1. INTRODUCTION

1.1 Background

On behalf of Unisys Corporation (Unisys), Geosyntec Consultants, Inc. (Geosyntec) is submitting this Site Characterization Work Plan for the Former Scott Technologies Site #808049 (Site) in accordance with an Order on Consent and Administrative Settlement Index No. A8-0836-1407 (Order) with the New York State Department of Environmental Conservation (NYSDEC or agency) dated 16 July 2014. The Site is located at 1051 South Main Street in Elmira, Chemung County, New York (see **Figure 1**) and is currently occupied by Southern Tier Commerce Center (STCC). A Preliminary Site Assessment (PSA) for the entire Former Sperry Remington Site was completed in 1988 on behalf of Unisys and submitted to NYSDEC (Dames & Moore, 1988). The Site has been the subject of additional environmental investigations between 1992 and 2012. In June 2013, NYSDEC identified potential areas of concern (PAOCs) at the Site based on new information related to historical use of the property and previous environmental investigations results.

Scott Technologies Inc. (STI), a former owner of the Site, entered into a Voluntary Cleanup Agreement with NYSDEC in January 1999 to conduct investigation and remedial activities at the Site. Voluntary cleanup activities at the Site were declared by NYSDEC to have been satisfactorily completed in October 2006. Prior actions included the removal of four (4) registered underground storage tanks (USTs) in 1993 (Versar, 1993) and voluntary investigations.

This proposed Site Characterization is separate from a Remedial Investigation (RI) being conducted by Unisys in accordance with the Order on Consent and Administrative Settlement (Index #B8-0815-09-10) approved by NYSDEC on 30 March 2010 for 0.28 acres of the Former Sperry Remington Site (Site #808043).

1.2 <u>Purpose</u>

The general purpose of a Site Characterization Work Plan is to document environmental conditions at the Site as it relates to the PAOCs, historical information, and new findings. The work plan has been completed in accordance with NYSDEC DER-10 Guidance.

1.3 <u>Report Organization</u>

The remainder of this report is organized into the following sections:

- Section 2 Site Description and History;
- Section 3 Environmental Setting;
- Section 4 Objectives, Scope and Rationale;
- Section 5 Field Activities Plan;
- Section 6 Project Management; and
- Section 7 References.

2. SITE DESCRIPTION AND HISTORY

The Site history was presented in a Preliminary Site Assessment (Dames and Moore, 1988). The following sections of this work plan present the Site location, ownership and regulatory history, previous investigations, PAOCs identified by NYSDEC, and the current Conceptual Site Model (CSM) for the Site.

2.1 <u>Site Description</u>

The STI property is located at 1051 South Main Street in Elmira, New York (see **Figure 1** for Site location). The Site is approximately forty-six (46) acres and includes the STCC buildings and the Former Recreation Area (FRA). A Site map is provided as **Figure 2**. The Former Sperry Remington Site is located in the northeast portion of the Site. The Site is bounded by South Main Street to the west, Elmira High School (EHS) to the north, the Consolidated Rail Corp. property to the east and residential properties to the south. Miller Pond is located approximately one thousand (1,000) feet to the northeast.

2.2 <u>Site History</u>

The Site history has been presented to NYSDEC in prior Site related reports (URS, 2000). The Site was used for heavy industry from the 1880s to 1977 and was previously part of an eighty-three- (83-) acre facility that included the Site and the current EHS parcel to the north. From 1887 to 1909 B.W. Payne & Sons produced high speed steam engines. Morrow Manufacturing made drill-chucks, machine parts, and a line of tools from 1909 to 1935. The manufacturing activities of B.W. Payne & Sons and Morrow Manufacturing were conducted in the northern portion of the 83-acre facility currently occupied by EHS. Remington Rand began manufacturing typewriters in 1936 with main manufacturing activities occurring north of the Site. Building 88, the primary structure at the Site as shown on **Figure 2**, was constructed in 1942 under government order for the manufacture of the Norden bomb sight. The building was often referred to as the "N Plant". Production of the Norden bomb sight at the N-Plant continued until October 1944.

Remington Rand purchased the N-Plant in 1946 and gradually relocated some operations from the northern portion of the facility to the Site. Building 88 was used for manufacturing adding machines and assembly of adding machines and UNIVAC mainframe computers. In 1963, production at the facility was streamlined in a modernization program that relocated machinery to create a "straight-flow" operation. Raw materials were to be received at one end and the finished product shipped from the other. Based on plant drawings (Lancy, 1967) and process flow, the majority of Remington Rand's manufacturing processes were on the current EHS property with painting (likely a final step in the manufacturing process) located in Building 88, suggesting product flow was north to south. Previously, manufacturing had been conducted at both ends of the plant and assembly was completed in the middle.

In August 1967, the southern portion of the Site was dedicated as Rand Park. Construction included landscaping, installation of fence enclosures, and construction of a one hundred (100)

foot by forty (40) foot main pavilion. Rand Park is currently identified as the FRA shown on **Figure 2**.

By the early 1970s, manufacturing activities at the facility were reduced and consolidated in the southern portion of the facility that included, in part, the Site until the facility closed in 1972. The Site was deeded to the Chemung County Industrial Development Agency in 1973 and leased to Westinghouse in 1974. Westinghouse used the property primarily for warehousing activities. American LaFrance took over the Westinghouse lease of the Site in 1980 and manufactured and assembled fire engines from 1982 to 1985. American LaFrance generated paint sludge, paint solvents, waste cutting oils, and waste coolants during its operation. Wastes were staged in area east of Building 88 prior to off-Site disposal. Figgie International, Inc., the owner of American LaFrance, gained full title to the property from the Chemung County Industrial Agency in 1985, shortly before ceasing manufacturing activities at the property. Figgie International, Inc. changed its name to Scott Technologies, Inc. (STI) in April 1998 (Businessweek). Equilibrium Equities, Inc. purchased the property from STI in November 2005 and redeveloped it as STCC.

STI entered into a Voluntary Cleanup Agreement with NYSDEC in January 1999 to conduct investigation and remedial activities at the Site. Voluntary cleanup activities at the Site were declared by NYSDEC to have been satisfactorily completed in October 2006. Prior actions included the removal of four (4) registered underground storage tanks (USTs) in 1993 (Versar, 1993) and voluntary investigations.

As noted above in Section 2.0, a Preliminary Site Assessment report for the Former Remington Rand plant (Dames & Moore, 1988) was completed on behalf of Unisys and submitted to NYSDEC. In March 2010, Unisys entered into an Order on Consent and Administrative Settlement (the "Order") with NYSDEC to perform a RI and feasibility study (FS) of the Former Sperry Remington Site (NYSDEC Site 0808043). Prior to entering into this Order and at the request of NYSDEC, Unisys submitted a Brownfield Cleanup Program (BCP) application to NYSDEC on 8 February 2008. NYSDEC informed Unisys by e-mail on 1 October 2009 that the BCP application would be rejected due to BCP administrative issues within the agency. The Former Sperry Remington Site consists of 0.28 acres located in the northeast corner of this Site (**Figure 2**). Unisys is currently implementing an approved RI/FS Work Plan and subsequent addenda for the Former Sperry Remington Site (0808043).

2.3 Previous Investigations and Remedial Activities

2.3.1 Phase I/II Investigations (1991 – 1993)

Previous environmental investigations of the Site have been completed on behalf of STI or as Figgie International, Inc. Versar, Inc. (Versar) conducted a Phase I Environmental Audit in August 1991 (Versar, 1991) that identified potential environmental concerns. A Phase II investigation followed in December 1991 (Versar, 1992) and included collection of samples of surface soil, subsurface soil, and sediment, and installation and sampling of three (3) groundwater monitoring wells. Detected constituents in surface soils included metals, polynuclear aromatic hydrocarbons (PAHs), and polychlorinated biphenyls (PCBs). Twelve (12) tanks/vessels and three (3) concrete clarification chambers were identified as listed on **Table 1**. Samples of fine-grained material from the clarification chambers were analyzed for hazardous waste characteristics. The sample from CC-2 had concentrations of lead above the toxicity characteristic for lead. Analyses of holding pond sediments detected PAHs, volatile organic compounds (VOCs) and metals but not PCBs.

2.3.2 UST Removal and Supplemental Investigation (1993 – 1997)

In 1993, Versar registered and removed four (4) USTs, listed on **Table 1**, on behalf of Figgie International. Versar also conducted a limited remedial investigation that included collection of subsurface soil samples at twelve (12) locations and installation and sampling of six (6) groundwater monitoring wells (Versar, 1993). URS Consultants, Inc. (URS) conducted supplemental investigations and prepared human health and ecological risk assessments for Figgie International, Inc. between August 1995 and August 1997. Elevated concentrations of PAHs and metals were detected in surface soils in specific areas of the Site (URS, 2000). Concentrations of PAHs in surface soils exceeding NYSDEC cleanup goals at that time (Versar, 1992, URS, 1996) were localized in former work areas of the Site. Metals concentrations were comparable to background levels at the Site.

In August 1997, URS installed an additional monitoring well (MW-3A) in the northeast portion of the Site (URS, 1997) and sampled that well and three (3) existing monitoring wells (MW-1, MW-2 and MW-3) that had been installed by Versar in 1991 (Versar, 1992). PCBs and VOCs were not detected and detected concentrations of metals and semi-volatile organic compounds (SVOCs) were below applicable groundwater standards (URS, 1997). The groundwater monitoring network is shown on **Figure 3**. Monitoring wells MW-2, MW-3, and MW-3A are located downgradient of the former manufacturing areas. Monitoring well MW-1 was considered as a potential location to monitor background water quality (URS, 1997).

2.3.3 Voluntary Cleanup (1998 – 2000)

Based on the results of investigations by Versar and URS, URS submitted a remedial action work plan (RAWP) to NYSDEC in April 1998 on behalf of STI for voluntary remedial activities at the Site. The RAWP was revised in August 1998 and was subsequently approved by NYSDEC (URS, 2000). Between October 1999 and March 2000, STI conducted a voluntary remedial action in accordance with the approved RAWP. The voluntary remedial action included removal and disposal of low voltage PCB capacitors, cleaning or decommissioning of tanks/vessels, concrete clarification chambers or aboveground storage tanks (ASTs), and excavation of soils impacted by polynuclear aromatic hydrocarbons (PAHs).

Seven (6) tanks/vessels, three (3) concrete clarification chambers, and two (2) ASTs were cleaned (**Figure 4**). Tank/vessel T/V 4 was decommissioned after cleaning and left in place. Concrete clarification chamber CC-3 was decommissioned in place by filling with bank run sand and gravel. Sludge/debris removed from structures and rinse water from cleaning were characterized for disposal. With the exception of the material and rinse water from concrete

clarification chamber CC-2, sludge/debris and rinse water were characterized as non-hazardous. Material removed from CC-2 was characterized as hazardous based on toxicity characteristic leaching procedure (TCLP) results for lead. Because of the poor condition of CC-2, the structure and one (1) foot of surrounding soil was removed and disposed as hazardous waste.

PAHs in soils identified to exceed NYSDEC cleanup goals were excavated to depth of up to three (3) feet in areas north and east of Building 88 as shown on **Figure 4**. The cleanup goal for the voluntary remedial action approved by NYSDEC was a total PAH concentration of less than or equal to 100 parts per million (ppm). The total excavated area was approximately 0.75 acres. STI submitted a Final Engineering Report (URS, 2000) for the voluntary remedial action in March 2000.

2.3.4 Holding Pond Investigation (2001 - 2002)

In March 2001, NYSDEC requested that STI conduct additional investigation of holding pond sediments. Holding pond sediments sampled and analyzed by NYSDEC in 1992 were found to have metals and PCBs above applicable sediment criteria (URS, 2002). At that time, existing data did not warrant additional investigation or remediation (NYSDEC, 2001a). Off-Site sampling conducted by NYSDEC in June 2000 detected PCBs, PAHs and metals in sediment in Coldbrook Creek and its unnamed tributary. Those data suggested to NYSDEC that holding pond sediments potentially contained concentrations of those constituents higher than previously detected and that additional investigation was warranted. Subsequently, a work plan for supplemental investigation of the holding pond was submitted in 2001 on behalf of STI, and the work plan was approved by NYSDEC in January 2002 (URS, 2002). URS collected sediment and surface water samples from the holding pond and the culvert discharging to the adjacent wetlands in July 2002. Sediment sample analytical results detected metals, pesticides, PCBs, PAHs and VOCs. Analytical results for PCBs and several metals revealed concentrations in excess of NYSDEC sediment criteria. PCB analytical results were generally lower in holding pond sediments than in the lower reaches of the unnamed tributary. Metal analytical results for sediment in Coldbrook Creek and the unnamed tributary were generally similar or greater than results from holding pond sediments. Analyses of surface water samples detected VOCs, SVOCs, metals but not PCBs. Concentrations of metals in surface water were generally higher in the unnamed tributary (URS, 2002). There were no exceedances of applicable surface water standards for surface water samples collected from the holding pond. Remedial activities for the holding pond were deemed unnecessary by NYSDEC due to a determination of low risk to wildlife and human health as documented in the 2004 NYSDEC fact sheet for the voluntary cleanup (NYSDEC, 2004).

2.3.5 FRA Investigation and Voluntary Cleanup (2000-2006)

In May 2000, NYSDEC collected soil samples in the FRA (NYSDEC, 2001b). Analytical results showed concentrations of PAHs, pesticides and metal above NYSDEC recommended cleanup levels for soil. STI conducted additional investigations of the FRA in July 2002 and received approval for a voluntary remedial action in the FRA in July 2003. STI conducted the

voluntary remedial action in the FRA in October 2004 following pre-characterization of soils in March 2004 (URS, 2006). Shallow soils were excavated to depths of two (2) to eight (8) inches in four (4) areas shown on **Figure 4**. Three (3) areas in the vicinity of soil boring B-13 measured twenty (20) feet by twenty (20) feet each. The area excavated around soil boring B-08 measured seventy-five (75) feet by one hundred (100) feet. That area was divided into two (2) sections defined as hazardous and non-hazardous based on pre-characterization. Approximately eighty-six (86) tons of hazardous fill material and one hundred and four (104) tons of non-hazardous fill material were excavated and transported off-Site for disposal. Deed restrictions were filed with Chemung County Clerk's Office in July 2005 that limited potential future use of the Site to commercial or industrial uses with the exception of day care facilities and also required maintenance of the vegetative cover. In August 2005, STI submitted a Site Management Plan (SMP) for the FRA that described procedures for excavation and maintenance of the existing vegetative cover, fencing and signage. The SMP was approved by NYSDEC in correspondence dated 13 October 2005 (URS, 2006).

In an 11 October 2006 letter, NYSDEC declared that implementation of the NYSDEC-approved RAWP had been implemented successfully and "that no further investigation or response will be required at the Site for Existing Contamination to render the Site safe for industrial or commercial uses consistent with the remediation undertaken at the Site" (NYSDEC, 2006).

2.4 <u>NYSDEC-Identified Areas of Potential Concern</u>

In October 2013, NYSDEC presented to Unisys certain operable units (OUs) and PAOCs associated with the Former Sperry Remington Site (#808043) that NYSDEC had identified and provided corresponding historic plans and details depicting industrial waste facilities and operations from 1967 (Lancy, 1967). Portions of the 1967 Lancy report were initially provided to NYSDEC in 1988 (Dames & Moore, 1988). However, detailed processes drawings associated with that report were not located by NYSDEC until 2013. NYSDEC identified the following Operable Units:

- Operable Unit 1 (OU-1) is presented as the oil skimmer and box culvert associated with NYSDEC Site #808043.
- Operable Unit 2 (OU-2) is presented as those off-site areas that are the subject of the RI being conducted in accordance with the Order associated with NYSDEC Site #808043
- Operable Unit 3 (OU-3) is presented as the EHS property and adjacent properties.
- Operable Unit 4 is presented as the STCC property.

With the issuance of the Order on 16 July 2014, OU-4 is henceforth identified as the Former Scott Technologies Site (Site #808049). Those Site PAOCs identified by NYSDEC based on previous investigations and prior industrial use of the property are summarized on **Table 2** and **Figure 5**.

2.5 Draft Conceptual Site Model

A CSM presents the current understanding of a site, helps to identify data gaps, helps to focus data collection needs, and if warranted can ultimately support remedial decision making. The CSM will be updated to reflect information and additional data collected during subsequent investigative activities associated with a site.

An initial draft CSM of the Site was developed in order to evaluate the potential need for investigation of PAOCs identified by NYSDEC. The draft CSM presents historical soil and groundwater analytical data from previous investigations discussed in Section 2.3. The draft CSM also reflects voluntary remedial actions, and closure activities completed at the request of, and approved by, NYSDEC, as presented in Section 2.3.

Constituents of potential concern (COPCs) were identified by comparing analytical results to relevant screening criteria. COPCs for soils were identified by comparing available analytical data to relevant Soil Cleanup Objectives (SCOs) presented in 6 NYCRR Subpart 375. Given the current industrial land use by STCC and deed restrictions (URS, 2006) limiting potential future use of the Site to commercial or industrial uses with the exception of day care facilities, the applicable SCO for the protection of public health is the industrial land use SCO. The protection of groundwater SCO will also be considered as potential indicator of groundwater quality.

A summary of analytical results from previous soil sampling at the Site is presented in **Table 3** for the STCC facility and in **Table 4** for the FRA. Spatial and vertical representations of historical analytical data for the STCC facility are presented on **Figures 6** and **7**, respectively. Historic sample collection and analytical data indicate that COPCs in soil exceeded SCOs in limited areas of the Site as compared to industrial land use (10 of 32 samples) and for protection of groundwater (12 of 32 samples) criteria. As noted above, these representations also reflect prior removal and remedial actions completed at the Site. These removal and remedial actions include the following areas:

- Surface soil samples collected during the Phase II investigation (Versar, 1992) exceeded restricted land use and protection of groundwater SCOs for SVOCs and metals. A summary of analytical data for the STCC facility is presented as **Table 3**. Soil associated with those exceedances, noted as soil boring locations STCC-SS-2, STCC-SS-3, STCC-SS-4, and STCC-SS-5 were excavated and properly disposed in 2000 (URS, 2000), as noted on **Figures 6 and 7**.
- Surface soil sample STCC-SS-1 exceeded the commercial land use and protection of groundwater SCOs for benzo(a)pyrene.
- SVOCs exceeded industrial land use and protection of groundwater SCOs at the base of the excavation following removal of UST-3 and protection of groundwater SCOs for VOCs at the base of the excavation following removal of UST-6.

Spatial and vertical representations of historical analytical data for the FRA Area are presented on **Figures 8** and **9**, respectively. FRA soil sample analytical data (NYSDEC, 2001b, URS, 2003) exceeded industrial land use (14 of 102 samples) and protection of groundwater (66 of 102 samples) SCOs for metals, pesticides and SVOCs as summarized on **Table 4**. As noted above, these representations also reflect prior removal and remedial actions completed at the Site. These removal and remedial actions include the following areas:

- Surface soils at soil boring locations RecArea-B-7 and RecArea-B-8 and shallow subsurface soils at RecArea-B-9 exceeded SCOs for metals and SVOCs.
- Dieldrin, a pesticide, exceeded the protection of groundwater SCO at locations RecArea-B-1, RecArea-B-3, RecArea-B-4 and RecArea-B-8.

Supplemental soil sampling in the FRA was completed in 2004 (URS, 2003). Analytical results from this supplemental soil sampling as compared to SCOs are presented in **Table 4** and on **Figures 8** and **9**. Soil analyses from soil borings RecArea-B-5, RecArea-B-7, RecArea-B-8, and RecArea-B-13 had lead concentrations above the suggested screening value of one thousand (1,000) milligrams per kilogram (mg/kg) (URS, 2003). As a result, and as approved by NYSDEC, four (4) areas in the vicinity of RecArea-B-8, and RecArea-B-13 were excavated to remove the fill layer in 2004 (URS, 2006) as shown on **Figures 8** and **9**. Dieldrin analyses from sampling locations primarily in areas covered with heavy grasses and/or bushes and small trees, exceeded the suggested screening value in surface soil at several locations as noted in **Table 4**. As approved by NYSDEC, these areas were left undisturbed and in-place with the understanding that any potential future exposure would be minimized by institutional controls, including deed restrictions and the development of the SMP described in Section 2.3.5.

Review of historical soil analytical data from the FRA as compared to protection of groundwater SCOs is presented on **Table 4**. This review indicates groundwater protection SCOs were exceeded for metals in areas identified by soil borings RecArea-B-7, RecArea-B-8, RecArea-B-9 and RecArea-B-13 and for SVOCs at RecArea-B-7 and RecArea-B-9. Monitoring well STCC-MW-1 (**Figure 3**) is located in the FRA. Analytical results from prior groundwater sampling of this well indicate VOCs, SVOCs, PCBs or metals are not present above applicable groundwater standards.

Historical groundwater analytical data are available for the Site. Groundwater analytical data analyzed for VOCs and SVOCs from 1993, following UST removal at the Site (Versar, 1993), are summarized in **Table 5**. Evaluation of those data suggests their value in developing a draft CSM is limited. Limiting factors include (i) sample analyses were completed for an abbreviated analyte list; (ii) laboratory method detection limits (MDL) are not available for all analyses; (iii) reporting limits for some constituents were above the above the applicable groundwater standard; and (iv) data are from 1993.

In summary, components of this draft CSM indicate historic exceedances of industrial SCOs in surface and shallow subsurface soils given the context of limitations just noted. Many of those exceedances have been addressed by previous voluntary remedial activities conducted by STI in the vicinity of Building 88 (URS, 2000) and in the FRA (URS, 2006) in accordance with work plans approved by NYSDEC. Surface and near surface soils will be assessed in PAOCs that have not previously been investigated.

Exceedances of the protection of groundwater SCOs in limited areas across the site warrant investigation of groundwater to address potential COPC migration from soil. Groundwater investigations completed to date have not confirmed that pathway or potential off-Site COPC migration in groundwater. Proposed Site Characterization will evaluate groundwater quality using the existing groundwater monitoring network (**Figure 3**) to assess potential COPC migration pathways. Historical groundwater data will be useful when evaluating subsequent sample collection from existing Site monitoring wells. Comparison of data collected during 1993 and 1997 (approximately twenty (20) years post-Sperry Remington) with data associated with this SCWP (approximately forty (40) years post-Sperry Remington) will aid in the evaluation of past and present property use on groundwater quality. Data gaps in the groundwater monitoring network will be addressed initially by evaluating well integrity and sampling, if deemed appropriate. In addition, groundwater screening during soil investigation activities will be used to evaluate areas where protection of groundwater SCOs have been exceeded, and at select locations to evaluate groundwater associated with PAOCs.

3. ENVIRONMENTAL SETTING

3.1 Land Use

The Site consists of commercial buildings leased for commercial and manufacturing use and the FRA (**Figure 2**). Land use is commercial/manufacturing to the south and residential to the west and north. To the east, the Site is bounded by the Consolidated Rail Corp. property and residential and commercial properties beyond.

3.2 <u>Topography and Drainage</u>

The topography of the Site is relatively flat with a slight gradient to the east. The elevation of Site is approximately eight hundred fifty-one (851) feet above mean seal level as depicted on the Elmira, New York 1976 U.S. Geological Service (USGS) 7.5-minute topographic quadrangle map (**Figure 1**). Natural surface drainage has been altered significantly by construction at the Site. Drainage would either be to storm drains or flow eastward toward the railroad tracks (Dames & Moore, 1988).

3.3 Geology and Hydrogeology

Descriptions of the local geology and hydrogeology have been presented previously for the Site and the adjacent Former Sperry Remington Site – North Portion (NYSDEC 808022).

A stratigraphic layer comprised fill material is located on the Site at a depth of approximately zero (0) to five (5) feet below ground surface (bgs) (thickness varies). That fill unit consists of gravel, sand, silt, and trace amounts of cinders and ash. Beneath the fill layer, a heterogeneous mixture of cobbles, gravel, fine to coarse grain sand, and silt is encountered. Sand and gravel content increases generally with depth and the gravel pieces become more angular.

Two (2) naturally-occurring continuous stratigraphic units underlie the fill unit. The upper unit is post-glacial outwash. This unit consists of gray-brown fine sand and sub-rounded to rounded coarse to fine gravel. The post-glacial outwash unit extends from approximately six (6) feet below grade to approximately thirty-eight (38) feet below grade.

The second unit is a glacio-lacustrine silt and clay. The unit is relatively impermeable and consists of soft, gray-brown silt and clay, and extends from approximately thirty-eight (38) feet to approximately seven-eight (78) feet below grade in undisturbed areas. The top of weathered bedrock underlies the lacustrine unit and overlays competent shale which dips slightly to the north (Sterling, 2009).

Previous investigations conducted at the Site indicate that the general groundwater flow direction in the local area is to the east in the overburden water bearing zone (Versar, 1993). Four (4) production wells were identified to be in use by Remington Rand (Lancy, 1967). Three (3) wells with a combined pumping capacity of 2,500 gallons per minute (gpm) were located on the north side of the main building and the fourth well with a pumping capacity of 130 gpm was located on the south side (see **Figure 3**). It was reported in the Phase I Environmental Site Audit (Versar, 1991) that three (3) wells were used for the air conditioning system and that the fourth well had been removed. The three (3) production wells on the north side of the main building are no longer in use and have not been used at any point by STCC (Meinstein, 2014).

4. OBJECTIVES, SCOPE, AND RATIONALE

4.1 <u>Objectives</u>

The objectives of this Site Characterization are:

- to confirm historic detections of COPCs;
- to verify that concentrations of COPCs in cover soils are below standards, criteria and guidance (SCGs);
- to validate that concentrations of COPCs in media do not pose an immediate risk to human health and the environment;
- to document the presence of waste, if any, in media at the Site;
- to define the nature and extent of COPCs in media related to the presence of waste, if any, at the Site; and
- to evaluate PAOCs as potential sources of COPCs, estimate COPC mass, and determine COPC migration pathways or points of exposure;

4.2 <u>Scope</u>

The PAOCs identified by NYSDEC for the Site were evaluated for investigation with respect to the draft CSM developed for the Site and current activities under the Order for Site #808043. The following sections present the scope of work for the Site Characterization. A Quality Assurance Project Plan (QAPP)/Field Sampling Plan (FSP) (Appendix A) has been prepared to present the quality assurance/quality control (QA/QC) measures and describe methods and procedures that will be followed during completion of the Site Characterization activities.

4.2.1 Former Combined Industrial Sewer Inspection

The former combined industrial sewer (AOC-2) will be inspected for potential migration pathways to media at the Site. The inspection will build upon previous inspections of storm sewer connections conducted by Unisys as part of the Interim Remedial Measure (IRM) Pre-Design Investigation (Geosyntec, 2013) for Site #808043. Characterization of potential migration pathways from the former combined industrial sewer to subsurface soils (i.e. leaks) will consider the current land use, existing structures, and existing institutional and engineering controls. The former combined industrial sewer will be inspected for its structural integrity, connections to the STCC storm water management system and the presence of accumulated fine-grained material. The extent of the former combined industrial sewer inspection is shown on **Figure 10**.

Prior to the sewer inspections, Unisys will review historical plans with STCC and conduct a geophysical survey to establish the location of the former combined industrial sewer lines along the eastern portion of the Site and identify access points. Sewer inspection will include visual

observations and in-line camera surveys. If fine-grained material is present, the depth of material will be measured, to the extent practical, and recorded. If an adequate volume of material is present, a composite sample, collected across the entire material depth will be collected. The sample will be submitted to the fixed laboratory for analyses for metals, PCBs, SVOCs and VOCs. Confined space entry may be required.

Unisys will inspect the former boiler blow down line (AOC-2E). The 1958 schematic of Remington Rand waste streams (Dames and Moore, 1988) identified the discharge location of the former boiler blow down line near the eastern end of the holding pond. The former power house was located on EHS property. Soil sampling has been conducted in the vicinity of the former boiler blow down line as part of the site characterization of the Former Sperry Remington Site – North Portion (NYSDEC 808022).

Unisys will inspect the twenty-five-foot (25-ft) deep pit (AOC-3B) located in the crawl space in the northwest corner of Building 88 (**Figure 10**). The pit, which receives municipal storm water runoff from South Main Street, will be gauged for depth to water, depth to bottom and the potential presence of free product. If a sufficient water column is present in the pit, a water sample will be collected and submitted to the fixed laboratory for analyses for metals, PCBs, SVOCs and VOCs.

4.2.2 Soil Investigation

Data gaps in soil data at the Site have been evaluated through the current CSM which is based on historical soil analytical data and PAOCs identified by NYSDEC. The draft CSM presented in Section 2.5 indicated exceedances of industrial land use SCOs in soil in various areas of the Site. Many areas have already been addressed through voluntary remedial actions conducted by STI in accordance with scopes of work documented in work plans previously vetted and approved by NYSDEC. The proposed soil investigation identified in this work plan will evaluate PAOCs by comparison of surrounding soils to applicable SCOs (i.e. industrial land use and protection of groundwater). **Table 6** lists fourteen (14) proposed soil borings to be installed and the rationale for sample location selection. Proposed soil borings are shown on **Figure 11** as well as locations with PAOCs identified by NYSDEC and historical exceedances of industrial and protection of groundwater SCOs. Historical SCO exceedances are identified by COPC group (i.e. metals, VOCs, SVOCs, and/or pesticides).

Two (2) soil borings will be installed to evaluate PAOCs to the north and northeast of Building 88. Areas north and east of Building 88 were previously characterized and addressed through voluntary remedial actions. Areas to the south and southeast of Building 88 identified in the PSA (Dames and Moore, 1988) that may possibly contain wastes will be evaluated with installation of nine (9) soil borings. The soil investigation in the FRA will consist of installation of three (3) soil borings in areas to the south of the fenced area that are within the Site boundary. Soils within the fenced area have been characterized previously (NYSDEC, 2001a, URS, 2003)

and voluntary remedial action has been conducted by STI in accordance with the scope of work presented in work plans specifically approved by NYSDEC (URS, 2006).

Soil borings will be installed to the shallow water table or refusal. Up to five (5) discrete soil samples will be collected at each soil sampling location in the vicinity of historic subsurface infrastructure. A near surface soil sample will be collected from zero (0) to two (2) inches below the vegetative cover and three (3) shallow subsurface soil samples will be collected from two (2) to twenty-four (24) inches, two (2) to six (6) feet, six (6) to ten (10) feet below the vegetative cover and from ten (10) feet to the shallow water table. Depth to water is expected to be approximately fifteen (15) feet bgs. Surface soil samples will not be collected in paved areas. The depth of soil sampling in PAOCs that may contain wastes (i.e. AOC-17) will focus on the upper two (2) feet to assess surface and near surface conditions. This approach is consistent with previous historical vertical soil profiling and remedial activities in the FRA that focused on fill material (URS, 2006).

Proposed analyses for soil sampling locations are listed on **Table 6** and include PCBs, metals, VOCs, SVOCs, pesticides and cyanide. Analytical suites for specific soil sampling locations have been chosen based on (i) area operational history including known material and chemical use, and (ii) COPCs and / or analyte group chemicals detected in prior sampling events as presented in **Tables 3** and **4**. Sample designations will be in accordance with the QAPP/FSP (**Appendix A**). Soil samples will be submitted to a fixed laboratory for analyses specified in **Table 6**.

4.2.3 Groundwater Investigation

The draft CSM presented in Section 2.5 indicated potential risks for COPC migration from Soil to groundwater while historical groundwater data have not shown exceedances of applicable groundwater standards. The proposed groundwater investigation will assess potential COPC migration pathways. Investigation of groundwater will be conducted in several phases, beginning with the existing groundwater monitoring wells at the Site and DPT sampling of groundwater from specific locations.

Historic monitoring well locations are shown on **Figure 3**. The first phase of the groundwater investigation will consist of the following elements: i) location, identification of prior-installed wells, and determination if well construction is suitable for groundwater sample collection; ii) inspection and gauging of existing monitoring wells, and iii) groundwater sample collection. Each monitoring well, if located, will be inspected and gauged for depth to water from the top of inner casing, total depth of the well and estimated sedimentation depth, if applicable. Existing well construction information and field survey will be used to determine reference elevations.

Groundwater samples will be collected from those monitoring wells listed on **Table 7** and shown on **Figure 3**. **Table 7** lists the analyses to be performed on those groundwater samples to be collected and the rationale for such sampling. Sample analyses will include VOCs, SVOCs, metals, and PCBs. Analyses for PCBs will focus on historic areas of potential PCB presence in

the vicinity of Building 88 and potential off-Site migration. Sample designations will be in accordance with the QAPP/FSP (**Appendix A**).

In addition, grab groundwater samples will be collected using DPT methods at two (2) soil boring locations listed on **Table 7** and shown on **Figure 11** during the subsurface soil investigation. **Table 7** lists analyses to be performed on those groundwater samples to be collected and the rationale for such sampling. Sample designations will be in accordance with the QAPP/FSP in **Appendix A**.

Results of this groundwater investigation will be evaluated to determine the need for additional monitoring wells at the Site. Well locations and construction may be proposed to NYSDEC in work plans for a potential, subsequent phase of Site Characterization.

5. FIELD ACTIVITIES PLAN

This section describes field activities to be conducted for storm water structure inspection, soil sampling, well inspection, synoptic water level measurement, groundwater sampling, indoor air sampling and sub-slab vapor sampling. Methods and procedures for field sampling and QA/QC are presented in the QAPP/FSP in **Appendix A**.

5.1 Former Combined Industrial Sewer Inspection

5.1.1 Records Review

Historical plans of plant operations and current utility plans will be reviewed to verify the locations of the former combined industrial sewer. As necessary, STCC personnel will be consulted to confirm findings of the records review.

5.1.2 Geophysical Survey

A subsurface geophysical survey will be conducted along the alignment of the former combined industrial sewer. Geophysical survey methods will consist of one (1) or more of the following: ground penetrating radar (GPR), electromagnetic (EM) survey, and/or comprehensive subsurface utility (CSUL) surveys. Results of the geophysical survey will be compared to historical and current plans of subsurface utilities for tentative identification of subsurface anomalies. Subsurface anomalies potentially associated with the former combined industrial sewer will be highlighted for more detailed inspection.

5.1.3 In-line Camera Survey

In-line camera surveys will be performed along the accessible length of the former combined industrial sewer. Camera inspections will be performed to evaluate the origin and/or termination points of connections/pipes. Video recordings of those inspections will be taken and stored for documentation purposes. Real-time inspections will aid in determining the integrity of the pipe, potential volume of material within the line, and whether the line is potentially active with respect to discharge to adjacent surface waters. In the event of obstructions, access points (i.e. manholes) will be evaluated for potential confined space entry prior to clearing any obstruction.

Stormwater structures will be inspected for structural integrity, hydraulic connections to storm sewer system, and the presence of accumulated fine-grained material. If present, the depth of material will be measured, to the extent practical, and recorded. If an adequate volume of material is present, a composite sample, collected across the entire material depth will be collected. The composite sample will be submitted to the fixed laboratory for analyses for metals, PCBs, SVOCs and VOCs. Sample handling and analytical methods are presented in the QAPP/FSP (Appendix A).

5.1.4 Pit Inspection

The twenty-five-foot (25-ft) deep pit located in the crawl space in the northwest corner of Building 88 will be visually inspected for structural integrity and hydraulic connections to the storm sewer system. The pit will be gauged for depth to water, depth to bottom and the potential presence of free product. If sufficient water column is present in the pit, a water sample will be collected and submitted to the fixed laboratory for analyses for metals, PCBs, SVOCs and VOCs. Sample collection methods may include the use of bailers, bladder pumps, or passive diffusion samplers, depending on the height of water column present. Sample handling and analytical methods are presented in the QAPP/FSP (**Appendix A**).

5.2 <u>Soil</u>

5.2.1 Surface and Subsurface Soil Sampling

Surface and subsurface soil sampling will be conducted using either hand augering methods or DPT, depending on access to the boring location by the DPT equipment. Between sampling locations, all reusable equipment will be cleaned prior to sample collection at the next location. For direct push boreholes, a continuous soil core will be collected starting from ground surface. With hand augering, the borehole will be advanced until the desired sample depth is reached.

Soil cores will be visually logged for soil type, and inspected for staining, debris or other evidence of anthropogenic materials. Soil cores will be additionally screened for soil vapors using a photoionization detector (PID) and/or flame ionization detector (FID). Following field screening, soil samples will be collected from soil cores as several subsamples from select segments as indicated on **Table 6** in accordance with the QAPP/FSP. Irrespective of the sampling location, each soil core segment sample will be collected from material exhibiting the highest PID/FID readings, visual observation, or the presence of odors. If PID/FID readings are not higher than background and no staining or odors are observed, the sample will be collected from the middle of each segment. It should be noted that metals, PCBs and some SVOCS are not detected by PID or FID. Samples will be submitted to the fixed laboratory for those analyses listed in **Table 5**. Sample handling and analytical methods are presented in the QAPP/FSP.

5.3 Groundwater

5.3.1 Well Inspection and Synoptic Water Level Measurement

Prior to groundwater sampling, an attempt to locate each monitoring well shown on **Figure 3** will be made and, if successfully located, will be visually inspected for integrity. If possible, the depth to water level and total depth for each well will be measured from a reference point on the inner well casing to the nearest 0.01-feet using a clean electronic water level monitoring meter. Water level measurements will be used to develop a potentiometric surface map of the water table aquifer at the Site. Total depth measurements will be compared to historical well

construction details for well integrity evaluation. Reference elevations will be measured by a licensed surveyor.

5.3.2 Low-Flow Groundwater Sampling

Groundwater samples will be collected using low-flow sampling protocols in accordance with the QAPP/FSP. Each well shown on Figure 3 and listed on Table 7 will be purged and sampled using a submersible bladder pump and dedicated Teflon tubing. Purge water discharge will be routed to a flow-through cell and water quality measurements will be obtained using field Field groundwater quality measurements will be collected frequently instruments. (approximately every five (5) minutes) during purging and immediately prior to sample At a minimum, field measurements will include pH, temperature, specific collection. conductance, dissolved oxygen, oxidation-reduction potential, and turbidity. When these parameters display stabilization over three (3) consecutive readings or at least three (3) well volumes have been purged, samples will be obtained by directly filling clean, laboratoryprovided sampling containers directly from the discharge tubing. Upon collection, samples will be stored on ice in a cooler to remain at $4^{\circ}C$ ($\pm 2^{\circ}C$) prior to, and during, shipment to the laboratory. Prior to shipment, chain-of-custody forms for each sample shipment will be prepared and placed in the cooler with the corresponding samples. The sealed cooler will additionally contain a custody seal that will be placed over the lid. Between monitoring well locations, all reusable equipment will be cleaned prior to sample collection.

5.3.3 Direct Push Groundwater Sampling

Following DPT borehole installation and soil sample collection as described in Section 5.2.2, a groundwater grab sample will be collected at those locations shown on Figure 11 and analyzed for the compounds summarized on Table 7. It is anticipated that groundwater samples will be collected by inserting decontaminated DPT sampling rods equipped with an expendable drivepoint and extendable four (4) or five (5)-foot long stainless steel screen (DPT groundwater sampling apparatus). The DPT groundwater sampling apparatus will not be installed directly into the soil boring used for soil sample collection, but rather within two (2) to three (3) linear feet of the soil boring location. The DPT groundwater sampling apparatus will be installed to a depth that is approximately six (6) to seven (7) feet below the approximate water table depth identified during soil boring installation. Once the desired depth is reached, the DPT rods will be retracted four (4) or five (5) feet to expose and allow groundwater to enter the stainless steel screen. This procedure allows for the entire DPT groundwater sampling apparatus to be driven to a depth below the observed depth to groundwater and retracted to the desired sampling interval. Depth to water measurements will be taken every five (5) to ten (10) minutes to evaluate groundwater recovery. If groundwater collects in the screen, and the rate of recovery allows for sufficient sample volume, a groundwater sample will be collected.

Groundwater purging and sample collection is anticipated to be completed using a peristaltic pump and Teflon tubing. VOC data collected using a peristaltic pump will be used as screening data. If the depth to water exceeds peristaltic pump limitations, alternate purging and sampling

devices, such as a Teflon or stainless steel micro-bailer, may also be used. Prior to groundwater sample collection, the monitoring point will be developed by purging a minimum of three (3) borehole volumes from the screen. If low-yielding groundwater conditions are encountered, a reduced purge volume approach may be used. Efforts will be made to reduce sample turbidity to the extent practical as determined by the field sampler. Once purging is complete, water quality parameters (i.e., temperature, specific conductance, dissolved oxygen, oxidation-reduction potential and turbidity) will be measured using a calibrated water quality meter. Groundwater samples will then be obtained by directly filling clean, laboratory-provided sampling containers directly from the discharge tubing. Sample labeling, handling, and packing procedures described in the QAPP/FSP will be followed. Following sample collection, the DPT rods and screen will be removed from the boring and the boring will be abandoned. The boring will be abandoned by backfilling with bentonite chips. The DPT tooling and screen will be decontaminated between sampling locations as described in the QAPP/FSP.

5.4 **Quality Assurance**

Sample handling, including sample custody and sample control, will be conducted in accordance with the QAPP/FSP. **Table 8** lists analytical methods, containers, preservatives, and holding times for solid, water, air and sub-slab vapor analyses. Quality control samples, including field duplicates, matrix spike/matrix spike duplicates, trip blanks, and equipment blanks, will be collected at the frequency specified in the QAPP/FSP.

5.5 IDM Management

Solid Investigation Derived Material (IDM) that will be generated may include disposable personal protection equipment (PPE), disposable sampling equipment, and excavated material. Liquid IDM that will be generated will consist of purge groundwater from sampling of monitoring wells and water generated during decontamination of field equipment. Solid and liquid IDM will be temporarily stored in on-site fifty-five (55) gallon drums for waste characterization (if necessary) and subsequent, appropriate off-site disposal in accordance with the QAPP/FSP.

5.6 <u>Health and Safety</u>

A Site specific Health and Safety Plan (HASP) is presented in **Appendix B**. Each contractor will be required to prepare a project-specific HASP in accordance with DER-10 to be followed during implementation of the field program. The major elements of the HASP will include the following:

i) A description of the facility and work areas, availability of resources (medical care, water supply, etc.) and a summary of known hazards and potential risks associated with execution of the proposed scope of work;

- ii) A listing of key personnel and alternates responsible for Site safety, as well as training requirements for personnel completing the proposed scope of work; and
- iii) Health and safety procedures and protocols to be followed while completing the proposed scope of work, including site access control measures, levels of personal protection, decontamination procedures, site emergency procedures, and emergency medical care protocols.

Each HASP will be developed to be consistent with applicable National Institute for Occupational Safety and Health (NIOSH), EPA, OSHA, state and local regulations and requirements.

NYSDOH's Generic Community Air Monitoring Plan (CAMP) will be implemented during site characterization activities to monitor airborne emissions. Initial air monitoring data for each activity will be used to evaluate the need for continued monitoring. The CAMP will be implemented at the start of each new ground intrusive activity to establish an air monitoring database. When work areas are within twenty (20) feet of playgrounds, athletic playing fields, schools and childcare centers, the continuous monitoring locations for particulates will reflect the nearest potentially exposed individuals. The use of engineering controls such as dust barriers will be considered to prevent exposures related to the work activities and to control dust and odors. Consideration will be given to implementing the planned activities when the presence of potentially exposed populations is at a minimum (i.e. during hours when children are not likely to be present). Common-sense measures to keep dust and odors at a minimum around the work areas will also be implemented to ensure that the children are protected at all times.

A copy of the CAMP is included at **Appendix C**.

6. PROJECT MANAGEMENT

6.1 <u>Schedule</u>

Unisys will promptly commence the storm water system inspection, soil investigation and groundwater investigation activities of the PAOC investigation activities, weather permitting and pending access from the property owner, upon NYSDEC review and approval of this Site Characterization Work Plan. Completion of the work will be dependent on weather conditions and access. Once initiated and unencumbered by weather or other unforeseen delays, Unisys anticipates that the investigation will take approximately three (3) weeks to complete. A proposed schedule for Site Characterization activities is presented in **Figure 12**.

6.2 <u>Deliverables</u>

Unisys will provide monthly progress reports by the tenth (10th) day of each month commencing with the month subsequent to the approval of this Site Characterization Work Plan in accordance with the Order. Progress reports will include data received or generated in the previous reporting period.

Unisys will provide NYSDEC with a data summary report within ninety (90) days of receipt and validation of all data. The data summary report may recommend additional phases of Site Characterization, as appropriate.

All reports will be submitted to NYSDEC with final version copies issued to the document repository at Central Library of the Chemung County District in Elmira, New York in accordance with the Citizen Participation Plan (**Appendix D**). Electronic submittals will be completed in accordance with the NYSDEC electronic documents system (eDocs) requirements effective October 3, 2005.

 Notes
 .

 1.
 Soil Cleanup Objectives (SCOs) as presented in NYCRR Subpart 375-6.8b.

 2.
 Detected values are shown in **bold**.

3. Exceedances of the SCOs for the Protection of Public Health are shaded.

4. Exceedances of the SCOs for the Protection of Ground-Water are shown in <u>blue and underlined</u>.

J Estimated value

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 017<br>7/10/2002<br>Excavated<br>-<br>-<br>-<br>-<br>-<br>-                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 7/10/2002<br>Excavated<br>-<br>-<br>-<br>-<br>-<br>-<br>-<br>-<br>-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Excavated<br>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Excavated                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                         | -                                                                                                                                                                         | -                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                     | -                                                                                                                                                                                                                                                                                                                                                                                  | -                                                                                                                                                                                                                                                                                                                                                                                           | -                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 4130                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 19800                                                                                                                                                                                                                                                                                                                                                                                           | -                                                                                                                                                                                                                                                                                                                                                                                            | -                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 839

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 119J                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 2310J                                                                                                                                                                                                                                                                                                                                                                                           | -                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                             | -                                                                                                                                                                                                                                                                                                                                                                                            | -
