Login Sample Receipt Checklist

Client: O'Brien & Gere Inc of North America

Job Number: 200-29972-1

Login Number: 29972
List Number: 1
Creator: Lavigne III, Scott M

List Source: TestAmerica Burlington

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	Thermal preservation not required.
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	N/A	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Completed Field Data Forms

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Christopher Finke Date/Time Prepared 9/23/15 @ 1300

Preparer's Affiliation O'Brien & Gere Phone No. 315-956-6100

Purpose of Investigation SVI Sampling

1. OCCUPANT: Owner/occupant not present

Interviewed: Y / N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ___)

Interviewed: Y / N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	Commercial/Multi-use
Industrial	Church	Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? ____

If the property is commercial, type?

Business Type(s) Currently used as warehouse for Rescue Mission Donations

Does it include residences (i.e., multi-use)? Y / N (NA) If yes, how many? ____

Other characteristics:

Number of floors On-grade w/mezzanines Building age ~1950's

Is the building insulated? Y / N partially insulated How air tight? Tight / Average / (Not Tight)

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Airflow near source

Outdoor air infiltration

Outdoor air infiltration is primarily at the NE corner where part of the building has been torn down.

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

a. Above grade construction:	wood frame	concrete and	stone metal frame	brick In garage
b. Basement type:	full	crawlspace	slab	other _____
c. Basement floor:	concrete	dirt	stone	other _____
d. Basement floor:	uncovered	covered	partially covered with tile (vinyl)	
e. Concrete floor:	unsealed	sealed	sealed with _____	
f. Foundation walls:	poured	block In garage	stone	other _____
g. Foundation walls:	unsealed	sealed	sealed with _____	
h. The basement is:	wet	damp	dry	moldy
i. The basement is:	finished	unfinished	partially finished	
j. Sump present?	Y / N			
k. Water in sump?	Y / N / not applicable			

Basement/Lowest level depth below grade: — (feet) on grade

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Building is large - former industrial. There are several floor drains. Slab is generally competent, without cracks. ~~Garage~~ in main building & garage

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation	Heat pump	Hot water baseboard	Hot water - Boilers located in boiler room.
Space Heaters	Stream radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

Natural Gas	Fuel Oil	Kerosene
~~Electric~~	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: —

Boiler/furnace located in: Basement Outdoors Main Floor Other_____

Air conditioning: (Central Air) Window units Open Windows None

Are there air distribution ducts present? Y / N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

NA

7. OCCUPANCY

Is basement/lowest level occupied? Full-time (Occasionally) (Seldom) Almost Never

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	NA
1st Floor	Unoccupied - Storage for Rescue Mission
2nd Floor	NA
3rd Floor	
4th Floor	

8. FACTORS THAT MAY influence INDOOR AIR QUALITY

a. Is there an attached garage? Y / (N)

b. Does the garage have a separate heating unit? (Y) N / NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) (Y) N / NA Please specify_____

d. Has the building ever had a fire? Y / N When? Unknown

e. Is a kerosene or unvented gas space heater present? Y / (N) Where?_____

f. Is there a workshop or hobby/craft area? Y / (N) Where & Type?_____

g. Is there smoking in the building? (Y) N How frequently? - In Garage

h. Have cleaning products been used recently? Y / (N) When & Type? _____

i. Have cosmetic products been used recently? Y / (N) When & Type? _____

j. Has painting/staining been done in the last 6 months? Y / N Where & When? Unknown

k. Is there new carpet, drapes or other textiles? Y / (N) Where & When? _____

l. Have air fresheners been used recently? Y / (N) When & Type? _____

m. Is there a kitchen exhaust fan? (NA) Y / N If yes, where vented? _____

n. Is there a bathroom exhaust fan? Y / N If yes, where vented? — There is an exhaust fan in the garage

o. Is there a clothes dryer? Y / N If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / N When & Type? Unknown

Are there odors in the building? (Y) / N

If yes, please describe: Garage odor of motor oil and fuel from cars + lawn equipment. Main building has a strong mold/mildew odor.

Do any of the building occupants use solvents at work? (Y) N

(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? Garage is used for automobile repair.

If yes, are their clothes washed at work? Y / (N)

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) — No
Yes, use dry-cleaning infrequently (monthly or less) — (Unknown)
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / (N) Date of Installation: _____

Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: (Public Water) Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: (Public Sewer) Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: (NA)

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

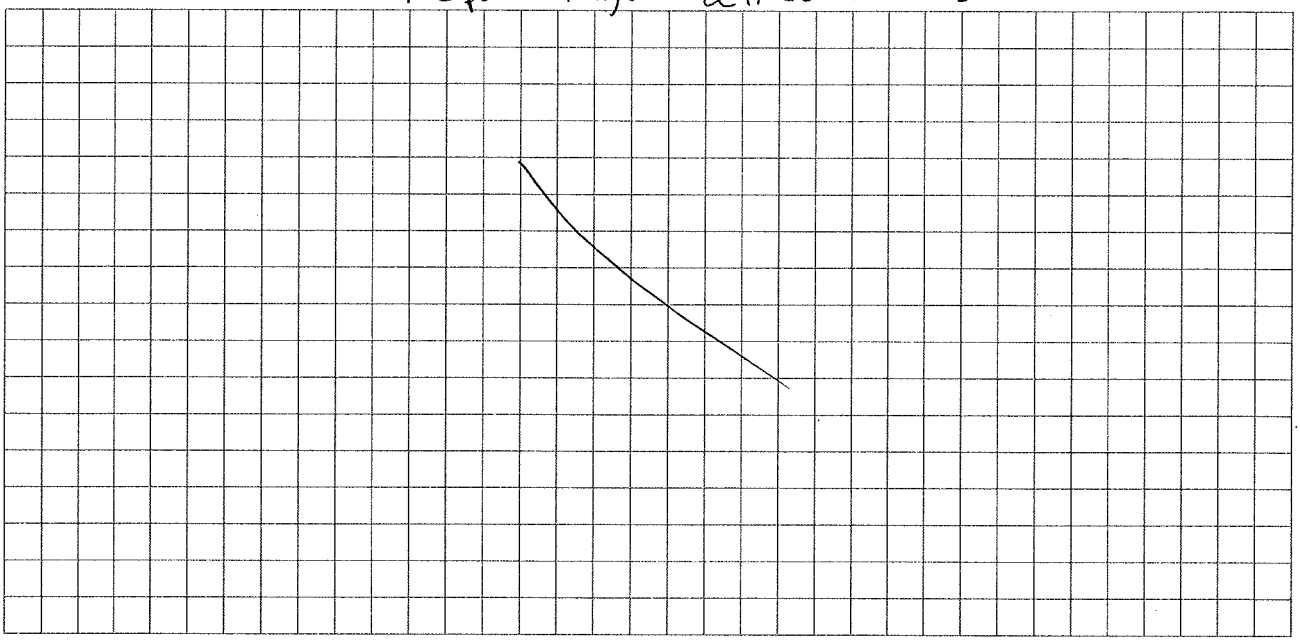
c. Responsibility for costs associated with reimbursement explained? Y / N (NA)

d. Relocation package provided and explained to residents? Y / N

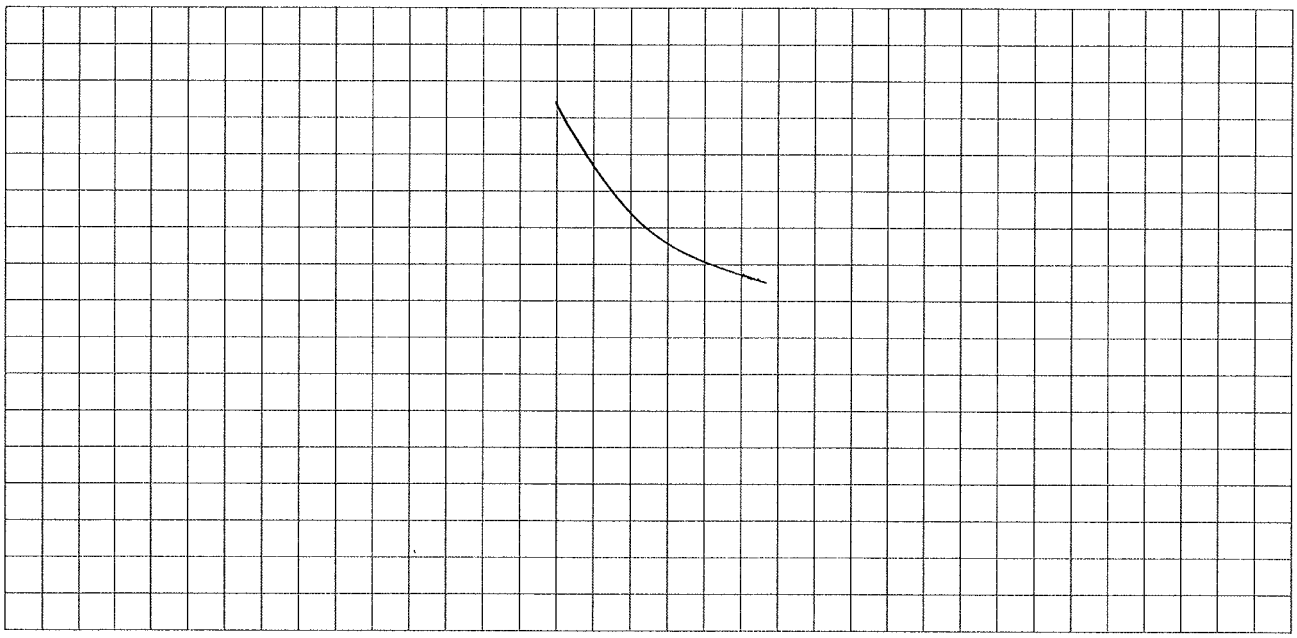
11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement: See Report Figure attachment.



First Floor:

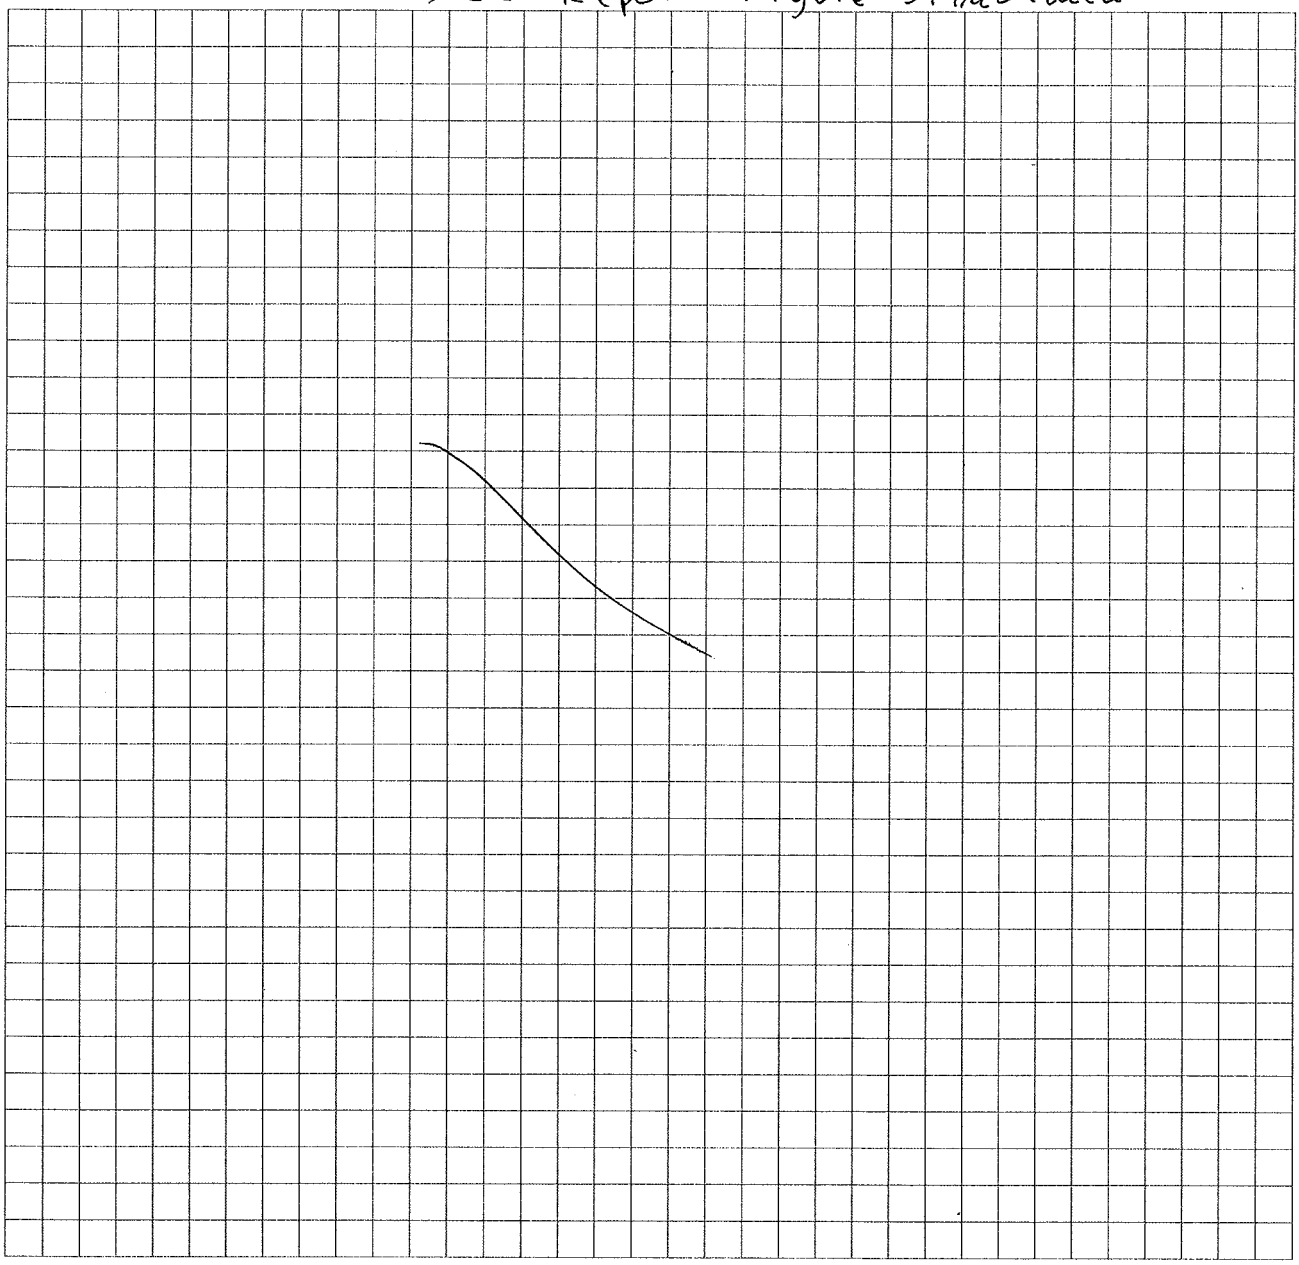


12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

See Report Figure Attachment



13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: RAE ppbRAE 3000

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N
North Garage Tenant	2 snowblowers, 2 chainsaws, 1 soil tiller :			petroleum distallates, gasoline		Y
	2 pump sprayers for pesticides ← assumed: Unknown					Y
South Garage Tenant :	Can Quest Brake Parts Cleaner	12 x 14oz	Used + new	NL		
	Macs Engine Cleaner	4 x 16oz	Used + new	NL		
	PB Blaster Penetrating Catalyst	11oz	Used	Aromatics, Napthalene, Petro. Distillates		
	CRC Sensor Cleaner	11 & 10 oz	Used	Hexane		
	Pyroil Starting Fluid	10 oz	Used	Heptane		
	Valvoline Throttle Body Cleaner	3 oz	Used	Acetone, xylene		
	Motor Oil	~ 10 Qts	Used + new	Petroleum distillates		
	3M Paint Defender	6 cans	Used + new	NL		
	Bars Leaks Radiator Stop Leak	10 oz	Used	NL		
	Gunk Belt Dressing	6 oz		NL		
	Several bottles of	Unknown contents - starter fluid, gasoline				
	Open drain pans of	radiator fluid and motor oil				
	Dupli color Spray paint	~3 x 11oz	Used	Acetone, propane, MEK, Butane, Toluene, Ethanol, MIK		
	Evidence of welding					
	Tires					
Main Building	Open warehouse w/ No	Inventory except Rescue Mission boxes of Contents.			of unknown	

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**

** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

Re:	Preliminary Vapor Intrusion Sampling Results, Former GE Farrell Road Site, Site # 7-34-055		Virginia Robbins, BS&K
File:	5851/41510		
Date:	March 12, 2009		

This Technical Memorandum (TM) presents the results of sampling conducted at the former GE Farrell Road Site (Site) on December 3, 2008 for the 2008-2009 heating season. The December 3, 2008 sampling was performed in response to the 2007-2008 heating season sampling recommendations presented in the February 21, 2008 report by O'Brien & Gere and a letter from the New York State Department of Environmental Conservation (NYSDEC), dated May 1, 2008.

The sampling was performed in accordance with the previous work plans submitted to NYSDEC to confirm trichloroethene (TCE) and 1,1-dichloroethene (1,1-DCE) concentrations at previous sampling locations (Locations) 3 and 2, respectively. This TM presents the additional sampling data, evaluates it with respect to the potential for vapor intrusion, and provides recommendations for next steps.

1. Site Background

The Site consists of 156 acres in an industrial zone setting located on Farrell Road and John Glenn Boulevard in the Town of Geddes, northeast of Routes 690 and 90 and south of the Seneca River. Nearly half of the Site (81 acres) is classified as a Class I wetlands. Ground water flows in a north/northwest direction across the Site toward Seneca River. Depth to ground water in the developed portion of the Site is approximately ten feet below ground surface (bgs). The developed portion of the Site is paved and contains four on-Site buildings; Buildings 1 and 2, former test building, and maintenance garage. Figure 1 shows Buildings 1 and 2.

There are three primary historic source areas relevant to vapor intrusion potential at the Site, referred to as areas of concern (AOC), where interim remedial measures (IRMs) were implemented.[1] The following identifies the locations (also shown on Figure 1) and gives a description of each AOC:

- AOC 5, located along the west side of Building 2, was an area where nine underground storage tanks (USTs) and a dry well were removed.
- AOC 7, located along the east side of Building 2, was an area of a former fuel oil UST and where drums containing Freon were rinsed.
- AOC 16, located adjacent to the maintenance garage, was an area of a former gasoline UST.

Currently, the Site is classified as Class 4 on the New York State Registry of Inactive Hazardous Waste Disposal Sites, based on the effectiveness of the IRMs. A ground water extraction and treatment system at the Site has been deemed effective at controlling off-site migration of shallow contaminated ground water. Concentrations of VOCs in ground water are periodically measured from samples collected from monitoring wells located at the Site. Building 2 is currently operated by Rite Aid Corporation who uses it as warehouse space for product inventory for its retail outlets.

In response to a request by the NYSDEC in August 2006, LMC conducted sampling at the Site to assess the

[1] Note that there were other AOCs at the Site where some remedial work was completed, but they are not considered relevant to this investigation.

potential for vapor intrusion. LMC retained O'Brien & Gere to conduct the vapor intrusion sampling, which was performed in February 2007 for the 2006-2007 heating season. The results of the sampling were summarized in a technical memorandum in May 2007, in which further monitoring for TCE and 1,1-DCE was recommended for two of the five sampling locations. Further monitoring was conducted in December 2007 for the 2007-2008 heating season, the results of which were reported by O'Brien & Gere in a technical memorandum in February 2008. Comparison of December 2007 results with the February 2007 showed that sub-slab vapor concentrations of 1,1-DCE decreased significantly at one of the two locations (Location 2) while remaining not detected at the other location (Location 3). TCE sub-slab concentration increased at Location 2 while it decreased at Location 3 . Therefore, additional sampling was recommended at Location 2 for 1,1-DCE to confirm the sub-slab concentration decrease and at Location 3 for TCE to monitor its sub-slab concentration. The remainder of the TM discusses the additional sampling and presents the results.

2. Vapor Intrusion Sampling

The vapor intrusion sampling was conducted on December 3, 2008. Samples of sub-slab vapor, indoor air, and ambient air were collected simultaneously over an 8-hour period. Samples were collected in accordance with the approved work plan. Javier Perez of the NYSDEC was present during a portion of the sample collection activities.

2.1 Sampling Locations and Methods

Paired sub-slab vapor and indoor air sample sets were collected at two locations at the northern portion of Building 2, as shown in Figure 1. The sampling locations were re-installed within approximately one-foot of the sampling locations sampled in February 2007. Sample sets were collected at the following locations and for the following compounds:

Sample IDs	Sample Location	Compound
SS-2-FR, IA-2-FR	Location 2 - Middle of northern end of building	1,1-DCE
SS-3-FR, IA-3-FR	Location 3 - Northeast corner of building	TCE

In addition to and concurrent with the sub-slab and indoor air sampling, an ambient air sample (Sample ID AA-FR) was collected immediate to and upwind of the building to assess the potential of impacts from upwind air sources on indoor air concentrations. The ambient air sample was located along a fence southwest of the building, near Farrell Road, as shown on Figure 1.

Air samples were collected using 6-liter pre-evacuated Summa® canisters. Sample collection rates were maintained by laboratory-calibrated constant-differential low volume flow controllers. Vacuum readings of the canisters were obtained and documented prior to sample collection and upon completion of sampling. Sample identifications, vacuum readings, flow controller identification numbers, and other relevant information were recorded on field forms provided in Attachment 1 of this document.

Sub-slab soil vapor samples were collected by drilling a 3/8-inch diameter hole in the building's slab near the locations of the previous sub-slab sampling, inserting inert food-grade tubing, sealing the tubing to the slab with beeswax, purging the tubing of indoor air, and slowly pulling (<15 cc/min) sub-slab vapor into a canister. The ambient and indoor air samples were collected by slowly pulling air into the canisters, which were situated at a height of 3 to 5 feet above the ground or slab. Samples were collected over an 8-hour period, utilizing batch certified-clean canisters for sub-slab samples and canisters that were individually certified-clean for low level

analysis for indoor and ambient air samples. After sample collection, the canisters were shipped under routine chain-of-custody to a subcontracted laboratory, Air Toxics, Ltd. (Air Toxics) of Folsom, CA, where they were analyzed by USEPA Method TO-15. Air Toxics is certified under the Environmental Laboratory Approval Program (ELAP) and by NYSDOH for TO-15 analyses. Canister certifications and Chain-of-Custody forms can be found with the analytical results in Attachment 2.

2.2 Quality Control

One duplicate sub-slab sample (duplicate to SS-3-FR-120308) and one duplicate indoor air sample (duplicate to IA-2-FR-120308) were collected as part of this sampling program. The duplicate sub-slab sample was collected by installing a stainless steel "tee" to the sample tubing from which the canister pulled sub-slab vapor. The combined sampling rate of sub-slab vapor from the duplicate sample locations was less than 0.025 liters per minute. The indoor air duplicate sample and indoor air sample were located within 1 foot of each other, positioned so that indoor air was collected at the same height.

Additionally, a Data Usability Summary Report (DUSR) was prepared for this sampling program to compare sample data with validation criteria prescribed by the United States Environmental Protection Agency's (USEPA) data validation guidance[2]. The DUSR is included as Attachment 3.

3. Building Survey and Chemical Inventory

Prior to sampling, the building tenant (Rite Aid) was requested to provide an inventory of the building's contents so that an inventory of VOC-containing materials (such as aerosols, cleaners) could be documented (nearly all of building contents are warehoused in cardboard boxes without labels describing their contents). This inventory is provided in Attachment 4. Although the inventory is not detailed, it generally contains products such as tableware, holiday decorations, candles (no oils), and miscellaneous items. It does not appear that liquids, aerosols, or chlorinated solvents are included in the building's inventory.

O'Brien & Gere confirmed that the building survey information (e.g., building foundation, utilities, heating and ventilation systems, slab conditions and penetrations) collected during the initial sampling had not changed. Therefore a building survey form is not included in Attachment 4, but the following information is provided as an overview. Building 2's concrete floor (slab) is located on-grade. Except for some narrow cracks in the slab's surface, it is in excellent condition. Multiple floor drains as well as roof drains penetrate the floor throughout the building. The building is used as a warehouse, with few partitioning walls and separate rooms. The building is primarily heated by hot water radiators, located around the perimeter of the building. There is a loading dock area with three overhead doors located along the northern end of the building's west side, where two trucks were being loaded during the sampling. Two fan-operated hot water heating units were located above the dock area. There is a boiler room located near AOC 7, on the eastern side of the building. This room was found to be under neutral pressure with respect to outdoor pressure during boiler operation. There is an office, which is occasionally occupied, located near the loading docks.

4. Sampling Results and Data Evaluation

4.1. Sub-Slab and Indoor Air Sampling Results

Sample results for each set of samples (sub-slab and indoor air) are presented together in Table 1 for each sampling location. Results are presented in units of micrograms per cubic meter ($\mu g/m^3$). The laboratory reports are provided as Attachment 2.

4.2. Quality Assurance and Quality Control

Laboratory analytical results were subjected to data validation requirements in accordance with the USEPA procedures, referenced above. Quality assurance/quality control (QA/QC) samples included laboratory blanks, field duplicates, and matrix spike / matrix spike duplicates (MS/MSD).

The DUSR (Attachment 3) reports that there was one minor excursion from method and validation criteria. As a result, the data for the two sub-slab samples at Location 3 for TCE were flagged with a "J" qualifier as approximate due to a minor excursion in precision. The DUSR concludes that 100 percent of the data can be considered complete and usable for qualitative and quantitative purposes.

4.3. Data Evaluation

The sample results were evaluated to assess if:

- indoor air concentrations were attributable to vapor intrusion,
- sub-slab and indoor air concentrations changed significantly since the previous sampling, and
- sub-slab and indoor air concentrations require any follow-on actions as recommended by NYSDOH's two soil vapor / indoor air matrices.

4.3.1. Vapor Intrusion Evaluation

For Location 3, sub-slab concentrations of TCE were found to be 390 $\mu g/m^3$ and 550 $\mu g/m^3$ in the sub-slab and sub-slab duplicate samples, respectively. Indoor air concentrations of TCE at Location 3 were found to be below the analytical reporting limit for this compound (<0.90 $\mu g/m^3$).

At Location 2, 1,1-DCE was found below the analytical detection limit (<0.69 $\mu g/m^3$) in the sub-slab sample and at a concentration of 1.1 $\mu g/m^3$ in the indoor air sample.

Since no detectable levels of TCE were found in the indoor air and 1,1-DCE indoor air concentrations were found above the sub-slab sample concentration, we conclude that vapor intrusion is not occurring at detectable levels. However, the TCE concentration in the sub-slab at Location 3 has the potential to intrude at detectable levels in the future if slab conditions change.

4.3.2 Comparison of Results to Previous Sampling

Table 2 provides a side-by-side comparison of the February 2007 (2006-2007 heating season), December 2007 (2007-2008 heating season), and December 2008 (2008-2009 heating season) sampling results. The comparison shows that there was little change in the sub-slab and indoor air concentrations for TCE between the December

2007 and December 2008 sampling events.

The sub-slab concentration for 1,1-DCE at Location 2 during the December 2008 sampling event was similar to the concentration detected during the December 2007 sampling event, both significantly lower than the February 2007 1,1-DCE concentration.

The indoor air concentration of 1,1-DCE at Location 2 during the December 2008 sampling event was essentially the same as the indoor air concentration measured during the December 2007 sampling event. Both these concentrations of 1,1-DCE were lower than the 1,1-DCE concentration initially measured during the February 2007 sampling event, corresponding with the same trend in the sub-slab samples. It appears that the 1,1-DCE found in the indoor air and sub-slab samples collected in February 2007 has dissipated.

4.3.3. NYSDOH Matrices

The NYSDOH guidance document has soil vapor / indoor air matrices for a few compounds including TCE and 1,1-DCE. Using the sub-slab and indoor concentrations, the matrices suggest the next step in managing potential vapor intrusion. Table 1 includes a column for each sampling location and each compound that presents the recommended next step suggested by the matrices, using the indoor air and sub-slab vapor results.

For TCE at Location 3, the matrix suggests that mitigation be performed because the sub-slab vapor concentration is high enough that it may potentially cause future indoor air exposure if the slab or building conditions were to change. For 1,1-DCE at Location 2, the matrix suggests that no further action is necessary.

5. Summary and Recommendations for Next Steps

Similar to the December 2007 sample event, 1,1-DCE was found at significantly lower concentrations than the February 2007 sample event in both sub-slab vapor and indoor air, thereby confirming that 1,1-DCE has dissipated from the sub-slab. Based on the last two sampling events, NYSDOH guidance suggests that no further action is necessary for 1,1-DCE. That is our recommendation as well.

As discussed above, vapor intrusion is not occurring at detectable levels for TCE, and sub-slab and indoor air concentrations are relatively unchanged from previous sampling conducted in February and December 2007. Although the NYSDOH decision matrix suggests that mitigation should be considered to prevent future potential vapor intrusion, the guidance also states that its recommended actions are generic and can be modified to accommodate building-specific conditions. Therefore we recommend no further action regarding TCE at Location 3 as an alternative to mitigation for the following reasons:

1. The indoor air concentrations for TCE have been well below the NYSDOH air guideline value of 5 $\mu g/m^3$ over the 22 month monitoring period.
2. The building slab is in very good condition.
3. The building is entirely unoccupied during weekends and most of each workday. During the 8 to 10 hours per workday that it is occupied, the few building occupants rarely spend any time in the Location 3 area. Therefore, the amount of potential future exposure would be significantly less than the assumptions used by NYSDOH in developing its air guideline value.
4. Annual monitoring (re-sampling) has been performed and has not detected evidence of vapor intrusion.
5. Sub-slab vapor concentrations appear to be stable and well documented via the three sampling events.

The recommendation of no further action is predicated on 1) the slab staying intact and 2) the building not modified appreciably. Therefore, we also recommend that annual inspections of the building be conducted to identify slab breaches and building modifications. If breaches are found, we recommend that they are sealed, and if they cannot be sealed, then additional sub-slab and indoor air sampling be conducted. If building modifications are made that could increase the potential for sub-slab vapors to intrude (enclosing the areas above the slab, making them more air tight and creating a negative indoor air pressure), then additional sub-slab and indoor air sampling be conducted. The inspection findings and follow-on actions would be documented in a letter report after each annual inspection.

Sample Analysis Data

Air Toxics LTD.

AN ENVIRONMENTAL ANALYTICAL LABORATORY

12/22/2008

Mr. Mark Distler
OBrien & Gere
5000 Brittonfield Parkway

E. Syracuse NY 13057

Project Name: LMCO Farrell Rd
Project #: 41510.001.001

Dear Mr. Mark Distler

The following report includes the data for the above referenced project for sample(s) received on 12/5/2008 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for you air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Bryanna Langley at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Bryanna Langley

LABORATORY NARRATIVE
Modified TO-15
OBrien & Gere
Workorder# 0812173

Five 6 Liter Summa Canister (100% Certified) and two 6 Liter Summa Canister samples were received on December 05, 2008. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode. The method involves concentrating up to 1.0 liter of air. The concentrated aliquot is then flash vaporized and swept through a water management system to remove water vapor. Following dehumidification, the sample passes directly into the GC/MS for analysis.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	***TO-15***	***ATL Modifications***
ICAL %RSD acceptance criteria	+- 30% RSD with 2 compounds allowed out to < 40% RSD	30% RSD with 4 compounds allowed out to < 40% RSD
Daily Calibration	+- 30% Difference	</= 30% Difference with four allowed out up to </=40%.; flag and narrate outliers
Blank and standards	Zero air	Nitrogen
Method Detection Limit	Follow 40CFR Pt.136 App. B	The MDL met all relevant requirements in Method TO-15 (statistical MDL less than the LOQ). The concentration of the spiked replicate may have exceeded 10X the calculated MDL in some cases
Sample collection media	Summa canister	ATL recommends use of summa canisters to insure data defensibility, but will report results from Tedlar bags at client request

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Data Usability Summary Report

To:	Mark Distler	*cc:*
From:	Karen A. Storne	
Re:	Review of Data for the Vapor Intrusion Sampling, Former GE Farrell Road Site, Performed December 2008	
File:	5851/41510.100.100	
Date:	February 5, 2009	

This memorandum presents the results of the data validation of the sub-slab, indoor, and ambient air samples collected from the Former GE Farrell Road Site in Geddes, New York. Sample collection activities were conducted by O'Brien & Gere on December 3, 2008.

The following table summarizes the analysis performed for this sampling event.

Table 1-1. *Analytical method and reference*

Parameter	Method	Reference
VOCs	USEPA Method TO-15	1

Note:
1. United States Environmental Protection Agency (USEPA). 1999. *Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air.* Cincinnati, Ohio.

Air Toxics LTD. of Folsom, California (Air Toxics) performed the analyses.

The laboratory packages generated by Air Toxics contained quality control analysis and supportive raw data.

Full validation was performed on the samples collected for this sampling event.

The analytical data generated for this investigation were evaluated by O'Brien & Gere using the quality assurance/quality control (QA/QC) information presented in the following documents:

- United States Environmental Protection Agency (USEPA). 1999. *Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air.* Cincinnati, Ohio.

- O'Brien & Gere. 2007. *Vapor Intrusion Sampling Work Plan, Former GE Farrell Road Site. Site # 7-34-055. Geddes, New York.* Syracuse, New York.

Data affected by excursions from the previously mentioned QA/QC criteria are qualified using the following USEPA data validation guidance and professional judgment:

- United States Environmental Protection Agency (USEPA). 2006. *Validating Volatile Organic Analysis of Ambient Air in canister by Method TO-15,* HW-31, Revision 4. New York, New York.

USEPA data validation guidelines have been modified to reflect the requirements of the method used in the analysis of samples collected for this sampling event. Qualifiers are applied to data that fail to meet the quality control criteria presented in the USEPA method.

In accordance with the USEPA guidance, and utilizing professional judgment, the following qualifiers are used in this type of data validation:

"U" Indicates that the analyte was analyzed for, but was not detected. The associated value indicates the approximate sample concentration necessary to be detected (i.e., quantitation limit).

"J" Indicates that the detected analyte is present but the reported value may not be accurate or precise. The result should be considered approximate based on excursions from QA/QC criteria. This qualifier is also applied by the laboratory for organic analyses when the analyte concentration was greater than the method detection limit (MDL) but less than the quantitation limit (QL).

"UJ" Indicates that the analyte was not detected and the quantitation limit may be inaccurate or imprecise. The result should be considered approximate based on excursions from QA/QC criteria.

"R" Indicates that the quantitation limit or sample result is unreliable and has been rejected due to a major excursion from QA/QC criteria. The analyte may or may not be present in the sample. The data should not be used for qualitative or quantitative purposes.

The validation included checking the following parameters:

- Work plan compliance
- Chain-of-custody records
- Sample collection and canisters
- Holding times
- Calibrations
- Blank analysis
- Laboratory control sample (LCS)/Laboratory control sample duplicate (LCSD) analysis
- Field duplicate analysis
- Internal standards performance
- Gas chromatography/mass spectrometry (GC/MS) instrument performance check
- Target analyte quantitation, identification, and QLs
- Documentation completeness.

The samples that were submitted for data validation are listed in Table 1-2 presented in Attachment A.

The following sections of this memorandum present the results of the comparison of the analytical data to the QA/QC criteria specified above. Based on the QA/QC information review, an overall evaluation of data usability is also presented in the final section.

VALIDATION APPROACH

The following validation approach was applied for USEPA Method TO-15:

- The cumulative effect of the various QA/QC excursions is employed in assigning the final data qualifiers. For example, if a sample result is affected by low LCS recovery for which the "J" qualifier is applied, but severely low internal standard recoveries result in the rejection of the sample result (R), the final qualifier is "R". QA/QC excursions that do not result in the qualification of an analyte typically are not discussed.

- The "J" qualifier applied by the laboratory to organic results that were greater than the MDL but less than the QL was retained during the validation process.

- VOC target analytes are evaluated using the criteria of either 30 percent relative standard deviation (%RSD) for initial calibrations or calibration coefficient of greater than 0.990 for calibration curves. The calibration verifications are evaluated using the criteria of 30 percent difference (%D). Target analyte relative response factors (RRFs) should be greater than or equal to 0.05 for initial calibrations and calibration verifications.

- A holding time of 30 days from sample collection to analysis is used to evaluate holding times.

- In the case of blank contamination, samples that contain target analytes at less than five times the associated blank concentration and common laboratory contaminants at less than ten times the associated blank concentration are qualified as undetected (U). In the case that sample concentrations impacted by blank contamination are less than the QL, the concentration qualified as non-detected (U) is raised to the QL level.

- Laboratory established control limits were used to assess LCS and surrogate data, where available.

- Internal standard recoveries are evaluated using control limits of within 40% of the standard area of the associated calibration verification standard. For internal standard area recoveries of 10% or greater but less than the lower standard area, the associated target analyte results are qualified as approximate (J, UJ) to indicate minor internal standard recovery excursions. For internal standard area recoveries of less than 25%, associated non-detected results for target analytes are rejected (R) to indicate major internal standard recovery excursions.

- If percent recoveries are less than laboratory control limits but greater than 10%, non-detected and detected results are qualified as approximate (J, UJ). If percent recoveries are greater than laboratory control limits, detected results are qualified as approximate (J). If percent recoveries are less than 10%, detected results are qualified as approximate (J) and non-detected results are qualified as rejected (R).

- Field duplicate data were evaluated against relative percent difference (RPD) criteria of less than 25% for air samples when results were greater than five times the quantitation limit. When sample results for field duplicate pairs were less than five times the quantitation limit, the data were evaluated using control limits of plus or minus two times the quantitation limit. If RPDs for field duplicates are outside of validation criteria, detected and non-detected results are qualified as approximate (UJ, J). Qualification of data associated with field duplicate excursions is limited to the field duplicate pair.

SAMPLE COLLECTION AND CANISTERS

Consistent with previous sampling events and the Work Plan, canister blanks were not collected.

VOLATILE ORGANIC COMPOUND IN AIR DATA EVALUATION SUMMARY

The following QA/QC parameters were found to meet method and validation criteria or did not result in additional qualification of sample results:

- Work plan compliance
- Chain-of-custody records

- Holding times
- Calibrations
- Blank analysis
- LCS/LCSD analysis
- Internal standards performance
- GC/MS instrument performance check
- Target analyte identification
- Documentation completeness.

Excursions from validation criteria and additional observations are presented in the following section.

I. Field duplicate analysis

The results for trichloroethene in samples SS-3-FR-120308 and SS-DUP-FR-120308[SS-3-FR-120308] were qualified as approximate (J) due to a minor field duplicate RPD excursion.

II. Target analyte quantitation and QLs

As part of laboratory policy, air samples submitted to Air Toxics are routinely pressurized at the time of receipt at the laboratory. This pressurization step allows sufficient sample volume to be available in the case that multiple analyses are necessary for analysis. This step dilutes the sample within the canister which results in an increase in the QL.

Due to elevated concentrations of target analytes, additional dilutions were used in the analysis of samples SS-3-FR-120308 and SS-DUP-FR-120308[SS-3-FR-120308].

DATA USABILITY

Overall data usability with respect to completeness for the final sample results reported is 100 percent for the VOC air data. The VOC air data were identified as usable for qualitative and quantitative purposes. Based on the validation performed, the typical completeness goal of 95 percent was met for these analyses.

Table 1-2. Cross Reference Table

Samples collected and submitted for data validation

Laboratory Name	Laboratory Identification	Client Identification	Date Collected	Matrix	Analysis Requested

Data Usability Summary Reports

DATA VALIDATION MEMORANDUM

TO: M Distler **cc:** Eric Alongi
FROM: KA Storne
RE: Data Usability Summary Report for the Former GE Farrell Road Site
VI Sampling – Performed February 2016
FILE: 5851/50238.002.100
DATE: May 10, 2016

This Data Usability Summary Report (DUSR) presents the data validation results for indoor air, sub-slab soil gas and ambient air samples collected by O'Brien & Gere in February 2016 for the Lockheed Martin Corporation (LMC) at the Former GE Farrell Road Site.

Alpha Analytical (Alpha) of Mansfield, Massachusetts performed the laboratory analyses for the sampling event. The laboratory package generated by Alpha contained summary forms for quality control analysis and supportive raw data.

The analysis performed for this sampling event is summarized in Table 1 below.

Table 1. ***Analytical Methods and References***

Parameter	Method	Reference
Volatile Organic Compounds (VOCs)	USEPA Method TO-15	1

Note:
1. United States Environmental Protection Agency. 1999. Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air. Cincinnati, Ohio.

VOCs indicates volatile organic compounds.

The samples submitted for review are summarized in the attached Table 2. Table 3 presents the specific data validation approach applied to data generated for this investigation. Table 4 presents the Laboratory QA/QC analyses definitions.

Full validation was performed on the samples collected for this sampling event.

The analytical data generated for this investigation were evaluated by O'Brien & Gere using the quality assurance/quality control (QA/QC) information presented in the following documents:

- United States Environmental Protection Agency (USEPA), 1999. *Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air*. Cincinnati, Ohio.
- O'Brien & Gere. 2015. *Vapor Intrusion Sampling Work Plan - Revised, Former GE Farrell Road Site. Site # 7-34-055. Geddes, New York.* Syracuse, New York (Work Plan).

Data affected by excursions from the previously mentioned QA/QC criteria were qualified using the following USEPA data validation guidance and professional judgment:

- USEPA. 2014. *Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15. SOP HW-31, Revision 6*. Albany, New York

USEPA data validation guidelines have been modified to reflect the requirements of the methods used in the analysis of samples collected for this sampling event. Qualifiers were applied to data that failed to meet the quality control criteria presented in the USEPA methods.

In accordance with the USEPA guidance, and utilizing professional judgment, the following qualifiers are used in data validation:

"U" Indicates that the analyte was analyzed for, but was not detected. The associated value indicates the approximate sample concentration necessary to be detected.

"J" Indicates that the detected analyte is present but the reported value may not be accurate or precise. The result should be considered approximate based on excursions from QA/QC criteria.

"UJ" Indicates that the analyte was not detected and the quantitation limit (QL) may be inaccurate or imprecise. The result should be considered approximate based on excursions from QA/QC criteria.

"R" Indicates that the QL or sample result is unreliable and has been rejected due to a major excursion from QA/QC criteria. The analyte may or may not be present in the sample. The data should not be used for qualitative or quantitative purposes.

The validation included checking the following parameters:

- Chain-of-custody records;
- Sample collection;
- Canister evaluation;
- Holding times;
- Calibrations;
- Blank analysis;
- Laboratory control sample (LCS) analysis;
- Internal standards performance;
- Field duplicate analysis;
- Gas chromatography/mass spectrometry (GC/MS) instrument performance check;
- Target analyte quantitation, identification, and quanitation limits (QLs); and
- Documentation completeness.

The following sections of this memorandum present the results of the comparison of the analytical data to the QA/QC criteria specified above. Based on the QA/QC information review, an overall evaluation of data usability is also presented in the final section.

VOLATILE ORGANIC COMPOUND DATA EVALUATION SUMMARY

The following QA/QC parameters were found to meet method and validation criteria or did not result in additional qualification of sample results:

- Holding times;
- Blank analysis;
- LCS analysis;
- Internal standards performance;
- Field duplicate analysis;
- GC/MS instrument performance check;

Excursions from method or validation criteria and additional observations are described below.

I. DOCUMENT COMPLETENESS

Supplemental information was requested to complete the validation process.

II. CHAIN-OF-CUSTODY RECORDS

For the samples collected 2/19/16, the time the samples were relinquished from the field location to the Alpha courier was not listed on the record.

III. CANISTER EVALUATION

The laboratory evaluated the pre-sampling and post-sampling flow rates of the sample flow controllers, applying an acceptance criterion of 20% RPD. Due to minor flow controller flow rate check excursions, the result for the following samples were qualified as approximate (UJ, J): FR-IA01-021916, FR-IA04-021916, FR-SS04-021916 and FR-IA05-021916.

IV. CALIBRATIONS

Results in the following samples were qualified as approximate (UJ) due to minor calibration accuracy excursions:

- 1,2,4-Trichlorobenzene and Hexachlorobutadiene in samples FR-IA01-021916, FR-AA01-021916, FR-IA02-021916, FR-IA03-021916, FR-IA04-021916, FR-IA05-021916, FR-IA06-021916, FR-IA07-021916, FR-IA08-021916, FR-IA09-021916, FR-IA10-021916 and FR-IA11-021916.

VI. TARGET ANALYTE QUANTITATION, IDENTIFICATION AND QLS

Dilutions were performed for samples FR-SS02-021916, FR-SS06-021916 and FR-SS08-021916 due to high concentrations of target analytes. As a result of the dilutions, reported detection limits were elevated.

The following results were qualified as approximate (UJ, J) due to interferences identified by the laboratory during analysis:

- Acetone in samples FR-IA01-021916, FR-IA02-021916, FR-IA03-021916, FR-IA04-021916, FR-IA05-021916, FR-IA06-021916, FR-IA07-021916, FR-IA08-021916, FR-IA09-021916, FR-IA10-021916 and FR-IA11-021916.
- Acetone in samples FR-SS02-021916, FR-SS08-021916, FR-SS09-021916 and FR-SS11-021916.
- Isopropanol in samples FR-IA01-021916, FR-IA02-021916 and FR-IA11-021916.

DATA USABILITY

Overall data usability with respect to completeness for the sample results reported is 100 percent for the VOC air data. The VOC air data were identified as usable for qualitative and quantitative purposes. Based on the validation performed, the typical completeness goal of 95 percent was met for these analyses.

DATA VALIDATION MEMORANDUM

TO:	M Distler	cc:	EM Alongi – OBG
FROM:	KA Storne		
RE:	Data Usability Summary Report for the Former GE Farrell Road Site VI Sampling – Performed January 2017		
FILE:	5851/64466.001.019		
DATE:	March 17, 2017		

This Data Usability Summary Report (DUSR) presents the data validation results for indoor air and ambient air samples collected by O'Brien & Gere in January 2017 for the Lockheed Martin Corporation (LMC) at the Former GE Farrell Road Site.

Alpha Analytical (Alpha) of Mansfield, Massachusetts performed the laboratory analyses for the sampling event. The laboratory package generated by Alpha contained summary forms for quality control analysis and supportive raw data.

The analysis performed for this sampling event is summarized in Table 1 below.

Table 1. ***Analytical Methods and References***

Parameter	Method	Reference
Volatile Organic Compounds (VOCs)	USEPA Method TO-15	1

Note:

1. United States Environmental Protection Agency. 1999. Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air. Cincinnati, Ohio.

VOCs indicates volatile organic compounds.

The samples submitted for review are summarized in the attached Table 2. Table 3 presents the specific data validation approach applied to data generated for this investigation. Table 4 presents the Laboratory QA/QC analyses definitions.

Full validation was performed on the samples collected for this sampling event.

The analytical data generated for this investigation were evaluated by O'Brien & Gere using the quality assurance/quality control (QA/QC) information presented in the following documents:

- United States Environmental Protection Agency (USEPA), 1999. *Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air*. Cincinnati, Ohio.
- O'Brien & Gere. 2015. *Vapor Intrusion Sampling Work Plan - Revised, Former GE Farrell Road Site. Site # 7-34-055. Geddes, New York.* Syracuse, New York (Work Plan).

Data affected by excursions from the previously mentioned QA/QC criteria were qualified using the following USEPA data validation guidance and professional judgment:

- USEPA. 2014. *Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15. SOP HW-31, Revision 6*. Albany, New York

Qualifiers were applied to data that failed to meet the quality control criteria presented in the USEPA methods.

In accordance with the USEPA guidance, and utilizing professional judgment, the following qualifiers are used in data validation:

"U" Indicates that the analyte was analyzed for, but was not detected. The associated value indicates the approximate sample concentration necessary to be detected.

"J" Indicates that the detected analyte is present but the reported value may not be accurate or precise. The result should be considered approximate based on excursions from QA/QC criteria.

"UJ" Indicates that the analyte was not detected and the quantitation limit (QL) may be inaccurate or imprecise. The result should be considered approximate based on excursions from QA/QC criteria.

"R" Indicates that the QL or sample result is unreliable and has been rejected due to a major excursion from QA/QC criteria. The analyte may or may not be present in the sample. The data should not be used for qualitative or quantitative purposes.

The validation included checking the following parameters:

- Chain-of-custody records;
- Sample collection;
- Canister evaluation;
- Holding times;
- Calibrations;
- Blank analysis;
- Laboratory control sample (LCS) analysis;
- Internal standards performance;
- Field duplicate analysis;
- Gas chromatography/mass spectrometry (GC/MS) instrument performance check;
- Target analyte quantitation, identification, and quanitation limits (QLs); and
- Documentation completeness.

The following sections of this memorandum present the results of the comparison of the analytical data to the QA/QC criteria specified above. Based on the QA/QC information review, an overall evaluation of data usability is also presented in the final section.

VOLATILE ORGANIC COMPOUND DATA EVALUATION SUMMARY

The following QA/QC parameters were found to meet method and validation criteria or did not result in additional qualification of sample results:

- Holding times;
- Sample collection;
- Canister evaluation;
- Holding times;
- Calibrations;
- Blank analysis;

- LCS analysis;
- Internal standards performance;
- Field duplicate analysis;
- GC/MS instrument performance check;

Excursions from method or validation criteria and additional observations are described below.

I. DOCUMENT COMPLETENESS

Supplemental information was requested to complete the validation process.

II. CHAIN-OF-CUSTODY RECORDS

For the samples collected 1/17/17, the samples were relinquished 1/24/17 at 14:41 and were received by the next party on 1/25/17. During that transfer, although there is a time and date gap, the laboratory indicated that the samples were relinquished to an Alpha courier and were within control of Alpha personnel after that sample transfer. Also, the time the samples were received on 1/25/17 was illegible on the record. The samples were received at the Alpha laboratory on 1/25/17 at 11:50.

III. TARGET ANALYTE QUANTITATION, IDENTIFICATION AND QLS

The following results were qualified as approximate (UJ, J) due to interferences identified by the laboratory during analysis:

Acetone in samples FR-011717-IA-03, FR-011717-AA, FR-011717-IA-04, FR-011717-IAD [FR-011717-IA-04], FR-011717-IA-05, FR-011717-IA-06, FR-011717-IA-07, FR-011717-IA-08, FR-011717-IA-09 and FR-011717-IA-10.

DATA USABILITY

Overall data usability with respect to completeness for the sample results reported is 100 percent for the VOC air data. The VOC air data were identified as usable for qualitative and quantitative purposes. Based on the validation performed, the typical completeness goal of 95 percent was met for these analyses.

DATA VALIDATION MEMORANDUM

TO:	M Distler	cc:	Eric Alongi – OBG
FROM:	KA Storne		
RE:	Data Usability Summary Report for the Former GE Farrell Road Site VI Sampling – Performed July and August 2017		
FILE:	5851/64466.001.019		
DATE:	October 5, 2017		

This Data Usability Summary Report (DUSR) presents the data validation results for indoor air, ambient air and soil vapor samples collected by O'Brien & Gere in January 2017 for the Lockheed Martin Corporation (LMC) at the Former GE Farrell Road Site.

Alpha Analytical (Alpha) of Mansfield, Massachusetts performed the laboratory analyses for the sampling event. The laboratory package generated by Alpha contained summary forms for quality control analysis and supportive raw data.

The analysis performed for this sampling event is summarized in Table 1 below.

Table 1. Analytical Methods and References

Parameter	Method	Reference
Volatile Organic Compounds (VOCs)	USEPA Method TO-15 Low Level/SIM	1

Note:
1. United States Environmental Protection Agency. 1999. Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air. Cincinnati, Ohio.

VOCs indicates volatile organic compounds.
SIM indicates selected ion monitoring.

The samples submitted for review are summarized in the attached Table 2. Table 3 presents the specific data validation approach applied to data generated for this investigation. Table 4 presents the Laboratory QA/QC analyses definitions.

Full validation was performed on the samples collected for this sampling event.

The analytical data generated for this investigation were evaluated by O'Brien & Gere using the quality assurance/quality control (QA/QC) information presented in the following documents:

- United States Environmental Protection Agency (USEPA), 1999. *Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air*. Cincinnati, Ohio.
- O'Brien & Gere. 2015. *Vapor Intrusion Sampling Work Plan - Revised, Former GE Farrell Road Site. Site # 7-34-055. Geddes, New York.* Syracuse, New York (Work Plan).

Data affected by excursions from the previously mentioned QA/QC criteria were qualified using the following USEPA data validation guidance and professional judgment:

- USEPA. 2014. *Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15. SOP HW-31, Revision 6*. Albany, New York

Qualifiers were applied to data that failed to meet the quality control criteria presented in the USEPA methods.

In accordance with the USEPA guidance, and utilizing professional judgment, the following qualifiers are used in data validation:

"U" Indicates that the analyte was analyzed for, but was not detected. The associated value indicates the approximate sample concentration necessary to be detected.

"J" Indicates that the detected analyte is present but the reported value may not be accurate or precise. The result should be considered approximate based on excursions from QA/QC criteria.

"UJ" Indicates that the analyte was not detected and the quantitation limit (QL) may be inaccurate or imprecise. The result should be considered approximate based on excursions from QA/QC criteria.

"R" Indicates that the QL or sample result is unreliable and has been rejected due to a major excursion from QA/QC criteria. The analyte may or may not be present in the sample. The data should not be used for qualitative or quantitative purposes.

The validation included checking the following parameters:

- Chain-of-custody records;
- Sample collection;
- Canister evaluation;
- Holding times;
- Calibrations;
- Blank analysis;
- Laboratory control sample (LCS) analysis;
- Internal standards performance;
- Field duplicate analysis;
- Gas chromatography/mass spectrometry (GC/MS) instrument performance check;
- Target analyte quantitation, identification, and quanitation limits (QLs); and
- Documentation completeness.

The following sections of this memorandum present the results of the comparison of the analytical data to the QA/QC criteria specified above. Based on the QA/QC information review, an overall evaluation of data usability is also presented in the final section.

VOLATILE ORGANIC COMPOUND DATA EVALUATION SUMMARY

The following QA/QC parameters were found to meet method and validation criteria or did not result in additional qualification of sample results:

- Holding times;
- Blank analysis;
- LCS analysis;
- Internal standards performance;
- Field duplicate analysis;
- GC/MS instrument performance check;

Excursions from method or validation criteria and additional observations are described below.

I. DOCUMENT COMPLETENESS

Supplemental information was requested to complete the validation process.

II. CHAIN-OF-CUSTODY RECORDS AND SAMPLE COLLECTION

For the samples collected 7/27/17, 7/31/17 and 8/1/17, the samples were relinquished 8/2/17 at 17:50 and were received by another party on 8/3/17 at 01:10. During that transfer, although there is a time and date gap, the laboratory indicated that the samples were relinquished to an Alpha courier and were within control of Alpha personnel after that sample transfer.

For the third transfer of the samples, the year was not listed on the record when the samples were relinquished on 8/3/17 at 05:46.

The chain-of-custody record listed only the TO-15 SIM analysis for indoor air and ambient air samples. However the laboratory properly performed and reported both TO-15 SIM and TO-15 Low Level analyses for these samples.

The laboratory indicated that the flow controller identification (1358) listed on the chain-of-custody record was inconsistent with the correct flow controller identification (0109) for sample FR-073117-SS-12.

III. CANISTER EVALUATION

The laboratory evaluated the pre-sampling and post-sampling flow rates of the sample flow controllers, applying an acceptance criterion of 20% RPD. Due to minor flow controller flow rate check excursions, the result for the following samples were qualified as approximate (UJ, J): FR-073117-SS-19, FR-073117-IA-10, FR-072717-IA-06 and FR-080117-SS-05.

A field duplicate for indoor air samples was not collected for this sampling event. Therefore sample collection precision for indoor air samples could not be evaluated.

IV. CALIBRATIONS

The following results were qualified as approximate (UJ, J) due to initial calibration or calibration verification excursions:

- Isopropyl alcohol in samples FR-080117-SS-14, FR-080117-SS-DUP [FR-080117-SS-08], FR-080117-SS-08, FR-080117-SS-05, FR-080117-SS-13, FR-080117-SS-12, FR-080117-SS-16 and FR-080117-SS-15.
- 1,2,4-Trichlorobenzene and hexachlorobutadiene in samples FR-073117-SS-17, FR-080117-SS-06, FR-073117-SS-20, FR-073117-SS-04, FR-073117-SS-22, FR-073117-SS-18, FR-073117-SS-19 and FR-073117-SS-21.

V. TARGET ANALYTE QUANTITATION, IDENTIFICATION AND QLS

The following results were qualified as approximate (UJ) due to an interference identified and reported by the laboratory during analysis:

- Acetone reported as non-detected in samples FR-080117-SS-14, FR-080117-SS-DUP [FR-080117-SS-08], FR-080117-SS-08, FR-080117-SS-13, FR-080117-SS-12 and FR-080117-SS-15.

The following results were qualified as approximate (J) due to an interference identified by the laboratory:

- Acetone reported as detected in samples FR-073117-SS-17, FR-073117-SS-20, FR-073117-SS-22, FR-073117-SS-19, FR-073117-SS-18, FR-072717-IA-10, FR-072717-IA-06, FR-072717-IA-XX, FR-072717-AA, FR-080117-SS-05, FR-072717-IA-04, FR-072717-IA-03, FR-072717-IA-05, FR-072717-IA-07, FR-072717-IA-08 and FR-072717-IA-09.

DATA USABILITY

Overall data usability with respect to completeness for the sample results reported is 100 percent for the VOC air data. The VOC air data were identified as usable for qualitative and quantitative purposes. Based on the validation performed, the typical completeness goal of 95 percent was met for these analyses.

DATA VALIDATION MEMORANDUM

FROM:	KA Storne		
RE:	Data Usability Summary Report for the Former GE Farrell Road Site VI Sampling – Performed October 2017		
FILE:	5851/64466.001.019		
DATE:	January 15, 2018		

This Data Usability Summary Report (DUSR) presents the data validation results for indoor air, ambient air and soil vapor samples collected by O'Brien & Gere in October 2017 for the Lockheed Martin Corporation (LMC) at the Former GE Farrell Road Site.

Alpha Analytical (Alpha) of Mansfield, Massachusetts performed the laboratory analyses for the sampling event. The laboratory package generated by Alpha contained summary forms for quality control analysis and supportive raw data.

The analysis performed for this sampling event is summarized in Table 1 below.

Table 1. Analytical Methods and References

Parameter	Method	Reference
Volatile Organic Compounds (VOCs)	USEPA Method TO-15 Low Level/SIM	1

Note:

1. United States Environmental Protection Agency. 1999. Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air. Cincinnati, Ohio.

VOCs indicates volatile organic compounds.
SIM indicates selected ion monitoring.

The samples submitted for review are summarized in the attached Table 2. Table 3 presents the specific data validation approach applied to data generated for this investigation. Table 4 presents the Laboratory QA/QC analyses definitions.

Full validation was performed on the samples collected for this sampling event.

The analytical data generated for this investigation were evaluated by O'Brien & Gere using the quality assurance/quality control (QA/QC) information presented in the following documents:

- United States Environmental Protection Agency (USEPA), 1999. *Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air*. Cincinnati, Ohio.
- O'Brien & Gere. 2015. *Vapor Intrusion Sampling Work Plan - Revised, Former GE Farrell Road Site. Site # 7-34-055. Geddes, New York.* Syracuse, New York (Work Plan).

Data affected by excursions from the previously mentioned QA/QC criteria were qualified using the following USEPA data validation guidance and professional judgment:

- USEPA. 2014. *Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15. SOP HW-31, Revision 6*. Albany, New York

In accordance with the USEPA guidance, and utilizing professional judgment, the following qualifiers are used in data validation:

"U" Indicates that the analyte was analyzed for, but was not detected. The associated value indicates the approximate sample concentration necessary to be detected.

"J" Indicates that the detected analyte is present but the reported value may not be accurate or precise. The result should be considered approximate based on excursions from QA/QC criteria.

"UJ" Indicates that the analyte was not detected and the quantitation limit (QL) may be inaccurate or imprecise. The result should be considered approximate based on excursions from QA/QC criteria.

"R" Indicates that the QL or sample result is unreliable and has been rejected due to a major excursion from QA/QC criteria. The analyte may or may not be present in the sample. The data should not be used for qualitative or quantitative purposes.

The validation included checking the following parameters:

- Chain-of-custody records;
- Sample collection;
- Canister evaluation;
- Holding times;
- Calibrations;
- Blank analysis;
- Laboratory control sample (LCS) analysis;
- Internal standards performance;
- Field duplicate analysis;
- Gas chromatography/mass spectrometry (GC/MS) instrument performance check;
- Target analyte quantitation, identification, and quanitation limits (QLs); and
- Documentation completeness.

The following sections of this memorandum present the results of the comparison of the analytical data to the QA/QC criteria specified above. Based on the QA/QC information review, an overall evaluation of data usability is also presented in the final section.

VOLATILE ORGANIC COMPOUND DATA EVALUATION SUMMARY

The following QA/QC parameters were found to meet method and validation criteria or did not result in additional qualification of sample results:

- Sample collection;
- Holding times;
- Calibrations;
- Blank analysis;
- LCS analysis;
- Internal standards performance;
- Field duplicate analysis;
- GC/MS instrument performance check;

Excursions from method or validation criteria and additional observations are described below.

I. DOCUMENT COMPLETENESS

Supplemental information, clarifications and missing laboratory data were requested to complete the validation process.

II. CHAIN-OF-CUSTODY RECORDS AND SAMPLE COLLECTION

The following time gaps were identified on the chain-of-custody records for this sampling event:

- For the samples collected 10/10/17 and 10/13/17, the samples were initially relinquished 10/16/17 at 12:42 and were received by the next party on 10/16/17 at 19:30.
- For the second transfer of the samples, the samples were relinquished 10/16/17 at 19:30 and were received by the next party on 10/17/17 at 00:55.

After the initial transfer from the field representative, samples are typically relinquished to an Alpha courier and are within control of Alpha personnel.

III. CANISTER EVALUATION

The laboratory evaluated the pre-sampling and post-sampling flow rates of the sample flow controllers, applying an acceptance criterion of 20% RPD. Due to minor flow controller flow rate check excursions, the result for the following samples were qualified as approximate (UJ, J): FR-101017-IA-08 and FR-101317-SS-29.

A field duplicate for indoor air samples was not collected for this sampling event. Therefore sample collection precision for indoor air samples could not be evaluated. As required for this project, a soil vapor field duplicate was collected and reported.

IV. TARGET ANALYTE QUANTITATION, IDENTIFICATION AND QLS

The following result was qualified as approximate (J) due to an interference identified by the laboratory:

- Acetone reported as detected in sample FR-101317-SS-23.

Dilutions were performed for samples due to high concentrations of target analytes. As a result of the dilutions, reported detection limits were elevated.

DATA USABILITY

Overall data usability with respect to completeness for the sample results reported is 100 percent for the VOC air data. The VOC air data were identified as usable for qualitative and quantitative purposes. Based on the validation performed, the typical completeness goal of 95 percent was met for these analyses.

DATA VALIDATION MEMORANDUM

TO:	M Distler	cc:	EM Alongi – OBG
FROM:	KA Storne		
RE:	Data Usability Summary Report for the Former GE Farrell Road Site VI Sampling – Performed June 2018		
FILE:	5851/64466.001.019		
DATE:	August 29, 2018		

This Data Usability Summary Report (DUSR) presents the data validation results for soil vapor samples collected by O'Brien & Gere in June 2018 for the Lockheed Martin Corporation (LMC) at the Former GE Farrell Road Site.

Alpha Analytical (Alpha) of Mansfield, Massachusetts performed the laboratory analyses for the sampling event. The laboratory package generated by Alpha contained summary forms for quality control analysis and supportive raw data.

The analysis performed for this sampling event is summarized in Table 1 below.

Table 1. ***Analytical Methods and References***

Parameter	Method	Reference
Volatile Organic Compounds (VOCs)	USEPA Method TO-15	1

Note:

1. United States Environmental Protection Agency. 1999. Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air. Cincinnati, Ohio.

VOCs indicates volatile organic compounds.

The samples submitted for review are summarized in the attached Table 2. Table 3 presents the specific data validation approach applied to data generated for this investigation. Table 4 presents the Laboratory QA/QC analyses definitions.

Full validation was performed on the samples collected for this sampling event.

The analytical data generated for this investigation were evaluated by O'Brien & Gere using the quality assurance/quality control (QA/QC) information presented in the following documents:

- United States Environmental Protection Agency (USEPA), 1999. *Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air*. Cincinnati, Ohio.
- O'Brien & Gere. 2015. *Vapor Intrusion Sampling Work Plan - Revised, Former GE Farrell Road Site. Site # 7-34-055. Geddes, New York.* Syracuse, New York (Work Plan).

Data affected by excursions from the previously mentioned QA/QC criteria were qualified using the following USEPA data validation guidance and professional judgment:

- USEPA. 2014. *Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15. SOP HW-31, Revision 6*. Albany, New York

Qualifiers are applied to data that fail to meet the quality control criteria presented in the USEPA methods.

In accordance with the USEPA guidance, and utilizing professional judgment, the following qualifiers are used in data validation:

"U" Indicates that the analyte was analyzed for, but was not detected. The associated value indicates the approximate sample concentration necessary to be detected.

"J" Indicates that the detected analyte is present but the reported value may not be accurate or precise. The result should be considered approximate based on excursions from QA/QC criteria.

"UJ" Indicates that the analyte was not detected and the quantitation limit (QL) may be inaccurate or imprecise. The result should be considered approximate based on excursions from QA/QC criteria.

"R" Indicates that the QL or sample result is unreliable and has been rejected due to a major excursion from QA/QC criteria. The analyte may or may not be present in the sample. The data should not be used for qualitative or quantitative purposes.

The validation included checking the following parameters:

- Chain-of-custody records;
- Sample collection;
- Canister evaluation;
- Holding times;
- Calibrations;
- Blank analysis;
- Laboratory control sample (LCS) analysis;
- Internal standards performance;
- Field duplicate analysis;
- Gas chromatography/mass spectrometry (GC/MS) instrument performance check;
- Target analyte quantitation, identification, and quanitation limits (QLs); and
- Documentation completeness.

The following sections of this memorandum present the results of the comparison of the analytical data to the QA/QC criteria specified above. Based on the QA/QC information review, an overall evaluation of data usability is also presented in the final section.

VOLATILE ORGANIC COMPOUND DATA EVALUATION SUMMARY

The following QA/QC parameters were found to meet method and validation criteria or did not result in additional qualification of sample results:

- Sample collection;
- Canister evaluation;
- Holding times;
- Calibrations;
- Blank analysis;
- LCS analysis;
- Internal standards performance;
- Field duplicate analysis;
- GC/MS instrument performance check.

Excursions from method or validation criteria and additional observations are described below.

I. DOCUMENT COMPLETENESS

Supplemental information and clarifications were requested during data validation to complete the validation process.

II. CHAIN-OF-CUSTODY RECORDS

For the samples collected 6/19/18 to 6/20/18, the laboratory provided the following clarification for the chain-of-custody records since the records were inconsistent and some entries were illegible:

- During the second transfer, samples were relinquished 6/22/18 at 11:45 and received 6/23/18 at 01:20. During the second transfer, although there is a time and date gap, the laboratory indicated that the samples were relinquished to an Alpha courier and were within control of Alpha personnel after that sample transfer. During the third transfer, samples were relinquished 6/23/18 at 05:50 and received 6/23/18 at 05:50.

III. TARGET ANALYTE QUANTITATION, IDENTIFICATION AND QLS

The following results were qualified as approximate (UJ) due to an interference identified by the laboratory:

- Acetone reported as non-detected in samples FR-061918-SS-08 and FR-061918-SSD-08 [FR-061918-SS-08].

Dilutions were performed for samples due to high concentrations of target analytes. As a result of the dilutions, reported detection limits were elevated.

DATA USABILITY

Overall data usability with respect to completeness for the sample results reported is 100 percent for the VOC air data. The VOC air data were identified as usable for qualitative and quantitative purposes. Based on the validation performed, the typical completeness goal of 95 percent was met for these

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: LOCKHEED MARTIN **Lab Number:** L1604824
Project Number: 50238 **Report Date:** 03/01/16

Case Narrative (continued)

Volatile Organics in Air
Canisters were released from the laboratory on February 18, 2016. The canister certification results are provided as an addendum.

Samples L1604824-01, -04, -06, -08, -11, -13, -15, -17, -19, -21, -23 and WG869392-5 Duplicate The presence of Acetone could not be determined in these samples due to a non-target compound interfering with the identification and quantification of this compound.

Samples L1604824-01, -04, -23 and WG869392-5 Duplicate The presence of Isopropyl alcohol could not be determined in these samples due to a non-target compound interfering with the identification and quantification of this compound.

Sample L1604824-05: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

Samples L1604824-05 and -18 The presence of Acetone could not be determined in these samples due to a non-target compound interfering with the identification and quantification of this compound.

Samples L1604824-14, -18, and WG869138-5: The samples have elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the samples.

Samples L1604824-20 and -24 results for Acetone should be considered estimated due to co-elution with a non-target peak.

The WG869392-3 LCS recovery for 1,2,4-Trichlorobenzene (144%) and Hexachlorobutadiene (144%) is above the upper 130% acceptance limit. The response for these compounds was elevated however they were not detected in any of the associated samples therefore no further action was required.

Project Number: 50238 **Report Date:** 03/01/16

Case Narrative (continued)

Sample Receipt

The sample designated FR-IA01-021916 (L1604824-01) had a RPD for the pre- and post-flow controller calibration check (24% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 10.0 mL/minute; the final flow rate was 12.7 mL/minute. The final pressure recorded by the laboratory of the associated canister was -0.8 inches of mercury. No further action was required.

The sample designated FR-IA04-021916 (L1604824-08) had a RPD for the pre- and post-flow controller calibration check (41% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 10.0 mL/minute; the final flow rate was 6.6 mL/minute. The final pressure recorded by the laboratory of the associated canister was -14.4 inches of mercury. No further action was required.

The sample designated FR-SS04-021916 (L1604824-09) had a RPD for the pre- and post-flow controller calibration check (90% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 9.7 mL/minute; the final flow rate was 3.7 mL/minute. The final pressure recorded by the laboratory of the associated canister was -5.8 inches of mercury. No further action was required.

The sample designated FR-IA05-021916 (L1604824-11) had a RPD for the pre- and post-flow controller calibration check (38% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 10.0 mL/minute; the final flow rate was 6.8 mL/minute. The final pressure recorded by the laboratory of the associated canister was -11.3 inches of mercury. No further action was required.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

Report Format: Data Usability Report

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L1604824
Project Number:	50238	**Report Date:**	03/01/16

Data Qualifiers

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: 1,2-Dibromo-3-chloropropane, 1,2-Dibromoethane, m/p-xylene, o-xylene
EPA 624: 2-Butanone (MEK), 1,4-Dioxane, tert-Amylmethyl Ether, tert-Butyl Alcohol, m/p-xylene, o-xylene
EPA 625: Aniline, Benzoic Acid, Benzyl Alcohol, 4-Chloroaniline, 3-Methylphenol, 4-Methylphenol.
EPA 1010A: NPW: Ignitability
EPA 6010C: NPW: Strontium; SCM: Strontium
EPA 8151A: NPW: 2,4-DB, Dicamba, Dichloroprop, MCPA, MCPP; SCM: 2,4-DB, Dichloroprop, MCPA, MCPP
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene, Isopropanol; SCM: Iodomethane (methyl iodide), Methyl methacrylate (soil); 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Pentachloronitrobenzene, 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Pentachloronitrobenzene, 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 9010: NPW: Amenable Cyanide Distillation, Total Cyanide Distillation
EPA 9038: NPW: Sulfate
EPA 9050A: NPW: Specific Conductance
EPA 9056: NPW: Chloride, Nitrate, Sulfate
EPA 9065: NPW: Phenols
EPA 9251: NPW: Chloride
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
EPA 8270D: NPW: Biphenyl; SCM: Biphenyl, Caprolactam
EPA 8270D-SIM Isotope Dilution: SCM: 1,4-Dioxane
SM 2540D: TSS
SM2540G: SCM: Percent Solids
EPA 1631E: SCM: Mercury
EPA 7474: SCM: Mercury
EPA 8081B: NPW and SCM: Mirex, Hexachlorobenzene.
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA 8270-SIM: NPW and SCM: Alkylated PAHs.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene, n-Butylbenzene, n-Propylbenzene, sec-Butylbenzene, tert-Butylbenzene.
Biological Tissue Matrix: ***8270D-SIM; 3050B; 3051A; 7471B; 8081B; 8082A; 6020A:*** Lead***; 8270D:*** bis(2-ethylhexyl)phthalate, Butylbenzylphthalate, Diethyl phthalate, Dimethyl phthalate, Di-n-butyl phthalate, Di-n-octyl phthalate, Fluoranthene, Pentachlorophenol.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F,**
EPA 353.2: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: LM-FARRELL RD. **Lab Number:** L1702331
Project Number: 50238 **Report Date:** 01/31/17

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on January 16, 2017. The canister certification results are provided as an addendum.

Sample L1702331-01, -03 through -10 The presence of Acetone could not be determined in these samples due to a non-target compound interfering with the identification and quantification of this compound.

Sample L1702331-02 results for Acetone should be considered estimated due to co-elution with a non-target peak.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

Project Number:	50238	**Report Date:**	01/31/17

Data Qualifiers

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS
EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Project Number: 50238 **Report Date:** 08/09/17

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on July 24, 2017. The canister certification results are provided as an addendum.

L1726747-02, -04, and -08: The samples have elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the samples.

L1726747-08: The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L1726747-13, -14, -15, -17, -18, -19, and -20: The samples have elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the samples.

L1726747-13, -14, -15, -17, -18, and -20: The presence of Acetone could not be determined in these samples due to a non-target compound interfering with the identification and quantification of this compound.

L1726747-19 and -20: The samples were re-analyzed on dilution in order to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

The WG1029029-3 LCS recoveries for 1,2,4-Trichlorobenzene (137%) and Hexachlorobutadiene (134%) are above the upper 130% acceptance limit. None of the samples associated with this LCS had these compounds detected above the reporting limit therefore no further action is required.

Case Narrative (continued)

The flow controller ID number for the sample designated FR-080117-SS-12 (L1726747-18) is listed on the CoC as 1358 but should be 0109.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: Data Usability Report

Project Name:	LM-FARRELL RD.	**Lab Number:**	L1726747
Project Number:	50238	**Report Date:**	08/09/17

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS
EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, EPA 351.1, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9221E.**

Mansfield Facility:

Drinking Water
EPA 200.7: Ba, Be, Cd, Cr, Cu, Ni, Na, Ca. **EPA 200.8:** Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Ni, Se, TL. **EPA 245.1** Hg.

Non-Potable Water
EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.
EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn.
EPA 245.1 Hg.
SM2340B

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: LOCKHEED MARTIN **Lab Number:** L1737422
Project Number: 50238 **Report Date:** 12/19/17

Case Narrative (continued)

Report Submission

This report replaces the one previously issued on October 23, 2017. The report has been revised to provide CLP forms that were missing from the original data package.

For indoor and ambient air samples a single aliquot of sample is taken from the canister and analyzed by both TO15 full scan and TO15 SIM simultaneously on the same instrument.

Volatile Organics in Air

Canisters were released from the laboratory on October 6, 2017. The canister certification results are provided as an addendum.

L1737422-10: The sample was diluted and re-analyzed to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L1737422-11, -12, -13, -14, -16, -17, -18, and -19: The samples have elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the samples.

L1737422-15 results for Acetone should be considered estimated due to co-elution with a non-target peak.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: Data Usability Report

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L1737422
Project Number:	50238	**Report Date:**	12/19/17

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS
EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

Lab Number: L1823802
Report Date: 07/02/18

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Number: 64466 **Report Date:** 07/02/18

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on June 18, 2018. The canister certification results are provided as an addendum.

L1823802-02, -03, -04, -08, -09, -10, -11, -13 -15: The samples have elevated detection limits due to the dilution required by the elevated concentrations of target compounds in these samples.

L1823802-08 and -09 The presence of Acetone could not be determined in these samples due to a non-target compound interfering with the identification and quantification of this compound.

L1823802-11: The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The results should be considered estimated, and are qualified with an E flag, for the compounds that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compounds that exceeded the calibration range.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: Data Usability Report

Project Name:	LOCKHEED MARTIN	**Lab Number:**	L1823802
Project Number:	64466	**Report Date:**	07/02/18

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Field Data Forms

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Christopher Finke Date/Time Prepared 9/23/15 @ 1300

Preparer's Affiliation O'Brien & Gere Phone No. 315-956-6100

Purpose of Investigation SVI Sampling

1. OCCUPANT: Owner/occupant not present

Interviewed: Y / N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ___)

Interviewed: Y / N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	Commercial/Multi-use
Industrial	Church	Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? ____

If the property is commercial, type?

Business Type(s) Currently used as warehouse for Rescue Mission Donations

Does it include residences (i.e., multi-use)? Y / N (NA) If yes, how many? ____

Other characteristics:

Number of floors On-grade w/mezzanines Building age ~1950's

Is the building insulated? Y / N partially insulated How air tight? Tight / Average / (Not Tight)

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Airflow near source

Outdoor air infiltration

Outdoor air infiltration is primarily at the NE corner where part of the building has been torn down.

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

a. Above grade construction:	wood frame	concrete and	stone metal frame	brick In garage
b. Basement type:	full	crawlspace	slab	other _____
c. Basement floor:	concrete	dirt	stone	other _____
d. Basement floor:	uncovered	covered	partially covered with tile (vinyl)	
e. Concrete floor:	unsealed	sealed	sealed with _____	
f. Foundation walls:	poured	block In garage	stone	other _____
g. Foundation walls:	unsealed	sealed	sealed with _____	
h. The basement is:	wet	damp	dry	moldy
i. The basement is:	finished	unfinished	partially finished	
j. Sump present?	Y / N			
k. Water in sump?	Y / N / not applicable			

Basement/Lowest level depth below grade: — (feet) on grade

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Building is large - former industrial. There are several floor drains. Slab is generally competent, without cracks. ~~Garage~~ in main building & garage

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation	Heat pump	Hot water baseboard	Hot water - Boilers located in boiler room.
Space Heaters	Stream radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

Natural Gas	Fuel Oil	Kerosene
~~Electric~~	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: —

Boiler/furnace located in: Basement Outdoors Main Floor Other_____

Air conditioning: (Central Air) Window units Open Windows None

Are there air distribution ducts present? Y / N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

NA

7. OCCUPANCY

Is basement/lowest level occupied? Full-time (Occasionally) (Seldom) Almost Never

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	NA
1st Floor	Unoccupied - Storage for Rescue Mission
2nd Floor	NA
3rd Floor	
4th Floor	

8. FACTORS THAT MAY influence INDOOR AIR QUALITY

a. Is there an attached garage? Y / (N)

b. Does the garage have a separate heating unit? (Y) N / NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) (Y) N / NA Please specify_____

d. Has the building ever had a fire? Y / N When? Unknown

e. Is a kerosene or unvented gas space heater present? Y / (N) Where?_____

f. Is there a workshop or hobby/craft area? Y / (N) Where & Type?_____

g. Is there smoking in the building? (Y) N How frequently? - In Garage

h. Have cleaning products been used recently? Y / (N) When & Type? _____

i. Have cosmetic products been used recently? Y / (N) When & Type? _____

j. Has painting/staining been done in the last 6 months? Y / N Where & When? Unknown

k. Is there new carpet, drapes or other textiles? Y / (N) Where & When? _____

l. Have air fresheners been used recently? Y / (N) When & Type? _____

m. Is there a kitchen exhaust fan? (NA) Y / N If yes, where vented? _____

n. Is there a bathroom exhaust fan? Y / N If yes, where vented? — There is an exhaust fan in the garage

o. Is there a clothes dryer? Y / N If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / N When & Type? Unknown

Are there odors in the building? (Y) / N

If yes, please describe: Garage odor of motor oil and fuel from cars + lawn equipment. Main building has a strong mold/mildew odor.

Do any of the building occupants use solvents at work? (Y) N

(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? Garage is used for automobile repair.

If yes, are their clothes washed at work? Y / (N)

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) — No
Yes, use dry-cleaning infrequently (monthly or less) — (Unknown)
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / (N) Date of Installation: _____

Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: (Public Water) Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: (Public Sewer) Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: (NA)

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

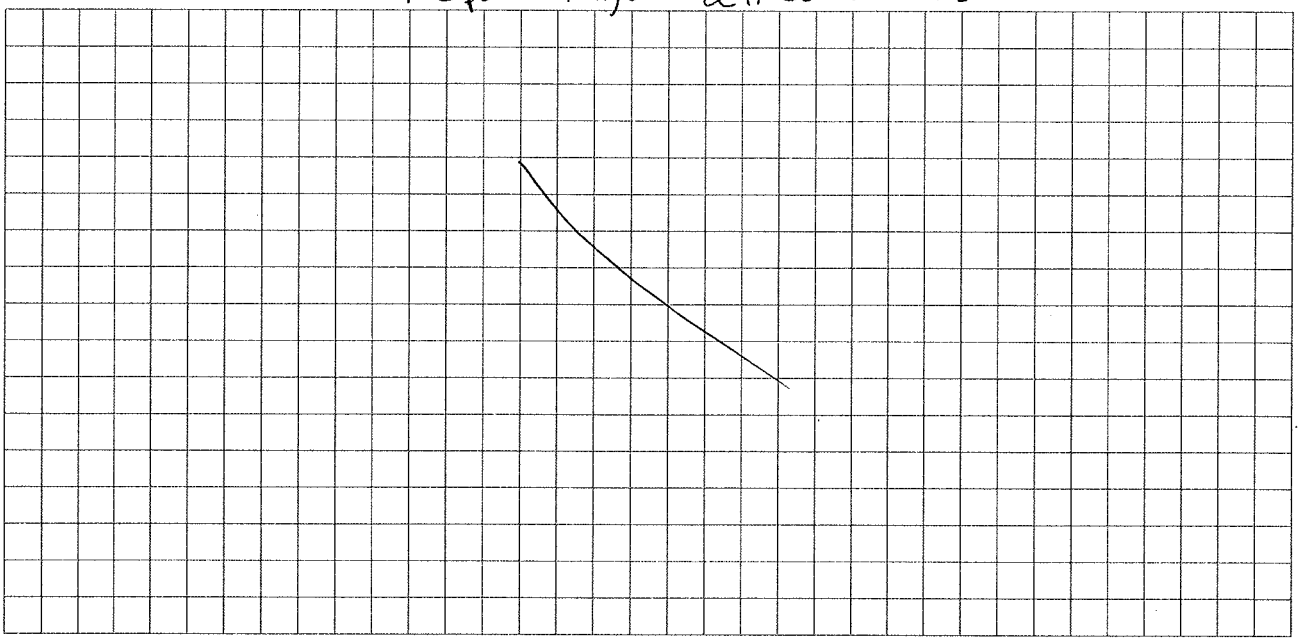
c. Responsibility for costs associated with reimbursement explained? Y / N (NA)

d. Relocation package provided and explained to residents? Y / N

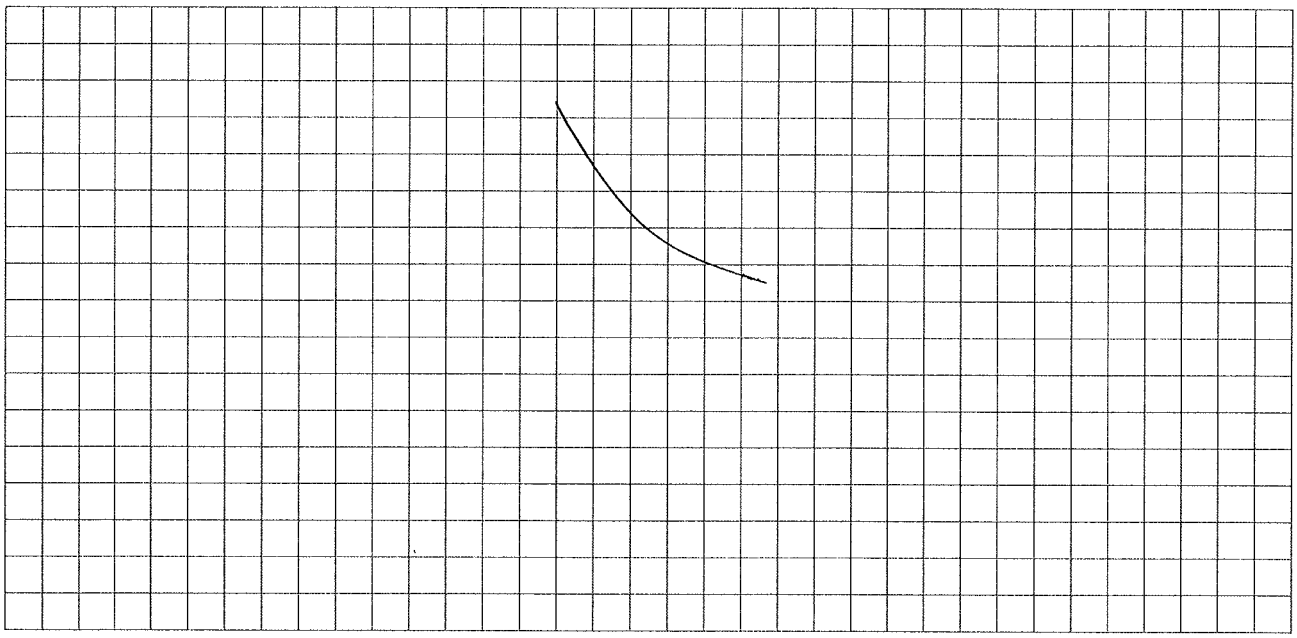
11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement: See Report Figure attachment.



First Floor:

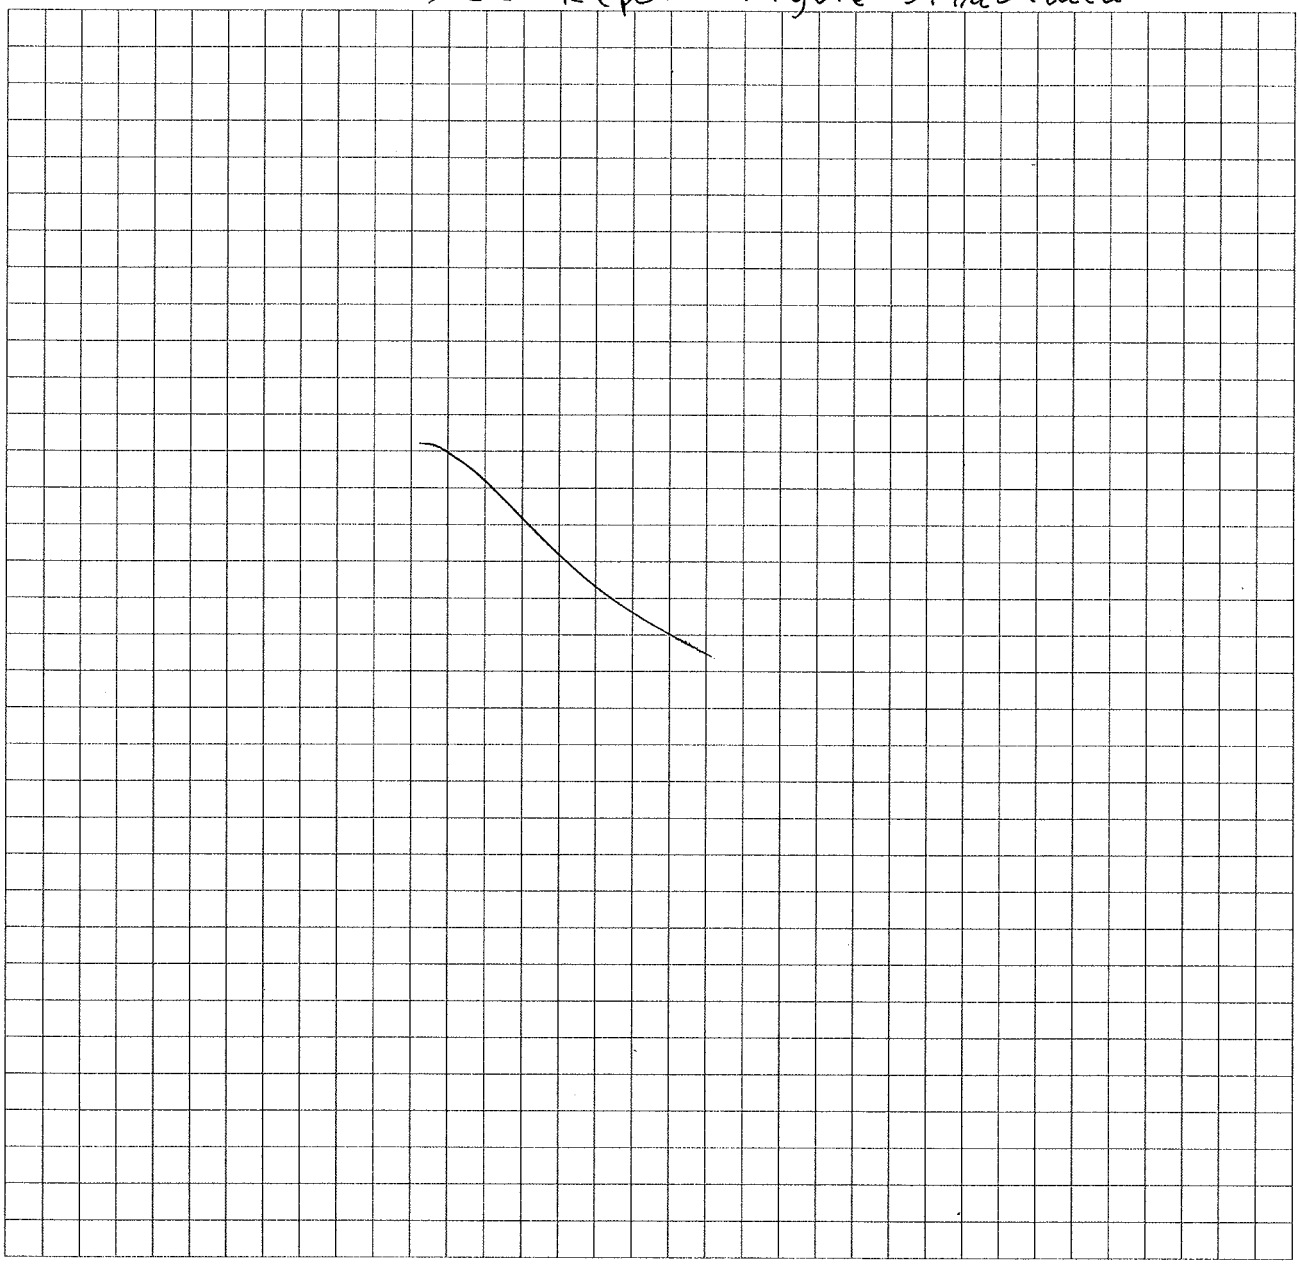


12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

See Report Figure Attachment



13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: RAE ppbRAE 3000

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N
North Garage Tenant	2 snowblowers, 2 chainsaws, 1 soil tiller :			petroleum distallates, gasoline		Y
	2 pump sprayers for pesticides ← assumed: Unknown					Y
South Garage Tenant :	Can Quest Brake Parts Cleaner	12 x 14oz	Used + new	NL		
	Macs Engine Cleaner	4 x 16oz	Used + new	NL		
	PB Blaster Penetrating Catalyst	11oz	Used	Aromatics, Napthalene, Petro. Distillates		
	CRC Sensor Cleaner	11 & 10 oz	Used	Hexane		
	Pyroil Starting Fluid	10 oz	Used	Heptane		
	Valvoline Throttle Body Cleaner	3 oz	Used	Acetone, xylene		
	Motor Oil	~ 10 Qts	Used + new	Petroleum distillates		
	3M Paint Defender	6 cans	Used + new	NL		
	Bars Leaks Radiator Stop Leak	10 oz	Used	NL		
	Gunk Belt Dressing	6 oz		NL		
	Several bottles of	Unknown contents - starter fluid, gasoline				
	Open drain pans of	radiator fluid and motor oil				
	Dupli color Spray paint	~3 x 11oz	Used	Acetone, propane, MEK, Butane, Toluene, Ethanol, MIK		
	Evidence of welding					
	Tires					
Main Building	Open warehouse w/ No	Inventory except Rescue Mission boxes of Contents.			of unknown	

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**

** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

SSDS Commissioning Documentation

Installation and Operation Commissioning Checklist

Address: 241 Farrell Rd Bldg 2 **Structure ID #:** _____

Performed by: EA **Date:** 9/20/16

System Performance Data

Fan Inlet Static Pressure (vacuum)

Fan System	SSDS-05	SSDS-06	SSDS-03	4	5
Fan Model	HS-5000	HS-5000	HS-5000		
U-Tube Reading ("w.c.)	-44"-37"	-8"	-7.2"		

Is each fan mounted securely?	☑Yes	☐No	
Coupling connections secure?	☑Yes	☐No	
Is excessive noise heard when fan is running?	☐Yes	☑No	
Is set point indicated on speed controller?	☐Yes	☐No	☑NA
Is the pipe and conduit penetration sealed to the structure's exterior?	☑Yes	☐No	
If fan vacuum is at maximum, measure velocity at each SSP (record below).			
Does the SSP velocity meet criteria (> 1 ft/min)?	☐Yes	☐No	☑NA

Sub-Slab/Sub-Membrane SSP Static Pressure (vacuum)

SSP#	Static Pressure (" w.c.)	Fan System	Velocity at SSP (ft/min)
1	-7.2	SSDS-05	
2	-37	SSDS-05	
3	-8	SSDS-06	

Final Communication Test Results (Sub-Slab)

Communication test point	Recorded on Separate Page At End of Forms				
Manometer reading (" w.c. vacuum)					
Does smoke enter? (sub-slab ventilation systems only)					

Communication test point					
Manometer reading (" w.c. vacuum)					
Does smoke enter? (sub-slab ventilation systems only)					

Were all fans in operation during final communication test?	☑Yes	☐No	
Were all valves locked after final communication test?	☐Yes	☐No	☑NA
Was the pressure reading at each test point ≤ -0.004"w.c.?	☐Yes	☐No	☑NA
Was maximum building depressurization simulated during test?	☐Yes	☑No	
Was there precipitation during the previous 24 hours?	☑Yes	☐No	
What was the apparent wind speed?	☑Calm	☐Light	☐Strong

Installation and Operation Commissioning Checklist

Address: 241 Farrell Rd Bldg 2 **Structure ID #:** _____

Performed by: EA **Date:** 9/20/16

Accessible Crawlspace Performance Inspection (Sub-membrane Depressurization)

Was each membrane joint and perimeter smoke tested and found to be sealed? ☐Yes ☐No ☒NA

Is the manometer reading ≥ 1/10" w.c. vacuum? ☐Yes ☐No ☒NA

Inaccessible Crawlspace Data (Ventilation) ☒NA

	Crawlspace 1	Crawlspace 2	Crawlspace 3	Crawlspace 4
SSP#				
Crawlspace volume (ft^3)				
Suction pipe diameter (in.)				
Target velocity (ft/min)				
Measured velocity (ft/min)				
Meets criteria (≥ 90%) - Y or N				

Backdraft Test Results

Was commissioning backdraft test performed? ☐Yes ☒No

Was backdraft test conducted under maximum building depressurization? ☐Yes ☒No

On what combustion appliances was a backdraft test performed? * ☐Hot Water Heater ☐Dryer ☐Fireplace (damper closed) ☐Furnace / Boiler ☐Fireplace (damper opened) ☐Other_____

Was any combustion appliance not operable and could not be tested? ☒Yes ☐No

If yes, which appliances: Combustion Devices are not in operation

Is there is a backdraft on any appliance? ☐Yes ☐No

(If yes, explain) **

Was a previous backdraft condition present during any previous visit? ☐Yes ☒No ☐NA

* Do not operate whole house fan during backdraft test.

** If backdraft exists, shut down SSD system. Backdraft will need to be corrected prior to re-energizing system.

** If backdraft exists, please notify the property owner. Owner was notified on: (date) _____

Installation and Operation Commissioning Checklist

Address: 241 Farrell Rd Bldg 2 **Structure ID #:** _____

Performed by: EA **Date:** 9/20/14

Electrical System Installation Inspection

Are all electrical connections secure?	☑Yes	☐No	
Are all switches locked on?	☐Yes	☑No	☐NA
Are audible alarm(s) present and working?	☐Yes	☐No	☑NA
Is each junction box closed?	☑Yes	☐No	☐NA
Is the conduit/wire properly supported?	☑Yes	☐No	☐NA
Are appliances affected by fan operation?	☐Yes	☐No	NA

Pipe System Performance

Are all pipe runs properly supported (6'-horizontal/8'-vertical)?	☑Yes	☐No	
Were 10% of all pipe joints smoke tested?	☑Yes	☐No	
Did smoke enter?	☐Yes	☑No	
Are manometers installed at each suction point?	☑Yes	☐No	☐NA
Are system suction point seals accessible?	☑Yes	☐No	
System suction points are sealed to the slab?	☑Yes	☐No	
Each component is installed?	☑Yes	☐No	
Excessive noise is heard in piping joints?	☐Yes	☑No	

Slab/Wall Repair Performance

Were drawing-identified slab and wall crack repairs/modifications smoke tested?	☐Yes	☐No	☑NA
Did smoke enter?	☐Yes	☐No	☑NA
Are there other visible cracks that did not draw smoke?	☑Yes	☐No	
Are there areas of the slab and/or walls that are not visible (e.g. finished areas)?	☑Yes	☐No	
Are there areas of the slab and/or walls that are not accessible (e.g. stored items)?	☐Yes	☑No	
Are utility penetrations sealed so they don't draw smoke?	☑Yes	☐No	☐NA
Is top course of block wall open?	☐Yes	☐No	☑NA
Did top course of block wall draw smoke after sealing?	☐Yes	☐No	☑NA
Are sump cover(s) present and sealed properly?	☐Yes	☐No	☑NA
Is sump cover structurally sound?	☐Yes	☐No	☑NA
Check and clean Dranjer(s)?	☐Yes	☐No	☑NA
Smoke Dranjer(s)?	☐Yes	☐No	☑NA

Labeling Inspection

Correct labels applied in the proper locations?	☑Yes	☐No	
Commisioned value written on SSP sticker?	☑Yes	☐No	
Is SSDS breaker identified in the electrical panel?	☑Yes	☐No	

Installation and Operation Commissioning Checklist

Address: 941 Farrell Rd Bldg 2 **Structure ID #:** _____

Performed by: EA **Date:** 9/20/12

System Exhaust

Are there vents to occupiable attic space?	☐Yes	☑No	
Are HVAC units installed in attic space?	☐Yes	☑No	
Are there any roof mounted air intakes that supply air into the structure?	☐Yes	☑No	
Is building equipped with a whole house fan(s)?	☐Yes	☑No	
Has Homeowner been informed to only operate the whole house fan(s) with all windows open?	☐Yes	☐No	☑NA
Does the condensate line appear to be functioning correctly?	☐Yes	☐No	☑NA
Are all fan exhaust stacks installed?	☑Yes	☐No	
At least **1 foot** above the eave of the roof?	☑Yes	☐No	Distance above eave: ~14"
At least **10 ft** above ground level?	☑Yes	☐No	
At least **10 ft** away from any windows, doors, chimneys, or other openings into conditioned or otherwise occupied spaces?	☑Yes	☐No	Distance from opening: NA
If not 10 ft away, at least **2 ft** above windows, doors, chimneys, or other openings into conditioned or otherwise occupied spaces?	☐Yes	☐No	Distance above opening: NA ☑NA
Is it sufficiently sealed where downspout meets PVC pipe?	☐Yes	☐No	☑NA

Documentation

Were digital photographs taken of post-installation conditions?	☑Yes	☐No	
Was Homeowner provided "Operational Fact Sheet"?	☐Yes	☐No	
Was a field modification form completed to record installation changes?	☐Yes	☐No	☐NA
Was the drawing updated to show installed components?	☐Yes	☐No	

Comments:
