1. Introduction

The New York State Department of Environmental Conservation (NYSDEC) has issued a Work Assignment (# D007618-10) to ARCADIS/Malcolm Pirnie, Inc. (Malcolm Pirnie) for Operation, Maintenance, and Monitoring at the Columbia Mills Site (NYSDEC Site Number 7-38-012) in New York State. Malcolm Pirnie, Inc. has prepared this Quarterly Report and Annual Groundwater Monitoring Summary in accordance with the NYSDEC-approved Work Plan to summarize site activities, including third quarter 2012 groundwater sampling results.

2. Site Description

The Columbia Mills site is located on Route 48, Minetto, Oswego County, New York (Figure 2-1), across Route 48 from the western bank of the Oswego Canal. A capped, closed landfill is located in the western portion of the site. The landfill is surrounded by a six-foot chain-link fence. Groundwater quality in the vicinity of the landfill is monitored by sampling of eight groundwater monitoring wells.

3. Operation and Maintenance

Operation and Maintenance (O&M) activities were conducted on July 25, 2012 in accordance with the Work Plan, the recommendations in the draft 2009 Periodic Review Report (Malcolm Pirnie, 2009), and in consultation with NYSDEC.

3.1 O&M Observations

The following observations were noted during the July 2012 inspection:

- The landfill cap was mowed.
- No woody vegetation was observed on the cover system.
- No problems were noted with the condition of the perimeter fence or with the security of the landfill.

3.2 Leachate Collection System Operation Overview

A schematic of the leachate collection system is provided in Figure 3-1. Figure 3-2 provides a process flow diagram of the leachate collection system based on the 2008 and 2009 site visits and observations and review of site documents and construction plans. As shown in Figure 3-2, a combination pore-pressure relief system (PPRS)/leachate collection system is located along the perimeter of the landfill cell. The system directs leachate by gravity to a 10,000 gallon sub-surface leachate collection tank, the Town of Minetto sanitary sewer, or the amphibian breeding pond (ABP) (via the combination sampling sump). A valve located at the inlet to the collection tank controls flow into the tank. Valves located upgradient of the leachate collection tank can direct flow to the Town of Minetto sanitary sewer or ABP. Currently, at the direction of the NYSDEC, leachate is being directed to Town of Minetto sanitary sewer.

As shown in Figure 3-1 and 3-2, groundwater from separate PPRSs (north and south of the landfill cell, respectively) discharges into a pre-cast concrete combination sampling sump located on the west side of the landfill. Valves within the sampling sump control groundwater flow into the sump and through the PPRSs. The valves can be closed if sampling indicates the presence of contamination in groundwater from the PPRS collection lines.

3.3 Leachate Collection System Sampling

Based on the recommendations in the draft PRR and in consultation with NYSDEC, leachate collection system samples were collected from the north and south PPRS and leachate inlet pipes in the combination sampling sump (Figure 3-1) to evaluate the potential presence of poly-chlorinated biphenyl (PCBs) discharged to the Town of Minetto sanitary sewer. However, due to no flow from the north PPRS during the July 2012 sampling event, no sample was collected at this location.

3.3.1 Sampling Procedures

Leachate flow was temporarily diverted from the Town of Minetto sanitary sewer to the combination sampling sump. Leachate collection system samples were then collected from each inlet pipe to the combination sampling sump structure (leachate, and south PPRS) (Figure 3-1) using a swing-type dipper sampling device. Water collected from each pipe was transferred from the dipper sampler collection container directly into the appropriate sampling container. Leachate flow was restored to the Town of Minetto sanitary sewer after sampling was complete.

Samples from the combination sampling sump were submitted to TestAmerica in Amherst, New York for analysis of PCBs by USEPA Method 8082.

3.3.2 Sampling Results

Leachate collection system sampling results are summarized in Table 3-1 (PCBs). Analytical reporting forms are provided in Appendix A.

As shown in Table 3-1, none of the samples collected from the leachate collection system contained PCBs at concentrations greater than the indicated laboratory quantitation limits.

4. Groundwater Monitoring Program

4.1 Groundwater Monitoring

Groundwater monitoring wells were sampled on July 25, 2012 to provide information on groundwater quality, monitor contaminant migration in the groundwater at the site, and assess hydrogeologic site conditions, including groundwater flow.

4.2 Well Inspection

Existing on-site groundwater monitoring wells and piezometers (Figure 4-1) were evaluated for integrity and suitability for groundwater monitoring and water levels. The condition of each well and piezometer was recorded on well inspection logs (Appendix B). As shown in Appendix B the integrity of the groundwater monitoring wells and piezometers were acceptable and no repair or maintenance is required at this time.

4.2.1 Groundwater Flow

Prior to collecting samples, groundwater levels were measured to the nearest hundredth of a foot and recorded on a groundwater level data form (Appendix C). Table 4-1 summarizes the groundwater levels and elevations from the site. As shown in Table 4-1, groundwater elevations in shallow overburden and bedrock wells ranged from approximately 310 feet above mean sea level (amsl) to approximately 324 feet amsl; groundwater elevations in deep bedrock wells ranged from approximately 300-feet amsl to approximately 323 feet amsl. As shown in Table 4-1, well clusters MW-1S/1D and 4S/4D had higher groundwater elevations in the deep groundwater monitoring zone compared to the shallow groundwater monitoring zone, indicating an upward hydraulic gradient at these locations. Table 4-1 shows that well clusters MW-2S/2D and MW-3S/3D had downward hydraulic gradient. As shown in Table 4-1, the average shallow groundwater elevations measured in 2012 are approximately one foot lower than in 2011. The average deep groundwater elevations measured in 2012 are approximately two feet lower than in 2011.

Shallow and deep potentiometric surfaces map are provided on Figure 4-2 and Figure 4-3, respectfully. As shown on Figure 4-2 and Figure 4-3, the direction of groundwater flow in the vicinity of the site is generally to the northeast toward the ABP and the Oswego Canal.

4.3 Groundwater Sampling

Groundwater samples from monitoring wells MW-1S, MW-1D, MW-2S, MW-2D, MW-3S, MW-3D, MW-4S, and MW-4D were collected using low-flow groundwater purging and sampling procedures in accordance with the Work Plan. One sample (MW-X) was collected from MW-4D and submitted as a field duplicate. Prior to collecting groundwater samples, pH, conductivity, turbidity, dissolved oxygen (DO), temperature, salinity, total dissolved solids (TDS), and oxidation-reduction potential (REDOX) were measured using a Horiba U-22 water quality meter and recorded on groundwater sampling purge logs. Groundwater sampling purge logs are presented in Appendix D. Groundwater samples were submitted to TestAmerica for analysis of PCBs by USEPA Method 8082.

4.3.1 Groundwater Sampling Results

Table 4-2 shows that no PCBs were detected in any of the groundwater samples collected during the July 2012 sampling event. As shown in Table 4-2, only one groundwater sample (MW-3S) collected in 2007 contained a total PCB concentration greater than the respective NYSDEC Class GA Standard of 0.09 ug/L.

5. Recommendations

Annual O&M should continue to be conducted as described in the Work Plan and as recommended in the draft PRR.

6. Summary

Operation and Maintenance activities conducted in July 2012 indicated no significant problems with the condition or security of the landfill.

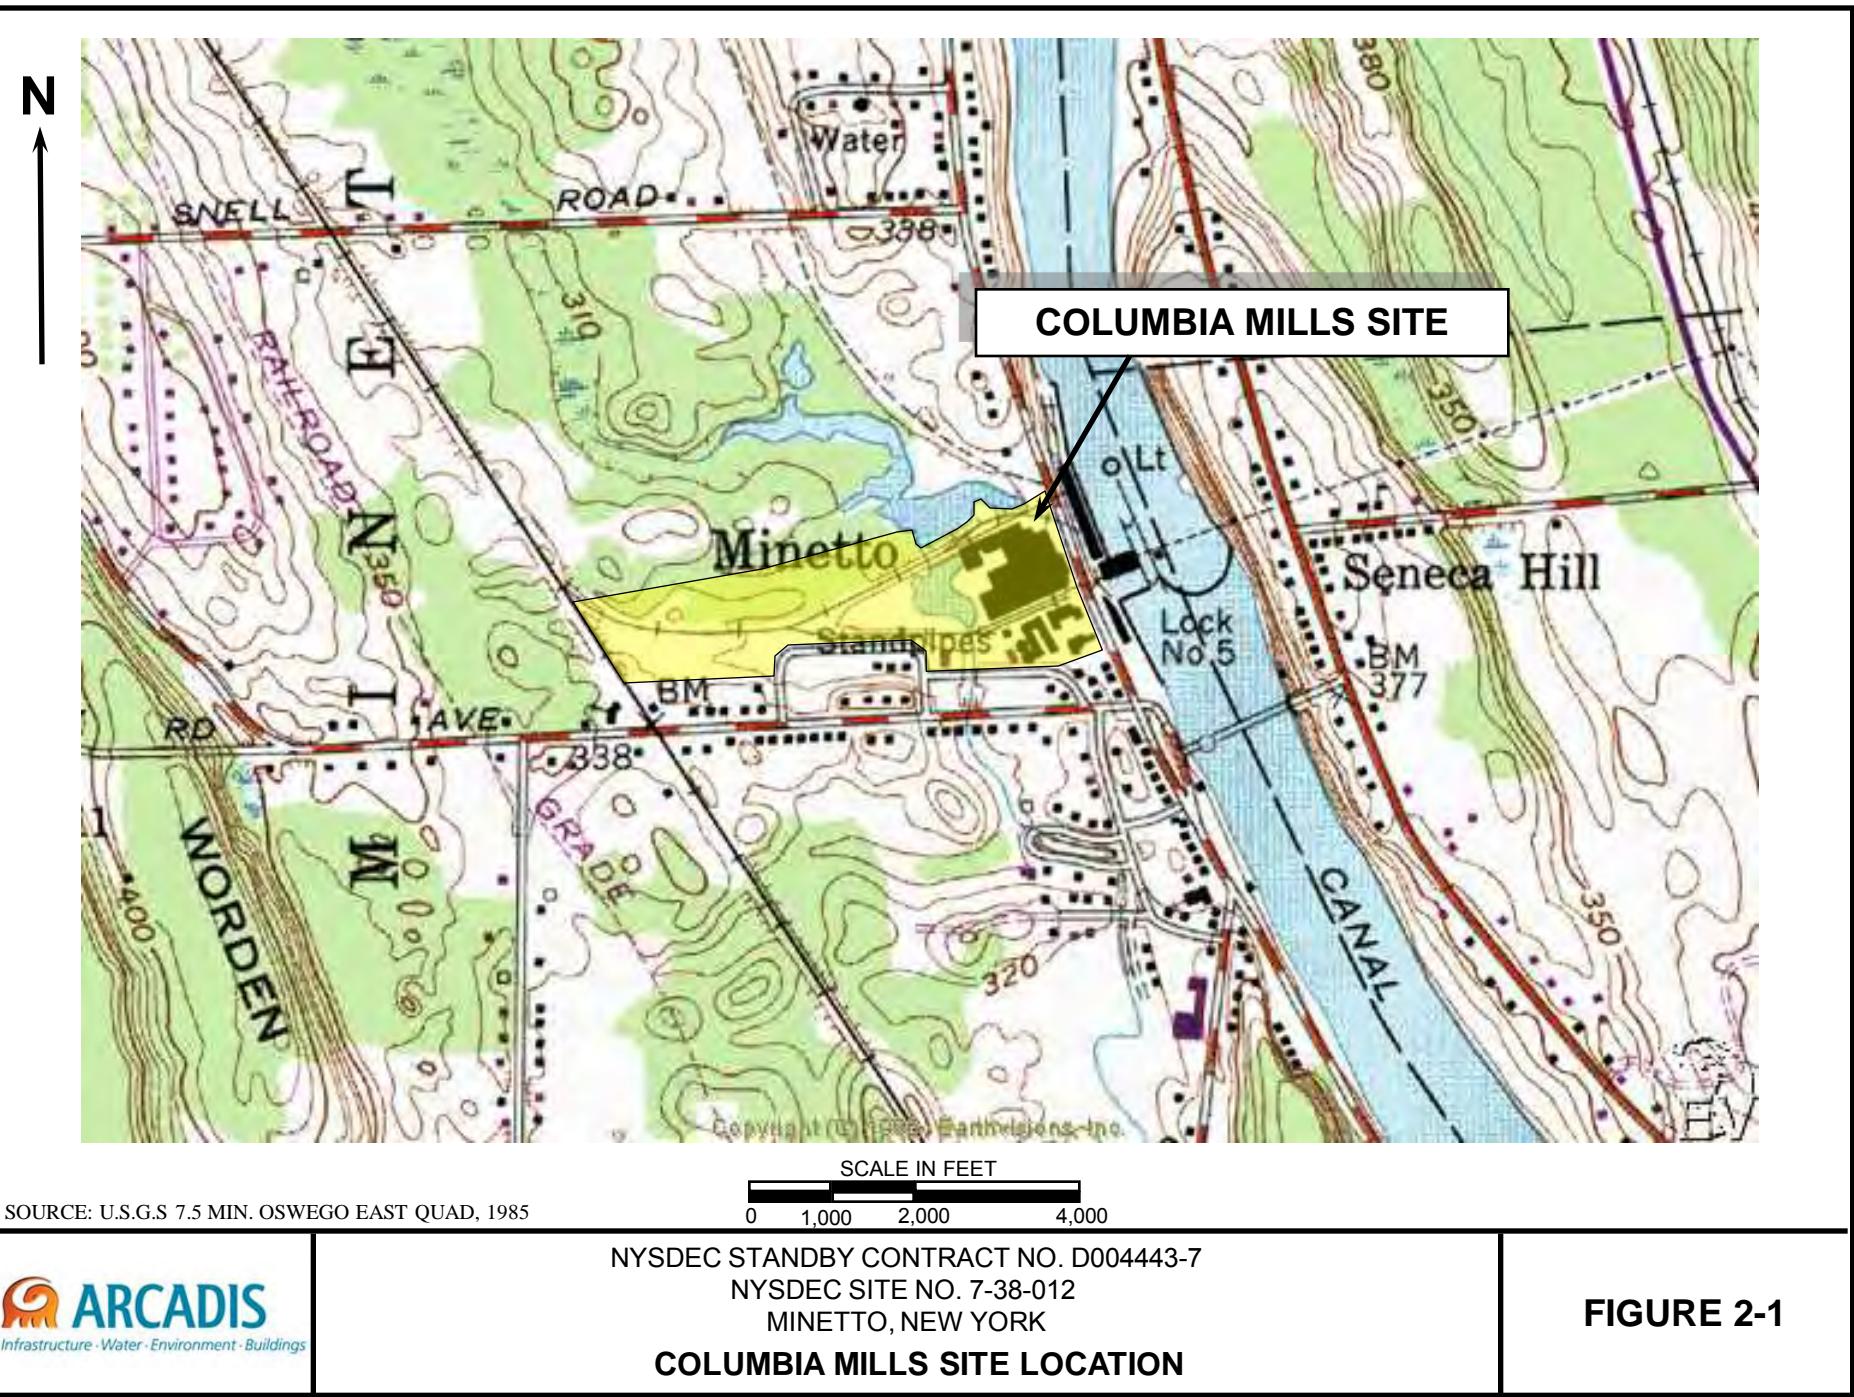

Leachate and PPRS samples did not contain detectable concentrations of PCBs. The groundwater monitoring wells and piezometers are generally in acceptable condition. Based on the water level survey, groundwater flow across the site is generally toward the northeast. No PCBs were detected in any of the groundwater samples collected during the July 2012 monitoring event.

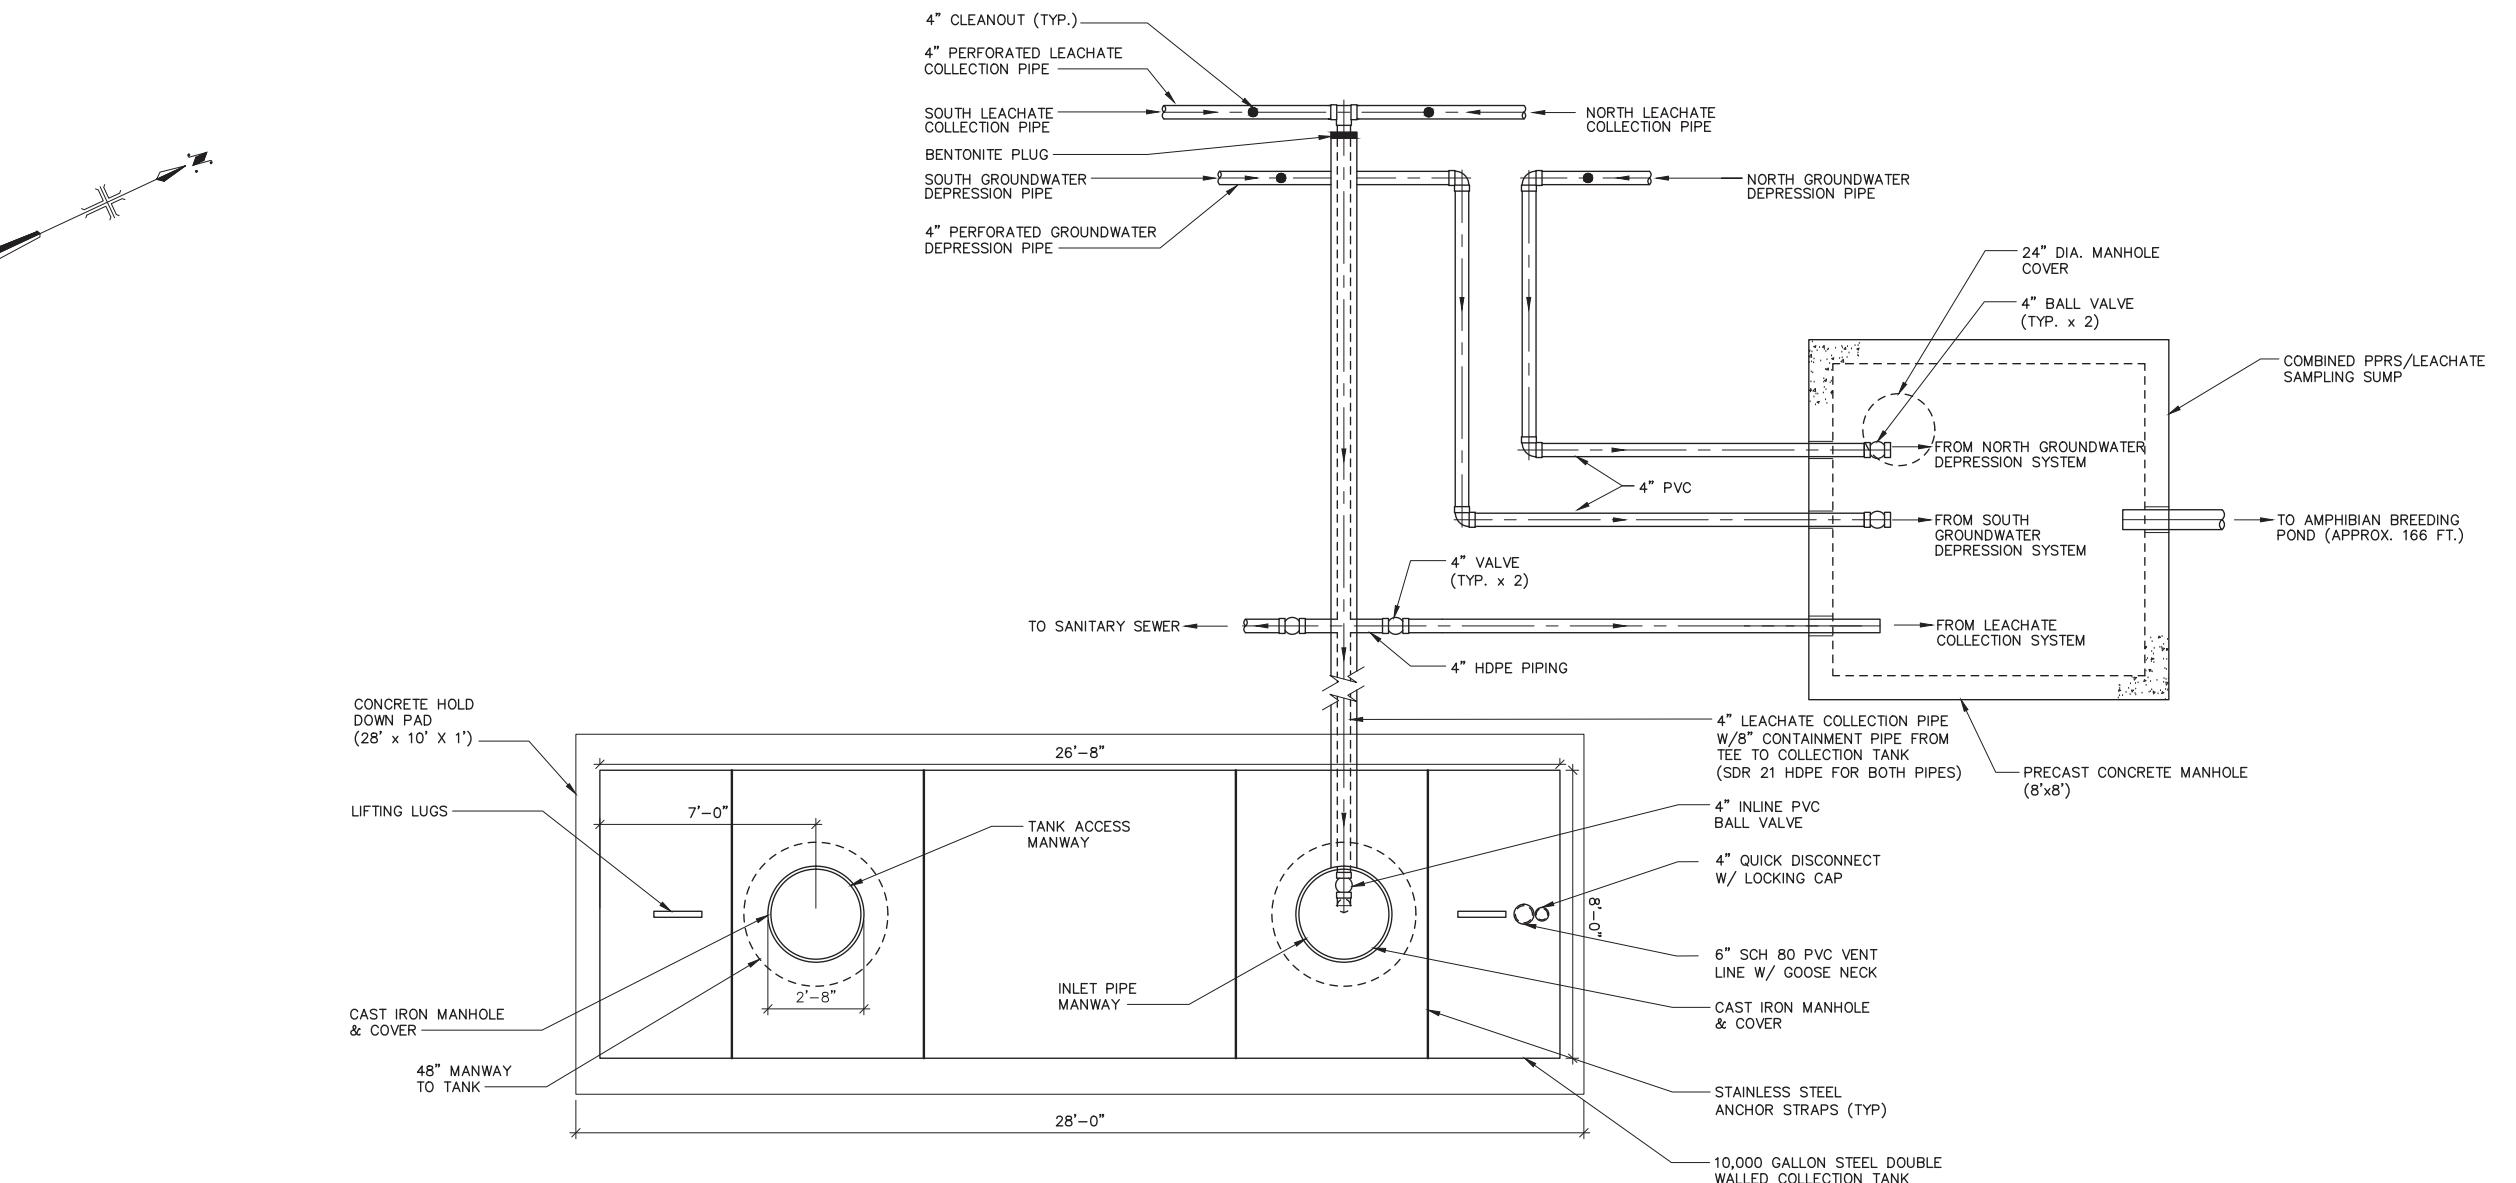

Annual O&M should continue to be conducted as described in the Work Plan and as recommended in the draft PRR.

Receipt

The samples were received on 7/26/2012 9:00 AM and 7/27/2012 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 2.2° C, 2.5° C and 2.6° C.

GC Semi VOA

Method 8082: All primary data is reported from the ZB-5 column.

No other analytical or quality issues were noted.

Organic Prep

Method 3510C: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation MW-3D (480-23140-2), MW-3S (480-23140-1)

Method 3510C: The following sample MW-3D (480-23140-2) has twice the normal amount of surrogate added.

No other analytical or quality issues were noted.
