Subject: Removal Site Evaluation for the Pollution Abatement Services (PAS) Irwin Dump Site,
Oswego, New York

From: Dave Rosoff, On-Scene Coordinator
Removal Action Branch

To: File

Spill Identification #: KR EPA ID #: NYD000511618

I. INTRODUCTION

The Removal Action Branch (RAB) received a request from the New York State Department of Environmental Conservation (NYSDEC) on August 14, 2007 to evaluate the PAS Irwin Dump Site (Site) for CERCLA removal action eligibility. The Site is located near the intersection of Johnson Road and Byer Road in the City of Oswego, New York (Figure 1). The Site is on a one-acre parcel of open land and is part of a four-acre construction debris landfill located at 70 Byer Road. Commercial properties are immediately adjacent to the Site and residential properties are within 500 feet of the Site.

There is a release and a continuing threat of release of CERCLA designated hazardous substances at the Site, which is defined as a facility under section 101(9) of CERCLA.
Drums containing hazardous waste and hazardous substances were buried on the Site in a sixty by forty foot area to a depth of approximately fifteen feet below ground surface in the mid-1970s. Many of these drums are badly corroded or damaged and have released their contents into the soil. Currently, approximately 150 drums of industrial waste and 200 cubic yards of grossly contaminated soil excavated from the burial area by EPA during the December 2007 Removal Site Evaluation (RSE) field work are staged on the Site. Additional drums of waste and contaminated soil remain buried in the drum burial area. Sampling of the material in the drums and soil has revealed the presence of ignitable and reactive characteristic RCRA hazardous wastes, as well as other hazardous substances.

Based on the available information, a CERCLA Removal Action is warranted at the Site.

II. SITE CONDITIONS AND BACKGROUND

A. Site Description

1. Physical Location

The Site is located in a mixed residential/commercial neighborhood on Byer Road in a rural corner of the City of Oswego and occupies Parcel 145.50-01-04.1 on the City tax map (Figure 2). The approximately one-acre Site is part of a four-acre construction debris landfill created in the 1970s, but is owned separately from the rest of the landfill. The Site is bounded to the east and west by commercial businesses and by Byer Road to the south. Woodlands are located immediately to the north. Residences are located within 500 feet of the Site to the west. A Lake Ontario tributary (Ont-66b) borders the Site to the east and northeast. A map depicting the Site is presented as Figure 3.

2. Site History

Reportedly, approximately 250 drums from the Pollution Abatement Services (PAS) site in the City of Oswego were buried on the Site in the mid-1970s. The drums were brought to the developing construction debris landfill at 70 Byer Road and buried on its northern edge by Mr. Richard Irwin, former owner and operator of the landfill. The drum burial area is not on the property formerly owned by Mr. Irwin but on the adjacent northerly property. Apparently, while filling the property at 70 Byer Road, Mr. Irwin extended the filling onto to the property owned by the former resident at 2652 Johnson Road... Currently, the Site is unoccupied open land owned by the new owner of 2652 Johnson Road. The former Irwin-owned portion of the landfill at 70 Byer Road is now owned by the City of Oswego.

3. Previous Work Relevant to this RSE

There have been several field investigations at the Site beginning in 1983. A Phase I investigation (1983) and a Phase II investigation (1986) were completed at the Site and reported no significant contamination. Buried drums were discovered on the Site during an expanded NYSDEC Phase II investigation in 1991. Waste from one of the drums failed EP-TOX for ignitability. At least six drums were uncovered and all were reportedly in poor condition. Samples from groundwater wells installed around the landfill did not indicate any significant levels of contamination. Due to the presence of an unknown number of drums buried on the Site the NYSDEC listed the Site on its Class 2 Registry of Inactive Hazardous Waste Disposal Sites on March 31, 1994. In 1998, in response to a referral from NYSDEC, EPA's Region II removal program performed a removal assessment at the Site. EPA excavated fifteen trenches and collected five soil samples during the assessment. Groundwater samples were also collected and analyzed from six monitoring wells around the Site. No cache of buried drums was located on the Site during the 1998 assessment and the results of the samples did not indicate any significant contamination. NYSDEC returned to the Site in 1999 to confirm the presence of the drum burial area. The excavation work at this time revealed more than twenty-five drums buried in the same

area previously identified in 1991. At least one of these drums contained an ignitable material and was overpacked and removed from the Site.

EPA performed an initial walk through at the Site in November 2007 with NYSDEC. Ten partially buried drums were observed by EPA during this visit.

4. Site Assessment/Characteristics

The removal assessment of the Site documented in this report took place between December 10th and December 14th, 2007. All of the analytical results from the sampling conducted during this removal assessment are presented in the Lockheed Martin (REAC) Site Investigation and Analytical Results Removal Assessment Report dated March 2008.

The Site is an unoccupied open field that terminates to the north at a steep wooded down-sloping embankment. The identified drum burial area measures approximately forty by sixty by approximately fifteen foot deep and is located near this embankment. Currently, 150 drums and 200 cubic yards of contaminated soil excavated from this area during the removal assessment are staged on the surface of the Site. During the excavation EPA observed damaged and corroded drums buried haphazardly and leaking their contents into the surrounding soils. The drums contained clear liquids, colored solids, brown and black resinous material, viscous tarry liquids, clear silicone-like gels and rubbery textured brown/orange solids. Materials in many of the drums had strong chemical odors and organic vapor levels as high as 900 units were measured on the photo ionization detector (PID) in the air around the excavation. Several drums had visible "General Electric Company" labeling.

EPA collected 17 samples from drums and 7 waste/soil samples from the excavation during the assessment. Results from the analysis of these samples indicate that at least four drums contain material displaying the characteristic of ignitability and at least 2 drums contain material displaying the characteristic of reactivity (sulfide) as defined in 40 CFR, Subpart C, §261.21 and Subpart C, §261.23 of RCRA, and would be designated as hazardous wastes and CERCLA hazardous substances. In addition listed CERCLA hazardous substances including xylene, toluene, ethylbenzene, benzene, phenol, 1, 2-methylphenol, naphthalene and 2-methylnaphthalene, were detected at significantly elevated concentrations in waste material and soil impacted by the release of the waste materials from the drums (Tables 1 through 8). An unknown number of drums remain in the drum burial area along with approximately 2,000 cubic yards of contaminated soil impacted by releases from these drums.

5. Release or threatened release into the environment of a hazardous substance, or pollutant or contaminant

Drums containing hazardous waste (RCRA ignitable and reactive wastes) and other listed CERCLA hazardous substances have been found buried on the Site. These drums have leaked their hazardous contents into the soil around them. Currently, approximately 150 drums and 200 cubic yards of grossly contaminated soil excavated during the removal assessment are staged on-

Site. An unknown quantity of additional drums are still buried on the Site in the drum burial area along with a significant quantity of contaminated soil.

The following listed hazardous substances (as defined in 40CFR Table 302.4) have been identified at significantly elevated concentrations in the soil and waste at the Site through sampling and analysis:

<u>Hazardous Substance</u>	<u>Max. Conc. PPM</u>	<u>Statutory Source for Designation as a</u>
Acetone	6,200	RCRA §3001
Toluene	83,000	RCRA §3001, CWA §307(a) & §311(b)(4), CAA §112
Ethylbenzene	1,400	CWA §307(a) & §311(b)(4), CAA §112
Xylene	10,200	RCRA §3001, CWA §311(b)(4), CAA §112
Benzene	17	RCRA §3001, CWA §307(a) & §311(b)(4), CAA §112
1,2 Dichlorobenzene	6.6	RCRA §3001, CWA §307(a) & §311(b)(4)
Trichloroethene	7.6	RCRA §3001, CWA §307(a) & §311(b)(4), CAA §112
Phenol	4,800	RCRA §3001, CWA §307(a) & §311(b)(4), CAA §112
2-methylphenol	3,600	RCRA §3001, CWA §311(b)(4), CAA §112
4-methylphenol	36	RCRA §3001, CWA §311(b)(4), CAA §112
2,4-dimethylphenol	23	RCRA §3001, CWA §307(a) & §311(b)(4), CAA §112
2,4-dinitrophenol	16	RCRA §3001, CWA §307(a)
Acetophenone	38	RCRA §3001, CAA §112
Naphthalene	530	RCRA §3001, CWA §307(a) & §311(b)(4), CAA §112
2-methylnaphthalene	210	RCRA §3001, CWA §307(a) & §311(b)(4), CAA §112

III. THREATS TO PUBLIC HEALTH WELFARE OR THE ENVIRONMENT, AND STATUTORY AND REGULATORY AUTHORITIES

A. Threats to the Public Health or Welfare

Conditions at the site meet the requirements of Section 300.415(b) of the National Contingency Plan (NCP) for the undertaking of a CERCLA removal action. Factors from the NCP Section 300.415(b)(2) that support conducting a removal action at the site include:

- (i) Actual or potential exposure to nearby human populations, animals, of the food chain from hazardous substances, or pollutants, or contaminants;**

There is a potential exposure to hazardous substances by nearby human populations (§300.415(b)(2)(i)). The Site is in a residential/commercial area, and is completely unsecured and has been used by trespassers for hunting and ATV driving. Prior to the removal assessment in December 2007 at least 10 partially buried drums of waste were exposed at the surface. Currently, approximately 150 drums and 200 cubic yards of contaminated soil excavated during

the assessment are staged on the Site. This material contains high levels of hazardous substances.

Direct human contact with the hazardous materials present at the Site could occur during the activities of trespassers. Since the Site is not secure or monitored, there is a significant threat of future uncontrolled releases.

(iii) Hazardous substances or pollutants or contaminants in drums, barrels, tanks or other bulk storage containers, that may pose a threat of release;

There are hazardous substances in drums and other storage containers on the Site that may pose a threat of release (**§300.415(b)(2)(iii)**). Leaking drums containing industrial waste are buried on the Site. These drums are leaking their contents into the soil. Drums excavated during the assessment activities in December 2007 are known to contain ignitable and reactive hazardous waste and numerous other listed CERCLA hazardous substances. These drums are drums are in poor condition and are temporarily staged on the Site awaiting removal.

(vi) Threat of fire or explosion

Ignitable and flammable (high VOC) wastes in containers on the Site represent a significant risk for fire. A fire could result in the generation and release of a large airborne plume of smoke containing hazardous substances. This plume could easily migrate off-Site into neighboring communities causing widespread exposure to airborne contamination. The Site is unsecured and vandals could ignite material in the drum storage area causing a catastrophic fire.

(vii) The availability of other appropriate federal or state response mechanisms to respond to the release;

There are no State/local response agencies available to mitigate the threats to public health or the environment on the Site.

B. Threats to the Environment

The drums have already released hazardous substances to soil on the Site. This contamination could migrate and impact groundwater or nearby surface water. A Lake Ontario tributary (Ont-66b) borders the Site to the east and northeast.

IV. EXPECTED CHANGE IN THE SITUATION SHOULD ACTION BE DELAYED OR NOT TAKEN

Delayed action will increase health risk to those persons that access the Site. Additional release from the leaking drums in the subsurface will occur over time increasing the aerial extent of soil contamination and further threatening groundwater and surface water. In addition, the potential for a fire and the widespread migration of hazardous substances off-Site increases over time.

V. CONCLUSIONS

The Site is considered a facility as defined by Section 300.5 of the NCP and Section 101(9) of CERCLA, 42 U.S.C. § 9601(9). A release of hazardous substances has occurred on the Site in a quantity and concentration that may present a substantial threat to the public health and the environment. There is a current exposure pathway existing to humans and the environment that may present an imminent and substantial endangerment to the public health and welfare and no other party, government or otherwise, is currently available to take a timely response action to mitigate the threat.

Based on the high concentrations of volatile and semi-volatile hazardous substances in the drums and contaminated soil, the Site may pose a health threat to unprotected individuals accessing the Site and to individuals residing or working in the vicinity of the Site.

VI. RECOMMENDATIONS

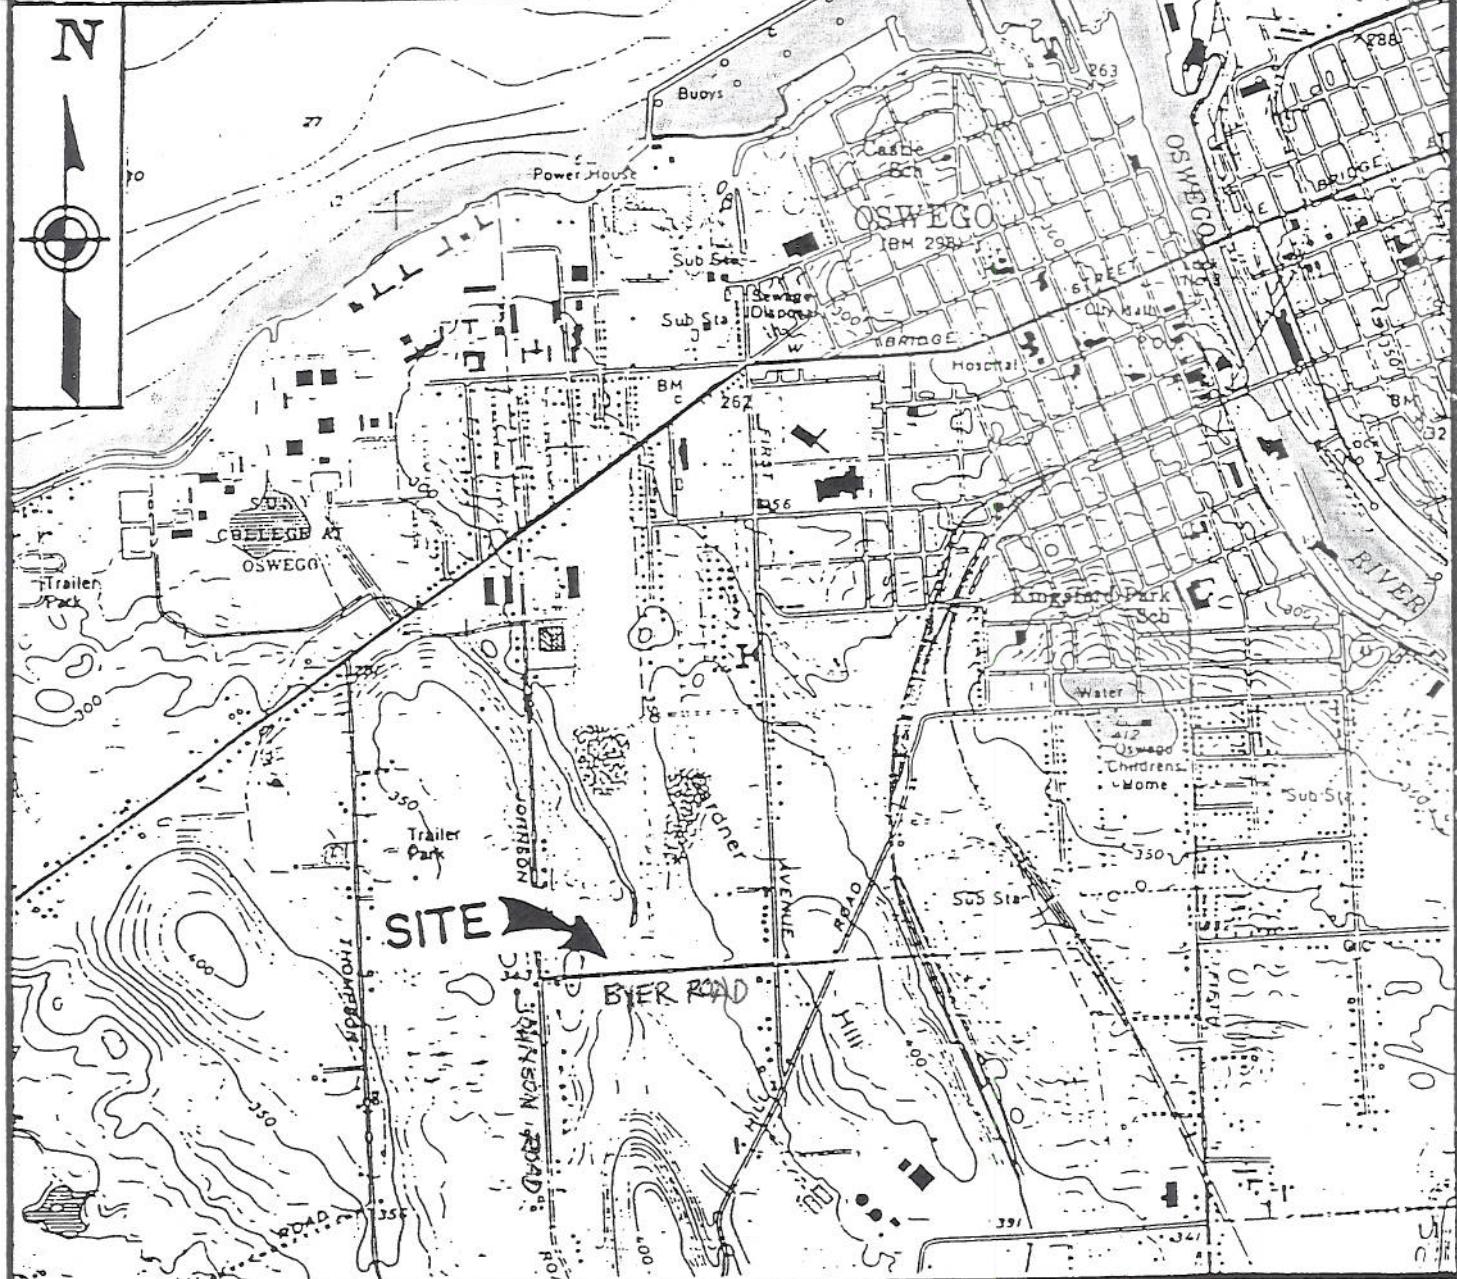

It is recommended that a CERCLA Time-Critical removal action be undertaken to address the RCRA hazardous waste and other listed CERCLA hazardous substances found in the drums and soil on the Site.

The removal action would consist of removal of previously excavated drums of waste and contaminated soil for appropriate off-Site disposal and the excavation of remaining buried drums and contaminated soil and the proper transportation and disposal of that material to an appropriate off-Site disposal facility. Further investigation of the extent of the release from the Site into groundwater and surface water should also be conducted to determine the potential for off-Site migration of contamination.

make = milligrams per kilogram

(g) = Analytical Detection Limit

U = Undetected at the analytical detection limit

J = Estimated value

R = Data is rejected

UJ = Estimated value of the undetected value

Table 8. Total Petroleum Hydrocarbon Results
Irwin Property Site
Oswego County, NY

Sample #	Sample ID	Total Petroleum Hydrocarbons (mg/kg)	Analytical Reporting Limit (mg/kg)
B4ME1	WM-1	16,500	529
B4MF1	WM-11	8,730	412
B4MF4/B4MG6*	WM-14	1,470	427-450
B4MF5/B4MG7*	WM-15	3,700	422-427
B4MF6/B4MG8*	WM-16	1,865	422

* Duplicate samples- Results are reported as mean concentration
mg/kg - milligrams per kilogram
