### State Superfund Site Classification Notice

The Inactive Hazardous Waste Disposal Site Program is New York State's superfund program for identifying, investigating, and cleaning up sites where the disposal of hazardous waste may present a threat to public health and/or the environment. The New York State Department of Environmental Conservation (DEC) maintains a list of these sites in the Registry of Inactive Hazardous Waste Disposal Sites (Registry). The site identified above, and located on a map on the reverse side of this page, has been added to the Registry as a Class 2 site that presents a significant threat to public health and/or the environment for the following reason(s):

- Polychlorinated biphenyls (PCBs) are present at the site in the shallow soils up to 16,000 parts per million (ppm). These levels significantly exceed the hazardous waste threshold for PCBs in soil. Actions are recommended to prevent unauthorized or inadvertent access to the property where there is the potential for exposure through direct contact with contaminated soil.
- People who enter the site could contact contaminants in the soil by walking on, digging, or otherwise disturbing the soil. Additional environmental investigations are needed to further evaluate the nature and extent of contamination and to better understand exposure pathways on and off-site.

DEC will keep you informed throughout the investigation and cleanup of the site.

**If you own property adjacent to this site and are renting or leasing your property to someone else, please share this information with them. If you no longer wish to be on the contact list for this site or otherwise need to correct our records, please contact the DEC Project Manager listed below.**
