                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                           | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                           | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  Notes:

PAOC - Potential Area of Concern

SCO - Restricted Residential Soil Cleanup Objective (6 NYCRR Subpart 375 )

UST - Underground Storage Tank

TCLP - Toxicty Characterisitic Leaching Procedure

in bgs - inches below ground surface

ft bgs - feet below ground surface

mg//L -milligrams/Liter

PCBs - Polychlorinated Biphenyls

VOCs - volatile organic compound

SVOCs - semi-volatile organic compounds

X - Sample to be obtained at this interval

NA - Not Applicable, Paved Area

(-) - No sample to be collected.

GW - Direct Push Groundwater sample to be collected (See Table 7 for analyses)

### Notes:

UST - Underground Storage Tank

TCLP - Toxicty Characterisitic Leaching Procedure mg//L -milligrams/Liter

VOC - Volatile organic compound

SVOC - Semivolatile Organic Compound

PCB - Polychlorinated biphenyl

X - Analyze

NA - No Analysis

## TABLE 8 ANALYTICAL METHODS, CONTAINERS, PRESERVATIVES, AND HOLDING TIMES

### Former Scott Technologies Site Elmira, New York

Matrix	Analytical Group	Analytical Method	Containers (number, size, type)	Preservation Requirements (chemical, temperature, etc.)	Maximum Holding Time (preparation/analysis)
	TCL VOCs	SW-846 8260C	Terracore kit	2 VOA vials $H_2O$ , 1 VOA vial MEOH, frozen within 48 hours	14 days
	TCL SVOCs	SW-846 8270D	1-4 oz glass jar	$Cool < 6^{\circ}C$ but not frozen	14 days to extract 40 days to analyze
Solid	Pesticides	SW-846 8081	1-4 oz glass jar	$Cool < 6^{\circ}C$ but not frozen	<ul><li>14 days to extract</li><li>40 days to analyze</li></ul>
	PCBS	SW-846 8082A	1-4 oz glass jar	Cool <6 [°] C but not frozen	14 days to extract 40 days to analyze
	Mercury, Total	SW-846 7471B	1.4	$Cool < 6^{\circ}C$ but not frozen	28 days
	Metals, Total	SW-846 6010C	1-4 oz. glass jar	Cool <6 [°] C but not frozen	180 days
	Cyanide	Method 9014	1-4 oz glass jar	Cool <6 ^o C but not frozen	14 days
	TCL VOCs	SW-846 8260C	3 X 40-mL glass VOA vials	HCl to pH<2, no headspace, cool to $<6^{\circ}$ C, but not frozen	14 days
	TCL SVOCs	SW-846 8270D	2 - 1 L amber glass	Cool <6 [°] C but not frozen	7 days to extract 40 days to analyze
Water	PCBs	SW-846 8082A Low- Level	2-1 L amber glass	Cool <6 ⁰ C but not frozen	7 days to extract 40 days to analyze
water	Mercury, Total	SW-846 7470A	1.250 ml plastic	HNO3 to pH<2, Cool <6 ⁰ C but not	28 days
	TAL Metals	SW-846 6010C	1-250 ml plastic	frozen	6 months
	TPH-DRO	SW-846 8015D	1-1 L glass	Cool <6 ⁰ C but not frozen	7 days to extract 40 days to analyze
	TPH-GRO	SW-846 8015D	3 X 40-mL glass VOA vials	HCl to pH<2, no headspace, cool to $<6^{\circ}$ C, but not frozen	14 days

Notes:

SW-846 - USEPA "SW-846 Test Methods for Evaluating Solid Waste: Physical/Chemical Methods", April 1998, 5th edition.

°C - Celcius HCl – hydrochloric acid L – liter mL – milliliters

⁰C – degrees Celsius

oz. – ounce

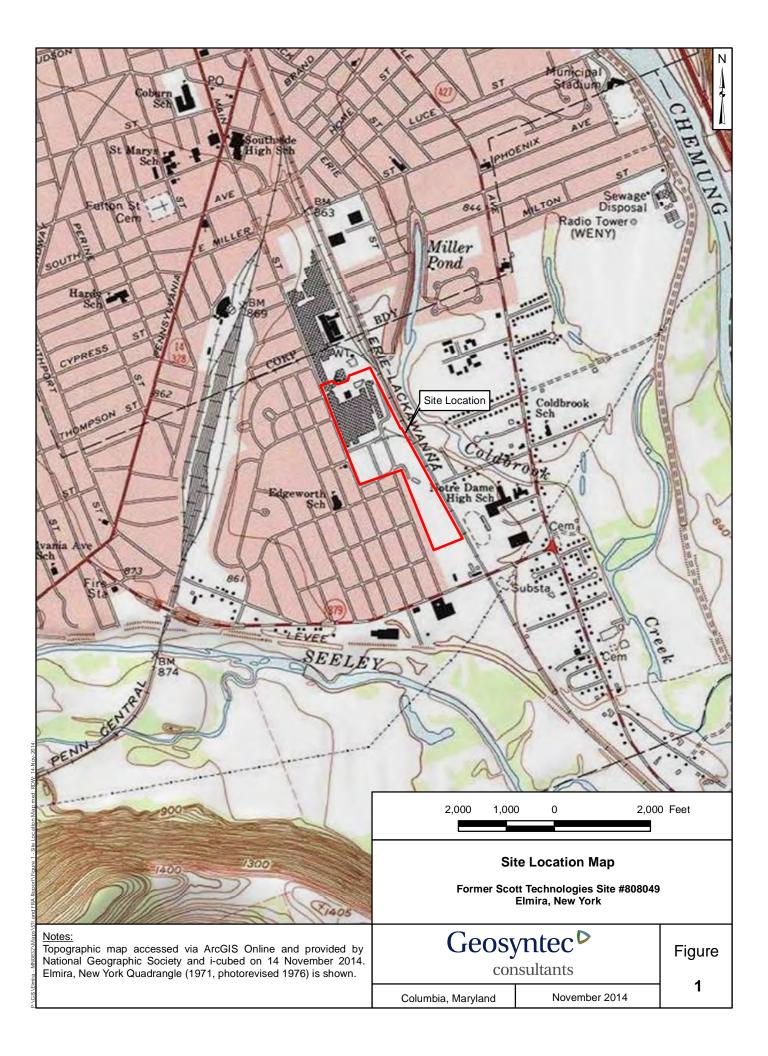

MEOH - methanol DRO - diesel range organics HVS - high volume sampling VOA – volatile organic analyte VOC – volatile organic compound H₂O - water SVOC – semi-volatile organic compound

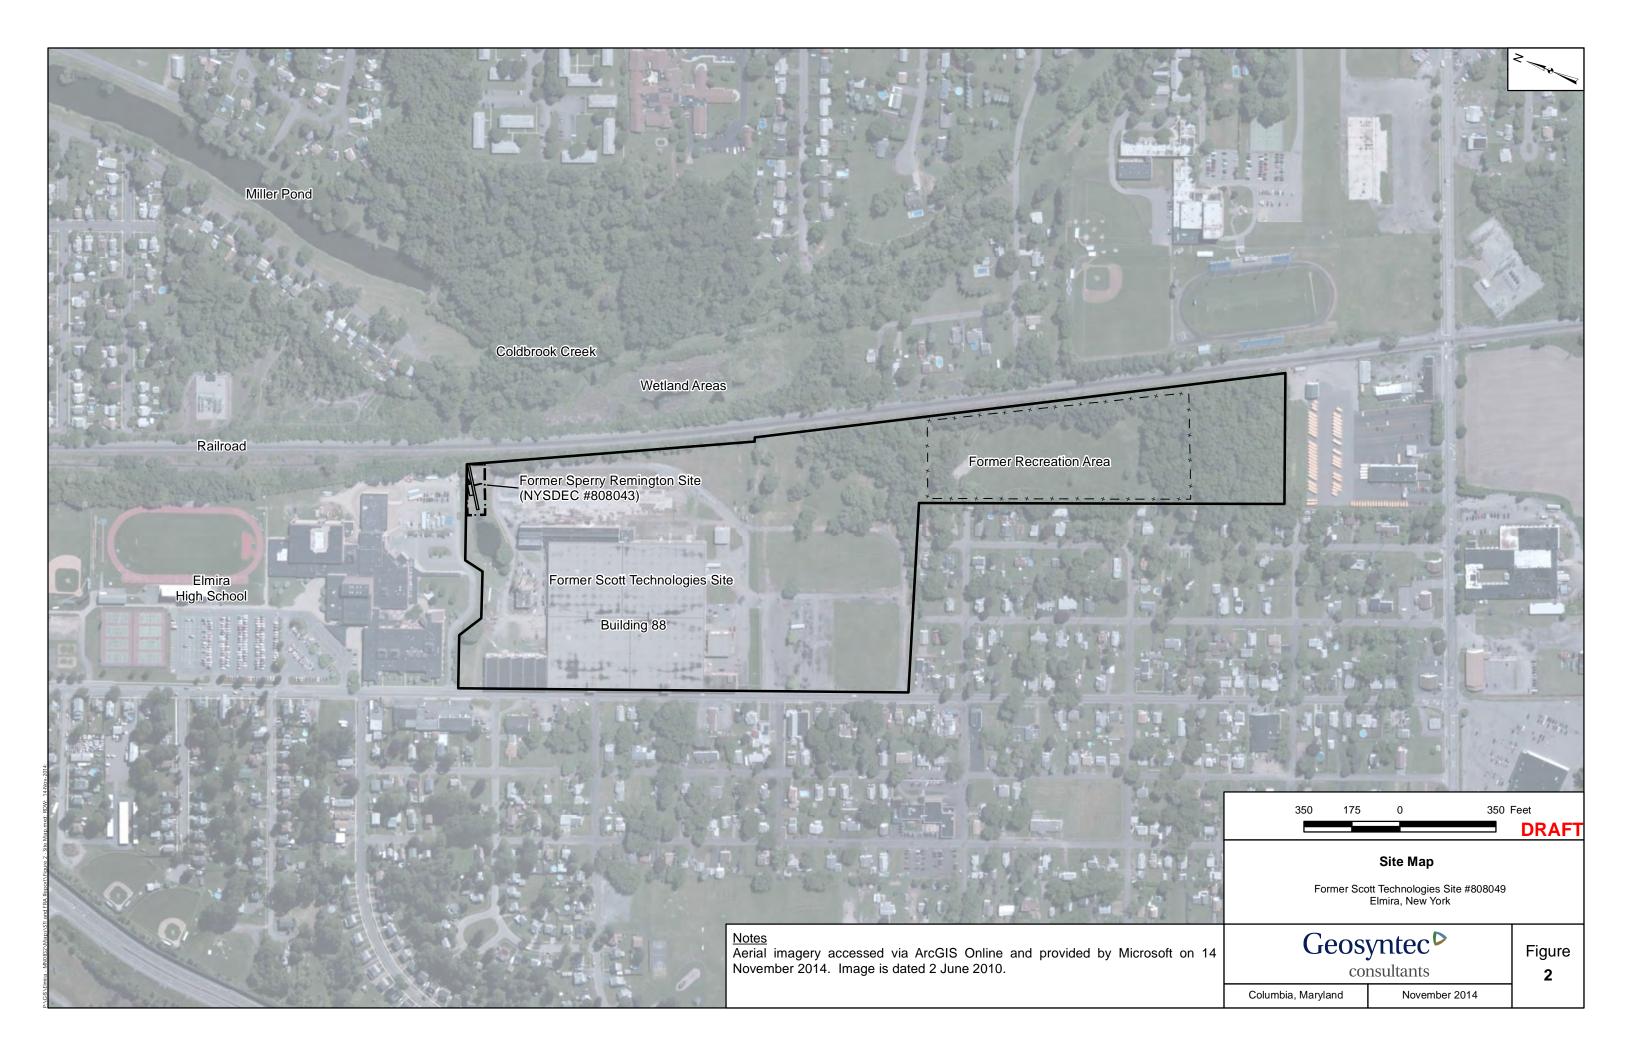

TPH – total petroleum hydrocarbons

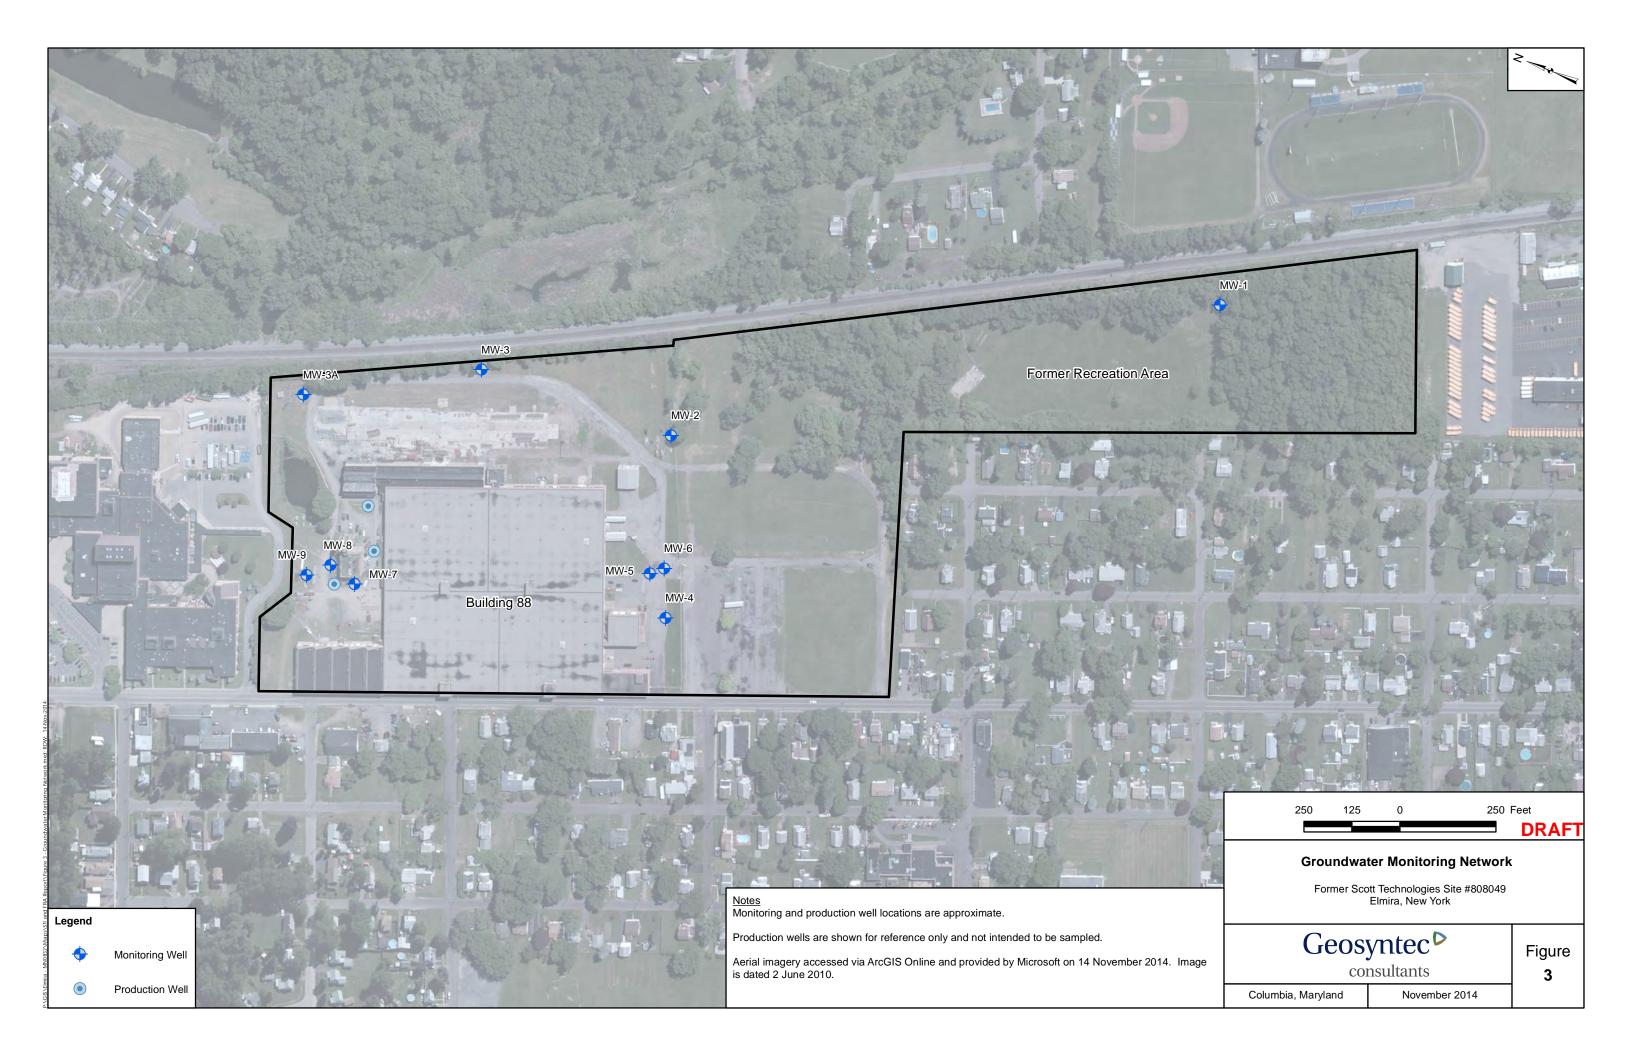

- GRO gasoline range organics
- TCL Target Compound List
- TAL Target Analyte List

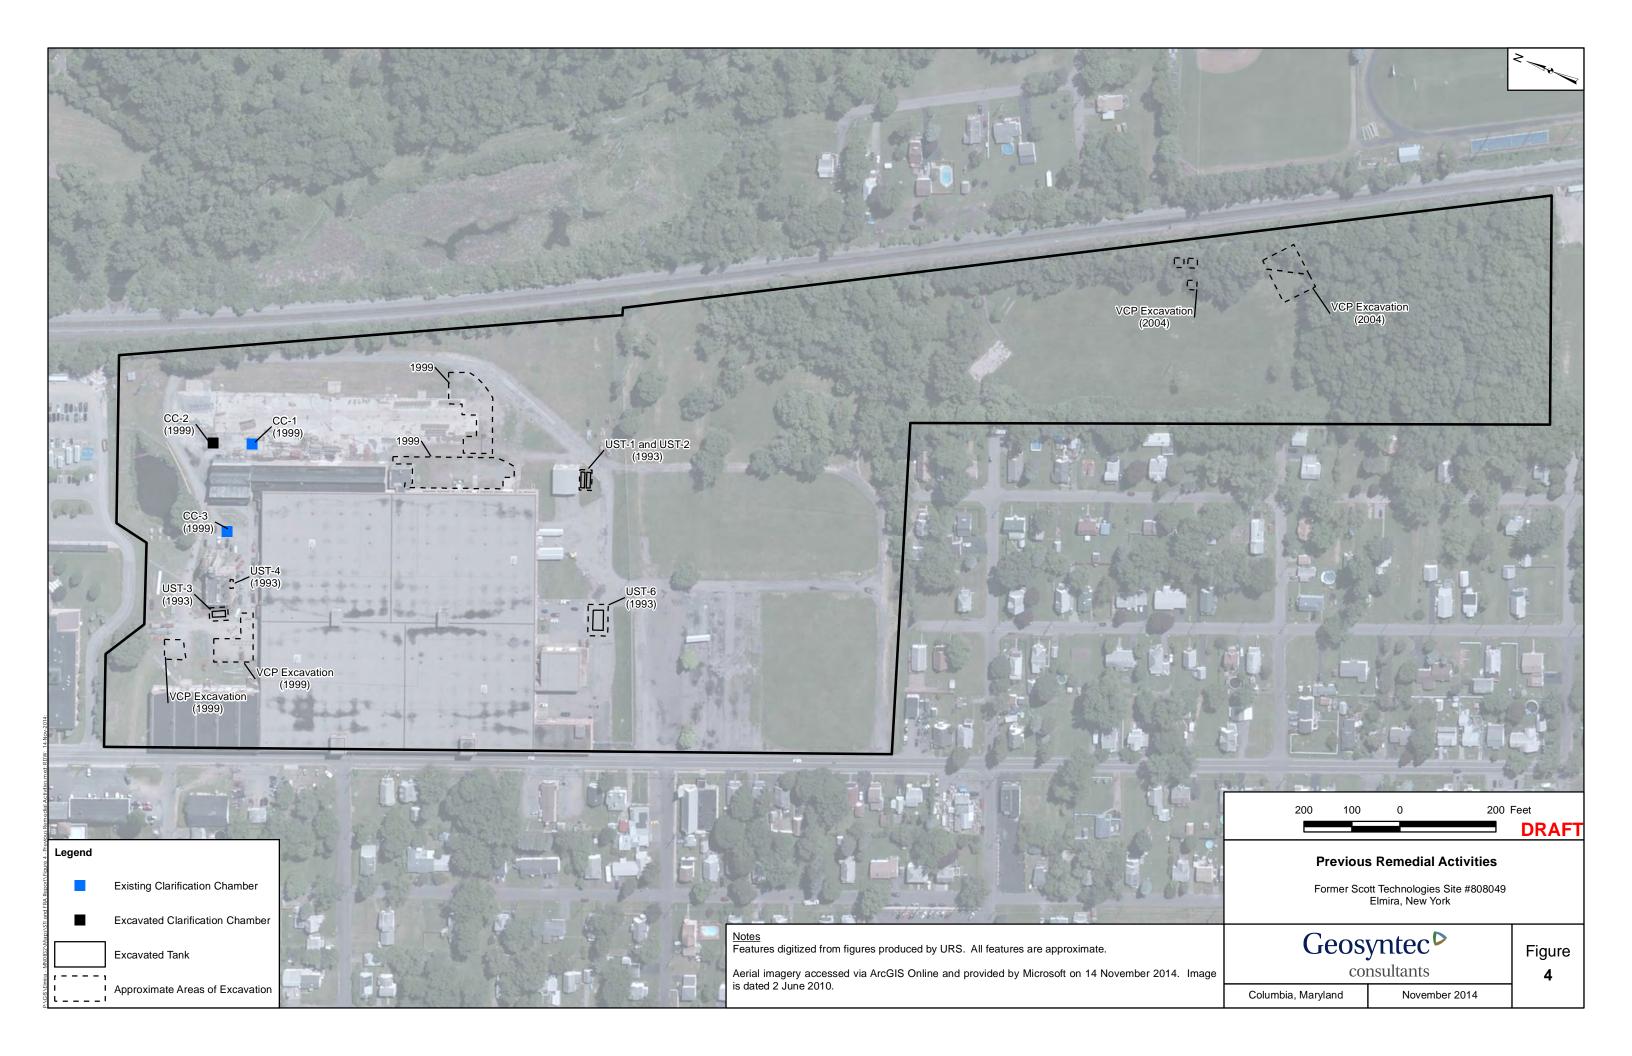

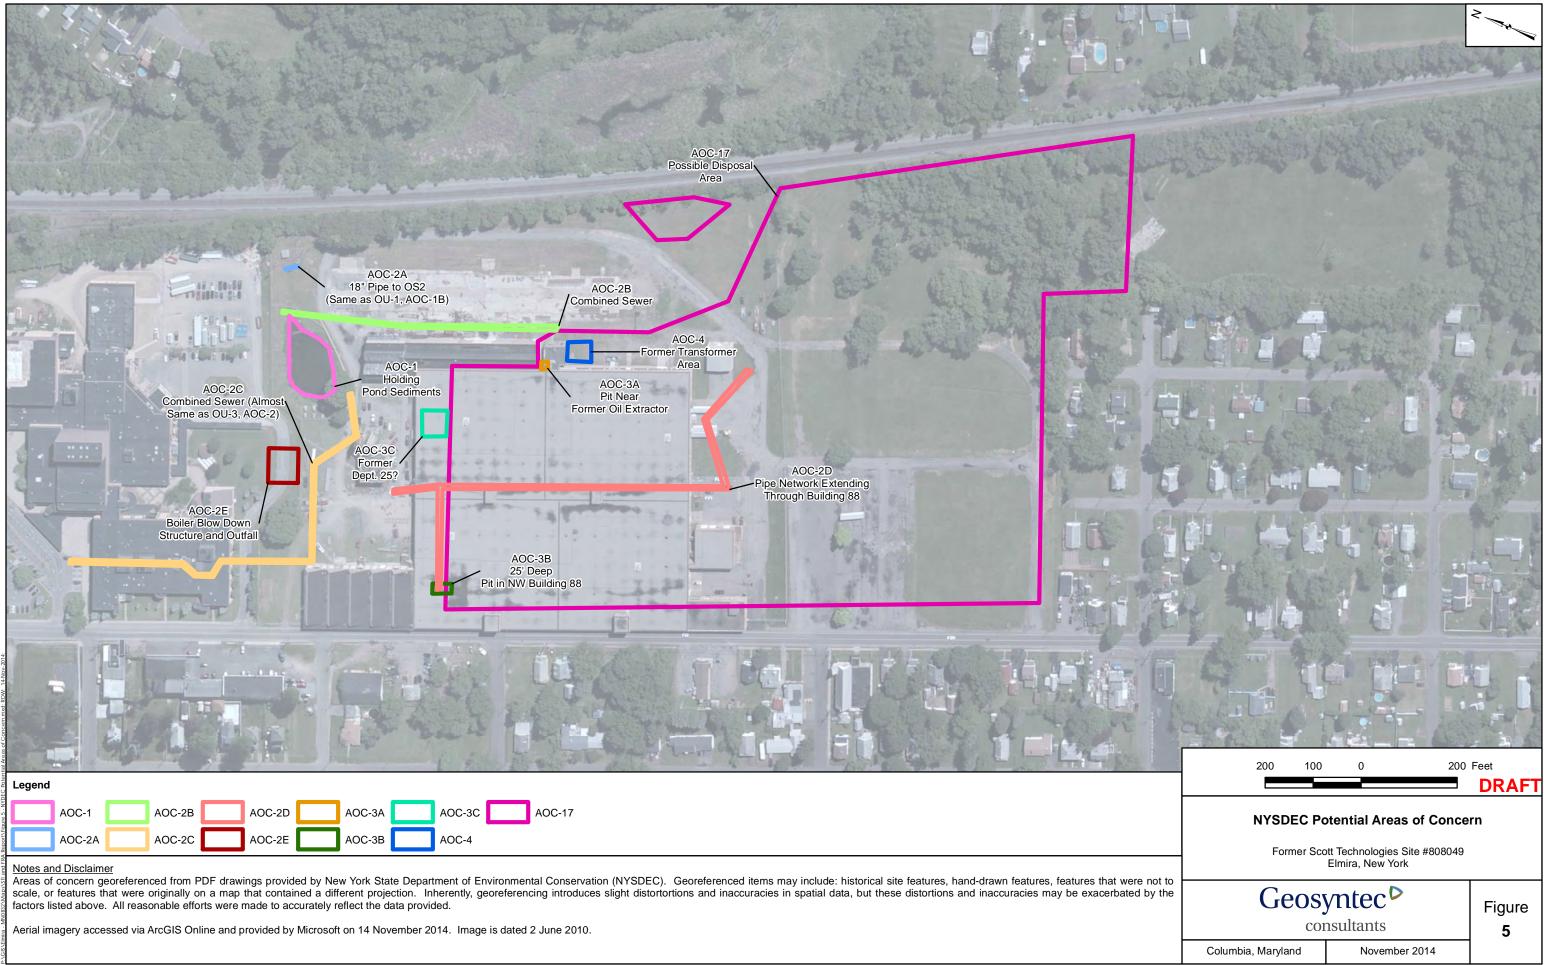

### FIGURES

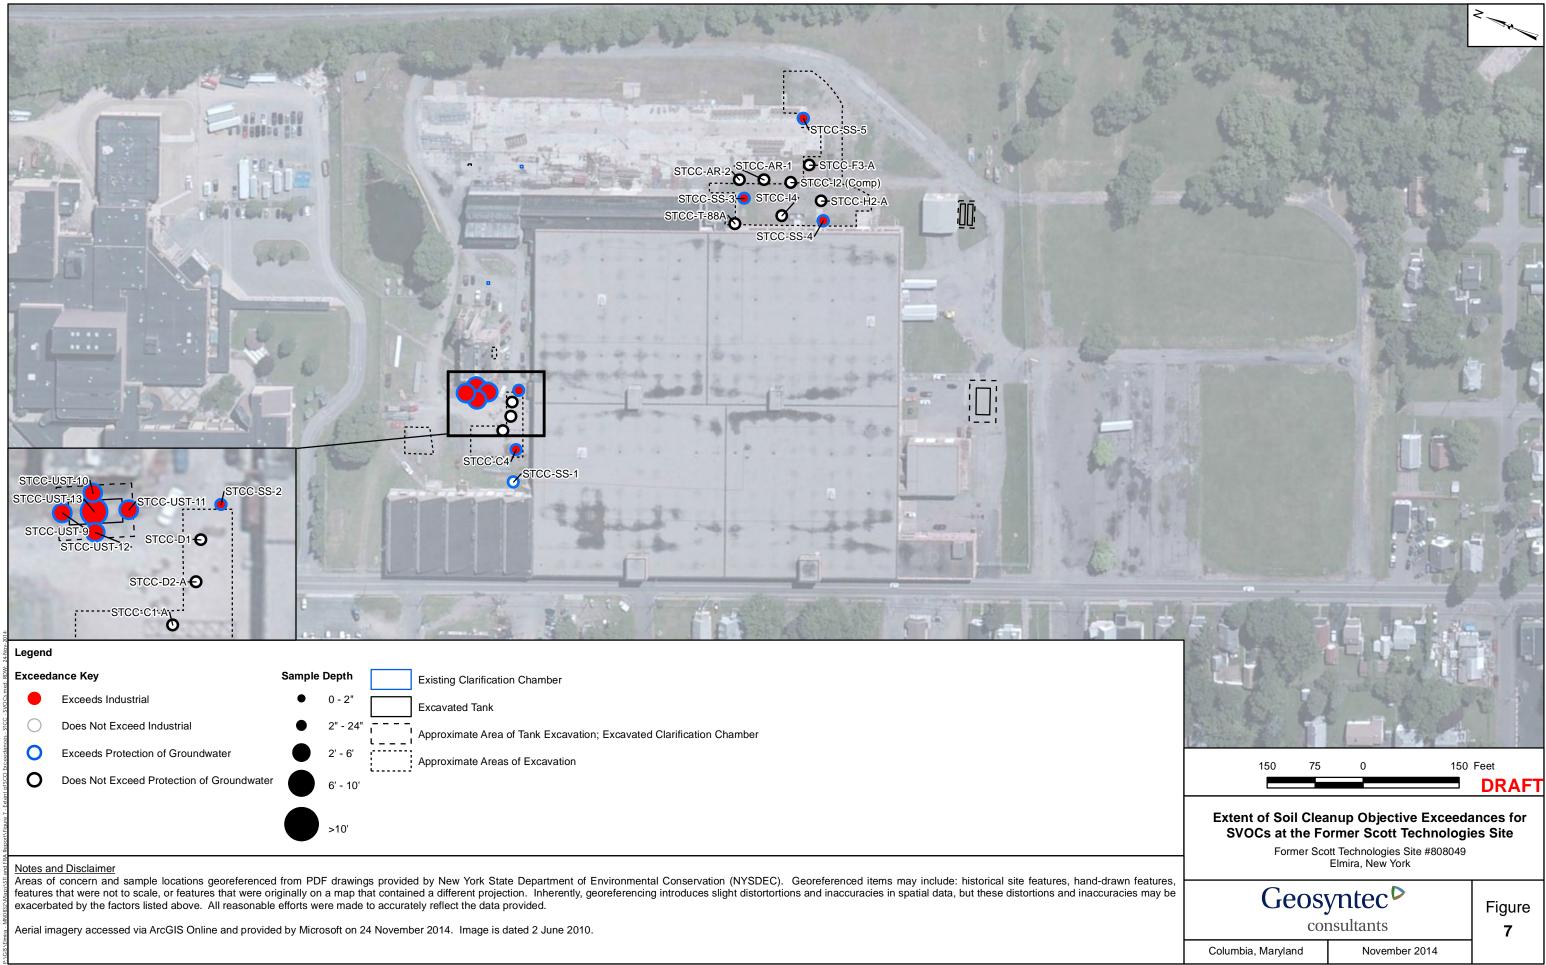

### Notes and Disclaimer

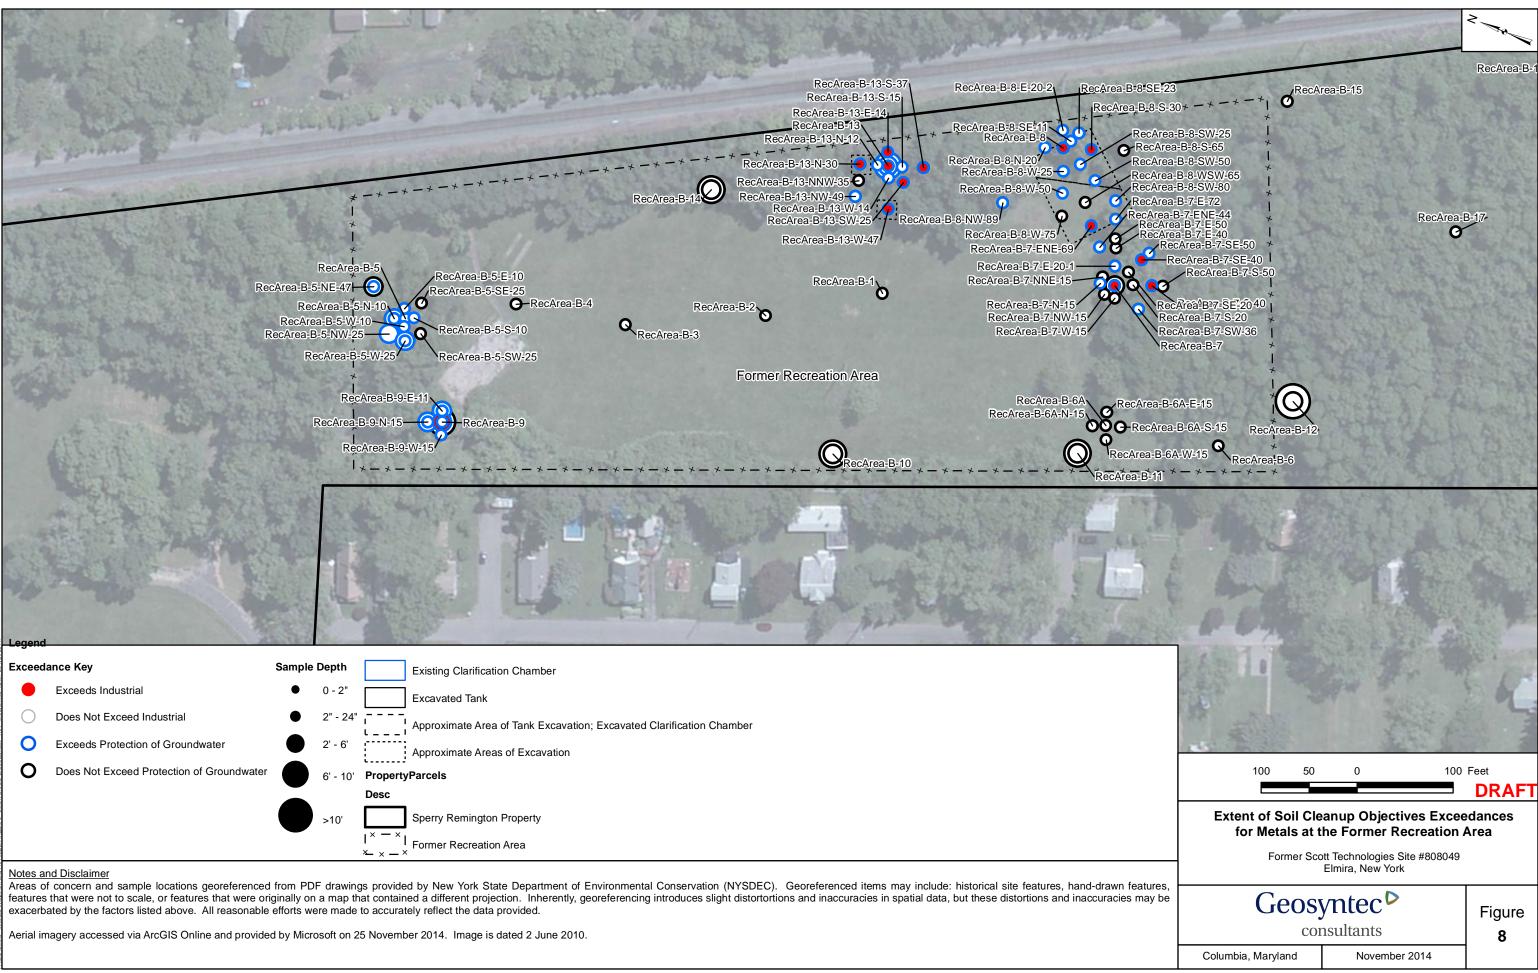

Areas of concern and sample locations georeferenced from PDF drawings provided by New York State Department of Environmental Conservation (NYSDEC). Georeferenced items may include: historical site features, hand-drawn features features that were not to scale, or features that were originally on a map that contained a different projection. Inherently, georeferencing introduces slight distortoritions and inaccuracies in spatial data, but these distortions and inaccuracies may exacerbated by the factors listed above. All reasonable efforts were made to accurately reflect the data provided.

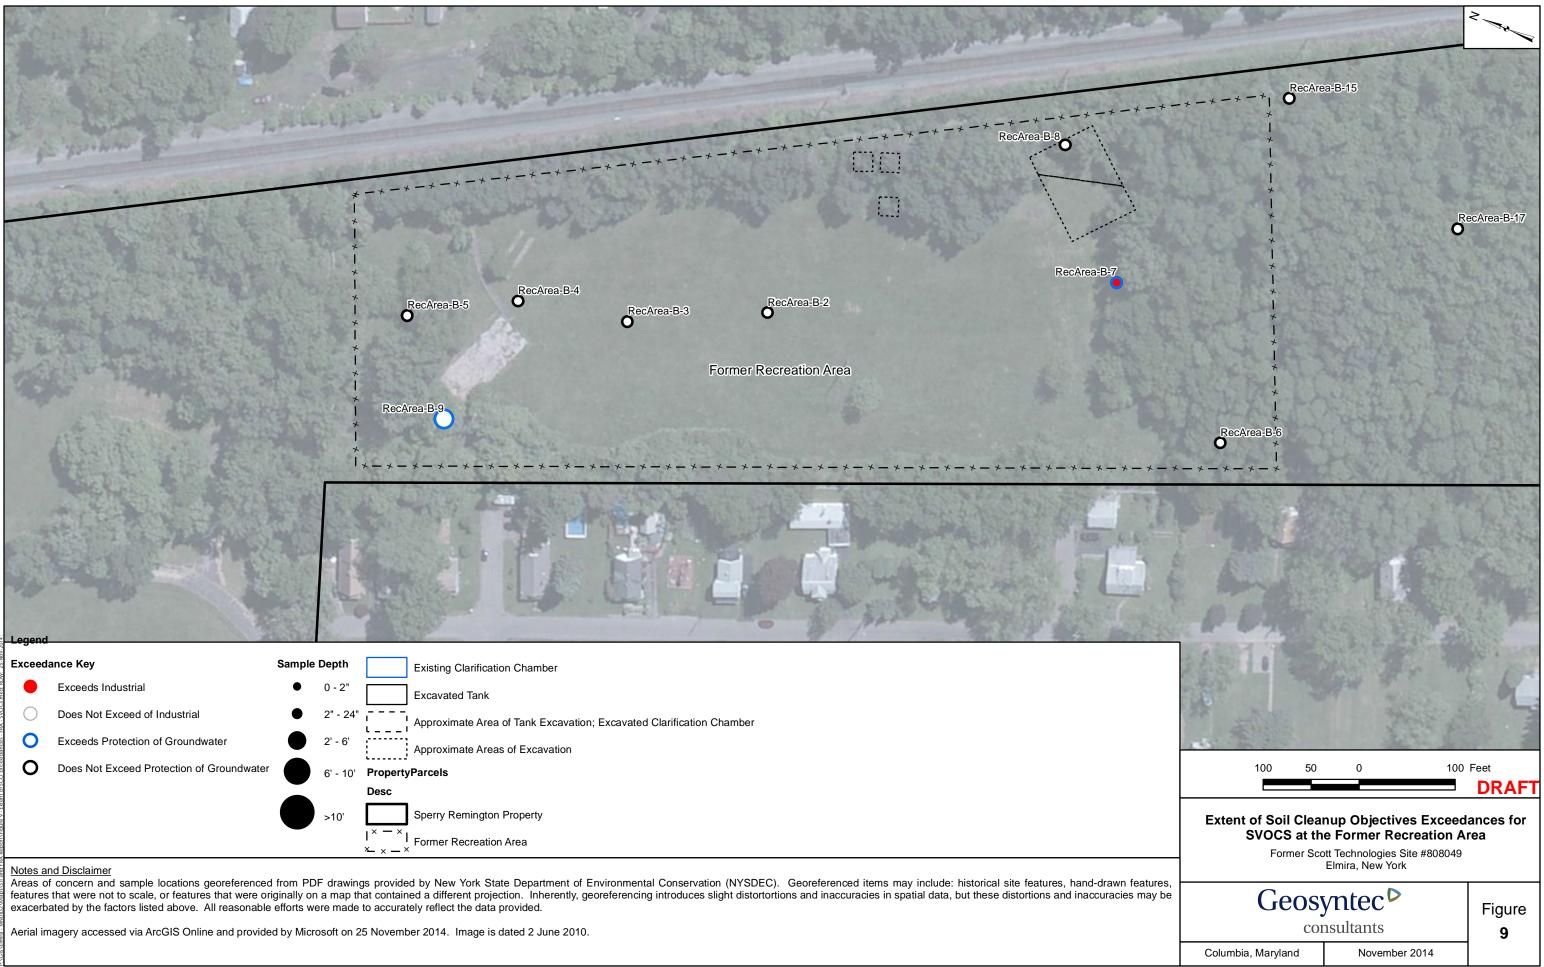

Aerial imagery accessed via ArcGIS Online and provided by Microsoft on 24 November 2014. Image is dated 2 June 2010.

### 1. INTRODUCTION

This Quality Assurance Project Plan (QAPP)/Field Sampling Plan (FSP) was prepared by Geosyntec Consultants (Geosyntec) to present the quality assurance/quality control (QA/QC) measures and describe methods and procedures that will be followed during completion of the site characterization activities for the Former Scott Technologies Site #808049 (Site) located at 1051 South Main Street in Elmira, Chemung County, New York. This QAPP/FSP was developed using the guidelines presented in United States Environmental Protection Agency (USEPA), *Requirements for Quality Assurance Project Plans, EPA Quality Assurance/R-5* (USEPA, 2001) and the guidance presented in the New York State Department of Environmental Conservation (NYSDEC) DER-10 *Technical Guidance for Site Investigation and Remediation* (NYSDEC, 2010).

This plan provides direction for field activities associated with the site characterization, which include: i) storm water structure inspection; ii) soil investigation; and iii) a groundwater investigation. The sampling program was designed to document waste disposal at the Site as it relates to the potential areas of concern (PAOCs), historical information and new findings.

This QAPP/FSP has been developed using the graded approach set forth in EPA QA/R5. This QAPP/FSP provides the quantitative data quality objectives that will be met for each project task. The overall task specific data quality objectives (DQOs) will be described in each project specific task work plan as they are developed. This QAPP/FSP is meant as the generic document under which each task is performed and applies for the duration of the on-site sampling program. This QAPP/FSP will be reviewed and updated as application specific information becomes known or is complete.

The project QAPP/FSP will be required reading for all members of the project team participating in sample collection, will be in the possession of all field teams, and will be distributed to laboratories performing analytical work associated with the Site Characterization. This document has been developed to ensure that data acquired during the Site Characterization are thoroughly documented, verifiable, and defensible, and that the quality of the data meets requirements for its intended use. Project QA objectives and QC requirements have been used to develop the DQOs described in the following sections for acquiring valid usable data. Criteria for data quality were established in terms of the precision, accuracy, representativeness, comparability, completeness, and sensitivity (PARCCS) parameters. This QAPP/FSP outlines the sampling strategy and establishes field procedure requirements.

### 1.1 **Project Objectives/Problem Definition**

This QAPP/FSP pertains to investigation activities described in the Site Characterization Work Plan. The general purpose of the Site Characterization Work Plan is to document waste disposal at the Site as it relates to PAOCs, historical information and new findings. The specific objectives include the following:

- Confirmation of historic detections of compounds of potential concern (COPCs);
- Verification that concentrations of COPCs in cover soils are below standards, criteria and guidance (SCGs);
- Validation that concentrations of COPCs in media do not pose an immediate risk to human health and the environment;
- Documentation of waste disposal at the Site;
- Definition of the nature and extent of COPCs in media related to waste disposal at the Site; and
- Evaluation of PAOCs as potential sources, migration pathways or points of exposure.

### **1.2 Project Organization**

The primary project team assembled to oversee, direct and complete the investigation activities at the Site consists of personnel from Geosyntec. Geosyntec will be responsible for development of the projects technical direction, supervision and implementation of investigation activities including oversight of subcontractors, data management, and data quality assessment. The project team and corresponding projects roles are summarized below:

- Unisys Corporation Project Manager, Kevin Krueger, P.E. Mr. Krueger is primarily responsible for the project direction and decisions concerning technical issues and strategies, budget and schedule.
- Project Director, Paul Brookner, P.G., Geosyntec. Mr. Brookner will provide strategic direction to the project team as well as oversight and guidance during project execution. He will also verify that adequate resources are available, and client expectations are met.
- Project Manager, Aron Krasnopoler, Ph. D., P.E., Geosyntec. Dr. Krasnopoler has responsibility for technical, financial, and scheduling matters and overall management of the project.
- Field Activities Manager, Adam Gray, Geosyntec. Mr. Gray has the overall responsibility for completion of field activities in accordance with the Work Plan and QAPP/FSP and is the communication link between the Geosyntec Project Manager and the field team.
- Database Manager, R. Dylan Walker, Geosyntec. Mr. Walker has responsibility for maintaining the project database, archiving project data files, uploading laboratory electronic data deliverables (EDDs) and data qualifiers into the project database, and data transmittal to regulating agencies.
- Quality Assurance Officer (QAO), Julia Caprio Geosyntec. Ms. Caprio will have the overall responsibility for QA. Ms. Caprio or her designee will communicate directly to

the Geosyntec Project Manager and Laboratory Manager on matters pertaining to QA, data validation, and laboratory analyses.

- Health and Safety Officer, Adam Gray, Geosyntec. Mr. Gray will be responsible for safely implementing field activities and ensuring that they comply with the Site Health and Safety Plan (HASP).
- Analytical Laboratories, TestAmerica Pittsburgh Laboratory. The TestAmerica Pittsburgh Laboratory will be responsible for solid and water sample analyses for the project. The laboratories will ultimately be responsible for the data produced and will ensure that laboratory data are generated in compliance with this QAPP/FSP, NYSDEC Analytical Services Protocols, internal laboratory procedures, and other applicable guidance.
- Subcontractors. Geosyntec will procure various subcontractors to implement the Work Plan scope of work. The subcontractors will include a subsurface utility locator/clearer, land surveyor, and driller. The subcontractors are responsible for conducting the work in accordance with the Work Plans, contractual agreements and for communicating any issues concerning the budget, schedule, or achievement of the technical specifications to the Geosyntec Field Team Leader.

Resumes for Geosyntec personnel identified above are provided for reference in Appendix C.1.

### **1.3** QAPP Revision or Amendment

It is expected that the procedures outlined in this QAPP/FSP will be followed. However, procedural modifications may be warranted depending on field conditions, equipment limitations, or limitations imposed by the procedure(s). Modification to this QAPP/FSP will be approved in advance by the Project Manager and the QAO. Deviations from the QAPP/FSP will be documented.

### 2. DATA QUALITY OBJECTIVES AND CRITERIA

DQOs are qualitative and quantitative statements that clarify the project objectives, specify the most appropriate type of data for the project decisions, determine the most appropriate conditions from which to collect data, and specify tolerable limits on decision errors. The DQO process is a series of planning steps based on scientific methods that are designed to ensure that the type, quantity, and quality of environmental data used for decision-making are appropriate for the intended application. In addition to the project objectives, the DQOs specify data collection boundaries and limitations, the most appropriate type of data to collect, and the level of decision error that will be acceptable for the decision. This section describes the outcome of the DQO process for data collection activities to be conducted at the Site.

### 2.1 Data Quality Objectives for Measurement Data

The overall quality objective of the project is to provide valid data of known and documented quality from environmental media (soil and groundwater) to adequately characterize the PAOCs and refine the conceptual site model (CSM).

Section 3 of the Site Characterization Work Plan details the screening done to identify existing data gaps that need to be addressed. Section 4 of the Site Characterization Work Plan details the overall scope of work that will be undertaken to address the data gaps. During the investigation, laboratory analyses of environmental samples will serve as the primary sources of data to characterize the PAOCs and refine the conceptual site model. In addition, the following field activities will generate supporting data:

- Field instrument (photoionization detector and/or flame ionization detector) screening of soil samples and soil vapor samples;
- Field analytical analysis of groundwater quality parameters (pH, specific conductance, oxidation reduction potential, dissolved oxygen, and turbidity) during monitoring well purging; and
- Visual inspection and documentation of observed conditions.

A three-dimensional conceptual understanding of COPC distribution in soil and groundwater will be developed based on the analytical results and field screening. **Tables C.1 and C.2** summarize the environmental screening criteria for solid and aqueous samples, respectively, that will be used as the basis for evaluating analytical data from the Site Characterization.

### 2.2 Project Quality Assurance/Quality Control Objectives

Data from a certified laboratory analysis of field samples will serve as the primary basis for reaching final conclusions from the Site Characterization. These data will be derived through standard methods and will be assessed through measures of PARCCS parameters to determine the QC of the data and its suitability

for meeting the DQOs in this QAPP/FSP. The QC criteria are defined in this section, along with analytical methods and project-required reporting limits.

### 2.2.1 Precision

Precision refers to the reproducibility or degree of agreement among duplicate measurements of a single analyte. The closer the numerical values of the measurements, the more precise the measurement. Poor precision stems from random errors (i.e., mechanisms which can cause both high and low measurement errors at random). Precision is usually stated in terms of standard deviation, but other estimates, such as the coefficient of variation (relative standard deviation), range (maximum value minus minimum values), and relative range are common, and may be used pending review of the data.

Precision will be determined through the collection of field duplicates and the analysis of laboratory duplicates, Matrix Spike (MS)/Matrix Spike Duplicate (MSD) and Laboratory Control Spike (LCS)/Laboratory Control Sample Duplicate (LCSD) samples for the work performed at the Site. The overall precision of measurement data are a mixture of sampling and analytical factors. Sampling precision will be measured through the laboratory analysis of field duplicates, MS/MSD and LCS/LCSD samples.

Precision will be determined from replicate samples and will be expressed as the relative percent difference (RPD) between replicate/duplicate sample results, computed as follows:

$$RPD = \frac{X_1 - X_2}{(X_1 + X_2)/2} \times 100$$

where  $X_1$  and  $X_2$  are reported concentrations for each replicate sample and subtracted differences represent absolute values. For field duplicates, the precision goals for this project are as follows:

- (i) RPD = 50% for solid samples if both results are greater than five times the quantitation limit; and
- (ii) RPD = 30% for liquid samples if both results are greater than five times the quantitation limit.

RPD values are shown in **Tables C.1** and **C.2** for MS/MSD and LCS/LCSD results for solid and aqueous matrices. For laboratory duplicate analysis, the default laboratory RPD goals will be used.

### 2.2.2 Accuracy

Accuracy refers to the degree of difference between measured or calculated values and the true value. The closer the numerical value of the measurement comes to the true value, or actual concentration, the more accurate the measurement. The converse of accuracy is bias, in which a systematic mechanism tends to consistently introduce errors in one direction or the other. Bias in environmental sampling can occur in one of three ways; these mechanisms and their associated diagnostic and management methods are as follows:

- High bias, which can stem from cross-contamination of sampling, packaging, or analytical equipment and materials. Cross-contamination is monitored through blank samples, such as equipment blanks, field blanks, trip blanks, filter blanks, and method blanks. These samples assess the potential for cross-contamination from, respectively, sampling equipment, ambient conditions, packaging and shipping procedures, field filters, and laboratory equipment. Data validation protocols described in Section 5 present a structured approach for data qualification based on blank samples.
- Low bias, which can stem from the dispersion and degradation of target analytes; an example is the volatilization of chlorinated solvents during field sampling. The effects of these mechanisms are difficult to quantify. Sampling accuracy can be maximized, however, by the adoption and adherence to a strict field QA program. Specifically, sampling procedures will be performed following standard protocols described in Section 3; for example, eliminating headspace in sampling vials for Volatile Organic Compounds (VOCs) will reduce the potential for dispersion of VOCs during sampling. Through regular review of field procedures, deficiencies will be documented and corrected in a timely manner.
- High or low bias, due to poor recoveries, poor calibration, or other system control problems. The effects of these mechanisms on analytical accuracy may be expressed as the percent recovery of an analyte that has been added to the environmental sample at a known concentration before analysis. Analytical accuracy and bias in the laboratory will be determined through the analysis of method blanks, LCSs and MS/MSDs. As with blank samples, data validation protocols provide a structured formula for data qualification based on erroneously high or low analyte recoveries.

Accuracy, when potentially affected by high or low recoveries as described in the third bullet above, is presented as percent recovery (%R), defined as:

% 
$$R = \frac{Spiked Sample Concentration - Sample Concentration}{Spike Concentration} \times 100$$

Laboratory control limits will be used to evaluate accuracy and are shown in Tables C.1 and C.2 for solid and aqueous matrices.

# 2.2.3 Representativeness

Representativeness qualitatively expresses the degree to which the sample collection and analytical protocols adequately reflect the environmental conditions present at the sampling location. If the results are reproducible, the data obtained can be said to represent the environmental condition. Representativeness is ensured by collecting sufficient numbers of samples of an environmental medium, properly chosen with respect to place and time. The precision of a representative set of samples reflects the degree of variability of the sampled medium, as well as the effectiveness of the sampling techniques and laboratory analysis. The sampling network is expected to provide data representative of the soil and groundwater conditions in specific areas of concern at the Site. Representativeness in the laboratory is ensured by using the proper analytical procedures, attaining the quantitative DQOs, and meeting sample holding times.

# 2.2.4 Comparability

Comparability expresses the confidence with which one data set can be compared to another data set measuring the same property. Comparability is ensured through the use of established and approved analytical methods, consistency in the basis of analysis (e.g., wet weight, volume, etc.), consistency in reporting units, and analysis of standard reference materials. By using standard sampling and analytical procedures, data sets will be comparable.

## 2.2.5 Completeness

Completeness is defined as the percentage of measurements made which are judged to be valid measurements. The completeness goal is essentially the same for all data uses in that sufficient amounts of valid data are to be generated.

There are limited historical data on the completeness achieved by individual methods. However, the USEPA Contract Laboratory Program (CLP) data have been found to be 80 to 85 percent complete on a nationwide basis.

The percent completeness for each set of samples will be calculated as follows:

% Completeness = 
$$\frac{Valid Data}{Total Data Planned} \times 100$$

The QA objective for completeness for all parameters will be 90 percent.

# 2.2.6 Sensitivity and Reference Limits

Sensitivity is the capability of a test or instrument to discriminate between measurement responses representing different levels (e.g., concentrations) or a variable interest. Reference limits for analyses conducted by the certified laboratory include method detection limits (MDLs) and reporting limits (RLs).

*MDL* is a statistically determined concentration. It is the minimum concentration of a substance (analyte) that can be measured and reported with 99 percent (%) confidence that the analyte concentration is greater than zero as determined from the analysis of a sample in a given matrix containing the analyte. The MDL is lower than the concentration at which the laboratory can

quantitatively report. Accordingly, sample results greater than the MDL but less than the RL will be laboratory qualified as "estimated." MDL is defined as follows for all measurements:

 $MDL = (t_{n-1,1-\alpha = 0.99}) x (s)$ 

where:

MDL = method detection limit

 $t_{n-1,1-\alpha = 0.99}$  = students t-value for a one-sided 99% confidence level and a standard deviation estimate with n-1 degrees of freedom

s = standard deviation of the replicate analyses

n = number of replicate samples analyzed

*RL* is the minimum concentration of an analyte or category of analytes in a specific matrix that can be identified and quantified above the MDL and within specified limits of precision and bias during routine analytical operating conditions. The laboratory will select the RL for all analytes at concentration levels that exceed the calculated MDLs by a factor of 3 to 10 and are within the method calibration range. Frequently, RLs for specific samples are adjusted for dilution, changes to sample volume/size and extract/digestate volumes, percentage solids, and cleanup procedures.

The MDLs and RLs for this project for both solid and aqueous sample matrices are presented in **Tables C.1 and C.2**, respectively.

# 2.2.7 Analytical Methods

The analytical laboratories selected for this project will be the TestAmerica Pittsburgh Laboratory for soil and groundwater samples. TestAmerica Pittsburgh laboratory is certified by New York State through the National Environmental Laboratory Accreditation Program (NELAP) for all of the analytical methods required for the project. Laboratory analytical methods used to analyze field samples may include the following analyses:

- Target Compound List (TCL) VOCs SW-846 method 8260C (solid and water) including 10 VOC of highest concentration tentatively identified compounds (TICs);
- TCL Semi-volatile Organic Compounds (SVOCs) SW-846 method 8270D (solid and water) including 20 highest concentration TICs;
- Polychlorinated Biphenyls (PCBs) SW-846 method 8082A for solid samples and Low-Level 8082A for water samples;
- Pesticides SW846 method 8081 for solid samples;
- Cyanide EPA Method 9014 for solid samples;
- Target Analyte List (TAL) Metals SW-846 methods 6010C/7471B (solid and water);

• Total Petroleum Hydrocarbons (TPH) – Gasoline Range Organics (GRO) and Diesel Range Organics (TPH-DRO) – SW-846 8015D (water);

# 3. DATA GENERATION AND ACQUISITION

### 3.1 Overview

This section describes the sampling strategies and field procedures that will be implemented to support the Site Characterization to provide data required to meet the DQOs described in Section 2. Environmental measurements to be obtained during implementation of the Site Characterization include the following:

- data from observations and screening conducted during soil sampling via hand auger or direct push technology (DPT);
- visual observations during storm sewer inspections;
- water level data and integrity inspections from Site monitoring wells;
- data from screening and analysis of samples of the following media:
  - soil samples collected via hand auger or DPT;
  - o groundwater samples from existing groundwater monitoring wells;
  - fine-grained material samples if collected from the former combined industrial sewer;

In addition, the following activities will be conducted in support of the Site Characterization:

- work necessary to clear planned sampling locations for underground utilities and structures;
- land surveying to obtain sample location coordinates and elevations;
- decontaminating of field equipment;
- sampling (if necessary) and managing investigative derived materials (IDM).

The strategy and procedure for each of these items is addressed in the remainder of this section. In addition, analytical parameters, field and laboratory QC strategies, equipment testing, inspection, and maintenance, inspection and acceptance of supplies and consumables, and nondirect measurements are discussed in this section.

## 3.2 Special Training and Certification

## 3.2.1 Health and Safety Training

All field activities will be performed by individuals with appropriate training (i.e., Code of Federal Regulations [CFR] 1910.120) and in accordance with the site-specific HASP). Before field activities commence, the site-specific HASP shall be reviewed and signed by all Geosyntec personnel conducting field work.

## **3.2.2** Subcontractor Training

All subcontractors performing work during the investigation will be required to conduct all activities in accordance with applicable health and safety regulations (e.g., CFR 1910.120) and site-specific requirements. A copy of the HASP will be provided to each subcontractor. However, subcontractors will be responsible for the health and safety of their personnel while working at the Site. Each day before work commences, a tailgate health and safety meeting shall be conducted by the contractor field team lead.

### 3.3 Sampling Process Design

The basis for the development of the site characterization scope of work is described in the Work Plan and subsequent addenda (if any). Laboratory analyses of soil and groundwater samples will serve as the primary source of data to support the completion of the investigation. Field screening and analysis will be used to assist in the conceptual characterization of Site conditions and to direct the collection of samples for laboratory analysis.

### 3.4 Field Methods and Procedures for Data Collection

This section describes the procedures that will be implemented to collect data during implementation of the Work Plan. It includes a description of the procedures for field collection, analysis, and handling of soil and water samples. All field activities will be carried out in accordance with this QAPP/FSP and the project HASP.

#### 3.4.1 Surface Soil Sampling

To obtain the required surface soil samples (i.e., 0 to 2 inches below ground surface [bgs]), the following procedures shall be used:

- Obtain appropriate laboratory prepared sample containers prior to sampling and don appropriate level of Health and Safety according to the approved HASP.
- Mobilize to sampling location.
- Cut a small section of sod from sampling location and lay to side.
- Laydown plastic sheeting over the sampling location. Cut a hole in plastic sheeting large enough to allow the sampling tools to pass.
- Using a hand auger, excavate a hole in the soil approximately two (2) inches deep Alternative methods such as utilizing a decontaminated shovel, trowel, spatula, or dedicated (disposable) scoop may also be used.
- A geologist or his designee will be responsible for geologic logging of all soil, to maintain consistency. Soil will be visually inspected to record details of the color,

texture, moisture, density, cohesion, plasticity and any indication of staining or obvious odor, and digital photographs will be taken.

- Divide the soil core into the desired sample depth segments noted above.
- Scan the segments at minimum depth intervals using a photoionization detector (PID) or flame ionization detector (FID).
- If applicable, collect VOC grab soil sample using a terra core sampling kit as soon as possible before homogenizing.
- For remaining analytes, place soil sample in a mixing container (decontaminated stainless bowl or sealable plastic bag) and homogenize the sample with decontaminated stainless steel spoons or other appropriate mixing device.
- Once homogenized, place soil in laboratory provided sample containers for shipment to and analysis at the laboratory.
- Follow the sample handling and labeling procedures outlined in Section 3.7 and 3.8 of this document.
- To collect soil samples below the first interval, place a decontaminated soil collection barrel and cutting shoe with a new acetate liner in the open bore-hole and drive probe to collect the next soil interval.
- Abandon two (2) inch deep hole to ground surface with commercially available topsoil. Replace sod and apply tap water.
- Obtain location coordinates from hand-held global positioning system (GPS) instrument, and mark location on enlargement of sampling site specific map.
- Complete field forms and enter sampling and location information in the bound field book as outlined in Section 3.8.5 in this document.
- Decontaminate sampling equipment as outlined in Section 3.5.5.
- Manage IDM as outlined in Section 3.5.5.

## 3.4.2 Subsurface Soil Sampling

Subsurface soil sampling will be conducted using either hand augering methods or DPT, depending on access to the boring location by the DPT equipment. Between sampling locations, all reusable equipment will be cleaned prior to sample collection to prevent cross-contamination of samples. For direct push boreholes, a continuous soil core will be collected starting from ground surface. With hand augering, the borehole will be advanced until the desired sample depth is reached. Shallow subsurface soil sampling will be conducted to verify and delineate PCB and VOC soil management areas in the one (1)- foot to three (3)- foot soil horizon beneath the vegetative cover at the Site. Other subsurface soil sampling will be conducted to confirm historic detections of COPCs in soil, document waste disposal, define the nature and extent of

soil COPCs, and evaluate PAOCs as potential sources, potential migration pathways and potential points of exposure.

Soil cores will be visually logged for soil type, and inspected for staining, debris or other evidence of anthropogenic materials. The soil cores will be additionally screened for soil vapors using a PID and/or FID. Following the field screening, soil samples will be collected from soil cores as several subsamples from select segments. For the shallow subsurface sampling program, each soil boring will be divided into four (4) segments: 0-2 inches below ground surface (bgs), 0.17-1 feet (ft) bgs, 1-2 ft bgs, and 2-3 ft bgs. For the other subsurface sampling, each soil boring will be divided into five (5) segments: 0-2 inches bgs, 0.17-2 ft bgs, 2-6 ft bgs, 6-10 ft bgs, and 10 ft bgs to the shallow water table. The surface soil segment (0-2 inches bgs) will only be collected in vegetated areas. Irrespective of the sampling location, each soil core segment sample will be collected from material exhibiting the highest PID/FID readings (if applicable), visual observation, or the presence of odors. If PID/FID readings are not higher than background and no staining or odors are observed, the sample will be collected from the middle of each segment. Samples will be submitted to the fixed laboratory for analyses identified in the Work Plan.

Specific procedures for planned soil sampling activities via DPT are provided below.

- Obtain appropriate laboratory prepared sample containers prior to sampling and don appropriate level of Personal Protective Equipment (PPE) as described in the HASP.
- Mobilize DPT rig to the sampling location. The DPT rig will not be allowed to directly touch the ground surface in sensitive areas.
- After mobilization, cut a small section of sod from sampling location and lay to side.
- Laydown plastic sheeting over the sampling location. Cut a hole in plastic sheeting large enough to allow the drill tooling to pass.
- Drive the decontaminated soil probe to the desired terminal depth, collecting soil cores into the acetate liner placed within the core barrel sampler. Remove soil core barrel and associated rod from borehole and remove soil sample within acetate liner. The acetate liner will be cut with a utility knife to observe, log, and record lithology.
- A geologist or his designee will be responsible for geologic logging of all soil cores, to maintain consistency. Soil cores will be visually inspected to record details of the color, texture, moisture, density, cohesion, plasticity and any indication of staining or obvious odor, and digital photographs will be taken.
- Divide the soil core into the desired sample depth segments noted above.
- Scan the segments at minimum depth intervals using a PID or FID.
- If applicable, collect VOC grab soil samples directly from the acetate liners using a terra core sampling kit. The samples will be collected from the depth interval with the highest

PID/FID reading or in the central portion of the segment if elevated readings are not observed.

- For remaining analytes, use decontaminated stainless steel or dedicated plastic scoops (or equivalent decontaminated or dedicated sampling tools) to remove soil from acetate liners from the desired depth interval in each segment.
- Place soil sample in a mixing container (decontaminated stainless bowl or sealable plastic bag) and homogenize the sample with decontaminated stainless steel spoons or other appropriate mixing device.
- Once homogenized, place soil in laboratory provided sample containers for shipment to and analysis at the laboratory.
- Follow the sample handling and labeling procedures outlined in Section 3.7 and 3.8 of this document.
- To collect soil samples below the first interval, place a decontaminated soil collection barrel and cutting shoe with a new acetate liner in the open bore-hole and drive probe to collect the next soil interval.
- These steps are repeated until the desired maximum sample depth is reached or probe refusal is reached (point where probe will not penetrate soils due to obstruction and/or hard material).
- Abandon open borehole with bentonite chips to within 2-inches of the ground surface. Fill remainder of borehole from 2-inches to the ground surface with commercially available topsoil. Replace sod and apply tap water.
- Obtain location coordinates from hand-held GPS instrument, and mark location on enlargement of sampling site specific map.
- Complete field forms and enter sampling and location information in the bound field book as outlined in Section 3.8.5 in this document.
- Decontaminate sampling equipment as outlined in Section 3.5.5.
- Manage IDM as outlined in Section 3.5.5.

## 3.4.3 Monitoring Well Inspection and Synoptic Water Level Measurements

Prior to groundwater sampling, an attempt to locate the monitoring wells identified in the Work Plan will be made and, if successfully located, will be visually inspected for integrity. If possible, the depth to water level in each well will be measured from a reference point on the inner well casing to the nearest 0.01-feet using a clean electronic water level monitoring meter. The specific procedures to be used for each well are presented below:

• Navigate to the monitoring well location and locate the monitoring well.

- Once located, open the well casing and note the condition of the well casing, concrete pad, and overall condition of the monitoring well. Take a photograph of the monitoring well.
- Determine the location of the surveyed elevation mark. For monitoring wells, general markings include either a notch in the riser pipe or a permanent ink (generally black ink) mark on the riser pipe.
- Obtain a water level measurement from the surveyed elevation mark by lowering the water level probe down the well until the audible sound of the unit is detected or the light on an electronic sounder illuminates indicating that the probe is below the water. The precise measurement should be determined (to nearest 0.01 feet) by repeatedly raising and lowering the tape to converge on the exact measurement.
- Measure the depth to the bottom of the well by continuing to lower the water level probe down the well until slack is noted in the tape. The precise measurement should be determined (to nearest 0.1 feet) by repeatedly raising and lowering the tape to converge on the exact measurement. It should be noted, based on the response and feeling of the water tape during repeated measurements, whether the well has a soft or hard bottom.
- Record the water level and depth to bottom measurement as well as the location identification number, date, time, and weather conditions in the field logbook and/or field form.
- Decontaminate the water level probe as discussed in Section 3.5.5. Generally, only that portion of the tape that enters the water table needs to be decontaminated.

# 3.4.4 Low-Flow Groundwater Sampling

Samples will be collected from existing groundwater monitoring wells identified in the Work Plan using low-flow sampling protocols. Purging of the groundwater will be performed at relatively low flow rates (between 0.1 and 0.5 liters per minute) in order to minimize drawdown of the surrounding water table and minimize stress on the formation. Water purged from the wells will be monitored for the following water quality field parameters: temperature, pH, specific conductivity, dissolved oxygen (DO), oxidation-reduction potential (ORP), and turbidity to document changes in water quality. Samples will be collected when three consecutive readings indicate stability in the field parameters. The procedures to be followed during groundwater sampling are:

- Obtain appropriate laboratory prepared sample containers prior to sampling and don appropriate level of PPE as described in the HASP.
- Obtain a depth to water measurement with either an interface probe or a water line.
- Install a decontaminated bladder pump with a disposable bladder and clean polyethylene tubing to purge the wells. The pump should be set to the midpoint of the screen interval

or in the case of an open borehole to the midpoint of the water column. Attach pump discharge tubing to the flow through cell.

- Operate the pump at a low flow rate (between 0.1 and 0.5 liters per minute). Use a graduated cylinder or other graduated container to estimate the flow rate. Adjust pump settings to achieve desired flow rate that also minimizes drawdown of the initial water level (i.e., <0.3 feet [ft] of the initial water level).
- Purge water and other IDM generated during groundwater sampling will be managed as outlined in Section 3.5.5.
- Water quality field parameters, using a calibrated water quality meter (see below) will be recorded every three to five minutes or each time the internal volume of the flow cell is replaced with water during purging. Additionally, color, clarity and any noticeable odors will be documented. Water will continue to be purged from the wells until the drawdown of water level has stabilized and three consecutive measurements have stabilized according to the following criteria:
  - $\circ \, pH, \pm 0.1;$
  - o temperature,  $\pm 10\%$ ;
  - o specific conductivity,  $\pm 3\%$ ;
  - $\circ$  ORP,  $\pm$  10 millivolts
  - $\circ$  DO,  $\pm 10\%$ ; and
  - $\circ$  turbidity,  $\pm 10\%$  or < 10 nephelometric turbidity units (NTUs)
- Put on disposable nitrile sampling gloves prior to procuring sample. Immediately following purging activities (after the groundwater has reached stabilization), laboratory-provided sample containers (with the appropriate type and volume of preservative) will be filled directly from the sample pump discharge tube while maintaining the flow rate established during purging to minimize any potential agitation of the groundwater. Care should be taken as to not allow the tubing to the touch the inside of the sample container during filling. VOCs and TPH-GRO samples shall be collected first. Those sample analytes will be collected in 40-mL glass vials with no head space. Carefully, but quickly, slip the cap with the septum onto the vial with the Teflon[™] face of the septum towards the water. Tighten the cap securely, invert the vial and tap the cap to assure that there are no air bubbles inside. If bubbles are present, open vial, add a few more drops of sample water and reseal. Following VOC and TPH-GRO sampling, sample bottles will be filled for the other desired analytes. Care should be taken such that the tubing is not allowed to touch the sample bottle.
- Check to make sure the vial caps are tight and then place on ice immediately.
- Follow the sample handling and labeling procedures outlined in Section 3.7 and 3.8 of this document.

- Complete field forms and enter sampling information in the bound field book as outlined in Section 3.8.5 in this document.
- Decontaminate sampling equipment as outlined in Section 3.5.5.

Field water quality measurements will be obtained using calibrated portable instruments capable of measuring DO, ORP, pH, temperature, turbidity, and specific conductance. The water quality meter will be calibrated as discussed in Section 3.5.4. Results will be recorded as follows: DO to the nearest 0.1 mg/L, ORP to the nearest 0.1 millivolt (mV), specific conductance to the nearest 1 microSiemens per centimeter, turbidity to the nearest 0.1 NTU, pH to the nearest 0.1 pH unit, and temperature to the nearest 1°C. If applicable, the membrane on the DO probe will be periodically checked for integrity and will be replaced according to manufacturer's specifications if it is found to be torn or if air bubbles are distinguishable under the membrane. Results of manufacturer-recommended calibration checks and any maintenance conducted on the field measurement instrument will be recorded in the field logbook or on a field data sheet as discussed in Section 3.8.5.

## 3.4.5 Direct Push Groundwater Sampling

Following DPT borehole installation and soil sample collection as described in Section 3.4.2, a groundwater grab sample will be collected at select locations as described in the Work Plan. It is anticipated that groundwater samples will be collected by inserting decontaminated DPT sampling rods equipped with an expendable drive-point and extendable 4 or 5-foot long stainless steel screen (DPT groundwater sampling apparatus). The DPT groundwater sampling apparatus will not be installed directly into the soil boring used for soil sample collection, but rather within 2 to 3 linear feet of the soil boring location. The DPT groundwater sampling apparatus will installed to a depth that is approximately 6 to 7 feet below the approximate water table depth identified during soil boring installation. Once the desired depth is reached, the DPT rods will be retracted 4 or 5 feet to expose and allow groundwater to enter the stainless steel screen. This procedure allows for the entire DPT groundwater and retracted to the desired sampling interval. Depth to water measurements will be taken every 5 to 10 minutes to evaluate groundwater recovery. If groundwater collects in the screen, and the rate of recovery allows for sufficient sample volume, a groundwater sample will be collected.

Groundwater purging and sample collection is anticipated to be completed using a peristaltic pump and Teflon tubing. If the depth to water exceeds peristaltic pump limitations, alternate purging and sampling devices, such as a Teflon or stainless steel micro-bailer, may also be used. Prior to groundwater sample collection, the monitoring point will be developed by purging a minimum of three (3) borehole volumes from the screen. If low-yielding groundwater conditions are encountered, a reduced purge volume approach may be used. Efforts will be made to reduce sample turbidity to the extent practical as determined by the field sampler. Once purging is complete, water quality parameters (i.e., temperature, specific conductance, dissolved oxygen,

oxidation-reduction potential and turbidity) will be measured using a calibrated water quality meter. Groundwater samples will then be obtained by directly filling clean, laboratory-provided sampling containers directly from the discharge tubing. Sample labeling, handling, and packing procedures described in the QAPP/FSP will be followed. Following sample collection, the DPT rods and screen will be removed from the boring and the boring will be abandoned. The boring will be abandoned by backfilling with bentonite chips. The DPT tooling and screen will be decontaminated between sampling locations as described in the QAPP/FSP. IDM generated as part of this investigation activity will be managed as outlined in the QAPP/FSP.

## **3.4.6 Former Combined Industrial Sewer Inspection**

The former combined industrial sewer will be inspected for structural integrity, hydraulic connections to the storm sewer system and the presence of accumulated fine-grained material. The sewer inspection will include visual observations and in-line camera surveys. A detailed description of the sewer condition will be recorded in the field book or on a field form. If present, the depth of fine-grained material will be measured, to the extent practical, and recorded. If an adequate volume of material is present, a composite sample, collected across the entire material depth may be collected. The sample will be submitted to the fixed laboratory for analyses for metals, PCBs, SVOCs and VOCs. General soil sample collection and handling procedures presented in Section 3.4.1 will be used to procure the samples. All observations and sample collection (if necessary) will initially be attempted from the ground surface. If entry into a manhole is required to complete the inspection and sampling tasks, confined space entry procedures will be followed.

## 3.5 Field Methods and Procedures for Other Project and Support Activities

## 3.5.1 Utility Location Procedures

Utility surveys will be conducted in each location where invasive investigation activities deeper than six inches will be conducted in order to clear underground utilities, structures, or debris that may affect the investigation or may present health and safety or property damage risks. An area within a five-foot radius of each proposed location will be cleared using the following protocol:

- Find/confirm the most recent version of as-built Site drawings and review to identify potential utilities/structures/debris;
- Contact the local public utility locating service;
- Contact Site Representative to discuss utility locations;
- Perform a site reconnaissance to locate utilities/structures on as-built drawings and to find evidence of undocumented utilities/structures/debris;
- Mark the proposed sampling locations and the known underground utility lines/structures/debris in the immediate vicinity using color-coded surveyor paint;

• Use ground penetrating radar (GPR)/ electromagnetic (EM) geophysical equipment and procedures to assure underground obstruction clearance.

Wherever possible, a transmitter/receiver unit will be attached to the exposed pipe or utility to trace metallic pipes or utilities that are either indicated on facility utility maps or obvious by surface expression. The location of the utility will be marked on the ground using color-coded surveyor paint. If a utility is identified within 3 feet of the proposed sampling/drilling location, the sampling/drilling point will be moved and the clearance procedures repeated.

# 3.5.2 Land Survey Procedures

A New York State registered land surveyor will survey the horizontal location and elevation of all existing groundwater monitoring wells at the Site. Surveyed locations will be accurate to plus or minus 0.01 foot vertically and plus or minus 0.1 foot horizontally. Horizontal data will be reported in reference to the North American Datum 1983 (NAD83) New York State Plane; vertical data will be reported in reference to the North American Vertical Datum 1988 (NAVD88). Monitoring well elevations will be measured at a reference point at the north side of the top of each inner well casing to the nearest 0.01 foot. Soil boring sampling locations will be surveyed using a GPS and/or by a registered land surveyor. Sampling locations will be staked (or marked through another method of identification) and identified in the interim between media sampling and land surveying activities.

## 3.5.3 Geophysical Survey

A subsurface geophysical survey will be conducted along the alignment of the former combined industrial sewer. Geophysical survey methods will consist of one (1) or more of the following: GPR, EM survey, and/or comprehensive subsurface utility (CSUL) surveys. Results of the geophysical survey will be compared to historical and current plans of subsurface utilities for tentative identification of subsurface anomalies. Subsurface anomalies potentially associated with the former combined industrial sewer will be highlighted for more detailed inspection.

## 3.5.4 In-line Camera Survey

In-line camera surveys will be performed along the accessible length of the former combined industrial sewer. Camera inspections will be performed to evaluate the origin and/or termination points of connections/pipes. Video recordings of those inspections will be taken and stored for documentation purposes. Real-time inspections will aid in determining the integrity of the pipe, potential volume of material within the line, and whether the line is a potentially active with respect to discharge to adjacent surface waters. In the event of obstructions, access points (i.e. manholes) will be evaluated for potential confined space entry prior to clearing any obstruction.

## 3.5.5 Management of Investigation-Derived Materials

IDM generated during the Site Characterization activities will include disposable PPE, disposable sampling equipment, soil boring cuttings, decontamination water, and purge water. PPE, disposable sampling equipment, and soil boring cuttings will be collected and placed in 55-gallon Department of Transportation (DOT)-approved drums for characterization (if necessary) and offsite disposal. Liquid IDM (decontamination water and purge water) will be collected and stored in 55-gallon drums for waste characterization (if necessary) and off-site disposal.

## **3.5.6** Field Instrument Calibration and Operation

All instruments and equipment used during sampling and analysis (e.g. PID/FID or water quality meters) will be operated, calibrated, and maintained according to the manufacturer's guidelines and recommendations. Operation, calibration, and maintenance will be performed by trained personnel on a daily basis. Calibration will be performed at the beginning, middle and end of each sampling day. If instruments appear to be reading incorrectly, additional calibration may be required. All maintenance and calibration information will be documented and will be available upon request.

Appropriate corrective actions will be taken if a field instrument fails the instrument-specific calibration QC criteria. Corrective action steps will be as follows:

- Check the instrument;
- Investigate the cause of failure;
- Recalibrate the instrument;
- If the instrument recalibration still fails, call the instrument manufacturer or rental company technical support for assistance;
- If the problem persists, send the instrument for service;
- If the instrument is a rental, contact the rental office for immediate replacement of the instrument; and
- If practicable, keep a backup instrument on site.

## **3.5.7** Field Equipment Decontamination

Decontamination of non-dedicated and non-disposable sampling equipment will be performed prior to sampling and between sampling locations to prevent the introduction of extraneous material into samples and to prevent cross-contamination between sample locations. All sampling equipment will be decontaminated as described below. Decontamination water will be collected and managed as outlined in Section 4.3.4.

## 3.5.7.1 Decontamination of Soil Sampling Equipment

This procedure applies to equipment used in the collection of environmental soil samples submitted for organic and inorganic constituent analysis. Examples of relevant items of equipment include DPT shoes, trowels, scoops/spoons, and other small items. Decontamination is to be performed before sampling events and between sampling points.

- Place five wash basins in an established decontamination area that has a low permeability liner (e.g., polyethylene) and secondary containment. The decontamination area must be of sufficient size to allow placement of the five plastic wash bins in a line, and provide an air drying area for equipment.
- Fill the first wash basin with potable water. Add sufficient soap powder or solution to cause suds to form in the basin. Do not use an excessive amount of the soap or rinsing the soap off the equipment will be difficult. Periodic changing of the water is required.
- Using a clean coarse scrub brush, wash the sampling equipment in the soap solution in the first basin, removing all visible residues. Be sure to wash inside surfaces of equipment as well as the exterior surfaces. Allow excess soap to drain off the equipment when finished.
- Fill the second basin with potable water (first rinse) and rinse the equipment. A coarse scrub brush or pressure sprayer may be used to aid in the rinse, if necessary. Periodic changing of the water is required.
- Rinse the equipment with distilled/deionized water in the third basin. Periodic changing of the water is required.
- If samples for organic analysis will be collected, rinse the equipment with isopropyl alcohol over the fourth basin such that the isopropyl alcohol is collected. The step may be performed using a squeeze bottle or pressure sprayer.
- Rinse with distilled/deionized water over the fourth basin to remove any residual isopropyl alcohol.
- If the equipment is being used to sample for metals, rinse the equipment with a 5% nitric acid solution over the fifth basin such that the solution is collected. The step can be performed using a squeeze bottle or pressure sprayer.
- Rinse with distilled/deionized water over the fifth basin to remove any residual acid.
- Allow the equipment to air-dry in a clean area or blot with chemical-free paper towels before reuse. Wrap the equipment in aluminum foil with the shiny side out if it will not be reused immediately.

# **3.5.7.2** Decontamination of Submersible Sampling Pumps

This procedure will be used to decontaminate bladder pumps before and between groundwater sample collection points.

- Place four wash basins in an established decontamination area that has a low permeability liner (e.g., polyethylene) and secondary containment. The decontamination area must be of sufficient size to allow placement of the five plastic wash bins in a line.
- Fill the first wash basin with potable water. Add sufficient soap powder or solution to cause suds to form in the basin. Do not use an excessive amount of the soap or rinsing the soap off the equipment will be difficult. Periodic changing of the water is required.
- Using a clean coarse scrub brush, wash the pump and power cord thoroughly in the soap solution in the first basin, removing all visible residues. While submersed in the soap solution, the pump should be turned on and a minimum of one gallon pumped through the system. Allow excess soap to drain off the equipment when finished.
- Fill the second basin with potable water and rinse the pump and power cord. While submersed, the pump should be turn on and a minimum of one gallon pumped through the system. Periodic changing of the water is required.
- Fill the third basin with distilled/deionized water and rinse the pump and power cord. While submersed, the pump should be turn on and a minimum of one gallon pumped through the system. Periodic changing of the water is required.
- If samples for organic analysis will be collected, rinse the pump exterior with isopropyl alcohol over the fourth basin such that the isopropyl alcohol is collected. The step can be performed using a squeeze bottle or pressure sprayer. Isopropyl alcohol should not be run through the pump.
- Rinse the exterior with distilled/deionized water over the fourth basin to remove any residual isopropyl alcohol.
- Wrap the equipment in aluminum foil with the shiny side out if it will not be reused immediately.

## 3.5.7.3 Decontamination of Measuring Equipment

This procedure will be used to decontaminate measuring equipment, such as water level indicators before and between measuring points.

- Fill two clean basins or spray bottles with potable water.
- Add sufficient soap powder to one basin or spray bottle to form a thin layer of soap suds.
- Immerse the device in the soap containing basin and gentle agitate. Scrub the device if is soiled. Periodic changing of the water is required. Alternatively, the equipment may be

cleaned using a spray bottle containing a water/soap solution and wiped with a chemical free paper towel.

• Immerse the device in the basin containing the rinse water and gentle agitate. Periodic changing of the water is required. Alternatively, the equipment may be cleaned using a spray bottle and wiped with a chemical free paper towel.

## **3.5.7.4** Decontamination of Large Equipment

If large equipment such as a drilling rig becomes soiled and decontamination is thought necessary, a temporary decontamination pad will be established for decontamination of heavy equipment. This pad may include a membrane-lined and bermed area large enough to drive heavy equipment (e.g., drill rig, backhoe) onto with enough space to spread other equipment and to contain overspray. Usually a small sump is necessary to collect and contain rinsate (a pump is used to remove these wastes from the sump). A water supply and power source is also necessary to run steam cleaning and/or pressure washing equipment. Decontamination will be accomplished by steam cleaning or high pressure water wash and manual scrubbing. This may be performed at the decontamination pad or in the vicinity of the drilling location, if the rinsate can be captured and containerized.

## 3.6 Inspection/Acceptance of Supplies and Consumables

Supplies and consumables will be inspected and approved by the on-site project manager or field team leader to ensure that products meet project requirements. Those items not meeting project requirements should be returned immediately for replacement or refund.

## **3.7** Sample Handling Procedures

Many of the chemical constituents and physicochemical parameters that are to be measured or evaluated in the QAPP are volatile or are not chemically stable, and therefore sample preservation is required. For these constituents, samples will be transferred in the field from the sampling equipment directly into the container that has been specifically prepared for that analysis or set of compatible parameters. All samples will be stored at  $\leq$  6 degrees Celsius (°C) from the time of collection to the time of analysis. Collected samples will be stored together with any MS/MSD, blind field duplicate, trip blank, and equipment blank samples collected during that sampling event on ice in a cooler. All samples will be stored together in an area known to be free of contamination.

## **3.7.1** Sample Containers and Preservatives

The laboratory will be responsible for supplying the proper containers to ensure sample integrity. The laboratory will provide new and/or pre-cleaned containers from an outside supplier. **Table C.3** details the bottle type, quantity, preservative and holding time for each parameter analyzed

in soil and groundwater. All sample preservation additives will be measured and placed in the appropriate sample containers by the laboratory prior to sampling.

#### **3.7.2** Sample Designation

Each separate sample will be identified using a sample label with a unique sample identifier (ID). The following presents the sample designation for soil and groundwater samples.

#### 3.7.2.1 Soil Sample Designation

Soil sample identification (ID) will use the following nomenclature:

```
Site Location-Field ID-(Confirmation or Step Out)-Matrix-(Depth From)-(Depth To)
```

Where:

Site Location:	STI
	Confirmation Sample: Historic Field ID + "-A"
Field ID:	Step Out Location: Historic Field ID + "-B", "-C", etc.
	PAOC Evaluation: B## – Subsurface; numbered sequentially
	SS## – Surface Soil; numbered
	sequentially
Matrix:	Surface Soil: SS
	Subsurface Soil: SUB
Depth From:	Upper depth of sample interval in feet (subsurface only)
Depth To:	Lower depth of sample interval in feet (subsurface only)

#### 3.7.2.2 Groundwater Sample Designation

Groundwater sample IDs will use the following nomenclature:

Site Location-Field ID

Where:

Site Location: STI Field ID: Monitoring Well ID

## 3.7.3 Sample Labeling

Each separate sample will be identified using a sample label. The sampler will complete all information using waterproof ink with the following information:

- Sample ID in accordance with Section 3.7.2
- job name and identification number;
- date and time of sample collected;
- preservative;
- analytical method requested; and
- name of sampler.

The sample label contains the authoritative information for the sample. Inconsistencies with other documents will be settled in favor of the container label unless otherwise corrected in writing from the field personnel collecting samples. A chain-of-custody (COC) should reflect the same information as the label and be kept with the samples at all times.

# 3.7.4 Sample Packaging and Shipment

When all samples have been collected at the end of the day, samples will be retrieved from their storage location and packaged for shipment. The following procedures will be during sample packing.

- Place plastic bubble wrap matting or other suitable packing material over the base of each cooler or shipping container as needed.
- Insert a clean trash bag into the cooler to serve as a liner.
- Bag cubed ice in heavy duty zipper-lock plastic bags, close the bags, and distribute the bagged ice in a layer over the bottom of the cooler. Loose ice should not be used. Cold packs should be used only if the samples are chilled before being placed in the cooler.
- Check that each sample container is sealed, labeled legibly, and is externally clean. Relabel and/or wipe bottles clean if necessary. If needed, clear tape should be placed over the labels to protect them and keep them from falling off the container. To protect each bottle from breakage during shipment, each glass sample bottle should be wrapped individually with bubble wrap and secured with tape or rubber bands. Alternate bottle protection procedures such as placing glass jars back in the cardboard shipping box in which they arrived, using cardboard dividers in the cooler, or placing in an appropriate foam holder may also be used. Bottles should be placed into the cooler in an upright single layer with approximately one inch of space between each bottle. Do not stack bottles or place them in the cooler lying on their side. If plastic and glass sample

containers are used, alternate the placement of each type of container within the cooler so that glass bottles are not placed side by side.

- Insert the cooler temperature blank supplied by the laboratory into each cooler (if any).
- Insert a Trip Blank into each cooler containing VOC samples.
- If space allows, place bagged ice in voids between sample containers. Other packing materials such as bubble wrap, and/or Styrofoam pellet packing material may be used as a substitute to fill voids between sample containers within each cooler to a level that meets the approximate top of the sample containers. Packing material may require tamping by hand to reduce the potential for settling.
- Bag cubed ice in heavy duty zipper-lock plastic bags, close the bags, and distribute the bagged ice in a layer over the top of the samples. Loose ice should not be used. Cold packs should be used only if the samples are chilled before being placed in the cooler.
- Add additional bubble wrap/Styrofoam pellets or other packing materials to fill the balance of the cooler or container, if necessary.
- Sign and date a custody seal as discussed in Section 3.8.3 and enter the custody seal numbers in the appropriate place on the COC form.
- Complete the COC form as discussed in Section 3.8.1. If shipping the samples involves use of a third party commercial carrier service, sign the COC record thereby relinquishing custody of the samples. Shippers should not be asked to sign COC records. If a laboratory courier is used, or if samples are transported to the laboratory by field personnel, the receiving party should accept custody and sign the COC records. Keep a copy of the COC for the project file. Place the original (with remaining copies) in a zipper-lock plastic bag and tape the bag to the inside lid of the cooler or shipping container.
- Close the lid of the cooler or the top of the shipping container.
- Place the custody seal across the cooler or container lid opening and overlap with transparent packaging tape.
- Packaging tape should be placed entirely around the sample shipment containers. A minimum of three full wraps of packaging tape will be placed on at least two places on the cooler/container.
- Place a shipping label on the outside of the shipping container that indicates the point of origin and destination.
- Repeat the above steps for each cooler or shipping container.

Following sample packing, the cooler/container containing the samples will be transported to the laboratory overnight via a package delivery service office or laboratory courier under executed chain of custody. The appropriate shipping form or air bill will be filled out and affixed to the

cooler/container. Some courier services may use multi-package shipping forms where only one form needs to be filled out for all packages going to the same destination. If not, a separate shipping form should be used for each cooler/container. The receipt for package tracking purposes should be kept in the project files, in the event a package becomes lost.

### **3.8** Sample Custody and Documentation

An overriding consideration for data resulting from laboratory analyses is the ability to demonstrate that the data are legally defensible (i.e., that the samples were obtained from the locations stated and that they reached the laboratory without alteration). To accomplish this, evidence of collection, shipment, laboratory receipt, and laboratory custody until disposal will be documented through the COC record. A sample is considered to be in custody if the following applies to the sample:

- It is in actual possession or in view of the person who collected the samples;
- It is locked in a secure area;
- It is placed in an area restricted to authorized personnel; or
- It is placed in a container and secured with an official custody seal, such that the sample cannot be reached without breaking the seal.

If sample preservation requires temperature control, then samples will be stored in iced coolers or a refrigerator in an access-controlled area of the site. Sample custody will be the responsibility of the field manager or on-site designee from the time of sample collection until the samples are accepted by the courier service for delivery to the laboratory. Thereafter, the laboratory performing the analysis will maintain custody.

## 3.8.1 Chain-of-Custody

COC records will be filled out for all samples to establish the documentation necessary to trace sample possession from the time of collection. In addition to providing a custody exchange record for the samples, the COC record serves as a formal request for sample analyses. The COC record lists each sample and the individuals performing the sample collection, shipment, and receipt. The following information will be recorded on the COC record:

- Project name;
- Project location;
- Geosyntec project number;
- Geosyntec project manager;
- Geosyntec project manager contact information;
- Sample numbers;
- Date (of sample collection);

- Time (of sample collection to the nearest minute, military time);
- Sample type (composite or grab);
- Sample description (matrix);
- Number of sample containers;
- Analysis required;
- Project specific QC samples (e.g.MS/MSD)

- Remarks (including special instructions to the laboratory);
- Type of data deliverable;
- Preservative information;
- Date/time (of custody transfer);
- Laboratory name;
- Turnaround time required; and
- Sampler's signature.

The COC records will be completed, signed, and distributed as follows:

- one copy will be retained by the sample coordinator for inclusion in the project files; and
- the original will be sent to the analytical laboratory with the sample shipment as described in Section 3.7.3 of this document.

## 3.8.2 Field Sample Custody

All necessary sample containers will be shipped by the laboratory. The field personnel and/or Geosyntec QAO will determine the sample containers needed for a specific sampling task, check the integrity of the containers, and assure that the proper containers are assigned to the task to be conducted.

The COC record will be the controlling document to ensure that sample custody is maintained. The COC record will be initiated in the field by sampling personnel when they collect a sample. Each time the sample custody is transferred, the former custodian will sign the COC in the "Relinquished By" line, and the new custodian will sign the COC in the "Received By" line. The date and time will accompany each signature.

Immediately after sample collection, each sample will be handled as described in Section 3.7 of this document.

### 3.8.3 Custody Seals

Custody seals are used to prevent unauthorized tampering with samples from the time of sample collection through the time of laboratory analysis. The seals will be signed and dated by sampling personnel and then placed on the shipping containers in such a way that they must be broken to open the containers. Seals will be affixed to the sample containers before the samples leave the custody of the sampling personnel. It is recommended that clear packing tape be placed over the custody seal to ensure that it is securely affixed to the shipping container. The laboratory will immediately notify Geosyntec personnel upon receipt in the event that the custody seal indicates that the container has been tampered with.

## 3.8.4 Laboratory Sample Custody and Documentation

Samples will be delivered to laboratory personnel authorized to receive samples, also referred to as the "sample custodian". The custodian, upon receipt of a sample, will inspect the condition of the sample (including temperature of the cooler) and the custody seal, reconcile the information on the sample label against that on the COC record, assign a laboratory number, log the sample in the laboratory information management system (LIMS), and store the sample in a secured sample storage area. The custodian will record all pertinent observations and measurements on the COC record, and sign the COC record.

Upon receiving the samples, the laboratory personnel will note on the original COC record any discrepancy in the number of samples, temperature within the cooler or broken samples. The Geosyntec QAO or designated representative will be notified immediately of any problems identified with shipped samples. The Geosyntec QAO or designated representative will, in turn, notify the project manager and together they will determine the appropriate course of action.

If the laboratory sample custodian judges sample custody to be invalid (e.g., custody seals have been broken), the Geosyntec QAO or designated representative will be immediately notified. The Geosyntec QAO or designated representative will, in turn, notify the project manager. The project manager will make a decision, in consultation with the client, as to the fate of the sample in question on a case-by-case basis. The sample will either be processed "as-is" with custody failure noted along with the analytical data, or rejected with resampling scheduled, if necessary. The laboratory will initiate an internal COC that will track the sample within the various areas of the laboratory. Custody of the samples is transferred with the relinquishing signature of the sample custodian and the custody acceptance signature of the laboratory personnel. This procedure is followed each time a sample changes hands. The laboratory will archive the samples and maintain their custody, as required by the contract, or until further notification from the Geosyntec QAO or designated representative, at which time the samples will either be returned to the project for disposal or disposed of by the laboratory.

### **3.8.5** Field Documentation

All information pertinent to field sampling will be recorded in a permanently bound or electronic field logbook or field forms to maintain the integrity and traceability of samples. Detailed field data will be recorded on activity-specific field forms. All entries will be recorded in black indelible ink.

At a minimum, the logbook and/or corresponding field forms will contain the following information as applicable to the sample type collected:

- Project name and location (on the front page of the logbook);
- Signature of field sampler;
- Date and time of collection for each sample;
- Sample identification number;
- Sample location (sampling point);
- Weather (rain, sunny, approximate temperature, etc.);
- Requested analysis;
- If prudent, a drawing of or a copy of a map with the sample locations;
- Field analyses performed, including results, instrument checks, problems, and calibration records for field instruments;
- Descriptions of deviations from this QAPP/FSP;
- Problems encountered and corrective action taken;
- Identification of field QC samples; and
- Any other events that may affect the samples.

Field documentation will be stored in the project files for future use or reference, if necessary.

#### **3.8.6** Document Corrections

Changes or corrections on any project documentation will be made by crossing out the item with a single line. The person performing the correction must initial and date the correction. The original item, although erroneous, must remain legible. The new information will be written above the crossed-out item. Corrections will be written clearly and legibly.

# 4. QUALITY ASSURANCE/QUALITY CONTROL MEASURES

### 4.1 Field Quality Control

Field QC samples will be collected and analyzed to assess the precision and accuracy of groundwater and soil sampling activities. Field QC samples for this project will include field duplicates, MS/MSD, equipment rinsates, source blanks when necessary, temperature blanks, and trip blanks. **Table C.4** describes the field quality control samples per matrix and their frequencies.

## 4.1.1 Field Duplicates

Field duplicates are two samples (an original and a duplicate) of the same matrix, collected at the same time and location and using the same sampling techniques, to the extent practicable. Field duplicate samples are used to evaluate the precision of the overall sample collection process. Field duplicates will be collected at a frequency of 1 per 10 regular samples and will be analyzed for the full set of analyses used for the regular samples collected. Field duplicates receive unique sample numbers; therefore, the identities of the duplicate samples are "blind" to the analytical laboratory. Exact locations of duplicate samples and sample identifications will be recorded in the field logbook.

## 4.1.2 Matrix Spike/Matrix Spike Duplicate

The laboratory will analyze an MS/MSD for every 20 samples analyzed or for every analytical batch prepared, whichever is more frequent. Field personnel will collect triple the amount of the volume of the sample matrix for the designated MS/MSD sample. The MS/MSD sample will be used to determine the precision and accuracy of the sample preparation and analytical methods.

## 4.1.3 Equipment Rinsate Blank and Source Blank

Equipment rinsate samples will be collected at a frequency of one per day for each matrix that non-disposable or non-dedicated sampling equipment is used. Rinsate samples are laboratory-certified clean water collected from the final rinse of the decontamination process. Rinsate samples will be collected from the sampling equipment, placed in appropriate containers supplied by the analytical laboratory, and analyzed for the full set of analyses used for the samples collected that day. Equipment rinsate samples are used to evaluate the effectiveness of the decontamination procedure and the potential for cross-contamination during sampling events. One source blank will be collected per event by pouring laboratory-certified clean water directly into the appropriate sample containers while at a site.

# 4.1.4 Trip Blanks

Trip blanks will be prepared by the laboratory in 40-mL volatile organic analysis (VOA) vials with analyte-free water. The trip blanks will be carried into the field, stored, and shipped to the laboratory along with the water samples. Trip blanks will be shipped with each cooler that contains groundwater samples to be analyzed for VOCs. Trip blanks are evaluated to determine whether VOC cross-contamination between samples has occurred during storage and transportation. Trip blanks apply only to volatile organics in groundwater and must be free of headspace.

## 4.1.5 Temperature Blanks

Each cooler will be shipped with a temperature blank. A temperature blank is a sample container filled with tap water and stored in the cooler during sample collection and transportation. The laboratory will record the temperature of the temperature blank immediately upon receipt of the samples. If samples are received at the laboratory less than 8 hours after collection, they may not have had sufficient time to cool to the required  $\leq 6$  °C.

# 4.2 Laboratory Quality Control/Quality Assurance

## 4.2.1 Laboratory Qualifications

The analytical laboratory selected for soil and groundwater analyses for this project will be the TestAmerica Pittsburgh Laboratory. TestAmerica Pittsburgh Laboratory is certified by New York State through the National Environmental Laboratory Accreditation Program for the analytical methods required for the project.

## 4.2.2 Quality Control Samples

The laboratory has a QC program in place to ensure the reliability and validity of the analysis performed by the laboratory. All analytical procedures are documented in writing as Standard Operating Procedures (SOPs) and each SOP includes a QC section which addresses the minimum QC requirements for the procedures. The internal QC checks differ slightly for each individual procedure but in general the QC requirements include the following:

- Method blanks;
- Reagent/preparation blanks (inorganic parameters);
- Instruments blanks;
- MS/MSDs;
- Surrogate spikes;
- Laboratory duplicates;

- LCSs;
- Internal standards;
- Mass tuning;
- serial dilutions; and
- interference check samples.

## 4.2.3 Calibration

All instruments will be calibrated and the calibration acceptance criteria met before samples are analyzed. Calibration standards will be prepared with National Institute for Standards and Testing (NIST)-traceable standards and analyzed according to method requirements. Initial calibration acceptance criteria documented in the laboratory SOPs will meet those of applicable guidance documents. The initial calibration will meet one of the following requirements:

- The lowest concentration of the calibration standard is less than or equal to the RL based on the final volume of extract or sample; or
- For each target analyte, at least one of the calibration standards will be at or below the regulatory limit (action level) as defined by the DQOs.

Initial calibration will be verified, before samples are analyzed, with a second source standard prepared at the mid-point of the calibration curve. Initial calibration verification will meet the acceptance criteria that are expressed in the laboratory SOPs.

Daily calibration verification will be conducted at the method-prescribed frequencies, and will meet the acceptance criteria of applicable guidance documents. Daily calibration verification will not be used for quantitation of target analytes.

Calibration data (calibration tables, chromatograms, instrument printouts, and laboratory logbooks) will be clearly labeled to identify the source and preparation of the calibration standard, and, will therefore be traceable to the standard preparation records.

#### 4.2.4 **Preventive Maintenance**

The primary objective of a preventive maintenance program is to help ensure the timely and effective completion of a measurement effort by minimizing the downtime of crucial analytical equipment caused by expected or unexpected component failure. In implementing this program, efforts are focused in three primary areas: maintenance responsibilities, maintenance schedules, and adequate inventory of critical spare parts and equipment.

Maintenance responsibilities for laboratory equipment are assigned to the respective laboratory managers. The laboratory managers then establish maintenance procedures and schedules for

each major equipment item. These are contained in the maintenance logbooks assigned to each instrument.

The effectiveness of any maintenance program depends, to a large extent, on adherence to specific routine maintenance for each major equipment item. Other maintenance activities may also be identified as requiring attention on an as-needed basis. The manufacturer's recommendations or sample throughput provide the basis for the established maintenance schedules, and the manufacturers' service contracts provide primary maintenance for many major instruments (e.g., gas chromatography instruments, atomic absorption spectrometers, analytical balances, etc.). Maintenance activities for each instrument are documented in a maintenance log.

Along with a schedule for maintenance activities, an adequate inventory of spare parts is required to minimize equipment downtime. This inventory emphasizes those parts (and supplies) that are subject to frequent failure, have limited useful lifetimes, or cannot be obtained in a timely manner should failure occur.

The laboratory manager is responsible for maintaining an adequate inventory of necessary spare parts. Sufficient equipment will be on hand to continue analyses in the event that an instrument encounters problems. In addition to backup instrumentation, a supply of spare parts, such as fittings, septa, atomic absorption lamps, mirrors, diaphragms, graphite furnace tubes, and other ancillary equipment, will be maintained.

# 4.2.5 Training

The laboratory will have an established policy and procedure on training and documenting of the analyst's competency. As described in SW-846 (USEPA, 1996), each staff member that performs sample preparation and analysis will demonstrate their proficiency through preparation and analysis of four LCSs. An analyst will be considered proficient if the acceptance criteria for method accuracy and precision are met. The laboratory will maintain all training records on file.

## 4.2.6 Supplies and Consumables

The laboratory will inspect supplies and consumables before their use in analysis. The materials specifications in the analytical methods will be used as a guideline for establishing the acceptance criteria for these materials. Purity of reagents will be monitored by analysis of solvent blanks. An inventory and storage system for materials and supplies will ensure use before manufacturers' expiration dates and storage under safe and chemically compatible conditions.

## 5. DATA MANAGEMENT, VALIDATION, AND USABILITY

#### 5.1 Data Management

Data management operations include data recording, validation, transformation, transmittal, reduction, analysis, tracking, storage and retrieval.

Data will be managed by an ESdat[®] Database System powered by a Microsoft Access database[®]. Upon receipt from the laboratory, the analytical report and electronic data deliverable (EDD will be entered into the project's data validation tracking system, which allows the data to be tracked from receipt, through validation, to data loading and storage. The electronic data will be imported into the database system concurrent with the data validation process. The database will be updated with validated data after validation of the laboratory data is complete.

The data will be considered final when data validation is complete and any required data qualifiers have been added to the database. Any changes made to the database after finalization will be documented, including a description of the change, date of change, person responsible, and reason for change.

Once all data quality checks are performed, the data will be exported to a variety of formats to meet project needs. Cross-tab tables showing concentrations by sample location will be prepared. Data can be accessed by a variety of mapping and visualization tools.

The project database will be maintained on a secure network drive which is backed up regularly. Access to the database will be limited to authorized and trained project personnel.

An EDD meeting the requirements of the NYSDEC EDD Manual (NYSDEC, 2013) will be submitted with the PAOC Investigation Report so that the data can be uploaded to the NYSDEC Environmental Information Management System (EIMS). The EIMS uses the database software application EQuISTM from EarthSoft[®] Inc. (EarthSoft).

## 5.2 Data Reduction, Review, Verification, and Validation

This section addresses the stages of data quality assessment by the laboratory, and by Geosyntec after data have been generated and received (i.e., data reduction, review, verification, and validation). It also sets procedures for evaluating the usability of data with respect to the DQOs set forth in Section 2. Data validation pertinent to this Site will be performed in general accordance with the following data validation guidance documents, where applicable:

- USEPA, Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review, OSWER 9240.1-51, EPA 540-R-10-011, January 2010
- USEPA, Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, EPA 540-R-08-01, June 2008

• DER-10/Technical Guidance for Site Investigation and Remediation, NYSDEC May 3, 2010

### 5.2.1 Data Reduction

Raw analytical data generated in the laboratory are collected on printouts from the instruments and associated data system or are manually recorded into bound notebooks. Analysts review data as they are generated to determine that the instruments are performing within specifications. This review includes calibration checks, surrogate recoveries, blank checks, retention time reproducibility, and other QC checks as specified in the SOPs. If any problems are noted during the analytical run, corrective action is taken by the laboratory and documented. Each analytical run is reviewed by the laboratory for completeness prior to interpretation and data reduction.

### 5.2.2 Data Review

Data review is an initial and relatively non-technical step of data assessment that primarily addresses issues of completeness and data handling integrity. In data review, the reviewer will ensure that all necessary reporting components have been included in laboratory reports, such as necessary fields (e.g., collection/analysis dates, units, etc.) as well as the presence of (but not implications of) QC data components (e.g., LCS records, surrogate results, etc.).

### 5.2.3 Data Verification

Data verification is a more technical process than data review in that the core technical aspects of data quality (e.g., precision, accuracy, etc.) are evaluated through a review of the results of QA/QC measures, such as LCSs and surrogates.

Following interpretation and data reduction by an analyst, data are transferred to the laboratory sample management system either by direct data upload from the analytical data system or manually. The data are reviewed by the group leader or another analyst and marked on the sample management system as being verified. The person performing the verification reviews all data including QC information prior to verifying the data. If data package deliverables have been requested, the laboratory will complete the appropriate forms summarizing the QC information and transfer copies of all raw data (e.g., instrument printouts, spectra, chromatograms, etc.) to the data packages group. This group will combine the information from the various analytical groups and the analytical reports from the laboratory sample management system into one package. This package is reviewed by the laboratory project manager (LPM) for conformance with SOPs and to ensure that all project QC goals have been met. Any analytical problems are discussed in the case narrative, which is also included with the data package deliverables.

### 5.2.4 Data Validation and Usability Determination

Following data verification by the laboratory, data validation will be coordinated and/or conducted by Geosyntec's QAO. Validation documentation will be stored in the project file. Validation will be conducted on 100 percent of the laboratory data by an entity independent of the laboratory. This validation will be done on the hard copy (or pdf version) data with electronic data screening as a component of the validation.

While data verification is a technical process in which the data's adherence to core PARCCS elements is evaluated, it still does not answer the final question of the usability of the data and the implications of any departures from data expectations. The data validation process is designed to answer these questions through: (i) the assignment of data qualifiers based on the data validation results; and (ii) a case-by-case review of data quality issues with respect to project DQOs to render a final assessment of data usability.

#### **5.3 Data Evaluation Roles and Responsibilities**

The following components of data evaluation will be performed by certain entities as noted:

- data reduction will be performed by the analytical laboratory;
- data review will be performed both by the laboratory and by Geosyntec;
- data verification will be performed both by the laboratory and by Geosyntec; and
- data validation and usability determination will be performed by Geosyntec.

## 5.4 Data Reporting

The laboratory data package receipt schedules will be based on the laboratory standard turnaround time. The laboratory will provide hard copy data packages that consist of several components, as well as an EDD for each set of samples (i.e., each work order). The data package deliverables from the laboratory will be specific to each type of data collected but will consist of Level 4 data packages (referred as Category B by NYSDEC). The components of a Level 1 through Level 4 data package are as follows:

- Level 1– Signed cover sheet, narrative, data results, and copy of the chain-of-custody;
- Level 2 Signed cover sheet, narrative, data results, QC sample results, copy of the chain-of-custody;
- Level 3 Signed cover sheet, narrative, data results, raw data result information, QC sample results, raw data QC information, calibration and continuing calibration information; and
- Level 4, Full, or CLP-like All of the above plus all raw data and supporting information for the data results.

The reporting scheme from collection of raw data through document storage is as follows:

- Raw data collected by laboratory technical personnel;
- Data reviewed/checked by laboratory supervisor;
- Data receive QA/QC review by LPM;
- Data deliverable undergoes data validation as per project requirements; validation qualifier codes are applied to the data (as applicable) and incorporated into the EDD (with follow-up QC check). The EDD is checked against the hardcopy results during the validation process. Minor errors are corrected in-house. Resubmittal of the hardcopy or the EDD may be required if major errors are observed; and
- If data are found to be incorrect, then corrective action procedures are implemented, and the data review process is reinitiated.

The validation process for laboratory data will include a review of laboratory quality control results and comparison against USEPA validation limits and/or project specific criteria that could affect the quality of sample results. Specific quality control components to be evaluated in the review include the following:

- Case narrative;
- Data completeness check;
- Holding times;
- Sample preservation;
- Blank results (instrument blanks, method blanks, field blanks, trip blanks, equipment blanks (as applicable);
- Surrogate recoveries;
- Internal standard recoveries (as applicable);
- Calibrations ;
- Initial and Continuing calibration;
- Analytical run sequence;
- Chromatograms;
- Raw data files;
- Internal Standard and Retention Time Summary
- Instrument tune (as applicable);
- Serial dilution;

- Laboratory duplicates (as applicable);
- Matrix spike and matrix spike duplicate results;
- Field duplicates;
- Laboratory control sample results; and
- Other specific information as described in the most current NYSDEC ASP.

Based on validation results, qualifiers will be added to reported analytical results to indicate uncertainty or potential bias or interferences. Specific data qualifiers which will be applied to sample concentration include the following:

- J The results are considered estimated. The analyte was detected above the MDL but the associated reported concentration is approximate and is considered estimated because it is below the RL, also referred to as reporting limit) or because there was a QC issue identified and associated with the analytical result.
- R The reported analyte concentration is rejected due to a serious deficiency with the associated quality control result(s). The presence or absence of the analyte cannot be confirmed.
- U The analyte was not detected above the MDL or RL as applicable.
- UJ The analyte was not detected above the MDL or RL as applicable. However, due to quality control results that did not meet acceptance criteria, the RL is uncertain and may not accurately represent the actual limit.

## 5.5 Data Usability and Reconciliation with Project Quality

The following sections describe the performance criteria and data usability for the investigation program. In general, if issues with data quality are found in the various data sets, they will be discussed with the project team including the laboratory and NYSDEC. A NYSDEC Data Usability Summary Report (DUSR) will be prepared to assess the usability of the data when compared to its intended use as established in the DQO statement. Data sets will be assessed with regard to the PARCCS parameters described below.

## 5.5.1 Precision

Field and laboratory duplicates have been incorporated into the program to assess the precision of the measurement system. If duplicate results indicate matrix heterogeneity greater than anticipated, qualifiers will be added to the reported concentrations and a description of validation actions will be included in the DUSR.

# 5.5.2 Accuracy

Accuracy is a measure of how a concentration is in agreement with a reference concentration. Calibrations, matrix spikes, surrogate spikes, internal standards, and laboratory control sample results will be used to assess accuracy. The DUSR will identify non-compliant results and discuss the impact to reported results. Data qualifiers will be applied to sample concentrations based on a comparison of quality control results to laboratory or method specified performance criteria.

## 5.5.3 Representativeness

Sample representativeness will be assessed through an analysis of the blank results. The concentrations and frequencies of target analytes detected in blanks will provide an indication of data representativeness. The DUSR will describe issues concerning representativeness based on a review of these data. Qualifiers will be applied to data that not meet the specified laboratory or method criteria of these measurement parameters.

# 5.5.4 Comparability

Comparability between data sets will be made qualitatively and quantitatively to determine the extent to which different measurements of the same quantity will yield valid conclusions. Comparability performance will be assessed on the basis of duplicate results from samples of the same media collected from the same location at the same time compared against measurement performance criteria, as discussed in Section 2.

Field parameters can provide another means of assessing the comparability of data points within a data set. Parameters including pH, turbidity, and specific conductivity are generally similar among like samples, within certain limits. Should laboratory data appear anomalous, field parameters will be checked to assess the potential that a sample may not have been representative of general conditions for a particular location at a particular time.

## 5.5.5 Completeness

A data set for a specific medium will be considered complete if at least 90 percent of the results have all associated quality control results and are accepted a valid data to meet the Quality Objectives provided in this QAPP/FSP. The DUSR will include a discussion of the results obtained from the completeness review and recommend corrective action(s) as appropriate.

#### Notes:

⁽¹⁾ The Analytical Reporting Limit and Method Detection Limit listed are those that can be routinely achieved by the analytical laboratory.

⁽²⁾ Screening criteria values are the minimum of the New York State Department of Environmental Conservation Table 375-6.8(b) Restricted Use Soil Cleanup Objectives for Industrial Land Use and Protection of Ground Water, December 2006.

⁽³⁾ Screening value for total chromium is value specifed for hexavalent chromium.

- Refers to no screening criteria established

CAS - Chemical Abstracts Service

VOC - volatile organic compound

SVOC - semi-volatile organic compound

PCB - polychlorinated biphenyl

µg/Kg - micrograms per kilogram

mg/Kg - milligrams per kilogram

# Notes:

(1) The Analytical Reporting Limit and Method Detection Limit listed are those that can be routinely achieved by the analytical laboratory.

⁽²⁾ Screening criteria values are Division of Technical and Opertional Guidance Series (1.1.1) June, 1998 Table 5 New York State Groundwater Effluent Limitations Maximum Allowable Concentrations

- Refers to no screening criteria established

All concentration units are micrograms per liter

CAS - Chemical Abstracts Service

VOC - volatile organic compound

PCB - polychlorinated biphenyl

Bold - Indicates that the sceening criteria value is between the reporting limit and method detection limit.

Bold and Shaded - Indicates that the screening criteria value is below both the reporting limit and method detection limit.

# APPENDIX C.1 – GEOSYNTEC RESUMES

#### PAUL L. BROOKNER, MBA, P.G.

environmental management assessment environmental management systems litigation support site investigation and remediation international projects

# **EDUCATION**

M.B.A., University of Minnesota, Carlson School of Business, Twin Cities, Minnesota, 2001

M.S., Geology, University of Nebraska, Lincoln, Nebraska, 1986

B.A., Geology, State University of New York, Binghamton, New York, 1982

#### **REGISTRATIONS AND CERTIFICATIONS**

Registered Professional Geologist, Florida, No. 001153 Registered Professional Geologist, Minnesota, No. 30307

#### **CAREER SUMMARY**

Mr. Brookner has more than 25 years of experience in the environmental industry having served as regulator, consultant, and environmental manager for a multi-national corporation. Most recently, he served as Program Manager for the Corporate Environmental Affairs group for a Fortune 500 Company where he managed corporate environmental risk, financial reserves, and compliance for a global portfolio of legacy manufacturing facilities. In this role, he led negotiations with regulators in CERCLA, RCRA, and European agencies, as well as multiple state lead programs. Mr. Brookner specializes in the financial reporting of contingent environmental liabilities, including FAS 5 and Sarbanes-Oxley requirements. For a Fortune 500 company, he provided recommendations to treasury, accounting, and internal/external audit stakeholders on managing and reporting environmental reserves. He has also used this expertise to evaluate the scope and quantify the cost of potential remedial scenarios for environmental insurance underwriting, corporate due diligence, consistency with the National Contingency Plan, and environmental litigation support. He has served as a fact and testifying expert in these and other areas.

Mr. Brookner also possesses expertise in investigating and estimating the nature and extent of environmental contamination and in developing remedial strategies for sites impacted by chlorinated solvents, metals, petroleum hydrocarbons and polychlorinated biphenyls. The sites have included industrial manufacturing, petroleum and

petrochemical, and railroad facilities; RCRA, CERCLA, state lead superfund and voluntary cleanup programs, and European Union sites.

# Site Investigation/Remediation

Former Vickers Facility, Fortune 500 Corporation, Joplin, Missouri. Program manager for this U.S. EPA Region VII and MDNR RCRA site. Soil, groundwater, surface water and soil vapor have been identified to have been impacted by chlorinated solvents and metals. Provided strategic direction for this highly complex karst site for both the RCRA Facility Investigation and Corrective Measures Study (CMS) from 1992 to present. Instrumental in development and completion of the 1993 and 2010 CMS reports produced for the Site.

*Former Vickers Facility, Fortune 500 Corporation, Omaha, Nebraska.* Project manager for this U.S. EPA Region VII RCRA site. Led negotiations of the Administrative Order on Consent for completion of and RFI/CMS for the site. Implemented a residential indoor air vapor investigation in coordination with EPA and ATSDR that determined that subsurface vapors have not caused unacceptable risk in the homes. Implemented a source area IRM resulting in the removal of greater than 20,000 pounds of VOCs from the subsurface.

*Former Manufacturing Facility, Fortune 500 Corporation, Bad Homburg, Germany.* Project manager for this former manufacturing facility in a highly industrialized section of Germany. Chlorinated solvents, identified in soil and groundwater, were initially addressed by excavation and pump and treat (PT) technologies. Cost-benefit analysis indicated that continuation of PT would be inefficient. Enhanced reductive dechlorination (ERD) pilot test was first successful implementation of in situ bioremediation for RP Darmstadt – Wiesbaden. Negotiated and implemented ERD fullscale implementation with regulators to include parallel shutdown of PT.

*Former Sperry Marine Facility, Fortune 500 Corporation, Charlottesville, Virginia.* Project manager for this RCRA Facility Lead Program (FLP) site regulated by U.S. EPA Region III. Implementation of an RCRA Facility Investigation for chlorinated solvents and metals in soil and groundwater. Negotiated scope of the FLP with EPA to incorporate historical data and focus the RFI on specific SWMUs and AOCs.

*McInerney Farm Site,* Fortune 500 Corporation, Southport, New York. Project manager for the remediation of a former typewriter manufacturing facility's waste landfill. Negotiated revised soil cleanup criteria for paint waste, cadmium, nickel, zinc and PCBs with NYSDEC for incorporation into an Explanation of Significant Difference. Oversaw the RD/RA implementation which included removal in excess of 25,000 tons of waste from the site. A major goal of the RD/RA effort was to

differentiate waste types to minimize disposal costs. Paint waste generated at the site was segregated into two distinct waste streams – high VOCs and low VOCs. As a result, multiple disposal options became available to reduce T&D costs. RD/RA Costs >\$7 million.

*Former Remington Site,* Fortune 500 Corporation, Elmira, New York. Project manager for the evaluation of interim measures (IM) and completion of remedial investigation/feasibility studies (RI/FS) of a former typewriter manufacturing facility. IM evaluation included a pre-design investigation of potential continuing discharge sources to an adjacent wetland and surface water bodies for compounds of potential concern (COPCs) including: cadmium, nickel, zinc and PCBs. RI/FS activities included a sediment, soil, and surface water sampling program intended to delineate the magnitude and extent for COPCs. Investigation activities are anticipated to be completed in 2012/2013.

*HWD Site*, Multi-Party PRP Group, Farmingdale, New York. Member of the technical committee for this New York State superfund site. RI/FS investigation included soil, groundwater, and vapors for chlorinated solvents. The committee oversaw implementation of an interim measures response for vapors detected in buildings adjacent to the site. A sub-slab depressurization system was installed to provide an engineering control for the issue. The approved RD for the site will address site soils with SVE and site groundwater by multiple ISCO injections. Site Costs > \$2 million.

*Former Memorex Facility*, Fortune 500 Corporation, Westlake Village, California. Project manager for this LA RWQCB regulated site. Demonstrated to the water board that the site pump and treat system had reached its practicable technical limits for treating site groundwater. An annual groundwater monitoring program has been implemented to document that the extent of dissolved phase chlorinated solvents and 1,4 dioxane are stable. Coordinated redevelopment of the site with the current owner. This resulted in the removal of over 100,000 cubic yards of soil from the site and installation of a liquid boot vapor barrier system.

Amenia Landfill, Multi-Party PRP Group, Amenia, New York. Member of the technical committee for this New York State superfund site. RI/FS investigation included soil, groundwater, surface waters, wetlands, and sediments for chlorinated solvents, metals and PCBs. The committee was also responsible for determining cost allocation for this multi-party PRP site. Allocation was refined at the completion of the RI/FS phase, prior to RD/RA implementation. Final allocation incorporated NYS EQBA funding which significantly reduced overall financial exposure to industrial and municipal parties. Site Costs > \$8 million.

# Geosyntec[>]

# Environmental Management/Liability Valuation/Litigation Support

**Corporate Environmental Insurance Initiative**, Fortune 500 Corporation, Portfolio of 50 Sites across the United States. Led a project team consisting of internal/external legal counsel, financial analysts and environmental professionals to evaluate the efficacy of cost cap insurance (with commutation account) for a portfolio of over 50 legacy environmental liabilities (traditional multi-media impacted sites) across the United States.

**Quarterly and Annual Financial Reporting,** Fortune 500 Corporation, Global Portfolio of Environmental Liabilities. Led a team to complete quarterly and annual reviews of the corporation's environmental reserve end-position. Prepared and presented the subsequent reserve position reports to the CFO and Comptroller. Provided financial reports and supporting documentation for annual external audit review.

*Estimate and Management of Environmental Liabilities, Fortune 500 Corporation, Global Portfolio.* Managed the Environmental Reserve for a portfolio of over 50 sites in accordance with FAS 5 contingent liability accounting and Sarbanes Oxley reporting requirements. Lifetime cost estimates for individual sites were developed based on a project life-cycle and cost probability analysis and rolled-up for top level review. Developed annual operating plans for individual projects to recognize organizational spending priorities.

**Evaluation of Environmental Liabilities**, Fortune 500 Corporation, Orange County, California. Consulting expert for a prior owner to evaluate the feasibility and net present value of alternative remediation options proposed by a 3rd party and current site owner. The prior owner retained environmental liability for the property through an existing contractual obligation. Our evaluation indicated that lesser cost remedial alternatives that met regulatory obligations were technically feasible for this site. A potential cost savings of \$1 million would be realized by not implementing the 3rd party recommended alternative.

*Evaluation of Environmental Liabilities, Fortune 500 Corporation, Brazil, France and Great Britain.* Project manager for evaluating potential environmental liabilities for the corporation's former manufacturing operations in Brazil, France and Great Britain. Liabilities were estimated based on period of ownership/operation, chemical usage history, employee headcount and normalized revenue.

*Evaluation of Environmental Liabilities*, *Multi-National Specialty Chemical Manufacturer, Malaysia*. Evaluation of potential environmental liabilities for a

chemical manufacturing plant in Malaysia. The evaluation was a key factor in the client's negotiations for purchase of the plant. Evaluation included a Monte Carlo probability analysis of future costs.

*Evaluation of Environmental Liabilities*, *Multi-National Specialty Chemical Manufacturer*, *North Carolina*. Evaluation of existing and potential environmental liabilities for a legacy chemical manufacturing plant in North Carolina. The evaluation helped the client recognize potential future costs and establish an environmental reserve.

Government Owned-Company Operated Cost Recovery Action, Fortune 500 Corporation. Project team member for a multi-party CERCLA cost recovery action against the United States for environmental issues related to a World War II era manufacturing facility (recoverable costs exceed \$200 million). Responsibilities included interrogatory response preparation, technical evaluation of plaintiff and defendant cost allocation proposals, and generation of a historical summary for environmental response costs.

**Rule 30(b)(6) Witness**, Fortune 500 Corporation, Mid-West United States. Deposed, rule 30(b)(6) witness for a Fortune 500 corporation in defense of a multi-party lawsuit for alleged damages resultant from the operation of a farm implement manufacturing plant. Deposition included all historical operational aspects of the plant, including manufacturing processes, equipment throughput, chemical use and environmental investigations completed at the site. Managed the litigation driven investigation of alternative source(s) for chlorinated solvents in groundwater for the multiple defendants.

*Expert Witness, General Liability Insurance Recovery, Schloff Chemical Supply, Co., St. Louis Park, Minnesota.* Factual and expert witness for Plaintiff, Schloff Chemical Supply Co., seeking cost recovery from a Comprehensive General Liability and multiple excess coverage policies. Provided interrogatory response, deposition and court room testimony in support of policy coverage.

#### CAREER SUMMARY

Ms. Caprio is a Senior Project Professional specializing in Quality Assurance located at the Geosyntec Knoxville office. She holds a B.A. degree in biology from Lock Haven State University, a Master's Degree in Organizational Management and a MBA degree in Quality Management. Ms. Caprio has over 25 years of experience in the environmental field. Currently, she specializes in project quality management, preparation and review of quality assurance project plans (QAPPs), quality assurance management plans (QMPs), field sampling plans, data verification, data evaluation, data validation, QA audits including laboratory audits and project on-site field audits. Her data validation experience includes chemical, radiological and geotechnical parameters for media including but not limited to sediment, soil, groundwater, surface water, biota, soil vapor and air monitoring. Ms. Caprio also provides both in-house quality assurance training through the various office locations within Geosyntec and outside quality assurance training for clients. Her experience also includes; natural attenuation of petroleum hydrocarbons and chlorinated solvents, bioventing, biosparging, land treatment, and treatability studies, bioremediation system design, technical support for project managers, and work plan development. She also contributes to Geosyntec's sales and proposal efforts by preparing project designs, cost estimates, and bioremediation project proposals. She has over 20 years of experience as an analytical chemist in environmental and biotechnology laboratories including laboratory management, data management, quality control/quality assurance, and supervision of wet chemistry, gas chromatography, and high performance liquid chromatography departments. Her experience also includes methods development, design and

execution of treatability studies involving biological treatment of hazardous wastes and mixed wastes.

*Investigation and Characterization Former Adak Naval Complex Project, Adak, Alaska, Quality Assurance Manager.* Developed the Sampling and Analysis Plan (SAP) for the United States Department of the Navy Naval Facilities Engineering Command Northwest (NAVFAC NW) under the Environmental Multiple Award Contracts (EMAC) and under the regulatory oversight of the Alaska Department of Environmental Conservation. The SAP was specific to the investigation and characterization of the East Canal/Building T-1341. Also responsible for coordinating the data validation of the samples sent to the fixed base laboratory for analysis.

*Ocean Cape Radio Relay System, Uakutat, Alaska.* Developed the UFP-QAPP. The UFP-QAPP was developed to detail the QA/QC processes and procedures implemented during the Removal Action of multiple areas of interest at the Ocean Cape Radio Relay Station Formerly Used Defense Site near Yukutat, Alaska. The project is under the supervision of the Army Corps of Engineers and under the regulatory oversight of the Alaska Department of Environmental Conservation.

*Katzebue Federal Aviation Administration (FAA) Station, Katzebue, Alaska.* Responsible for coordinating the Stage 2A data validation of the sample data. The data are from a contaminated soil removal action at the Power Plant and Carpenter Shop Areas of Concern. The validation was performed for Athna Engineering Services, LLC.

Savannah River Site Project (NQA-1), Quality Assurance Manager. Responsible for the overall implementation of all quality assurance practices for the project including 1) on-site activities: drilling practices, sample collection, on-site project documentation, and on-site geotechnical testing/measurements 2) off site laboratory geotechnical testing, 3) engineering practices and procedures utilized for the project. Responsible for on-going audits for sub-tier contractors throughout the project, as well as audits of the project offices, both on-site and off-site.

**QA** Audits of full service commercial analytical laboratories as well as on-site mobile laboratories and project specific field audits. Responsible for the auditing to ensure compliance with good laboratory practices, EPA method specifications, laboratory QA program and implementation and project specific QA requirements.

*Naval Auxiliary Landing Field Site, San Clemente Island, CA, Quality Assurance Manager.* Responsible for preparation and implementation of the SAP (under Navy UFP-QAPP specifications). Also responsible for field and laboratory audits; as well as coordination of laboratory analyses and data validation.

*Berry's Creek Study Area – Mega-Sediment Site, New Jersey, EPA Region 2, Quality Assurance Manager.* Responsible for the preparation, final review and implementation of the UFP QAPP. Conducted field and laboratory audits against project requirements. Also responsible for the Tier III validation of the project data.

*Town of Ocean Ridge, Quality Assurance Manager.* Responsible for preparation of the QAPP under Section 319 Nonpoint Source Grant.

*Conchiglio Warehouse and Edwards Supply Site Remediation Project, Ocala, Florida, EPA, Region 4, Quality Assurance Manager.* Responsible for preparation of the QAPP.

*Mattheissen and Hegleler Zinc Company (Carus) Site Remediation Project, LaSalle, Illinois, EPA Region 5, Quality Assurance Manager.* Responsible for the preparation and implementation of the QAPP. Also responsible for the Tier III project data validation.

**OMYA site,** Florence, Vermont, EPA Region 1, Quality Assurance Manager. Responsible for the preparation and implementation of the QAPP. Also responsible for the Tier III project data valiadation as well as review and assessment of historical analytical data.

*Former Baskins Dry Cleaner- Pinnelas County Florida, Quality Assurance Manager.* Responsible for the final review of the QAPP under the USEPA Quality Assurance guidance for Brownsfield Sites.

Asia Rare Earth Project, GSM, Malaysia, Laboratory Management Skills Training, QA/QC, Data Validation. GSM is a Geosyntec subsidiary that is providing remediation services at a former rare earth processing facility in Malaysia. The laboratory performs gross alpha/beta and gamma spectroscopy analyses.

**BCX Tank Farm Project**, *Quality Assurance Manager*. Responsible for the preparation, final review, and implementation of the QAPP, validation and final data review, EPA Region 4.

**Progress Energy Site Tampa,** Florida, EPA Region 4, Quality Assurance Manager. Responsible for preparation of the QAPP.

*West Shore Landings Site, Tampa, Florida, EPA Region 4, Quality Assurance Manager.* Responsible for preparation of the QAPP.

Geosyntec EPA Region 5 Superfund Projects, Quality Assurance Manager.

Los Angeles Unified School District, Los Angeles, CA, Data Validation and QAPP Review. Responsible for data validation, including data from both fixed base laboratory analysis and mobile laboratory data, and QAPP review for SRES #1, SRHS#12, SRHS#15, SRES#4, CHS#15, SRES #2, SR MS #6, CRHS#16, CRES#20, Gratts, Glassel Park, East LA High School #2 Area C, Area D, and 28th Street. Data deliverables included Level II and Level IV packages for inorganic and organic analyses.

*South Western Division (SWDIV); U.S. Navy QAO, Quality Assurance Officer and Geosyntec Liaison.* Responsible for final review and completion of Sampling Analytical Plans (SAPs) for projects performed for SWDIV. Responsible for project adherence to SAP over the duration of the project and for QA oversight of the project. All communication between the QAO for the Navy and GeoSyntec project personnel are directed through the Geosyntec QAO.

*Commercial Nitrogen Processing Plant Site*, *Dodge City, Kansas, Quality Assurance Officer for Remediation*. Responsible for writing the Quality Assurance Project Plan (QAPP) for assuring the integrity of the QAPP. Includes the co-ordination all QA-specific activities. Responsible for on-going data validation and verification.

**Honeywell International Moundsville Site,** Moundsville, West Virginia, Quality Assurance Officer for Remediation. Responsible for writing the Quality Assurance Project Plan (QAPP) and the Sampling and Analysis Plan (SAP) and for assuring the integrity of the QAPP. Includes the co-ordination all QA-specific activities. Responsible for initial on-site QA training of the field sampling teams. Responsible for on-going data validation and verification.

**35-acre Honeywell International Chromium Ore Processing Residue (COPR) Site,** Jersey City, New Jersey, Region 4, Quality Assurance Officer for remediation pilot testing. Responsible for writing the Quality Assurance Project Plan (QAPP) and the Sampling and Analysis Plan (SAP) and for assuring the integrity of the QAPP. Includes the co-ordination all QA-specific activities. Responsible for on-going data validation and verification.

160 Acre Parcel Site, Rialto, CA, Region 9, Quality Assurance Officer. Responsible for assuring the integrity of the QAPP and will coordinate all QA-specific activities. Responsible for on-going data validation and verification.

*LCP-HoltraChem Site*, *Reigelwood*, *NC*, *Quality Assurance Officer*. Responsible for assuring the preparation, review and integrity of the QAPP and will coordinate all QA-specific activities. (CERCLA)

*GEMCOR Site*, *Calipatria*, *CA*. Data review and validation of NORM, lead, and arsenic. Site historically produced geothermal brines resulting in elevated levels of normally occurring radioactive material (NORM) across the area of the site.

*Environmental Laboratory Auditor* – perform full and analytical method specific audits of commercial laboratories

Data validation expertise including all media types, chemical and radiological parameters.

# **REGISTRATIONS AND CERTIFICATIONS**

OSHA Hazardous Waste Site Worker (40-Hour Certification) RCRA Refresher Training American Red Cross Adult CPR/AED and First Aid Railway Worker Protection and e-Railsafe Training Transportation Worker Identification Certification (TWIC)

# **CAREER SUMMARY**

Mr. Gray is an environmental scientist with 6 years of experience supporting environmental site characterization and remediation projects and is currently serving as project manager (PM) on several projects. Through his work to date, he has gained field experience sampling many different environmental media for a broad range of analytes. His experience has allowed him supervise numerous field sampling teams and oversee subcontractors for a variety of purposes. These experiences have also allowed him to contribute to numerous project deliverables designed for various regulatory authorities.

Mr. Gray graduated in 2010 with a Master's of Science in Natural Resource Sciences from the University of Maryland. While at the University (2004-2007), he was employed as a Graduate Research Assistant. His graduate research integrated soil chemical and biological parameters to determine morphological patterns in wetland soils. His coursework included soil characterization, environmental chemistry, statistical data analysis, and Geographical Information Systems (GIS). Prior to completing his graduate studies, he was employed by the USDA-Forest Service. His professional interests include environmental site remediation, hydrogeologic investigation, geologic characterization, GIS modeling, and water resource sciences. He is currently employed full time at Geosyntec as a Scientist. While employed at Geosyntec, Mr. Gray has gained significant experience on the following projects.

*Cortese Landfill Superfund Site*, *New York*. Mr. Gray is currently serving as PM for the routine environmental monitoring program (groundwater, surface water, and landfill gas) at this complex CERCLA site impacted with various volatile and semi-volatile organic compounds including

Adam L. Gray Page 2

# Geosyntec^D consultants

chlorinated solvents and petroleum hydrocarbons and is lead author for the Environmental Monitoring Report submitted annually to USEPA Region II. The site is currently undergoing a groundwater remedy transition from pump and treat to air sparging/soil vapor extraction (AS/SVE) for which Mr. Gray has made several key contributions including: (i) assisting with development of a pilot test work plan, field implementation, data analysis, and reporting; (ii) assisting with AS/SVE source are remedy design; and (iii) helping draft several key documents including Monitored Natural Attenuation Remedial Design for downgradient groundwater, Operation Maintenance and Monitoring Plan for source area groundwater and treatment system operations, and Report on Supplemental Monitoring Well Installation. Due to his extensive experience and conceptual site knowledge, it is expected that Mr. Gray will continue to support the project in a variety of ways.

*Newland Park Landfill, Wicomico County, Maryland.* Mr. Gray is PM for the comprehensive environmental monitoring program at this municipal solid waste landfill located on the Maryland eastern shore. He is responsible for ensuring that environmental monitoring activities comply with requirements specified in 40 CFR 258 Subpart E as well as the Site's disposal permit issued by Maryland Department of the Environment (MDE). He coordinates implementation of all environmental monitoring activities, directs data analysis, and is responsible for delivering semi-annual groundwater and quarterly landfill gas monitoring reports to MDE.

*Confidential Client, Virginia.* Mr. Gray has served as PM for investigation and remediation activities related to petroleum hydrocarbon releases at two of the client's facilities in Virginia. He has helped the client understand the Virginia regulatory framework and coordinated all investigation and remediation activities under guidance of the Virginia Oil Control Program. He was responsible for planning, coordinating, and implementing investigation and clean-up activities at both sites and authoring site characterization reports.

*Large RCRA Facility, Confidential Client.* Mr. Gray has been an integral team member and task manager for this comprehensive and complex RCRA site that is a 400-acre former rocket motor manufacturing facility. He has generally served as the field team leader for various large environmental media (groundwater, surface water including NPDES, and soil) sampling events for the detection of volatile organic compounds (VOC), energetics, hydrocarbons, and metals. He has gained significant experience implementing a hydrogeologic investigation at the fractured bedrock site, which included monitoring well drilling and installation oversight, packer testing, electronic borehole flowmeter, aquifer pump testing with pressure transducers, tracer testing, and various other borehole characterization activities. He has also serviced on-site environmental remediation systems, excavated test pits to investigate subsurface geophysical anomalies, and other various field activities to support project needs. He has helped to draft, review, and edit various site documents submitted to USEPA, which include site work plans, quality assurance project plan, health and safety plan, supplemental RCRA Facility Investigation (RFI) report, and an interim measures report. He has also provided significant GIS support which included drafting maps and completing surface analyses using ESRI ArcMap[®] for site work plans and reports.

Adam L. Gray Page 3

# Geosyntec[>]

**Confidential Client,** Maryland and Virginia. Mr. Gray has assisted on many field activities for this large company client at various sites throughout Maryland and Virginia and is currently serving as an assistant PM on the client's large environmental portfolio. His duties as an assistant PM role include planning, coordinating, implementing, and reporting for various site activities that support client and project needs. Most recently, he has provided extensive field support and served as an integral team member for a complex site investigation at a petroleum hydrocarbon impacted site in the District of Columbia. His duties have included installation oversight of 70 UVOST (UltraViolet Optical Screening Tool) soil borings for real-time delineation of the area impacted by hydrocarbons and installation oversight of 15 monitoring wells using Hollow Stem Auger drilling methods. He was also responsible for completing slug tests on several monitoring wells and analyzing the data to determine site specific hydraulic conductivity. Other routine activities at various sites throughout the client's portfolio include sampling soil and groundwater for VOC's, polycyclic aromatic hydrocarbons, and metals, documenting and shipping site derived waste, and management of site treatment systems.

**Pennsylvania Act 2 Remediation.** Mr. Gray served as task manager for confirmatory sampling efforts and attainment demonstrations related to excavation and capping clean-up work at this metals impacted foundry site located in northwest Pennsylvania. He was responsible for developing a confirmatory soil sampling program that meets Pennsylvania Act 2 requirements and managing all soil sample collection activities. Following sample collection, he compiled the sample results and preformed statistical analysis to demonstrate contaminant attainment at each excavation.

Advanced Post-Master's Certificate, The Johns Hopkins University, Environmental Engineering, Baltimore, Maryland, 1999
OSHA 40-hr Hazardous Waste Operations and Emergency Response Certified

# **CAREER SUMMARY**

Dr. Krasnopoler has over twelve years of experience in site investigation and remediation of contaminated sites under CERCLA, RCRA, state-lead, and voluntary cleanup. He has developed and implemented work plans for site characterization and pilot testing and design packages for remedial construction. Client sectors have included industrial manufacturing, pharmaceutical, military, municipal, railroad, and solid waste management. Sites contaminants have included chlorinated solvents, petroleum hydrocarbons, and heavy metals.

Dr. Krasnopoler specializes in the design of in-situ remedial systems, including air sparging, bioventing, biosparging, in-situ chemical oxidation (e.g., Fenton's reagent, ozone), and soil vapor extraction. He has developed pilot test programs for feasibility demonstration and the collection of design parameters.

Dr. Krasnopoler excels in the use of relational databases and geographical information systems (GIS) for data reporting, developing site conceptual models and analyzing remedy performance.

Dr. Krasnopoler has conducted environmental due diligence for potential real estate transactions and corporate acquisition for a variety of properties including manufacturing facilities, pest control operations, aerial photography operations, former lumber mills and solid waste facilities.

#### **Remediation Design and Construction**

### In-situ Chemical Oxidation

*Cortese Landfill NPL Site, Narrowsburg, New York* – Prepared a feasibility study for treatment of a residual source area at a Superfund site that increased the duration of the proscribed groundwater extraction and treatment remedy that resulted in the selection of a remedial alternative with lower cost and expected operational duration. The selected remedial alternative will reduce migration of organic contaminants downgradient through in-situ source area treatment including air sparging, soil vapor extraction, and amendment with ozone. Planned and implemented a pilot test to collect design parameters for the full-scale design of the air sparging and soil vapor extraction systems. Prepared a final design report for in-situ source area treatment in two treatment areas. Prepared a bid package for construction of the air sparging and soil vapor extraction components of the in-situ source treatment and assisted the client in evaluating the bids for contractor selection. Engineer of Record for construction quality assurance for source area remedial action construction.

*Willow Grove Air Reserve Station, Horsham, Pennsylvania* – Project Engineer for the design of a two-staged remedy to treat free product and dissolved constituents resulting from a jet fuel release. The remedy included in-situ chemical oxidation to remediate free product and enhanced bioremediation to break down the dissolved jet fuel constituents. The design included well layout and construction, oxidation reagent quantities. Designed, planned and provided oversight for in-situ chemical oxidation (Fenton's reagent) pilot study to determine feasibility and provide design parameters for full-scale design. Obtained necessary permits for pilot studies including a waiver for underground injection control permit.

*Howard County Department of Public Works Maintenance Facility, Elkridge, Maryland* - Project Engineer for the design of a source removal action of chlorinated solvents using Fenton's reagent for in-situ chemical oxidation. Determined extent of contamination and designed well layout for treatment. Provided oversight for baseline groundwater sampling.

*Locomotive Painting Facility, Boise, Idaho* - Project Engineer for the design of a large-scale pilot study for remediation of chlorinated solvents using Fenton's reagent for in-situ chemical oxidation. Determined extent of contamination and designed injection well layout. Provided oversight for reagent application.

#### In-situ Bioremediation

*Confidential Client, Voorhees, New Jersey* – Project Engineer for construction, start-up, operation and monitoring of an aerobic biobarrier to prevent groundwater contamination from adjacent closed industrial and municipal landfills from reaching surface water receptors. Preconstruction activities included preparing construction permits and soliciting bids for drilling, trenching, pipe installation and electrical work. Construction activities included trenching for the installation of utilities and underground air injection piping, installation of air injection

equipment and associated piping and instrumentation. Start-up activities included leak checking, flow balancing, vapor monitoring and groundwater monitoring. Operation and monitoring activities included flow balancing and performance groundwater monitoring. After seven years of operation, concentrations in shallow and intermediate groundwater downgradient of the barrier were below remediation standards and surface water concentrations were below remediation standards in all but a few locations.

*City of Alexandria, Virginia* – Designed and implemented pilot test for aerobic in-situ bioremediation remedy to treat BTEX and naphthalene plume located downgradient of a former manufactured gas plant and to prevent discharge to the Potomac River. Prepared a 60% remedial design of a full-scale biosparging system based on pilot test results and lab-scale treatability studies. The remedial design also includes an in-situ oil-water separator and an in-situ permeable reactive barrier to collect free product that may be mobilized during storm events.

*Elizabethtown Landfill NPL Site, West Donegal Twp., Pennsylvania* – Supported a focused feasibility study of aerobic in-situ bioremediation and metals precipitation using dilute hydrogen peroxide as an alternative to the ROD groundwater extraction and treatment remedy.

*Confidential Client, Minnesota* – Provided technical advice for optimization of butanestimulated co-metabolic biosparging system for treatment of chlorinated solvents.

*Naval Air Station North Island, California* – Designed and implemented control logic for a groundwater recirculation system to enhance bioremediation of dissolved chlorinated solvents. Set up and programmed a supervisory control and data acquisition (SCADA) system to monitor system inputs, control system outputs and notify remotely in the case of an alarm condition.

*United States Geological Survey, Baltimore, Maryland* – Supported pilot studies in the West Branch Canal Creek Study Area, Aberdeen Proving Grounds, Edgewood, MD to intercept chlorinated solvent contamination arising from a groundwater seep that is hydraulically connected to a groundwater plume. Supported construction of an artificial layer of natural materials to mimic natural attenuation through sediment and supporting monitoring wells. Participated in baseline and performance groundwater sampling for analysis of VOCs, redox parameters and major ions. Collected and analyzed groundwater samples for bromide concentration as part of a tracer test prior to a bioaugmentation by direct injection.

*Willow Grove Air Reserve Station, Horsham, Pennsylvania* – Project Engineer for the design of a two-staged remedy to remediate free product and dissolved constituents resulting from a jet fuel release. The remedy included in-situ chemical oxidation to remove free product and enhanced bioremediation to break down the dissolved jet fuel constituents. The design included well layout and construction, and specification of air injection equipment for oxygen delivery. Designed, planned and performed a biosparging pilot study to collect design parameters for full-scale design.

**Pharmaceutical Manufacturing Facility** - Project Engineer in support of RCRA Corrective Action Designed and implemented pilot studies for bioventing and biosparging remedies for residual contamination in overburden soils and groundwater. Assisted in the design of a containerized air injection system, which included explosion-proof blowers, heat exchanger, moisture separator, system piping, telemetry, and electrical components. Also assisted with system shakedown and start-up operation. Performed soil gas sampling and in situ respirometry testing and analyzed data to establish baseline and intermediate VOC concentrations and biodegradation rates. Prepared monthly reports of VOC emissions during pilot studies for use in the facility's air emissions reports.

# Nano-scale Zero Valent Iron

*Aerojet General Corporation, Rancho Cordova, California* – Project Engineer for the evaluation of laboratory treatability studies to measure the performance of nanoscale metallic particles for treating trichloroethene, perchlorate, and n-nitrosodimethylamine in soil and groundwater at a California Superfund site.

*Edwards Air Force Base, California* – Project Engineer for the evaluation of laboratory treatability studies to measure the performance of nanoscale metallic particles for treating trichloroethene, carbon tetrachloride, and perchlorate in soil and groundwater at a California Superfund site.

#### Other

*Nuclear Metals, Inc. Superfund Site, Concord, Massachusetts-* Developed feasibility study cost estimates for remedial alternatives using RACER cost estimating software and site-specific cost estimates for VOC and uranium plumes. Remedial technologies included groundwater extraction, air stripping, ion exchange, permeable reactive barriers and monitored natural attenuation.

*FMC Corporation, Newark, California* - Project Engineer for the design and construction of a steam-enhanced dual-phase extraction system to remove ethylene dibromide and ethylene dichloride from shallow, low permeability soils and groundwater. Prepared draft process design including sizing and costing of major equipment, mass balances and equipment layout.

*High Voltage Engineering Corp., Burlington, Massachusetts* - Project Engineer for the redesign of a groundwater treatment system including new pumps, packaged air stripper system and piping network. Determined sizes for submersible pumps and piping. Determined replacement schedule for vapor-phase carbon adsorber. Designed layout of metering well vaults. Investigated the requirements for installation of packaged air stripper system in an underground building. Prepared drawings and specifications for the construction of the system and reviewed subcontractor proposals.

*Confidential Client, New Jersey* - Developed conceptual design and cost estimate for contingency to upgrade a municipal water supply to remove arsenic and mercury by ion exchange.

*Campbell's Soup Company, Napoleon, Ohio* – Developed costs for removal of an unregulated landfill and soil treatment by medium-temperature thermal desorption.

# Site Investigation

*Confidential Client, New York* – Developed and implemented a supplemental remedial investigation of potential discharges from an oil-water separator to adjacent wetlands and surface water. Potential impacts include PCBs and inorganic constituents in soil, sediment and surface water. Conducted pre-design investigation for closure-in-place of the oil-water separator as an interim remedial measure.

*Confidential Client, Connecticut* – Developed a pre-design investigation for remedial action at a former manufacturing facility. Areas of concern include solid waste disposal areas and releases of petroleum hydrocarbons and chlorinated solvents. Updated conceptual site model and developed remedial approach. Proposed remedial actions include selective soil removal, engineered controls and monitored natural attenuation of groundwater.

*Confidential Client, Virginia* – Task manager for the site investigation of navigational components manufacturer under the USEPA Region 3 Facility Lead Corrective Action Program. Prepared a Description of Current Conditions Report and site characterization work plan. Coordinated site characterization activities and analysis and reporting of results. Prepared an Interim Measures Work Plan for a soil removal action to remove soils that represent a potential risk to construction workers.

*Confidential Client, Maryland* – Prepared site investigation work plan and managed site characterization data for investigation of relationship between VOCs in site soil gas and groundwater and in off-site production wells.

#### Due Diligence

*Confidential Client, Ohio* Performed Phase I ESA of aseptic creamer manufacturing facility for a potential acquisition.

*Confidential Client, Georgia*, Performed Phase I ESA of a pest control operation for a potential acquisition.

*Confidential Client, Pennsylvania* – Performed Phase I ESAs of medical device manufacturing facilities for a potential acquisition.

*Confidential Client, Maryland* – Performed a Phase I ESA of a former lumber mill in Eastern Maryland for a potential property acquisition.

*Confidential Client, Illinois* – Performed Phase I ESAs of aerial photography operations for potential investors.

*EnviroSolutions, Inc.* – Performed environmental and operational review of a transfer facility in Newark, New Jersey for potential solid waste acquisition.

# **Environmental Liability Valuation**

*Confidential Client* – Prepared cost estimates for future environmental liabilities for an automobile parts manufacturer as part of insurance cost recovery using cost modeling database application.

*Confidential Client* – Managed review and categorization of incurred costs for an electrical transformer manufacturer related to environmental investigation, remediation and legal defense.

# **Database Management and Geographic Information Systems (GIS)**

Aberdeen Proving Ground, Edgewood, Maryland – Consolidated site characterization data from multiple consultants into a relational database and GIS. Compared extent of chemicals of potential concern for vapor intrusion to building locations to screen buildings for further investigation.

*Confidential Client, Northwestern Pennsylvania* – Managed and analyzed site characterization data for a foundry site. Utilized database queries and GIS to identify areas requiring remediation.

*Municipal Solid Waste Facility, Pennsylvania* – Enhanced database application for management and reporting of site data on landfill gas extraction, leachate collection and leachate application.

**Confidential Client, Maryland** – Managed geographic information for a geotechnical investigation that included over 100 cone penetrometer test (CPT) locations and over twenty soil borings.

*Welsh Road Landfill Superfund Site, Honey Brook Township, Chester County, Pennsylvania.* Developed database application to report monitoring data for a full scale evapo-transpiration landfill cover system. Form-based system allows the user to select and report data for various instruments, including soil moisture probes, landfill gas probes, Gee lysimeters, a pan lysimeter, and a weather station. Developed queries to determine frequency of measurements using a tipping bucket as a measure of infiltration to a pan lysimeter.

*Confidential Fortune 500 Company* - Identified target chemicals for site characterization at a former metals extraction plant based on analysis of the manufacturing process and chemicals stored on site.

# **Data Visualization**

*Pharmaceutical Manufacturing Facility* – Created a digital animation using the Environmental Visualization Software (EVS) and site water level data to visualize the spatial and temporal relationships between water levels in a river and underlying bedrock aquifer.

*Ohio EPA* - Constructed a visualization using the Groundwater Modeling System (GMS) of a contaminant plume that combined cross section of the plume and underlying geology.

*Confidential Client, New Jersey* - Prepared three-dimensional visualization of proposed excavation of contaminated soil using the Environmental Visualization Software (EVS) software package.

*Savannah River Site* - Prepared three-dimensional visualization of tritium and tetrachloroethylene groundwater sampling data and site geology using the EVS software package.

#### **Modeling**

*Confidential Client, Tennessee* - Developed groundwater flow model using MODFLOW 2000 to simulate groundwater extraction in fractured bedrock in order to optimize pumping rates.

*Edwards Air Force Base, California* – Used Visual MODFLOW and MODPATH to predict groundwater flow and particle pathways during injection and recirculation of nanoscale zero valent iron particles as part of pilot test to remediate a chlorinated solvent plume.

*Savannah River Site* - Developed calculation of the rate of TCE biodegradation in wetland sediments that showed that intrinsic bioremediation was occurring in the wetland sediments. SRS Engineering Calculation Q-CLC-B-00026," Biological Degradation Rate for TCE at Twin Lakes Wetlands".

*Pharmaceutical Manufacturing Facility, New Jersey* - Peer reviewed another consultant's model for assessing SVE performance and selection of cleanup levels at a RCRA facility. Developed an alternative SVE model that improved the description of mass transfer across the water table and vapor flow to the extraction well. The client selected our SVE model over the other consultant's model.

#### **Litigation Support**

*U. S Department of Justice* - Researched costs for treatment using low-temperature thermal desorption in support of cost recovery for remediation of a Superfund site. Costs were found to be within the range of similar projects despite contractor errors and the Federal government was able to recover partial costs of the remedy from the responsible parties.

# **Training**

**U.S. EPA Technology Innovation Office** - Prepared course materials for short course on Fieldbased Investigations of DNAPL. Materials included descriptions of DNAPL physics and chemistry, invasive and non-invasive techniques.

#### NEPA Assessments

*Bechtel Corp.* – Conducted site visits and prepared NEPA assessments for construction and colocation of cellular communications antennas in the Washington DC Metro area.

#### **R. DYLAN WALKER**

database management application integration and automation geographic information systems data visualization and conceptual modeling

#### **EDUCATION**

M.A, Secondary Education, University of Maryland, College Park, Maryland, 2011 B.S., Environmental Science, Virginia Tech, Blacksburg, Virginia, 2007

#### **CAREER SUMMARY**

Mr. Walker is a data management and visualization professional with extensive experience in database management, geospatial data analysis, and application integration and automation including the development of site conceptual models, online data access and visualization, animation, automation, and geospatial statistical analysis. His experience is supplemented by extensive and diverse field and management experience, including geotechnical readings, groundwater and soil sampling and reporting, landfill gas monitoring, staff management, equipment management, work plan development, and reporting.

Mr. Walker provides data management, geospatial information systems, and data visualization support for several projects on an as-needed basis, including internet based systems. Occasional use of a global positioning system is employed to demark or find instruments. Several of the maps and other visualizations, including boring logs and three-dimensional models, are later used in reports and in conjunction with large databases associated with the project.

#### Data Management, Automation, and Visualization

**BASF-Harshaw**, *Cleveland*, *Ohio*. Staff GIS Professional at a former chemical manufacturing plant near the Cuyahoga River. Provides geospatial analysis and data management support for planning, environmental sample collection and results, and reporting.

*Conway Railyard, Conway, Pennsylvania.* Staff GIS Professional at a major rail yard near the Ohio River. The Site is under active river gauge monitoring with active light non-aqueous phase liquid (LNAPL) recovery systems monitored monthly. Provides data management and automation tools to enhance workflows, including calculations, data import, and charts.

*Blue Ridge Dam Evaluation, Toccoa River, Georgia.* Staff GIS Professional at a hydroelectric dam undergoing geotechnical analysis. Provides data management and data visualization support via an all-in-one tool with GIS, spreadsheets, and 3-D modeling integration. Tools programmed support engineers by providing easy access and charting of long-term, complex data.

R. Dylan Walker Page 2

*Former Vickers Facility, Bad Homburg, Germany.* Staff GIS Professional at a site undergoing active environmental remediation via enhanced reductive dechlorination (ERD). Provides geospatial analysis, including mass estimates and calculations, and three-dimensional modeling. Also manages the site database to monitor on-site remediation systems.

*Cortese Landfill NPL Site, Narrowsburg, New York.* Staff GIS Professional at a national priorities listed landfill. Provides database management, quality control/quality assurance, and data analysis and reporting for environmental data collected at the site. Mr. Walker also provides geographic information systems support and data visualization at the site.

*Coal Combustion Byproducts Storage Sites, Confidential Client, Mid-Atlantic.* Staff GIS Professional at multiple CCB storage facilities in the Mid-Atlantic. Provides environmental data management and geospatial analysis and data visualizations including web-based mapping products.

*Spring Site Development, Confidential Client, Mid-Atlantic.* Staff GIS Professional tasked with managing spring level measurements and environmental boreholes. Automated data management and reporting for improved efficiency and faster reporting.

*Litigation Support Project, Confidential Financial Client.* Staff GIS Professional tasked with producing figures to be used by legal personnel and expert witnesses on a matter relating to alleged environmental contamination on a former agricultural property sold for residential development.

*Phase I and Phase II ESA Project Support.* Staff GIS Professional tasked with producing figures depicting observations and results of several Phase I and Phase II environmental site assessments through the United States and Canada. Work products included GIS analysis and figures and boring logs.

#### Field Work, Data Management, Reporting

*Cherry Island Landfill, Wilmington, Delaware.* Staff Scientist/Site Manager/Lead Field Technician at an active landfill undergoing an extensive expansion designed by Geosyntec. Work primarily involved management of a tracer test, data analysis, and a site-specific database. Responsible for oversight of the installation and development of new well installation using mud-rotary techniques. Solely responsible for ensuring groundwater is sampled according to the work plan. Often required to manage other field personnel to accomplish this task. Also responsible for collection of geotechnical information from several on-site instruments prior to tracer injection. Extensive reporting required following completion of tracer test.

*Welsh Road Landfill, Honey Brook Township, Chester County, Pennsylvania.* Staff Scientist / Lead Field Technician at a recently capped landfill utilizing a full scale evapo-transpiration cover system. Responsible for database management and groundwater sampling through 2007. Beginning in 2008, became solely responsible for all tasks related to the project. Tasks included maintaining proper function of all on-site instruments and the data they produced. On-site

R. Dylan Walker Page 3

instruments include soil moisture probes, landfill gas probes, Gee lysimeters, a pan lysimeter, and a weather station. Extensive data management, data analysis, and reporting required.

*Closed Landfill Sampling, Meadville, Pennsylvania.* Staff Scientist / Primary Field Scientist at a site suspected of heavy metals and semi-volatile organic carbon chemicals contamination. Provided field support by sampling groundwater and soil. Responsible for the post-sampling data analysis, primarily statistical analysis, and reports. Site includes a closed landfill that requires sampling and other post closure care procedures.

*Old York Road, Burlington Township, New Jersey.* Staff Scientist who provided field and technical support at a former construction and engineering facility suspected of heavy metals and volatile organic compounds contamination. Conducted groundwater sampling and reporting for the facility in accordance with strict New Jersey Department of Environmental Protection requirements. Also provided support at the site through use of geospatial information systems and technical support, such as deed restrictions and notifications.

*Spring Scouting, Various Sites.* Staff Scientist, responsible for providing geospatial information systems support and research to aid clients in scouting for and finding potential natural springs for use as drinking water. Experience involves extreme confidentiality, extensive contact with local and state municipalities, and hydrogeology.

Atlantic Research Corporation, Gainesville, Virginia. Staff Scientist who provided field support at a 400-acre decommissioned facility with extensive perchlorate contamination that is utilizing active bioremediation. Activities included soil, groundwater, and concrete environmental sampling. Geospatial and global positioning system are used as needed.

*Canal Creek Study Area, Aberdeen Proving Ground, Aberdeen, Maryland.* Staff Scientist who provided geospatial and database support that utilized third-party data to provide maps and figures used in presentations.

*Fresh Kills Landfill, New York City, New York.* Staff Scientist who provided geotechnical drilling oversight for several geophysical investigation borings which included split-spoon sampling and Shelby tubes. Logged the geological conditions for depth and engineering property accuracy were important to the task.

*Newland Park Landfill, Salisbury, Maryland.* Staff Scientist who provided field support at an active landfill utilizing landfill gas control systems to prevent off-site vapor intrusion.

*Central Landfill, Cecil County, Maryland.* Staff Scientist who provided geospatial information systems support for the project including, but not limited to, converting computer-aided drafting and drawing designs to a geospatial information systems. Also prepared data collection software for field staff to use which supplemented automatic borehole log and fence diagram generation for site reports. Information analysis support was provided to project management and field staff on an as needed basis.

#### subsurface vapor transport & inhalation exposure innovative technology development

#### **EDUCATION**

Pennsylvania State University, Univ. Park, PA, B.S. (Honors), Geochemistry, 1974 Pennsylvania State University, Univ. Park, PA, Ph.D., Geology, 1983

#### **CAREER SUMMARY**

William is a Senior Consultant based in Albany, New York with more than 30 years of experience in investigation and remediation of contaminated groundwater, soil and vapor intrusion sites. From 1982 to 2010, he worked for the New York State Department of Environmental Conservation (NYSDEC) on many of the largest and most complex remedial sites in the State. From the early 2000's through the present, his primary focus has been on the assessment and mitigation of vapor intrusion. Prior to joining Geosyntec in 2010, he served as the New York State Department of Environmental Conservation's (NYSDEC) technical lead on the development of the State's "Guidance for Evaluating Soil Vapor Intrusion in the State of New York, and on the development of several other policy documents related to vapor intrusion. He developed the technical criteria and headed the team that evaluated the vapor intrusion pathway at more than 400 "legacy" sites in the state. He conducted research on the spatial and temporal variability of volatile organic compounds in sub-slab soil vapor and indoor air, on the comparability of data collected from passive diffusion samplers (modified EPA TO-17) and Summa[®] samplers, and on the impacts of subslab depressurization systems (active and passive) on the subslab concentration of VOCs. His research was used to develop NYSDEC policies on how to conduct vapor intrusion evaluations (number of samples, time of year to sample, which locations within and beneath a home to sample, use of tracers), how long to monitor structures where a potential for vapor intrusion exists, and when to consider "blanket mitigation" of adjacent structures in a neighborhood.

William has continued to focus on vapor intrusion assessment and mitigation since joining Geosyntec in 2011. He has conducted vapor intrusion investigations for the United States Air Force the United States Navy and corporate clients, and has provided litigation support. He serves on the USEPA's technical workgroup that is updating the November 2002, "OSWER Draft Guidance for Evaluating the Vapor Intrusion to Indoor

William E. Wertz, Ph.D. Page 2

Air Pathway from Groundwater and Soils (Subsurface Vapor Intrusion Guidance. He also coauthored draft vapor intrusion guidance for the Air Force, and has lead vapor intrusion training seminars for regulators and the public.

#### **Applied Research**

*Temporal and Spatial Variability in the Distribution of VOCs in Sub-slab and Indoor Air.* Principal investigator on a New York statewide project to characterize the distribution of VOCs at residential structures and the factors that influence it.

*Evaluation of Passive Samplers for Vapor Intrusion Assessment, NYSDEC, NY.* Principal Investigator for a study comparing quantitative passive samplers/TO-17 and Summa canister /TO-15 analyses for use in vapor intrusion assessments at residential structures.

Building Pressure Cycling to Discern Vapor Intrusion from Background Sources, Edwards Air Force Base, CA. Principal Investigator for a field demonstration in 2013 using building pressure cycling to assess vapor intrusion at structure where traditional sampling methods were not practicable. Comparison of indoor air samples collected before and during periods of building pressurization and depressurization demonstrated that the source of TCE in indoor air was due to vapor intrusion, but that other VOCs were present as a result of background contributions. A smoke pen was used to identify preferential vapor intrusion pathways during periods of building depressurization, which was confirmed by collecting a sample of vapor entering the building via a seam at the slab-wall intersection. Samples collected during periods of depressurization were used to estimate reasonable maxim exposure concentrations for use in a risk assessment.

## **ROUTE TO HOSPITAL**

#### St. Joseph's Hospital

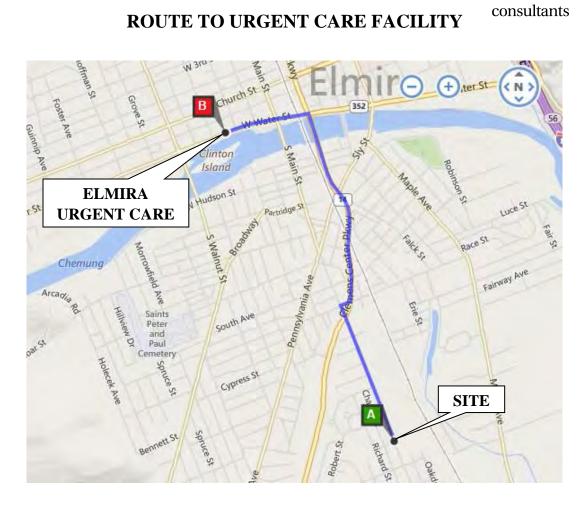

607-733-6541 555 E. Market Street Elmira, NY 14901

#### Written Directions to Hospital from Site:

1. Depart S Main St toward Robert St (0.7 miles)

2. Turn right onto W Miller St, and then immediately turn left onto RT-14 /Clemens Center Pkwy (0.6 miles)

- 3. Turn right onto Pennsylvenia Ave (0.4 miles)
- 4. Road name changes to Madison Ave ( (0.2 miles )
- 5. Turn right onto E Market St (465 ft)
- 6. Arrive at St. Joseph's Hospital

Geosyntec[>]

#### URGENT CARE FACILITY NAME

**Elmira Urgent Care** 607-732-1100 360 West Water St. Elmira, New York

#### Written Directions to Urgent Care Facility from Site:

1. Depart S Main St toward Soper St (0.7 miles)

2. Turn right onto West Miller St. and then immediately turn left onto RT-14/Clemens Center Pkwy (1.0 miles)

3. Turn left onto RT -352E/E Water St. (0.4 miles)

4. Arrive at 360 W. Water St., Elmira, NY (Elmira Urgent Care)

SITE MAP

#### 1. INTRODUCTION

This site-specific Health and Safety Plan (HASP) was prepared to address project-specific hazards known or suspected to be present associated with the existing conditions and work to be performed at the work site(s). This HASP was prepared to meet the requirements specified in Occupational Safety and Health (OSHA) Hazardous Waste Operations Emergency and Response (HAZWOPER) program, Geosyntec's Health and Safety (H&S) Procedure HS 301, and the H&S requirements of the client.

#### 2. SIGNATURES

#### 2.1 <u>Preparers and Reviewers</u>

This HASP must be maintained on site when field work is being performed. The Site Health and Safety Officer (SHSO) can change or amend this document, in agreement with the Health and Safety Coordinator (HSC) or Project Manager. Amendments (e.g., changes in personal protective equipment, addition of tasks, etc.) must be documented in Section 19 and in Appendix A. This HASP must be reviewed and amended on an annual basis for projects lasting more than one year.

2.2 <u>Site Workers</u>

This HASP must be reviewed by personnel prior to site work. Workers not in attendance at the initial meeting must be trained by the SHSO on the information covered in the pre-entry briefing. After reading the HASP and attending a pre-entry briefing, Geosyntec employees and other parties covered under this HASP must sign the following acknowledgment statement.

"I have read, understand, and will perform my work in accordance with the information set forth in this HASP."

#### 4. APPLICABILITY OF THIS HASP

This HASP was prepared in accordance with Geosyntec Consultants' H&S Procedures for use by Geosyntec project staff and subcontractors. Subcontractors, at a minimum, shall ensure that their employees, and those of its lower tier subcontractors, comply with these procedures and other health, safety and security provisions in the Subcontract. Compliance with this HASP shall represent the minimum requirements to be met by subcontractors, who shall be responsible for examining all requirements and determining whether additional or more stringent health, safety and security provisions are appropriate for their portion of the work and implementing them accordingly. Therefore, for firms executing all or any portion of the work, this document and its contents should not be used without a thorough peer review by their health and safety managers. Prior to commencing work, such firms are responsible for reviewing and supplementing the HASP to add appropriate procedures specific to their portion of the work.

#### 5. SITE/TASK/HAZARD DESCRIPTION

#### 5.1 <u>Site Background</u>

The following is a brief description of the site, including information as to the location, approximate size, previous usage, and current usage. A description of the tasks to be performed is also presented.

• S:	ite Location:	cott Technologies Site				
• A	pproximate Size of Site:	e: 46 acres				
• Previous Site Usage:		Manufacturing – engines, drill tools typewriters				
• C	urrent Site Usage:	Manufacturing and warehouse space				
• Description of Surrounding Property/Population:						
North	Elmira High School	East	Rail Road Tracks; Residential/Commercia	1		
South	Residential/Commercial	West	Residential/Commercial	l		

• Summary of previous site investigations (if available/applicable):

Several rounds of soil and groundwater investigation have been completed in the vicinity of the Site. Based on the current conceptual site model presented in the Site Characterization Work Plan contaminants of potential concern (COPCs) in soil include metals, polychlorinated biphenyls (PCBs), semi-volatile organic compounds (SVOCs) which mostly consist of polycyclic aromatic hydrocarbons (PAHs), and volatile organic compounds (VOCs). COPCs in groundwater include lead, PCBs, SVOCs/PAHs, and VOCs.

#### 5.2 <u>Task Descriptions</u>

Tasks for project include:

Task 1:         Direct-Push Technology Borings for Soil Sample Collection
---------------------------------------------------------------------------

Task 2: Hand Augering for Shallow Soil Sample Coll
----------------------------------------------------

Task 3: Monitoring Well Inspection and Synoptic Water Level Measurement

- Task 4: Groundwater Sampling
- Task 5: Storm Water Structure Inspection

Task Hazard Analyses (THAs) describing the tasks and potential hazards for each are presented in Appendix B.

#### 5.3 <u>Chemical Hazards</u>

The classes of chemicals that are known or suspected to be present that may be encountered while performing site work include the following:

- Benzene, toluene, ethylbenzene, xylenes (BTEX)
- Chlorinated volatile organic compounds (VOCs)
- Total petroleum hydrocarbon (TPH)
- Polycyclic aromatic hydrocarbons (PAHs)
- Polychlorinated biphenyls (PCBs)
- Hazardous metals
- Aesbestos

Controls for these hazards are presented in the THAs included in Appendix B. A summary of these chemical hazards is presented in Appendix C.

#### 5.4 <u>Physical Hazards</u>

The following physical hazards have been identified associated with the work to be performed and the site conditions.

- Cold Stress
- Drilling (including Indoor)
- Drum and Container Handling
- Dust and particulates
- Eye Injury
- Hand/Foot Injury
- Heat Stress
- Heavy Equipment
- Knives / Blades
- Lifting Heavy Loads
- Loud Noise/Vibration
- Portable Power/Hand Tool
- Slips, Trips, and Falls
- Thoroughfares / Traffic
- Urban Environments
- Utility Protection

Controls for these hazards are presented in the THAs included in Appendix B.

#### 5.5 <u>Biological Hazards</u>

The following biological hazards have been identified associated with the work to be performed and the site conditions.

- Allergic reaction to poisonous plants
- Biting/stinging insects
- Lyme disease
- Rats / vermin
- Snakes

Controls for these hazards are presented in the THAs included in Appendix B.

#### 6. GENERAL SAFE WORK PRACTICES

The following general safe work practices must be adhered to while performing site work:

- Basic PPE shall be worn, including hard hats, safety glasses, hard-toed boots, and highvisibility vests. If conditions allow, the requirement for hard hats and hard-toed boots may be reduced with approval of the SHSO and Project Manager.
- Minimize contact with impacted materials. Do not place equipment on the ground. Do not sit or kneel on potentially contaminated surfaces.
- Smoking, eating, or drinking after entering the work zone and before personal decontamination is not allowed. Employees who are suspected of being under the influence of illegal drugs or alcohol will be removed from the site. Workers taking prescribed medication that may cause drowsiness shall not operate heavy equipment and are prohibited from performing tasks where Level C or B personal protective equipment is required.
- Practice good housekeeping.
- Use of contact lenses is not allowed under certain hazardous working conditions.
- The following conditions must be observed when operating a motor vehicle:
  - Wearing of seat belts is mandatory
  - The use of headlights is mandatory during periods of rain, fog, or other adverse weather or low-light conditions
  - A backup warning system or use of vehicle horn is mandatory when the vehicle is engaged in a backward motion
  - Posted traffic signs and directions from flagmen must be observed
  - Equipment and/or samples transported in vehicles must be secured from movement

- The use of vehicles acquired by Geosyntec by non-Geosyntec personnel is prohibited
- In an unknown situation, always assume the worst reasonable conditions.
- Be observant of your immediate surroundings and the surroundings of others. It is a team effort to notice and warn of dangerous situations. Withdrawal from a hazardous situation to reassess procedures is the preferred course of action.
- Conflicting situations may arise concerning safety requirements and working conditions. These must be addressed and resolved rapidly by the SHSO and PM to relieve motivations or pressures to circumvent established safety policies.
- Unauthorized breaches of specified safety protocol are not allowed. Workers unwilling or unable to comply with established procedures will be asked to leave the work site.

### 7. EMERGENCY RESPONSE

This section discusses emergency response procedures and response equipment to be maintained on site. A table presenting a list of contacts and telephone numbers for the applicable local and off-site emergency responders is provided inside the front cover of this HASP (after figures).

#### 7.1 <u>Injury and Emergency Response Procedures</u>

In the event of an **injury** to an employee, the instructions for injury response and reporting, located in the front of this HASP, must be implemented immediately. In the event that an **emergency** develops, the following procedures are to be implemented:

- The Site Health and Safety Officer (SHSO), or designated alternate, should be immediately notified via the on-site communication system. The SHSO assumes control of the emergency response.
- If applicable, the SHSO must immediately notify off-site emergency responders (e.g., fire department, hospital, police department, etc.) and must inform the response team of the nature and location of the emergency on site.
- If applicable, the SHSO may call for evacuation of the site. Site workers should move to their respective refuge stations using the evacuation routes provided on the Site Map.
- For small fires, flames should be extinguished using the appropriate type of fire extinguisher. Large fires should be handled by the local fire department.
- If a worker is injured, the procedures presented in "Instructions for Injury Response", located in the front of this HASP, must be implemented immediately.
- After an incident has stabilized, the procedures presented in "Instructions for Incident Reporting", located in the front of this HASP, must be followed.

#### 7.2 <u>Emergency Response Equipment</u>

Emergency response equipment will be maintained in the work area as necessary for this project. Examples of emergency response equipment include first aid kits, and fire extinguishers (Type ABC).

#### 8. KEY PERSONNEL AND HEALTH AND SAFETY RESPONSIBILITIES

Project personnel and their responsibilities in regard to health and safety concerns on this project are as follows:

Project Manager (PM): Aron Krasnopoler

- Approve this HASP and amendments, if any;
- Monitor the field logbooks for health and safety work practices employed;
- Coordinate with SHSO so that emergency response procedures are implemented;
- Check that corrective actions are implemented;
- Check and document that qualified personnel receive this plan and are aware of its provisions and potential hazards associated with site operations, and that they are instructed in safe work practices and familiar with emergency response procedures; and
- Provide for appropriate monitoring, personal protective equipment, and decontamination materials.

#### Site Health and Safety Officer (SHSO): Adam Gray

- Prepare and implement project HASP and amendments, if any, and report to the Project Manager for action if deviations from the anticipated conditions exist and authorize the cessation of work if necessary;
- Check that site personnel meet the training and medical requirements;
- Conduct pre-entry briefing and daily tailgate safety meetings;
- Check that monitoring equipment and personal protective equipment are operating correctly according to manufacturer's instructions and such equipment is utilized by on-site personnel. Calibrate or check calibration of monitoring equipment and record results;
- Check that decontamination procedures are being implemented;
- Implement site emergency response and follow-up procedures;
- Notify the HSC in the event an emergency occurs; and
- Perform and document weekly inspections, if necessary.

Health and Safety Coordinator: Michael Hansen

- Review and audit HASP and amendments;
- Notify Director of Health & Safety when an emergency occurs;
- Assist with the implementation of the corporate health and safety program; and
- Consult with staff on health and safety issues.

#### Site Workers

- Provide verification of required health and safety training and medical surveillance prior to arriving at the site;
- Notify supervisors of workplace accomodation requirements as the result of physical limitations or medical conditions;
- Attend pre-entry briefings and daily tailgate safety meetings;
- Immediately report accidents and/or unsafe conditions to the SHSO;
- Be familiar with and abide by the HASP; and
- Be ultimately responsible for his or her own safety.

#### 9. WORKER TRAINING AND MEDICAL SURVEILLANCE

Personnel involved in field activities subject to OSHA HAZWOPER 29 CFR 1910.120 will be required to participate in both a health and safety training program that complies with criteria primarily set forth by the OSHA HAZWOPER in 29 CFR 1910.120(e) and a medical surveillance program covered under 29 CFR 1910.120(f), or equivalent regulations based on the jurisdiction in which the project is performed.

#### 9.1 <u>Pre-Assignment and Annual Refresher Training</u>

Prior to arrival on site, the Geosyntec Project Manager will be responsible for monitoring that their staff meet the requirements of pre-assignment training (40/24 hours per Procedure HS 301). In addition, personnel must be able to document dates of attendance at an annual 8-hour refresher and three days of fieldwork under a qualified supervisor. Failure to provide this documentation will prohibit entry to the active work area(s) (i.e., Exclusion Zone).

#### 9.2 <u>Site Supervisor Training</u>

Consistent with OSHA 29 CFR 1910.120 (e)(4), prior to arrival on site, individuals designated as site supervisors require an additional eight hours of specialized training.

#### 9.3 Initial Site Safety Orientation and HASP Review

In addition to complying with 29 CFR 1910(e), site personnel will attend an initial safety orientation during which the HASP and applicable THAs will be reviewed prior to initiating field activities. This review will include the following:

- Understanding the lines of authority regarding health and safety and site personnel roles and responsibilities;
- Information of specific hazard agents related to the site and site operations will be discussed, such as health hazards of site chemicals and specific safety hazards of processes, tools, and equipment;
- Training in the proper use, maintenance, and decon protocol of PPE and Level(s) of Protection;
- Appropriate work practices and engineering controls to reduce/eliminate exposures to site hazards will be reviewed;
- Personnel will be informed of means for normal site and emergency communication(s);
- Air monitoring strategies will be discussed to include the frequency/types, action levels, sampling techniques, pre/post calibration techniques;
- Unique/site specific medical surveillance requirements that need to be considered based on site contaminants;
- Understanding site control measures, work zones, and proper decontamination procedures for personnel/tools/vehicles, etc. to reduce the potential for both on/off site contamination;
- Personnel will be trained to respond quickly and properly in the event of an emergency; and
- Personnel involved in specific hazardous activities, such as confined space entry, drum handling, sampling unknowns, etc. will receive specialized training in the appropriate techniques to employ prior to commencing these operations.

#### 9.4 <u>Baseline Medical Surveillance Exam</u>

The baseline medical examination is used to identify physical capabilities and certain medical limitations that may have an impact on the candidate's ability to perform in the position and/or job activity for which he/she is being considered, as well as to establish certain baseline medical parameters. The initial test results can then be compared against future periodic or project-specific monitoring results.

#### 9.5 <u>Periodic/Annual/Biennial Medical Exam</u>

The periodic medical examination is used to evaluate an employee's continued fitness for duty and to assess possible impact(s) occupational exposures may have had on their health status. The periodic examination includes an update to the medical and work history, results of previous occupational exposure assessments, and a detailed medical exam tailored to the job description.

The Medical Director from WorkCare determines the frequency of the periodic medical exams based on regulatory requirements, the position/work activities of the employee, and the level of exposure to physical, chemical, and biological agents.

#### 9.6 <u>Exposure/Activity/Project-Specific Medical Testing</u>

None planned.

#### 9.7 <u>Exit Exam</u>

An exit medical examination is offered when an employee leaves the medical surveillance program, either because of termination of employment with Geosyntec or because of reassignment to a position not designated or identified to participate in the medical surveillance program. This optional exit examination may be used to assess potential changes in medical status that have occurred during the course of employees' previous work activities, and to establish a medical baseline at the time of departure.

#### 9.8 <u>Exit/Termination</u>

An exit medical examination is offered when an employee leaves the medical surveillance program, either because of termination of employment with Geosyntec or because of reassignment to a position not designated or identified to participate in the medical surveillance program. This optional exit examination assesses potential adverse impacts occupational exposures may have contributed to the employee's health status.

#### **10. MAPS AND SITE CONTROL**

#### 10.1 Routes to Hospital and Urgent Care Facility

A hospital and an urgent care facility near the site have been identified. Maps to the hospital and urgent care are included after the Table of Contents of this HASP. Both figures also include the facility name and phone number.

#### 10.2 <u>Site Map</u>

A site map is located inside the cover of this HASP. The site map is intended to show the location of the work zone(s), to provide on-site orientation, and to delineate evacuation routes. Changes may be made to the site map by the SHSO based on changing site conditions. The site map should be accessible in the work area.

#### 10.3 Buddy System

The buddy system is required when work is performed in hazardous areas. The buddy system includes maintaining regular contact with one or more onsite Geosyntec personnel, clients, and/or contractors to periodically check on the condition of site workers such that each employee in the work group is observed by (or in verbal contact with) at least one other employee in the work group. For field visits with only one employee onsite, the buddy system shall be implemented via periodic telephone contact with offsite Geosyntec personnel. The purpose of the buddy system is to provide rapid assistance to employees in the event of an emergency.

#### 10.4 <u>Controlled Work Zones</u>

APPLIES TO TASK:	$\square 2$	Π3	4	ß	6	$\Box \oslash$	8	🛛 Not Apr	licable
									neuore

Three controlled work zones, including an Exclusion Zone, a Contaminant Reduction Zone (CRZ), and a Support Zone, are required for the task(s) indicated above. Geosyntec employees must not be allowed into the CRZ or Exclusion Zone or the Work Zone until they have received the proper personal protective equipment (PPE) and they have read, understand, and meet the requirements outlined in this HASP. The Exclusion Zone is defined as the area on site where contamination is suspected and tasks are to be performed. The CRZ is defined as the area where equipment and workers are to be decontaminated as they leave the Exclusion Zone. The Support Zone is defined as the command area and may serve as a staging and storage area for supplies. The location and extent of the work zones may be modified as necessary as site investigation information becomes available. For sites that do not require the three controlled work zones, the area(s) where work is to be performed shall be called the Work Zone.

Visitors to the site may need to be continually escorted for safety purposes. Visitors under Geosyntec's direction need to check in with the SHSO upon visiting the site.

For the tasks identified above, the boundaries of the Exclusion Zone, CRZ, and Support Zone, or the Work Zone, shall be marked using appropriate methods, including but not limited to warning tape, signs, traffic cones, fencing, or other appropriate means.

#### 10.5 <u>Site Access</u>

Certain sites require controlled access to the work area. Examples of access controls include sign in/sign out logs, checking in with guards, and donning identification badges. Geosyntec personnel will adhere to the site-specific access requirements and monitor that subcontractors and other Geosytnec visitors abide by site-specific access control requirements.

10.6 Inspections

APPLICABLE NOT APPLICABLE

Based on the hazards identified for the project, periodic health and safety inspections may be performed. The Health & Safety Inspection Checklist records should be kept on file at the project site. The frequency for periodic inspections is:

Weekly
Monthly
Other:

#### 11. TAILGATE MEETINGS

Tailgate meetings must be held daily prior to starting work to discuss important health and safety issues concerning tasks to be performed during that shift. Non-Geosyntec site workers should also communicate health and safety concerns associated with the tasks they will be performing. Topics discussed in the tailgate meetings must be documented.

#### **12. STOP WORK AUTHORITY**

In accordance with the Company's Procedure HS 203 - Stop Work Authority, Geosyntec personnel and subcontractor personnel have the <u>authority and responsibility</u> to issue a Stop Work Order if unsafe actions and/or conditions are identified. The Stop Work Authority (SWA) process involves a stop, notify, correct, and resume approach for resolving observed unsafe work actions or conditions. The person issuing the work stoppage will first notify workers engaged in or affected by the unsafe activity or condition and require that associated work be stopped. After this Stop Work Order is issued, the Geosyntec project manager and the supervisors for affected or concerned contractors will also be notified. The Geosyntec project manager will document the issuance of the Stop Work Order on the form provided in Procedure HS 203. Work will not resume until the issues and concerns of the Stop Work Order have been adequately addressed.

#### **13.** AIR MONITORING

APPLIES TO TASK: 🖾 0 🛛 2 🗔 3 🗍 4 🗍 5 🗍 6 🗍 7 🗍 8 👘 Not Applicable

Air monitoring will be performed to evaluate airborne chemical and/or dust exposure levels within the breathing zone of site workers. Hazardous conditions may include concentrations that may cause acute or chronic illness, potential oxygen deficient environments, or potential explosive environments. Air monitoring may also be performed to evaluate the adequacy of engineering, administrative, and/or PPE controls. Air monitoring may be "real-time" (e.g., the instrument provides immediate results at the project), using multi-gas meters, photoionization detectors (PIDs), or colorimetric tubes. Personal monitoring may also be performed by collecting samples and forwarding to a laboratory for analysis and quantification.

The type(s) of air monitoring equipment required and associated action levels are outlined in Appendix D. Monitoring equipment must be calibrated based on the manufacturer's requirements. Calibration results and air monitoring measurements must be documented. Based on the results noted and site activities or scope of work changes, the frequency of air monitoring may be adjusted on site by the SHSO with the consent of the Project Manager and communication with the HSC.

#### 14. PERSONAL PROTECTIVE EQUIPMENT

The levels of PPE required for each task are presented in Appendix E. Required equipment and types of protective clothing materials, as well as an indication of the initial level of protection to be utilized, are listed. The level of protection may be upgraded or downgraded by the SHSO according to controls requirements in Appendix Eor according to action levels provided in Appendix D.

If respirators are worn, workers must abide by the company's Respiratory Protection Program in accordance with company's Respiratory Protection Program (EHS 112).

### **15. DECONTAMINATION**

The SHSO and Project Manager will determine the type and level of decontamination procedures for both personnel and equipment based on evaluation of specific work activities in the controlled work zones. Medical treatment will take precedence over decontamination in the event of a life threatening and/or serious injury/illness. Personnel will perform decontamination in designated and identified areas upon leaving "hot zones" where the potential exists for exposure to hazardous chemical, biological, or environmental conditions.

Decontamination of personnel in Level D (modified) will consist of proper containerization and disposal of coveralls, disposable boots, and gloves (if applicable).

Decontamination of personnel in Level C, if applicable, will consist, at a minimum, of:

- Removal and cleaning/disposal of boot covers, coveralls, and outer gloves;
- Removal, cleaning, and storage of respiratory protection;
- Washing of non-disposable PPE suspected of being contaminated using a soap solution followed by a water rinse; and
- Removal and disposal of inner gloves.

Hand tools and sampling equipment shall be decontaminated as needed by washing in decontamination basins with appropriate solutions, or, if possible, by dry decontamination. Wash solutions and PPE may require disposal at a licensed waste facility.

#### **16.** SPILL CONTAINMENT

The task(s) for this project may involve the handling of drums and/or containers that contain stored chemicals, hazardous materials, and/or wastes. The drums and/or containers may have been spilled/dislodged during site activities due to compromised construction of the drum/container, transportation accidents, improper packaging practices, and improper handling of hazardous materials during on/off loading. Containers shall be inspected and their integrity assured prior to being moved and/or handled. If the integrity of the container is in question, the container shall be over packed or its contents transferred. Operations shall be organized and coordinated to minimize movement of such containers. Where spills, leaks, or ruptures may potentially occur, a supply of sorbents shall be located in the immediate area. Additional preventative measures include:

- UN-approved 55-gallon drums, bins, and/or Baker tanks will be inspected for visible defects upon delivery to the site;
- UN-approved 55-galon drums will also be inspected to ensure each drum includes a resealable lid with a small resealable sampling port near the top, or on the side of the drum and that the enclosure is not deformed and/or distorted;
- Drums will not be completely filled to allow for possible expansion of liquid and will be set on wooden pallets to facilitate transport by forklift;
- The storage area will be inspected to check for leaks weekly while the containers are being filled and immediately after a relocation to a temporary on-site storage area; and
- Flat areas will be selected for temporary storage away from high-traffic work areas/zones and storm/sewer drains.

In the event of an unplanned release or spill of unknown or hazardous substances, the site supervisor will designate personnel who will support the spill containment, control, and/or clean-up procedures. The team will request additional off-site emergency response assistance if necessary based on the type of spill, volume, potential toxicity, etc.

The spill area will be isolated and restricted to only authorized personnel designated to assist with the containment, control, or clean-up activity. Authorized personnel will be trained to contain and clean spills from typical materials and quantities used at the project location. Physical barriers will be set up to warn unauthorized personnel to stay clear and evacuate the affected area. The spill, leak, or incident will be assessed by the team and characterized to determine the appropriate course(s) of action(s) to consider:

- Small spills (i.e., maximum volume of 55 gallons of a liquid or 100 pounds of a solid) may be remediated using absorbent materials by designated personnel;
- Large spills (i.e., liquid volumes > 55 gallons or solid weighs > 100 pounds) and/or spills of highly toxic materials may require assistance by off-site hazardous materials (HAZMAT) teams;
- Attempts shall be made to identify and stop the source(s) of spillage immediately while donning proper PPE (based on action levels and the air monitoring program) and performing air monitoring;
- The site supervisor will direct spill-response operations and stay at the spill area until it has been cleaned, inspected, and cleared for re-entry; and
- The site supervisor will prepare a spill incident and clean-up report and will communicate findings to the Project and Branch Manager and EHS Department.

#### **17.** CONFINED SPACE ENTRY

APPLICABLE NOT APPLICABLE

The task(s) for this project involve confined-space entry. Workers must abide by the company's Confined Space Entry Program (Procedure HS 118).

#### 18. GLOBALLY-HARMONIZED SYSTEM FOR HAZARD COMMUNICATION

### APPLICABLE INOT APPLICABLE

The following procedures must be followed for chemicals <u>brought onto the site</u> by Geosyntec personnel or by subcontractors (i.e., decontamination solution, sampling preservatives, KB-1 solution, sodium permanganate, etc.) while performing the tasks of this project:

- Labels on primary chemical containers must not be defaced;
- Chemicals must be stored in appropriate storage containers;
- Secondary containers and storage cabinets must be correctly and clearly labeled;
- Chemicals incompatible with each other must not be stored together;
- Workers must receive training on the chemical hazards; and
- Safety Data Sheets (SDSs) must be added to Appendix F.

When chemicals are used on site, workers must abide by Geosyntec's GHS Hazard Communication Program (Procedure HS 115).

#### **19. HASP AMENDMENTS**

Over the course of this project, it is possible that the project-specific hazards and working conditions will change. This HASP may be reviewed and amended as necessary to effectively describe the changing working conditions and measures to mitigate the potential health and safety issues that may arise during the project. Amendments to the HASP should be briefly described in the following spaces provided. The full text of the amendments should be provided in Appendix A and/or additional THAs should be added to Appendix B.

### **AMENDMENT 1:**

Date: Brief description	_ Project Manager: of amendment:	HSC:	
AMENDMENT	2:		
Date: Brief description	_ Project Manager: of amendment:		
AMENDMENT	3:		
Date: Brief description	_ Project Manager: of amendment:	HSC:	

#### **Appendix A: HASP Amendments**

Discuss details of amendments to this HASP here. Include amendment number, date, and details of amendments.

#### Appendix B: Task Hazard Analyses

TASKS	
Direct-Push Borings for Soil Sample Collection	©Stormwater Structure Inspection
^② Hand Augering for Shallow Soil Sample Collection	6
^③ Monitoring Well Inspection and Synoptic Water Level Measurements	$\oslash$
<pre>@Groundwater Sampling</pre>	8

THAs for these tasks are presented in the following pages.

### **APPENDIX B – Task Hazard Analyses**

					Fay
TASK/ACTIVITY:	DPT Borings for	or Soil Sample Collection	Date:		10/21/2014
Project Name:	Former Scott Technologies Site		Client Name:		Unisys Corporation
Project Number:	MN0832		Geosyntec Proj. Mngr.:		Aron Krasnopoler
Project Address:	1051 Sourth M	ain Street, Elmira, New York	Geosynt	ec Proj. Dir.:	Paul Brookner
Task Description:	analyses		round surf	ace via direct-pu	sh technology (DPT) for laboratory
		TASK HAZARD ANALYSIS			
Site-Specific Comn	nents:				
Sub-Tasks, A	ctivities	Hazards			Hazard Controls
Task 1: Mobilize to Site	)	-Driving -Mobilization to and around unfa facility	miliar	<ul> <li>Drive carefully to distracted driving.</li> <li>Review scope of</li> </ul>	o facility, be well rested and avoid f work.
Task 2: Locate Soil San and clear drilling location ground and undergrour	ons for above-	-Slips/trips/falls -Heat/cold stress		-Pay close attention movement.	on to foot placement; slow deliberate
Locate sampling location	ons. Place pin	-Biohazards: snakes, bees, spid poison ivy	er, ticks,	-Dress for weathe	r conditions. Apply sunscreen if needed.
flags at all sampling loc location will be docume	ations. Boring				oundings and avoid biohazards.
Task 3: Conduct DPT drilling and soil sampling		-Same hazards noted above for -Drill Rig Hazards -Sharp edges on knife and on a sleeves used with DPT sampling -Potential contaminant exposure PCBs, SVOCs	cetate g.	<ul> <li>-Same hazard controls noted above for Task 2.</li> <li>-Before entering work area, don level D personal protect equipment (PPE). PPE will include: hard hat, safety glasses, safety vests, steel toe boots, nitrile gloves; and plugs or ear muffs.</li> <li>-Avoid being in close proximity to drilling rig.</li> <li>-Have a private utility locator clear each boring location underground utilities.</li> <li>-Avoid direct contact with contaminated matrices.</li> <li>-Pay close attention to the sharp edges and wear hand protection, such as leather gloves, if necessary.</li> </ul>	
Task 4: Sample Collect and Packing	tion, Labeling				······
Homogenize samples in decontaminated stainless steel or disposable mixing containers. Place the homogenized sample in the laboratory- supplied sample containers and label the bottles. Pack samples in cooler with ice and proper quality assurance samples.		-Potential contaminant exposure PCBs, SVOCs -Back strain when transporting o of collected samples packed wit	coolers full	sample material. -Use proper lifting	level D PPE and minimize contact with techniques. Get assistance when ly for containers heavier than 49 lbs.
Task 5: Equipment Decontamination Decontaminate equipment that will be reused (e.g. hand auger, trowel, et. al.)		-Slips, Trips, and Falls -Hand injuries during handling of equipment. -Potential contaminant exposure: VOCs, PCBs, SVOCs		<ul> <li>-Pay close attention to foot placement; slow deliberate movement.</li> <li>-Pay close attention to the sharp edge of steel hand trowel to avoid cutting or other injuries of hands.</li> <li>-Continue to wear level D PPE and minimize contact with water</li> </ul>	
Task 6: Demobilization		-Splash hazards -Driving		water. -Drive carefully ar	nd avoid distracted driving. If too
Demobilize from Site, making sure all work areas are clean and orderly				exhausted to drive arrangements to s	e safely back to the office make stay at hotel.

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
1. P	REMISES/ENVIRONMENTAL	HAZARDS
Site-S	Specific Comments:	
	LOCATION HAZARDS  Outdoor field work  Urban, suburban  Rural, remote location Indoor field work  Operating facility Vacant facility Water hazards	<ul> <li>Use routine safety precautions commensurate with routine work environment conditions</li> <li>For non-routine, unique, or severe location hazards, see site-specific safety comments above.</li> <li>For water-related work, see #2, "Water Hazards"</li> <li>For worksite violence/security risks, see #3, "Violence, Security, Working Alone"</li> <li>For transportation related hazards, see #5, "Worksite Traffic, Vehicle, Transportation Hazards"</li> <li>For utility-related hazards, see # 6, "Utility-Related Hazards</li> <li>For atmospheric hazards in enclosed, indoor, or confined spaces, see # 11 "Confined Spaces or Hazardous Enclosed/Indoor Spaces"</li> </ul>

	consultants	Pag
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
$\boxtimes$	WALKING/WORKING	Keep work areas clean, orderly, dispose of trash/debris, maintain sanitary conditions.
	SURFACES, HOUSEKEEPING Surface Uneven, rough terrain, riprap	⊠ Walkways are cleared of equipment, excavated material, tools and debris, snow
	Slippery surfaces	□ Holes, pits, openings to be covered or otherwise marked or guarded
	$\Box$ Holes, pits, openings	□ Apply absorbent, salt or sand, for traction/slip resistance on slippery/icy/wet surfaces
	$\Box$ Puncture, foot hazards	☑ Wear proper work boots/shoes with ankle support and/or traction, as appropriate for conditions
$\boxtimes$	TEMPERATURE/WEATHER	☑ Heat/Cold stress are monitored in accordance with Geosyntec procedures EHS 124 & EHS 125
	Heat Stress	□ Provide sufficient fluids, shade, breaks, other precautions as appropriate to adderss heat hazards.
	☑ Cold Stress	☑ Provide protection from sun (sun screen, shaded brake area).
	Severe Weather	☑ For cold stress, wear multiple layers, protect from wind/wet, frequent break in warm location.
	🖂 Lightning	□ In high wind, discontinue working at heights (e.g. on ladders, scaffold, aerial lift, similar).
		Use precautions for lightning, thunderstorm, hale, tornado (monitor weather, "30/30 rule," shelter)
$\boxtimes$	BIOLOGICAL HAZARDS	<ul> <li>☑ Utilize safety practices commensurate with risk of biting/stinging insects, wild/feral/pet animals.</li> <li>☑ For poisonous plants (poison ivy/oak/sumac/etc.), minimize exposed skin area, wear coveralls, use</li> </ul>
	$\square$ Insects, spiders, ticks	barrier cream/wash (Technu products or similar), as appropriate.
	□ Wild/feral/pet animals	barrier crean/wash (rechnu products or similar), as appropriate.
	Mold, fungi	For biological exposure hazards, use protective measures commensurate with hazard:
	⊠ Poisonous plants	Minor-moderate hazard - use ordinary hygiene practices, protective gloves, hand washing.
	Bird Guano	□ Moderate-severe hazard - add protective clothing, respirator, decon, as appropriate.
	□ Infectious, wastewater, sewer	□ Bloodborne pathogen (human infectious agents) - implement "Universal Precautions"
	□ Bloodborne pathogens	
$\square$	HAZARDOUS NOISE	Hearing protection is used when exposed to excessive noise levels (greater than 85 dBA over an
	OVERHEAD HAZARDS,	8-hour work period, or intermittent)
	FALLING OBJECTS	□ Wear hardhat when exposed to overhead hazards, "bump" hazards, falling objects
		Cordon off hazard zones, route access/egress around hazards of falling objects
		Secure objects from falling     Describe a substantiant content within and estimate workers
		Provide overhead protection (canopy) to protect public pedestrians, workers
		□ Make site-specific arrangements for illumination of work areas and access routes.
	Night work  Indoor work	
0.0		
	Specific Comments:	TIONS, FLOOD, ETC. – CHECK IF NOT APPLICABLE: 🖂
Sile-C	specific comments.	
	WATER HAZARDS	Wear appropriate Coast Guard-approved Personal Flotation Device (PFD)
	Drowning, hypothermia	□ Bring emergency rescue equipment (ring buoy, reaching device, flares)
	□ Boat, barge, raft	□ Use fuel safety practices, fire extinguisher present in boat
	□ Wading, wetland, mud/silt	□ See site-specific safety comments above.
	□ Dam release, flood, tide	
	Diving	
2 \/I		
	Specific Comments:	ON, WORKING ALONE – SPECIAL MEASURES – CHECK IF NOT ANTICIPATED: 🖂
Sile-C	pecific confinents.	
	PERSONAL SECURITY, HIGH	Employ standard precautions, which may include: conduct work only during daylight hours, use
	CRIME AREA	buddy system, avoid parking in secluded location, lock vehicles, hide valuable items in vehicles
		from plain view
		□ See site-specific safety comments above for project-specific security measures.
	PUBLIC AT RISK, SITE SECURITY	□ Provide safe pedestrian route around work areas, use appropriate barriers, signs, warning devices.
	SECONT	Provide covers over excavation, secure fencing, overnight protection     Dravide protection from successful (accessful (acces)))))))))))))))))))))))))))))))))))
		<ul> <li>Provide protection from overhead hazards (canopy, etc.) where public at risk of overhead hazards</li> <li>Provide secure locked storage of hazardous chemicals, hazardous equipment, etc.</li> </ul>
		□ Establish "check in" procedure with supervisor or project manager (arrival, mid-day, departure)
	WORKING ALONE	□ Additional measures, as appropriate for the working conditions.
4. DI	RIVING, TRAFFIC, TRANSPOF	RTATION HAZARDS – CHECK IF NOT APPLICABLE:
	Specific Comments:	
$\boxtimes$	DRIVING HAZARDS	☑ Use routine safe/defensive driving practices (seat belts, safe speeds, eyes ahead, no tailgating,
K_N	☑ Routine work travel	limit distractions, no texting, safe cell phone use, clear windows, account for weather/road conditions, adequate sleep, other measures as appropriate).
	Unfamiliar location	$\boxtimes$ Plan travel route before driving (assemble maps, enter destination in GPS).
	Unfamiliar vehicle	□ Familiarize yourself with vehicle operational controls before operating unfamiliar vehicle.
1	Overnight travel, distance	

	consultants		Page
	HAZARD	HAZARD CONTROLS (check all that apply and o	comment as required)
$\boxtimes$	WORKERS EXPOSED TO	Workers to wear reflective vests where exposed	to traffic hazards.
	TRAFFIC HAZARDS	Where possible, park vehicles as protective shields	ld from oncoming traffic.
	☑ In/near public or private	Configure work area and support vehicles to mir	imize worker exposure to traffic hazards.
	roadway	DOT signal devices will be used to re-route vehi	cles around work area, site entrances/exits.
	Parking lot, driveway	□ Flaggers will be used and have DOT Flagger Tra	aining; police detail where appropriate or required.
	□ Worksite, construction site	Park vehicles in secure location away from heav	y equipment use or other site operations.
	traffic	□ Mark temporary roadways clearly, provide berm	s/stop logs where needed.
	RAILROAD/AIRPORT HAZARD	□ Coordinate with rail company/airport and implem	
		□ Site workers to receive safety training for railroad	
	OFF-ROAD DRIVING, USE OF	□ For off road driving, do not exceed capability of v

	AERIAL LIFT	<ul> <li>Operators are sufficiently trained, experienced and qualified.</li> </ul>
	□ Scissor lift	<ul> <li>Equipment is inspected after mobilization and is in good condition.</li> </ul>
	$\square$ Extensible boom	<ul> <li>Harness &amp; Lanyard worn whenever operating the lift (scissor lifts may be excepted)</li> </ul>
	□ Articulated boom	<ul> <li>Overhead and surface obstructions are reviewed with operators prior to use.</li> </ul>
	_	
	└ Vertical Lift ("Genie")	
	SCAFFOLD	□ Identify/coordinate operations with competent person
	Supported scaffold	□ Supported scaffold level, stable, proper attachments, tiebacks, planking,
	Suspended scaffold	□ Suspended scaffolds anchored properly
	□ Free-standing/mobile scaffold	□ Guardrails present above 10 feet or personal fall apparatus used.
		□ Proper means of accessing scaffold (proper ladders, stair tower).
		□ Total height of free-standing scaffold not to exceed four times the minimum base dimension.
8. TC	OOLS, EQUIPMENT, MACHINE	RY – CHECK IF NOT APPLICABLE: 🗆
Site-S	pecific Comments:	
$\boxtimes$	HAND TOOLS	☑ Use proper tool for the job, maintain tools in good condition (no damage, cutting tools sharp,
	Eye injury, puncture/bruise/ laceration hazard	etc.) use appropriate PPE for hand/eye/body protection, plan for safe "follow through" motion, use
		vise/clamp/work surface to hold/stabilize work piece
	POWER TOOLS	□ For all power tools:
_	Eye/hand/body injury	<ul> <li>Inspect tools to ensure safe operating condition before each use.</li> </ul>
	Fuel-related hazards	<ul> <li>Use tool in accordance with manufacturer's specifications.</li> <li>Use PPE or other safety practices, as appropriate, for eye/hearing/hand/head/body protection</li> </ul>
	Inhalation hazard	<ul> <li>Provide training or verify operator gualification for use of power tool.</li> </ul>
		- Stay clear of hazard zone, "line of fire" when working near where power tools are used.
	Sparks, heat, fire hazard	□ Use safety practices for refueling, fuel handling/transport/storage.
	Electrical hazards	Use respirators, ventilation, wet methods, other appropriate means to control inhalation hazard.
		□ For spark/heat generating tool, control fire hazards, segregate combustible/flammable materials.
		□ For electrical hazards, see # 6, "Electrical Hazards".
	WELDING, CUTTING	□ Hot work permit system to be implemented.
	□ Gas welding/cutting	<ul> <li>Operator properly protected (eye protection, clothing, apron, etc.)</li> </ul>
	□ Arc welding/cutting	□ Fire hazard controls (watcher, fire extinguisher, water, isolate combustibles)
		□ Protect nearby personnel from hazardous UV, IR light (shielding, curtain)
		Electrical safe work practices for arc welding
		□ Gas cylinder safe practices (secured, upright, caps on when not in use, prevent damage).
	EQUIPMENT/MACHINERY	
$\boxtimes$	☑ Point-of-operation hazards	☑ <u>Working Near Equipment/Machinery</u> ☑ Work at asfe distance/restrict accesses around guarde in place, based warning signal
	$\boxtimes$ Pinch points, moving parts	Work at safe distance/restrict access, ensure guards in place, heed warning signs
		☑ Implement measures necessary for adequate illumination
	☐ 'Struck-by,' 'caught between'	Control exposue to emission/discharge gases (ventilation, PPE, other means).
	□ Hot surfaces, heat	Ensure safe practices for fuels/fluids/machine-related hazardous materials
	Extension cords, flexible wire	☑ Use PPE or other safety practices for eye/hearing/hand/head/body protection
	⊠ Fuel related (gas or liquid)	Segregate combustible materials from hot surfaces/hot exhaust (minimum 3 feet)
	Hydraulic pressure	Operation/Maintenance/Repair of Equipment/Machinery (see applicable control measures above)
	Compressed air/gas	Orient/locate equipment for safe access during operation and maintenance
	□ Kinetic, stored energy	Use equipment/machinery in accordance with manufacturer's specifications
		Use safe lifting practices, minimize repetitive motion hazards
		□ Ensure point-of-operation, mechanical power transmission, other moving parts are guarded
	Emissions, discharge gases	with protective devices; do not override interlocks, guards, protective devices
	□ Working at heights, falls	Secure long hair/loose clothing/hanging jewelry near moving/rotating parts
	Lifting, repetitive motion	Ensure appropriate warning signs are in place and heeded
	Illumination	□ Use safe practices for fueling, fuel transport & storage.
	Electrical (see below)	Operate fuel-powered equipment in well ventilated location.
		$\square$ Incorporate safety provisions/safe work practices for compressed air, pressurized systems
		(pneumatic/hydraulic), stored energy
		□ Implement control-of-hazardous-energy practices (lockout/tagout), designate "authorized"
		personnel, notify "affected" personnel
		$\Box$ Protect from fall hazards (safe ladder use, personal fall protection, guardrails, other)
	ELECTRICAL HAZARDS	□ Implement provisions of # 6, "Electrical Hazards"
9. M	ANUAL MATERIAL HANDLING	5, MATERIAL STORAGE – CHECK IF NOT APPLICABLE: 🗆

# Geosyntec Consultants

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
Site-S	Specific Comments: Drum Handlin	ng and Sample Coolers
		No lie war war in the state in the state of
$\square$	LIFTING / ERGONOMIC Musculoskeletal strain,	<ul> <li>Use proper manual lifting techniques (straight back, bend at knees, firm grasp, firm footing).</li> <li>Seek assistance for lifting heavy objects (&gt;50 lbs.)</li> </ul>
	repetitive motion injury	Use mechanical lifting equipment to reduce manual material handling hazard
		Semechanical mining equipment to reduce manual material nanoing nazard
		safe practices appropriate for the specific task(s).
	STORAGE OF MATERIALS	Store materials in stable manner that prevents tipping, sliding, rolling, falling over.
		□ Materials stored in tiers to be stacked, racked, blocked, interlocked or otherwise secured to prevent
		sliding, falling or collapse
		$\Box$ Do not exceed load limits of racks, platform; ensure racks are stable, robust, secure
		$\square$ On scaffold, do not store materials in excess of supplies needed for immediate use
	See Sect. 12 for Chemical	Ensure stored materials do not block aisles, passageways
	Storage	$\Box$ For used lumber, remove nails before stacking, and stack to be stable and self supporting, no
		higher than 20 feet (or 16 feet if lumber is to be handled manually)
		□ Debris will be removed regularly from storage area and place in designated area or disposed.
		S, HEAVY EQUIPMENT, HEAVY VEHICLES – CHECK IF NOT ANTICIPATED: 🛛
Site-S	Specific Comments: DPT Drilling I	Rig
<b></b>	HEAVY EQUIPMENT;	☐ Trained/qualified persons operate all heavy equipment.
$\boxtimes$	CONSTRUCTION VEHICLES	<ul> <li>No passengers on moving/operating equipment except where passenger seat/restraint is present.</li> </ul>
	Hazards: Struck By, Run-Over,	Equipment inspected upon mobilization and daily; maintained in good repair, backup alarms
	Caught In Between (pinch points), Roll Over, Fluid Leaks	□ All leaks or defective safety equipment will be repaired before use.
	points), Roll Over, I luid Leaks	Operators required to use seatbelts.
		Eye contact with operator and use of hand signals prior to approaching near equipment.
		☑ High visibility vests are required of all personnel in work area.
		Max. safe slope for each vehicle will be followed.
		Personnel to stay clear of swing radius of equipment.
		Spill equipment available for fuel and hydraulic fluid leaks.
		Equipment locked, secured, brakes set, buckets/forks lowered, when not in use.
	CDANES	
	CRANES Overhead hazards – utility lines,	In addition to general safety practices for heavy equipment (above), as applicable:
	swing radius, falling objects,	□ A Critical Lift Plan & Checklist prepared/executed (HS 506) prior to mobilization.
	wire ropes and hoisting	□ Equipment will be inspected prior to mobilization and a Crane Pre-Operational Safety Checklist
	equipment	(see EHS 506) will be completed and signed by crane operator.
	Overbalancing – high winds, outrigger placement,	□ Crane operator will remain at the controls at all times during operation.
	overloading, safe slope	□ Crane operation must be performed under the direction of an appointed signal person at all times.
	□ Struck By, Run-Over, Caught	□ Communication between crane operator and signal person will be maintained through standard
	In Between (pinch points), Roll	hand signals or voice communication equipment. Radio equipment, if used, will be equipped with a
	Over, Fluid Leaks	dedicated channel.  Lifting or lowering will not exceed 100ft/minute. Lowering must be controlled i.e. no free fall.
		□ Stop work will be issued whenever hoisting equipment is exposed to high winds.
		□ Outriggers will be fully extended/locked with a firm footing within the maximum safe slope (<1%).
		□ Crane to be on level, stable base, dunnage used when necessary.
		□ Total weight of load not to exceed 50% of rated capacity for the crane radius and configuration.
		□ Rigging procedures – see Hoisting, Lifting, Rigging, below.
		□ Suspended personnel lifting is prohibited (unless per approved "man-lift" equipment).
		□ No personnel permitted beneath suspended loads.
<u> </u>		
	HOISTING, LIFTING, RIGGING	□ Identify, coordinate with competent person.
		□ Rigging directly to the forks of a lull, forklift, or front loader equipped forks is prohibited.
	□ Loader, excavator, etc.	<ul> <li>Do not exceed loading limits of equipment.</li> <li>A Critical Lift Checklist (see EHS 506) will be completed and signed prior to crane mobilization.</li> </ul>
	$\Box$ Mechanical, electrical hoist	□ Rigging, wire rope and hoisting equipment will be inspected and signed phor to crane mobilization.
		□ Crane hooks will be equipped with safety latches.
	FORKLIFT	In addition to general safety practices for heavy equipment (above), as applicable:
	Hazards: Struck By, Run-Over,	Qualified operater, per established forklift training (certificate is required)
	Caught In Between (pinch	□ Equipment inspected daily and documented on Forklift Preoperation Inspection Checklist
	points), Roll Over, Fluid Leaks	<ul> <li>Operators required to use seatbelts, and adhere to safe operating procedures.</li> </ul>

Page	7	of	9
------	---	----	---

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)	Page
		Do not exceed lifting load limits.	
		□ Forklift shall not be moved/driven with empty forks in raised position.	
		□ When not in use, forks lowered, brake set, controls in neutral, key removed.	
	EXCAVATION/TRENCHING	Activities under supervision/oversight of competent person	
	$\Box$ Max Depth $\geq$ 20'	<ul> <li>□ Sloping &amp; shoring for excavations ≥20' are approved by a professional engineer</li> </ul>	
	□ Max Depth $\geq$ 5'	□ Sloping & shoring for excavations $\geq$ 5' when persons are exposed to cave-in.	
	☐ Max Depth <5' with potential	□ Sloping & shoring for shallow (<5') excavations with cave-in hazard	
	cave-in hazard	□ Excavations $\geq$ 4' are classified as a non-permit confined space	
	Potential permit-required	□ Excavations $\geq$ 4' are classified as Alternate Entry or Permit-Required (see confined space)	
	confined space at depth $\ge$ 4'	□ Implement underground utility clearance procedures.	
	Underground utilities	□ Hand digging within 3' of utility locations.	
	Overhead utilities	□ Excavations to be protected by perimeter fencing (not barricade tape)	
	□ Structures/foundations	□ Use trench boxes in accordance with proper procedures.	
	Falls into excavations	□ Workers in trenches to be within 25 feet of ladder or sloped entryway.	
-			
$\boxtimes$	DRILLING	☑ Contractor inspects drill rig daily before use.	
	Struck By, Run-Over, Caught	☑ Drill rig equipped with operational emergency stop.	
	In Between (pinch points), Roll Over, Fluid Leaks	☐ Highpressure lines equipped with whip checks.	
	☐ Underground utilities,	☐ High visibility vests, hard hats are being worn near the equipment.	
	aboveground	☑ Operators and helpers will maintain a safe distance to moving parts. Individuals working near	
	⊠ Spills	moving or rotating parts will secure loose hair, clothing, and equipment.	
	See Equipment/Machinery	Drill rigs will only be moved with masts lowered. Masts will be erected with outriggers fully	
		extended when equipped with outriggers. Max. safe slope for rig will be followed, drill rig leveled, appropriate blocking/cribbing as needed	4
		Spinning parts of the rig are guarded when possible, no loose clothing being worn near the rig.	J.
		<ul> <li>☑ Spinning parts of the fig are guarded when possible, no house clothing being worn hear the fig.</li> <li>☑ Follow underground utility clearance procedures.</li> </ul>	
		<ul> <li>☑ Poliow underground utility clearance procedures.</li> <li>☑ Area is surveyed for overhead utilities, safe clearance distance maintained.</li> </ul>	
		<ul> <li>☑ Hearing protection is used when working near the rig.</li> </ul>	
		Spill equipment is available for fuel and hydraulic fluid leaks.	
	DEMOLITION	Develop/implement demolition safety plan	
	BLASTING	Develop/implement blasting safety plan	
11. C	ONFINED SPACES, HAZARD	OUS ENCLOSED or INDOOR SPACES – CHECK IF NOT APPLICABLE:	
	Specific Comments:		
	CONFINED SPACE(S)	For personnel working near confined spaces:	
	Permit required	- Confined spaces have been identified, labeled.	
	Non-permit required	<ul> <li>Communication system in place to prevent unauthorized entry.</li> </ul>	
	Potential/actual hazards:		
	Atmospheric hazards:	□ For <u>permit-required confined space entry</u> , see separate entry permit.	
	Flammable/explosive	<ul> <li>All entrants, attendants, supervisors are trained/qualified.</li> <li>Hazards properly characterized</li> </ul>	
	Oxygen deficiency	<ul> <li>Necessary equipment for safe entry utilized (access, retrieval, air monitoring)</li> </ul>	
	Hydrogen sulfide	<ul> <li>Arrangements for rescue team have been made.</li> </ul>	
	Other toxic		
	Combustible dust	□ For entry into a <u>non-permit</u> confined space, see site specific procedures delineated above in "si	ite-
	Electrical	specific comments," or see alternate/attached safety work plan.	
	Mechanical, engulfment, entrapment, stored energy		
	ENCLOSED/INDOOR	For indoor use of gasoline/propane/diesel equipment:	
	SPACE(S)	□ Duct exhaust to outdoors, and/or introduce fresh air using ventilation/blowers/fans.	
	□ Outfall, culvert	Perform air monitoring (see section on Air Monitoring)	
	□ Tunnel, shaft, gallery		
	□ Machine/equipment pit/vault	For entry into potentially hazardous indoor or enclosed spaces:	
	□ Basement/Sub-basement	□ Ventilate and/or perform air monitoring for anticipated hazards.	
	Crawl space entry	□ If space classified as confined space, follow confined space entry requirements (above).	
L	Indoor equipment/drilling		
		DDUCTS USED AT WORK SITE – CHECK IF NOT APPLICABLE:

	consultants	Pag				
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)				
$\boxtimes$	WALKING/WORKING	Keep work areas clean, orderly, dispose of trash/debris, maintain sanitary conditions.				
لالكنا	SURFACES, HOUSEKEEPING	☑ Walkways are cleared of equipment, excavated material, tools and debris, snow				
	⊠ Uneven, rough terrain, riprap	Holes, pits, openings to be covered or otherwise marked or guarded				
	<ul> <li>Slippery surfaces</li> <li>Holes, pits, openings</li> </ul>	□ Apply absorbent, salt or sand, for traction/slip resistance on slippery/icy/wet surfaces				
	$\square$ Puncture, foot hazards	Wear proper work boots/shoes with ankle support and/or traction, as appropriate for conditions				
	TEMPERATURE/WEATHER	☐ Heat/Cold stress are monitored in accordance with Geosyntec procedures EHS 124 & EHS 125				
	Heat Stress	□ Provide sufficient fluids, shade, breaks, other precautions as appropriate to adderss heat hazards.				
	⊠ Cold Stress	Provide protection from sun (sun screen, shaded brake area).				
	Severe Weather	Solution: For cold stress, wear multiple layers, protect from wind/wet, frequent break in warm location.				
	⊠ Lightning	□ In high wind, discontinue working at heights (e.g. on ladders, scaffold, aerial lift, similar).				
		☑ Use precautions for lightning, thunderstorm, hale, tornado (monitor weather, "30/30 rule," shelter)				
$\boxtimes$	BIOLOGICAL HAZARDS	☑ Utilize safety practices commensurate with risk of biting/stinging insects, wild/feral/pet animals.				
	Insects, spiders, ticks	For poisonous plants (poison ivy/oak/sumac/etc.), minimize exposed skin area, wear coveralls, use				
	Wild/feral/pet animals	barrier cream/wash (Technu products or similar), as appropriate.				
	🗆 Mold, fungi	For biological exposure hazards, use protective measures commensurate with hazard:				
	Poisonous plants	☑ Minor-moderate hazard - use ordinary hygiene practices, protective gloves, hand washing.				
	Bird Guano	□ Moderate-severe hazard - add protective clothing, respirator, decon, as appropriate.				
	□ Infectious, wastewater, sewer	□ Bloodborne pathogen (human infectious agents) - implement "Universal Precautions"				
	□ Bloodborne pathogens					
	HAZARDOUS NOISE	□ Hearing protection is used when exposed to excessive noise levels (greater than 85 dBA over an				
		8-hour work period, or intermittent)				
	OVERHEAD HAZARDS,	Wear hardhat when exposed to overhead hazards, "bump" hazards, falling objects				
	FALLING OBJECTS	□ Cordon off hazard zones, route access/egress around hazards of falling objects				
		□ Secure objects from falling				
		Provide overhead protection (canopy) to protect public pedestrians, workers				
	ILLUMINATION	□ Make site-specific arrangements for illumination of work areas and access routes.				
	Night work					
	Indoor work					
2. B	2. BOATING, WATER, WET LOCATIONS, FLOOD, ETC. – CHECK IF NOT APPLICABLE: 🖂					
Site-S	Site-Specific Comments:					
		Wear appropriate Coast Guard-approved Personal Flotation Device (PFD)				
	<ul> <li>Drowning, hypothermia</li> <li>Boat, barge, raft</li> </ul>	□ Bring emergency rescue equipment (ring buoy, reaching device, flares)				
	$\Box$ Wading, wetland, mud/silt	□ Use fuel safety practices, fire extinguisher present in boat				
	$\Box$ Dam release, flood, tide	□ See site-specific safety comments above.				
3. VI	OLENCE, PUBLIC PROTECTI	ON, WORKING ALONE – SPECIAL MEASURES – CHECK IF NOT ANTICIPATED: 🛛				
	Specific Comments:					
	PERSONAL SECURITY, HIGH	Employ standard precautions, which may include: conduct work only during daylight hours, use				
	CRIME AREA	buddy system, avoid parking in secluded location, lock vehicles, hide valuable items in vehicles				
		from plain view				
		□ See site-specific safety comments above for project-specific security measures.				
	PUBLIC AT RISK, SITE SECURITY	□ Provide safe pedestrian route around work areas, use appropriate barriers, signs, warning devices.				
		Provide covers over excavation, secure fencing, overnight protection     Provide protection from everbaged bezards (encours) where public at risk of everbaged bezards				
		<ul> <li>Provide protection from overhead hazards (canopy, etc.) where public at risk of overhead hazards</li> <li>Provide secure locked storage of hazardous chemicals, hazardous equipment, etc.</li> </ul>				
	WORKING ALONE	□ Establish "check in" procedure with supervisor or project manager (arrival, mid-day, departure)				
		Additional measures, as appropriate for the working conditions.				
4. DI	RIVING. TRAFFIC. TRANSPOR	RTATION HAZARDS – CHECK IF NOT APPLICABLE:				
	Specific Comments:					
$\boxtimes$	DRIVING HAZARDS	☑ Use routine safe/defensive driving practices (seat belts, safe speeds, eyes ahead, no tailgating,				
لا ا	Routine work travel	limit distractions, no texting, safe cell phone use, clear windows, account for weather/road				
	Unfamiliar location	conditions, adequate sleep, other measures as appropriate).				
	Unfamiliar vehicle	☐ Plan travel route before driving (assemble maps, enter destination in GPS).				
	Overnight travel, distance	□ Familiarize yourself with vehicle operational controls before operating unfamiliar vehicle.

	HAZARD	Page Page Page Page Page Page Page Page
	AERIAL LIFT	Operators are sufficiently trained, experienced and qualified.
	$\Box$ Scissor lift	<ul> <li>Equipment is inspected after mobilization and is in good condition.</li> </ul>
	Extensible boom	□ Harness & Lanyard worn whenever operating the lift (scissor lifts may be excepted)
	□ Articulated boom	<ul> <li>Overhead and surface obstructions are reviewed with operators prior to use.</li> </ul>
	☐ Vertical Lift ("Genie")	
	SCAFFOLD	Identify/coordinate operations with competent person
	Supported scaffold	□ Supported scaffold level, stable, proper attachments, tiebacks, planking,
	Suspended scaffold	□ Suspended scaffolds anchored properly
	□ Free-standing/mobile scaffold	□ Guardrails present above 10 feet or personal fall apparatus used.
		Proper means of accessing scaffold (proper ladders, stair tower).
		□ Total height of free-standing scaffold not to exceed four times the minimum base dimension.
8. TC	OOLS. EQUIPMENT. MACHINE	RY – CHECK IF NOT APPLICABLE: 🗆
	pecific Comments:	
	HAND TOOLS	☑ Use proper tool for the job, maintain tools in good condition (no damage, cutting tools sharp,
$\boxtimes$	Eye injury, puncture/bruise/	etc.) use appropriate PPE for hand/eye/body protection, plan for safe "follow through" motion, use
	laceration hazard	vise/clamp/work surface to hold/stabilize work piece
	POWER TOOLS	For all power tools:
	Eye/hand/body injury	<ul> <li>Inspect tools to ensure safe operating condition before each use.</li> </ul>
	□ Fuel-related hazards	<ul> <li>Use tool in accordance with manufacturer's specifications.</li> </ul>
	□ Inhalation hazard	- Use PPE or other safety practices, as appropriate, for eye/hearing/hand/head/body protection
		<ul> <li>Provide training or verify operator qualification for use of power tool.</li> </ul>
	□ Sparks, heat, fire hazard	- Stay clear of hazard zone, "line of fire" when working near where power tools are used.
	Electrical hazards	□ Use safety practices for refueling, fuel handling/transport/storage.
		Use respirators, ventilation, wet methods, other appropriate means to control inhalation hazard.
		□ For spark/heat generating tool, control fire hazards, segregate combustible/flammable materials.
		□ For electrical hazards, see # 6, "Electrical Hazards".
	WELDING, CUTTING	□ Hot work permit system to be implemented.
	□ Gas welding/cutting	□ Operator properly protected (eye protection, clothing, apron, etc.)
	Arc welding/cutting	□ Fire hazard controls (watcher, fire extinguisher, water, isolate combustibles)
		Protect nearby personnel from hazardous UV, IR light (shielding, curtain)
		Electrical safe work practices for arc welding
		□ Gas cylinder safe practices (secured, upright, caps on when not in use, prevent damage).
	EQUIPMENT/MACHINERY	Working Near Equipment/Machinery
	Point-of-operation hazards	□ Work at safe distance/restrict access, ensure guards in place, heed warning signs
	Pinch points, moving parts	□ Implement measures necessary for adequate illumination
	□ 'Struck-by,' 'caught between'	□ Control exposue to emission/discharge gases (ventilation, PPE, other means).
	$\Box$ Hot surfaces, heat	□ Ensure safe practices for fuels/fluids/machine-related hazardous materials
	□ Extension cords, flexible wire	□ Use PPE or other safety practices for eye/hearing/hand/head/body protection
	□ Fuel related (gas or liquid)	□ Segregate combustible materials from hot surfaces/hot exhaust (minimum 3 feet)
	□ Hydraulic pressure	□ Operation/Maintenance/Repair of Equipment/Machinery (see applicable control measures above)
	□ Compressed air/gas	
	☐ Kinetic, stored energy	<ul> <li>Orient/locate equipment for safe access during operation and maintenance</li> <li>Use equipment/machinery in accordance with manufacturer's specifications</li> </ul>
	□ Lockout/tagout	Use safe lifting practices, minimize repetitive motion hazards
	Emissions, discharge gases	□ Ensure point-of-operation, mechanical power transmission, other moving parts are guarded
		with protective devices; do not override interlocks, guards, protective devices
	□ Working at heights, falls	Secure long hair/loose clothing/hanging jewelry near moving/rotating parts
	□ Lifting, repetitive motion	□ Ensure appropriate warning signs are in place and heeded
		□ Use safe practices for fueling, fuel transport & storage.
	□ Electrical (see below)	□ Operate fuel-powered equipment in well ventilated location.
		□ Incorporate safety provisions/safe work practices for compressed air, pressurized systems
		(pneumatic/hydraulic), stored energy
		□ Implement control-of-hazardous-energy practices (lockout/tagout), designate "authorized"
		personnel, notify "affected" personnel
		□ Protect from fall hazards (safe ladder use, personal fall protection, guardrails, other)
	ELECTRICAL HAZARDS	□ Implement provisions of # 6, "Electrical Hazards"
9. M	ANUAL MATERIAL HANDLING	5, MATERIAL STORAGE – CHECK IF NOT APPLICABLE: 🗆

# Geosyntec Consultants

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
Site-S	pecific Comments:	
$\boxtimes$	LIFTING / ERGONOMIC	☑ Use proper manual lifting techniques (straight back, bend at knees, firm grasp, firm footing).
	Musculoskeletal strain, repetitive motion injury	Seek assistance for lifting heavy objects (>50 lbs.)
	repetitive motion injury	□ Use mechanical lifting equipment to reduce manual material handling hazard
		For repetitive motion activities, take breaks, switch hands, share task with others, employ other
		safe practices appropriate for the specific task(s).
	STORAGE OF MATERIALS	□ Store materials in stable manner that prevents tipping, sliding, rolling, falling over.
		□ Materials stored in tiers to be stacked, racked, blocked, interlocked or otherwise secured to prevent
		sliding, falling or collapse
		Do not exceed load limits of racks, platform; ensure racks are stable, robust, secure
		□ On scaffold, do not store materials in excess of supplies needed for immediate use
	See Sect. 12 for Chemical	Ensure stored materials do not block aisles, passageways
	Storage	□ For used lumber, remove nails before stacking, and stack to be stable and self supporting, no higher than 20 feet (or 16 feet if lumber is to be handled manually)
		Debris will be removed regularly from storage area and place in designated area or disposed.
10 0		
	pecific Comments:	S, HEAVY EQUIPMENT, HEAVY VEHICLES – CHECK IF NOT ANTICIPATED: 🛛
Sile-3	specific Comments:	
	HEAVY EQUIPMENT;	□ Trained/qualified persons operate all heavy equipment.
	CONSTRUCTION VEHICLES	<ul> <li>No passengers on moving/operating equipment except where passenger seat/restraint is present.</li> </ul>
	Hazards: Struck By, Run-Over,	□ Equipment inspected upon mobilization and daily; maintained in good repair, backup alarms
	Caught In Between (pinch points), Roll Over, Fluid Leaks	□ All leaks or defective safety equipment will be repaired before use.
	points), Roll Over, Fluid Leaks	□ Operators required to use seatbelts.
		□ Eye contact with operator and use of hand signals prior to approaching near equipment.
		□ High visibility vests are required of all personnel in work area.
		□ Max. safe slope for each vehicle will be followed.
		Personnel to stay clear of swing radius of equipment.
		□ Spill equipment available for fuel and hydraulic fluid leaks.
		□ Equipment locked, secured, brakes set, buckets/forks lowered, when not in use.
	CRANES	In addition to general safety practices for heavy equipment (above), as applicable:
	Overhead hazards – utility lines,	Only qualified persons operate cranes (certificate required).
	swing radius, falling objects, wire ropes and hoisting	□ A Critical Lift Plan & Checklist prepared/executed (HS 506) prior to mobilization.
	equipment	Equipment will be inspected prior to mobilization and a Crane Pre-Operational Safety Checklist
	$\Box$ Overbalancing – high winds,	(see EHS 506) will be completed and signed by crane operator.
	outrigger placement,	Crane operator will remain at the controls at all times during operation.
	overloading, safe slope	□ Crane operation must be performed under the direction of an appointed signal person at all times.
	□ Struck By, Run-Over, Caught	□ Communication between crane operator and signal person will be maintained through standard hand signals or voice communication equipment. Radio equipment, if used, will be equipped with a
	In Between (pinch points), Roll Over, Fluid Leaks	dedicated channel.
		□ Lifting or lowering will not exceed 100ft/minute. Lowering must be controlled i.e. no free fall.
		□ Stop work will be issued whenever hoisting equipment is exposed to high winds.
		□ Outriggers will be fully extended/locked with a firm footing within the maximum safe slope (<1%).
		□ Crane to be on level, stable base, dunnage used when necessary.
		□ Total weight of load not to exceed 50% of rated capacity for the crane radius and configuration.
		Rigging procedures – see Hoisting, Lifting, Rigging, below.
		□ Suspended personnel lifting is prohibited (unless per approved "man-lift" equipment).
		□ No personnel permitted beneath suspended loads.
		□ Identify, coordinate with competent person.
		□ Rigging directly to the forks of a lull, forklift, or front loader equipped forks is prohibited.
	□ Drill rig	Do not exceed loading limits of equipment.
	□ Loader, excavator, etc.	□ A Critical Lift Checklist (see EHS 506) will be completed and signed prior to crane mobilization.
	Mechanical, electrical hoist	□ Rigging, wire rope and hoisting equipment will be inspected and maintained on a weekly basis.
		Crane hooks will be equipped with safety latches.
	FORKLIFT	In addition to general safety practices for heavy equipment (above), as applicable:
	Hazards: Struck By, Run-Over, Caught In Between (pinch	Qualified operater, per established forklift training (certificate is required)
	points), Roll Over, Fluid Leaks	Equipment inspected daily and documented on Forklift Preoperation Inspection Checklist
1		□ Operators required to use seatbelts, and adhere to safe operating procedures.

		Pag
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
		Do not exceed lifting load limits.
		□ Forklift shall not be moved/driven with empty forks in raised position.
		□ When not in use, forks lowered, brake set, controls in neutral, key removed.
	EXCAVATION/TRENCHING	Activities under supervision/oversight of competent person
	$\Box$ Max Depth $\geq$ 20'	$\Box$ Sloping & shoring for excavations $\geq$ 20' are approved by a professional engineer
	$\Box$ Max Depth $\geq$ 5'	$\Box$ Sloping & shoring for excavations $\geq$ 5' when persons are exposed to cave-in.
	Max Depth <5' with potential	□ Sloping & shoring for shallow (<5') excavations with cave-in hazard
	cave-in hazard	$\Box$ Excavations $\geq$ 4' are classified as a non-permit confined space
	Potential permit-required	$\Box$ Excavations $\geq$ 4' are classified as Alternate Entry or Permit-Required (see confined space)
	confined space at depth $\geq$ 4'	□ Implement underground utility clearance procedures.
	Underground utilities	□ Hand digging within 3' of utility locations.
	Overhead utilities	□ Excavations to be protected by perimeter fencing (not barricade tape)
	Structures/foundations	□ Use trench boxes in accordance with proper procedures.
	Falls into excavations	□ Workers in trenches to be within 25 feet of ladder or sloped entryway.
	DRILLING	□ Contractor inspects drill rig daily before use.
	Struck By, Run-Over, Caught	□ Drill rig equipped with operational emergency stop.
	In Between (pinch points), Roll	□ Highpressure lines equipped with whip checks.
	Over, Fluid Leaks	☐ High visibility vests, hard hats are being worn near the equipment.
	□ Underground utilities,	□ Operators and helpers will maintain a safe distance to moving parts. Individuals working near
	aboveground	moving or rotating parts will secure loose hair, clothing, and equipment.
		□ Drill rigs will only be moved with masts lowered. Masts will be erected with outriggers fully
	□ See Equipment/Machinery	extended when equipped with outriggers.
		□ Max. safe slope for rig will be followed, drill rig leveled, appropriate blocking/cribbing as needed.
		□ Spinning parts of the rig are guarded when possible, no loose clothing being worn near the rig.
		□ Follow underground utility clearance procedures.
		□ Area is surveyed for overhead utilities, safe clearance distance maintained.
		□ Hearing protection is used when working near the rig.
		□ Spill equipment is available for fuel and hydraulic fluid leaks.
	DEMOLITION	Develop/implement demolition safety plan
	BLASTING	□ Develop/implement blasting safety plan
11. C	ONFINED SPACES, HAZARD	DUS ENCLOSED or INDOOR SPACES – CHECK IF NOT APPLICABLE: 🛛
Site-S	Specific Comments:	
	CONFINED SPACE(S)	□ For personnel working near confined spaces:
	Permit required	<ul> <li>Confined spaces have been identified, labeled.</li> </ul>
	Non-permit required	<ul> <li>Communication system in place to prevent unauthorized entry.</li> </ul>
	Potential/actual hazards:	
	☐ Atmospheric hazards:	□ For <u>permit-required confined space entry</u> , see separate entry permit.
	Flammable/explosive	<ul> <li>All entrants, attendants, supervisors are trained/qualified.</li> </ul>
	Oxygen deficiency	<ul> <li>Hazards properly characterized</li> <li>Necessary equipment for safe entry utilized (access, retrieval, air monitoring)</li> </ul>
	Hydrogen sulfide	<ul> <li>Arrangements for rescue team have been made.</li> </ul>
	□ Other toxic	
	Combustible dust	□ For entry into a <u>non-permit</u> confined space, see site specific procedures delineated above in "site-
		specific comments," or see alternate/attached safety work plan.
	Mechanical, engulfment,	
	entrapment, stored energy	
	ENCLOSED/INDOOR	For indoor use of gasoline/propane/diesel equipment:
	SPACE(S)	Duct exhaust to outdoors, and/or introduce fresh air using ventilation/blowers/fans.
	Outfall, culvert	□ Perform air monitoring (see section on Air Monitoring)
	Tunnel, shaft, gallery	
	□ Machine/equipment pit/vault	For entry into potentially hazardous indoor or enclosed spaces:
	□ Basement/Sub-basement	□ Ventilate and/or perform air monitoring for anticipated hazards.
	Crawl space entry	☐ If space classified as confined space, follow confined space entry requirements (above).
	□ Indoor equipment/drilling

	<ul> <li>Slippery surfaces</li> <li>Holes, pits, openings</li> </ul>	□ Apply absorbent, salt or sand, for traction/slip resistance on slippery/icy/wet surfaces
	$\square$ Puncture, foot hazards	Wear proper work boots/shoes with ankle support and/or traction, as appropriate for conditions
	TEMPERATURE/WEATHER	☐ Heat/Cold stress are monitored in accordance with Geosyntec procedures EHS 124 & EHS 125
	Heat Stress	□ Provide sufficient fluids, shade, breaks, other precautions as appropriate to adderss heat hazards.
	⊠ Cold Stress	Provide protection from sun (sun screen, shaded brake area).
	Severe Weather	Solution: For cold stress, wear multiple layers, protect from wind/wet, frequent break in warm location.
	⊠ Lightning	□ In high wind, discontinue working at heights (e.g. on ladders, scaffold, aerial lift, similar).
		☑ Use precautions for lightning, thunderstorm, hale, tornado (monitor weather, "30/30 rule," shelter)
$\boxtimes$	BIOLOGICAL HAZARDS	☑ Utilize safety practices commensurate with risk of biting/stinging insects, wild/feral/pet animals.
	Insects, spiders, ticks	For poisonous plants (poison ivy/oak/sumac/etc.), minimize exposed skin area, wear coveralls, use
	Wild/feral/pet animals	barrier cream/wash (Technu products or similar), as appropriate.
	🗆 Mold, fungi	For biological exposure hazards, use protective measures commensurate with hazard:
	Poisonous plants	☑ Minor-moderate hazard - use ordinary hygiene practices, protective gloves, hand washing.
	Bird Guano	☐ Moderate-severe hazard - add protective clothing, respirator, decon, as appropriate.
	□ Infectious, wastewater, sewer	Bloodborne pathogen (human infectious agents) - implement "Universal Precautions"
	Bloodborne pathogens	
	HAZARDOUS NOISE	□ Hearing protection is used when exposed to excessive noise levels (greater than 85 dBA over an
		8-hour work period, or intermittent)
	OVERHEAD HAZARDS,	Wear hardhat when exposed to overhead hazards, "bump" hazards, falling objects
	FALLING OBJECTS	□ Cordon off hazard zones, route access/egress around hazards of falling objects
		□ Secure objects from falling
		Provide overhead protection (canopy) to protect public pedestrians, workers
	ILLUMINATION	□ Make site-specific arrangements for illumination of work areas and access routes.
	Night work	
	Indoor work	
2. B	DATING, WATER, WET LOCA	TIONS, FLOOD, ETC. – CHECK IF NOT APPLICABLE: 🛛
Site-S	Specific Comments:	
		Wear appropriate Coast Guard-approved Personal Flotation Device (PFD)
	<ul> <li>Drowning, hypothermia</li> <li>Boat, barge, raft</li> </ul>	□ Bring emergency rescue equipment (ring buoy, reaching device, flares)
	$\Box$ Wading, wetland, mud/silt	□ Use fuel safety practices, fire extinguisher present in boat
	$\Box$ Dam release, flood, tide	□ See site-specific safety comments above.
3. VI	OLENCE, PUBLIC PROTECTION	ON, WORKING ALONE – SPECIAL MEASURES – CHECK IF NOT ANTICIPATED: 🗆
	specific Comments:	
	-	
	PERSONAL SECURITY, HIGH	Employ standard precautions, which may include: conduct work only during daylight hours, use
	CRIME AREA	buddy system, avoid parking in secluded location, lock vehicles, hide valuable items in vehicles
		from plain view
		□ See site-specific safety comments above for project-specific security measures.
	PUBLIC AT RISK, SITE SECURITY	□ Provide safe pedestrian route around work areas, use appropriate barriers, signs, warning devices.
		Provide covers over excavation, secure fencing, overnight protection     Revide protection from everbaged bazarda (appendicts) where public at risk of everbaged bazarda
		<ul> <li>Provide protection from overhead hazards (canopy, etc.) where public at risk of overhead hazards</li> <li>Provide secure locked storage of hazardous chemicals, hazardous equipment, etc.</li> </ul>
	WORKING ALONE	Establish "check in" procedure with supervisor or project manager (arrival, mid-day, departure)
$\boxtimes$	WORKING ALONE	Additional measures, as appropriate for the working conditions.
4. DI	RIVING, TRAFFIC, TRANSPOR	TATION HAZARDS – CHECK IF NOT APPLICABLE:
	specific Comments:	
$\boxtimes$	DRIVING HAZARDS	☑ Use routine safe/defensive driving practices (seat belts, safe speeds, eyes ahead, no tailgating,
لات	Routine work travel	limit distractions, no texting, safe cell phone use, clear windows, account for weather/road conditions, adequate sleep, other measures as appropriate).
	Unfamiliar location	
	Unfamiliar vehicle	☑ Plan travel route before driving (assemble maps, enter destination in GPS).
1	Overnight travel, distance	□ Familiarize yourself with vehicle operational controls before operating unfamiliar vehicle.

	consultants		Page	
	HAZARD	HAZARD CONTROLS (check all that apply and o	comment as required)	
$\boxtimes$	WORKERS EXPOSED TO	Workers to wear reflective vests where exposed	to traffic hazards.	
	TRAFFIC HAZARDS	☑ Where possible, park vehicles as protective shie	ld from oncoming traffic.

	HAZARD	Pa HAZARD CONTROLS (check all that apply and comment as required)
	AERIAL LIFT	Operators are sufficiently trained, experienced and qualified.
	Scissor lift	<ul> <li>Equipment is inspected after mobilization and is in good condition.</li> </ul>
	Extensible boom	□ Harness & Lanyard worn whenever operating the lift (scissor lifts may be excepted)
	□ Articulated boom	<ul> <li>Overhead and surface obstructions are reviewed with operators prior to use.</li> </ul>
	_	
	└ Vertical Lift ("Genie")	
	SCAFFOLD	Identify/coordinate operations with competent person
	Supported scaffold	Supported scaffold level, stable, proper attachments, tiebacks, planking,
	Suspended scaffold	Suspended scaffolds anchored properly
	Free-standing/mobile scaffold	□ Guardrails present above 10 feet or personal fall apparatus used.
		Proper means of accessing scaffold (proper ladders, stair tower).
		□ Total height of free-standing scaffold not to exceed four times the minimum base dimension.
8 T(	OOLS FOUIPMENT MACHINE	RY – CHECK IF NOT APPLICABLE:
	pecific Comments: May use hand	
One-o	specific comments. May use hand	
	HAND TOOLS	☑ Use proper tool for the job, maintain tools in good condition (no damage, cutting tools sharp,
$\boxtimes$	Eye injury, puncture/bruise/	etc.) use appropriate PPE for hand/eye/body protection, plan for safe "follow through" motion, use
	laceration hazard	vise/clamp/work surface to hold/stabilize work piece
	POWER TOOLS	□ For all power tools:
	Eye/hand/body injury	<ul> <li>Inspect tools to ensure safe operating condition before each use.</li> <li>Use tool in accordance with manufacturer's specifications.</li> </ul>
	Fuel-related hazards	<ul> <li>Use PPE or other safety practices, as appropriate, for eye/hearing/hand/head/body protection</li> </ul>
	Inhalation hazard	<ul> <li>Provide training or verify operator qualification for use of power tool.</li> </ul>
	□ Noise	<ul> <li>Stay clear of hazard zone, "line of fire" when working near where power tools are used.</li> </ul>
	Sparks, heat, fire hazard	Use safety practices for refueling, fuel handling/transport/storage.
	Electrical hazards	□ Use respirators, ventilation, wet methods, other appropriate means to control inhalation hazard.
		□ For spark/heat generating tool, control fire hazards, segregate combustible/flammable materials.
		□ For electrical hazards, see # 6, "Electrical Hazards".
	WELDING, CUTTING	□ Hot work permit system to be implemented.
	Gas welding/cutting	□ Operator properly protected (eye protection, clothing, apron, etc.)
	□ Arc welding/cutting	□ Fire hazard controls (watcher, fire extinguisher, water, isolate combustibles)
		Protect nearby personnel from hazardous UV, IR light (shielding, curtain)
		Electrical safe work practices for arc welding
		$\Box$ Gas cylinder safe practices (secured, upright, caps on when not in use, prevent damage).
	EQUIPMENT/MACHINERY	Working Near Equipment/Machinery
	Point-of-operation hazards	Work at safe distance/restrict access, ensure guards in place, heed warning signs
	Pinch points, moving parts	□ Implement measures necessary for adequate illumination
	'Struck-by,' 'caught between'	□ Control exposue to emission/discharge gases (ventilation, PPE, other means).
	□ Hot surfaces, heat	□ Ensure safe practices for fuels/fluids/machine-related hazardous materials
	Extension cords, flexible wire	□ Use PPE or other safety practices for eye/hearing/hand/head/body protection
	□ Fuel related (gas or liquid)	□ Segregate combustible materials from hot surfaces/hot exhaust (minimum 3 feet)
	□ Hydraulic pressure	□ Operation/Maintenance/Repair of Equipment/Machinery (see applicable control measures above)
	□ Compressed air/gas	
		Orient/locate equipment for safe access during operation and maintenance
	□ Kinetic, stored energy	□ Use equipment/machinery in accordance with manufacturer's specifications
		Use safe lifting practices, minimize repetitive motion hazards
	□ Lockout/tagout	$\square$ Ensure point-of-operation, mechanical power transmission, other moving parts are guarded
	Emissions, discharge gases	with protective devices; do not override interlocks, guards, protective devices
	Working at heights, falls	Secure long hair/loose clothing/hanging jewelry near moving/rotating parts
	Lifting, repetitive motion	Ensure appropriate warning signs are in place and heeded
	Illumination	Use safe practices for fueling, fuel transport & storage.
	Electrical (see below)	Operate fuel-powered equipment in well ventilated location.
		Incorporate safety provisions/safe work practices for compressed air, pressurized systems
		(pneumatic/hydraulic), stored energy
		□ Implement control-of-hazardous-energy practices (lockout/tagout), designate "authorized"
		personnel, notify "affected" personnel
		□ Protect from fall hazards (safe ladder use, personal fall protection, guardrails, other)
	ELECTRICAL HAZARDS	□ Implement provisions of # 6, "Electrical Hazards"
$\Box$		
0 14		
9. IVI	ANUAL INA I ERIAL HANULING	G, MATERIAL STORAGE – CHECK IF NOT APPLICABLE: 🛛

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
Site-S	pecific Comments:	
	LIFTING / ERGONOMIC	□ Use proper manual lifting techniques (straight back, bend at knees, firm grasp, firm footing).
	Musculoskeletal strain,	Seek assistance for lifting heavy objects (>50 lbs.)
	repetitive motion injury	Use mechanical lifting equipment to reduce manual material handling hazard
		□ For repetitive motion activities, take breaks, switch hands, share task with others, employ other
		safe practices appropriate for the specific task(s).
	STORAGE OF MATERIALS	□ Store materials in stable manner that prevents tipping, sliding, rolling, falling over.
		☐ Materials stored in tiers to be stacked, racked, blocked, interlocked or otherwise secured to prevent
		sliding, falling or collapse
		□ Do not exceed load limits of racks, platform; ensure racks are stable, robust, secure
		□ On scaffold, do not store materials in excess of supplies needed for immediate use
	See Sect. 12 for Chemical	Ensure stored materials do not block aisles, passageways
	Storage	□ For used lumber, remove nails before stacking, and stack to be stable and self supporting, no
		higher than 20 feet (or 16 feet if lumber is to be handled manually)
		□ Debris will be removed regularly from storage area and place in designated area or disposed.
10. 0	CONSTRUCTION OPERATION	S, HEAVY EQUIPMENT, HEAVY VEHICLES – CHECK IF NOT ANTICIPATED: 🛛
Site-S	pecific Comments:	
	HEAVY EQUIPMENT;	Trained/qualified persons operate all heavy equipment.
	CONSTRUCTION VEHICLES	□ No passengers on moving/operating equipment except where passenger seat/restraint is present.
	Hazards: Struck By, Run-Over,	Equipment inspected upon mobilization and daily; maintained in good repair, backup alarms
	Caught In Between (pinch points), Roll Over, Fluid Leaks	□ All leaks or defective safety equipment will be repaired before use.
	points), Roll Over, I luid Leaks	Operators required to use seatbelts.
		Eye contact with operator and use of hand signals prior to approaching near equipment.
		□ High visibility vests are required of all personnel in work area.
		□ Max. safe slope for each vehicle will be followed.
		·
		Personnel to stay clear of swing radius of equipment.     Still environment exclusion for further distribute field to be the set of the se
		□ Spill equipment available for fuel and hydraulic fluid leaks.
		□ Equipment locked, secured, brakes set, buckets/forks lowered, when not in use.
	CRANES	In addition to general safety practices for heavy equipment (above), as applicable:
	Overhead hazards – utility lines, swing radius, falling objects,	□ Only qualified persons operate cranes (certificate required).
	wire ropes and hoisting	□ A Critical Lift Plan & Checklist prepared/executed (HS 506) prior to mobilization.
	equipment	Equipment will be inspected prior to mobilization and a Crane Pre-Operational Safety Checklist
	$\Box$ Overbalancing – high winds,	(see EHS 506) will be completed and signed by crane operator.
	outrigger placement,	□ Crane operator will remain at the controls at all times during operation.
	overloading, safe slope	□ Crane operation must be performed under the direction of an appointed signal person at all times.
	Struck By, Run-Over, Caught	Communication between crane operator and signal person will be maintained through standard
	In Between (pinch points), Roll	hand signals or voice communication equipment. Radio equipment, if used, will be equipped with a
	Over, Fluid Leaks	dedicated channel.
		□ Lifting or lowering will not exceed 100ft/minute. Lowering must be controlled i.e. no free fall.
		□ Stop work will be issued whenever hoisting equipment is exposed to high winds.
		□ Outriggers will be fully extended/locked with a firm footing within the maximum safe slope (<1%).
		□ Crane to be on level, stable base, dunnage used when necessary.
		□ Total weight of load not to exceed 50% of rated capacity for the crane radius and configuration.
		Rigging procedures – see Hoisting, Lifting, Rigging, below.
		□ Suspended personnel lifting is prohibited (unless per approved "man-lift" equipment).
		No personnel permitted beneath suspended loads.
	HOISTING, LIFTING, RIGGING	□ Identify, coordinate with competent person.
	Crane	□ Rigging directly to the forks of a lull, forklift, or front loader equipped forks is prohibited.
	🗆 Drill rig	□ Do not exceed loading limits of equipment.
	Loader, excavator, etc.	□ A Critical Lift Checklist (see EHS 506) will be completed and signed prior to crane mobilization.
	Mechanical, electrical hoist	□ Rigging, wire rope and hoisting equipment will be inspected and maintained on a weekly basis.
		□ Crane hooks will be equipped with safety latches.
	FORKLIFT	In addition to general safety practices for heavy equipment (above), as applicable:
	Hazards: Struck By, Run-Over,	Qualified operater, per established forklift training (certificate is required)
	Caught In Between (pinch	Qualified operater, per established forklift training (certificate is required)     Equipment inspected daily and documented on Forklift Preoperation Inspection Checklist
	points), Roll Over, Fluid Leaks	
1		Operators required to use seatbelts, and adhere to safe operating procedures.

`	consultants	Page
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
		□ Do not exceed lifting load limits.
		□ Forklift shall not be moved/driven with empty forks in raised position.
		□ When not in use, forks lowered, brake set, controls in neutral, key removed.
	EXCAVATION/TRENCHING	□ Activities under supervision/oversight of competent person
	$\Box$ Max Depth $\geq$ 20'	□ Sloping & shoring for excavations ≥20' are approved by a professional engineer
	☐ Max Depth ≥ 5'	$\Box$ Sloping & shoring for excavations $\geq$ 5' when persons are exposed to cave-in.
	☐ Max Depth <5' with potential	□ Sloping & shoring for shallow (<5') excavations with cave-in hazard
	cave-in hazard	$\Box$ Excavations $\geq$ 4' are classified as a non-permit confined space
	Potential permit-required	$\Box$ Excavations $\geq$ 4' are classified as Alternate Entry or Permit-Required (see confined space)
	confined space at depth $\ge$ 4'	□ Implement underground utility clearance procedures.
	Underground utilities	□ Hand digging within 3' of utility locations.
	Overhead utilities	<ul> <li>Excavations to be protected by perimeter fencing (not barricade tape)</li> </ul>
	Structures/foundations	□ Use trench boxes in accordance with proper procedures.
	Falls into excavations	□ Workers in trenches to be within 25 feet of ladder or sloped entryway.
		workers in trenches to be within 23 feet of ladder of sloped entryway.
	DRILLING	Contractor inspects drill rig daily before use.
	□ Struck By, Run-Over, Caught	□ Drill rig equipped with operational emergency stop.
	In Between (pinch points), Roll	☐ Highpressure lines equipped with whip checks.
	Over, Fluid Leaks	☐ High visibility vests, hard hats are being worn near the equipment.
	Underground utilities,	□ Operators and helpers will maintain a safe distance to moving parts. Individuals working near
	aboveground	moving or rotating parts will secure loose hair, clothing, and equipment.
		□ Drill rigs will only be moved with masts lowered. Masts will be erected with outriggers fully
	□ See Equipment/Machinery	extended when equipped with outriggers.
		□ Max. safe slope for rig will be followed, drill rig leveled, appropriate blocking/cribbing as needed.
		□ Spinning parts of the rig are guarded when possible, no loose clothing being worn near the rig.
		□ Follow underground utility clearance procedures.
		□ Area is surveyed for overhead utilities, safe clearance distance maintained.
		□ Hearing protection is used when working near the rig.
		□ Spill equipment is available for fuel and hydraulic fluid leaks.
	DEMOLITION	Develop/implement demolition safety plan
	BLASTING	Develop/implement blasting safety plan
11. C	ONFINED SPACES, HAZARDO	OUS ENCLOSED or INDOOR SPACES – CHECK IF NOT APPLICABLE:
Site-S	specific Comments:	
	-	
	CONFINED SPACE(S)	□ For personnel working near confined spaces:
	Permit required	<ul> <li>Confined spaces have been identified, labeled.</li> </ul>
	Non-permit required	<ul> <li>Communication system in place to prevent unauthorized entry.</li> </ul>
	Potential/actual hazards:	
	Atmospheric hazards:	□ For permit-required confined space entry, see separate entry permit.
	Flammable/explosive	<ul> <li>All entrants, attendants, supervisors are trained/qualified.</li> </ul>
	Oxygen deficiency	<ul> <li>Hazards properly characterized</li> <li>Necessary equipment for sofe ontry utilized (secose retrievel, sizmonitoring)</li> </ul>
	□ Hydrogen sulfide	<ul> <li>Necessary equipment for safe entry utilized (access, retrieval, air monitoring)</li> <li>Arrangements for rescue team have been made.</li> </ul>
	□ Other toxic	
	$\Box$ Combustible dust	□ For entry into a <u>non-permit</u> confined space, see site specific procedures delineated above in "site-
		specific comments," or see alternate/attached safety work plan.
	☐ Mechanical, engulfment,	
	entrapment, stored energy	
	ENCLOSED/INDOOR	For indoor use of gasoline/propane/diesel equipment:
	SPACE(S)	Duct exhaust to outdoors, and/or introduce fresh air using ventilation/blowers/fans.
	Outfall, culvert	□ Perform air monitoring (see section on Air Monitoring)
	Tunnel, shaft, gallery	
	□ Machine/equipment pit/vault	For entry into potentially hazardous indoor or enclosed spaces:
	□ Basement/Sub-basement	□ Ventilate and/or perform air monitoring for anticipated hazards.
	□ Crawl space entry	☐ If space classified as confined space, follow confined space entry requirements (above).
	□ Indoor equipment/drilling

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
1. PI	REMISES/ENVIRONMENTAL H	IAZARDS
Site-S	Specific Comments:	
	LOCATION HAZARDS  Outdoor field work  Urban, suburban  Rural, remote location  Indoor field work  Operating facility Vacant facility Water hazards	<ul> <li>Use routine safety precautions commensurate with routine work environment conditions</li> <li>For non-routine, unique, or severe location hazards, see site-specific safety comments above.</li> <li>For water-related work, see #2, "Water Hazards"</li> <li>For worksite violence/security risks, see #3, "Violence, Security, Working Alone"</li> <li>For transportation related hazards, see #5, "Worksite Traffic, Vehicle, Transportation Hazards"</li> <li>For utility-related hazards, see # 6, "Utility-Related Hazards</li> <li>For atmospheric hazards in enclosed, indoor, or confined spaces, see # 11 "Confined Spaces or Hazardous Enclosed/Indoor Spaces"</li> </ul>

Page 2 of 9

	consultants	Pag
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
$\boxtimes$	WALKING/WORKING	Keep work areas clean, orderly, dispose of trash/debris, maintain sanitary conditions.
لالكنا	SURFACES, HOUSEKEEPING	☑ Walkways are cleared of equipment, excavated material, tools and debris, snow
	<ul> <li>☑ Uneven, rough terrain, riprap</li> <li>☑ Slippery surfaces</li> </ul>	Holes, pits, openings to be covered or otherwise marked or guarded
	□ Holes, pits, openings	□ Apply absorbent, salt or sand, for traction/slip resistance on slippery/icy/wet surfaces
	$\square$ Puncture, foot hazards	Wear proper work boots/shoes with ankle support and/or traction, as appropriate for conditions
	TEMPERATURE/WEATHER	☑ Heat/Cold stress are monitored in accordance with Geosyntec procedures EHS 124 & EHS 125
	Heat Stress	□ Provide sufficient fluids, shade, breaks, other precautions as appropriate to adderss heat hazards.
	⊠ Cold Stress	Provide protection from sun (sun screen, shaded brake area).
	Severe Weather	☑ For cold stress, wear multiple layers, protect from wind/wet, frequent break in warm location.
	🖂 Lightning	□ In high wind, discontinue working at heights (e.g. on ladders, scaffold, aerial lift, similar).
		☑ Use precautions for lightning, thunderstorm, hale, tornado (monitor weather, "30/30 rule," shelter)
$\boxtimes$	BIOLOGICAL HAZARDS	Utilize safety practices commensurate with risk of biting/stinging insects, wild/feral/pet animals.
	⊠ Insects, spiders, ticks	For poisonous plants (poison ivy/oak/sumac/etc.), minimize exposed skin area, wear coveralls, use barrier cream/wash (Technu products or similar), as appropriate.
	□ Wild/feral/pet animals	barner creath/wash (rectific products of similar), as appropriate.
	🗆 Mold, fungi	For biological exposure hazards, use protective measures commensurate with hazard:
	Poisonous plants	Minor-moderate hazard - use ordinary hygiene practices, protective gloves, hand washing.
	Bird Guano	□ Moderate-severe hazard - add protective clothing, respirator, decon, as appropriate.
	□ Infectious, wastewater, sewer	□ Bloodborne pathogen (human infectious agents) - implement "Universal Precautions"
	Bloodborne pathogens	
	HAZARDOUS NOISE	□ Hearing protection is used when exposed to excessive noise levels (greater than 85 dBA over an
		8-hour work period, or intermittent)
	OVERHEAD HAZARDS, FALLING OBJECTS	□ Wear hardhat when exposed to overhead hazards, "bump" hazards, falling objects
	TALLING OBJECTS	□ Cordon off hazard zones, route access/egress around hazards of falling objects
		□ Secure objects from falling
		□ Provide overhead protection (canopy) to protect public pedestrians, workers
	ILLUMINATION	□ Make site-specific arrangements for illumination of work areas and access routes.
	□ Night work	
		TIONS, FLOOD, ETC. – CHECK IF NOT APPLICABLE: 🛛
Site-S	Specific Comments:	
	WATER HAZARDS	Wear appropriate Coast Guard-approved Personal Flotation Device (PFD)
	□ Drowning, hypothermia	□ Bring emergency rescue equipment (ring buoy, reaching device, flares)
	□ Boat, barge, raft	□ Use fuel safety practices, fire extinguisher present in boat
	□ Wading, wetland, mud/silt	□ See site-specific safety comments above.
	Dam release, flood, tide	
	Diving	
	-	ON, WORKING ALONE – SPECIAL MEASURES – CHECK IF NOT ANTICIPATED: 🗆
Site-S	Specific Comments:	
	PERSONAL SECURITY, HIGH	🗖 🗖 Englanden der der eine Afrikansen der besterne instrumter ander der der der der die bekennen einer
	CRIME AREA	Employ standard precautions, which may include: conduct work only during daylight hours, use buddy system, avoid parking in secluded location, lock vehicles, hide valuable items in vehicles
		from plain view
		See site-specific safety comments above for project-specific security measures.
	PUBLIC AT RISK, SITE	□ Provide safe pedestrian route around work areas, use appropriate barriers, signs, warning devices.
	SECURITY	Provide covers over excavation, secure fencing, overnight protection
		□ Provide protection from overhead hazards (canopy, etc.) where public at risk of overhead hazards
		□ Provide secure locked storage of hazardous chemicals, hazardous equipment, etc.
$\boxtimes$	WORKING ALONE	Establish "check in" procedure with supervisor or project manager (arrival, mid-day, departure)
		Additional measures, as appropriate for the working conditions.
		RTATION HAZARDS – CHECK IF NOT APPLICABLE:
Site-S	Specific Comments:	
	DRIVING HAZARDS	☑ Use routine safe/defensive driving practices (seat belts, safe speeds, eyes ahead, no tailgating,
$\square$	☑ Routine work travel	limit distractions, no texting, safe cell phone use, clear windows, account for weather/road
	Unfamiliar location	conditions, adequate sleep, other measures as appropriate).
	Unfamiliar vehicle	☑ Plan travel route before driving (assemble maps, enter destination in GPS).
		□ Familiarize yourself with vehicle operational controls before operating unfamiliar vehicle.

	consultants		Pag	
	HAZARD	HAZARD CONTROLS (check all that apply and o	comment as required)	
$\boxtimes$	WORKERS EXPOSED TO	☑ Workers to wear reflective vests where exposed	to traffic hazards.	
<u>1 - 1</u>	TRAFFIC HAZARDS	☑ Where possible, park vehicles as protective shields	ld from oncoming traffic.	
	☑ In/near public or private	Configure work area and support vehicles to mir	nimize worker exposure to traffic hazards.	
	roadway	DOT signal devices will be used to re-route vehi	cles around work area, site entrances/exits.	
	Parking lot, driveway	□ Flaggers will be used and have DOT Flagger Training; police detail where appropriate or required		
	□ Worksite, construction site	☑ Park vehicles in secure location away from heavy equipment use or other site operations.		
	traffic	Mark temporary roadways clearly, provide berms	s/stop logs where needed.	
	RAILROAD/AIRPORT HAZARD	Coordinate with rail company/airport and implem	nent required safety measures	
		□ Site workers to receive safety training for railroad		
	OFF-ROAD DRIVING, USE OF	$\boxtimes$ For off road driving, do not exceed capability of v	-	
$\boxtimes$	ALL-TERRAIN VEHICLE	□ Follow ATV specific procedures for training, safe		
	TRANSPORTING MATERIALS,			
	TOWING/HAULING LOADS	□ Ensure load is firmly secured (rope, straps, load		
		□ For trailer use, verify signal/braking lights operat	ional, rear-view mirrors effective, nitch/safety	
		chains secure.		
		or underground/overhead work) – CHECK IF N	OT APPLICABLE: 🛛	
Site-S	Specific Comments:			
	T			
	OVERHEAD UTILITIES	Maintain proper clearance, employ other approp	riate precautions for the conditions.	
	UNDERGROUND UTILITIES		e procedures have been completed prior to ground	
		penetrations, and employ other utility clearance	locator practices, as appropriate for conditions.	
6. EL	ECTRICAL HAZARDS - CHEC	CK IF NOT APPLICABLE: 🛛		
Site-S	Specific Comments:			
	WORKERS EXPOSED TO:	Implement electrical safe work practices comme	nsurate with the work to be performed, pertaining	
	□ Voltage < 50 v	to the following (as applicable):		
	□ Voltage 50-600v	<ul> <li>Worker training/qualification</li> </ul>		
	□ Voltage > 600v	<ul> <li>Electrical equipment and hazards, safe d</li> </ul>	esign features	
	□ AC □ DC □ 3-phase	<ul> <li>Electrical safe work practices</li> </ul>		
	□ Battery and/or solar power	<ul> <li>Grounding, use of GFCIs</li> <li>Electrical equipment installation, operation</li> </ul>	n maintananca ranair	
	□ Capacitor/Transformer	<ul> <li>Arc flash protection</li> </ul>	ni, maintenance, repair	
		<ul> <li>Electrical equipment diagnostics</li> </ul>		
	BASIC ELECTRICAL	Control water-related hazards, in a manner appr	opriate for the job tasks/equipment/tool.	
	HAZARDS	□ Use extension cords/power cords properly, prev		
	Equipment/tool use/operation	□ Inspect tool/equipment/extension cords/power c		
	□ Use of extension cords	□ Use GFCI-protected outlet or portable GFCI in w		
		□ Ensure live parts are guarded, enclosures secur		
			e.	
-		□ Enclosures, circuits properly labeled.		
	LOCKOUT/TAGOUT OF ELECTRICAL ENERGY		s (lockout/tagout), provide lockout/tagout locks and	
		devices, training workers, designate "authorized" po	ersonnei, notity affected personnei	
	ALL HAZARDS – CHECK IF NO	DT ANTICIPATED: 🛛		
Site-S	Specific Comments:			
	WORKING AT HEIGHTS	Ensure guardrails present	Use fall protection net	
	Roof, skylight	Use personal fall apparatus (PFA)	□ Restrict access beneath work to protect other	
	Elevated platform	Use tether or positioning device	site personnel from overhead hazards	
	□ Holes, side opening	□ Restrict access to hazard (barriers, tape, sign)	□ Install caps on protruding rebar	
	□ Retaining wall, cliff, ledge	$\Box$ Ensure covers in place over holes		
	$\Box$ Trench, excavation	□ Watch person		
	Protruding rebar			
	-		l der voo	
	LADDERS / STAIRS	Provide instruction/review pertaining to safe lad		
	Extension ladders	□ Extension ladders are properly footed, secured,		
	□ Step ladders	□ Stepladders are set on level ground or properly		
	Fixed ladders	□ Stairs have proper rise over run and stairs >4 si	teps or 4' have guardrails.	
	□ Stairs	□ Never use a step ladder as a straight ladder. All		
1	1	past leading edge. Never use metal ladders while	working with electricity	

Page	<b>5</b> (	of 9
------	------------	------

	consultants	Pag
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
	AERIAL LIFT	Operators are sufficiently trained, experienced and qualified.
	□ Scissor lift	Equipment is inspected after mobilization and is in good condition.
	Extensible boom	□ Harness & Lanyard worn whenever operating the lift (scissor lifts may be excepted)
	Articulated boom	Overhead and surface obstructions are reviewed with operators prior to use.
	Vertical Lift ("Genie")	
	SCAFFOLD	□ Identify/coordinate operations with competent person
	Supported scaffold	□ Supported scaffold level, stable, proper attachments, tiebacks, planking,
	Suspended scaffold	□ Suspended scaffolds anchored properly
	□ Free-standing/mobile scaffold	□ Guardrails present above 10 feet or personal fall apparatus used.
		Proper means of accessing scaffold (proper ladders, stair tower).
		□ Total height of free-standing scaffold not to exceed four times the minimum base dimension.
8. TC	OOLS, EQUIPMENT, MACHINE	RY – CHECK IF NOT APPLICABLE: ⊠
	pecific Comments:	
	-	
$\boxtimes$	HAND TOOLS	☑ Use proper tool for the job, maintain tools in good condition (no damage, cutting tools sharp,
	Eye injury, puncture/bruise/	etc.) use appropriate PPE for hand/eye/body protection, plan for safe "follow through" motion, use
	laceration hazard	vise/clamp/work surface to hold/stabilize work piece
	POWER TOOLS	□ For all power tools:
	Eye/hand/body injury	<ul> <li>Inspect tools to ensure safe operating condition before each use.</li> </ul>
	Fuel-related hazards	<ul> <li>Use tool in accordance with manufacturer's specifications.</li> <li>Use DPE or other active protional as appropriate for ava/bacring/bacr/bacr/bacr/bacr/bacr/bacr/bacr/bacr</li></ul>
	Inhalation hazard	<ul> <li>Use PPE or other safety practices, as appropriate, for eye/hearing/hand/head/body protection</li> <li>Provide training or verify operator gualification for use of power tool.</li> </ul>
	□ Noise	<ul> <li>Stay clear of hazard zone, "line of fire" when working near where power tools are used.</li> </ul>
	$\Box$ Sparks, heat, fire hazard	□ Use safety practices for refueling, fuel handling/transport/storage.
	Electrical hazards	Use respirators, ventilation, wet methods, other appropriate means to control inhalation hazard.
		□ For spark/heat generating tool, control fire hazards, segregate combustible/flammable materials.
		□ For electrical hazards, see # 6, "Electrical Hazards".
	WELDING, CUTTING	□ Hot work permit system to be implemented.
	□ Gas welding/cutting	Operator properly protected (eye protection, clothing, apron, etc.)
	□ Arc welding/cutting	□ Fire hazard controls (watcher, fire extinguisher, water, isolate combustibles)
	0 0	□ Protect nearby personnel from hazardous UV, IR light (shielding, curtain)
		□ Electrical safe work practices for arc welding
		Gas cylinder safe practices (secured, upright, caps on when not in use, prevent damage).
	EQUIPMENT/MACHINERY	Working Near Equipment/Machinery
	Point-of-operation hazards	□ Work at safe distance/restrict access, ensure guards in place, heed warning signs
	Pinch points, moving parts	□ Implement measures necessary for adequate illumination
	□ 'Struck-by,' 'caught between'	Control exposue to emission/discharge gases (ventilation, PPE, other means).
	□ Hot surfaces, heat	□ Ensure safe practices for fuels/fluids/machine-related hazardous materials
	Extension cords, flexible wire	□ Use PPE or other safety practices for eye/hearing/hand/head/body protection
	Fuel related (gas or liquid)	□ Segregate combustible materials from hot surfaces/hot exhaust (minimum 3 feet)
	□ Hydraulic pressure	Operation/Maintenance/Repair of Equipment/Machinery (see applicable control measures above)
	Compressed air/gas	□ Orient/locate equipment for safe access during operation and maintenance
	□ Kinetic, stored energy	Use equipment/machinery in accordance with manufacturer's specifications
	Noise	□ Use safe lifting practices, minimize repetitive motion hazards
	Lockout/tagout	Ensure point-of-operation, mechanical power transmission, other moving parts are guarded
	Emissions, discharge gases	with protective devices; do not override interlocks, guards, protective devices
	$\Box$ Working at heights, falls	Secure long hair/loose clothing/hanging jewelry near moving/rotating parts
	Lifting, repetitive motion	Ensure appropriate warning signs are in place and heeded
	Illumination	Use safe practices for fueling, fuel transport & storage.
	$\Box$ Electrical (see below)	Operate fuel-powered equipment in well ventilated location.
		$\square$ Incorporate safety provisions/safe work practices for compressed air, pressurized systems
		(pneumatic/hydraulic), stored energy
		Implement control-of-hazardous-energy practices (lockout/tagout), designate "authorized"
		personnel, notify "affected" personnel
		$\Box$ Protect from fall hazards (safe ladder use, personal fall protection, guardrails, other)
	ELECTRICAL HAZARDS	□ Implement provisions of # 6, "Electrical Hazards"
9. M	ANUAL MATERIAL HANDLING	5, MATERIAL STORAGE – CHECK IF NOT APPLICABLE: 🛛

### Geosyntec[▷] consultants

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
Site-S	pecific Comments: Cooler Lifting	1
	LIFTING / ERGONOMIC Musculoskeletal strain, repetitive motion injury	<ul> <li>Use proper manual lifting techniques (straight back, bend at knees, firm grasp, firm footing).</li> <li>Seek assistance for lifting heavy objects (&gt;50 lbs.)</li> <li>Use mechanical lifting equipment to reduce manual material handling hazard</li> <li>For repetitive motion activities, take breaks, switch hands, share task with others, employ other</li> </ul>
	STORAGE OF MATERIALS	<ul> <li>safe practices appropriate for the specific task(s).</li> <li>Store materials in stable manner that prevents tipping, sliding, rolling, falling over.</li> <li>Materials stored in tiers to be stacked, racked, blocked, interlocked or otherwise secured to prevent sliding, falling or collapse</li> <li>Do not exceed load limits of racks, platform; ensure racks are stable, robust, secure</li> </ul>
	See Sect. 12 for Chemical Storage	<ul> <li>On scaffold, do not store materials in excess of supplies needed for immediate use</li> <li>Ensure stored materials do not block aisles, passageways</li> <li>For used lumber, remove nails before stacking, and stack to be stable and self supporting, no higher than 20 feet (or 16 feet if lumber is to be handled manually)</li> <li>Debris will be removed regularly from storage area and place in designated area or disposed.</li> </ul>
10. C	ONSTRUCTION OPERATION	S, HEAVY EQUIPMENT, HEAVY VEHICLES – CHECK IF NOT ANTICIPATED: 🖂
Site-S	pecific Comments:	
	HEAVY EQUIPMENT; CONSTRUCTION VEHICLES Hazards: Struck By, Run-Over, Caught In Between (pinch points), Roll Over, Fluid Leaks	<ul> <li>Trained/qualified persons operate all heavy equipment.</li> <li>No passengers on moving/operating equipment except where passenger seat/restraint is present.</li> <li>Equipment inspected upon mobilization and daily; maintained in good repair, backup alarms</li> <li>All leaks or defective safety equipment will be repaired before use.</li> <li>Operators required to use seatbelts.</li> <li>Eye contact with operator and use of hand signals prior to approaching near equipment.</li> <li>High visibility vests are required of all personnel in work area.</li> <li>Max. safe slope for each vehicle will be followed.</li> <li>Personnel to stay clear of swing radius of equipment.</li> <li>Spill equipment available for fuel and hydraulic fluid leaks.</li> <li>Equipment locked, secured, brakes set, buckets/forks lowered, when not in use.</li> </ul>
	CRANES Overhead hazards – utility lines, swing radius, falling objects, wire ropes and hoisting equipment Overbalancing – high winds, outrigger placement, overloading, safe slope Struck By, Run-Over, Caught In Between (pinch points), Roll Over, Fluid Leaks	In addition to general safety practices for heavy equipment (above), as applicable:         Only qualified persons operate cranes (certificate required).         A Critical Lift Plan & Checklist prepared/executed (HS 506) prior to mobilization.         Equipment will be inspected prior to mobilization and a Crane Pre-Operational Safety Checklist (see EHS 506) will be completed and signed by crane operator.         Crane operator will remain at the controls at all times during operation.         Crane operation must be performed under the direction of an appointed signal person at all times.         Communication between crane operator and signal person will be maintained through standard hand signals or voice communication equipment. Radio equipment, if used, will be equipped with a dedicated channel.         Lifting or lowering will not exceed 100ft/minute. Lowering must be controlled i.e. no free fall.         Stop work will be issued whenever hoisting equipment is exposed to high winds.         Outriggers will be fully extended/locked with a firm footing within the maximum safe slope (<1%).         Crane to be on level, stable base, dunnage used when necessary.         Total weight of load not to exceed 50% of rated capacity for the crane radius and configuration.         Rigging procedures – see Hoisting, Lifting, Rigging, below.         Suspended personnel lifting is prohibited (unless per approved "man-lift" equipment).         No personnel permitted beneath suspended loads.
	HOISTING, LIFTING, RIGGING  Crane Drill rig Loader, excavator, etc. Mechanical, electrical hoist	<ul> <li>Identify, coordinate with competent person.</li> <li>Rigging directly to the forks of a lull, forklift, or front loader equipped forks is prohibited.</li> <li>Do not exceed loading limits of equipment.</li> <li>A Critical Lift Checklist (see EHS 506) will be completed and signed prior to crane mobilization.</li> <li>Rigging, wire rope and hoisting equipment will be inspected and maintained on a weekly basis.</li> <li>Crane hooks will be equipped with safety latches.</li> </ul>
	FORKLIFT Hazards: Struck By, Run-Over, Caught In Between (pinch points), Roll Over, Fluid Leaks	In addition to general safety practices for heavy equipment (above), as applicable:  Qualified operater, per established forklift training (certificate is required)  Equipment inspected daily and documented on Forklift Preoperation Inspection Checklist Operators required to use seatbelts, and adhere to safe operating procedures.

		Pag
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
		□ Do not exceed lifting load limits.
		□ Forklift shall not be moved/driven with empty forks in raised position.
		□ When not in use, forks lowered, brake set, controls in neutral, key removed.
	EXCAVATION/TRENCHING	Activities under supervision/oversight of competent person
	$\Box$ Max Depth $\geq$ 20'	□ Sloping & shoring for excavations ≥20' are approved by a professional engineer
	$\Box$ Max Depth $\geq$ 5'	$\Box$ Sloping & shoring for excavations $\geq$ 5' when persons are exposed to cave-in.
	☐ Max Depth <5' with potential	□ Sloping & shoring for shallow (<5') excavations with cave-in hazard
	cave-in hazard	$\Box$ Excavations $\geq 4'$ are classified as a non-permit confined space
	Potential permit-required	$\Box$ Excavations $\geq$ 4' are classified as Alternate Entry or Permit-Required (see confined space)
	confined space at depth $\ge$ 4'	□ Implement underground utility clearance procedures.
	Underground utilities	□ Hand digging within 3' of utility locations.
	Overhead utilities	□ Excavations to be protected by perimeter fencing (not barricade tape)
	Structures/foundations	□ Use trench boxes in accordance with proper procedures.
	Falls into excavations	□ Workers in trenches to be within 25 feet of ladder or sloped entryway.
	DRILLING	Contractor inspects drill rig daily before use.
	Struck By, Run-Over, Caught	□ Drill rig equipped with operational emergency stop.
	In Between (pinch points), Roll	□ Highpressure lines equipped with whip checks.
	Over, Fluid Leaks	☐ High visibility vests, hard hats are being worn near the equipment.
	Underground utilities,	□ Operators and helpers will maintain a safe distance to moving parts. Individuals working near
	aboveground	moving or rotating parts will secure loose hair, clothing, and equipment.
		Drill rigs will only be moved with masts lowered. Masts will be erected with outriggers fully
	□ See Equipment/Machinery	extended when equipped with outriggers.
		□ Max. safe slope for rig will be followed, drill rig leveled, appropriate blocking/cribbing as needed.
		□ Spinning parts of the rig are guarded when possible, no loose clothing being worn near the rig.
		□ Follow underground utility clearance procedures.
		□ Area is surveyed for overhead utilities, safe clearance distance maintained.
		□ Hearing protection is used when working near the rig.
		□ Spill equipment is available for fuel and hydraulic fluid leaks.
	DEMOLITION	Develop/implement demolition safety plan
	BLASTING	□ Develop/implement blasting safety plan
11. C	ONFINED SPACES, HAZARD	DUS ENCLOSED or INDOOR SPACES – CHECK IF NOT APPLICABLE:
Site-S	Specific Comments:	
	CONFINED SPACE(S)	□ For personnel working near confined spaces:
	Permit required	<ul> <li>Confined spaces have been identified, labeled.</li> </ul>
	Non-permit required	<ul> <li>Communication system in place to prevent unauthorized entry.</li> </ul>
	Potential/actual hazards:	
	Atmospheric hazards:	□ For permit-required confined space entry, see separate entry permit.
	Flammable/explosive	<ul> <li>All entrants, attendants, supervisors are trained/qualified.</li> </ul>
	Oxygen deficiency	<ul> <li>Hazards properly characterized</li> <li>Necessary equipment for safe entry utilized (access, retrieval, air monitoring)</li> </ul>
	□ Hydrogen sulfide	<ul> <li>Arrangements for rescue team have been made.</li> </ul>
	□ Other toxic	
	Combustible dust	□ For entry into a <u>non-permit</u> confined space, see site specific procedures delineated above in "site-
		specific comments," or see alternate/attached safety work plan.
	Mechanical, engulfment,	
	entrapment, stored energy	
	ENCLOSED/INDOOR	For indoor use of gasoline/propane/diesel equipment:
	SPACE(S)	Duct exhaust to outdoors, and/or introduce fresh air using ventilation/blowers/fans.
	Outfall, culvert	□ Perform air monitoring (see section on Air Monitoring)
	Tunnel, shaft, gallery	
	□ Machine/equipment pit/vault	For entry into potentially hazardous indoor or enclosed spaces:
	□ Basement/Sub-basement	□ Ventilate and/or perform air monitoring for anticipated hazards.
	Crawl space entry	☐ If space classified as confined space, follow confined space entry requirements (above).
	□ Indoor equipment/drilling	
12 0		DUCTS USED AT WORK SITE – CHECK IF NOT APPLICABLE:

consultants

	consultants	Pag			
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)			
$\boxtimes$	WALKING/WORKING	Keep work areas clean, orderly, dispose of trash/debris, maintain sanitary conditions.			
لالكنا	SURFACES, HOUSEKEEPING	☑ Walkways are cleared of equipment, excavated material, tools and debris, snow			
	⊠ Uneven, rough terrain, riprap	☑ Holes, pits, openings to be covered or otherwise marked or guarded			
	<ul> <li>Slippery surfaces</li> <li>Holes, pits, openings</li> </ul>	□ Apply absorbent, salt or sand, for traction/slip resistance on slippery/icy/wet surfaces			
	$\square$ Puncture, foot hazards	☑ Wear proper work boots/shoes with ankle support and/or traction, as appropriate for conditions			
	TEMPERATURE/WEATHER	☑ Heat/Cold stress are monitored in accordance with Geosyntec procedures EHS 124 & EHS 125			
$\boxtimes$	Heat Stress	□ Provide sufficient fluids, shade, breaks, other precautions as appropriate to adderss heat hazards.			
	⊠ Cold Stress	Provide protection from sun (sun screen, shaded brake area).			
	Severe Weather	☑ For cold stress, wear multiple layers, protect from wind/wet, frequent break in warm location.			
	🖂 Lightning	□ In high wind, discontinue working at heights (e.g. on ladders, scaffold, aerial lift, similar).			
		☑ Use precautions for lightning, thunderstorm, hale, tornado (monitor weather, "30/30 rule," shelter)			
$\boxtimes$	BIOLOGICAL HAZARDS	Utilize safety practices commensurate with risk of biting/stinging insects, wild/feral/pet animals.			
	⊠ Insects, spiders, ticks	For poisonous plants (poison ivy/oak/sumac/etc.), minimize exposed skin area, wear coveralls, use barrier cream/wash (Technu products or similar), as appropriate.			
	□ Wild/feral/pet animals	barrier creath/wash (rectific products of similar), as appropriate.			
	Mold, fungi	For biological exposure hazards, use protective measures commensurate with hazard:			
	Poisonous plants	Minor-moderate hazard - use ordinary hygiene practices, protective gloves, hand washing.			
	Bird Guano	□ Moderate-severe hazard - add protective clothing, respirator, decon, as appropriate.			
	□ Infectious, wastewater, sewer	□ Bloodborne pathogen (human infectious agents) - implement "Universal Precautions"			
	Bloodborne pathogens				
	HAZARDOUS NOISE	□ Hearing protection is used when exposed to excessive noise levels (greater than 85 dBA over an			
		8-hour work period, or intermittent)			
	OVERHEAD HAZARDS, FALLING OBJECTS	□ Wear hardhat when exposed to overhead hazards, "bump" hazards, falling objects			
		Cordon off hazard zones, route access/egress around hazards of falling objects			
		Secure objects from falling			
		Provide overhead protection (canopy) to protect public pedestrians, workers			
		□ Make site-specific arrangements for illumination of work areas and access routes.			
	□ Night work				
	2. BOATING, WATER, WET LOCATIONS, FLOOD, ETC. – CHECK IF NOT APPLICABLE: Site-Specific Comments:				
Site-S	specific Comments:				
	WATER HAZARDS	Wear appropriate Coast Guard-approved Personal Flotation Device (PFD)			
	Drowning, hypothermia	□ Bring emergency rescue equipment (ring buoy, reaching device, flares)			
	Boat, barge, raft	□ Use fuel safety practices, fire extinguisher present in boat			
	Wading, wetland, mud/silt	□ See site-specific safety comments above.			
	□ Dam release, flood, tide				
• · · /					
	OLENCE, PUBLIC PROTECTIOn Specific Comments:	ON, WORKING ALONE – SPECIAL MEASURES – CHECK IF NOT ANTICIPATED: 🛛			
Site-S	specific Comments:				
	PERSONAL SECURITY, HIGH	Employ standard precautions, which may include: conduct work only during daylight hours, use			
	CRIME AREA	buddy system, avoid parking in secluded location, lock vehicles, hide valuable items in vehicles			
		from plain view			
		□ See site-specific safety comments above for project-specific security measures.			
	PUBLIC AT RISK, SITE	□ Provide safe pedestrian route around work areas, use appropriate barriers, signs, warning devices.			
	SECURITY	□ Provide covers over excavation, secure fencing, overnight protection			
		□ Provide protection from overhead hazards (canopy, etc.) where public at risk of overhead hazards			
		<ul> <li>Provide secure locked storage of hazardous chemicals, hazardous equipment, etc.</li> <li>Establish "check in" procedure with supervisor or project manager (arrival, mid-day, departure)</li> </ul>			
	WORKING ALONE	Additional measures, as appropriate for the working conditions.			
4. DI	RIVING. TRAFFIC. TRANSPOR	RTATION HAZARDS – CHECK IF NOT APPLICABLE:			
	pecific Comments:				
$\boxtimes$	DRIVING HAZARDS	☑ Use routine safe/defensive driving practices (seat belts, safe speeds, eyes ahead, no tailgating,			
لا ا	Routine work travel	limit distractions, no texting, safe cell phone use, clear windows, account for weather/road conditions, adequate sleep, other measures as appropriate).			
	Unfamiliar location				
	Unfamiliar vehicle	☑ Plan travel route before driving (assemble maps, enter destination in GPS).			
1	Overnight travel, distance	□ Familiarize yourself with vehicle operational controls before operating unfamiliar vehicle.			

	consultants		Page
	HAZARD	HAZARD CONTROLS (check all that apply and o	comment as required)
	WORKERS EXPOSED TO	☑ Workers to wear reflective vests where exposed	to traffic hazards.
	TRAFFIC HAZARDS	☑ Where possible, park vehicles as protective shie	ld from oncoming traffic.

		Pag
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
	AERIAL LIFT	Operators are sufficiently trained, experienced and qualified.
	Scissor lift	Equipment is inspected after mobilization and is in good condition.
	Extensible boom	□ Harness & Lanyard worn whenever operating the lift (scissor lifts may be excepted)
	Articulated boom	□ Overhead and surface obstructions are reviewed with operators prior to use.
	Vertical Lift ("Genie")	
	SCAFFOLD	□ Identify/coordinate operations with competent person
	□ Supported scaffold	□ Supported scaffold level, stable, proper attachments, tiebacks, planking,
	Suspended scaffold	Suspended scaffolds anchored properly
	□ Free-standing/mobile scaffold	Guardrails present above 10 feet or personal fall apparatus used.
		Proper means of accessing scaffold (proper ladders, stair tower).
		□ Total height of free-standing scaffold not to exceed four times the minimum base dimension.
о т/		RY – CHECK IF NOT APPLICABLE: ⊠
Site-S	pecific Comments:	
	HAND TOOLS	$\Box$ Use proper tool for the job, maintain tools in good condition (no damage, cutting tools sharp,
	Eye injury, puncture/bruise/	etc.) use appropriate PPE for hand/eye/body protection, plan for safe "follow through" motion, use
	laceration hazard	vise/clamp/work surface to hold/stabilize work piece
	POWER TOOLS	□ For all power tools:
	Eye/hand/body injury	<ul> <li>Inspect tools to ensure safe operating condition before each use.</li> </ul>
	□ Fuel-related hazards	- Use tool in accordance with manufacturer's specifications.
	$\square$ Inhalation hazard	- Use PPE or other safety practices, as appropriate, for eye/hearing/hand/head/body protection
		<ul> <li>Provide training or verify operator qualification for use of power tool.</li> </ul>
		<ul> <li>Stay clear of hazard zone, "line of fire" when working near where power tools are used.</li> </ul>
	Sparks, heat, fire hazard	□ Use safety practices for refueling, fuel handling/transport/storage.
	Electrical hazards	Use respirators, ventilation, wet methods, other appropriate means to control inhalation hazard.
		□ For spark/heat generating tool, control fire hazards, segregate combustible/flammable materials.
		□ For electrical hazards, see # 6, "Electrical Hazards".
		□ Hot work permit system to be implemented.
	□ Gas welding/cutting	□ Operator properly protected (eye protection, clothing, apron, etc.)
	□ Arc welding/cutting	Fire hazard controls (watcher, fire extinguisher, water, isolate combustibles)
		Protect nearby personnel from hazardous UV, IR light (shielding, curtain)
		Electrical safe work practices for arc welding
		Gas cylinder safe practices (secured, upright, caps on when not in use, prevent damage).
	EQUIPMENT/MACHINERY	□ Working Near Equipment/Machinery
	□ Point-of-operation hazards	□ Work at safe distance/restrict access, ensure guards in place, heed warning signs
	Pinch points, moving parts	□ Implement measures necessary for adequate illumination
	□ 'Struck-by,' 'caught between'	□ Control exposue to emission/discharge gases (ventilation, PPE, other means).
	Hot surfaces, heat	Ensure safe practices for fuels/fluids/machine-related hazardous materials
	Extension cords, flexible wire	Use PPE or other safety practices for eye/hearing/hand/head/body protection
	Fuel related (gas or liquid)	$\Box$ Segregate combustible materials from hot surfaces/hot exhaust (minimum 3 feet)
	Hydraulic pressure	Operation/Maintenance/Repair of Equipment/Machinery (see applicable control measures above)
	Compressed air/gas	□ Orient/locate equipment for safe access during operation and maintenance
	□ Kinetic, stored energy	□ Use equipment/machinery in accordance with manufacturer's specifications
		□ Use safe lifting practices, minimize repetitive motion hazards
	□ Lockout/tagout	
	•	□ Ensure point-of-operation, mechanical power transmission, other moving parts are guarded
	Emissions, discharge gases	with protective devices; do not override interlocks, guards, protective devices
	Working at heights, falls	Secure long hair/loose clothing/hanging jewelry near moving/rotating parts
	Lifting, repetitive motion	Ensure appropriate warning signs are in place and heeded
	Illumination	$\Box$ Use safe practices for fueling, fuel transport & storage.
	Electrical (see below)	Operate fuel-powered equipment in well ventilated location.
		□ Incorporate safety provisions/safe work practices for compressed air, pressurized systems
		(pneumatic/hydraulic), stored energy
		□ Implement control-of-hazardous-energy practices (lockout/tagout), designate "authorized"
		personnel, notify "affected" personnel
		Protect from fall hazards (safe ladder use, personal fall protection, guardrails, other)
	ELECTRICAL HAZARDS	□ Implement provisions of # 6, "Electrical Hazards"
9. M	ANUAL MATERIAL HANDLING	G, MATERIAL STORAGE – CHECK IF NOT APPLICABLE: 🗆

# Geosyntec Consultants

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
Site-S	specific Comments:	
$\boxtimes$	LIFTING / ERGONOMIC Musculoskeletal strain,	Use proper manual lifting techniques (straight back, bend at knees, firm grasp, firm footing).
	repetitive motion injury	<ul> <li>Seek assistance for lifting heavy objects (&gt;50 lbs.)</li> <li>Use mechanical lifting equipment to reduce manual material handling hazard</li> </ul>
		□ For repetitive motion activities, take breaks, switch hands, share task with others, employ other
		safe practices appropriate for the specific task(s).
	STORAGE OF MATERIALS	Store materials in stable manner that prevents tipping, sliding, rolling, falling over.
		□ Materials stored in tiers to be stacked, racked, blocked, interlocked or otherwise secured to prevent
		sliding, falling or collapse
		□ Do not exceed load limits of racks, platform; ensure racks are stable, robust, secure
		$\square$ On scaffold, do not store materials in excess of supplies needed for immediate use
	See Sect. 12 for Chemical	Ensure stored materials do not block aisles, passageways
	Storage	$\Box$ For used lumber, remove nails before stacking, and stack to be stable and self supporting, no
		higher than 20 feet (or 16 feet if lumber is to be handled manually)
		Debris will be removed regularly from storage area and place in designated area or disposed.
		S, HEAVY EQUIPMENT, HEAVY VEHICLES – CHECK IF NOT ANTICIPATED: 🛛
Site-S	specific Comments:	
	HEAVY EQUIPMENT;	□ Trained/qualified persons operate all heavy equipment.
	CONSTRUCTION VEHICLES	<ul> <li>No passengers on moving/operating equipment except where passenger seat/restraint is present.</li> </ul>
	Hazards: Struck By, Run-Over,	□ Equipment inspected upon mobilization and daily; maintained in good repair, backup alarms
	Caught In Between (pinch points), Roll Over, Fluid Leaks	□ All leaks or defective safety equipment will be repaired before use.
		□ Operators required to use seatbelts.
		□ Eye contact with operator and use of hand signals prior to approaching near equipment.
		High visibility vests are required of all personnel in work area.
		Max. safe slope for each vehicle will be followed.
		Personnel to stay clear of swing radius of equipment.
		Spill equipment available for fuel and hydraulic fluid leaks.
		□ Equipment locked, secured, brakes set, buckets/forks lowered, when not in use.
	CRANES	In addition to general safety practices for heavy equipment (above), as applicable:
	Overhead hazards – utility lines,	□ Only qualified persons operate cranes (certificate required).
	swing radius, falling objects,	□ A Critical Lift Plan & Checklist prepared/executed (HS 506) prior to mobilization.
	wire ropes and hoisting	□ Equipment will be inspected prior to mobilization and a Crane Pre-Operational Safety Checklist
	equipment	(see EHS 506) will be completed and signed by crane operator.
	Overbalancing – high winds, outrigger placement,	□ Crane operator will remain at the controls at all times during operation.
	overloading, safe slope	□ Crane operation must be performed under the direction of an appointed signal person at all times.
	□ Struck By, Run-Over, Caught	□ Communication between crane operator and signal person will be maintained through standard
	In Between (pinch points), Roll	hand signals or voice communication equipment. Radio equipment, if used, will be equipped with a dedicated channel.
	Over, Fluid Leaks	Lifting or lowering will not exceed 100ft/minute. Lowering must be controlled i.e. no free fall.
		□ Stop work will be issued whenever hoisting equipment is exposed to high winds.
		□ Outriggers will be fully extended/locked with a firm footing within the maximum safe slope (<1%).
		□ Crane to be on level, stable base, dunnage used when necessary.
		□ Total weight of load not to exceed 50% of rated capacity for the crane radius and configuration.
		Rigging procedures – see Hoisting, Lifting, Rigging, below.
		□ Suspended personnel lifting is prohibited (unless per approved "man-lift" equipment).
		□ No personnel permitted beneath suspended loads.
	HOISTING, LIFTING, RIGGING	
		Identify, coordinate with competent person. Regina directly to the forks of a lull forklift or front loader equipped forks is prohibited.
		<ul> <li>Rigging directly to the forks of a lull, forklift, or front loader equipped forks is prohibited.</li> <li>Do not exceed loading limits of equipment.</li> </ul>
	□ Loader, excavator, etc.	<ul> <li>□ A Critical Lift Checklist (see EHS 506) will be completed and signed prior to crane mobilization.</li> </ul>
	$\Box$ Mechanical, electrical hoist	□ Rigging, wire rope and hoisting equipment will be inspected and signed phot to crane mobilization.
	,	□ Crane hooks will be equipped with safety latches.
	FORKLIFT	In addition to general safety practices for heavy equipment (above), as applicable:
	Hazards: Struck By, Run-Over,	Qualified operater, per established forklift training (certificate is required)
	Caught In Between (pinch	Equipment inspected daily and documented on Forklift Preoperation Inspection Checklist
	points), Roll Over, Fluid Leaks	□ Operators required to use seatbelts, and adhere to safe operating procedures.

· · · · ·		Pag
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
		□ Do not exceed lifting load limits.
		Forklift shall not be moved/driven with empty forks in raised position.
		□ When not in use, forks lowered, brake set, controls in neutral, key removed.
	EXCAVATION/TRENCHING	Activities under supervision/oversight of competent person
	☐ Max Depth ≥ 20'	□ Sloping & shoring for excavations ≥20' are approved by a professional engineer
	$\Box$ Max Depth $\geq$ 5'	□ Sloping & shoring for excavations $\geq$ 5' when persons are exposed to cave-in.
	☐ Max Depth <5' with potential	□ Sloping & shoring for shallow (<5') excavations with cave-in hazard
	cave-in hazard	□ Excavations $\geq$ 4' are classified as a non-permit confined space
	Potential permit-required	
	confined space at depth $\geq$ 4'	$\Box$ Excavations $\geq$ 4' are classified as Alternate Entry or Permit-Required (see confined space)
	□ Underground utilities	□ Implement underground utility clearance procedures.
	<ul> <li>Overhead utilities</li> </ul>	□ Hand digging within 3' of utility locations.
	□ Structures/foundations	□ Excavations to be protected by perimeter fencing (not barricade tape)
	Falls into excavations	□ Use trench boxes in accordance with proper procedures.
		Workers in trenches to be within 25 feet of ladder or sloped entryway.
		Contractor inspects drill rig daily before use.
	□ Struck By, Run-Over, Caught	□ Drill rig equipped with operational emergency stop.
	In Between (pinch points), Roll Over, Fluid Leaks	□ Highpressure lines equipped with whip checks.
	,	□ High visibility vests, hard hats are being worn near the equipment.
	Underground utilities,	□ Operators and helpers will maintain a safe distance to moving parts. Individuals working near
	aboveground	moving or rotating parts will secure loose hair, clothing, and equipment.
		Drill rigs will only be moved with masts lowered. Masts will be erected with outriggers fully
	□ See Equipment/Machinery	extended when equipped with outriggers.
		□ Max. safe slope for rig will be followed, drill rig leveled, appropriate blocking/cribbing as needed.
		□ Spinning parts of the rig are guarded when possible, no loose clothing being worn near the rig.
		□ Follow underground utility clearance procedures.
		□ Area is surveyed for overhead utilities, safe clearance distance maintained.
		□ Hearing protection is used when working near the rig.
		□ Spill equipment is available for fuel and hydraulic fluid leaks.
	DEMOLITION	Develop/implement demolition safety plan
	BLASTING	Develop/implement blasting safety plan
11. C	ONFINED SPACES, HAZARD	DUS ENCLOSED or INDOOR SPACES – CHECK IF NOT APPLICABLE: 🛛
Site-S	pecific Comments: Storm sewer	system must not be entered by Geosyntec.
	CONFINED SPACE(S)	For personnel working near confined spaces:
	□ Permit required	<ul> <li>Confined spaces have been identified, labeled.</li> </ul>
	□ Non-permit required	<ul> <li>Communication system in place to prevent unauthorized entry.</li> </ul>
	Potential/actual hazards:	
	Atmospheric hazards:	□ For permit-required confined space entry, see separate entry permit.
		<ul> <li>All entrants, attendants, supervisors are trained/qualified.</li> </ul>
	□ Flammable/explosive	<ul> <li>Hazards properly characterized</li> </ul>
	Oxygen deficiency	<ul> <li>Necessary equipment for safe entry utilized (access, retrieval, air monitoring)</li> </ul>
	Hydrogen sulfide	<ul> <li>Arrangements for rescue team have been made.</li> </ul>
	Other toxic	
	Combustible dust	□ For entry into a <u>non-permit</u> confined space, see site specific procedures delineated above in "site-
	Electrical	specific comments," or see alternate/attached safety work plan.
	Mechanical, engulfment,	
	entrapment, stored energy	
	ENCLOSED/INDOOR	For indoor use of gasoline/propane/diesel equipment:
	SPACE(S)	□ Duct exhaust to outdoors, and/or introduce fresh air using ventilation/blowers/fans.
	□ Outfall, culvert	□ Perform air monitoring (see section on Air Monitoring)
	□ Tunnel, shaft, gallery	
	□ Machine/equipment pit/vault	For entry into potentially hazardous indoor or enclosed spaces:
	□ Basement/Sub-basement	□ Ventilate and/or perform air monitoring for anticipated hazards.
	Crawl space entry	□ If space classified as confined space, follow confined space entry requirements (above).
	Indoor equipment/drilling

#### **Appendix C: Summary of Chemical Hazards**

#### **Petroleum Hydrocarbons**

Petroleum hydrocarbons likely at the site include tar and/or fuel-related materials in soils and sediments. Gasoline, diesel, oil, and heavier hydrocarbons, such as grease, may be present. Volatile components of gasoline include benzene, toluene, ethylbenzene, and xylenes (BTEX).

The primary exposure routes for petroleum hydrocarbons during site activities are inhalation, dermal contact, and ingestion of contaminated soil, sediment, dust, or water. Lighter petroleum hydrocarbons such as gasoline and benzene readily volatilize and are primarily an inhalation concern, whereas the primary route of exposure to heavier petroleum hydrocarbons such as aromatic hydrocarbons, oil, and grease is dermal contact. The target organs primarily affected by prolonged exposure to petroleum hydrocarbons are the respiratory system, central nervous system, kidneys, liver, and skin. Prolonged dermal contact with petroleum hydrocarbons can cause irritation or dermatitis. The BTEX compounds are known or suspected human carcinogens.

Petroleum hydrocarbons such as gasoline are also flammable and can be a physical hazard when present in high concentrations. Combustion of petroleum hydrocarbons can produce carbon dioxide, carbon monoxide, aldehydes, fumes, smoke (particulate matter) and other products of incomplete combustion. Intentional and inadvertent combustion of petroleum hydrocarbons is not expected during sampling activities; however, personnel will evacuate the area should a fire occur. The table below summarizes BTEX exposure limits.

Chemical Name	$PEL^1$	$TLV^2$
Benzene	1	0.5
Toluene	200	50
Ethylbenzene	100	100
Xylene	100	100

¹ OSHA Permissible Exposure Limit (in parts per million)

² ACGIH Threshold Limit Value (in parts per million)

#### Polycyclic Aromatic Hydrocarbons (PAHs)

PAHs are produced during combustion events due to inadequate oxidation of fuel. PAHs in the pure state are yellowish crystalline solids. They are found in coal tar and in products of incomplete combustion. These chemicals have varying degrees of potency for causing cancer, with benzo(a)pyrene being among the most potent. The PAHs are evaluated collectively as COAL TAR PITCH VOLATILES. Coal tar pitch volatiles may cause photo-sensitization and a rash where sunlight strikes the skin. Exposure may also cause cancer of lungs, skin, bladder or kidneys. Benzo(b)fluoranthene, benzo(j)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, chrysene, and indeno(1,2,3,c,d)pyrene have been identified as carcinogenic.

This information on PAH compounds is presented for site contaminant awareness. While the potential for site personnel sustaining significant inhalation exposures to volatilized PAH compounds during the site activities of this project is minimal, there is the potential for inhalation of PAH-contaminated dust, and handling of contaminated soils presents skin exposure hazards. Use of dust suppression techniques (as appropriate) and the proper use of the PPE will

- Anthracene
- Benzo(a)pyrene Benzo(a)anthracene
- Chrysene Benzo(b)fluoranthene
- Fluoranthene Benzo(k)fluoranthene
- Fluorene Benzo(g,h,i)perylene
- Indeno(1,2,3,c,d)pyrene Benzo(d,e,f)phenanthrene

adequately protect personnel. Some significant PAH compounds include:

• Phenanthrene

OSHA PEL for coal tar pitch volatiles is 0.2 mg/m3 and NIOSH REL is 0.1 mg/m³, TLV 0.2 mg/m3 is for 8 hour time weighted average (TWA).

#### PCBs

PCBs are carcinogenic chlorinated hydrocarbons. Potential exposure routes are through inhalation, skin absorption, ingestion and skin or eye contact and may irritate eyes, cause acne, cause liver damage or have reproductive effects. Carcinogenic effects such as tumors and leukemia have been observed in animals. The OSHA permissible exposure limit (PEL) for 8-hour time-weighted average (TWA) is 1 mg/m³ (skin). The NIOSH PEL is 0.001 mg/m³.

#### **RCRA Metals**

These metals include arsenic, barium, cadmium, chrome, mercury, selenium, and silver. Heavy metals are known to cause neurologic effects (lead, mercury), kidney damage (cadmium), and respiratory damage (arsenic, cadmium). Oral and respiratory exposures should be minimized. The table below summarizes exposure limits.

Chemical Name	PEL ¹	$TLV^2$
Arsenic	0.01	0.01
Lead	0.05	0.05
Mercury	0.01	0.25

¹ OSHA Permissible Exposure Limit (PEL) in parts per million

² ACGIH Threshold Limit Value (TLV) in parts per million

#### Chlorinated Solvents/Volatile Organic Compounds (VOCs)

Chlorinated VOCs are widely used as solvents in industrial operations such as degreasing, manufacturing, cleaning and dry cleaning, and are also present in household products and automotive fluids. They readily form vapors which can accumulate in indoor air spaces (i.e., via migration through the subsurface) and react with ozone to form sub-micron sized particles with the potential to cause adverse respiratory health effects. Free product releases (via surface or subsurface discharges or inadequate disposal) can migrate downward to significant depths and through fine-grained deposits to groundwater, and can persist as wide-scale sources of vapor plumes for long periods of time.

Several chlorinated hydrocarbons have been identified in soil and groundwater at the site including perchloroethylene (PCE), trichloroethylene (TCE), and 1,2-dichloroethane (DCA). The likely routes of exposure to chlorinated solvents include inhalation, ingestion and direct contact with the skin or eye. The toxicity of chlorinated solvents varies; many affect the CNS and some are identified as carcinogens. PCE can affect the CNS and cause irritation of the skin, eyes, and upper respiratory tract. TCE can depress the CNS, affect kidneys, liver, and lungs and can cause rapid and irregular heartbeat. Toxic effects are increased when combined with alcohol, caffeine, and other drugs. DCA can cause CNS depression and damage to the liver, kidneys, heart, and digestive system. Eye contact with DCA can cause irritation and serious injury if not removed promptly. DCA and TCE are flammable liquids; the LEL of both solvents are approximately 6% and their flash points are less than 100°F. PCE is not considered flammable. These chlorinated solvents are only slightly soluble in water.

Exposure levels will be maintained below OSHA PEL or NIOSH REL as shown in the table below.

Chemical Name	$\operatorname{PEL}^1$	$REL^2$
1,2 DCA	50	1
TCE	100	Ca
PCE	100	Ca

¹ OSHA Permissible Exposure Limit (PEL) in parts per million ² ACGIH Threshold Limit Value (TLV) in parts per million

Ca - Carcinogenic

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
$\boxtimes$	WALKING/WORKING	Keep work areas clean, orderly, dispose of trash/debris, maintain sanitary conditions.
تخصي	SURFACES, HOUSEKEEPING	☑ Walkways are cleared of equipment, excavated material, tools and debris, snow
	⊠ Uneven, rough terrain, riprap	Holes, pits, openings to be covered or otherwise marked or guarded
	<ul> <li>☑ Slippery surfaces</li> <li>□ Holes, pits, openings</li> </ul>	□ Apply absorbent, salt or sand, for traction/slip resistance on slippery/icy/wet surfaces
	$\square$ Puncture, foot hazards	Wear proper work boots/shoes with ankle support and/or traction, as appropriate for conditions
	TEMPERATURE/WEATHER	☐ Heat/Cold stress are monitored in accordance with Geosyntec procedures EHS 124 & EHS 125
	⊠ Heat Stress	Provide sufficient fluids, shade, breaks, other precautions as appropriate to adderss heat hazards.
	⊠ Cold Stress	Provide protection from sun (sun screen, shaded brake area).
	Severe Weather	□ For cold stress, wear multiple layers, protect from wind/wet, frequent break in warm location.
	⊠ Lightning	□ In high wind, discontinue working at heights (e.g. on ladders, scaffold, aerial lift, similar).
		☑ Use precautions for lightning, thunderstorm, hale, tornado (monitor weather, "30/30 rule," shelter)
$\boxtimes$	BIOLOGICAL HAZARDS	☑ Utilize safety practices commensurate with risk of biting/stinging insects, wild/feral/pet animals.
	Insects, spiders, ticks	For poisonous plants (poison ivy/oak/sumac/etc.), minimize exposed skin area, wear coveralls, use
	Wild/feral/pet animals	barrier cream/wash (Technu products or similar), as appropriate.
	🗆 Mold, fungi	For biological exposure hazards, use protective measures commensurate with hazard:
	Poisonous plants	Minor-moderate hazard - use ordinary hygiene practices, protective gloves, hand washing.
	Bird Guano	□ Moderate-severe hazard - add protective clothing, respirator, decon, as appropriate.
	□ Infectious, wastewater, sewer	Bloodborne pathogen (human infectious agents) - implement "Universal Precautions"
	□ Bloodborne pathogens	
$\boxtimes$	HAZARDOUS NOISE	B Hearing protection is used when exposed to excessive noise levels (greater than 85 dBA over an
		8-hour work period, or intermittent)
	OVERHEAD HAZARDS,	$\Box$ Wear hardhat when exposed to overhead hazards, "bump" hazards, falling objects
	FALLING OBJECTS	Cordon off hazard zones, route access/egress around hazards of falling objects
		□ Secure objects from falling
		□ Provide overhead protection (canopy) to protect public pedestrians, workers
	ILLUMINATION	□ Make site-specific arrangements for illumination of work areas and access routes.
	Night work	
	Indoor work	
2. B	OATING, WATER, WET LOCAT	TIONS, FLOOD, ETC. – CHECK IF NOT APPLICABLE: 🖂
Site-S	Specific Comments:	
	WATER HAZARDS	Wear appropriate Coast Guard-approved Personal Flotation Device (PFD)
	Drowning, hypothermia	Bring emergency rescue equipment (ring buoy, reaching device, flares)
	Boat, barge, raft	Use fuel safety practices, fire extinguisher present in boat
	Wading, wetland, mud/silt	□ See site-specific safety comments above.
	Dam release, flood, tide	
<i>.</i>		
		ON, WORKING ALONE – SPECIAL MEASURES – CHECK IF NOT ANTICIPATED: 🖂
Site-5	Specific Comments:	
	PERSONAL SECURITY, HIGH	Employ standard precautions, which may include: conduct work only during daylight hours, use
	CRIME AREA	buddy system, avoid parking in secluded location, lock vehicles, hide valuable items in vehicles
		from plain view
	PUBLIC AT RISK, SITE	See site-specific safety comments above for project-specific security measures.      Reguide acts pedeotrian route around work around work around any appropriate herrisen around works.
	SECURITY	<ul> <li>Provide safe pedestrian route around work areas, use appropriate barriers, signs, warning devices.</li> <li>Provide covers over excavation, secure fencing, overnight protection</li> </ul>
		□ Provide protection from overhead hazards (canopy, etc.) where public at risk of overhead hazards
		□ Provide secure locked storage of hazardous chemicals, hazardous equipment, etc.
	WORKING ALONE	Establish "check in" procedure with supervisor or project manager (arrival, mid-day, departure)
		□ Additional measures, as appropriate for the working conditions.
4. D	RIVING, TRAFFIC, TRANSPOR	TATION HAZARDS – CHECK IF NOT APPLICABLE:
	Specific Comments:	
	DRIVING HAZARDS	☐ Use routine safe/defensive driving practices (seat belts, safe speeds, eyes ahead, no tailgating,
$\boxtimes$	⊠ Routine work travel	limit distractions, no texting, safe cell phone use, clear windows, account for weather/road
		conditions, adequate sleep, other measures as appropriate).
	Unfamiliar location	conditions, adequate sicep, other measures as appropriate).
	<ul> <li>Unfamiliar location</li> <li>Unfamiliar vehicle</li> </ul>	<ul> <li>Plan travel route before driving (assemble maps, enter destination in GPS).</li> <li>Familiarize yourself with vehicle operational controls before operating unfamiliar vehicle.</li> </ul>

9. M	ANUAL MATERIAL HANDLING	S, MATERIAL STORAGE – CHECK IF NOT APPLICABLE: 🗆

HAZARD HAZARD CONTROLS (check all that apply and comment as required)				
Site-S	Specific Comments: Drum Handlin	ng and Sample Coolers		
	LIFTING / ERGONOMIC	V Les proper manual lifting techniques (atraight heal, hand at knoss, firm groop, firm facting)		
$\square$	Musculoskeletal strain,	<ul> <li>☑ Use proper manual lifting techniques (straight back, bend at knees, firm grasp, firm footing).</li> <li>☑ Seek assistance for lifting heavy objects (&gt;50 lbs.)</li> </ul>		
	repetitive motion injury	Use mechanical lifting equipment to reduce manual material handling hazard		
		Semechanical litting equipment to reduce mandal material nationing nazard		
		safe practices appropriate for the specific task(s).		
	STORAGE OF MATERIALS	Store materials in stable manner that prevents tipping, sliding, rolling, falling over.		
		□ Materials stored in tiers to be stacked, racked, blocked, interlocked or otherwise secured to prevent		
		sliding, falling or collapse		
		□ Do not exceed load limits of racks, platform; ensure racks are stable, robust, secure		
		□ On scaffold, do not store materials in excess of supplies needed for immediate use		
	See Sect 12 for Chamical	Ensure stored materials do not block aisles, passageways		
	See Sect. 12 for Chemical Storage	□ For used lumber, remove nails before stacking, and stack to be stable and self supporting, no		
		higher than 20 feet (or 16 feet if lumber is to be handled manually)		
		□ Debris will be removed regularly from storage area and place in designated area or disposed.		
10. 0	CONSTRUCTION OPERATION	S, HEAVY EQUIPMENT, HEAVY VEHICLES – CHECK IF NOT ANTICIPATED: 🖂		
Site-S	Specific Comments: DPT Drilling	Rig		
$\boxtimes$	HEAVY EQUIPMENT; CONSTRUCTION VEHICLES	☑ Trained/qualified persons operate all heavy equipment.		
	Hazards: Struck By, Run-Over,	⊠ No passengers on moving/operating equipment except where passenger seat/restraint is present.		
	Caught In Between (pinch	Equipment inspected upon mobilization and daily; maintained in good repair, backup alarms		
	points), Roll Over, Fluid Leaks	□ All leaks or defective safety equipment will be repaired before use.		
		Operators required to use seatbelts.		
		Eye contact with operator and use of hand signals prior to approaching near equipment.		
		High visibility vests are required of all personnel in work area.		
		Max. safe slope for each vehicle will be followed.		
		Personnel to stay clear of swing radius of equipment.		
		Spill equipment available for fuel and hydraulic fluid leaks.		
		Equipment locked, secured, brakes set, buckets/forks lowered, when not in use.		
	CRANES	In addition to general safety practices for heavy equipment (above), as applicable:		
	Overhead hazards – utility lines,	□ Only qualified persons operate cranes (certificate required).		
	swing radius, falling objects,	□ A Critical Lift Plan & Checklist prepared/executed (HS 506) prior to mobilization.		
	wire ropes and hoisting equipment	□ Equipment will be inspected prior to mobilization and a Crane Pre-Operational Safety Checklist		
	□ Overbalancing – high winds,	(see EHS 506) will be completed and signed by crane operator.		
	outrigger placement,	□ Crane operator will remain at the controls at all times during operation.		
	overloading, safe slope	□ Crane operation must be performed under the direction of an appointed signal person at all times.		
	□ Struck By, Run-Over, Caught	Communication between crane operator and signal person will be maintained through standard		
	In Between (pinch points), Roll Over, Fluid Leaks	hand signals or voice communication equipment. Radio equipment, if used, will be equipped with a dedicated channel.		
	Over, I tulu Leaks	Lifting or lowering will not exceed 100ft/minute. Lowering must be controlled i.e. no free fall.		
		□ Stop work will be issued whenever hoisting equipment is exposed to high winds.		
		□ Outriggers will be fully extended/locked with a firm footing within the maximum safe slope (<1%).		
		□ Crane to be on level, stable base, dunnage used when necessary.		
		□ Total weight of load not to exceed 50% of rated capacity for the crane radius and configuration.		
		Rigging procedures – see Hoisting, Lifting, Rigging, below.		
		□ Suspended personnel lifting is prohibited (unless per approved "man-lift" equipment).		
		□ No personnel permitted beneath suspended loads.		
		□ Identify, coordinate with competent person.		
		□ Rigging directly to the forks of a lull, forklift, or front loader equipped forks is prohibited.		
	□ Drill rig	Do not exceed loading limits of equipment.		
	□ Loader, excavator, etc.	□ A Critical Lift Checklist (see EHS 506) will be completed and signed prior to crane mobilization.		
	Mechanical, electrical hoist	□ Rigging, wire rope and hoisting equipment will be inspected and maintained on a weekly basis.		
<u> </u>		Crane hooks will be equipped with safety latches.		
	FORKLIFT	In addition to general safety practices for heavy equipment (above), as applicable:		
	Hazards: Struck By, Run-Over, Caught In Between (pinch	Qualified operater, per established forklift training (certificate is required)		
	points), Roll Over, Fluid Leaks	Equipment inspected daily and documented on Forklift Preoperation Inspection Checklist		
1		□ Operators required to use seatbelts, and adhere to safe operating procedures.		

		Pag
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
		□ Do not exceed lifting load limits.
		□ Forklift shall not be moved/driven with empty forks in raised position.
		□ When not in use, forks lowered, brake set, controls in neutral, key removed.
	EXCAVATION/TRENCHING	Activities under supervision/oversight of competent person
	$\Box$ Max Depth $\geq$ 20'	□ Sloping & shoring for excavations ≥20' are approved by a professional engineer
	$\Box$ Max Depth $\geq$ 5'	$\Box$ Sloping & shoring for excavations $\geq$ 5' when persons are exposed to cave-in.
	☐ Max Depth <5' with potential	□ Sloping & shoring for shallow (<5') excavations with cave-in hazard
	cave-in hazard	$\Box$ Excavations $\geq 4'$ are classified as a non-permit confined space
	Potential permit-required	$\Box$ Excavations $\geq$ 4' are classified as Alternate Entry or Permit-Required (see confined space)
	confined space at depth $\ge 4'$	□ Implement underground utility clearance procedures.
	Underground utilities	□ Hand digging within 3' of utility locations.
	Overhead utilities	<ul> <li>Excavations to be protected by perimeter fencing (not barricade tape)</li> </ul>
	Structures/foundations	□ Use trench boxes in accordance with proper procedures.
	Falls into excavations	
		□ Workers in trenches to be within 25 feet of ladder or sloped entryway.
	DRILLING	⊠ Contractor inspects drill rig daily before use.
$\boxtimes$	Struck By, Run-Over, Caught	☑ Drill rig equipped with operational emergency stop.
	In Between (pinch points), Roll	<ul> <li>☑ Highpressure lines equipped with whip checks.</li> </ul>
	Over, Fluid Leaks	<ul> <li>☑ High visibility vests, hard hats are being worn near the equipment.</li> </ul>
	Underground utilities,	Operators and helpers will maintain a safe distance to moving parts. Individuals working near
	aboveground	moving or rotating parts will secure loose hair, clothing, and equipment.
	⊠ Spills	☑ Drill rigs will only be moved with masts lowered. Masts will be erected with outriggers fully
	See Equipment/Machinery	extended when equipped with outriggers.
		Max. safe slope for rig will be followed, drill rig leveled, appropriate blocking/cribbing as needed.
		Spinning parts of the rig are guarded when possible, no loose clothing being worn near the rig.
		S Follow underground utility clearance procedures.
		Area is surveyed for overhead utilities, safe clearance distance maintained.
		Hearing protection is used when working near the rig.
		Spill equipment is available for fuel and hydraulic fluid leaks.
	DEMOLITION	Develop/implement demolition safety plan
	BLASTING	
	BEASTING	Develop/implement blasting safety plan
44.0		
		DUS ENCLOSED or INDOOR SPACES – CHECK IF NOT APPLICABLE:

	Hydrogen sulfide	<ul> <li>Arrangements for rescue team have been made.</li> </ul>
	Other toxic	
	Combustible dust	□ For entry into a <u>non-permit</u> confined space, see site specific procedures delineated above in "site-
	Electrical	specific comments," or see alternate/attached safety work plan.
	Mechanical, engulfment,	
	entrapment, stored energy	
	ENCLOSED/INDOOR	For indoor use of gasoline/propane/diesel equipment:
	SPACE(S)	Duct exhaust to outdoors, and/or introduce fresh air using ventilation/blowers/fans.
	Outfall, culvert	Perform air monitoring (see section on Air Monitoring)
	Tunnel, shaft, gallery	
	□ Machine/equipment pit/vault	For entry into potentially hazardous indoor or enclosed spaces:
	□ Basement/Sub-basement	□ Ventilate and/or perform air monitoring for anticipated hazards.
	□ Crawl space entry	☐ If space classified as confined space, follow confined space entry requirements (above).
	□ Indoor equipment/drilling

TASK	ACTIVITY:	Hand Augering Collection	for Shallow Soil Sample	Date:		7/18/2014
Project	t Name:	Former Sperry	Remington Site North	<b>Client Na</b>	ame:	Unisys Corporation
Projec	t Number:	MN0832		Geosynt	ec Proj. Mngr.:	Aron Krasnopoler
Projec	t Address:	777 Sourth Ma	in Street, Elmira, New York	Geosynt	ec Proj. Dir.:	Paul Brookner
Task D	Description:	Collect surface analyses	soil samples from 0 to 2 inch	nes below g	ground surface vi	a hand augering for laboratory
A. SUI	MMARY OF S		TASK HAZARD ANALYSIS			
Site-Sp	pecific Comm	nents:				
	Sub-Tasks, A	ctivities	Hazards			Hazard Controls
Task 1:	Mobilize to Site		-Driving -Mobilization to and around unfa facility	amiliar	<ul> <li>Drive carefully to distracted driving.</li> <li>Review scope of</li> </ul>	o facility, be well rested and avoid
Task 2: Locate Soil Sampling Locations Locate sampling locations. Place pin flags at all sampling locations. Boring location will be documented by GPS.			-Slips/trips/falls -Heat/cold stress -Biohazards: snakes, bees, spider, ticks, poison ivy		movement. -Dress for weathe	on to foot placement; slow deliberate r conditions. Apply sunscreen if needed. undings and avoid biohazards.
Task 3: Surface Soil Sampling A decontaminated stainless steel hand auger or hand trowel will be used to collect each near surface soil sample.			-Same hazards noted above for Task 2. -Potential hand and back injuries. -Potential contaminant exposure: VOCs, PCBs, SVOCs		-Same hazard controls noted above for Task 2. -Before entering work area, don level D personal protective equipment (PPE). PPE will include: hard hat, safety glasses, safety vests, steel toe boots, nitrile gloves, and ear plugs or ear muffs. -Wear leather work gloves and safety glasses. -Avoid direct contact with contaminated matrices. -Pay close attention to the sharp edge of steel hand trowel to avoid cutting or other injuries to hands.	
Task 4: Sample Collection, Labeling and Packing Homogenize samples in decontaminated stainless steel or disposable mixing containers. Place the homogenized sample in the laboratory- supplied sample containers and label the bottles. Pack samples in cooler with ice and proper quality assurance			-Potential contaminant exposure PCBs, SVOCs -Back strain when transporting of collected samples packed wit	coolers full	sample material. -Use proper lifting	level D PPE and minimize contact with techniques. Get assistance when ly for containers heavier than 49 lbs.
samples. Task 5: Equipment Decontamination Decontaminate equipment that will be reused (e.g. hand auger, trowel, et. al.)			-Slips, Trips, and Falls -Hand injuries during handling of equipment. -Potential contaminant exposure: VOCs, PCBs, SVOCs -Splash hazards		novement. -Pay close attention to avoid cutting or -Continue to wear water.	on to foot placement; slow deliberate on to the sharp edge of steel hand trowel other injuries of hands. level D PPE and minimize contact with
Task 6: Demobilization Demobilize from Site, making sure all work areas are clean and orderly			-Driving			nd avoid distracted driving. If too e safely back to the office make stay at hotel.

	consultants	Pag			
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)			
$\boxtimes$	WALKING/WORKING	Keep work areas clean, orderly, dispose of trash/debris, maintain sanitary conditions.			
	SURFACES, HOUSEKEEPING	Walkways are cleared of equipment, excavated material, tools and debris, snow			
	<ul> <li>☑ Uneven, rough terrain, riprap</li> <li>☑ Slippery surfaces</li> </ul>	Holes, pits, openings to be covered or otherwise marked or guarded			
	$\Box$ Holes, pits, openings	□ Apply absorbent, salt or sand, for traction/slip resistance on slippery/icy/wet surfaces			
	$\Box$ Puncture, foot hazards	B Wear proper work boots/shoes with ankle support and/or traction, as appropriate for conditions			
$\boxtimes$	TEMPERATURE/WEATHER	☑ Heat/Cold stress are monitored in accordance with Geosyntec procedures EHS 124 & EHS 125			
	Heat Stress	☑ Provide sufficient fluids, shade, breaks, other precautions as appropriate to adderss heat hazards.			
	⊠ Cold Stress	☑ Provide protection from sun (sun screen, shaded brake area).			
	Severe Weather	□ For cold stress, wear multiple layers, protect from wind/wet, frequent break in warm location.			
	⊠ Lightning	□ In high wind, discontinue working at heights (e.g. on ladders, scaffold, aerial lift, similar).			
		Use precautions for lightning, thunderstorm, hale, tornado (monitor weather, "30/30 rule," shelter)			
$\boxtimes$	BIOLOGICAL HAZARDS	Utilize safety practices commensurate with risk of biting/stinging insects, wild/feral/pet animals.			
	⊠ Insects, spiders, ticks	For poisonous plants (poison ivy/oak/sumac/etc.), minimize exposed skin area, wear coveralls, use			
	□ Wild/feral/pet animals	barrier cream/wash (Technu products or similar), as appropriate.			
	Mold, fungi	For biological exposure hazards, use protective measures commensurate with hazard:			
	Poisonous plants	Minor-moderate hazard - use ordinary hygiene practices, protective gloves, hand washing.			
	Bird Guano	□ Moderate-severe hazard - add protective clothing, respirator, decon, as appropriate.			
	□ Infectious, wastewater, sewer	□ Bloodborne pathogen (human infectious agents) - implement "Universal Precautions"			
	□ Bloodborne pathogens				
	HAZARDOUS NOISE	□ Hearing protection is used when exposed to excessive noise levels (greater than 85 dBA over an			
		8-hour work period, or intermittent)			
	OVERHEAD HAZARDS, FALLING OBJECTS	□ Wear hardhat when exposed to overhead hazards, "bump" hazards, falling objects			
	FAELING OBJECTS	□ Cordon off hazard zones, route access/egress around hazards of falling objects			
		□ Secure objects from falling			
		□ Provide overhead protection (canopy) to protect public pedestrians, workers			
	ILLUMINATION	□ Make site-specific arrangements for illumination of work areas and access routes.			
	□ Night work				
	□ Indoor work				
	2. BOATING, WATER, WET LOCATIONS, FLOOD, ETC. – CHECK IF NOT APPLICABLE: 🛛				
Site-S	Specific Comments:				
	WATER HAZARDS	Wear appropriate Coast Guard-approved Personal Flotation Device (PFD)			
	Drowning, hypothermia	□ Bring emergency rescue equipment (ring buoy, reaching device, flares)			
	□ Boat, barge, raft	Use fuel safety practices, fire extinguisher present in boat			
	□ Wading, wetland, mud/silt	□ See site-specific safety comments above.			
	Dam release, flood, tide				
		ON, WORKING ALONE – SPECIAL MEASURES – CHECK IF NOT ANTICIPATED: 🛛			
Site-S	Specific Comments:				
	PERSONAL SECURITY, HIGH	🗆 Englas, standard ar secutions, which may include, conclust work, only during devilopt hours, we			
	CRIME AREA	Employ standard precautions, which may include: conduct work only during daylight hours, use buddy system, avoid parking in secluded location, lock vehicles, hide valuable items in vehicles			
		from plain view			
		□ See site-specific safety comments above for project-specific security measures.			
	PUBLIC AT RISK, SITE	□ Provide safe pedestrian route around work areas, use appropriate barriers, signs, warning devices.			
	SECURITY	□ Provide covers over excavation, secure fencing, overnight protection			
		□ Provide protection from overhead hazards (canopy, etc.) where public at risk of overhead hazards			
		Provide secure locked storage of hazardous chemicals, hazardous equipment, etc.			
	WORKING ALONE	Establish "check in" procedure with supervisor or project manager (arrival, mid-day, departure)			
		Additional measures, as appropriate for the working conditions.			
		RTATION HAZARDS – CHECK IF NOT APPLICABLE:			
Site-S	Specific Comments:				
	DRIVING HAZARDS	Use routine safe/defensive driving practices (seat belts, safe speeds, eyes ahead, no tailgating,			
$\boxtimes$	⊠ Routine work travel	limit distractions, no texting, safe cell phone use, clear windows, account for weather/road			
		conditions, adequate sleep, other measures as appropriate).			
	□ Unfamiliar location □ Unfamiliar vehicle	conditions, adequate sleep, other measures as appropriate).			

	consultants		Page		
	HAZARD	HAZARD CONTROLS (check all that apply and o	comment as required)		
$\boxtimes$	WORKERS EXPOSED TO	☑ Workers to wear reflective vests where exposed to traffic hazards.			
	TRAFFIC HAZARDS	☑ Where possible, park vehicles as protective shield from oncoming traffic.			
	☑ In/near public or private	☑ Configure work area and support vehicles to minimize worker exposure to traffic hazards.			
	roadway	□ DOT signal devices will be used to re-route vehicles around work area, site entrances/exits.			
	Parking lot, driveway	□ Flaggers will be used and have DOT Flagger Training; police detail where appropriate or requ			
	Worksite, construction site	<ul> <li>Park vehicles in secure location away from heavy equipment use or other site operations.</li> </ul>			
	traffic	□ Mark temporary roadways clearly, provide berm			
	RAILROAD/AIRPORT HAZARD				
	KAILKOAD/AIKFORT HAZARD	Coordinate with rail company/airport and implem			
		□ Site workers to receive safety training for railroa			
	OFF-ROAD DRIVING, USE OF	□ For off road driving, do not exceed capability of v	vehicle		
	ALL-TERRAIN VEHICLE	□ Follow ATV specific procedures for training, safe	ety equipment, operation.		
	TRANSPORTING MATERIALS,	Ensure load is firmly secured (rope, straps, load	configuration) to prevent shifting during travel.		
	TOWING/HAULING LOADS	For trailer use, verify signal/braking lights operat	ional, rear-view mirrors effective, hitch/safety		
		chains secure.			
5 U	TILITY-RELATED HAZARDS (f	or underground/overhead work) – CHECK IF N			
	Specific Comments:				
Sile-C	specific comments.				
	OVERHEAD UTILITIES	□ Maintain proper alegrance, amploy other approp	rioto proceutions for the conditions		
	OVERHEAD OTHERTIES	□ Maintain proper clearance, employ other approp	male precautions for the conditions.		
	UNDERGROUND UTILITIES		ce procedures have been completed prior to ground		
		penetrations, and employ other utility clearance			
0.51					
	ECTRICAL HAZARDS – CHEC	K IF NOT APPLICABLE:			
Site-S	Specific Comments:				
	1				
	WORKERS EXPOSED TO:	DSED TO: Implement electrical safe work practices commensurate with the work to be performed, pertaining			
	□ Voltage < 50 v	to the following (as applicable):			
	□ Voltage 50-600v	<ul> <li>Worker training/qualification</li> </ul>			
	□ Voltage > 600v	<ul> <li>Electrical equipment and hazards, safe design features</li> </ul>			
	□ AC □ DC □ 3-phase	- Electrical safe work practices			
	$\Box$ Battery and/or solar power	- Grounding, use of GFCIs			
	□ Capacitor/Transformer	<ul> <li>Electrical equipment installation, operation, maintenance, repair</li> <li>Arc flash protection</li> </ul>			
		<ul> <li>Electrical equipment diagnostics</li> </ul>			
	BASIC ELECTRICAL	Control water-related hazards, in a manner appr	opriate for the job tasks/equipment/tool		
	HAZARDS	□ Use extension cords/power cords properly, prev			
	Equipment/tool use/operation	□ Inspect tool/equipment/extension cords/power c	• •		
	□ Use of extension cords	□ Use GFCI-protected outlet or portable GFCI in w			
		□ Ensure live parts are guarded, enclosures secur	e.		
		Enclosures, circuits properly labeled.			
	LOCKOUT/TAGOUT OF		s (lockout/tagout), provide lockout/tagout locks and		
	ELECTRICAL ENERGY	devices, training workers, designate "authorized" po	ersonnel, notify "affected" personnel		
7. F/	ALL HAZARDS – CHECK IF NO	DT ANTICIPATED: 🖂			
Site-S	Specific Comments:				
	WORKING AT HEIGHTS	Ensure guardrails present	Use fall protection net		
	Roof, skylight	Use personal fall apparatus (PFA)	□ Restrict access beneath work to protect other		
	Elevated platform	□ Use tether or positioning device	site personnel from overhead hazards		
	□ Holes, side opening	□ Restrict access to hazard (barriers, tape, sign)	□ Install caps on protruding rebar		
	□ Retaining wall, cliff, ledge				
	$\Box$ Trench, excavation	Ensure covers in place over holes     Wetch percept			
	-	Watch person			
	Protruding rebar				
	LADDERS / STAIRS	Provide instruction/review pertaining to safe lad			
	Extension ladders	<ul> <li>Extension ladders are properly footed, secured,</li> </ul>	setup at proper angle		
	Step ladders	□ Stepladders are set on level ground or properly shimmed with spreaders locked.			
	Fixed ladders	□ Stairs have proper rise over run and stairs >4 st	-		
	□ Stairs	<ul> <li>Otalis have proper use over run and statis 24 steps of 4 have guardians.</li> <li>Never use a step ladder as a straight ladder. All straight ladders shall be extended three rungs</li> </ul>			
1		past leading edge. Never use metal ladders while working with electricity.			

,	Page <b>5</b> o		

HAZARD		HAZARD CONTROLS (check all that apply and comment as required)
	AERIAL LIFT	Operators are sufficiently trained, experienced and qualified.
	Scissor lift	Equipment is inspected after mobilization and is in good condition.
	Extensible boom	□ Harness & Lanyard worn whenever operating the lift (scissor lifts may be excepted)
	Articulated boom	Overhead and surface obstructions are reviewed with operators prior to use.
	Vertical Lift ("Genie")	
	SCAFFOLD	□ Identify/coordinate operations with competent person
	Supported scaffold	□ Supported scaffold level, stable, proper attachments, tiebacks, planking,
	Suspended scaffold	□ Suspended scaffolds anchored properly
	□ Free-standing/mobile scaffold	□ Guardrails present above 10 feet or personal fall apparatus used.
	_	□ Proper means of accessing scaffold (proper ladders, stair tower).
		□ Total height of free-standing scaffold not to exceed four times the minimum base dimension.
8. TC	DOLS, EQUIPMENT, MACHINE	RY – CHECK IF NOT APPLICABLE:
	Specific Comments:	
	-	
$\boxtimes$	HAND TOOLS	oxtimes Use proper tool for the job, maintain tools in good condition (no damage, cutting tools sharp,
	Eye injury, puncture/bruise/	etc.) use appropriate PPE for hand/eye/body protection, plan for safe "follow through" motion, use
	laceration hazard	vise/clamp/work surface to hold/stabilize work piece
	POWER TOOLS	□ For all power tools:
	Eye/hand/body injury	<ul> <li>Inspect tools to ensure safe operating condition before each use.</li> </ul>
	Fuel-related hazards	<ul> <li>Use tool in accordance with manufacturer's specifications.</li> </ul>
	$\Box$ Inhalation hazard	<ul> <li>Use PPE or other safety practices, as appropriate, for eye/hearing/hand/head/body protection</li> <li>Provide training or verify operator qualification for use of power tool.</li> </ul>
	□ Noise	<ul> <li>Stay clear of hazard zone, "line of fire" when working near where power tools are used.</li> </ul>
	Sparks, heat, fire hazard	Use safety practices for refueling, fuel handling/transport/storage.
	Electrical hazards	Use respirators, ventilation, wet methods, other appropriate means to control inhalation hazard.
		□ For spark/heat generating tool, control fire hazards, segregate combustible/flammable materials.
		□ For electrical hazards, see # 6, "Electrical Hazards".
	WELDING, CUTTING	☐ Hot work permit system to be implemented.
	□ Gas welding/cutting	□ Operator properly protected (eye protection, clothing, apron, etc.)
	□ Arc welding/cutting	□ Fire hazard controls (watcher, fire extinguisher, water, isolate combustibles)
	0 0	□ Protect nearby personnel from hazardous UV, IR light (shielding, curtain)
		□ Electrical safe work practices for arc welding
		□ Gas cylinder safe practices (secured, upright, caps on when not in use, prevent damage).
	EQUIPMENT/MACHINERY	U Working Near Equipment/Machinery
	Point-of-operation hazards	□ Work at safe distance/restrict access, ensure guards in place, heed warning signs
	$\Box$ Pinch points, moving parts	□ Implement measures necessary for adequate illumination
	□ 'Struck-by,' 'caught between'	□ Control exposue to emission/discharge gases (ventilation, PPE, other means).
	□ Hot surfaces, heat	□ Ensure safe practices for fuels/fluids/machine-related hazardous materials
	Extension cords, flexible wire	□ Use PPE or other safety practices for eye/hearing/hand/head/body protection
	Fuel related (gas or liquid)	□ Segregate combustible materials from hot surfaces/hot exhaust (minimum 3 feet)
	□ Hydraulic pressure	Operation/Maintenance/Repair of Equipment/Machinery (see applicable control measures above)
	Compressed air/gas	□ Orient/locate equipment for safe access during operation and maintenance
	□ Kinetic, stored energy	□ Use equipment/machinery in accordance with manufacturer's specifications
	□ Noise	□ Use safe lifting practices, minimize repetitive motion hazards
	Lockout/tagout	Ensure point-of-operation, mechanical power transmission, other moving parts are guarded
	Emissions, discharge gases	with protective devices; do not override interlocks, guards, protective devices
	□ Working at heights, falls	Secure long hair/loose clothing/hanging jewelry near moving/rotating parts
	□ Lifting, repetitive motion	Ensure appropriate warning signs are in place and heeded
	Illumination	□ Use safe practices for fueling, fuel transport & storage.
	□ Electrical (see below)	Operate fuel-powered equipment in well ventilated location.
		□ Incorporate safety provisions/safe work practices for compressed air, pressurized systems
		(pneumatic/hydraulic), stored energy
		Implement control-of-hazardous-energy practices (lockout/tagout), designate "authorized"
		personnel, notify "affected" personnel
		□ Protect from fall hazards (safe ladder use, personal fall protection, guardrails, other)
	ELECTRICAL HAZARDS	□ Implement provisions of # 6, "Electrical Hazards"
9. M	ANUAL MATERIAL HANDLING	G, MATERIAL STORAGE – CHECK IF NOT APPLICABLE: 🗆

HAZARD		HAZARD CONTROLS (check all that apply and comment as required)			
Site-S	Site-Specific Comments:				
$\boxtimes$	LIFTING / ERGONOMIC	☑ Use proper manual lifting techniques (straight back, bend at knees, firm grasp, firm footing).			
	Musculoskeletal strain,	Seek assistance for lifting heavy objects (>50 lbs.)			
	repetitive motion injury	Use mechanical lifting equipment to reduce manual material handling hazard			
		For repetitive motion activities, take breaks, switch hands, share task with others, employ other			
		safe practices appropriate for the specific task(s).			
	STORAGE OF MATERIALS	□ Store materials in stable manner that prevents tipping, sliding, rolling, falling over.			
		□ Materials stored in tiers to be stacked, racked, blocked, interlocked or otherwise secured to prevent			
		sliding, falling or collapse			
		□ Do not exceed load limits of racks, platform; ensure racks are stable, robust, secure			
		□ On scaffold, do not store materials in excess of supplies needed for immediate use			
	See Sect. 12 for Chemical	□ Ensure stored materials do not block aisles, passageways			
	Storage	□ For used lumber, remove nails before stacking, and stack to be stable and self supporting, no			
		higher than 20 feet (or 16 feet if lumber is to be handled manually)			
		□ Debris will be removed regularly from storage area and place in designated area or disposed.			
10. 0	CONSTRUCTION OPERATION	S, HEAVY EQUIPMENT, HEAVY VEHICLES – CHECK IF NOT ANTICIPATED: 🛛			
Site-S	Specific Comments:				
	HEAVY EQUIPMENT;	Trained/qualified persons operate all heavy equipment.			
	CONSTRUCTION VEHICLES	□ No passengers on moving/operating equipment except where passenger seat/restraint is present.			
	Hazards: Struck By, Run-Over,	□ Equipment inspected upon mobilization and daily; maintained in good repair, backup alarms			
	Caught In Between (pinch	□ All leaks or defective safety equipment will be repaired before use.			
	points), Roll Over, Fluid Leaks	Operators required to use seatbelts.			
		Eye contact with operator and use of hand signals prior to approaching near equipment.			
		<ul> <li>☐ High visibility vests are required of all personnel in work area.</li> </ul>			
		<ul> <li>☐ Max. safe slope for each vehicle will be followed.</li> </ul>			
		<ul> <li>Personnel to stay clear of swing radius of equipment.</li> </ul>			
		□ Spill equipment available for fuel and hydraulic fluid leaks.			
		□ Equipment locked, secured, brakes set, buckets/forks lowered, when not in use.			
	ODANES	In addition to concrete afety prostions for boow on viewant (above) as anylighter			
	CRANES	In addition to general safety practices for heavy equipment (above), as applicable:			
	Overhead hazards – utility lines, swing radius, falling objects,	□ Only qualified persons operate cranes (certificate required).			
	wire ropes and hoisting	□ A Critical Lift Plan & Checklist prepared/executed (HS 506) prior to mobilization.			
	equipment	□ Equipment will be inspected prior to mobilization and a Crane Pre-Operational Safety Checklist			
	□ Overbalancing – high winds,	(see EHS 506) will be completed and signed by crane operator.			
	outrigger placement,	□ Crane operator will remain at the controls at all times during operation.			
	overloading, safe slope	□ Crane operation must be performed under the direction of an appointed signal person at all times.			
	□ Struck By, Run-Over, Caught	Communication between crane operator and signal person will be maintained through standard			
	In Between (pinch points), Roll	hand signals or voice communication equipment. Radio equipment, if used, will be equipped with a dedicated channel.			
	Over, Fluid Leaks	Lifting or lowering will not exceed 100ft/minute. Lowering must be controlled i.e. no free fall.			
		□ Stop work will be issued whenever hoisting equipment is exposed to high winds.			
		□ Outriggers will be fully extended/locked with a firm footing within the maximum safe slope (<1%).			
		□ Crane to be on level, stable base, dunnage used when necessary.			
		□ Total weight of load not to exceed 50% of rated capacity for the crane radius and configuration.			
		□ Rigging procedures – see Hoisting, Lifting, Rigging, below.			
		□ Suspended personnel lifting is prohibited (unless per approved "man-lift" equipment).			
		□ No personnel permitted beneath suspended loads.			
	HOISTING, LIFTING, RIGGING	□ Identify, coordinate with competent person.			
	Crane	□ Rigging directly to the forks of a lull, forklift, or front loader equipped forks is prohibited.			
	Drill rig	Do not exceed loading limits of equipment.			
	Loader, excavator, etc.	□ A Critical Lift Checklist (see EHS 506) will be completed and signed prior to crane mobilization.			
	Mechanical, electrical hoist	□ Rigging, wire rope and hoisting equipment will be inspected and maintained on a weekly basis.			
		□ Crane hooks will be equipped with safety latches.			
	FORKLIFT	In addition to general safety practices for heavy equipment (above), as applicable:			
	Hazards: Struck By, Run-Over,	□ Qualified operater, per established forklift training (certificate is required)			
	Caught In Between (pinch	□ Equipment inspected daily and documented on Forklift Preoperation Inspection Checklist			
	points), Roll Over, Fluid Leaks	<ul> <li>Operators required to use seatbelts, and adhere to safe operating procedures.</li> </ul>			
1		🗀 operators required to use seatuells, and adhere to sale operating procedures.			

Page	7	of	9
i aye		UI.	J

		Pa
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
		□ Do not exceed lifting load limits.
		□ Forklift shall not be moved/driven with empty forks in raised position.
		□ When not in use, forks lowered, brake set, controls in neutral, key removed.
	EXCAVATION/TRENCHING	Activities under supervision/oversight of competent person
	$\Box$ Max Depth $\geq$ 20'	$\Box$ Sloping & shoring for excavations $\geq$ 20' are approved by a professional engineer
	$\Box$ Max Depth $\geq$ 5'	$\Box$ Sloping & shoring for excavations $\geq$ 5' when persons are exposed to cave-in.
	☐ Max Depth <5' with potential	□ Sloping & shoring for shallow (<5') excavations with cave-in hazard
	cave-in hazard	$\Box$ Excavations $\geq$ 4' are classified as a non-permit confined space
	Potential permit-required	$\Box$ Excavations $\geq$ 4' are classified as Alternate Entry or Permit-Required (see confined space)
	confined space at depth $\geq$ 4'	□ Implement underground utility clearance procedures.
	Underground utilities	□ Hand digging within 3' of utility locations.
	Overhead utilities	□ Excavations to be protected by perimeter fencing (not barricade tape)
	Structures/foundations	□ Use trench boxes in accordance with proper procedures.
	Falls into excavations	□ Workers in trenches to be within 25 feet of ladder or sloped entryway.
	DRILLING	□ Contractor inspects drill rig daily before use.
	□ Struck By, Run-Over, Caught	Drill rig equipped with operational emergency stop.
	In Between (pinch points), Roll	□ Highpressure lines equipped with whip checks.
	Over, Fluid Leaks	□ High visibility vests, hard hats are being worn near the equipment.
	Underground utilities, aboveground	□ Operators and helpers will maintain a safe distance to moving parts. Individuals working near
		moving or rotating parts will secure loose hair, clothing, and equipment.
	□ See Equipment/Machinery	□ Drill rigs will only be moved with masts lowered. Masts will be erected with outriggers fully
		extended when equipped with outriggers.
		□ Max. safe slope for rig will be followed, drill rig leveled, appropriate blocking/cribbing as needed.
		□ Spinning parts of the rig are guarded when possible, no loose clothing being worn near the rig.
		□ Follow underground utility clearance procedures.
		□ Area is surveyed for overhead utilities, safe clearance distance maintained.
		□ Hearing protection is used when working near the rig.
		□ Spill equipment is available for fuel and hydraulic fluid leaks.
	DEMOLITION	Develop/implement demolition safety plan
	BLASTING	Develop/implement blasting safety plan
		DUS ENCLOSED or INDOOR SPACES – CHECK IF NOT APPLICABLE:
Site-S	Specific Comments:	
	CONFINED SPACE(S)	□ For personnel working near confined spaces:
	Permit required	<ul> <li>Confined spaces have been identified, labeled.</li> </ul>
	Non-permit required	<ul> <li>Communication system in place to prevent unauthorized entry.</li> </ul>
	Potential/actual hazards:	E Francisco V and the Constant and the second
	Atmospheric hazards:	□ For permit-required confined space entry, see separate entry permit.
	Flammable/explosive	<ul> <li>All entrants, attendants, supervisors are trained/qualified.</li> <li>Hazards properly characterized</li> </ul>
	Oxygen deficiency	<ul> <li>Necessary equipment for safe entry utilized (access, retrieval, air monitoring)</li> </ul>
	Hydrogen sulfide	<ul> <li>Arrangements for rescue team have been made.</li> </ul>
	Other toxic	
	Combustible dust	□ For entry into a <u>non-permit</u> confined space, see site specific procedures delineated above in "site-
	Electrical	specific comments," or see alternate/attached safety work plan.
	Mechanical, engulfment,	
	entrapment, stored energy	
	ENCLOSED/INDOOR	For indoor use of gasoline/propane/diesel equipment:
	SPACE(S)	□ Duct exhaust to outdoors, and/or introduce fresh air using ventilation/blowers/fans.
	Outfall, culvert	Perform air monitoring (see section on Air Monitoring)
	Tunnel, shaft, gallery	
	□ Machine/equipment pit/vault	For entry into potentially hazardous indoor or enclosed spaces:
	Basement/Sub-basement	Ventilate and/or perform air monitoring for anticipated hazards.
	□ Crawl space entry	□ If space classified as confined space, follow confined space entry requirements (above).
	Indoor equipment/drilling

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)				
1. PI	REMISES/ENVIRONMENTAL H	IAZARDS				
Site-S	Site-Specific Comments:					
	LOCATION HAZARDS  Outdoor field work  Urban, suburban  Rural, remote location  Indoor field work  Operating facility Vacant facility Water hazards	<ul> <li>Use routine safety precautions commensurate with routine work environment conditions</li> <li>For non-routine, unique, or severe location hazards, see site-specific safety comments above.</li> <li>For water-related work, see #2, "Water Hazards"</li> <li>For worksite violence/security risks, see #3, "Violence, Security, Working Alone"</li> <li>For transportation related hazards, see #5, "Worksite Traffic, Vehicle, Transportation Hazards"</li> <li>For utility-related hazards, see # 6, "Utility-Related Hazards</li> <li>For atmospheric hazards in enclosed, indoor, or confined spaces, see # 11 "Confined Spaces or Hazardous Enclosed/Indoor Spaces"</li> </ul>				

	Pag				
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)			
$\boxtimes$	WALKING/WORKING	Keep work areas clean, orderly, dispose of trash/debris, maintain sanitary conditions.			
لالك	SURFACES, HOUSEKEEPING	☑ Walkways are cleared of equipment, excavated material, tools and debris, snow			
	⊠ Uneven, rough terrain, riprap	□ Holes, pits, openings to be covered or otherwise marked or guarded			
	<ul> <li>☑ Slippery surfaces</li> <li>□ Holes, pits, openings</li> </ul>	□ Apply absorbent, salt or sand, for traction/slip resistance on slippery/icy/wet surfaces			
	$\square$ Puncture, foot hazards	Wear proper work boots/shoes with ankle support and/or traction, as appropriate for conditions			
	TEMPERATURE/WEATHER	☐ Heat/Cold stress are monitored in accordance with Geosyntec procedures EHS 124 & EHS 125			
$\square$	⊠ Heat Stress	Provide sufficient fluids, shade, breaks, other precautions as appropriate to adderss heat hazards.			
	⊠ Cold Stress	☑ Provide protection from sun (sun screen, shaded brake area).			
	Severe Weather	□ For cold stress, wear multiple layers, protect from wind/wet, frequent break in warm location.			
	⊠ Lightning	□ In high wind, discontinue working at heights (e.g. on ladders, scaffold, aerial lift, similar).			
		☑ Use precautions for lightning, thunderstorm, hale, tornado (monitor weather, "30/30 rule," shelter)			
$\boxtimes$	BIOLOGICAL HAZARDS	☑ Utilize safety practices commensurate with risk of biting/stinging insects, wild/feral/pet animals.			
	Insects, spiders, ticks	Series For poisonous plants (poison ivy/oak/sumac/etc.), minimize exposed skin area, wear coveralls, use			
	□ Wild/feral/pet animals	barrier cream/wash (Technu products or similar), as appropriate.			
	🗆 Mold, fungi	For biological evenesure bezarde, use protective measures commensurate with bezard:			
	⊠ Poisonous plants	For biological exposure hazards, use protective measures commensurate with hazard: ⊠ Minor-moderate hazard - use ordinary hygiene practices, protective gloves, hand washing.			
	□ Bird Guano	□ Moderate-severe hazard - add protective clothing, respirator, decon, as appropriate.			
	□ Infectious, wastewater, sewer	□ Bloodborne pathogen (human infectious agents) - implement "Universal Precautions"			
	□ Bloodborne pathogens				
	HAZARDOUS NOISE	□ Hearing protection is used when exposed to excessive noise levels (greater than 85 dBA over an			
		8-hour work period, or intermittent)			
	OVERHEAD HAZARDS,	Wear hardhat when exposed to overhead hazards, "bump" hazards, falling objects			
	FALLING OBJECTS	□ Cordon off hazard zones, route access/egress around hazards of falling objects			
		□ Secure objects from falling			
		Provide overhead protection (canopy) to protect public pedestrians, workers			
	ILLUMINATION	□ Make site-specific arrangements for illumination of work areas and access routes.			
	Night work				
	Indoor work				
2. B	OATING, WATER, WET LOCA [.]	TIONS, FLOOD, ETC. – CHECK IF NOT APPLICABLE: 🖂			
	Specific Comments:				
	WATER HAZARDS	Wear appropriate Coast Guard-approved Personal Flotation Device (PFD)			
	Drowning, hypothermia	□ Bring emergency rescue equipment (ring buoy, reaching device, flares)			
	Boat, barge, raft	Use fuel safety practices, fire extinguisher present in boat			
	Wading, wetland, mud/silt	□ See site-specific safety comments above.			
	Dam release, flood, tide				
		ON, WORKING ALONE – SPECIAL MEASURES – CHECK IF NOT ANTICIPATED: 🗆			
Site-S	Specific Comments:				
	PERSONAL SECURITY, HIGH	Employ standard precautions, which may include: conduct work only during daylight hours, use			
	CRIME AREA	buddy system, avoid parking in secluded location, lock vehicles, hide valuable items in vehicles			
		from plain view			
		□ See site-specific safety comments above for project-specific security measures.			
	PUBLIC AT RISK, SITE	□ Provide safe pedestrian route around work areas, use appropriate barriers, signs, warning devices.			
	SECURITY	□ Provide covers over excavation, secure fencing, overnight protection			
		□ Provide protection from overhead hazards (canopy, etc.) where public at risk of overhead hazards			
		Provide secure locked storage of hazardous chemicals, hazardous equipment, etc.      Establish "sheek is" precedure with superviser or preiset menager (arrival mid day, departure)			
$\boxtimes$	WORKING ALONE	<ul> <li>Establish "check in" procedure with supervisor or project manager (arrival, mid-day, departure)</li> <li>Additional measures, as appropriate for the working conditions.</li> </ul>			
4. DI	RIVING, TRAFFIC, TRANSPOR	RTATION HAZARDS – CHECK IF NOT APPLICABLE:			
	Specific Comments:				
	DRIVING HAZARDS	☐ Use routine safe/defensive driving practices (seat belts, safe speeds, eyes ahead, no tailgating,			
$\boxtimes$		limit distractions, no texting, safe cell phone use, clear windows, account for weather/road			
	Routine work travel	conditions, adequate sleep, other measures as appropriate).			
	Unfamiliar location	☑ Plan travel route before driving (assemble maps, enter destination in GPS).			
	Unfamiliar vehicle	□ Familiarize yourself with vehicle operational controls before operating unfamiliar vehicle.			
1	Overnight travel, distance				

	consultants		Page
	HAZARD	HAZARD CONTROLS (check all that apply and o	comment as required)
$\boxtimes$	WORKERS EXPOSED TO	Workers to wear reflective vests where exposed	to traffic hazards.
	TRAFFIC HAZARDS	Where possible, park vehicles as protective shields	ld from oncoming traffic.
	☑ In/near public or private	S Configure work area and support vehicles to mir	nimize worker exposure to traffic hazards.
	roadway	DOT signal devices will be used to re-route vehi	cles around work area, site entrances/exits.

		□ Site workers to receive safety training for railroa	
	OFF-ROAD DRIVING, USE OF	□ For off road driving, do not exceed capability of v	vehicle
	ALL-TERRAIN VEHICLE	□ Follow ATV specific procedures for training, safe	ety equipment, operation.
	TRANSPORTING MATERIALS,	Ensure load is firmly secured (rope, straps, load	configuration) to prevent shifting during travel.
	TOWING/HAULING LOADS	For trailer use, verify signal/braking lights operat	ional, rear-view mirrors effective, hitch/safety
		chains secure.	
5 U		or underground/overhead work) – CHECK IF N	
	Specific Comments:		
Sile-C	specific comments.		
	OVERHEAD UTILITIES	□ Maintain proper clearance, employ other approp	riate procestions for the conditions
	OVERTIERD OTTETTES		
	UNDERGROUND UTILITIES	Confirm appropriate underground utility clearance	e procedures have been completed prior to ground
		penetrations, and employ other utility clearance	
6 EI	ECTRICAL HAZARDS – CHEC		
Site-S	Specific Comments:		
	WORKERS EXPOSED TO:	□ Implement electrical safe work practices comme	insurate with the work to be performed, pertaining
	□ Voltage < 50 v	to the following (as applicable):	
	□ Voltage 50-600v	<ul> <li>Worker training/qualification</li> </ul>	logian faaturaa
	□ Voltage > 600v	<ul> <li>Electrical equipment and hazards, safe d</li> <li>Electrical safe work practices</li> </ul>	lesigniteatures
	🗆 AC 🗆 DC 🗆 3-phase	- Grounding, use of GFCIs	
	Battery and/or solar power	<ul> <li>Electrical equipment installation, operation</li> </ul>	on, maintenance, repair
	Capacitor/Transformer	<ul> <li>Arc flash protection</li> </ul>	
		<ul> <li>Electrical equipment diagnostics</li> </ul>	
	BASIC ELECTRICAL	Control water-related hazards, in a manner appr	opriate for the job tasks/equipment/tool.
	HAZARDS	□ Use extension cords/power cords properly, prev	ent damage, take out of service if damaged.
	Equipment/tool use/operation	□ Inspect tool/equipment/extension cords/power c	ords before each use.
	Use of extension cords	□ Use GFCI-protected outlet or portable GFCI in w	
		□ Ensure live parts are guarded, enclosures secur	
		□ Enclosures, circuits properly labeled.	
	LOCKOUT/TAGOUT OF		
	ELECTRICAL ENERGY		s (lockout/tagout), provide lockout/tagout locks and
		devices, training workers, designate "authorized" po	ersonner, notify anected personner
	ALL HAZARDS – CHECK IF NO	DT ANTICIPATED: 🛛	
Site-S	Specific Comments:		
	WORKING AT HEIGHTS	Ensure guardrails present	Use fall protection net
_	Roof, skylight	Use personal fall apparatus (PFA)	Restrict access beneath work to protect other
	Elevated platform	Use tether or positioning device	site personnel from overhead hazards
	Holes, side opening	□ Restrict access to hazard (barriers, tape, sign)	Install caps on protruding rebar
	Retaining wall, cliff, ledge	Ensure covers in place over holes	
	□ Trench, excavation	□ Watch person	
	Protruding rebar		
	LADDERS / STAIRS	Provide instruction/review pertaining to safe lad	der use
	Extension ladders	<ul> <li>Extension ladders are properly footed, secured,</li> </ul>	
	□ Step ladders		
	□ Fixed ladders	□ Stepladders are set on level ground or properly	-
		□ Stairs have proper rise over run and stairs >4 si	
	□ Stairs	Never use a step ladder as a straight ladder. All past leading edge. Never use metal ladders while	

	HAZARD	Page Page Page Page Page Page Page Page
	AERIAL LIFT	<ul> <li>Operators are sufficiently trained, experienced and qualified.</li> </ul>
	Scissor lift	Equipment is inspected after mobilization and is in good condition.
	Extensible boom	□ Harness & Lanyard worn whenever operating the lift (scissor lifts may be excepted)
	Articulated boom	□ Overhead and surface obstructions are reviewed with operators prior to use.
	Vertical Lift ("Genie")	
	SCAFFOLD	□ Identify/coordinate operations with competent person
	Supported scaffold	□ Supported scaffold level, stable, proper attachments, tiebacks, planking,
	Suspended scaffold	□ Suspended scaffolds anchored properly
	□ Free-standing/mobile scaffold	□ Guardrails present above 10 feet or personal fall apparatus used.
	-	□ Proper means of accessing scaffold (proper ladders, stair tower).
		□ Total height of free-standing scaffold not to exceed four times the minimum base dimension.
8. TC	OOLS, EQUIPMENT, MACHINE	RY – CHECK IF NOT APPLICABLE: 🗆
Site-S	pecific Comments: May use hand	tools to open monitoring wells
_	HAND TOOLS	☑ Use proper tool for the job, maintain tools in good condition (no damage, cutting tools sharp,
$\boxtimes$	Eye injury, puncture/bruise/	etc.) use appropriate PPE for hand/eye/body protection, plan for safe "follow through" motion, use
	laceration hazard	vise/clamp/work surface to hold/stabilize work piece
]	POWER TOOLS	□ For all power tools:
$\Box$	Eye/hand/body injury	<ul> <li>Inspect tools to ensure safe operating condition before each use.</li> </ul>
	Fuel-related hazards	<ul> <li>Use tool in accordance with manufacturer's specifications.</li> </ul>
	$\square$ Inhalation hazard	- Use PPE or other safety practices, as appropriate, for eye/hearing/hand/head/body protection
		<ul> <li>Provide training or verify operator qualification for use of power tool.</li> </ul>
	□ Sparks, heat, fire hazard	- Stay clear of hazard zone, "line of fire" when working near where power tools are used.
	Electrical hazards	□ Use safety practices for refueling, fuel handling/transport/storage.
		Use respirators, ventilation, wet methods, other appropriate means to control inhalation hazard.
		□ For spark/heat generating tool, control fire hazards, segregate combustible/flammable materials.
		□ For electrical hazards, see # 6, "Electrical Hazards".
	WELDING, CUTTING	□ Hot work permit system to be implemented.
	□ Gas welding/cutting	□ Operator properly protected (eye protection, clothing, apron, etc.)
	□ Arc welding/cutting	□ Fire hazard controls (watcher, fire extinguisher, water, isolate combustibles)
		Protect nearby personnel from hazardous UV, IR light (shielding, curtain)
		Electrical safe work practices for arc welding
		$\Box$ Gas cylinder safe practices (secured, upright, caps on when not in use, prevent damage).
	EQUIPMENT/MACHINERY	<u>Working Near Equipment/Machinery</u>
	Point-of-operation hazards	$\Box$ Work at safe distance/restrict access, ensure guards in place, heed warning signs
	$\Box$ Pinch points, moving parts	Implement measures necessary for adequate illumination
	'Struck-by,' 'caught between'	□ Control exposue to emission/discharge gases (ventilation, PPE, other means).
	$\Box$ Hot surfaces, heat	Ensure safe practices for fuels/fluids/machine-related hazardous materials
	$\Box$ Extension cords, flexible wire	□ Use PPE or other safety practices for eye/hearing/hand/head/body protection
	Fuel related (gas or liquid)	Segregate combustible materials from hot surfaces/hot exhaust (minimum 3 feet)
	Hydraulic pressure	Operation/Maintenance/Repair of Equipment/Machinery (see applicable control measures above)
	Compressed air/gas	□ Orient/locate equipment for safe access during operation and maintenance
	Kinetic, stored energy	Use equipment/machinery in accordance with manufacturer's specifications
	□ Noise	□ Use safe lifting practices, minimize repetitive motion hazards
	Lockout/tagout	Ensure point-of-operation, mechanical power transmission, other moving parts are guarded
	Emissions, discharge gases	with protective devices; do not override interlocks, guards, protective devices
	Working at heights, falls	□ Secure long hair/loose clothing/hanging jewelry near moving/rotating parts
	□ Lifting, repetitive motion	Ensure appropriate warning signs are in place and heeded
		$\Box$ Use safe practices for fueling, fuel transport & storage.
	□ Electrical (see below)	Operate fuel-powered equipment in well ventilated location.
		□ Incorporate safety provisions/safe work practices for compressed air, pressurized systems
		(pneumatic/hydraulic), stored energy
		□ Implement control-of-hazardous-energy practices (lockout/tagout), designate "authorized"
		personnel, notify "affected" personnel
		□ Protect from fall hazards (safe ladder use, personal fall protection, guardrails, other)
	ELECTRICAL HAZARDS	Implement provisions of # 6, "Electrical Hazards"
9. M	ANUAL MATERIAL HANDLING	G, MATERIAL STORAGE – CHECK IF NOT APPLICABLE: 🛛

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
Site-S	pecific Comments:	
	LIFTING / ERGONOMIC	□ Use proper manual lifting techniques (straight back, bend at knees, firm grasp, firm footing).
	Musculoskeletal strain, repetitive motion injury	□ Seek assistance for lifting heavy objects (>50 lbs.)
	repetitive motion injury	Use mechanical lifting equipment to reduce manual material handling hazard
		□ For repetitive motion activities, take breaks, switch hands, share task with others, employ other
		safe practices appropriate for the specific task(s).
	STORAGE OF MATERIALS	□ Store materials in stable manner that prevents tipping, sliding, rolling, falling over.
		□ Materials stored in tiers to be stacked, racked, blocked, interlocked or otherwise secured to prevent
		sliding, falling or collapse
		Do not exceed load limits of racks, platform; ensure racks are stable, robust, secure
		□ On scaffold, do not store materials in excess of supplies needed for immediate use
	See Sect. 12 for Chemical	□ Ensure stored materials do not block aisles, passageways
	Storage	□ For used lumber, remove nails before stacking, and stack to be stable and self supporting, no
		higher than 20 feet (or 16 feet if lumber is to be handled manually)
10 0		Debris will be removed regularly from storage area and place in designated area or disposed.
		S, HEAVY EQUIPMENT, HEAVY VEHICLES – CHECK IF NOT ANTICIPATED: 🖂
Site-S	pecific Comments:	
	HEAVY EQUIPMENT; CONSTRUCTION VEHICLES	□ Trained/qualified persons operate all heavy equipment.
	Hazards: Struck By, Run-Over,	□ No passengers on moving/operating equipment except where passenger seat/restraint is present.
	Caught In Between (pinch	Equipment inspected upon mobilization and daily; maintained in good repair, backup alarms     All looks on defective sofety equipment will be repaired before use
	points), Roll Over, Fluid Leaks	□ All leaks or defective safety equipment will be repaired before use.
		Operators required to use seatbelts.
		Eye contact with operator and use of hand signals prior to approaching near equipment.
		□ High visibility vests are required of all personnel in work area.
		Max. safe slope for each vehicle will be followed.
		Personnel to stay clear of swing radius of equipment.     Spill agripment excitable for fuel and hydraulia fluid locks
		□ Spill equipment available for fuel and hydraulic fluid leaks.
		□ Equipment locked, secured, brakes set, buckets/forks lowered, when not in use.
	CRANES	In addition to general safety practices for heavy equipment (above), as applicable:
	Overhead hazards – utility lines,	□ Only qualified persons operate cranes (certificate required).
	swing radius, falling objects,	□ A Critical Lift Plan & Checklist prepared/executed (HS 506) prior to mobilization.
	wire ropes and hoisting	□ Equipment will be inspected prior to mobilization and a Crane Pre-Operational Safety Checklist
	equipment	(see EHS 506) will be completed and signed by crane operator.
	Overbalancing – high winds, outrigger placement,	□ Crane operator will remain at the controls at all times during operation.
	overloading, safe slope	□ Crane operation must be performed under the direction of an appointed signal person at all times.
	□ Struck By, Run-Over, Caught	□ Communication between crane operator and signal person will be maintained through standard
	In Between (pinch points), Roll	hand signals or voice communication equipment. Radio equipment, if used, will be equipped with a
	Over, Fluid Leaks	dedicated channel.
		□ Lifting or lowering will not exceed 100ft/minute. Lowering must be controlled i.e. no free fall.
		□ Stop work will be issued whenever hoisting equipment is exposed to high winds.
		□ Outriggers will be fully extended/locked with a firm footing within the maximum safe slope (<1%).
		<ul> <li>Crane to be on level, stable base, dunnage used when necessary.</li> <li>Total weight of load not to exceed 50% of rated capacity for the crane radius and configuration.</li> </ul>
		□ Rigging procedures – see Hoisting, Lifting, Rigging, below.
		<ul> <li>Rigging procedures – see Holsting, Enting, Rigging, below.</li> <li>Suspended personnel lifting is prohibited (unless per approved "man-lift" equipment).</li> </ul>
		□ No personnel permitted beneath suspended loads.
	HOISTING, LIFTING, RIGGING	□ Identify, coordinate with competent person.
	$\Box$ Crane	□ Rigging directly to the forks of a lull, forklift, or front loader equipped forks is prohibited.
	□ Drill rig	□ Do not exceed loading limits of equipment.
	□ Loader, excavator, etc.	<ul> <li>□ A Critical Lift Checklist (see EHS 506) will be completed and signed prior to crane mobilization.</li> </ul>
	□ Mechanical, electrical hoist	□ Rigging, wire rope and hoisting equipment will be inspected and signed phot to clane mobilization.
		□ Crane hooks will be equipped with safety latches.
	FORKLIFT	In addition to general safety practices for heavy equipment (above), as applicable:
	Hazards: Struck By, Run-Over,	Qualified operater, per established forklift training (certificate is required)
	Caught In Between (pinch	□ Equipment inspected daily and documented on Forklift Preoperation Inspection Checklist
	points), Roll Over, Fluid Leaks	<ul> <li>Operators required to use seatbelts, and adhere to safe operating procedures.</li> </ul>
1		$\square$ operators required to use seatures, and adhere to sale operating procedures.

Page	7	of	9
------	---	----	---

		Pa
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
		□ Do not exceed lifting load limits.
		□ Forklift shall not be moved/driven with empty forks in raised position.
		□ When not in use, forks lowered, brake set, controls in neutral, key removed.
	EXCAVATION/TRENCHING	Activities under supervision/oversight of competent person
	$\Box$ Max Depth $\geq$ 20'	□ Sloping & shoring for excavations ≥20' are approved by a professional engineer
	$\Box$ Max Depth $\geq$ 5'	$\Box$ Sloping & shoring for excavations $\geq$ 5' when persons are exposed to cave-in.
	☐ Max Depth <5' with potential	□ Sloping & shoring for shallow (<5') excavations with cave-in hazard
	cave-in hazard	$\Box$ Excavations $\geq$ 4' are classified as a non-permit confined space
	Potential permit-required	$\Box$ Excavations $\geq$ 4' are classified as Alternate Entry or Permit-Required (see confined space)
	confined space at depth $\ge$ 4'	□ Implement underground utility clearance procedures.
	Underground utilities	□ Hand digging within 3' of utility locations.
	Overhead utilities	□ Excavations to be protected by perimeter fencing (not barricade tape)
	Structures/foundations	□ Use trench boxes in accordance with proper procedures.
	Falls into excavations	□ Workers in trenches to be within 25 feet of ladder or sloped entryway.
	DRILLING	□ Contractor inspects drill rig daily before use.
	□ Struck By, Run-Over, Caught	Drill rig equipped with operational emergency stop.
	In Between (pinch points), Roll	□ Highpressure lines equipped with whip checks.
	Over, Fluid Leaks	□ High visibility vests, hard hats are being worn near the equipment.
	Underground utilities,	□ Operators and helpers will maintain a safe distance to moving parts. Individuals working near
	aboveground	moving or rotating parts will secure loose hair, clothing, and equipment.
	□ Spills	□ Drill rigs will only be moved with masts lowered. Masts will be erected with outriggers fully
	See Equipment/Machinery	extended when equipped with outriggers.
		□ Max. safe slope for rig will be followed, drill rig leveled, appropriate blocking/cribbing as needed.
		□ Spinning parts of the rig are guarded when possible, no loose clothing being worn near the rig.
		□ Follow underground utility clearance procedures.
		□ Area is surveyed for overhead utilities, safe clearance distance maintained.
		Hearing protection is used when working near the rig.
		□ Spill equipment is available for fuel and hydraulic fluid leaks.
	DEMOLITION	Develop/implement demolition safety plan
	BLASTING	Develop/implement blasting safety plan
11. C	ONFINED SPACES, HAZARD	DUS ENCLOSED or INDOOR SPACES – CHECK IF NOT APPLICABLE:
Site-S	Specific Comments:	
-	1	
	CONFINED SPACE(S)	□ For personnel working near confined spaces:
	Permit required	<ul> <li>Confined spaces have been identified, labeled.</li> </ul>
	Non-permit required	<ul> <li>Communication system in place to prevent unauthorized entry.</li> </ul>
	Potential/actual hazards:	
	Atmospheric hazards:	□ For permit-required confined space entry, see separate entry permit.
	□ Flammable/explosive	<ul> <li>All entrants, attendants, supervisors are trained/qualified.</li> <li>Hazards properly characterized</li> </ul>
	Oxygen deficiency	<ul> <li>Necessary equipment for safe entry utilized (access, retrieval, air monitoring)</li> </ul>
	Hydrogen sulfide	<ul> <li>Arrangements for rescue team have been made.</li> </ul>
	□ Other toxic	
	□ Combustible dust	□ For entry into a <u>non-permit</u> confined space, see site specific procedures delineated above in "site-
	Electrical	specific comments," or see alternate/attached safety work plan.
	Mechanical, engulfment,	
	entrapment, stored energy	
	ENCLOSED/INDOOR	For indoor use of gasoline/propane/diesel equipment:
	SPACE(S)	□ Duct exhaust to outdoors, and/or introduce fresh air using ventilation/blowers/fans.
	□ Outfall, culvert	Perform air monitoring (see section on Air Monitoring)
	Tunnel, shaft, gallery	
	□ Machine/equipment pit/vault	For entry into potentially hazardous indoor or enclosed spaces:
	□ Basement/Sub-basement	Ventilate and/or perform air monitoring for anticipated hazards.
	$\Box$ Crawl space entry	□ If space classified as confined space, follow confined space entry requirements (above).
	Indoor equipment/drilling	
12. C	OMMERCIAL CHEMICAL PRO	DDUCTS USED AT WORK SITE – CHECK IF NOT APPLICABLE:
-	Specific Comments: Alconox	

	HAZARD	HAZARD CO	NTROLS (check all that apply and comment	as required)

	consultants	Pag
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
$\boxtimes$	WALKING/WORKING	Keep work areas clean, orderly, dispose of trash/debris, maintain sanitary conditions.
لالك	SURFACES, HOUSEKEEPING	☑ Walkways are cleared of equipment, excavated material, tools and debris, snow
	⊠ Uneven, rough terrain, riprap	□ Holes, pits, openings to be covered or otherwise marked or guarded
	<ul> <li>☑ Slippery surfaces</li> <li>□ Holes, pits, openings</li> </ul>	□ Apply absorbent, salt or sand, for traction/slip resistance on slippery/icy/wet surfaces
	$\square$ Puncture, foot hazards	Wear proper work boots/shoes with ankle support and/or traction, as appropriate for conditions
	TEMPERATURE/WEATHER	☐ Heat/Cold stress are monitored in accordance with Geosyntec procedures EHS 124 & EHS 125
$\square$	⊠ Heat Stress	Provide sufficient fluids, shade, breaks, other precautions as appropriate to adderss heat hazards.
	⊠ Cold Stress	☑ Provide protection from sun (sun screen, shaded brake area).
	Severe Weather	□ For cold stress, wear multiple layers, protect from wind/wet, frequent break in warm location.
	⊠ Lightning	□ In high wind, discontinue working at heights (e.g. on ladders, scaffold, aerial lift, similar).
		☑ Use precautions for lightning, thunderstorm, hale, tornado (monitor weather, "30/30 rule," shelter)
$\boxtimes$	BIOLOGICAL HAZARDS	☑ Utilize safety practices commensurate with risk of biting/stinging insects, wild/feral/pet animals.
	Insects, spiders, ticks	Series For poisonous plants (poison ivy/oak/sumac/etc.), minimize exposed skin area, wear coveralls, use
	□ Wild/feral/pet animals	barrier cream/wash (Technu products or similar), as appropriate.
	🗆 Mold, fungi	For biological evenesure bezarde, use protective measures commensurate with bezard:
	⊠ Poisonous plants	For biological exposure hazards, use protective measures commensurate with hazard: ⊠ Minor-moderate hazard - use ordinary hygiene practices, protective gloves, hand washing.
	□ Bird Guano	□ Moderate-severe hazard - add protective clothing, respirator, decon, as appropriate.
	□ Infectious, wastewater, sewer	□ Bloodborne pathogen (human infectious agents) - implement "Universal Precautions"
	□ Bloodborne pathogens	
	HAZARDOUS NOISE	□ Hearing protection is used when exposed to excessive noise levels (greater than 85 dBA over an
		8-hour work period, or intermittent)
	OVERHEAD HAZARDS,	Wear hardhat when exposed to overhead hazards, "bump" hazards, falling objects
	FALLING OBJECTS	□ Cordon off hazard zones, route access/egress around hazards of falling objects
		□ Secure objects from falling
		Provide overhead protection (canopy) to protect public pedestrians, workers
	ILLUMINATION	□ Make site-specific arrangements for illumination of work areas and access routes.
	Night work	
	Indoor work	
2. B	OATING, WATER, WET LOCA [.]	TIONS, FLOOD, ETC. – CHECK IF NOT APPLICABLE: 🖂
	Specific Comments:	
	WATER HAZARDS	Wear appropriate Coast Guard-approved Personal Flotation Device (PFD)
	Drowning, hypothermia	□ Bring emergency rescue equipment (ring buoy, reaching device, flares)
	Boat, barge, raft	Use fuel safety practices, fire extinguisher present in boat
	Wading, wetland, mud/silt	□ See site-specific safety comments above.
	Dam release, flood, tide	
		ON, WORKING ALONE – SPECIAL MEASURES – CHECK IF NOT ANTICIPATED: 🗆
Site-S	Specific Comments:	
	PERSONAL SECURITY, HIGH	Employ standard precautions, which may include: conduct work only during daylight hours, use
	CRIME AREA	buddy system, avoid parking in secluded location, lock vehicles, hide valuable items in vehicles
		from plain view
		□ See site-specific safety comments above for project-specific security measures.
	PUBLIC AT RISK, SITE	□ Provide safe pedestrian route around work areas, use appropriate barriers, signs, warning devices.
	SECURITY	□ Provide covers over excavation, secure fencing, overnight protection
		□ Provide protection from overhead hazards (canopy, etc.) where public at risk of overhead hazards
		Provide secure locked storage of hazardous chemicals, hazardous equipment, etc.      Establish "sheek is" precedure with superviser or preiset menager (arrival mid day, departure)
$\boxtimes$	WORKING ALONE	<ul> <li>Establish "check in" procedure with supervisor or project manager (arrival, mid-day, departure)</li> <li>Additional measures, as appropriate for the working conditions.</li> </ul>
4. DI	RIVING, TRAFFIC, TRANSPOR	RTATION HAZARDS – CHECK IF NOT APPLICABLE:
	Specific Comments:	
	DRIVING HAZARDS	☐ Use routine safe/defensive driving practices (seat belts, safe speeds, eyes ahead, no tailgating,
$\boxtimes$		limit distractions, no texting, safe cell phone use, clear windows, account for weather/road
	Routine work travel	conditions, adequate sleep, other measures as appropriate).
	Unfamiliar location	☑ Plan travel route before driving (assemble maps, enter destination in GPS).
	Unfamiliar vehicle	□ Familiarize yourself with vehicle operational controls before operating unfamiliar vehicle.
1	Overnight travel, distance	

	constituitants		Page			
	HAZARD	HAZARD CONTROLS (check all that apply and o	comment as required)			
$\boxtimes$	WORKERS EXPOSED TO	Workers to wear reflective vests where exposed	to traffic hazards.			
	TRAFFIC HAZARDS	Where possible, park vehicles as protective shield	ld from oncoming traffic.			
	☑ In/near public or private	Configure work area and support vehicles to mir	nimize worker exposure to traffic hazards.			
	roadway	DOT signal devices will be used to re-route vehi	cles around work area, site entrances/exits.			
	Parking lot, driveway	□ Flaggers will be used and have DOT Flagger Tra				
	Worksite, construction site	$\boxtimes$ Park vehicles in secure location away from heav				
	traffic	☐ Mark temporary roadways clearly, provide berm				
_	RAILROAD/AIRPORT HAZARD		Coordinate with rail company/airport and implement required safety measures			
		□ Site workers to receive safety training for railroad/airport work.				
	OFF-ROAD DRIVING, USE OF					
$\boxtimes$	ALL-TERRAIN VEHICLE	☑ For off road driving, do not exceed capability of vehicle				
			Follow ATV specific procedures for training, safety equipment, operation.			
	TRANSPORTING MATERIALS, TOWING/HAULING LOADS	Ensure load is firmly secured (rope, straps, load				
		□ For trailer use, verify signal/braking lights operat	tional, rear-view mirrors effective, hitch/safety			
		chains secure.				
5. U	TILITY-RELATED HAZARDS (f	or underground/overhead work) – CHECK IF N	OT APPLICABLE: 🛛			
Site-S	Specific Comments:					
	OVERHEAD UTILITIES	Maintain proper clearance, employ other approp	riate precautions for the conditions.			
	UNDERGROUND UTILITIES		ce procedures have been completed prior to ground			
		penetrations, and employ other utility clearance,	locator practices, as appropriate for conditions.			
6. EL	.ECTRICAL HAZARDS – CHEC	CK IF NOT APPLICABLE: 🛛				
Site-S	Specific Comments:					
	WORKERS EXPOSED TO:	Implement electrical safe work practices comme	nsurate with the work to be performed, pertaining			
	□ Voltage < 50 v	to the following (as applicable):				
	□ Voltage 50-600v	<ul> <li>Worker training/qualification</li> </ul>				
	□ Voltage > 600v	<ul> <li>Electrical equipment and hazards, safe d</li> </ul>	lesign features			
	□ AC □ DC □ 3-phase	<ul> <li>Electrical safe work practices</li> </ul>				
	□ Battery and/or solar power	<ul> <li>Grounding, use of GFCIs</li> <li>Electrical equipment installation, operatic</li> </ul>	n maintenance renair			
	□ Capacitor/Transformer	<ul> <li>Arc flash protection</li> </ul>	in, maintenance, repair			
		<ul> <li>Electrical equipment diagnostics</li> </ul>				
	BASIC ELECTRICAL	Control water-related hazards, in a manner appr	opriate for the job tasks/equipment/tool.			
	HAZARDS	□ Use extension cords/power cords properly, prev				
	□ Equipment/tool use/operation	□ Inspect tool/equipment/extension cords/power c				
	□ Use of extension cords	□ Use GFCI-protected outlet or portable GFCI in w				
		□ Ensure live parts are guarded, enclosures secur				
		□ Enclosures, circuits properly labeled.

	HAZARD	Page Page Page Page Page Page Page Page			
	AERIAL LIFT  Scissor lift  Extensible boom  Articulated boom Vertical Lift ("Genie")	<ul> <li>Operators are sufficiently trained, experienced and qualified.</li> <li>Equipment is inspected after mobilization and is in good condition.</li> <li>Harness &amp; Lanyard worn whenever operating the lift (scissor lifts may be excepted)</li> <li>Overhead and surface obstructions are reviewed with operators prior to use.</li> </ul>			
	SCAFFOLD  Supported scaffold  Suspended scaffold  Free-standing/mobile scaffold  OOLS, EQUIPMENT, MACHINE  Specific Comments:	<ul> <li>☐ Identify/coordinate operations with competent person</li> <li>☐ Supported scaffold level, stable, proper attachments, tiebacks, planking,</li> <li>☐ Suspended scaffolds anchored properly</li> <li>☐ Guardrails present above 10 feet or personal fall apparatus used.</li> <li>☐ Proper means of accessing scaffold (proper ladders, stair tower).</li> <li>☐ Total height of free-standing scaffold not to exceed four times the minimum base dimension.</li> <li><b>ERY</b> – CHECK IF NOT APPLICABLE: ⊠</li> </ul>			
	HAND TOOLS Eye injury, puncture/bruise/ laceration hazard	☑ Use proper tool for the job, maintain tools in good condition (no damage, cutting tools sharp, etc.) use appropriate PPE for hand/eye/body protection, plan for safe "follow through" motion, use vise/clamp/work surface to hold/stabilize work piece			
	<ul> <li>POWER TOOLS</li> <li>Eye/hand/body injury</li> <li>Fuel-related hazards</li> <li>Inhalation hazard</li> <li>Noise</li> <li>Sparks, heat, fire hazard</li> <li>Electrical hazards</li> </ul>	<ul> <li>For all power tools:         <ul> <li>Inspect tools to ensure safe operating condition before each use.</li> <li>Use tool in accordance with manufacturer's specifications.</li> <li>Use PPE or other safety practices, as appropriate, for eye/hearing/hand/head/body protection</li> <li>Provide training or verify operator qualification for use of power tool.</li> <li>Stay clear of hazard zone, "line of fire" when working near where power tools are used.</li> </ul> </li> <li>Use safety practices for refueling, fuel handling/transport/storage.</li> <li>Use respirators, ventilation, wet methods, other appropriate means to control inhalation hazard.</li> <li>For spark/heat generating tool, control fire hazards, segregate combustible/flammable materials.</li> <li>For electrical hazards, see # 6, "Electrical Hazards".</li> </ul>			
	WELDING, CUTTING Gas welding/cutting Arc welding/cutting	<ul> <li>Hot work permit system to be implemented.</li> <li>Operator properly protected (eye protection, clothing, apron, etc.)</li> <li>Fire hazard controls (watcher, fire extinguisher, water, isolate combustibles)</li> <li>Protect nearby personnel from hazardous UV, IR light (shielding, curtain)</li> <li>Electrical safe work practices for arc welding</li> <li>Gas cylinder safe practices (secured, upright, caps on when not in use, prevent damage).</li> </ul>			
	EQUIPMENT/MACHINERY Point-of-operation hazards Finch points, moving parts 'Struck-by,' 'caught between' Hot surfaces, heat Extension cords, flexible wire Fuel related (gas or liquid) Hydraulic pressure Compressed air/gas Kinetic, stored energy Noise Lockout/tagout Emissions, discharge gases Working at heights, falls Lifting, repetitive motion Illumination Electrical (see below)	<ul> <li>Working Near Equipment/Machinery</li> <li>Working Near Equipment/Machinery</li> <li>Work at safe distance/restrict access, ensure guards in place, heed warning signs</li> <li>Implement measures necessary for adequate illumination</li> <li>Control exposue to emission/discharge gases (ventilation, PPE, other means).</li> <li>Ensure safe practices for fuels/fluids/machine-related hazardous materials</li> <li>Use PPE or other safety practices for eye/hearing/hand/head/body protection</li> <li>Segregate combustible materials from hot surfaces/hot exhaust (minimum 3 feet)</li> <li>Operation/Maintenance/Repair of Equipment/Machinery (see applicable control measures above)</li> <li>Orient/locate equipment for safe access during operation and maintenance</li> <li>Use equipment/machinery in accordance with manufacturer's specifications</li> <li>Use safe lifting practices, minimize repetitive motion hazards</li> <li>Ensure point-of-operation, mechanical power transmission, other moving parts are guarded with protective devices; do not override interlocks, guards, protective devices</li> <li>Secure long hair/loose clothing/hanging jewelry near moving/rotating parts</li> <li>Ensure appropriate warning signs are in place and heeded</li> <li>Use safe practices for fueling, fuel transport &amp; storage.</li> <li>Operate fuel-powered equipment in well ventilated location.</li> <li>Incorporate safety provisions/safe work practices for compressed air, pressurized systems (pneumatic/hydraulic), stored energy</li> <li>Implement control-of-hazardous-energy practices (lockout/tagout), designate "authorized" personnel, notify "affected" personnel</li> <li>Protect from fall hazards (safe ladder use, personal fall protection, guardrails, other)</li> </ul>			
	ELECTRICAL HAZARDS	□ Implement provisions of # 6, "Electrical Hazards"			
9. M	9. MANUAL MATERIAL HANDLING, MATERIAL STORAGE – CHECK IF NOT APPLICABLE: 🛛				

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
Site-S	Specific Comments: Cooler Lifting	3
$\boxtimes$	LIFTING / ERGONOMIC Musculoskeletal strain,	☐ Use proper manual lifting techniques (straight back, bend at knees, firm grasp, firm footing).
	repetitive motion injury	Seek assistance for lifting heavy objects (>50 lbs.)
		Use mechanical lifting equipment to reduce manual material handling hazard
		Solution of the second state of the second sta
		safe practices appropriate for the specific task(s).
	STORAGE OF MATERIALS	□ Store materials in stable manner that prevents tipping, sliding, rolling, falling over.
		□ Materials stored in tiers to be stacked, racked, blocked, interlocked or otherwise secured to prevent
		sliding, falling or collapse <ul> <li>Do not exceed load limits of racks, platform; ensure racks are stable, robust, secure</li> </ul>
		□ On scaffold, do not store materials in excess of supplies needed for immediate use
		□ Ensure stored materials do not block aisles, passageways
	See Sect. 12 for Chemical	□ For used lumber, remove nails before stacking, and stack to be stable and self supporting, no
	Storage	higher than 20 feet (or 16 feet if lumber is to be handled manually)
		□ Debris will be removed regularly from storage area and place in designated area or disposed.
10 0	CONSTRUCTION OPERATION	S, HEAVY EQUIPMENT, HEAVY VEHICLES – CHECK IF NOT ANTICIPATED: 🛛
	Specific Comments:	
Sile-C	specific comments.	
	HEAVY EQUIPMENT;	□ Trained/qualified persons operate all heavy equipment.
	CONSTRUCTION VEHICLES	<ul> <li>No passengers on moving/operating equipment except where passenger seat/restraint is present.</li> </ul>
	Hazards: Struck By, Run-Over,	Equipment inspected upon mobilization and daily; maintained in good repair, backup alarms
	Caught In Between (pinch	□ All leaks or defective safety equipment will be repaired before use.
	points), Roll Over, Fluid Leaks	□ Operators required to use seatbelts.
		Eye contact with operator and use of hand signals prior to approaching near equipment.
		□ High visibility vests are required of all personnel in work area.
		□ Max. safe slope for each vehicle will be followed.
		Personnel to stay clear of swing radius of equipment.
		□ Spill equipment available for fuel and hydraulic fluid leaks.
		□ Equipment locked, secured, brakes set, buckets/forks lowered, when not in use.
	CRANES	In addition to general safety practices for heavy equipment (above), as applicable:
	Overhead hazards – utility lines, swing radius, falling objects,	□ Only qualified persons operate cranes (certificate required).
	wire ropes and hoisting	A Critical Lift Plan & Checklist prepared/executed (HS 506) prior to mobilization.
	equipment	□ Equipment will be inspected prior to mobilization and a Crane Pre-Operational Safety Checklist
	$\Box$ Overbalancing – high winds,	(see EHS 506) will be completed and signed by crane operator. □ Crane operator will remain at the controls at all times during operation.
	outrigger placement,	□ Crane operation must be performed under the direction of an appointed signal person at all times.
	overloading, safe slope □ Struck By, Run-Over, Caught	□ Communication between crane operator and signal person will be maintained through standard
	In Between (pinch points), Roll	hand signals or voice communication equipment. Radio equipment, if used, will be equipped with a
	Over, Fluid Leaks	dedicated channel.
		Lifting or lowering will not exceed 100ft/minute. Lowering must be controlled i.e. no free fall.
		□ Stop work will be issued whenever hoisting equipment is exposed to high winds.
		□ Outriggers will be fully extended/locked with a firm footing within the maximum safe slope (<1%).
		□ Crane to be on level, stable base, dunnage used when necessary.
		□ Total weight of load not to exceed 50% of rated capacity for the crane radius and configuration.
		□ Rigging procedures – see Hoisting, Lifting, Rigging, below.
		Suspended personnel lifting is prohibited (unless per approved "man-lift" equipment).
		□ No personnel permitted beneath suspended loads.
<b>—</b>	HOISTING, LIFTING, RIGGING	
		<ul> <li>Identify, coordinate with competent person.</li> <li>Rigging directly to the forks of a lull, forklift, or front loader equipped forks is prohibited.</li> </ul>
	$\Box$ Drill rig	<ul> <li>Do not exceed loading limits of equipment.</li> </ul>
	□ Loader, excavator, etc.	<ul> <li>□ A Critical Lift Checklist (see EHS 506) will be completed and signed prior to crane mobilization.</li> </ul>
	□ Mechanical, electrical hoist	□ Rigging, wire rope and hoisting equipment will be inspected and maintained on a weekly basis.
		□ Crane hooks will be equipped with safety latches.
<b>—</b>	FORKLIFT	In addition to general safety practices for heavy equipment (above), as applicable:
	Hazards: Struck By, Run-Over,	Qualified operater, per established forklift training (certificate is required)
	Caught In Between (pinch	Guained operater, per established forking (centricate is required)     Equipment inspected daily and documented on Forklift Preoperation Inspection Checklist
	points), Roll Over, Fluid Leaks	<ul> <li>Operators required to use seatbelts, and adhere to safe operating procedures.</li> </ul>
1		T = operatione required to doe obtablito, and denote to sale operating procedures.

	constituints	Pag
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
		□ Do not exceed lifting load limits.
		Forklift shall not be moved/driven with empty forks in raised position.
		□ When not in use, forks lowered, brake set, controls in neutral, key removed.
	EXCAVATION/TRENCHING	Activities under supervision/oversight of competent person
	$\Box$ Max Depth $\geq$ 20'	$\Box$ Sloping & shoring for excavations $\geq$ 20' are approved by a professional engineer
	$\square$ Max Depth $\ge$ 5'	□ Sloping & shoring for excavations $\geq$ 5' when persons are exposed to cave-in.
	$\Box$ Max Depth <5' with potential	□ Sloping & shoring for shallow (<5') excavations with cave-in hazard
	cave-in hazard	$\Box$ Excavations $\geq$ 4' are classified as a non-permit confined space
	Potential permit-required	
	confined space at depth $\geq 4'$	$\Box$ Excavations $\geq$ 4' are classified as Alternate Entry or Permit-Required (see confined space)
	□ Underground utilities	□ Implement underground utility clearance procedures.
	<ul> <li>Overhead utilities</li> </ul>	□ Hand digging within 3' of utility locations.
	□ Structures/foundations	Excavations to be protected by perimeter fencing (not barricade tape)
		□ Use trench boxes in accordance with proper procedures.
	Falls into excavations	□ Workers in trenches to be within 25 feet of ladder or sloped entryway.
	224 1910	
	DRILLING	□ Contractor inspects drill rig daily before use.
_	□ Struck By, Run-Over, Caught	Drill rig equipped with operational emergency stop.
	In Between (pinch points), Roll	Highpressure lines equipped with whip checks.
	Over, Fluid Leaks	□ High visibility vests, hard hats are being worn near the equipment.
	Underground utilities,	Operators and helpers will maintain a safe distance to moving parts. Individuals working near
	aboveground	moving or rotating parts will secure loose hair, clothing, and equipment.
		Drill rigs will only be moved with masts lowered. Masts will be erected with outriggers fully
	See Equipment/Machinery	extended when equipped with outriggers.
		□ Max. safe slope for rig will be followed, drill rig leveled, appropriate blocking/cribbing as needed.
		□ Spinning parts of the rig are guarded when possible, no loose clothing being worn near the rig.
		□ Follow underground utility clearance procedures.
		□ Area is surveyed for overhead utilities, safe clearance distance maintained.
		□ Hearing protection is used when working near the rig.
		□ Spill equipment is available for fuel and hydraulic fluid leaks.
	DEMOLITION	Develop/implement demolition safety plan
	BLASTING	Develop/implement blasting safety plan
11. C	ONFINED SPACES, HAZARD	DUS ENCLOSED or INDOOR SPACES – CHECK IF NOT APPLICABLE: 🛛
Site-S	Specific Comments:	
	CONFINED SPACE(S)	□ For personnel working near confined spaces:
	Permit required	<ul> <li>Confined spaces have been identified, labeled.</li> </ul>
	□ Non-permit required	<ul> <li>Communication system in place to prevent unauthorized entry.</li> </ul>
	Potential/actual hazards:	
	Atmospheric hazards:	□ For permit-required confined space entry, see separate entry permit.
	•	<ul> <li>All entrants, attendants, supervisors are trained/gualified.</li> </ul>
	□ Flammable/explosive	<ul> <li>Hazards properly characterized</li> </ul>
	Oxygen deficiency	<ul> <li>Necessary equipment for safe entry utilized (access, retrieval, air monitoring)</li> </ul>
	Hydrogen sulfide	<ul> <li>Arrangements for rescue team have been made.</li> </ul>
	Other toxic	
	Combustible dust	□ For entry into a non-permit confined space, see site specific procedures delineated above in "site-
	Electrical	specific comments," or see alternate/attached safety work plan.
	Mechanical, engulfment,	
	entrapment, stored energy	
	ENCLOSED/INDOOR	For indoor use of gasoline/propane/diesel equipment:
	SPACE(S)	□ Duct exhaust to outdoors, and/or introduce fresh air using ventilation/blowers/fans.
	□ Outfall, culvert	□ Perform air monitoring (see section on Air Monitoring)
	Tunnel, shaft, gallery	
	□ Machine/equipment pit/vault	For entry into potentially hazardous indoor or enclosed spaces:
	$\Box$ Basement/Sub-basement	□ Ventilate and/or perform air monitoring for anticipated hazards.
	Crawl space entry	□ If space classified as confined space, follow confined space entry requirements (above).
	Indoor equipment/drilling	
12. C	OMMERCIAL CHEMICAL PRO	DUCTS USED AT WORK SITE – CHECK IF NOT APPLICABLE: 🗆

TASK/ACTIVITY:	Stormwater Str	ucture Insp	pection	Date:		7/18/2014
Project Name:	Former Sperry	Remingtor	n Site North	Client Na	ame:	Unisys Corporation
Project Number:	MN0832	MN0832			ec Proj. Mngr.:	Aron Krasnopoler
Project Address:	777 Sourth Ma	in Street, E	Imira, New York	Geosynt	ec Proj. Dir.:	Paul Brookner
Task Description:	Manhole SW-7 and the presen measured, to the	3 will be in ce of accu ne extent p	spected for structu mulated fine-graine	ral integrity ed material ded. If an	y, hydraulic conne I. If present, the c	ections to the storm sewer system depth fo the material will be of material is present, a composite
A. SUMMARY OF	SITE-SPECIFIC	TASK HA	ZARD ANALYSIS			
Site-Specific Com	nents:					
Sub-Tasks,	Activition	[	Useeds			
Task 1: Mobilize to Sit		-Driving -Mobilizatio	Hazards	miliar	<ul> <li>Drive carefully to distracted driving.</li> <li>Review scope of</li> </ul>	Hazard Controls facility, be well rested and avoid work.
Task 2: Locate SW-73	Manhole	-Slips/trips/falls -Heat/cold stress -Biohazards: snakes, bees, spider, ticks, poison ivy		<ul> <li>- Review scope of work.</li> <li>-Pay close attention to foot placement; slow deliberate movement.</li> <li>-Dress for weather conditions. Apply sunscreen if needed</li> <li>-Beaware of surroundings and avoid biohazards.</li> </ul>		
Task 3: Remove manh inspect conditions in s surface. Do not enter t	ump from ground	-Same hazards noted above for Task 2. -lifting/removing manhole lid -falling in manhole/sump Potential contaminant exposure: VOCs, PCBs, SVOCs		<ul> <li>-Same hazard controls noted above for Task 2.</li> <li>-don level D personal protective equipment (PPE). PPE will include: safety glasses, safety vests, steel toe boots, and nitrile gloves.</li> <li>-Avoid direct contact with contaminated matrices and/or equipment.</li> <li>-Use safe lifting practices for manhole</li> <li>-Keep center of gravity outside of manhole and close manhole when observations are complete.</li> <li>-Do not break plane of manhole</li> </ul>		
Task 4: If necessary, collect fine- grained sample from the manhole using a reach sampler or similar device. Do not enter the manhole.		-Same hazards as Task 3. -Potential contaminant exposure: VOCs, PCBs, SVOCs -Splash hazards		-Continue to wear level D PPE and minimize contact with water. -Do not break plane of manhole

	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)			
1. PI	REMISES/ENVIRONMENTAL H	IAZARDS			
		les will be blocked by traffic cones and/or caution tape. A dedicated watch person may also be			
used.					
	LOCATION HAZARDS  Outdoor field work  Urban, suburban  Rural, remote location  Indoor field work  Operating facility Vacant facility Water hazards	<ul> <li>Use routine safety precautions commensurate with routine work environment conditions</li> <li>For non-routine, unique, or severe location hazards, see site-specific safety comments above.</li> <li>For water-related work, see #2, "Water Hazards"</li> <li>For worksite violence/security risks, see #3, "Violence, Security, Working Alone"</li> <li>For transportation related hazards, see #5, "Worksite Traffic, Vehicle, Transportation Hazards"</li> <li>For utility-related hazards, see # 6, "Utility-Related Hazards</li> <li>For atmospheric hazards in enclosed, indoor, or confined spaces, see # 11 "Confined Spaces or Hazardous Enclosed/Indoor Spaces"</li> </ul>			
	WALKING/WORKING SURFACES, HOUSEKEEPING ⊠ Uneven, rough terrain, riprap ⊠ Slippery surfaces ⊠ Holes, pits, openings □ Puncture, foot hazards	<ul> <li>Keep work areas clean, orderly, dispose of trash/debris, maintain sanitary conditions.</li> <li>Walkways are cleared of equipment, excavated material, tools and debris, snow</li> <li>Holes, pits, openings to be covered or otherwise marked or guarded</li> <li>Apply absorbent, salt or sand, for traction/slip resistance on slippery/icy/wet surfaces</li> <li>Wear proper work boots/shoes with ankle support and/or traction, as appropriate for conditions</li> </ul>			
	TEMPERATURE/WEATHER ☑ Heat Stress ☑ Cold Stress ☑ Severe Weather ☑ Lightning	<ul> <li>Heat/Cold stress are monitored in accordance with Geosyntec procedures EHS 124 &amp; EHS 125</li> <li>Provide sufficient fluids, shade, breaks, other precautions as appropriate to adderss heat hazards.</li> <li>Provide protection from sun (sun screen, shaded brake area).</li> <li>For cold stress, wear multiple layers, protect from wind/wet, frequent break in warm location.</li> <li>In high wind, discontinue working at heights (e.g. on ladders, scaffold, aerial lift, similar).</li> <li>Use precautions for lightning, thunderstorm, hale, tornado (monitor weather, "30/30 rule," shelter)</li> </ul>			
	BIOLOGICAL HAZARDS ⊠ Insects, spiders, ticks □ Wild/feral/pet animals □ Mold, fungi ⊠ Poisonous plants □ Bird Guano □ Infectious, wastewater, sewer	<ul> <li>Utilize safety practices commensurate with risk of biting/stinging insects, wild/feral/pet animals.</li> <li>For poisonous plants (poison ivy/oak/sumac/etc.), minimize exposed skin area, wear coveralls, use barrier cream/wash (Technu products or similar), as appropriate.</li> <li>For biological exposure hazards, use protective measures commensurate with hazard:</li> <li>Minor-moderate hazard - use ordinary hygiene practices, protective gloves, hand washing.</li> <li>Moderate-severe hazard - add protective clothing, respirator, decon, as appropriate.</li> <li>Bloodborne pathogen (human infectious agents) - implement "Universal Precautions"</li> </ul>			

	HAZARD	Pag
	Bloodborne pathogens	HAZARD CONTROLS (check all that apply and comment as required)
	HAZARDOUS NOISE	Hearing protection is used when exposed to excessive noise levels (greater than 85 dBA over an 8-hour work period, or intermittent)
	OVERHEAD HAZARDS,	□ Wear hardhat when exposed to overhead hazards, "bump" hazards, falling objects
	FALLING OBJECTS	□ Cordon off hazard zones, route access/egress around hazards of falling objects
		□ Secure objects from falling
		□ Provide overhead protection (canopy) to protect public pedestrians, workers
	ILLUMINATION	□ Make site-specific arrangements for illumination of work areas and access routes.
	Night work	
	Indoor work	
2. B	DATING, WATER, WET LOCA	TIONS, FLOOD, ETC. – CHECK IF NOT APPLICABLE: 🛛
Site-S	Specific Comments:	
	WATER HAZARDS	Wear appropriate Coast Guard-approved Personal Flotation Device (PFD)
	Drowning, hypothermia	□ Bring emergency rescue equipment (ring buoy, reaching device, flares)
	□ Boat, barge, raft	□ Use fuel safety practices, fire extinguisher present in boat
	<ul> <li>Wading, wetland, mud/silt</li> <li>Dam release, flood, tide</li> </ul>	□ See site-specific safety comments above.
	$\Box$ Diving	
		ON, WORKING ALONE – SPECIAL MEASURES – CHECK IF NOT ANTICIPATED: 🖂
Site-S	Specific Comments:	
	PERSONAL SECURITY, HIGH	Employ standard precautions, which may include: conduct work only during daylight hours, use
	CRIME AREA	buddy system, avoid parking in secluded location, lock vehicles, hide valuable items in vehicles
		from plain view  See site-specific safety comments above for project-specific security measures.
	PUBLIC AT RISK, SITE	□ Provide safe pedestrian route around work areas, use appropriate barriers, signs, warning devices.
	SECURITY	□ Provide covers over excavation, secure fencing, overnight protection
		□ Provide protection from overhead hazards (canopy, etc.) where public at risk of overhead hazards
		□ Provide secure locked storage of hazardous chemicals, hazardous equipment, etc.
	WORKING ALONE	□ Establish "check in" procedure with supervisor or project manager (arrival, mid-day, departure)
	UVING TRAFFIC TRANSPORT	Additional measures, as appropriate for the working conditions.
-	Specific Comments:	
0.10 0		
$\boxtimes$	DRIVING HAZARDS	☑ Use routine safe/defensive driving practices (seat belts, safe speeds, eyes ahead, no tailgating,
	Routine work travel	limit distractions, no texting, safe cell phone use, clear windows, account for weather/road
	Unfamiliar location	conditions, adequate sleep, other measures as appropriate). Plan travel route before driving (assemble maps, enter destination in GPS).
	Unfamiliar vehicle	□ Familiarize yourself with vehicle operational controls before operating unfamiliar vehicle.
	Overnight travel, distance	
$\boxtimes$	WORKERS EXPOSED TO	☑ Workers to wear reflective vests where exposed to traffic hazards.
	TRAFFIC HAZARDS	Where possible, park vehicles as protective shield from oncoming traffic.
	roadway	☐ Configure work area and support vehicles to minimize worker exposure to traffic hazards.
	Parking lot, driveway	DOT signal devices will be used to re-route vehicles around work area, site entrances/exits.
	$\Box$ Worksite, construction site	□ Flaggers will be used and have DOT Flagger Training; police detail where appropriate or required.
	traffic	Park vehicles in secure location away from heavy equipment use or other site operations.
<u> </u>		Mark temporary roadways clearly, provide berms/stop logs where needed.
	RAILROAD/AIRPORT HAZARD	<ul> <li>Coordinate with rail company/airport and implement required safety measures</li> <li>Site workers to receive safety training for railroad/airport work.</li> </ul>
	OFF-ROAD DRIVING, USE OF	For off road driving, do not exceed capability of vehicle
	ALL-TERRAIN VEHICLE	□ Follow ATV specific procedures for training, safety equipment, operation.
	TRANSPORTING MATERIALS,	□ Ensure load is firmly secured (rope, straps, load configuration) to prevent shifting during travel.
	TOWING/HAULING LOADS	□ For trailer use, verify signal/braking lights operational, rear-view mirrors effective, hitch/safety
		chains secure.
5. U	TILITY-RELATED HAZARDS (f	or underground/overhead work) – CHECK IF NOT APPLICABLE: 🖂
	Specific Comments:	
	OVERHEAD UTILITIES	□ Maintain proper clearance, employ other appropriate precautions for the conditions.
_	1	

	HAZARD	HAZARD CONTROLS (check all that apply and c	comment as required)		
	UNDERGROUND UTILITIES	□ Confirm appropriate underground utility clearance procedures have been completed prior to ground penetrations, and employ other utility clearance/locator practices, as appropriate for conditions.			
6. EL	ECTRICAL HAZARDS – CHEC		······		
	pecific Comments:				
	WORKERS EXPOSED TO: Voltage < 50 v Voltage 50-600v Voltage > 600v AC DC 3-phase Battery and/or solar power Capacitor/Transformer	<ul> <li>Implement electrical safe work practices comment to the following (as applicable):         <ul> <li>Worker training/qualification</li> <li>Electrical equipment and hazards, safe de</li> <li>Electrical safe work practices</li> <li>Grounding, use of GFCIs</li> <li>Electrical equipment installation, operatio</li> <li>Arc flash protection</li> <li>Electrical equipment diagnostics</li> </ul> </li> </ul>	esign features

	DOLS, EQUIPMENT, MACHINE specific Comments:	RY – CHECK IF NOT APPLICABLE: ⊠			
	HAND TOOLS Eye injury, puncture/bruise/ laceration hazard	□ Use proper tool for the job, maintain tools in goo etc.) use appropriate PPE for hand/eye/body pro vise/clamp/work surface to hold/stabilize work pi	otection, plan for safe "follow through" motion, use		

	consultants	Pag
	HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
	POWER TOOLS	□ For all power tools:
	Eye/hand/body injury	<ul> <li>Inspect tools to ensure safe operating condition before each use.</li> </ul>
	Fuel-related hazards	<ul> <li>Use tool in accordance with manufacturer's specifications.</li> </ul>
	Inhalation hazard	- Use PPE or other safety practices, as appropriate, for eye/hearing/hand/head/body protection
	□ Noise	<ul> <li>Provide training or verify operator qualification for use of power tool.</li> </ul>
	$\Box$ Sparks, heat, fire hazard	- Stay clear of hazard zone, "line of fire" when working near where power tools are used.
	•	□ Use safety practices for refueling, fuel handling/transport/storage.
	Electrical hazards	□ Use respirators, ventilation, wet methods, other appropriate means to control inhalation hazard.
		□ For spark/heat generating tool, control fire hazards, segregate combustible/flammable materials.
		□ For electrical hazards, see # 6, "Electrical Hazards".
	WELDING, CUTTING	□ Hot work permit system to be implemented.
	□ Gas welding/cutting	<ul> <li>Operator properly protected (eye protection, clothing, apron, etc.)</li> </ul>
	□ Arc welding/cutting	
		□ Fire hazard controls (watcher, fire extinguisher, water, isolate combustibles)
		□ Protect nearby personnel from hazardous UV, IR light (shielding, curtain)
		□ Electrical safe work practices for arc welding
		□ Gas cylinder safe practices (secured, upright, caps on when not in use, prevent damage).
	EQUIPMENT/MACHINERY	U Working Near Equipment/Machinery
	Point-of-operation hazards	□ Work at safe distance/restrict access, ensure guards in place, heed warning signs
	$\Box$ Pinch points, moving parts	□ Implement measures necessary for adequate illumination
	□ 'Struck-by,' 'caught between'	□ Implement measures necessary for adequate multimation □ Control exposue to emission/discharge gases (ventilation, PPE, other means).
	$\square$ Hot surfaces, heat	
	,	□ Ensure safe practices for fuels/fluids/machine-related hazardous materials
	Extension cords, flexible wire	Use PPE or other safety practices for eye/hearing/hand/head/body protection
	Fuel related (gas or liquid)	Segregate combustible materials from hot surfaces/hot exhaust (minimum 3 feet)
	Hydraulic pressure	Operation/Maintenance/Repair of Equipment/Machinery (see applicable control measures above)
	Compressed air/gas	Orient/locate equipment for safe access during operation and maintenance
	Kinetic, stored energy	Use equipment/machinery in accordance with manufacturer's specifications
	□ Noise	□ Use safe lifting practices, minimize repetitive motion hazards
	Lockout/tagout	□ Ensure point-of-operation, mechanical power transmission, other moving parts are guarded
	•	
	Emissions, discharge gases     Weaking at heighte, falle	with protective devices; do not override interlocks, guards, protective devices
	□ Working at heights, falls	□ Secure long hair/loose clothing/hanging jewelry near moving/rotating parts
	Lifting, repetitive motion	Ensure appropriate warning signs are in place and heeded
	Illumination	$\Box$ Use safe practices for fueling, fuel transport & storage.
	Electrical (see below)	Operate fuel-powered equipment in well ventilated location.
		□ Incorporate safety provisions/safe work practices for compressed air, pressurized systems
		(pneumatic/hydraulic), stored energy
		□ Implement control-of-hazardous-energy practices (lockout/tagout), designate "authorized"
		personnel, notify "affected" personnel
		□ Protect from fall hazards (safe ladder use, personal fall protection, guardrails, other)
	ELECTRICAL HAZARDS	
	ELECTRICAL HAZARDS	□ Implement provisions of # 6, "Electrical Hazards"
		G, MATERIAL STORAGE – CHECK IF NOT APPLICABLE: 🗆
Site-S	Specific Comments:	
	LIFTING / ERGONOMIC	☐ Use proper manual lifting techniques (straight back, bend at knees, firm grasp, firm footing).
$\square$	Musculoskeletal strain,	Seek assistance for lifting heavy objects (>50 lbs.)
	repetitive motion injury	Use mechanical lifting equipment to reduce manual material handling hazard
		5 1 1
		□ For repetitive motion activities, take breaks, switch hands, share task with others, employ other
		safe practices appropriate for the specific task(s).
	STORAGE OF MATERIALS	□ Store materials in stable manner that prevents tipping, sliding, rolling, falling over.
		□ Materials stored in tiers to be stacked, racked, blocked, interlocked or otherwise secured to prevent
		sliding, falling or collapse
		Do not exceed load limits of racks, platform; ensure racks are stable, robust, secure
		□ On scaffold, do not store materials in excess of supplies needed for immediate use
		□ Ensure stored materials do not block aisles, passageways
	See Sect. 12 for Chemical	
	Storage	□ For used lumber, remove nails before stacking, and stack to be stable and self supporting, no
		higher than 20 feet (or 16 feet if lumber is to be handled manually)
		□ Debris will be removed regularly from storage area and place in designated area or disposed.
10. 0	CONSTRUCTION OPERATION	S, HEAVY EQUIPMENT, HEAVY VEHICLES – CHECK IF NOT ANTICIPATED: 🖂
	Specific Comments:	·

HAZARD	HAZARD CONTROLS (check all that apply and comment as required)
HEAVY EQUIPMENT; CONSTRUCTION VEHICLES Hazards: Struck By, Run-Over, Caught In Between (pinch points), Roll Over, Fluid Leaks	<ul> <li>Trained/qualified persons operate all heavy equipment.</li> <li>No passengers on moving/operating equipment except where passenger seat/restraint is present.</li> <li>Equipment inspected upon mobilization and daily; maintained in good repair, backup alarms</li> <li>All leaks or defective safety equipment will be repaired before use.</li> <li>Operators required to use seatbelts.</li> <li>Eye contact with operator and use of hand signals prior to approaching near equipment.</li> <li>High visibility vests are required of all personnel in work area.</li> <li>Max. safe slope for each vehicle will be followed.</li> <li>Personnel to stay clear of swing radius of equipment.</li> <li>Spill equipment available for fuel and hydraulic fluid leaks.</li> <li>Equipment locked, secured, brakes set, buckets/forks lowered, when not in use.</li> </ul>
CRANES	In addition to general safety practices for heavy equipment (above), as applicable:
Overhead hazards – utility lines, swing radius, falling objects, wire ropes and hoisting equipment Overbalancing – high winds, outrigger placement, overloading, safe slope Struck By, Run-Over, Caught In Between (pinch points), Roll Over, Fluid Leaks	<ul> <li>Only qualified persons operate cranes (certificate required).</li> <li>A Critical Lift Plan &amp; Checklist prepared/executed (HS 506) prior to mobilization.</li> <li>Equipment will be inspected prior to mobilization and a Crane Pre-Operational Safety Checklist (see EHS 506) will be completed and signed by crane operator.</li> <li>Crane operator will remain at the controls at all times during operation.</li> <li>Crane operation must be performed under the direction of an appointed signal person at all times.</li> <li>Communication between crane operator and signal person will be maintained through standard hand signals or voice communication equipment. Radio equipment, if used, will be equipped with a dedicated channel.</li> <li>Lifting or lowering will not exceed 100ft/minute. Lowering must be controlled i.e. no free fall.</li> <li>Stop work will be issued whenever hoisting equipment is exposed to high winds.</li> <li>Outriggers will be fully extended/locked with a firm footing within the maximum safe slope (&lt;1%).</li> <li>Crane to be on level, stable base, dunnage used when necessary.</li> <li>Total weight of load not to exceed 50% of rated capacity for the crane radius and configuration.</li> <li>Rigging procedures – see Hoisting, Lifting, Rigging, below.</li> <li>Suspended personnel lifting is prohibited (unless per approved "man-lift" equipment).</li> <li>No personnel permitted beneath suspended loads.</li> </ul>
	□ Identify, coordinate with competent person.

#### **Appendix C: Summary of Chemical Hazards**

#### **Petroleum Hydrocarbons**

Petroleum hydrocarbons likely at the site include tar and/or fuel-related materials in soils and sediments. Gasoline, diesel, oil, and heavier hydrocarbons, such as grease, may be present. Volatile components of gasoline include benzene, toluene, ethylbenzene, and xylenes (BTEX).

The primary exposure routes for petroleum hydrocarbons during site activities are inhalation, dermal contact, and ingestion of contaminated soil, sediment, dust, or water. Lighter petroleum hydrocarbons such as gasoline and benzene readily volatilize and are primarily an inhalation concern, whereas the primary route of exposure to heavier petroleum hydrocarbons such as aromatic hydrocarbons, oil, and grease is dermal contact. The target organs primarily affected by prolonged exposure to petroleum hydrocarbons are the respiratory system, central nervous system, kidneys, liver, and skin. Prolonged dermal contact with petroleum hydrocarbons can cause irritation or dermatitis. The BTEX compounds are known or suspected human carcinogens.

Petroleum hydrocarbons such as gasoline are also flammable and can be a physical hazard when present in high concentrations. Combustion of petroleum hydrocarbons can produce carbon dioxide, carbon monoxide, aldehydes, fumes, smoke (particulate matter) and other products of incomplete combustion. Intentional and inadvertent combustion of petroleum hydrocarbons is not expected during sampling activities; however, personnel will evacuate the area should a fire occur. The table below summarizes BTEX exposure limits.

Chemical Name	$PEL^1$	$TLV^2$
Benzene	1	0.5
Toluene	200	50
Ethylbenzene	100	100
Xylene	100	100

¹ OSHA Permissible Exposure Limit (in parts per million)

² ACGIH Threshold Limit Value (in parts per million)

#### **Polycyclic Aromatic Hydrocarbons (PAHs)**

PAHs are produced during combustion events due to inadequate oxidation of fuel. PAHs in the pure state are yellowish crystalline solids. They are found in coal tar and in products of incomplete combustion. These chemicals have varying degrees of potency for causing cancer, with benzo(a)pyrene being among the most potent. The PAHs are evaluated collectively as COAL TAR PITCH VOLATILES. Coal tar pitch volatiles may cause photo-sensitization and a rash where sunlight strikes the skin. Exposure may also cause cancer of lungs, skin, bladder or kidneys. Benzo(b)fluoranthene, benzo(j)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, chrysene, and indeno(1,2,3,c,d)pyrene have been identified as carcinogenic.

consultants

This information on PAH compounds is presented for site contaminant awareness. While the potential for site personnel sustaining significant inhalation exposures to volatilized PAH compounds during the site activities of this project is minimal, there is the potential for inhalation of PAH-contaminated dust, and handling of contaminated soils presents skin exposure hazards. Use of dust suppression techniques (as appropriate) and the proper use of the PPE will adequately protect personnel. Some significant PAH compounds include:

- Anthracene
- Benzo(a)pyrene Benzo(a)anthracene
- Chrysene Benzo(b)fluoranthene
- Fluoranthene Benzo(k)fluoranthene
- Fluorene Benzo(g,h,i)perylene
- Indeno(1,2,3,c,d)pyrene Benzo(d,e,f)phenanthrene
- Phenanthrene

OSHA PEL for coal tar pitch volatiles is 0.2 mg/m3 and NIOSH REL is 0.1 mg/m³, TLV 0.2 mg/m3 is for 8 hour time weighted average (TWA).

#### PCBs

PCBs are carcinogenic chlorinated hydrocarbons. Potential exposure routes are through inhalation, skin absorption, ingestion and skin or eye contact and may irritate eyes, cause acne, cause liver damage or have reproductive effects. Carcinogenic effects such as tumors and leukemia have been observed in animals. The OSHA permissible exposure limit (PEL) for 8-hour time-weighted average (TWA) is  $1 \text{ mg/m}^3$  (skin). The NIOSH PEL is 0.001 mg/m³.

#### **RCRA Metals**

These metals include arsenic, barium, cadmium, chrome, mercury, selenium, and silver. Heavy metals are known to cause neurologic effects (lead, mercury), kidney damage (cadmium), and respiratory damage (arsenic, cadmium). Oral and respiratory exposures should be minimized. The table below summarizes exposure limits.

Chemical Name	$PEL^1$	$TLV^2$
Arsenic	0.01	0.01
Lead	0.05	0.05
Mercury	0.01	0.25

¹ OSHA Permissible Exposure Limit (PEL) in parts per million

² ACGIH Threshold Limit Value (TLV) in parts per million

#### Chlorinated Solvents/Volatile Organic Compounds (VOCs)

Chlorinated VOCs are widely used as solvents in industrial operations such as degreasing, manufacturing, cleaning and dry cleaning, and are also present in household products and automotive fluids. They readily form vapors which can accumulate in indoor air spaces (i.e., via migration through the subsurface) and react with ozone to form sub-micron sized particles with the potential to cause adverse respiratory health effects. Free product releases (via surface or subsurface discharges or inadequate disposal) can migrate downward to significant depths and through fine-grained deposits to groundwater, and can persist as wide-scale sources of vapor plumes for long periods of time.

Several chlorinated hydrocarbons have been identified in soil, indoor air vapor, and groundwater at the site including perchloroethylene (PCE), trichloroethylene (TCE), and 1,2-dichloroethane (DCA). The likely routes of exposure to chlorinated solvents include inhalation, ingestion and direct contact with the skin or eye. The toxicity of chlorinated solvents varies; many affect the CNS and some are identified as carcinogens. PCE can affect the CNS and cause irritation of the skin, eyes, and upper respiratory tract. TCE can depress the CNS, affect kidneys, liver, and lungs and can cause rapid and irregular heartbeat. Toxic effects are increased when combined with alcohol, caffeine, and other drugs. DCA can cause CNS depression and damage to the liver, kidneys, heart, and digestive system. Eye contact with DCA can cause irritation and serious injury if not removed promptly. DCA and TCE are flammable liquids; the LEL of both solvents are approximately 6% and their flash points are less than 100°F. PCE is not considered flammable. These chlorinated solvents are only slightly soluble in water.

Exposure levels will be maintained below OSHA PEL or NIOSH REL as shown in the table below.

Chemical Name	$\operatorname{PEL}^1$	$REL^2$
1,2 DCA	50	1
TCE	100	Ca
PCE	100	Ca

¹ OSHA Permissible Exposure Limit (PEL) in parts per million ² ACGIH Threshold Limit Value (TLV) in parts per million

Ca - Carcinogenic

Solubility in water (%):	100 - > 10% w/w
Coefficient of water\oil dist.:	Not available.
VOC:	None
Section	4 : FIRE AND EXPLOSION HAZARD DATA

#### Section 4 : FIRE AND EXPLOSION HAZARD DATA

-	Not flammable.
Conditions of flammability:	Surrounding fire.
Extinguishing media:	Carbon dioxide, dry chemical, foam. Water Water fog.
Special procedures:	Self-contained breathing apparatus required. Firefighters should wear the usual protective gear.
Auto-ignition temperature:	Not available.
Flash point (°C), method:	
Lower flammability limit (% vol):	Not applicable.
Upper flammability limit (% vol):	Not applicable.
Not available.	
Sensitivity to mechanical impact:	Not applicable.
Hazardous combustion products:	Oxides of carbon (COx). Hydrocarbons.
Rate of burning:	Not available.
Explosive power:	None

Section	5	:	REACTIVITY DATA	

Chemical stability: Stable under normal conditions.

Conditions of instability: None known.

Hazardous polymerization: Will not occur. Incompatible Strong acids.

substances: Strong oxidizers.

Hazardous See hazardous combustion products:

## decomposition products: Section 6 : HEALTH HAZARD DATA **Route of entry:** Skin contact, eye contact, inhalation and ingestion. Effects of Acute Exposure Eye contact: May cause irritation. Skin contact: Prolonged contact may cause irritation. Inhalation: Airborne particles may cause irritation. Ingestion: May cause vomiting and diarrhea. May cause abdominal pain. May cause gastric distress. Effects of chronic exposure: Contains an ingredient which may be corrosive. LD50 of product, species & route: > 5000 mg/kg rat oral. LC50 of product, species Not available for mixture, see the ingredients section. Exposure limit of Not available for mixture, see the ingredients section. Sensitization to product: Not available. Carcinogenic effects: Not listed as a carcinogen. Reproductive effects: Not available. Teratogenicity: Not available. Mutagenicity: Not available. Synergistic materials: Not available. Medical conditions Not available. aggravated by exposure: First Aid Skin contact: Remove contaminated clothing. Wash thoroughly with soap and water. Seek medical attention if irritation persists. **Eve contact:** Check for and remove contact lenses. Flush eyes with clear, running water for 15 minutes while holding eyelids open: if irritation persists, consult a physician. Inhalation: Remove victim to fresh air. Seek medical attention if symptoms persist. Ingestion: Dilute with two glasses of water. Never give anything by mouth to an unconscious person. Do not induce vomiting, seek immediate medical attention.

Castion 7	
Section 7 :	PRECAUTIONS FOR SAFE HANDLING AND USE
Leak/Spill:	Contain the spill. Recover uncontaminated material for re-use. Wear appropriate protective equipment. Contaminated material should be swept or shoveled into appropriate waste container for disposal.
Waste disposal:	In accordance with municipal, provincial and federal regulations.
	Protect against physical damage. Avoid breathing dust. Wash thoroughly after handling. Keep out of reach of children. Avoid contact with skin, eyes and clothing. Launder contaminated clothing prior to reuse.
Storage requirements:	Keep containers closed when not in use. Store away from strong acids or oxidizers. Store in a cool, dry and well ventilated area.
	Section 8 : CONTROL MEASURES
Precautionary Measures	
Gloves/Type:	
	Neoprene or rubber gloves.
Respiratory/Type:	
	If exposure limit is exceeded, wear a NIOSH approved respirator.
Eye/Type:	$\bigcirc$
	Safety glasses with side-shields.
Footwear/Type:	Safety shoes per local regulations.
Clothing/Type:	As required to prevent skin contact.
Other/Type:	Eye wash capability should be in close proximity.
Ventilation requirements:	Local exhaust at points of emission.

### 4. FIRST AID MEASURES

#### If inhaled

If breathed in, move person into fresh air. If not breathing give artificial respiration

### In case of skin contact

Wash off with soap and plenty of water.

#### In case of eye contact

Flush eyes with water as a precaution.

#### If swallowed

Never give anything by mouth to an unconscious person. Rinse mouth with water.

### 5. FIRE-FIGHTING MEASURES

#### Flammable properties

Flash point not applicable

Ignition temperature no data available

### Suitable extinguishing media

Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

#### Special protective equipment for fire-fighters

Wear self contained breathing apparatus for fire fighting if necessary.

### 6. ACCIDENTAL RELEASE MEASURES

### Personal precautions

Avoid dust formation.

### Environmental precautions

Do not let product enter drains.

#### Methods for cleaning up

Sweep up and shovel. Keep in suitable, closed containers for disposal.

### 7. HANDLING AND STORAGE

#### Handling

Provide appropriate exhaust ventilation at places where dust is formed. Normal measures for preventive fire protection.

#### Storage

Keep container tightly closed in a dry and well-ventilated place.

### 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Contains no substances with occupational exposure limit values.

### Personal protective equipment

### **Respiratory protection**

Respiratory protection is not required. Where protection from nuisance levels of dusts are desired, use type N95 (US) or type P1 (EN 143) dust masks. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

### Hand protection

For prolonged or repeated contact use protective gloves.

### **Eye protection** Safety glasses

**Hygiene measures** General industrial hygiene practice.

### 9. PHYSICAL AND CHEMICAL PROPERTIES

### Appearance

Form	granules
Colour	grey, beige
Safety data	
рН	6.0 - 9.0
Melting point	no data available
Boiling point	no data available
Flash point	not applicable
Ignition temperature	no data available
Lower explosion limit	no data available
Upper explosion limit	no data available
Density	2.400 g/cm3
Water solubility	no data available

### **10. STABILITY AND REACTIVITY**

#### Storage stability

Stable under recommended storage conditions.

## Materials to avoid

Strong acids

### Hazardous decomposition products

Hazardous decomposition products formed under fire conditions. - Aluminum oxide, silicon oxides

### **11. TOXICOLOGICAL INFORMATION**

### Acute toxicity

LD50 Intravenous - rat - 35 mg/kg Remarks: Lungs, Thorax, or Respiration:Acute pulmonary edema.

### Irritation and corrosion

no data available

### Sensitisation

no data available

### **Chronic exposure**

Carcinogenicity - mouse - Oral Tumorigenic:Equivocal tumorigenic agent by RTECS criteria. Liver:Tumors.

### IARC:

C: No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.

### Signs and Symptoms of Exposure

Lung irritation, Asthma

#### **Potential Health Effects**

Inhalation	May be harmful if inhaled. May cause respiratory tract irritation.
Skin	May be harmful if absorbed through skin. May cause skin irritation.
Eyes	May cause eye irritation.
Ingestion	May be harmful if swallowed.
Target Organs	Lungs,

#### Additional Information RTECS: CT9450000

### **12. ECOLOGICAL INFORMATION**

#### Elimination information (persistence and degradability)

no data available

#### **Ecotoxicity effects**

Toxicity to fish LC50 - Oncorhynchus mykiss (rainbow trout) - 19,000 mg/l - 96 h

#### Further information on ecology

no data available

### **13. DISPOSAL CONSIDERATIONS**

#### Product

Observe all federal, state, and local environmental regulations.

## Contaminated packaging

Dispose of as unused product.

### 14. TRANSPORT INFORMATION

#### DOT (US)

Not dangerous goods

#### IMDG

Not dangerous goods

### IATA

Not dangerous goods

### **15. REGULATORY INFORMATION**

### **DSL Status**

All components of this product are on the Canadian DSL list.

### WHMIS Classification

Not WHMIS controlled.

Not WHMIS controlled.

### **16. OTHER INFORMATION**

#### Further information

Sigma-Aldrich - 285234

The above information is believed to be correct but does not purport to be all inclusive and shall be used only as a guide. The information in this document is based on the present state of our knowledge and is applicable to the product with regard to appropriate safety precautions. It does not represent any guarantee of the properties of the product. Sigma-Aldrich Co., shall not be held liable for any damage resulting from handling or from contact with the above product. See reverse side of invoice or packing slip for additional terms and conditions of sale.

### SECTION 1 - PRODUCT AND COMPANY IDENTIFICATION

Company: AccuStandard, Inc. 125 Market Street New Haven, CT 06513 Date MSDS Printed: 1/31/2008 Preparation Date: 1/31/2008 Information Phone Number: 203-786-5290 Emergency Phone Number: 203-786-5290 Hours: Mon. to Fri. 8am-5pm EDT

Catalog Number: **FU-009-D-40X** Product Name: Diesel Fuel Synonyms: N/A Formula: N/A

Molecular Weight: N/A

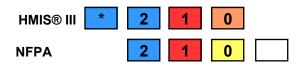

### SECTION 2 - COMPOSITION / INFORMATION ON INGREDIENTS

			ACGIH-TL	LV (mg/m3)	OSHA-PI	EL (mg/m3)
Component(s) (1)	CAS #	Appr. %	TWA	STEL skin	TWA	STEL skin
#2 Diesel Fuel	68334-30-5	2.0				
Dichloromethane	75-09-2	98.00	174			

### SECTION 3 - HAZARDS IDENTIFICATION

### Health and Environmental Hazards/Symptoms of Exposure:

Exposure can cause headache, nausea, confusion, drowsiness, dizziness and/or vomiting. Causes depression of central nervous system. Effects may be delayed. Lachrymator. Suspect cancer hazard.

### **Potential Health Effects:**

May be irritating to eyes. May cause eye damage. Irritating to skin. May be harmful if absorbed through the skin. May be irritating to mucous membrane and upper respiratory system. May be harmful if inhaled. Harmful if swallowed.

### **Routes of Entry:**

Inhalation, ingestion or skin contact.

### Carcinogenicity:

This product is or contains a component that is classified (ACGIH, IARC, NTP, OSHA) as a possible cancer hazard.

### SECTION 4 - FIRST AID MEASURES

### **Emergency First Aid:**

Get medical assistance for all cases of overexposure.

Skin contact: Immediately wash skin with soap and plenty of water. Remove contaminated clothing. Get medical attention if symptoms occur. Wash clothing before reuse.

Eye contact: Immediately flush with plenty of water. After initial flushing, remove contact lenses and continue flushing for at least 15 minutes. Assure adequate flushing by separating the eyelids with fingers.

Inhalation: Remove to fresh air. If not breathing, give artificial respiration or give oxygen by trained personnel. Seek immediate medical attention.

Ingestion: Do NOT induce vomiting. Call a physician or poison control center immediately. Never give anything by mouth to an unconscious person.

### **SECTION 5 - FIRE FIGHTING MEASURES**

Flammable Properties:

Flash Point: >230°F Flammable Limits LEL (%): 12 Flammable Limits UEL (%): 23 Autoignition Temperature: 556°C

During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion. Containers can build up pressure if exposed to heat.

### **Extinguishing Media:**

Use alcohol foam, carbon dioxide, dry chemical, or water spray when fighting fires involving this material.

### **Fire Fighting Procedures:**

As in any fire, wear self-contained breathing apparatus pressure demand, MSHA/NIOSH (approved or equivalent) and full protective

### SECTION 6 - ACCIDENTAL RELEASE MEASURES

### Spill Response:

Wear a self-contained breathing apparatus and appropriate personal protection. Stop leak if you can do so without risk. Ventilate area. Neutralize spill with soda ash or lime. Take up and containerize for proper disposal. Flush spill area with water. Keep combustibles away from spilled material. Comply with Federal, State, and local regulations.

### **SECTION 7 - HANDLING AND STORAGE**

Store in a tightly closed container.

Store in a cool dry, well-ventilated area away from ignition sources.

Avoid breathing vapors or mists.

Use with adequate ventilation.

Do not get in eyes, on skin or clothing.

Avoid prolonged or repeated exposure.

This product should only by used by persons trained in the safe handling of hazardous chemicals.

### SECTION 8 - EXPOSURE CONTROLS / PERSONAL PROTECTION

### **Engineering Controls and Personal Protection Equipment (PPE):**

Respiratory Protection: If workplace exposure limit(s) of product or any component is exceeded (see TLV/PEL), a NIOSH/MSHA approved air supplied respirator is advised in absence of proper environmental control. OSHA regulations also permit other NIOSH/MSHA respirators (negative pressure type) under specified conditions (see your safety equipment supplier). Engineering and/or administrative controls should be implemented to reduce exposure.

Material must be handled or transferred in an approved fume hood or with equivalent ventilation.

Protective gloves must be worn to prevent skin contact.

(Polyethylene, polyvinyl chloride (PVC) or equivalent)

Safety glasses with side shields must be worn at all times.

### **General Hygiene Considerations:**

Wash thoroughly after handling. Do not take internally. Eye wash and safety equipment should be readily available.

### SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Appearance: Clear liquid Odor: Ether-like odor pH: N/A Vapor Pressure: 353 mmHg (20 °C) Vapor Density (Air = 1): 2.93 g/L Boiling Point: 40 °C Melting Point: -97 °C Solubility in Water (%): Slight (1.3%) Specific Gravity ( $H_2O = 1$ ): 1.326 g/cm3 Flash Point: >230°F Explosion Limits (%): 12 to 23 Autoignition Temperature: 556°C Percent Volatile: 99+ Evaporation Rate (BuAc = 1): 27.5 Molecular Weight: N/A Molecular Formula: N/A

### SECTION 10 - STABILITY AND REACTIVITY

Stability: Stable

Conditions To Avoid:Contact with ignition sourcesMaterials To Avoid:Bases<br/>Oxidizers<br/>Alkali metals; Aluminum, magnesium, sodium, potassium and lithium

Hazardous Decomposition: Hydrogen chloride gas (HCl); Phosgene; Chlorine Hazardous Polymerization: Will not occur

### SECTION 11 - TOXICOLOGICAL INFORMATION

See section 3 for specific toxicological information for the ingredients of this product.

### SECTION 12 - ECOLOGICAL INFORMATION

By complying with sections 6 and 7 there will be no release to the environment.

### SECTION 13 - DISPOSAL CONSIDERATIONS

Recycle or incinerate at any EPA approved facility or dispose in compliance with Federal, State and local regulations. Empty containers must be triple-rinsed prior to disposal.

### SECTION 14 - TRANSPORT INFORMATION

**DOT** UN Number: UN1593

93 Shipping Class: 6.1

Packing Group: III

POISON

### SECTION 15 - REGULATORY INFORMATION

In addition to Federal and state regulations, local regulations may apply. Check with your local regulatory authorities.

# All components are listed on the TSCA Inventory. For laboratory, research and development use only. Not for manufacturing or commercial purposes.

WARNING: This product contains chemical(s) known to the state of California to cause cancer.

### **SECTION 16 - OTHER INFORMATION**

This document has been designed to meet the requirements of OSHA, ANSI and CHIPs regulations.

The statements contained herein are offered for informational purposes only and are based on technical data that we believe to be accurate. It is intended for use only by persons having the necessary technical skill and at their own discretion and risk. Since conditions and manner of use are outside our control, we make

Material Safety Data Sheet Hydrochloric acid

MSDS# 94460 Section 1 - Chemical Product and Company Identification Hydrochloric acid MSDS Name: SA5-5, SA50-1, SA50-20, SA50-4, SA52-20, SA52-500, SA54-1, SA54-10, SA54-20, SA54-4, Catalog Numbers: SA60-1, SA62-1 Synonyms: Chlorohydric acid; Hydrogen chloride; Muriatic acid; Spirits of salt; Hydrochloride. **Fisher Scientific** Company Identification: One Reagent Lane Fair Lawn, NJ 07410 For information in the US, call: 201-796-7100 Emergency Number US: 201-796-7100 CHEMTREC Phone Number, US: 800-424-9300 Section 2 - Composition, Information on Ingredients _____ Risk Phrases: 34 37 CAS#: 7647-01-0 Chemical Name: Hydrochloric acid %: < 2.0EINECS#: 231-595-7 С Hazard Symbols: _____ _____ Risk Phrases: CAS#: 7732-18-5 Chemical Name: Water %: >98 EINECS#: 231-791-2 Hazard Symbols: -----Text for R-phrases: see Section 16 Hazard Symbols: None listed **Risk Phrases:** None listed Section 3 - Hazards Identification EMERGENCY OVERVIEW Warning! May cause eye, skin, and respiratory tract irritation. Target Organs: No data found. Potential Health Effects Eye: May cause eye irritation.

Skin: May cause skin irritation.

Ingestion: May cause irritation of the digestive tract.

Inhalation: May cause respiratory tract irritation. Exposure to the mist and vapor may erode exposed teeth.

Prolonged or repeated skin contact may cause dermatitis. Repeated exposure may cause erosion of teeth. Chronic: Repeated exposure to low concentrations of HCl vapor or mist may cause bleeding of nose and gums. Chronic bronchitis and gastritis have also been reported.

Section 4 - First Aid Measures

Eyes:	In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical aid.
Skin:	In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Get medical aid immediately. Wash clothing before reuse.
Ingestion:	If swallowed, do NOT induce vomiting. Get medical aid immediately. If victim is fully conscious, give a cupful of water. Never give anything by mouth to an unconscious person.
Inhalation:	If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.
Notes to Physician:	Treat symptomatically and supportively.
	Section 5 - Fire Fighting Measures
General Information:	As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. Not flammable, but reacts with most metals to form flammable hydrogen gas. Use water spray to keep fire-exposed containers cool. Containers may explode when heated.
Extinguishing Media:	Substance is nonflammable; use agent most appropriate to extinguish surrounding fire.
Autoignit Temperatu	^{ion} Not applicable. ire:
	int: Not applicable.
LOW	
Explosion Lim Upp	^{its:} Not available
NFPA Rati	ng: health: 1; flammability: 0; instability: 1;
	Section 6 - Accidental Release Measures
General Information:	Use proper personal protective equipment as indicated in Section 8.
Spills/Leaks:	Avoid runoff into storm sewers and ditches which lead to waterways. Clean up spills immediately, observing precautions in the Protective Equipment section. Provide ventilation. Cover with dry earth, dry sand, or other non-combustible material followed with plastic sheet to minimize spreading and contact with water.
	Section 7 - Handling and Storage
Handling: vent	th thoroughly after handling. Remove contaminated clothing and wash before reuse. Use only in a well- ilated area. Avoid contact with eyes, skin, and clothing. Keep container tightly closed. Avoid ingestion and lation. Discard contaminated shoes.

Storage: Store in a tightly closed container. Store in a cool, dry, well-ventilated area away from incompatible substances. Do not store in metal containers. Store away from alkalies.

+   Chemical Name	ACGIH	+	++  OSHA - Final PELs
Hydrochloric acid	2 ppm Ceiling   	50 ppm IDLH	  5 ppm Ceiling; 7    mg/m3 Ceiling
   Water +	none listed	  none listed	  none listed   ++

Section 8 - Exposure Controls, Personal Protection

OSHA Vacated PELs: Hydrochloric acid: None listed Water: None listed

Engineering Controls:

Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use adequate general or local exhaust ventilation to keep airborne concentrations below the permissible exposure limits.

**Exposure** Limits

Personal Protective Equipment

Eyes: Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.

Skin: Wear neoprene or polyvinyl chloride gloves to prevent exposure.

Clothing: Wear appropriate protective clothing to prevent skin exposure.

Respirators: A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

### MINE SAFETY APPLIANCES COMPANY P.O. Box 426 Pittsburgh, PA 15230 PHONE (412) 967-3000

This product contains isobutylene, oxygen and nitrogen, substances subject to the Pennsylvania Worker and Community Right-To-Know Act.

#### **PRODUCT IDENTITY**

LABEL IDENTITY - MSA P/N 10028038 Calibration Check Gas, 100 ppm Isobutylene in Air

CHEMICAL NAME - Isobutylene, Oxygen, Nitrogen Mixture

ADDITIONAL IDENTITIES - MSA P/N 10028038 Calibration Gas

FORMULA -  $C_4H_8$  in Air

APPLICABLE CHEMICAL CONTENTS		
	ppm	TWA

Isobutylene (CAS 115-11-7) Air

NOTE: Gas under pressure, 1000 PSIG at 70°F, Approx. 100 Liters gas at atmospheric pressure

### PHYSICAL AND CHEMICAL PROPERTIES

APPEARANCE AND ODOR - Colorless odorless gas.

BOILING POINT - N/A S VAPOR PRESSURE - N/A VAPOR DENSITY (AIR = 1) -> 1 SOLUBILITY IN WATER - Isobutylene - Insoluble Oxygen -  $3.2 \text{ cm}^3/100 \text{ ml} (25^{\circ}\text{C})$ Nitrogen -  $2.3 \text{ cm}^3/100 \text{ ml} (0^{\circ}\text{C})$ 

SPECIFIC GRAVITY ( $H_2O = 1$ ) - N/A PERCENT VOLATILE BY VOLUME - N/A

None

Balance None

100

N/A - Not Applicable

### PHYSICAL HAZARD INFORMATION

PHYSICAL HAZARD - Compressed gas, 1000 PSIG at 70°F

CONDITIONS OR MATERIALS TO AVOID - None

FLASH POINT - N/A LEL - N/A UEL - N/A

EXTINGUISHING MEDIA - This calibration gas mixture is not flammable. Use extinguishing media appropriate to surrounding fire.

SPECIAL FIRE FIGHTING PROCEDURES - See Next Item

UNUSUAL FIRE AND EXPLOSION HAZARDS - Gas under pressure, 1000 PSIG at 70°F. Do not exceed 120°F.

### HEALTH HAZARDS

HEALTH HAZARDS - None Known for 100 ppm Isobutylene in Air. Isobutylene Inhalation Rat LC50: 620 Gm/ $M^3/4H$ . Isobutylene Inhalation Mouse LC50: 415 gm/ $M^3/2H$ .

SIGNS AND SYMPTOMS OF EXPOSURE - N/A to this gas mixture.

PRIMARY ROUTES OF ENTRY - Inhalation

TARGET ORGANS - Isobutylene is an asphyxiant, which displaces oxygen in the environment..

MEDICAL CONDITIONS GENERALLY RECOGNIZED AS BEING AGGRAVATED BY EXPOSURE - No information

EXPOSURE LIMITS - None (ACGIH 2009)

CARCINOGENICITY DATA - Component gases are not listed by NIOSH RTECS, OSHA, NTP or IARC.

EMERGENCY AND FIRST AID PROCEDURES - None

### SAFE HANDLING AND USE

HYGIENIC PRACTICES - Avoid breathing gas.

PROTECTIVE MEASURES DURING REPAIR AND MAINTENANCE OF CONTAMINATED EQUIPMENT - N/A

PROCEDURES FOR SPILL OR LEAK CLEANUP - Ventilate area

WASTE DISPOSAL - Do not puncture or incinerate cylinder. Before discarding cylinder, slowly release contents to a safe exhaust. Dispose of cylinder in accordance with local, state and federal regulations

STORAGE - Store in a cool, dry, well-ventilated area. Do not exceed 120°F.

### CONTROL MEASURES

PERSONAL PROTECTIVE EQUIPMENT - Due to the limited amount of gas in the cylinder, and the low release rate employed in instrument calibration, respiratory protection is not indicated under conditions of intended use.

ENGINEERING CONTROLS - Mechanical ventilation is suitable.

WORK PRACTICES - Avoid breathing gas. Use in well-ventilated areas. Follow the calibration procedure detailed in the MSA instruction manual provided with the instrument under calibration.

DATE OF PREPARATION - Rev. 2, April 2009

WARNING: This is a hazardous chemical product. By following the directions and warnings provided with this product, the hazards associated with the use of this product can be greatly reduced but never entirely eliminated. Mine Safety Appliances Company makes no warranties, expressed or implied, with respect to this product and EXPRESSLY DISCLAIMS THE WARRANTY OF MERCHANTABILITY AND ANY WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE. · · · · · · · · · · · · · · · · · · ·		Part and		-	1996, -

Take precautionary measures against static discharges. Keep container tightly closed. Do not pressurize, cut. weld braze, solder, drill, grind, or expose emoty containers to heat, sparks or open flames. Use only with adequate ventilation. Avoid breathing vapor or mist,

Storage:

#### Keen away from sources of ignition. Store in a tightly closed container. Keep from contact with oxidizing materials. Store in a cool, dry, well-ventilated area away from incompatible substances.

Section 8 - Exposure Controls, Personal Protection

Chemical Name	ACGIH	I NIOSH	JOSHA - Final PELs
Isopropyl alcohol			400 ppm TWA; 980  mg/m3 TWA 
Water	none listed	none listed	none listed

OSHA Vacated PELs: Isopropyl alcohol: 400 ppm TWA; 980 mg/m3 TWA Water: None listed

#### Engineering Controls:

Use explosion-proof ventilation equipment, Facilities storing or utilizing this material should be equipped with an evewash facility and a safety shower. Use adequate general or local exhaust ventilation to keep airborne concentrations below the permissible exposure limits.

#### Exposure Limits

Personal Protective Equipment

Eves: Wear chemical splash goggles,

Skin: Wear appropriate protective gloves to prevent skin exposure.

Clothing: Wear appropriate protective clothing to prevent skin exposure.

A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements or Respirators: European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

#### Section 9 - Physical and Chemical Properties

Physical State: Liquid Color: colorless Odor: alcohol-like pH: Not available Vapor Pressure: 33 mm Hg @ 20 deg C Vapor Density: 2.1 (Air=1) Evaporation Rate: 1.7 (n-butyl acetate=1) Viscosity: 2,27 mPas @ 20 deg C Boiling Point: 82 deg C @ 760 mm Hg ( 179.60°F) Freezing/Melting Point: -88 deg C (-126.40°F) Decomposition Temperature: Not available Solubility in water: Miscible Specific Gravity/Density; 0.7850 (water=1) Molecular Formula: C3H8O Molecular Weight: 60.09 Section 10 - Stability and Reactivity

Chemical Stability: Stable. Conditions to Avoid:

Other Materials

Ignition sources, excess heat. Strong oxidizing agents, strong acids, strong bases, amines, ammonia, ethylene oxide, isocyanates, Incompatibilities with acetaldehyde, chlorine, phosgene, Attacks some forms of plastics, rubbers, and coatings., aluminum at high temperatures.

Hazardous Carbon monoxide, carbon dioxide. Decomposition Products

······································			
Hazardous Polymerization	Will not occur.

European/International Regulations

European Labeling in Accordance with EC Directives

Hazard Symbols: XI F

**Risk Phrases:** 

R 11 Highly flammable.

R 36 Irritating to eves.

R 67 Vapours may cause drowsiness and dizziness

Safety Phrases:

S 7 Keep container tightly closed.

S 16 Keep away from sources of ignition - No smoking.

S 24/25 Avoid contact with skin and eyes.

S 26 In case of contact with eyes, rinse immediately with plenty of water and seek medical advice.

### **3. HAZARDS IDENTIFICATION**

#### **Emergency Overview**

**OSHA Hazards** Target Organ Effect, Corrosive

### **Target Organs**

Lungs, Teeth., Cardiovascular system.

OX

#### **HMIS Classification**

Health Hazard:	3
Chronic Health Hazard:	*
Flammability:	0
Physical hazards:	0
NFPA Rating	
Health Hazard:	3
Fire:	0
Reactivity Hazard:	3

Reactivity nazara.	
Special hazard.:	
•	

### **Potential Health Effects**

Inhalation	May be harmful if inhaled. Material is extremely destructive to the tissue of the
	mucous membranes and upper respiratory tract.
Skin	May be harmful if absorbed through skin. Causes skin burns.
Eyes	Causes eye burns.
Ingestion	May be harmful if swallowed. Causes burns.

#### 4. FIRST AID MEASURES

### General advice

Consult a physician. Show this safety data sheet to the doctor in attendance. Move out of dangerous area.

#### If inhaled

If breathed in, move person into fresh air. If not breathing give artificial respiration Consult a physician.

#### In case of skin contact

Take off contaminated clothing and shoes immediately. Wash off with soap and plenty of water. Consult a physician.

#### In case of eye contact

Continue rinsing eyes during transport to hospital. Rinse thoroughly with plenty of water for at least 15 minutes and consult a physician.

#### If swallowed

Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Rinse mouth with water. Consult a physician.

### **5. FIRE-FIGHTING MEASURES**

#### Flammable properties

Flash point no data available

### Ignition temperature no data available

#### Suitable extinguishing media

Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

#### Special protective equipment for fire-fighters

Wear self contained breathing apparatus for fire fighting if necessary.

#### **Further information**

Use water spray to cool unopened containers.

### 6. ACCIDENTAL RELEASE MEASURES

#### **Personal precautions**

Use personal protective equipment. Avoid breathing vapors, mist or gas. Ensure adequate ventilation. Evacuate personnel to safe areas.

#### **Environmental precautions**

Do not let product enter drains.

### Methods for cleaning up

Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13).

### 7. HANDLING AND STORAGE

#### Handling

Avoid inhalation of vapour or mist. Keep away from sources of ignition - No smoking. Keep away from combustible material.

#### Storage

Keep container tightly closed in a dry and well-ventilated place. Containers which are opened must be carefully resealed and kept upright to prevent leakage.

Sigma-Aldrich - 258121

### 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

### Components with workplace control parameters

Components	CAS-No.	Value	Control parameters	Update	Basis
Nitric acid	7697-37-2	TWA	2 ppm	2007-01-01	USA. ACGIH Threshold Limit Values (TLV)
Remarks	Eye & Uppe	r Respirat	ory Tract irritation	Dental erosion	
		STEL	4 ppm	2007-01-01	USA. ACGIH Threshold Limit Values (TLV)
	Eye & Uppe	r Respirat	ory Tract irritation	Dental erosion

		STEL	4 ppm 10 mg/m3	1989-01-19	USA. OSHA - TABLE Z-1 Limits for Air Contaminants - 1910.1000
		TWA	2 ppm 5 mg/m3	1997-08-04	USA. Occupational Exposure Limits (OSHA) - Table Z-1 Limits for Air Contaminants
	The value in	mg/m3 is	approximate.	1	

### Personal protective equipment

### **Respiratory protection**

Where risk assessment shows air-purifying respirators are appropriate use a full-face respirator with multipurpose combination (US) or type ABEK (EN 14387) respirator cartridges as a backup to engineering controls. If the respirator is the sole means of protection, use a full-face supplied air respirator. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

### Hand protection

Handle with gloves.

## Eye protection

Safety glasses

### Skin and body protection

Choose body protection according to the amount and concentration of the dangerous substance at the work place.

### Hygiene measures

Handle in accordance with good industrial hygiene and safety practice. Wash hands before breaks and at the end of workday.

### 9. PHYSICAL AND CHEMICAL PROPERTIES

### Appearance

Form	liquid
Colour	colourless
Safety data	
рН	< 1 at 20 °C (68 °F)
Melting point	no data available
Boiling point	100 °C (212 °F) at 1,013 hPa (760 mmHg)
Flash point	no data available
Ignition temperature	no data available
Lower explosion limit	no data available
Upper explosion limit	no data available
Vapour pressure	11 hPa (8 mmHg) at 20 °C (68 °F)
Density	1.4 g/cm3
Water solubility	completely soluble

### **10. STABILITY AND REACTIVITY**

#### Storage stability

Stable under recommended storage conditions. Stable under recommended storage conditions.

### Conditions to avoid

May discolor on exposure to air and light.

### Materials to avoid

Alkali metals, Organic materials, Acetic anhydride, Acetonitrile, Alcohols, Acrylonitrile

### Hazardous decomposition products

Hazardous decomposition products formed under fire conditions. - nitrogen oxides (NOx)

### **11. TOXICOLOGICAL INFORMATION**

### Acute toxicity

no data available

### Irritation and corrosion

Skin - rabbit - Extremely corrosive and destructive to tissue. - Draize Test

### Sensitisation

no data available

### **Chronic exposure**

IARC:	No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.
ACGIH:	No component of this product present at levels greater than or equal to 0.1% is identified as

a carcinogen or potential carcinogen by ACGIH.

NTP: No component of this product present at levels greater than or equal to 0.1% is identified as

a known or anticipated carcinogen by NTP.

OSHA: No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA.

Developmental Toxicity - rat - Oral Effects on Embryo or Fetus: Fetotoxicity (except death, e.g., stunted fetus).

Reproductive toxicity - rat - Oral Effects on Newborn: Biochemical and metabolic.

### Signs and Symptoms of Exposure

burning sensation, Cough, wheezing, laryngitis, Shortness of breath, spasm, inflammation and edema of the larynx, spasm, inflammation and edema of the bronchi, pneumonitis, pulmonary edema, Material is extremely destructive to tissue of the mucous membranes and upper respiratory tract, eyes, and skin.

#### **Potential Health Effects**

Inhalation	May be harmful if inhaled. Material is extremely destructive to the tissue of the mucous membranes and upper respiratory tract.
Skin	May be harmful if absorbed through skin. Causes skin burns.
Eyes	Causes eye burns.
Ingestion	May be harmful if swallowed. Causes burns.
Target Organs	Lungs, Teeth., Cardiovascular system.,

### **12. ECOLOGICAL INFORMATION**

### Elimination information (persistence and degradability)

no data available

### **Ecotoxicity effects**

Toxicity to fish LC50 - Asterias rubens - 100 - 330 mg/l - 48 h

### Further information on ecology

May be harmful to aquatic organisms due to the shift of the pH.

### **13. DISPOSAL CONSIDERATIONS**

#### Product

Observe all federal, state, and local environmental regulations. Contact a licensed professional waste disposal service to dispose of this material. Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber.

### Contaminated packaging

Dispose of as unused product.

See reverse side of invoice or packing slip for additional terms and conditions of sale.

# APPENDIX C Community Air Monitoring Plan

### Appendix 1A New York State Department of Health Generic Community Air Monitoring Plan

### Overview

A Community Air Monitoring Plan (CAMP) requires real-time monitoring for volatile organic compounds (VOCs) and particulates (i.e., dust) at the downwind perimeter of each designated work area when certain activities are in progress at contaminated sites. The CAMP is not intended for use in establishing action levels for worker respiratory protection. Rather, its intent is to provide a measure of protection for the downwind community (i.e., off-site receptors including residences and businesses and on-site workers not directly involved with the subject work activities) from potential airborne contaminant releases as a direct result of investigative and remedial work activities. The action levels specified herein require increased monitoring, corrective actions to abate emissions, and/or work shutdown. Additionally, the CAMP helps to confirm that work activities did not spread contamination off-site through the air.

The generic CAMP presented below will be sufficient to cover many, if not most, sites. Specific requirements should be reviewed for each situation in consultation with NYSDOH to ensure proper applicability. In some cases, a separate site-specific CAMP or supplement may be required. Depending upon the nature of contamination, chemical- specific monitoring with appropriately-sensitive methods may be required. Depending upon the proximity of potentially exposed individuals, more stringent monitoring or response levels than those presented below may be required. Special requirements will be necessary for work within 20 feet of potentially exposed individuals or structures and for indoor work with co-located residences or facilities. These requirements should be determined in consultation with NYSDOH.

Reliance on the CAMP should not preclude simple, common-sense measures to keep VOCs, dust, and odors at a minimum around the work areas.

### Community Air Monitoring Plan

Depending upon the nature of known or potential contaminants at each site, real-time air monitoring for VOCs and/or particulate levels at the perimeter of the exclusion zone or work area will be necessary. Most sites will involve VOC and particulate monitoring; sites known to be contaminated with heavy metals alone may only require particulate monitoring. If radiological contamination is a concern, additional monitoring requirements may be necessary per consultation with appropriate DEC/NYSDOH staff.

**Continuous monitoring** will be required for all <u>ground intrusive</u> activities and during the demolition of contaminated or potentially contaminated structures. Ground intrusive activities include, but are not limited to, soil/waste excavation and handling, test pitting or trenching, and the installation of soil borings or monitoring wells.

**Periodic monitoring** for VOCs will be required during <u>non-intrusive</u> activities such as the collection of soil and sediment samples or the collection of groundwater samples from existing monitoring wells. "Periodic" monitoring during sample collection might reasonably consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or

overturning soil, monitoring during well baling/purging, and taking a reading prior to leaving a sample location. In some instances, depending upon the proximity of potentially exposed individuals, continuous monitoring may be required during sampling activities. Examples of such situations include groundwater sampling at wells on the curb of a busy urban street, in the midst of a public park, or adjacent to a school or residence.

## VOC Monitoring, Response Levels, and Actions

Volatile organic compounds (VOCs) must be monitored at the downwind perimeter of the immediate work area (i.e., the exclusion zone) on a continuous basis or as otherwise specified. Upwind concentrations should be measured at the start of each workday and periodically thereafter to establish background conditions, particularly if wind direction changes. The monitoring work should be performed using equipment appropriate to measure the types of contaminants known or suspected to be present. The equipment should be calibrated at least daily for the contaminant(s) of concern or for an appropriate surrogate. The equipment should be capable of calculating 15-minute running average concentrations, which will be compared to the levels specified below.

1. If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 parts per million (ppm) above background for the 15-minute average, work activities must be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below 5 ppm over background, work activities can resume with continued monitoring.

2. If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities must be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities can resume provided that the total organic vapor level 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less - but in no case less than 20 feet, is below 5 ppm over background for the 15-minute average.

3. If the organic vapor level is above 25 ppm at the perimeter of the work area, activities must be shutdown.

4. All 15-minute readings must be recorded and be available for State (DEC and NYSDOH) personnel to review. Instantaneous readings, if any, used for decision purposes should also be recorded.

## Particulate Monitoring, Response Levels, and Actions

Particulate concentrations should be monitored continuously at the upwind and downwind perimeters of the exclusion zone at temporary particulate monitoring stations. The particulate monitoring should be performed using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The equipment must be equipped with an audible alarm to indicate exceedance of the action level. In addition, fugitive dust migration should be visually assessed during all work activities.

1. If the downwind PM-10 particulate level is 100 micrograms per cubic meter  $(mcg/m^3)$  greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques must be employed. Work may continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed 150 mcg/m³ above the upwind level and provided that no visible dust is migrating from the work area.

2. If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than 150 mcg/m³ above the upwind level, work must be stopped and a re-evaluation of activities initiated. Work can resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within 150 mcg/m³ of the upwind level and in preventing visible dust migration.

3. All readings must be recorded and be available for State (DEC and NYSDOH) and County Health personnel to review.

Appendix A	Site Location Maps
Appendix B	Site Mailing List

## 1. Introduction and Overview

This document presents the Citizen Participation (CP) Plan for the Former Scott Technologies Site ("Site") located at 1051 South Main Street, Elmira, Chemung County (Figures 1 and 2, Appendix A). The Site is currently occupied by Southern Tier Commerce Center (STCC). On 16 July 2014, Unisys Corporation (Unisys), entered into an Order on Consent and Administrative Settlement (Consent Order) with New York State Department of Environmental Conservation (NYSDEC) to perform environmental site characterization at STCC. The Consent Order requires the development of a CP Plan for the site in accordance with ECL §27-1417 and 6 NYCRR sections 375-1.10 and 375-3.10. Unisys intends to keep the general public informed regarding its site characterization activities at STCC, and is working closely with NYSDEC, and New York State Department of Health (NYSDOH) in that regard. The CP plan outlines community outreach approaches that are likely to be employed to achieve community participation and receive community feedback with regard to environmental site characterization at STCC.

## 2. Site Background

## 2.1 Site History

The Site was used for heavy industry from the 1880s to 1977. From 1887 to 1909 B.W. Payne & Sons produced high speed steam engines. Morrow Manufacturing made drill-chucks, machine parts, and a line of tools from 1909 to 1935. Remington Rand manufactured typewriters from 1936 until the facility closed in 1972. The Site was deeded to the Chemung County Industrial Development Agency in 1973 and leased to Westinghouse in 1974. Westinghouse used the property primarily for warehousing activities. American LaFrance took over the Westinghouse lease of the Site in 1980 and manufactured and assembled fire engines from 1982 to 1985. Figgie International, Inc., the owner of American LaFrance, gained full title to the property from the Chemung County Industrial Agency in 1985, shortly before ceasing manufacturing activities at the property. A Figgie International, Inc. changed its name to Scott Technologies, Inc. (STI) in April 1998 (Businessweek). Equilibrium Equities, Inc. purchased the property from STI in November 2005 and redeveloped it as STCC.

STI entered into a Voluntary Cleanup Agreement with NYSDEC in January 1999 to conduct site investigation and remedial activities at the Site. Voluntary cleanup activities were declared by NYSDEC to have been completed in October 2006. Prior actions included the removal of four registered underground storage tanks (USTs) in 1993 (Versar, 1993) and voluntary investigations.

In 1988, a Preliminary Site Assessment report for the Former Remington Rand plan (Dames & Moore, 1988) was completed on behalf of Unisys and submitted by NYSDEC. In March 2010, Unisys entered into an Order on Consent and Administrative Settlement (the "Order") with NYSDEC for to perform a remedial investigation (RI) and feasibility study (FS) of the Former Sperry Remington Site (NYSDEC Site 0808043). Prior to entering into this Order, Unisys submitted a Brownfield Cleanup Program application to NYSDEC on 8 February 2008. The Former Sperry Remington Site consists of 0.28 acres located in the northeast corner of the Site (Figures 1 and 2, Appendix A). Unisys is currently implementing the approved RI/FS Work Plan and subsequent addenda for the Former Sperry Remington Site.

## 2.2 Project Summary

Unisys is developing and submitting a Work Plan to document environmental conditions at the Site with oversight of environmental characterization activities by NYSDEC and NYSDOH ("State Agencies"). Information collected during the site characterization will be summarized in a report. That information may conclude that no further action is needed at STCC to address environmental conditions, or it may suggest the need for additional characterization activities. After that report has been reviewed and its findings accepted by the State Agencies, public notice of those findings will take place.

## 3. Citizen Participation (CP) Activities

The CP program described in this section has been developed in accordance with the requirements of NYSDEC Program Policy Number 23, the Citizen Participation Handbook for Remedial Programs. Unisys will implement likely CP activities outlined in this section with oversight and input from NYSDEC and NYSDOH.

## **3.1 Document Repository**

Documents pertaining to the site characterization and environmental studies at STCC will be made available for public review. The document repository will be maintained and available at a public building in order to provide convenient access to the public. For STCC characterization activities, a document repository will be established and maintained at the following two (2) locations:

<u>Chemung County Library District</u> Central Library (Elmira) 101 East Church Street Elmira, NY 14901 Attn: Owen Frank Phone: (607) 733-9173 <u>http://www.ccld.lib.ny.us/downtown.htm</u> NYSDEC Region 8 6274 East Avon-Lima Rd (Routes 5 and 20) Avon, New York 14414-9519 Attn: Bart Putzig, P.E. Hours: 8:30 - 4:45 M-F Phone: (585) 226-2466 (call for appointment)

Those documents to be maintained in those repositories include, but are not limited to, the Consent Order, Fact Sheets, Site Characterization Work Plan, CP Plan, Site Characterization Report, and other materials (historical investigations, information sheets, notices, etc.).

## 3.2 Mailing List

A mailing list allows for quick and easy dissemination of information, which can be accessed conveniently by those individuals who are interested in obtaining that information. A mailing list will be compiled to distribute site information to interested entities including stakeholders, media outlets, and government officials (Appendix B).

## **3.3 Points of Contact**

Below is a list of personnel who are the designated points of contact for the STCC site environmental characterization. The public is encouraged to contact them directly to obtain project-specific information.

Project Related Information Tim Schneider NYSDEC Division of Environmental Remediation 6274 East Avon-Lima Road Avon, NY 14414 585-226-5480 timothy.schneider@dec.ny.gov

<u>Site Related Health Information</u> Dawn Hettrick, MPH NYSDOH Empire State Plaza, Corning Tower Room #1787 Albany, NY 12237 518-402-7860 <u>beei@health.state.ny.us</u> <u>Citizen Participation</u> Linda Vera Regional Citizen Participation Specialist NYSDEC Division of Environmental Remediation 6274 East Avon-Lima Road Avon, NY 14414 585-226-5324 <u>linda.vera@dec.ny.gov</u>

# 3.4 Print Media

Fact Sheets are an effective means of disseminating information to the public to raise awareness and enhance participation. At key milestones in the project, NYSDEC will prepare a Fact Sheet in accordance with NYSDEC Program Policy Number 23.

## 3.5 Website

Because most community members have access to internet at either home, work, or a public library, providing information through a project website is helpful in enhancing public outreach and making information available at all times. NYSDEC will establish a website for the project and identify the website address for the project in its Fact Sheets.

## **3.6 Summaries of Technical Reports**

Report summaries are very useful in succinctly communicating main aspects of a project to the community in lay terms. Therefore, after each technical report has been finalized and approved by NYSDEC, a summary will be prepared in the form of a Fact Sheet and will be made available for public review.

## 3.7 Public Notices

As required by NYSDEC Program Policy, formal public notices will be published in a local newspaper with general circulation to inform community members of key milestones or events pertaining to the project. Public Notices will appear in a prominent position in the newspaper and adequate response time will be provided to allow for community participation and feedback.

## **3.8** Public Comment Period and Response to Comments

Public comments will be solicited on certain project documents as, and when, required by NYSDEC. Per NYSDEC policy, a public comment period is typically thirty to forty-five (30 to 45) days. Following the conclusion of a public comment period, NYSDEC and Unisys will compile comments received and provide responses in a formal Response to Comments document.

# 3.9 Meetings

To communicate major project schedules, activities, or milestones, public or town meetings will be organized as per NYSDEC's requirement. Those meetings will include an oral or poster presentation of project activities and milestones, and will include a discussion to solicit community feedback and address comments. Public meetings will be convened at locations convenient and central to the community, and the meeting time will be decided with input from community leaders. Meeting information will be published in a local newspaper and/or will be mailed to interested entities identified on the project mailing list.

# 3.10 Elected Local, State, and Federal Official Briefings

Local, state, and federal officials will be briefed as requested during project implementation and at key milestones. Those briefings will provide an opportunity for officials to be further informed about the project, get involved in the project, and resolve any concerns that they may have pertaining to project implementation. Contact information for relevant local, state and federal officials is included in the site mailing list provided in Appendix B.

# 3.11 CP Plan Revisions

Additional community needs or concerns that are not addressed in this CP plan may arise during project implementation. Unisys and NYSDEC will work together to identify those issues and update the CP plan as needed.
