

(Fact Sheet Begins Next)

Act Now to Continue Receiving Information About This Site!

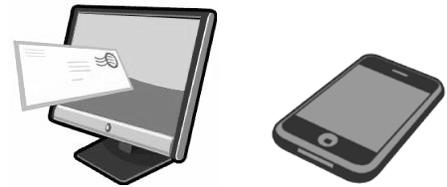

DEC's Division of Environmental Remediation (DER) now distributes information about contaminated sites *electronically by email*.

If you would like to continue to receive information about the contaminated site featured in this fact sheet:

You must sign up for the DER email listserv:

www.dec.ny.gov/chemical/61092.html

DER cannot register your email address - only the email address owner can do so. If you already have signed up for the listserv for the county in which the site is located, you need do nothing.

Why You Should Go “Paperless”:

- Get site information faster and share it easily;
- Receive information about all sites in a chosen county - read what you want, delete the rest;
- It helps the environment and stretches your tax dollars.

If “paperless” is not an option for you, call or write to the DER project manager identified in this fact sheet. Indicate that you need to receive paper copies of fact sheets through the Postal Service. Include the site name in your correspondence. The option to receive paper is available to individuals only. Groups, organizations, businesses, and government entities are assumed to have email access.

Conservation

FACT SHEET

State Superfund Program

Dinaburg Distributing, Inc.

Operable Unit #2
Rochester, NY 14620

SITE No. 828103

NYSDEC REGION 8

February 2021

Where to Find Information

Access project documents through the DECinfo locator and at these location(s):

Region 8 Office

6274 East Avon-Lima Road
Avon, New York 14414
585.226.2466

Key project documents and project summary also are available on the NYSDEC website at:

<https://www.dec.ny.gov/data/DecDocs/828103/>

Who to Contact

Comments and questions are welcome and should be directed as follows:

Project-Related Questions

Matthew Dunham, Project Manager

No Further Action Required for State Superfund Site; Public Comment Period Announced

The public is invited to comment on a no further action remedy being proposed by the New York State Department of Environmental Conservation (NYSDEC), in consultation with the New York State Department of Health (NYSDOH) related to the Dinaburg Distributing, Inc. site ("site") located at 1012 South Clinton Street and 350 Benton Street, Rochester, Monroe County. Please see the map for the site location.

Pursuant to Executive Order 202.15, a public meeting will not be held, in an effort to limit the community spread of COVID-19.

You are encouraged to provide comments during the 30-day comment period described in this fact sheet.

How to Comment: NYSDEC is accepting written comments about the proposed plan, called a Proposed Remedial Action Plan (PRAP) for 30 days, from **March XX** through **March XX, 2021**.

- Access the PRAP and other project documents online through the DECinfo Locator: <https://www.dec.ny.gov/data/DecDocs/828103/>.
- Documents also are available at the location(s) identified at left under "Where to find information."
- Please submit comments to the NYSDEC project manager listed under Project-Related Questions in the "Who to Contact" area at left.

The site is listed as a class "2" site in the State Registry of Inactive Hazardous Waste Disposal Sites (list of State Superfund sites). A class 2 site represents a significant threat to public health or the environment; action is required.

Proposed Remedial Action Plan: The remedy proposed for the site is No Further Action based on the results of the investigation at the site and actions that have already been implemented. An expedited cleanup, called an "Interim Remedial Measure" (IRM), is conducted at a site when a source of contamination or exposure pathway can be effectively addressed before issuance of the Record of Decision.

Several IRMs have been completed at this site, as follows:

IRM #1: A soil vapor extraction (SVE) system was installed to address potential indoor air contamination associated with soil vapor intrusion at two properties adjacent to the site.

IRM #2: Upon demolition of the on-site buildings, a second IRM was conducted. IRM #2 included removal of 370 cubic yards of contaminated soil. The second IRM also included the installation of a Multiphase Extraction system to treat the contaminated soil and groundwater remaining after the removal. A subslab depressurization system was installed at an adjacent residence to address potential indoor air contamination of volatile organic compounds associated with soil vapor intrusion. Upon completion of the IRM #2 activities, SVE system operations were discontinued.

The Dinaburg Distributing, Inc. site is divided into two Operable Units. Operable Unit 1 (OU1) is defined as the on-site source area. A Record of Decision was previously issued for OU1 and the selected remedy, electrical resistance heating, was implemented to address source area contamination. This remedy was completed in late 2015. OU2 addresses groundwater and soil vapor contamination. Based on the success of the OU1 source area remedial program and the IRM activities to address OU2, NYSDEC is proposing No Further Action.

Institutional and Engineering Controls: Institutional controls and engineering controls reduce or eliminate exposure to contaminants of concern. An *institutional control* is a non-physical restriction on use of the site, such as a deed restriction, when contamination left after the cleanup action makes the site suitable for some, but not all uses. An *engineering control* is a physical barrier or method to manage contamination such as a cap or vapor barrier.

The following institutional controls have been or will be put in place on the site:

- Local Groundwater Restriction
- Site Management Plan

Next Steps: NYSDEC will consider public comments as it finalizes the no further action remedy for the site. The selected remedy will be described in a document called a "Record of Decision" that will explain why the remedy was selected and respond to public comments. NYSDEC would then reclassify or delist the site from the Registry of Inactive Hazardous Waste Disposal Sites.

Site Description: This 0.25-acre site includes the properties identified as 1012 South Clinton Street and 350 Benton Street

in a mixed commercial/residential area on the southeast side of the City of Rochester, Monroe County. The buildings on both properties have been demolished and both properties are now vacant. Residential properties are located to the north, east and west of the site with a commercial property located to the south of the site. The 1012 South Clinton Street property was used as a dry-cleaning supply company that stored and distributed dry cleaning chemicals.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, 828103) at:

<http://www.dec.ny.gov/cfm/xtapps/dereexternal/index.cfm?pageid=3>

Summary of the Investigation: A Remedial Investigation (RI) has been conducted. The purpose of the RI was to define the nature and extent of any contamination resulting from previous activities at the site. The field activities and findings of the investigation are described in the RI Report. The primary contaminants of concern at the site were volatile organic compounds (VOCs), but the actions taken to address contamination in the various media support the proposed NFA remedy.

State Superfund Program: New York's State Superfund Program (SSF) identifies and characterizes suspected inactive hazardous waste disposal sites. Sites that pose a significant threat to public health and/or the environment go through a process of investigation, evaluation, cleanup and monitoring.

For more information about the SSF, visit:

<http://www.dec.ny.gov/chemical/8439.html>

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.
