FACT SHEET

State Superfund Program

714 Baldwin Street
Elmira, Chemung
County

April 2025

SITE No. 808041
NYSDEC REGION 8

Remedy Proposed for State Superfund Site; **NEW** Public Comment Period and **NEW** Public Meeting Announced

The 04/10/25 Public Meeting Date is CANCELLED

This factsheet notifies you of the ****NEW Public Meeting Date****
set for **Thursday 05/29/25 at 5:00 PM**
Steele Memorial Library, 101 E Church St, Elmira, NY 14901

NYSDEC invites you to this new public meeting date to discuss the remedy proposed for the site. You are encouraged to provide comments at the meeting.

DEC will provide interpreter services for hearing impaired persons and language interpreter services for individuals with difficulty understanding or reading English at no charge upon written request submitted no later than May 15th, 2025.

The public is invited to comment on a remedy being proposed by the New York State Department of Environmental Conservation (NYSDEC) in consultation with the New York State Department of Health (NYSDOH) to address contamination related to the former Associated Textile Rental Services site ("site") located at 714 Baldwin Street, Elmira in Chemung County. Please see the map for the site location. The estimated cost to implement the remedy is \$640,375.

How to Comment: NYSDEC is accepting written comments about the proposed plan, called a Proposed Remedial Action Plan (PRAP) from **March 12th through June 12th, 2025.**

- Access the PRAP and other project documents online through the DECinfo Locator:
<https://extapps.dec.ny.gov/data/DecDocs/808041/>
- Documents also are available at the location(s) identified at left under "Where to Find Information."
- Please submit comments to the NYSDEC project manager listed under Project-Related Questions in the "Who to Contact" area at left.

The site is listed as a Class "2" site in the State Registry of Inactive Hazardous Waste Sites (list of State Superfund sites). A Class 2 site represents a significant threat to public health or the environment; action is required. NYSDEC is proposing the following remedy to address these threats:

Proposed Remedial Action Plan: The remedy proposed for the site includes:

- Excavating approximately 100 cubic yards of contaminated soil from the on-site contaminant source area;
- Disposing of contaminated soil off-site at a permitted facility;
- Backfilling with clean material that meets the established Soil Cleanup Objectives for use as backfill;
- Treating of contaminated groundwater through injection of chemical oxidants into the groundwater;
- Treating of contaminated soil vapor through installation of a sub-slab depressurization system;
- Adhering to a Site Management Plan (SMP) for long term maintenance of the remedial systems; and
- Recording of an Environmental Easement to ensure proper use of the site may be necessary.

NYSDEC developed the proposed remedy after reviewing the detailed investigation of the site and evaluating the remedial options in the "Feasibility Study" developed under New York's State Superfund Program.

Next Steps: NYSDEC will consider public comments as it finalizes the remedy for the site. The selected remedy will be described in a document called a "Record of Decision" that will explain why the remedy was selected and provide responses to public comments. A detailed design of the selected remedy will then be prepared, and the cleanup will be performed.

NYSDEC will keep the public informed throughout the investigation and cleanup of the site.

Site Description: The site is 0.75 acres and is bordered on the north by commercial properties, on the south by mixed commercial and residential properties, on the east by industrial facilities, and to the west by Clemens Center Parkway and a packaging and manufacturing plant. It includes one single-floor warehouse with a small unpaved driveway and a lawn area to the north and east of the building. The site is zoned for light industrial use and the site building is currently inactive. Until 2014 the site was used as a laundry and truck fueling and maintenance depot, and before 1990 it was used to store petroleum products.

The proposed remedy is intended to allow the use and development of the site for industrial use as defined by

Part 375-1.8(g), although land use is subject to local zoning laws.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID,808041) at:

<https://extapps.dec.ny.gov/cfm/extapps/derexternal/index.cfm?pageid=3>

Summary of the Investigation: The primary contaminants of concern at the site are chlorinated volatile organic compounds (CVOCs) which are present in site soil, groundwater, and soil vapor; and petroleum-related volatile organic compounds (VOCs) present in site soil and groundwater.

State Superfund Program: New York's State Superfund Program (SSF) identifies and characterizes suspected inactive hazardous waste disposal sites. Sites that pose a significant threat to public health and/or the environment go through a process of investigation, evaluation, cleanup, and monitoring.

NYSDEC attempts to identify parties responsible for site contamination before committing State funds for investigation and cleanup.
