Manhole (MH) 3 Oil Source Investigation Report, July 2014

Dear Ms. Blum:

In accordance with the referenced order, Carrier Corporation is providing one hard copy and one electronic copy (PDF via email) of the Manhole (MH) 3 Oil Source Investigation Report.

Please call me at (615) 255-9300 if you have any questions.

Sincerely,

EnSafe Inc.

*May M. Heflin*

## **1.0 INTRODUCTION**

Carrier Corporation (Carrier), a wholly-owned subsidiary of United Technologies Corporation (UTC), retained EnSafe Inc. to conduct a subsurface investigation at its Thompson Road facility located at Carrier Parkway in Syracuse, New York (Site). The Site is subject to a Corrective Action Order — Index CO 7-20051118-4 dated February 13, 2006, with the New York State Department of Environmental Conservation Division of Remediation (NYSDEC-DER). The location of the Site is depicted on Figure 1. The purpose of the Manhole 3 (MH3) Oil Source investigation was to determine the source of oil discovered accumulating in manhole MH3, which is downstream of storm water sewer lines beneath the western two-thirds of Parking Lot R (PLR).

## 2.0 BACKGROUND

Former Building TR-3 was demolished during 2010 and 2011 as part of Carrier's Site-wide campus reconsolidation efforts. During May and June 2011, Carrier paved over much of the footprint of former Building TR-3 for additional employee parking (newly designated as PLR). The 8 to 12-inch concrete slab from the former building remained in place. As part of parking lot paving activities, Carrier installed multiple catch basins along existing underground drainage piping to convey storm water runoff to Pump Station 1 (PS-1) which conveys storm water to the on-site treatment system prior to discharging to Sanders Creek. Historical operations in former Building TR-3 include the use of transformers and hydraulic oil possibly containing polychlorinated biphenyls (PCBs) as well as degreasers containing chlorinated solvents. Four previous assessments have focused on various PLR areas including:

- Former Building TR-3 degreaser in the southeast portion of PL-R
- Storm water detention pond (Pond 3) in the northwest portion of PL-R
- Storm sewer utility lines associated with former Building TR-3 in the central portion of PL-R
- Expansion of previous assessments

Previous assessment findings identified shallow groundwater impacted by chlorinated volatile organic compounds (VOCs) and PCBs in several areas of the former Building TR-3/PLR vicinity. These areas included shallow soils and groundwater (including light non-aqueous phase liquid [LNAPL]) in the former degreaser area, shallow soils in the area of Pond 3, and sediments within and shallow soils and groundwater outside storm sewer utility lines throughout PLR. The layout of the Site, including the former Building TR-3 footprint overlaying the current configuration of PLR, is depicted on Figure 2.

In 2013, as part of routine operations and maintenance (O&M) activities associated with the Site's storm water treatment system, Carrier discovered an accumulation of oil in manhole MH3, which is downstream of storm sewer lines beneath the western two-thirds of PLR. An oil sample was collected from manhole MH3 on June 26, 2013, and analyzed for PCBs using U.S. Environmental Protection Agency (EPA) Method 8082. The oil sample yielded an Aroclor 1254 concentration of 230 micrograms per kilogram ( $\mu\text{g}/\text{kg}$ ). An oil/water emulsion sample was also collected from manhole MH3 on June 26, 2013, and submitted for PCB analysis; however, no PCBs were detected. On January 8, 2014, oil from manhole MH3 was sampled again and Aroclor 1254 was detected at an estimated concentration of 2,600  $\mu\text{g}/\text{kg}$ .

### **3.0 SCOPE OF WORK**

#### **3.1 Proposed Scope of Work**

EnSafe, on behalf of Carrier, prepared and submitted a *Manhole 3 (MH3) Oil Source Investigation Work Plan Addendum to the 2013 Parking Lot R Investigation* (EnSafe, March 27, 2014) to NYSDEC detailing objectives and strategies for oil source investigation at the MH3 area.

The March 2014 work plan was approved by NYSDEC via email correspondence on May 8, 2014. Notification of scheduled field activities was provided to NYSDEC in a letter dated May 12, 2014, and submitted via email. MH3 Oil Source Investigation activities were initiated on May 19, 2014. Fieldwork was conducted in accordance with the approved work plan.

#### **3.2 Sub-Slab Investigation**

##### **Soil**

EnSafe, along with personnel from Parratt-Wolff, Inc. (Syracuse, New York), conducted sub-slab soil sampling and monitoring well/piezometer installation activities in accordance with the March 2014 *Manhole 3 (MH3) Oil Source Investigation Work Plan Addendum to the 2013 Parking Lot R Investigation* submitted to NYSDEC. Figure 3 depicts the northeast portion of the PLR area as well as the Storm Water Treatment Building (SWTB) and proposed sampling locations from the March 2014 work plan.

Eight soil borings were advanced and two monitoring wells and six piezometers were installed along the exterior of the SWTB from May 20 to 27, 2014. Two monitoring wells were also installed within the SWTB interior – one adjacent to manhole MH3 and another within a pit located immediately west of the storm utility line connecting manholes MH3 and MH4. Lithologic, soil sampling, field screening, and well construction data for soil borings and monitoring wells are depicted on boring logs provided in Appendix A. Table 1 lists details regarding the soil borings, soil sample intervals, and the types of monitoring wells installed at each monitoring well location. Soil boring, monitoring well and piezometer locations for the MH3 Oil Source investigation area are depicted on Figure 4. Fieldwork activities deviated from the work plan as follows:

- No soil samples were collected from borings PLR-058, MW54 (PLR-059), PLR-060, PLR-061, MW53 (PLR-062) or PLR-063 either due to the elevation of the saturated zone or insufficient recovery of materials above the saturated zone.
- No soil samples were collected from monitoring well borings MW51 or MW52 due to the mud rotary drilling method required for well installation inside the SWTB.

- No groundwater sample was obtained from piezometer PLR-056 due to poor yield.
- PLR-059 was converted to a 4-inch diameter monitoring well (MW54) due to the observation of a thin layer LNAPL on groundwater.
- A 2-inch diameter monitoring well (MW53) was installed at PLR-062 in order to collect additional subsurface information in the future (i.e., hydraulic conductivity).

**Table 1**  
**MH3 Oil Source Investigation Monitoring Well Locations – May 2014**

Boring Identification	Soil Boring Total Depth (feet bgs)	Soil Sample Interval (feet bgs)	Monitoring Well Installed	Monitoring Well Total Depth (feet bgs)
PLR-056	20	8 to 10	Piezometer (1" Shallow)	18.12
PLR-057	20	8 to 10	Piezometer (1" Shallow)	19.00
PLR-058	20	Not Sampled**	Piezometer (1" Shallow)	19.00
MW54 (PLR-059)	20	Not Sampled**	Monitoring Well (4" Shallow)	20.72
PLR-060	20	8 to 10	Piezometer (1" Shallow)	18.94
PLR-061	20	Not Sampled**	Piezometer (1" Shallow)	19.62
MW53 (PLR-062)	20	Not Sampled**	Monitoring Well (2" Shallow)	14.70
PLR-063	20	Not Sampled**	Piezometer (1" Shallow)	15.77
MW51	25	Not Sampled***	Monitoring Well (2" Shallow)	24.65
MW52	13.5	Not Sampled***	Monitoring Well (2" Shallow)	15.45

**Notes:**

\*Temporary monitoring well replacement; therefore, no soil sample was collected.

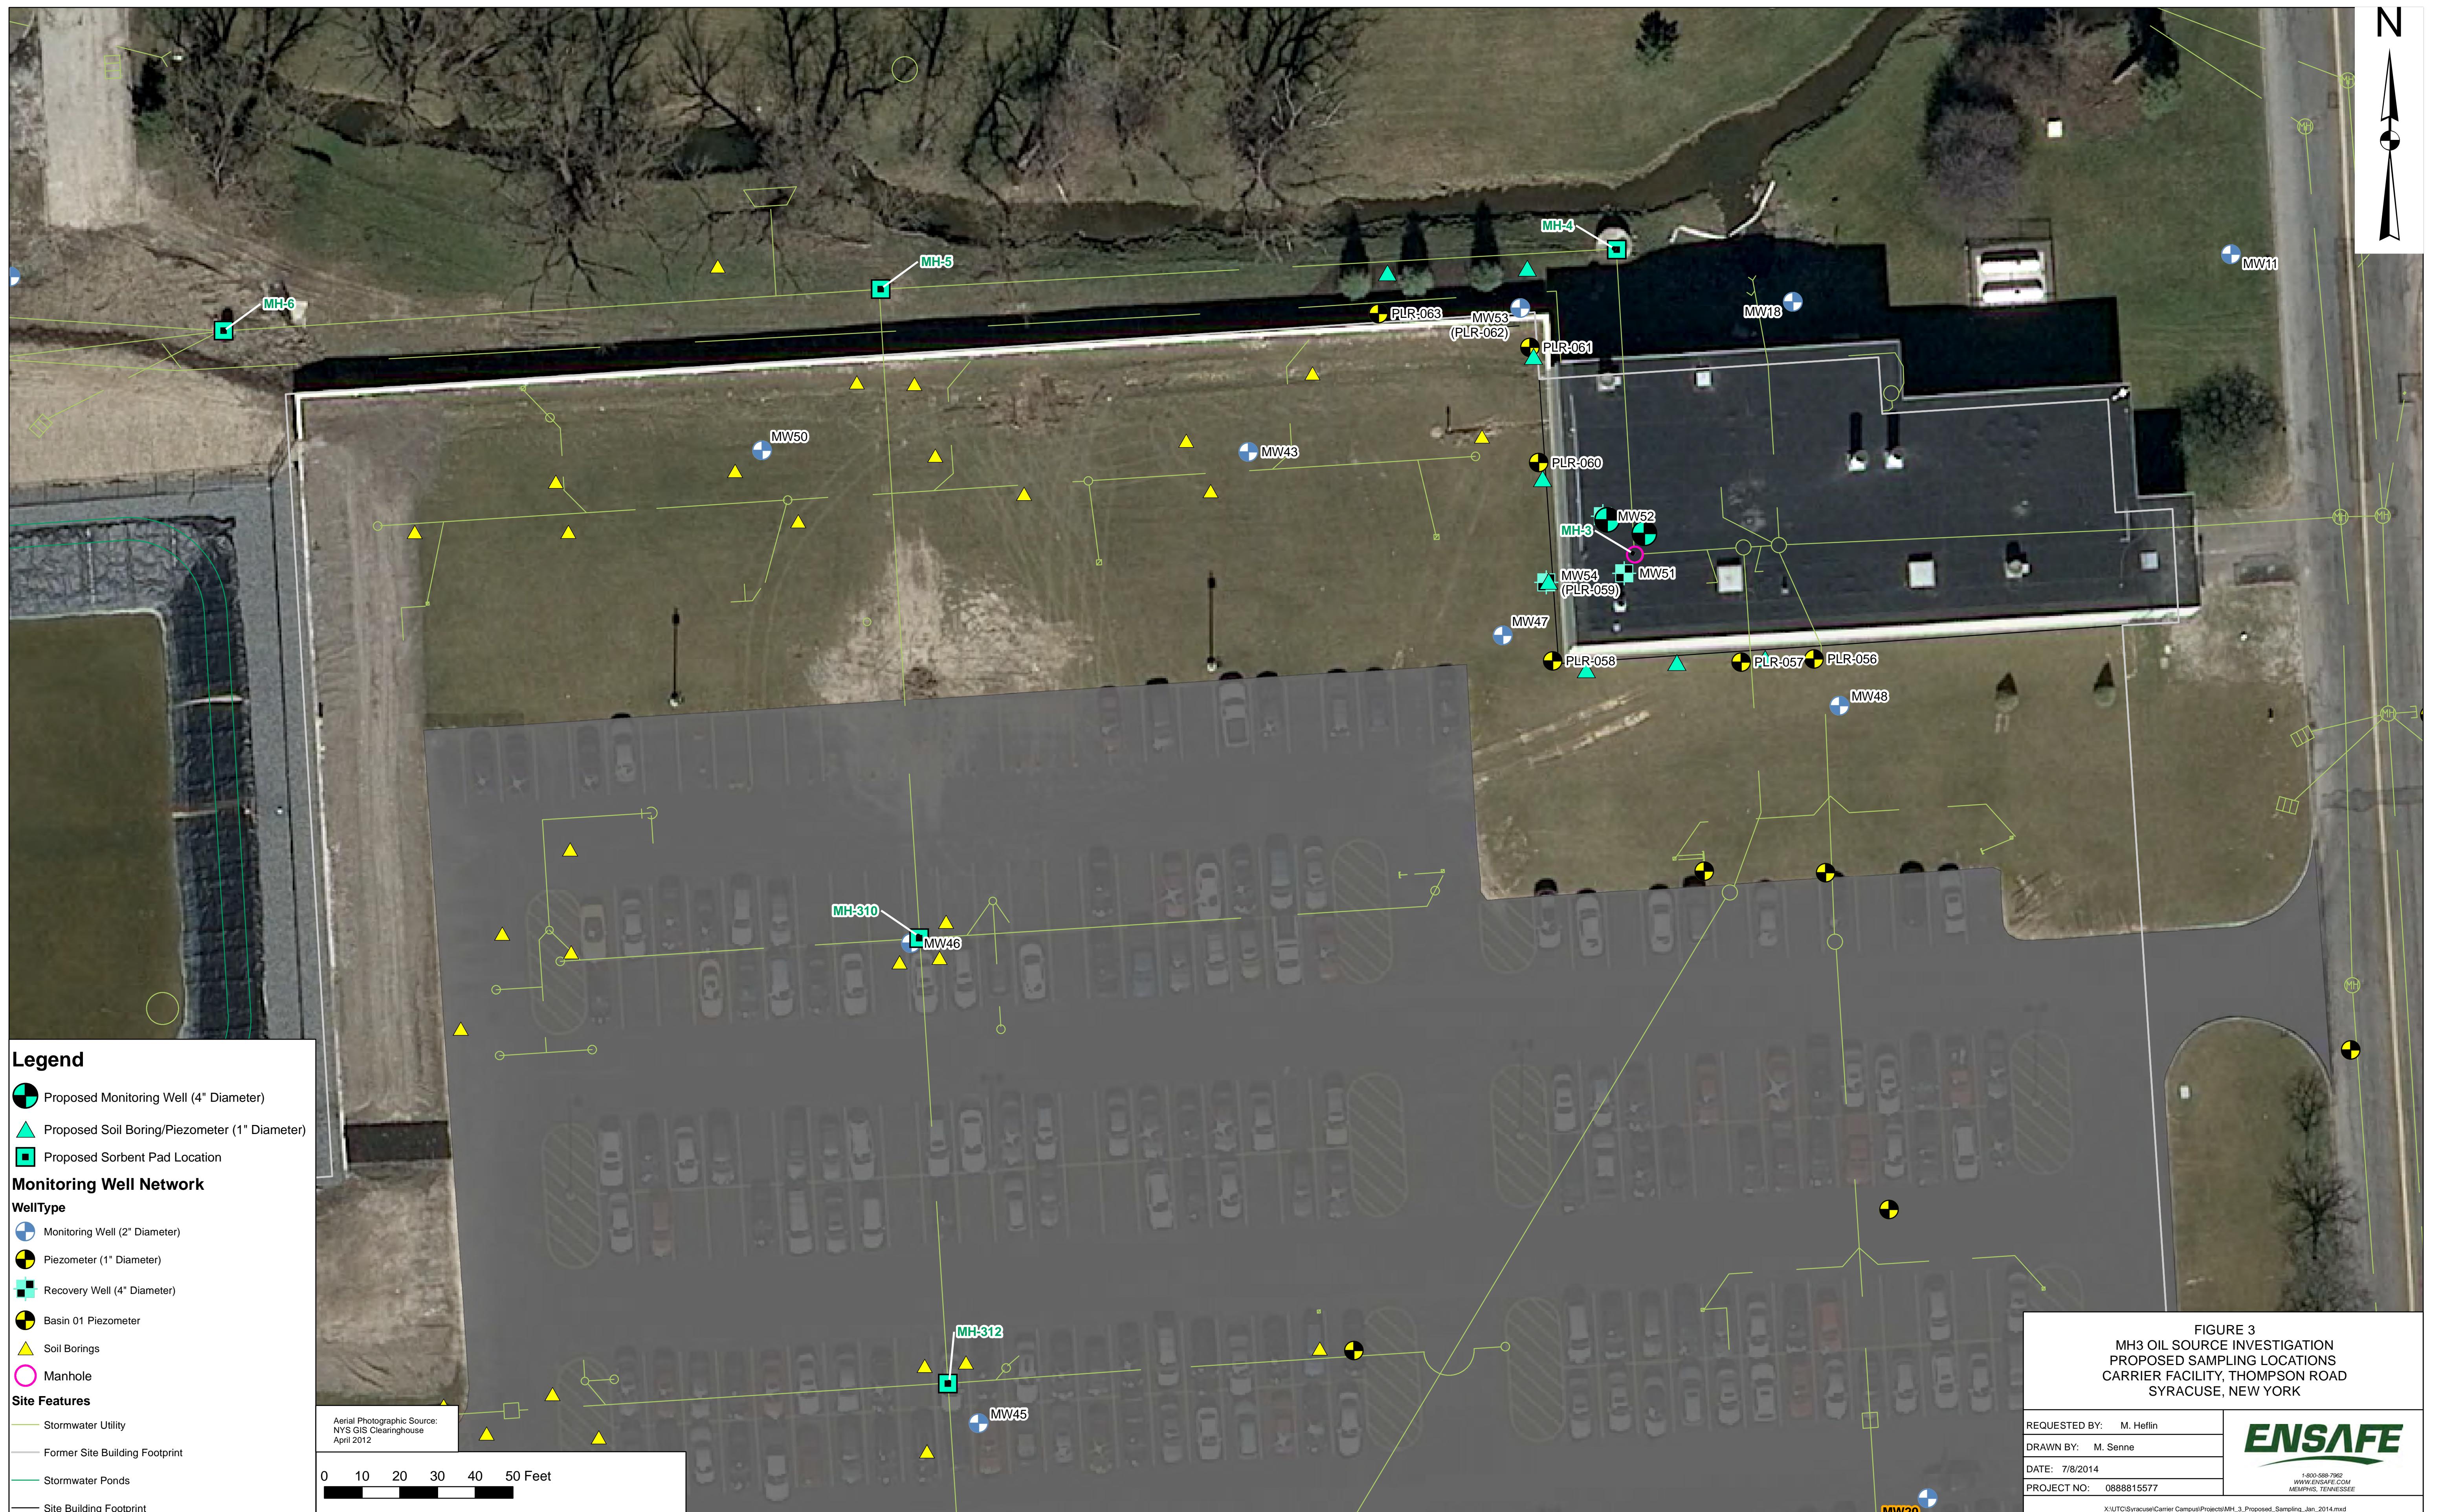

\*\* No sample collected due to insufficient recovery above the saturated zone.

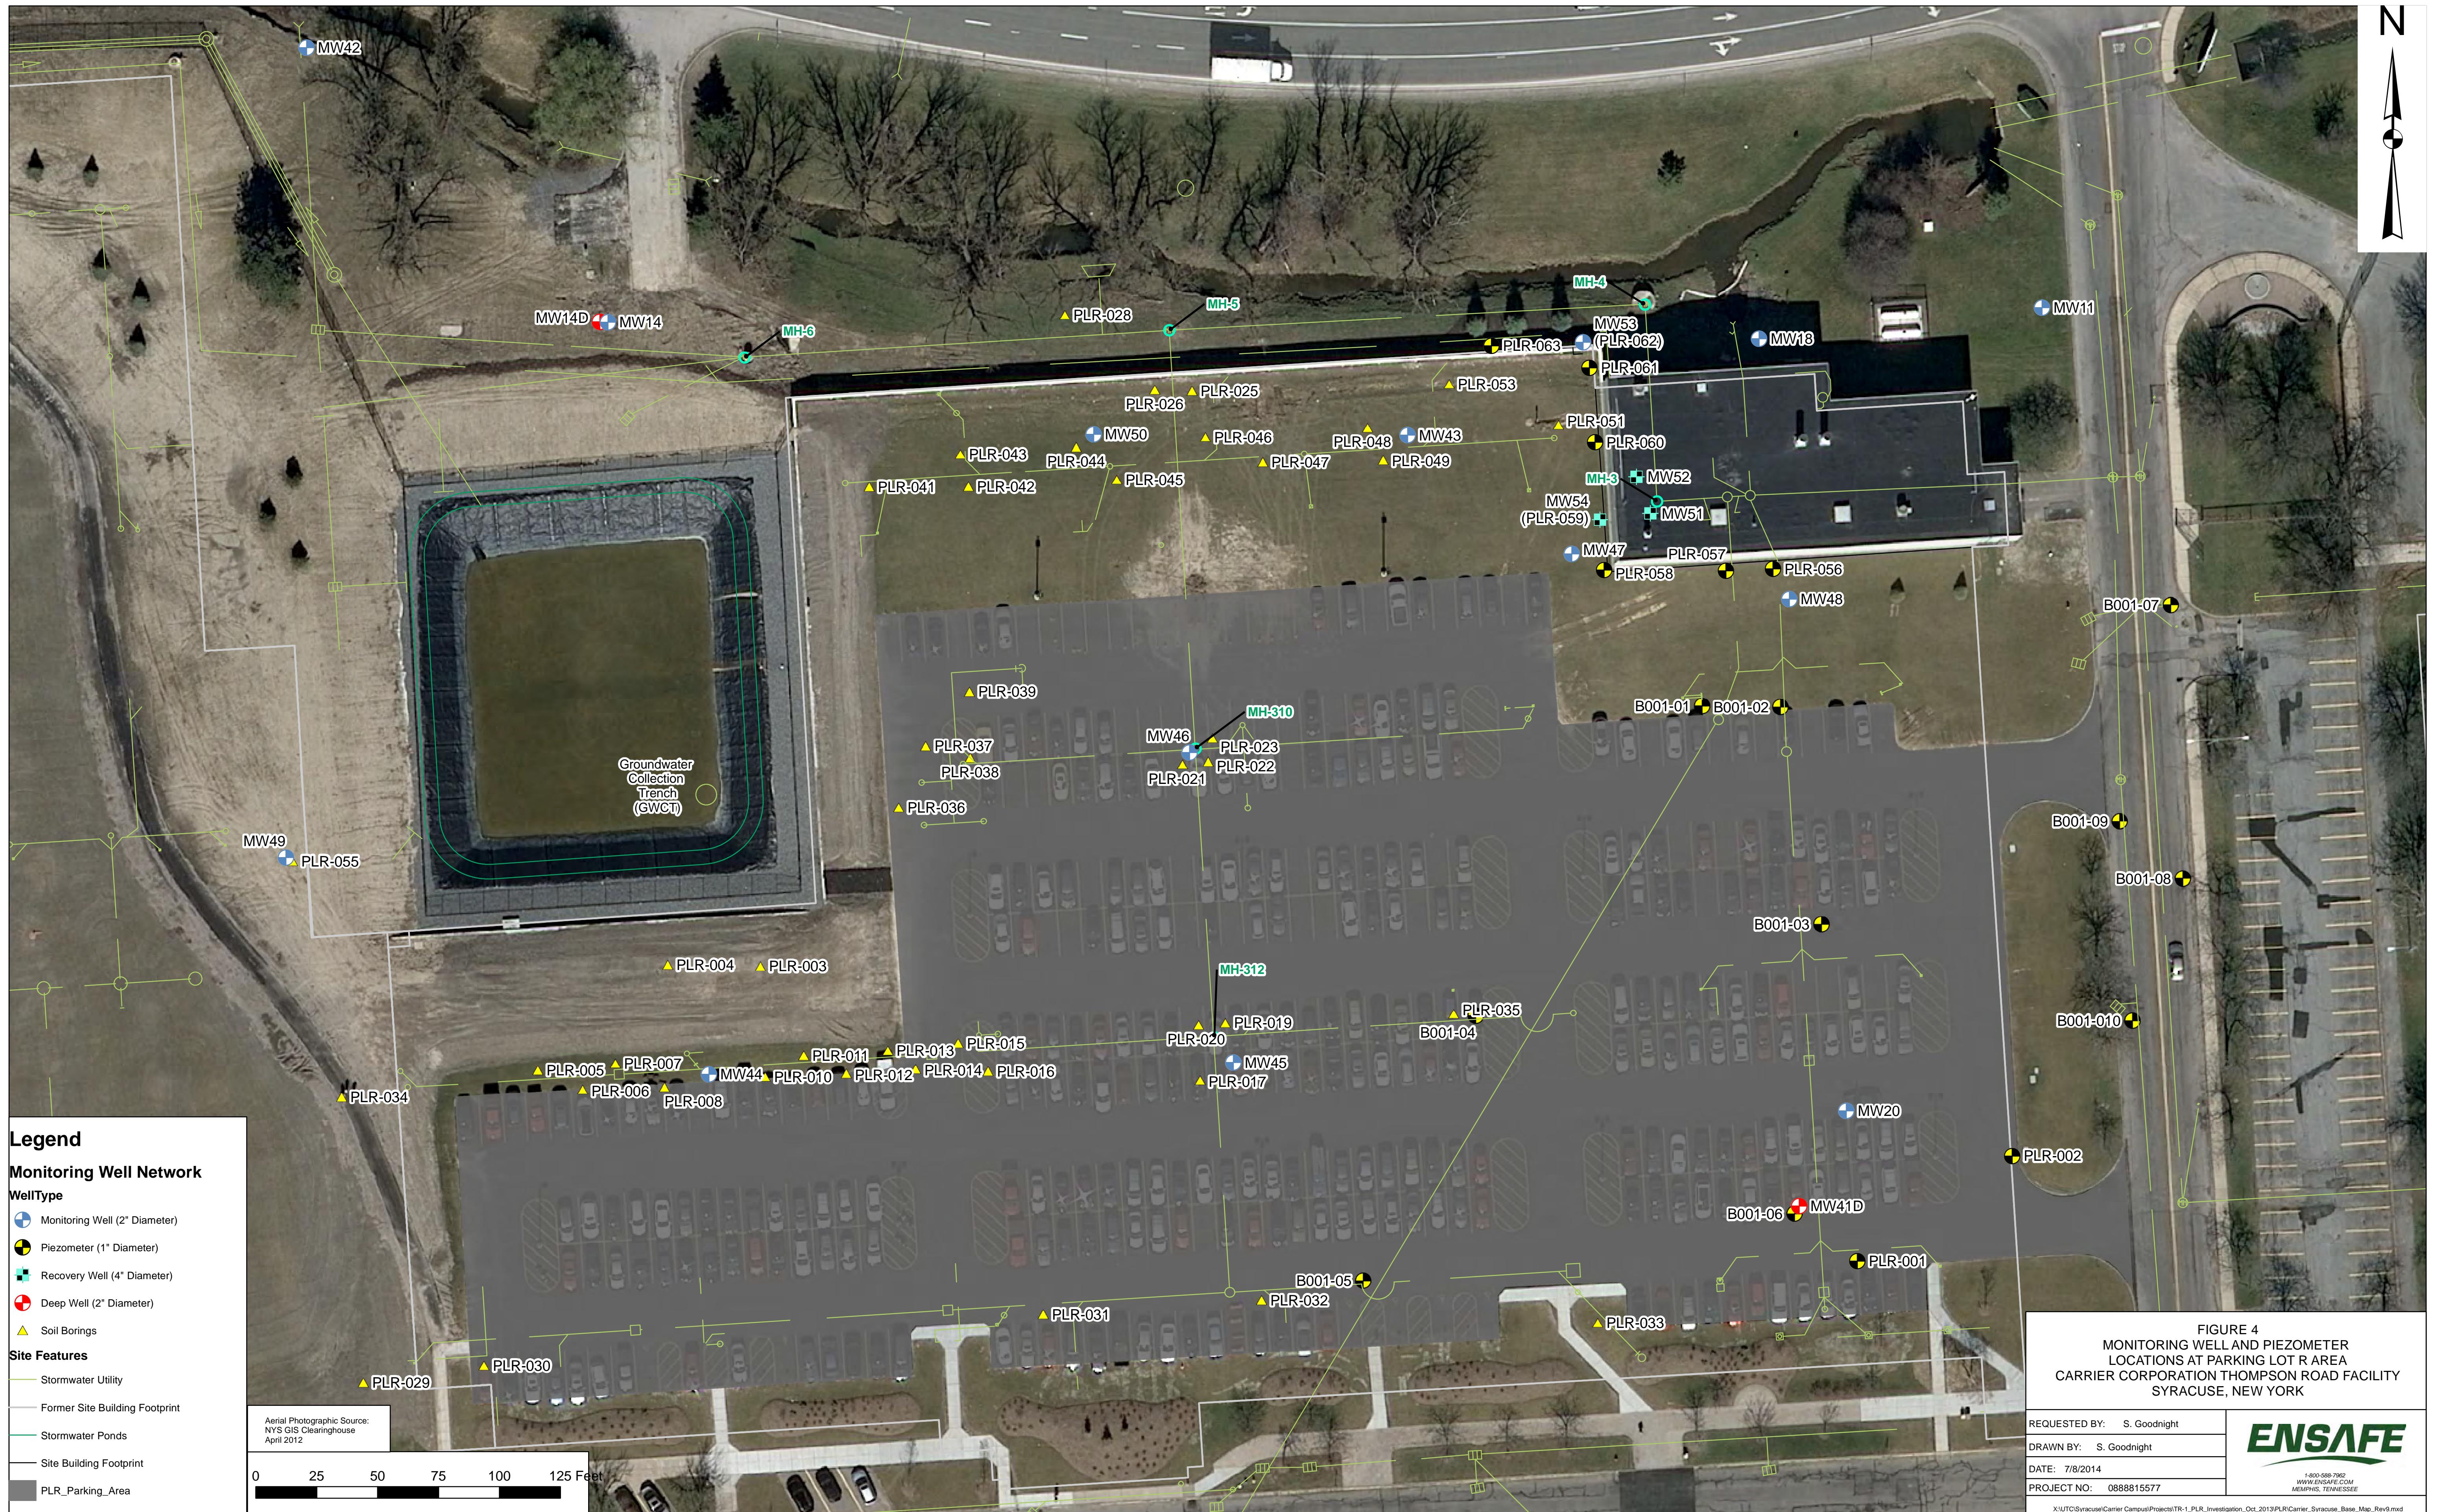

\*\*\* No sample collected due to required drilling method – mud rotary.

bgs = below ground surface.

Details regarding soil sampling, drilling equipment and methods, as well as installation procedures for the various types and diameters of monitoring wells are summarized in Table 2. Soil borings and monitoring wells/piezometers were installed in four general steps:

1. Hollow stem augers (HSA) were used to advance borings to the top of the former building TR-3 concrete slab.
2. Core barrels and steel casings were used to core through the former building TR-3 concrete slab.
3. Soil borings were advanced through the concrete slab to the desired depth using direct-push technology (DPT).
4. Polyvinyl chloride (PVC) piezometers and monitoring wells of varying diameters were installed using equipment and methods described in Table 2.

**Table 2**  
**Summary of Drilling Methods at MH3**

<b>Protective Casing Installation</b>		
<b>Drilling Method</b>	<b>Casing Diameter (Inches)</b>	<b>Purpose</b>
HQ Core Barrel (3-inch ID)	NA	Penetrate concrete floor for DPT soil sampling and 2-inch monitoring well installation
PQ Core Barrel (4.25-inch ID)	NA	Penetrate concrete floor for 4-inch monitoring well installation
4.25-inch ID HSAs	4	Penetrate former Building TR-2 slab to install 4-inch PVC casing at 2-inch Type II well
4.25-inch ID HSAs	4	Penetrate former Building TR-3 slab to install 4-inch steel casing conductor casing at Type III well
<b>Soil Sampling</b>		
<b>Drilling Method</b>	<b>Casing Diameter (Inches)</b>	<b>Purpose</b>
DPT Geoprobe DT-22 (2.25-inch OD)	NA	Soil Sampling 1.125-inch soil core
<b>Monitoring Well Installation</b>		
<b>Drilling Method</b>	<b>Casing Diameter (Inches)</b>	<b>Purpose</b>
DPT Geoprobe DT22 (2.25-inch OD)	1	Install 1-inch PVC Type II Piezometer
DPT Geoprobe 4.25-inch ID HSAs	2	Install 2-inch PVC Type II well
Spin-shoe and steel drill pipe (4-inch ID)	2	Install 2-inch PVC Type III well

**Notes:**

ID — inside diameter  
 HSA — hollow-stem auger  
 PVC — polyvinyl chloride  
 DPT — direct-push technology  
 OD — outside diameter  
 HQ — 96 millimeter (mm) OD; 63.5 mm ID core barrel  
 PQ — 122.6 mm OD; 85 mm ID core barrel  
 Lbs — pounds  
 NA — not applicable

### Soil Sampling

Soil samples were collected continuously at each location, as practical, using a track-mounted, DPT drill rig — a Geoprobe® Model 7800 series and DT22 down hole tools. Lithologic information was logged and the soil core was visually examined for indications of contamination (i.e., staining and/or odors). Soil from each 1-foot interval was screened immediately for organic vapors using a photoionization detector (PID) calibrated to 100 parts per million (ppm) isobutylene and measurements were recorded on the soil boring log. Soil from each 2-foot interval above the saturated zone was collected using laboratory supplied TerraCore sampling kits in accordance with U.S. EPA Method 5035, as required by NYSDEC *DER-10 Technical Guidance for Site Investigation and Remediation*, and stored on ice. As required, the remaining laboratory containers were filled and stored on ice.

Based on the field geologist's observations and field screening results, the sample interval within each soil boring suspected to be the most impacted, or if no notable impacts were identified, the interval immediately above the saturated zone, was selected for laboratory analysis. Each soil sample was labelled with a unique sample number identifying the location and depth interval, required analysis, date, and time of collection. Soil samples were stored on ice and hand delivered under chain-of-custody to Test America Laboratories, Inc. (Test America) service center in Syracuse, New York. Samples were then transported via overnight courier under chain-of-custody for analysis at Test America's laboratory in North Canton, Ohio. Lithologic, soil sampling, and field screening data for each location are depicted on boring logs provided in Appendix A.

Soil samples were analyzed for VOCs by U.S. EPA Methods 8260/5035, SVOCs by U.S. EPA Method 8270, pesticides by U.S. EPA Method 8081, PCBs by U.S. EPA Method 8082, and Resource Conservation and Recovery Act (RCRA) metals by U.S. EPA Methods 6010B/7471, per NYSDEC *DER-10 Technical Guidance for Site Investigation and Remediation* requirements.

### Monitoring Well and Piezometer Installation

Piezometers were installed using Geoprobe® DT22 tooling. Once soil sampling activities were completed, drilling rods were retracted from the borehole and an expendable drive point was inserted in the drilling string lead rod. The drill string was then advanced to the desired depth. PVC well pipe was inserted into the annulus of the drill string, typically including a 12-foot section of 0.01-inch slot monitoring well screen and an appropriate length of PVC casing riser. As the drill string was retracted, 20/24 filter sand pack was placed around the well screen. The retraction of the drill string continued until filter sand was a minimum of 2 feet above the top of the screened interval or 2 feet from the base of the former building TR-3 concrete slab. A seal was emplaced in the remainder of the borehole to ground surface by installing hydrated bentonite chips. The bentonite seal was extended to the ground surface to ensure integrity of the concrete slab.

Monitoring wells MW51 and MW52 were installed with a Little Beaver drilling rig using the spin-and-wash method, which utilizes a steel casing with a spin-shoe cutting head advanced to the desired depth. Accumulated soil cuttings in the annulus of the casing were cleared using fluid-rotary with a tri-cone bit and potable water. Soil cuttings and return fluid were containerized for off-site disposal at an approved facility upon receipt of analytical results. The minimal amount of potable water was used to complete this process. Once the casing annulus was cleared, PVC monitoring well pipe was installed, including a section of 0.01-inch slot monitoring well screen and an appropriate length of PVC casing riser. As the drill string was retracted, 20/24 filter sand pack was placed around the well screen. Retraction of the drill string continued until filter sand was a minimum of 2 feet above the top of the monitoring well screen or 0.5 feet from the base of the former building concrete slab. A seal was emplaced in the remainder of the borehole to ground surface by installing hydrated bentonite chips. The bentonite seal was extended from at least 2 feet below the bottom of the concrete slab to the top of the slab to ensure its integrity. Monitoring well MW52 is located within the storm water treatment system floc tank pit, approximately 7 feet below the SWTB finished floor elevation. It was completed with a stand pipe to account for potential artesian conditions - a scenario in which the potentiometric surface elevation would be greater than that of the tank pit floor elevation.

Monitoring wells MW53 and MW54 were installed with track-mounted and a CME truck-mounted drilling rig respectively, using auger tooling. Hollow stem augers with a knock-out plug were used to clear cuttings from each boring to the desired depth. Depending on the location, a 2-inch or 4-inch diameter PVC monitoring well pipe was inserted into the annulus of the drill string, including a section of 0.01-inch slot monitoring well screen and an appropriate length of PVC casing riser. As the drill string was retracted, 20/24 filter sand pack was placed around the well screen. The retraction of the drill string continued until filter sand was a minimum of 2 feet above the top of the monitoring well screen; then a layer of hydrated bentonite chips was installed (minimum 2-feet in thickness) to form a seal above the filter sand pack. Each monitoring well was completed with a flush-grade wellhead comprised of a circular 2-foot diameter concrete well pad and an 8-inch steel, load-bearing access cover.

Soil cuttings generated during were containerized for off-site disposal at a NYSDEC approved facility. Well construction and finishing details are depicted on the applicable boring logs provided in Appendix A.

## Groundwater

Monitoring wells MW51 and MW52 were developed by Parratt-Wolff personnel using an electrical submersible pump connected to 0.5-inch inside diameter polypropylene tubing. Monitoring wells (2-inch and 4-inch) and piezometers (1-inch diameter) were developed by EnSafe personnel using a peristaltic pump and 0.25-inch inside diameter Teflon lined polypropylene tubing. Well development continued until turbidity of the water evacuated from the well was visually clear. A minimum of three to five well volumes were evacuated from each monitoring well. Due to turbidity, some monitoring wells and/or piezometers required the evacuation of additional water volume to achieve adequate development. Waste water from well development activities was disposed by pouring it into the on-site storm water treatment system.

EnSafe collected groundwater samples from each location from May 28 to 30, 2014. Prior to sampling, each monitoring well was opened and allowed to equilibrate before a water level measurement was obtained using an electronic water level indicator. A tabular summary of well construction and groundwater elevation data for the monitoring well network at the Site is provided in Appendix B. After collecting depth-to-groundwater measurements, each monitoring well was purged using low flow sampling techniques with a peristaltic pump and dedicated Teflon tubing. Some monitoring wells and piezometers were low yielding and purged dry during sampling activities, and as a consequence, some groundwater samples were collected over the period of a few hours. Monitoring well purge field forms are provided in Appendix C. During purging activities, water quality parameters (pH, specific conductance, temperature, turbidity, dissolved oxygen, and oxygen-reduction potential) were monitored using a Horiba U-22 water quality meter and recorded on the purge forms. After water quality parameter measurements stabilized, groundwater from each monitoring well was collected and poured directly into three 40-milliliter (mL) glass vials preserved with hydrochloric acid using the "straw method" for VOC analyses. Additional groundwater sample volume was pumped directly into the appropriate laboratory supplied containers via peristaltic pump for non-VOC analyses. All groundwater samples were immediately stored on ice and hand delivered to the Test America service center under chain-of-custody procedures. Samples were then transported via overnight courier under chain-of-custody procedures for analysis at Test America's laboratory in North Canton, Ohio.

Groundwater samples were analyzed for the following: VOCs by U.S. EPA Methods 8260/5035, SVOCs by U.S. EPA Method 8270, pesticides by U.S. EPA Method 8081, PCBs by U.S. EPA Method 8082, and RCRA metals by U.S. EPA Methods 6010B/7471, per NYSDEC *DER-10 Technical Guidance for Site Investigation and Remediation* requirements.

## 4.0 FINDINGS

### Geology and Hydrogeology

Based on review of soil boring and monitoring well logs (Appendix A) for the MH3 Oil Source investigation area, approximately 2 feet of silty clay fill material overlies the former Building TR-3 concrete slab, which was generally encountered from 2 to 3.5 feet bgs. A gravel sub-base material extends to approximately 5 feet bgs. Lithology of the uppermost 2 to 8 feet beneath the concrete slab is generally a silty sand and silty clay which transitions with depth to primarily clayey silt to a depth of approximately 20 feet bgs – the typical boring termination depth for the investigation. Headspace field screening results during soil sampling activities ranged from 0 to out of range. The highest field screening measurement recorded, out of range (i.e., >1500 ppm), was observed in soil boring PLR-061 in the 18 to 20 feet bgs interval. The remaining field screening measurements were considerably lower.

LNAPL was observed at two locations during MH3 Oil Source investigation activities. Trace amounts of LNAPL were measured at PLR-059 (0.01 feet) and PLR-063 (0.01 feet). A slight sheen was observed on groundwater at PLR-057, and MW53 (PLR-062). Potentiometric data collected during the groundwater sampling activities are tabulated in Appendix B.

Soil boring and monitoring well logs indicate depth to shallow groundwater ranged from 7 to 10 feet bgs at the time of advancement. Historically, general groundwater flow direction for the shallow aquifer at the Site is to the west/northwest; however, groundwater tends to flow north towards Sanders Creek in the area of PLR, including the SWTB area. To date, the monitoring wells and piezometers installed during MH3 Oil Source investigation activities have not been surveyed; therefore, no potentiometric map has been generated. Upon receipt of survey data, groundwater elevations from these locations will be tied to Site-wide monitoring well network data.

### Parking Lot R Storm Water Line Assessment

Assessment of PLR storm water lines up gradient of manhole MH-3 included the placement of hydrophobic, oleophilic pads inside manholes MH6, MH5, MH4, MH310, and MH312. Assessment activities were initiated on January 9, 2014. Periodic visual examination of the manholes and pads inside the manholes was conducted and is ongoing. Table 3 provides observations recorded and actions taken to date.

**Table 3**  
**Summary of Parking Lot R Storm Water Line Assessment Findings**

Date	Manhole(s)	Observation	Action
1/9/2014	MH4	Clear running water with no odor or sheen	Hydrophobic, oleophilic pads deployed
	MH5	Slight sheen observed on standing water	
	MH6	Clear, no odor or sheen observed	
1/13/2014	MH4	No oil on pad, strong hydrocarbon odor	Replaced pad
	MH5	No oil on pad, strong hydrocarbon odor, slight sheen	Replaced pad
5/6/2014	MH4	Odor present, sediment build up on bench. Water clear. Pad contained odor and oil.	Replaced pad
	MH5	Slight sheen on standing water. Pad stained and slight hydrocarbon odor.	Replaced pad
	MH6	Water clear with no odor or product	Replaced pad
5/7/2014	MH310	Clear water with slight odor	Hydrophobic, oleophilic pads deployed
	MH312	Clear water with no odor	
	MH313	Clear water with slight odor	
5/21/2014	MH4	Strong odor with some staining on pad	Replaced pad
	MH5	Strong odor, sheen on water, oil with strong odor on pad	Replaced pad
	MH6	Light staining on pad with no odor	Replaced pad
	MH310	Oil on pad with strong sweet odor	Replaced pad
	MH312	Staining on pad with no odor	Replaced pad
6/3/2014	MH4	No staining on pad	Replaced pad
	MH5	No staining on pad	Replaced pad
	MH6	No odor, no staining on pad	Replaced pad
6/13/2014	MH312	Oil/grease observed on pad	Replaced pad
	MH313	Some oil on pad	Replaced pad

## 5.0 LABORATORY ANALYTICAL RESULTS

Reports detailing complete laboratory analytical results (detections and non-detections) for all samples submitted for analysis are presented in Appendix D.

### 5.1 Soil Analytical Results

Soil laboratory analytical results were compared to December 2006 NYSDEC-DER 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 Soil Cleanup Objectives (SCOs), Unrestricted Use, Restricted Use Commercial and Industrial, Protection of Groundwater, and Protection of Ecological Resources screening standards. Laboratory analytical results for soil samples from the MH3 Oil Source investigation area reported several VOCs, SVOCs, PCBs, and metal constituents at concentrations greater than laboratory method detection and/or reporting limits; these concentrations are summarized in Table 4.

No laboratory detected concentrations exceeded their respective NYSDEC-DER 6 NYCRR Unrestricted Use, Restricted Use Commercial and Industrial, Protection of Groundwater, or Protection of Ecological Resources SCOS. Laboratory method detection limits for all soil samples analyzed are less than their respective NYSDEC-DER 6 NYCRR Unrestricted Use, Restricted Use Commercial or Industrial Use soils, Protection of Groundwater, and Protection of Ecological Resources SCOS.

Some reported soil concentrations, as well as some groundwater concentrations discussed in Section 5.2 below, are estimated values and are J-qualified, or J-flagged. J-flagged analyte concentrations are greater than their respective laboratory method detection limits, but less than laboratory method reporting limits. An additional qualifier of note is "B." A B-qualifier denotes the analyte was detected in both the sample and the laboratory method blank sample indicating these particular concentrations may potentially be viewed as suspect or "non-detect" due to the method blank artifacts. Additional qualifiers were assigned to various analyte concentrations by the laboratory; however, none of these qualifiers had a negative impact on the data. Qualifiers for soil samples are summarized in the laboratory analytical reports (Appendix D) and Table 4.

## 5.2 Groundwater Analytical Results

Groundwater laboratory analytical results were compared to December 2006 NYSDEC-DER 6 NYCRR Part 703 Surface Water and Groundwater Quality Standards and Groundwater Effluent Limitations (NYCRR Part 703 Groundwater Quality Standards). Laboratory analytical results for groundwater samples collected during the MH3 Oil Source investigation reported several VOCs, SVOCs, pesticides, and metal constituents at concentrations greater than laboratory method detection and/or reporting limits; these concentrations are summarized in Table 5. Table 6 lists VOC analytes for which concentrations exceeded their respective screening limits, while Table 7 lists reported SVOC, pesticide and metal analyte concentrations which exceeded their respective screening limits.

No other reported concentrations exceeded their respective NYCRR Part 703 Groundwater Quality Standards. Laboratory method detection limits for all groundwater samples analyzed are less than their respective NYCRR Part 703 Groundwater Quality Standards, with the exception of PCBs (all samples) and VOCs and SVOCs for groundwater samples collected from MW52, MW53 (PLR-062), and PLR-063. PCBs were not detected in any of the groundwater samples submitted for laboratory analysis; however, in some cases, the reported laboratory method detection limit for a specific Aroclor exceeded the 6 NYCRR Part 703 Groundwater Quality Standards screening limit of 0.09 ug/L. Groundwater samples were analyzed for PCBs by U.S. EPA Method 8082 in accordance with the NYSDEC approved work plan. Due to concentrations of select analytes, the laboratory diluted groundwater samples collected from locations MW52, MW53 (PLR-062), and PLR-063. As a result, laboratory method detection limits for some VOC and SVOC analytes were elevated allowing for some analytes reported as non-detect to potentially exceed their respective NYCRR Part 703 Groundwater Quality Standards. However, each of these samples yielded concentrations of select VOC analytes which exceeded their respective comparative standard.

## 6.0 CONCLUSIONS AND RECOMMENDATIONS

Findings from MH3 Oil Source investigation activities identified impacts to shallow subsurface soils and groundwater, including observations of LNAPL. LNAPL was observed along the western exterior wall of the SWTB and north of the former Building TR-3 northern wall. LNAPL measured 0.01 feet thick at piezometers PLR-059 and PLR-063 during groundwater sampling activities.

Laboratory analytical results for soil samples reported various VOCs, SVOCs, PCBs, and metals at concentrations above laboratory method reporting limits. No reported laboratory detected constituent concentrations in soil samples exceeded NYCRR Part 375 SCOs, Protection of Groundwater or Protection of Ecological Resources screening standards.

Groundwater samples from the MH3 Oil Source investigation yielded concentrations of 6 VOCs, two SVOCs and two metal analytes in excess of their respective NYCRR Part 703 Groundwater Quality Standards screening limits. Most VOC exceedances were marginally greater than their respective screening limits; however, notably higher concentrations of select VOCs were reported in samples from piezometers PLR-061 and PLR-063 as well as monitoring well MW53 (PLR-062). SVOC and metal exceedances were marginally greater than their respective screening limits.

While no PCB detections were reported for any of the groundwater samples submitted for laboratory analysis, in some cases, the reported laboratory method detection limit for a specific Aroclor exceeded the NYCRR Part 703 Groundwater Quality Standards screening limit of 0.09 ug/L. No further sampling and analysis is recommended with regard to PCBs in this case.

Assessment of PLR storm water lines up gradient of manhole MH-3 yielded observations of oil at manholes MH4, MH5, MH6, MH310, and MH312; however, no conclusion as to a potential oil source responsible for the amount of accumulated oil observed at MH3 can be drawn at this time. Additionally, oil observed at manholes MH4, MH5, and MH6 is thought to have resulted from backflow of accumulated storm water due a plug installed between manholes MH3 and MH2.

Investigation activities summarized herein identified two locations with small amounts of LNAPL which may be contributing to the accumulation of oil in manhole MH3; however, no conclusions with regard to the source have been identified as a result of investigation activities summarized herein. Additional assessment of the PLR area storm lines is required to identify the source of oil accumulating in manhole MH3, including storm line videography, additional assessment of groundwater elevation fluxuations and hydraulic conductivity, and oil accumulation rate calculation.

The MH3 Oil Source investigation did identify potentially elevated concentrations of cis-1, 2-dichloroethene and vinyl chloride in the area north of the former Building TR-3 foundation wall and adjacent to Sanders Creek. Elevated concentrations of trichloroethene were also identified near the northwest corner of the SWTB (within the footprint of the former building TR-3). Further assessment of the area north of the former Building TR-3 foundation wall and south of Sanders Creek is warranted to determine the extent of impacts, to confirm the detected elevated concentrations of chlorinated compounds, and to further evaluate if remedial actions are warranted.

## 7.0 LIMITATIONS

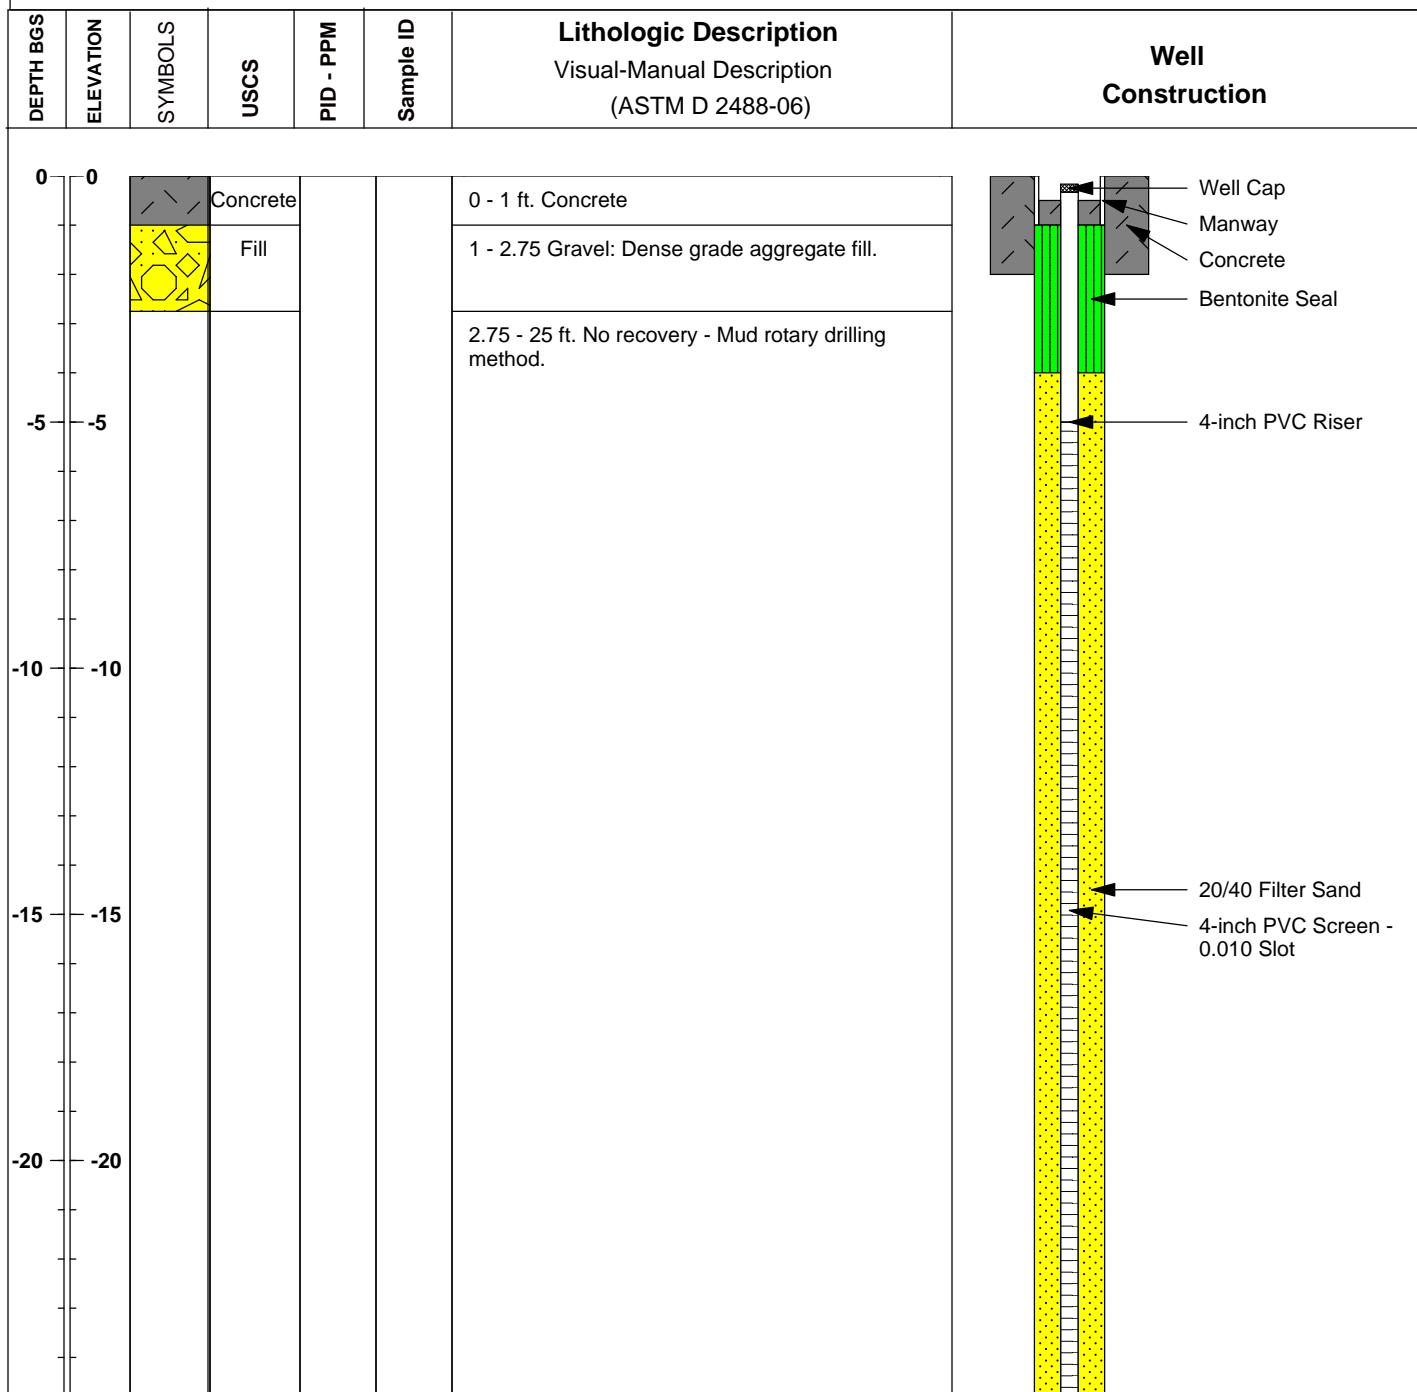

The information presented in this report was obtained through performance of a Scope of Work outlined in the *Manhole 3 (MH3) Oil Source Investigation Work Plan Addendum to the 2013 Parking Lot R Investigation* (EnSafe, March 27, 2014). Report users should recognize that any sampling or testing activities are inherently limited, in that conditions at other locations and depths may vary from those at the locations where samples or measurements were obtained. The ability of EnSafe to interpret results and draw conclusions about Site conditions are similarly limited, and subject to the availability and quality of information that led us to select sampling or measurement locations, and to practical limits in the extent of sampling that was conducted. EnSafe has conducted the professional assessment services with a level of care and skill consistent with generally accepted environmental consulting industry standards.

In any event, report results apply solely to conditions existing at the time that EnSafe obtained samples or conducted tests. Only the party for whom this report was originally prepared and/or other parties specifically named in our proposal have the right to make use of and rely upon this report. Reuse of this report or any portion thereof for other than its intended purpose shall be at the user's sole risk. Conditions in other parts of the Site may vary from those at the locations where data were collected. As such, EnSafe does not provide any guarantees, certifications, or warranties regarding the presence or extent of environmental contamination or contaminant sources on the Site. This assessment was intended for the purpose of determining the potential for contamination through limited assessment activities, and in no way represents a conclusive or complete site characterization.

## ANALYTICAL REPORT

Job Number: 240-37612-1

Job Description: MH3 Oil Source Investigation

For:  
EnSafe, Inc.  
220 Athens Way, Plaza 1, Suite 410  
Nashville, TN 37228  
Attention: Ms. May Heflin

Approved for release.  
Amy L McCormick  
Project Manager II  
6/10/2014 9:28 AM

---

Amy L McCormick, Project Manager II  
4101 Shuffel Street NW, North Canton, OH, 44720  
(330)966-9787

Final Data Tracking

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

## CASE NARRATIVE

**Client: EnSafe, Inc.**

**Project: MH3 Oil Source Investigation**

**Report Number: 240-37612-1**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

For soil 8260 VOCs: Cyclohexane is not included in our New York certification.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

### **RECEIPT**

The samples were received on 5/22/2014 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.2° C.

### **VOLATILE ORGANIC COMPOUNDS (GCMS)**

Samples PLR060S0514 (240-37612-1) and PLR057S0514 (240-37612-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were prepared on 05/22/2014 and 05/23/2014 and analyzed on 05/27/2014.

The continuing calibration verification (CCV) associated with batch 132139 recovered above the upper control limit for Dichlorodifluoromethane and 1,2-Dibromo-3-Chloropropane. Samples (CCVIS 240-132139/3), (LCS 240-132139/5), (MB 240-132139/7), PLR057S0514 (240-37612-2), and PLR060S0514 (240-37612-1) associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The CCV had Methyl Tert-Butyl Ether failing the 20 percent recovery, but was detected in the MRL. This compound was not detected in samples (CCVIS 240-132139/3), (LCS 240-132139/5), (MB 240-132139/7), PLR057S0514 (240-37612-2), PLR060S0514 (240-37612-1).

No other difficulties were encountered during the VOCs analysis.

All other quality control parameters were within the acceptance limits.

### **SEMOVOLATILE ORGANIC COMPOUNDS (GCMS)**

Samples PLR060S0514 (240-37612-1) and PLR057S0514 (240-37612-2) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 05/23/2014 and analyzed on 06/06/2014.

No difficulties were encountered during the SVOCs analysis.

All quality control parameters were within the acceptance limits.

**CHLORINATED PESTICIDES**

Samples PLR060S0514 (240-37612-1) and PLR057S0514 (240-37612-2) were analyzed for chlorinated pesticides in accordance with EPA SW-846 Method 8081B. The samples were prepared and analyzed on 05/29/2014.

Sample PLR057S0514 (240-37612-2)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Decachlorobiphenyl and Tetrachloro-m-xylene failed the surrogate recovery criteria low for PLR060S0514MS (240-37612-1MS).

Several analytes failed the recovery criteria low for the MS of sample PLR060S0514MS (240-37612-1) in batch 240-132486. Several analytes exceeded the RPD limit for the MSD of sample PLR060S0514MSD (240-37612-1) in batch 240-132486. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No other difficulties were encountered during the pesticides analysis.

All other quality control parameters were within the acceptance limits.

**POLYCHLORINATED BIPHENYLS (PCBS)**

Samples PLR060S0514 (240-37612-1) and PLR057S0514 (240-37612-2) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The samples were prepared on 05/28/2014 and analyzed on 05/30/2014.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required. All of the samples in this data set analyzed for PCBs were subjected to the sulfuric acid cleanup procedure before instrumental analysis, per EPA Method 3665A.

Sample PLR057S0514 (240-37612-2) required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur.

No other difficulties were encountered during the PCBs analysis.

All other quality control parameters were within the acceptance limits.

**TOTAL METALS (ICP)**

Samples PLR060S0514 (240-37612-1) and PLR057S0514 (240-37612-2) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 06/03/2014 and analyzed on 06/05/2014.

No difficulties were encountered during the metals analysis.

All quality control parameters were within the acceptance limits.

**MERCURY**

Samples PLR060S0514 (240-37612-1) and PLR057S0514 (240-37612-2) were analyzed for mercury in accordance with EPA SW-846 Method 7471B. The samples were prepared on 06/03/2014 and analyzed on 06/04/2014.

No difficulties were encountered during the mercury analysis.

All quality control parameters were within the acceptance limits.

**PERCENT SOLIDS**

Samples PLR060S0514 (240-37612-1) and PLR057S0514 (240-37612-2) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 05/23/2014.

No difficulties were encountered during the % solids analysis.

All quality control parameters were within the acceptance limits.

## EXECUTIVE SUMMARY - Detections

## DATA REPORTING QUALIFIERS

Client: EnSafe, Inc.

Job Number: 240-37612-1

Lab Section	Qualifier	Description
GC/MS VOA	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC/MS Semi VOA	J	Indicates an Estimated Value for TICs
	N	Presumptive evidence of material.
	T	Result is a tentatively identified compound (TIC) and an estimated value.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	A	The tentatively identified compound is a suspected aldol-condensation product.
GC Semi VOA	F1	MS and/or MSD Recovery exceeds the control limits
	F2	MS/MSD RPD exceeds control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
	p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
Metals	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

06/11/2014

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

## CASE NARRATIVE

**Client: EnSafe, Inc.**

**Project: MH3 Oil Source Investigation**

**Report Number: 240-37676-1**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

For soil 8260 VOCs: Cyclohexane is not included in our New York certification.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

### **RECEIPT**

The sample was received on 5/23/2014 9:30 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.6° C.

### **VOLATILE ORGANIC COMPOUNDS (GCMS)**

Sample PLR056S0514 (240-37676-1) was analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were prepared on 05/23/2014 and analyzed on 05/27/2014.

The continuing calibration verification (CCV) associated with batch 132139 recovered above the upper control limit for Dichlorodifluoromethane and 1,2-Dibromo-3-Chloropropane. Samples (CCVIS 240-132139/3), (LCS 240-132139/5), (MB 240-132139/7), and PLR056S0514 (240-37676-1) associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The CCV had Methyl Tert-Butyl Ether failing the 20 percent recovery, but was detected in the MRL. This compound was not detected in samples (CCVIS 240-132139/3), (LCS 240-132139/5), (MB 240-132139/7), and PLR056S0514 (240-37676-1).

No other difficulties were encountered during the VOCs analysis.

All other quality control parameters were within the acceptance limits.

### **SEMOVOLATILE ORGANIC COMPOUNDS (GCMS)**

Sample PLR056S0514 (240-37676-1) was analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 05/28/2014 and analyzed on 05/30/2014.

No difficulties were encountered during the SVOCs analysis.

All quality control parameters were within the acceptance limits.

### **CHLORINATED PESTICIDES**

Sample PLR056S0514 (240-37676-1) was analyzed for chlorinated pesticides in accordance with EPA SW-846 Method 8081B. The

samples were prepared and analyzed on 05/29/2014.

Sample PLR056S0514 (240-37676-1)[20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Decachlorobiphenyl failed the surrogate recovery criteria high for PLR056S0514 (240-37676-1).

No other difficulties were encountered during the pesticides analysis.

All other quality control parameters were within the acceptance limits.

#### **POLYCHLORINATED BIPHENYLS (PCBS)**

Sample PLR056S0514 (240-37676-1) was analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The samples were prepared on 05/28/2014 and analyzed on 06/02/2014.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required. All of the samples in this data set analyzed for PCBs were subjected to the sulfuric acid cleanup procedure before instrumental analysis, per EPA Method 3665A.

Sample PLR056S0514 (240-37676-1) was diluted due to the nature of the sample matrix. Elevated reporting limits (RLs) have been provided.

Sample PLR056S0514 (240-37676-1) required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur.

The last continuing calibration verification (CCV) associated with batch 132633 recovered above the upper control limit for PCB. Sample PLR056S0514 (240-37676-1) associated with this CCV was non-detect for the affected analyte; therefore, the data have been reported.

No other difficulties were encountered during the PCBs analysis.

All other quality control parameters were within the acceptance limits.

#### **TOTAL METALS (ICP)**

Sample PLR056S0514 (240-37676-1) was analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 06/03/2014 and analyzed on 06/05/2014.

No difficulties were encountered during the metals analysis.

All quality control parameters were within the acceptance limits.

#### **MERCURY**

Sample PLR056S0514 (240-37676-1) was analyzed for mercury in accordance with EPA SW-846 Method 7471B. The samples were prepared on 06/03/2014 and analyzed on 06/04/2014.

No difficulties were encountered during the mercury analysis.

All quality control parameters were within the acceptance limits.

#### **PERCENT SOLIDS**

Sample PLR056S0514 (240-37676-1) was analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 05/24/2014.

No difficulties were encountered during the % solids analysis.

All quality control parameters were within the acceptance limits.

## DATA REPORTING QUALIFIERS

Client: EnSafe, Inc.

Job Number: 240-37676-1

Lab Section	Qualifier	Description
GC/MS VOA	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC/MS Semi VOA	J	Indicates an Estimated Value for TICs
	N	Presumptive evidence of material.
	T	Result is a tentatively identified compound (TIC) and an estimated value.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
	p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
Metals	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Final Data Tracking

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

## CASE NARRATIVE

**Client: EnSafe, Inc.**

**Project: MH3 Oil Source Investigation**

**Report Number: 240-37873-1**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

### **RECEIPT**

The samples were received on 5/30/2014 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.4° C.

### **VOLATILE ORGANIC COMPOUNDS (GCMS)**

Samples PLR063G0514 (240-37873-1) and PLR062G0514 (240-37873-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 06/05/2014.

Samples PLR063G0514 (240-37873-1)[1000X] and PLR062G0514 (240-37873-2)[1000X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the VOCs analysis.

All quality control parameters were within the acceptance limits.

### **SEMOVOLATILE ORGANIC COMPOUNDS (GCMS)**

Samples PLR063G0514 (240-37873-1) and PLR062G0514 (240-37873-2) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 06/03/2014 and analyzed on 06/06/2014 and 06/09/2014.

Sample PLR063G0514 (240-37873-1)[20X] required dilution prior to analysis due to the nature of the sample matrix. The reporting limits have been adjusted accordingly.

Di-n-butyl phthalate was detected in method blank MB 240-133077/15-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Bis(2-ethylhexyl) phthalate was detected in method blank MB 240-133077/15-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The laboratory control sample (LCS/) for batch 133077 recovered outside control limits for Hexachlorocyclopentadiene. Hexachlorocyclopentadiene has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Results have been flagged accordingly.

The continuing calibration verification (CCV) recovered above the upper control limit for 4-Chloroaniline. Sample PLR063G0514 (240-37873-1) associated with this CCV was non-detect for the affected analyte; therefore, the data have been reported.

The CCV associated with sample PLR063G0514 (240-37873-1) recovered low for 3-Nitroaniline. The sample was ND for the affected analyte; therefore, no corrective action was taken. Additionally, an LODV was analyzed at the RL to support the ND's.

No other difficulties were encountered during the SVOCs analysis.

All other quality control parameters were within the acceptance limits.

#### **CHLORINATED PESTICIDES**

Samples PLR063G0514 (240-37873-1) and PLR062G0514 (240-37873-2) were analyzed for chlorinated pesticides in accordance with EPA SW-846 Method 8081B. The samples were prepared on 06/03/2014 and analyzed on 06/06/2014.

Decachlorobiphenyl failed the surrogate recovery criteria low for PLR063G0514 (240-37873-1). Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. This sample contained an allowable number of surrogate compounds outside limits; therefore, the results have been reported and qualified.

No other difficulties were encountered during the pesticides analysis.

All other quality control parameters were within the acceptance limits.

#### **POLYCHLORINATED BIPHENYLS (PCBs)**

Samples PLR063G0514 (240-37873-1) and PLR062G0514 (240-37873-2) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The samples were prepared on 06/02/2014 and analyzed on 06/03/2014.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required. All of the samples in this data set analyzed for PCBs were subjected to the sulfuric acid cleanup procedure before instrumental analysis, per EPA Method 3665A.

No difficulties were encountered during the PCBs analysis.

All quality control parameters were within the acceptance limits.

#### **TOTAL RECOVERABLE METALS (ICP)**

Samples PLR063G0514 (240-37873-1) and PLR062G0514 (240-37873-2) were analyzed for total recoverable metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 06/02/2014 and analyzed on 06/05/2014.

Barium was detected in method blank MB 240-132948/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No other difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

#### **TOTAL MERCURY**

Samples PLR063G0514 (240-37873-1) and PLR062G0514 (240-37873-2) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 06/02/2014 and analyzed on 06/03/2014.

According to UTC requirements, the PRDL Standard must be analyzed at a minimum of twice per eight hour working shift. On this analytical run, the eight hour minimum requirement was exceeded. The opening PRDL Standard was analyzed at 08:59, and the closing PRDL Standard was analyzed at 17:75. The percent recoveries for both the opening and closing PRDL Standards were within acceptance criteria. Results for samples PLR063G0514 (240-37873-1) and PLR062G0514 (240-37873-2) were accepted.

No other difficulties were encountered during the mercury analysis.

All other quality control parameters were within the acceptance limits.

## DATA REPORTING QUALIFIERS

Client: EnSafe, Inc.

Job Number: 240-37873-1

Lab Section	Qualifier	Description
GC/MS VOA	E	Result exceeded calibration range.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC/MS Semi VOA	B	Compound was found in the blank and sample.
	J	Indicates an Estimated Value for TICs
	*	LCS or LCSD exceeds the control limits
	N	Presumptive evidence of material.
	E	Result exceeded calibration range.
	T	Result is a tentatively identified compound (TIC) and an estimated value.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
	p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
Metals	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Final Data Tracking

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

## CASE NARRATIVE

**Client: EnSafe, Inc.**

**Project: MH3 Oil Source Investigation**

**Report Number: 240-37948-1**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

### **RECEIPT**

The samples were received on 5/31/2014 9:35 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the three coolers at receipt time were 2.4° C, 2.8° C and 3.6° C.

### **VOLATILE ORGANIC COMPOUNDS (GCMS)**

Samples PLR061G0514 (240-37948-1), PLR060G0514 (240-37948-2), PLR059G0514 (240-37948-3), PLR058G0514 (240-37948-4), PLR057G0514 (240-37948-5), CARMW51G0514 (240-37948-6), CARMW52G0514 (240-37948-7) and TRIP BLANK (240-37948-8) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260C. The samples were analyzed on 06/05/2014, 06/11/2014 and 06/12/2014.

Samples PLR061G0514 (240-37948-1)[2500X], CARMW51G0514 (240-37948-6)[2.5X] and CARMW52G0514 (240-37948-7)[20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Sample PLR058G0514 (240-37948-4)[10X] was diluted due to foaming at the time of purging during the original analysis. The reporting limits have been adjusted accordingly.

Methylene Chloride was detected in method blank MB 240-134234/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Methylene Chloride was detected in method blank MB 240-134356/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The laboratory control sample (LCS) for batch 134234 recovered outside control limits for trans-1,3-Dichloropropene. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) for batch 134356 recovered outside control limits for trans-1,3-Dichloropropene. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) for analytical batch 134234 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

The continuing calibration verification (CCV) for analytical batch 134356 exceeded control criteria for multiple compounds. The samples associated with this CCV were non-detects for the affected analytes. In accordance with the laboratory SOP, a low level CCV at the reporting limit (labeled as an MRL) was analyzed and the affected compounds were detected; therefore the data has been reported. No further corrective action was required.

No other difficulties were encountered during the VOCs analysis.

All other quality control parameters were within the acceptance limits.

#### **SEMOVOLATILE ORGANIC COMPOUNDS (GCMS)**

Samples PLR061G0514 (240-37948-1), PLR060G0514 (240-37948-2), PLR059G0514 (240-37948-3), PLR058G0514 (240-37948-4), PLR057G0514 (240-37948-5), CARMW51G0514 (240-37948-6) and CARMW52G0514 (240-37948-7) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 06/03/2014 and 06/04/2014 and analyzed on 06/06/2014 and 06/09/2014.

Sample PLR058G0514 (240-37948-4)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Di-n-butyl phthalate was detected in method blank MB 240-133077/15-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Bis(2-ethylhexyl) phthalate was detected in method blank MB 240-133077/15-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Bis(2-ethylhexyl) phthalate and Di-n-butyl phthalate were detected in method blank MB 240-133294/6-A at levels exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

The laboratory control sample (LCS) for batch 133077 recovered outside control limits for Hexachlorocyclopentadiene. Hexachlorocyclopentadiene has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Results have been flagged accordingly.

The laboratory control sample (LCS) for batch 133294 recovered outside control limits for Hexachlorocyclopentadiene. Hexachlorocyclopentadiene has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. The results have been flagged accordingly.

The continuing calibration verification (CCV) recovered above the upper control limit for 4-Chloroaniline. Samples PLR057G0514 (240-37948-5), PLR058G0514 (240-37948-4), PLR059G0514 (240-37948-3), PLR060G0514 (240-37948-2), PLR061G0514 (240-37948-1) associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

The CCV associated with these samples recovered low for 3-Nitroaniline. Since the samples were ND for the affected analyte - no corrective action was taken. Additionally, An LODV was analyzed at the RL to support the ND's.

No other difficulties were encountered during the SVOCs analysis.

All other quality control parameters were within the acceptance limits.

#### **CHLORINATED PESTICIDES**

Samples PLR061G0514 (240-37948-1), PLR060G0514 (240-37948-2), PLR059G0514 (240-37948-3), PLR058G0514 (240-37948-4), PLR057G0514 (240-37948-5), CARMW51G0514 (240-37948-6) and CARMW52G0514 (240-37948-7) were analyzed for chlorinated pesticides in accordance with EPA SW-846 Method 8081B. The samples were prepared on 06/03/2014 and analyzed on 06/06/2014.

Samples PLR061G0514 (240-37948-1)[5X], PLR060G0514 (240-37948-2)[5X], PLR059G0514 (240-37948-3)[20X], PLR058G0514 (240-37948-4)[2X] and CARMW51G0514 (240-37948-6)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Tetrachloro-m-xylene failed the surrogate recovery criteria high for PLR061G0514 (240-37948-1).

Decachlorobiphenyl and Tetrachloro-m-xylene failed the surrogate recovery criteria low for PLR058G0514 (240-37948-4).

Decachlorobiphenyl failed the surrogate recovery criteria low for PLR057G0514 (240-37948-5). Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. This sample contained an allowable number of surrogate compounds outside limits. These results have been reported and qualified.

Decachlorobiphenyl failed the surrogate recovery criteria low for CARMW52G0514 (240-37948-7). Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. This sample contained an allowable number of surrogate compounds outside limits. These results have been reported and qualified.

The continuing calibration verification (CCV) associated with batch 133651 recovered above the upper control limit for Endrin and Methoxychlor. Samples (LCS 240-133080/13-A) and (MB 240-133080/12-A) associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No other difficulties were encountered during the pesticides analysis.

All other quality control parameters were within the acceptance limits.

#### **POLYCHLORINATED BIPHENYLS (PCBs)**

Samples PLR061G0514 (240-37948-1), PLR060G0514 (240-37948-2), PLR059G0514 (240-37948-3), PLR058G0514 (240-37948-4), PLR057G0514 (240-37948-5), CARMW51G0514 (240-37948-6) and CARMW52G0514 (240-37948-7) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082A. The samples were prepared on 06/03/2014 and analyzed on 06/05/2014.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required. All of the samples in this data set analyzed for PCBs were subjected to the sulfuric acid cleanup procedure before instrumental analysis, per EPA Method 3665A.

No difficulties were encountered during the PCBs analysis.

All quality control parameters were within the acceptance limits.

#### **TOTAL RECOVERABLE METALS (ICP)**

Samples PLR061G0514 (240-37948-1), PLR060G0514 (240-37948-2), PLR059G0514 (240-37948-3), PLR058G0514 (240-37948-4), PLR057G0514 (240-37948-5), CARMW51G0514 (240-37948-6) and CARMW52G0514 (240-37948-7) were analyzed for total recoverable metals (ICP) in accordance with EPA SW-846 Method 6010C. The samples were prepared on 06/03/2014 and analyzed on 06/05/2014.

Barium was detected in method blank MB 240-133131/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No other difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

#### **TOTAL MERCURY**

Samples PLR061G0514 (240-37948-1), PLR060G0514 (240-37948-2), PLR059G0514 (240-37948-3), PLR058G0514 (240-37948-4), PLR057G0514 (240-37948-5), CARMW51G0514 (240-37948-6) and CARMW52G0514 (240-37948-7) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 06/03/2014 and analyzed on 06/05/2014.

The opening and closing PRDL standard associated with batch 240-133591 recovered Mercury below 80% at 70% and 61% respectively. Samples CARMW51G0514 (240-37948-6), CARMW52G0514 (240-37948-7), PLR057G0514 (240-37948-5), PLR058G0514 (240-37948-4), PLR059G0514 (240-37948-3), PLR060G0514 (240-37948-2), PLR061G0514 (240-37948-1) were affected.

No other difficulties were encountered during the mercury analysis.

All other quality control parameters were within the acceptance limits.

## DATA REPORTING QUALIFIERS

Client: EnSafe, Inc.

Job Number: 240-37948-1

<b>Lab Section</b>	<b>Qualifier</b>	<b>Description</b>
GC/MS VOA	B	Compound was found in the blank and sample.
	J	Indicates an Estimated Value for TICs
	*	LCS or LCSD exceeds the control limits
	N	Presumptive evidence of material.
	E	Result exceeded calibration range.
	T	Result is a tentatively identified compound (TIC) and an estimated value.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC/MS Semi VOA	B	Compound was found in the blank and sample.
	J	Indicates an Estimated Value for TICs
	*	LCS or LCSD exceeds the control limits
	N	Presumptive evidence of material.
	T	Result is a tentatively identified compound (TIC) and an estimated value.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
	p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
Metals	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
