Subject: **December 2015 Soil Vapor Point/Groundwater Sampling Report**  
**Soil Vapor Intrusion Investigation**  
**Scobell Chemical – NYSDOT Site 828076**  
**MACTEC Engineering and Consulting, P.C. Project No. 3617147328**

Dear Mr. Haugh,

MACTEC Engineering and Consulting, P.C., (MACTEC), under contract to the New York State Department of Environmental Conservation (Work Assignment No. D007619-32) is pleased to present this letter report documenting the December 2015 soil vapor point and groundwater sampling activities and findings associated with the Scobell Chemical (Site), New York State Department of Transportation (NYSDOT) site #828076 in the town of Brighton, Monroe County, New York (Figure 1). This report presents the results of sampling from newly installed shallow bedrock monitoring wells and soil vapor implants located downgradient from the site.

## **BACKGROUND**

The Scobell Chemical-NYSDOT site is the location of a former chemical repackaging company that operated at this location from the 1920s until 1986. The Site buildings and contaminated soil were removed from the Site in 1988 during a NYSDOT highway reconstruction project. Investigations conducted to date have identified volatile organic compounds (VOCs) in soil, bedrock and

groundwater below and surrounding the Site, primarily the chlorinated solvent trichloroethene (TCE).

VOCs, including chlorinated solvents, can partition from soil and groundwater to soil vapor and then migrate through the soil column. Soil vapor can be drawn into buildings through openings and cracks in foundations and floor slabs.

Exterior soil vapor, sub-slab soil vapor and indoor air samples were collected from commercial and residential properties surrounding the Site in 2012 and 2013. Based on TCE concentrations detected in sub-slab vapor from beneath Ellison Park Apartments, a potential exposure pathway was identified and sub-slab depressurization systems were installed to depressurize the slab of three structures at the Ellison Park Apartments Complex. Monitoring and evaluation of the complex was performed in 2015.

Additional soil vapor and groundwater sampling was conducted downgradient of the Site and complex in 2015 to evaluate the extent of the shallow groundwater plume, and to assess the potential for site contaminants to migrate to receptors via the soil vapor intrusion pathway.

## **GROUNDWATER AND SOIL VAPOR SAMPLING**

The November 2015 groundwater and soil vapor monitoring well installations and December 2015 groundwater and soil vapor sampling were conducted as described in the 2015 Field Activities Plan (MACTEC, 2015).

A summary of these field tasks and methodologies are described in more detail below. Locations of new groundwater wells and soil vapor points are shown with labels on Figure 2. Locations on Figure 2 without labels reflect historical sampling locations.

**Monitoring Well Installation and Groundwater Sampling.** To evaluate groundwater conditions beyond the historical groundwater monitoring network, seven shallow overburden/bedrock downgradient monitoring wells (MW-30S to MW-36S), and one deeper bedrock well (MW-32D) were installed in November 2015. Monitoring wells were installed using four inch inside diameter augers to bedrock, and then coring bedrock to the desired depth. Monitoring wells consisted of

two-inch inside diameter polyvinyl chloride wells (PVC), with the exception of MW-32S, which was a one-inch inside diameter PVC that was nested in the same boring as MW-32D. Boring logs, well installation diagrams, and well development logs are included in Attachment 1.

As part of the drilling program, the downwind perimeter of the drilling area was monitored for VOCs using a photoionization detector (PID) and for dust using a portable dust meter. PID and dust monitor readings were within acceptable limits, with the exception of the dust monitoring over an approximate 45 minute period while drilling MW-32S/D. Although the average criteria of 100 micrograms per cubic meter above background was exceeded during this time frame, the average levels over the 2.5 hour period monitored were within acceptable limits. The PID and dust meter readings are presented in Attachment 2.

Groundwater sampling of the newly installed wells was conducted approximately three to four weeks after installation and development. Prior to groundwater sampling, a round of water levels (depth to groundwater) was obtained from the new wells and a select set of existing monitoring wells that allowed for a general observation of water level measurements (see Table 1).

Monitoring wells were sampled using low-flow sampling procedures. Field measurements and groundwater sampling activities were documented using Low Flow Groundwater Data Records which are included in Attachment 1. Upon stabilization of field parameters, groundwater samples were obtained and shipped to ALS for analysis of VOCs by United States Environmental Protection Agency (USEPA) Method 8260.

**Soil Vapor Point/Implant Installation and Sampling.** To evaluate if chlorinated solvents are present in soil vapor along Blossom Road and the west side of the Ellison Park Apartments, seven permanent soil vapor implants (SVP-12 to SVP-18) were installed in November 2015 approximately five feet from the newly installed shallow monitoring wells using direct push tooling to create a two-inch ID hole. Six-inch stainless steel screens with attached Teflon tubing were installed approximately six feet below ground surface, surrounded by a size 00 sand pack to approximately six inches above the screen, a three foot bentonite seal, and native backfill or sand to the ground surface. Six-inch flush mount protective casings were installed at the surface to contain the end of the tubing. Soil vapor implant details were documented using a Soil Vapor Probe Construction Diagram included in Attachment 3.

Approximately three to four weeks following installation of the implants (December 2015), soil vapor from the implants was collected. The sample tubing was purged (minimum of 3 implant volumes) with a PID. In addition, oxygen and carbon dioxide were measured using an RKI Eagle multi gas meter to compare outdoor ambient air to soil vapor concentrations. If oxygen and carbon dioxide concentrations in the soil vapor are similar to ambient air, it is likely that ambient air is being pulled into the sampling point and the integrity of the vapor implant seal is compromised. As an additional measure, helium was used as a tracer gas by filling a shroud around the sampling port with helium. After purging the implant tubing, a helium detector was used to ensure that less than 10% helium was present in the soil vapor. Measurements of helium, oxygen and carbon dioxide indicated that the samples were representative of soil vapor and the system integrity was good; however, sample point SVP-16 did not have sufficient flow to enable collection of a soil vapor sample. The soil vapor sampling records, presented in Attachment 3, includes weather, temperature and barometric pressure.

Soil vapor implant samples were collected using 1.4 liter Summa type canisters with a collection time of approximately 60 minutes. Samples were analyzed by Centek Labs of Syracuse, NY Centek Laboratories for VOCs by USEPA Method TO-15. The sample from SVP-16 was submitted to the laboratory, but had insufficient sample volume to analyze.

## **RESULTS**

The locations of the new wells and soil vapor sample implant points, as well as the pilot study injection wells, were surveyed in December 2015 by Popli Design Group. Survey Data is included in Attachment 4, and groundwater level measurements are included in Table 1. Groundwater contours were not drawn because the groundwater flow is interpreted to be driven more by fracture flow than hydraulic head. A review of differences in water levels between the December 2014 and December 2015 rounds indicate that water levels do not fluctuate evenly across the monitoring well network, which supports the interpretation that the fracture zones are not interconnected. Groundwater from the site is interpreted to flow in a general north to northeasterly direction.

Groundwater analytical results are presented in Table 2 and soil vapor analytical results are presented in Table 3. Data Usability Summary Reports and complete analytical results are provided in Attachment 5.

Chlorinated solvents were not detected in the western or eastern most groundwater sample locations (MW-30S, MW-31S, MW-35S, and MW-36S). TCE and its breakdown products were detected in groundwater samples from MW-32S, MW-32D, and MW-33S at concentrations above the Class GA groundwater standards, with the highest concentrations of TCE (47 milligrams per liter) detected in MW-33S, which is located within the Ellison Park Apartment complex property. Lower concentrations (below standards) were detected in the sample from MW-34S, located on the northwest corner of the Ellison Park Apartments, and MW-32S/D located along Blossom Road.

Soil vapor sample results for the chlorinated solvents appeared to mirror the corresponding groundwater sample results. Chlorinated solvents were not detected in the western or eastern most soil vapor samples (SVP-12, SVP-13, SVP-17, and SVP-18), and the highest concentration of TCE (130 micrograms per cubic meter) was detected the sample from SVP-15, which is located adjacent to MW-33.

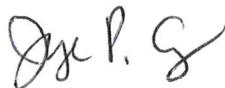

If you have questions or concerns, please feel free to contact us at 207-775-5401.

Sincerely,

**MACTEC Engineering and Consulting, P.C.**

Depths to water are typically measured from Top of Riser; if risers are not present, then depths are measured from Top of Casing

dry = no water in well at time of measurement

BGS = below ground surface

BTOC = below top of casing

BTOR = below top of riser

DNM = Did Not Measure

GS = ground surface

## SKETCH

www.911

N

A hand-drawn map illustrating a well development plan. A vertical line labeled "RC-15 Subsidiary" extends downwards from a point near the top left. A horizontal line labeled "MW-328" extends to the right from the same point. The area to the right of the horizontal line is shaded grey and labeled "Blossom Rd". A legend at the top indicates "Y" for a white box and "N" for a black box.

**DATA USABILITY SUMMARY REPORTS AND COMPLETE ANALYTICAL RESULTS**

**DATA USABILITY SUMMARY REPORT  
DECEMBER 2015 AIR SAMPLING EVENT  
SCOBELL CHEMICAL SITE  
BRIGHTON, NEW YORK**

## 1.0 INTRODUCTION

Air samples were collected at the Scobell Chemical site in December 2015 and submitted to Centek Laboratories located in Syracuse, New York, for analysis. Samples were analyzed by the following method:

- Volatile organic compounds (VOCs) by USEPA Method TO-15

Results were reported in the following sample delivery groups (SDGs):

- C1512036
- C1512040
- C1512042

A Data Usability Summary Report (DUSR) review was completed based on the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation guidance (NYSDEC, 2010). Sample event information included in this DUSR is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results
- Table 3 – Summary of Qualification Actions

Laboratory deliverables included:

- Category B deliverable as defined in the NYSDEC Analytical Services Protocols (NYSDEC, 2005).

The DUSR review included the following evaluations. A table of project control limits is presented in Attachment A. DUSR review checklists and applicable laboratory QC summary forms are included in Attachment B to document DUSR checks and QC outliers associated with qualification actions.

- Lab Report Narrative Review
- Data Package Completeness and COC records (Table 1 verification)
- Sample Preservation and Holding Times
- Instrument Calibration (report narrative/lab-qualifier evaluation)
- QC Blanks
- Laboratory Control Samples (LCS)
- Surrogate Spikes (if applicable)
- Field Duplicates (none collected)
- Target Analyte Identification and Quantitation
- Raw Data (chromatograms), Calculation Checks and Transcription Verifications
- Reporting Limits
- Electronic Data Qualification and Verification

Data qualification actions are applied when necessary based on general procedures in USEPA validation guidelines (USEPA, 2006) and the judgment of the project chemist. The following laboratory or data review qualifiers are used in the final data presentation:

J = concentration is estimated

U = target analyte is not detected above the reported detection limit

UJ = the target compound was not detected and the reporting limit is considered to be estimated

Results are interpreted to be usable as reported by the laboratory unless discussed in the following sections.

## 2.0 POTENTIAL DATA LIMITATIONS

Based on the DUSR review the majority of data meet the data quality objectives; however, the following potential limitations were identified:

- Results for Benzyl Chloride in a subset of samples in SDGs C1512040 and C1512042 are qualified estimated (UJ) based on a low LCS recovery. Qualified results are summarized on Table 3.
- Relative percent differences between sample results and associated field duplicate results in SDGs C1512036 and C1512042 were greater than the limit of 50 and/or inconsistent results were observed for a subset of analytes. Positive and non-detected results for affected analytes were qualified estimated (J/UJ). Qualified results are summarized on Table 3.

## 3.0 ADDITIONAL QC EXCEEDANCES AND OBSERVATIONS

Additional observations and quality control exceedances not specifically addressed above (Section 2.0) or included in Table 3 are summarized below. Unless presented in Table 3, sample results are interpreted to be usable as reported by the laboratory.

### Instrument Continuing Calibration

The laboratory narrative noted the continuing calibration %D for methyl butyl ketone (2-hexanone) was outside control limit of 30 and indicated a potential high bias. No laboratory qualifiers associated with calibration were reported with sample data and sample results were reported unqualified. 2-Hexanone is not a primary site contaminant at the site and the calibration outlier is not interpreted to be a significant data limitation.

Notes:

- J = The reported concentration is considered an estimated value
- UJ = The target compound was not detected and the reporting limit is considered to be estimated
- U = The target compound was not detected above the reporting limit or was qualified as not detected
- FD = Field duplicate relative percent difference (RPD) limit exceeded
- LCS-L = Laboratory control sample/laboratory control sample duplicate (LCS/LCSD) recovery low
- ug/m3 = microgram per meter cubed

### NYSDEC DUSR PROJECT CHEMIST REVIEW RECORD

Project: Scobell Chemical

Method : TO-15

Laboratory and SDG(s): Centek

SDG# C1512036

Date: 12/29/2015

Reviewer: Willie Stone

Review Level  NYSDEC DUSR

USEPA Region II Guideline

Control limits are from EPA Region 2 - SOP# HW-31, October 2006.

1.  **Case Narrative Review and Data Package Completeness** COMMENTS  
Were problems noted? No sample collected for 82 go76-SVP16005  
Are Field Sample IDs and Locations assigned correctly? YES NO (circle one)
2.  **Holding time and Sample Collection**  
All samples were analyzed within the 30 day holding time YES NO (circle one)
3.  **QC Blanks** (use 5x rule for calculating action levels)  
Are method blanks free of contamination? YES NO (circle one)  
Are Trip blanks free of contamination? YES NO (circle one)
4.  **Instrument Tuning**  
Were all results were within method criteria. YES NO (circle one)  
No problems noted
5.  **Instrument Calibration - Data Package Narrative review.**  
Did the laboratory narrative identify compounds that were outside of method criteria in the initial calibration and/or continuing calibration standards? YES NO  
Results not qualifed - No things noted in Narrative  
Did the laboratory qualify results based on initial or continuing calibration exceedances? YES NO NA
6.  **Internal Standards** (Area Limits = +40% to -40%, RT's within 20 seconds of mid point cal Std)  
Were all results within criteria? YES NO (circle one)
7.  **Surrogate Recovery**  
Were all results were within laboratory limits? YES NO (circle one)
8.  **Field Duplicates/replicates**  
Were Field Duplicates submitted/analyzed? YES NO  
Were all results were within criteria (Field Dup RPD goal = 50). YES NO NA (circle one)
9.  **Laboratory Control Sample Results** (limits 70-130%)  
No qualifcation needed  
See attached  
Were all results were within limits? YES NO (circle one)
10.  **Raw Data Review and Calculation Checks**  
See attached.
11.  **Electronic Data Review and Edits**  
Does the EDD match the Form I's? YES NO (circle one)
12.  **TIC Review and DUSR Table 1** (sample Listing), **Table 2** (results summary),  
**Table 3** (Reason Codes), **Table 4** (TIC's). Did lab report TICs? YES NO (circle one)

8.  **Field Duplicates/replicates**  
Were Field Duplicates submitted/analyzed? YES NO  
Were all results were within criteria (Field Dup RPD goal = 50). YES NO NA (circle one)
9.  **Laboratory Control Sample Results** (limits 70-130%)  
*Benzyl chloride low - See attached*  
Were all results were within limits? YES NO (circle one)
10.  **Raw Data Review and Calculation Checks**  
*See attached*
11.  **Electronic Data Review and Edits**  
Does the EDD match the Form I's? YES NO (circle one)
12.  **TIC Review and DUSR Table 1** (sample Listing), **Table 2** (results summary),  
**Table 3** (Reason Codes), **Table 4** (TIC's). Did lab report TICs? YES NO (circle one)

## NYSDEC DUSR PROJECT CHEMIST REVIEW RECORD

Project: Scobell Chemical

Method : TO-15

Laboratory and SDG(s): Centek

SDG# C1512042

Date: 12/29/2015

Reviewer: Willie Stone

Review Level  NYSDEC DUSR

USEPA Region II Guideline

Control limits are from EPA Region 2 - SOP# HW-31, October 2006.

1.  **Case Narrative Review and Data Package Completeness** COMMENTS  
Were problems noted? YES  NO  *One CC failure*  
Are Field Sample IDs and Locations assigned correctly? YES  NO  (circle one)
2.  **Holding time and Sample Collection**  
All samples were analyzed within the 30 day holding time. YES  NO  (circle one)
3.  **QC Blanks** (use 5x rule for calculating action levels)  
Are method blanks free of contamination? YES  NO  (circle one)  
  
Are Trip blanks free of contamination? YES  NO NA  (circle one)
4.  **Instrument Tuning**  
Were all results were within method criteria. YES  NO  (circle one)
5.  **Instrument Calibration - Data Package Narrative review.**  
Did the laboratory narrative identify compounds that were outside of method criteria in the initial calibration and/or continuing calibration standards? YES  NO  
*MKB high in an CC - Not detected. No action taken.*  
Did the laboratory qualify results based on initial or continuing calibration exceedances? YES  NO NA
6.  **Internal Standards** (Area Limits = +40% to -40%, RT's within 20 seconds of mid point cal Std)  
Were all results within criteria? YES  NO  (circle one)  
*No issues noted*
7.  **Surrogate Recovery**  
*No issues noted*  
Were all results were within laboratory limits? YES  NO  (circle one)
8.  **Field Duplicates/replicates**  
Were Field Duplicates submitted/analyzed? YES  NO   
*Was 1-13-16*  
Were all results were within criteria (Field Dup RPD goal = 50). YES  NO NA  (circle one)
9.  **Laboratory Control Sample Results** (limits 70-130%)  
*Benzaldehyde low see sub C1512040 for LCR page*  
Were all results were within limits? YES  NO  (circle one)
10.  **Raw Data Review and Calculation Checks**  
*See attached*
11.  **Electronic Data Review and Edits**  
Does the EDD match the Form I's? YES  NO  (circle one)
12.  **TIC Review and DUSR Table 1** (sample Listing), **Table 2** (results summary),  
**Table 3** (Reason Codes), **Table 4** (TIC's). Did lab report TICs? YES  NO  (circle one)

**DATA USABILITY SUMMARY REPORT**  
**DECEMBER 2015 GROUNDWATER SAMPLING EVENT**  
**SCOBELL CHEMICAL SITE**  
**BRIGHTON, NEW YORK**

## 1.0 INTRODUCTION

Groundwater samples were collected at the Scobell Chemical site in December 2015 and submitted to ALS Laboratory located in Rochester, New York, for analysis. Samples were analyzed by the following method:

- Volatile organic compounds (VOCs) by USEPA Method 8260C

Results were reported in the following sample delivery group (SDG):

- R1510767

A Data Usability Summary Report (DUSR) review was completed based on the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation guidance (NYSDEC, 2010). Sample event information included in this DUSR is presented in the following tables:

- Table 1 – Summary of Samples and Analytical Methods
- Table 2 – Summary of Analytical Results

Laboratory deliverables included:

- Category B deliverable as defined in the NYSDEC Analytical Services Protocols (NYSDEC, 2005).

The DUSR review included the following evaluations. A table of project control limits is presented in Attachment A. DUSR review checklists and applicable laboratory QC summary forms are included in Attachment B to document DUSR checks and QC outliers associated with qualification actions.

- Lab Report Narrative Review
- Data Package Completeness and COC records (Table 1 verification)
- Sample Preservation and Holding Times
- Instrument Calibration (report narrative/lab-qualifier evaluation)
- QC Blanks
- Laboratory Control Samples (LCS)
- Surrogate Spikes (if applicable)
- Field Duplicates
- Target Analyte Identification and Quantitation
- Raw Data (chromatograms), Calculation Checks and Transcription Verifications
- Reporting Limits
- Electronic Data Qualification and Verification

Data qualification actions are applied when necessary based on general procedures in USEPA validation guidelines (USEPA, 2014) and the judgment of the project chemist. The following laboratory or data review qualifiers are used in the final data presentation:

J = concentration is estimated

U = target analyte is not detected above the reported detection limit

Results are interpreted to be usable as reported by the laboratory unless discussed in the following sections.

## 2.0 POTENTIAL DATA LIMITATIONS

Based on the DUSR review the data meet the data quality objectives and no potential limitations were identified.

## 3.0 ADDITIONAL QC EXCEEDANCES AND OBSERVATIONS

Additional observations and quality control exceedances not specifically addressed above (Section 2.0) are summarized below. Sample results are interpreted to be usable as reported by the laboratory.

### Instrument Continuing Calibration

The laboratory narrative noted the continuing calibration %D for bromomethane was outside the control limit of 20. No laboratory qualifiers associated with calibration were reported with sample data and sample results were reported unqualified.

Bromomethane is not a primary site contaminant and the calibration outlier is not interpreted to be a significant data limitation.

## NYSDEC DUSR PROJECT CHEMIST REVIEW RECORD

Project: Scobell Chemical

Method : SW-846 8260C

Laboratory and SDG(s): ALS Environmental SDG# R1510767

Date: 1/20/16

Reviewer: Julie Ricardi

Review Level  NYSDEC DUSR

USEPA Region II Guideline

1.  **Case Narrative Review and COC/Data Package Completeness** COMMENTS

Were problems noted? QC problems noted as summarized below and attached  
Are Field Sample IDs and Locations assigned correctly? YES NO (circle one) No; sample 828076-MW30S015 was incorrectly logged into the lab and reported as 828076-MS30S015. The sample ID was corrected in the AmecFW database during the DUSR review  
Were all the samples on the COC analyzed for the requested analyses? YES NO (circle one)  
Yes
2.  **Holding time and Sample Collection**

All samples were analyzed within the 14 day holding time. YES NO (circle one) Yes
3.  **QC Blanks**

Are method blanks free of contamination? YES NO (circle one) No; 1,2,3-Trichlorobenzene (0.88 J ug/L) and 1,2,4-trichlorobenzene (0.51 J ug/L) reported; however, no detections of 1,2,3- or 1,2,4-trichlorobenzene in associated samples and results were reported unqualified  
Are Trip blanks free of contamination? YES NO (circle one) Yes; ND  
Are Rinse blanks free of contamination? YES NO NA (circle one) NA
4.  **Instrument Tuning**

Were all results were within method criteria. YES NO (circle one) NA  
No problems were noted in the narrative and no laboratory qualifiers were present; sample results were reported unqualified
5.  **Instrument Calibration** Were all results within criteria? YES NO (circle one) NA

Initial Calibration %RSD = 20% (30% for 1,1-DCE, chloroform, 1,2-DCP, toluene, ethylbenzene, VC)  
Initial Avg RRF and Continuing RRF should be  $\geq$  0.05 and 0.10 for Chloromethane, 1,1-Dichloroethane, Bromoform and 0.30 for Chlorobenzene and 1,1,2,2-Tetrachloroethane  
No problems were noted in the narrative and no laboratory qualifiers were present; sample results were reported unqualified  
Continuing Calibration %D = 20%  
Continuing calibration %Ds were noted in the narrative for bromomethane (narrative attached); no laboratory qualifiers were present and sample results were ND and were reported unqualified
6.  **Internal Standards** (Area Limits = -50% to +100%, RT's within 30 seconds of mid point cal Std)

Were all results within criteria? YES NO (circle one) NA  
No problems were noted in the narrative and no laboratory qualifiers were present; sample results were reported unqualified
7.  **Surrogate Recovery** - Region II limits (water 80-120%, soil 70-130%)

Were all results were within Region II limits? YES NO (circle one) Yes, all OK
8.  **Matrix Spike** - Region II limits (water and soil 70-130%, water RPD 20, soil RPD 35)

Were MS/MSDs submitted/analyzed? YES NO No
9.  **Duplicates/replicates** - Region II Limits (water RPD 50, soil RPD 100)

Were Field Duplicates submitted/analyzed? YES NO Yes

828076MW33S014 / 828076MW33S014D: All OK

Were all results were within Region II Limits?  YES  NO  NA (circle one) Yes

10.  **Laboratory Control Sample Results - Region II (Water and soil 70-130%)**

Were all results were within Region II control limits?  YES  NO (circle one) Yes; all OK

11.  **Raw Data Review and Calculation Checks**

OK; see attached

12.  **Electronic Data Review and Edits**

Does the EDD match the Form Is?  YES  NO (circle one) Yes

13.  **Table Review**

**Table 1** (Samples and Analytical Methods)

**Table 2** (Analytical Results)

**Table 3** (Qualification Actions)

Were all tables produced and reviewed?  YES  NO (circle one) Yes

**Table 4** (TICs) Did lab report TICs? YES  NO (circle one) No

## ALS Environmental

**Client:** AMEC Foster Wheeler  
**Service Request No.:** R1510767  
**Project:** Scobell Chemical  
**Date Received:** 12/11/2015  
**Sample Matrix:** Water

### CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory Control Sample (LCS), Matrix Spikes, and Duplicates.

#### Sample Receipt

Water samples were received for analysis at ALS Environmental on 12/11/15. The samples were received in good condition and consistent with the accompanying chain of custody form. All sampling activities performed by ALS personnel have been in accordance with "ALS Field Procedures and Measurements Manual" or by client specifications. The samples were stored in a refrigerator between 1°C and 6°C upon receipt at the laboratory.

#### Volatile Organics

Water samples were analyzed for a site specific list of Volatiles by methods 5030C/8260C from SW-846.

All initial calibration criteria were met for all analytes. All Continuing Calibration Verification (CCV) standards were within 20% Difference except Bromomethane on the 12/20/15 CCV. All positive detections of analytes for samples associated with this CCV should be considered as estimated.

All Tuning criteria were within QC limits.

All Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD) recoveries were within limits.

Site specific QC was not requested on these samples.

All Internal Standard Areas were within limits.

All surrogate standard recoveries were within limits.

The Method blanks associated with these samples were free of contamination except for low level detections for 1,2,4-Trichlorobenzene and 1,2,3-Trichlorobenzene on the 12/20/15 blank.

All samples were analyzed within recommended holding times.

No other analytical or QC problems were encountered.

Analytical Report for Service Request No: R1510767

Mr. Chuck Staples  
AMEC Environmental & Infrastructure  
511 Congress Street, Suite 200  
Portland, ME 041101

**Laboratory Results for: Scobell Chemical Site/3617147328.05**

Dear Mr. Staples:

Enclosed are the results of the sample(s) submitted to our laboratory on December 11, 2015. For your reference, these analyses have been assigned our service request number **R1510767**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7472. You may also contact me via email at [Janice.Jaeger@alsglobal.com](mailto:Janice.Jaeger@alsglobal.com).

Respectfully submitted,

**ALS Group USA Corp. dba ALS Environmental**
