

(Fact Sheet Begins Next)

## Act Now to Continue Receiving Information About This Site!

DEC's Division of Environmental Remediation (DER) now distributes information about contaminated sites *electronically by email*.

If you would like to continue to receive information about the contaminated site featured in this fact sheet:

**You must sign up for the DER email listserv:**

[www.dec.ny.gov/chemical/61092.html](http://www.dec.ny.gov/chemical/61092.html)

DER cannot register your email address - only the email address owner can do so. If you already have signed up for the listserv for the county in which the site is located, you need do nothing.

### Why You Should Go “Paperless”:

- ☒ Get site information faster and share it easily;
- ☒ Receive information about all sites in a chosen county - read what you want, delete the rest;
- ☒ It helps the environment and stretches your tax dollars.

**If “paperless” is not an option for you**, call or write to the DER project manager identified in this fact sheet. Indicate that you need to receive paper copies of fact sheets through the Postal Service. Include the site name in your correspondence. The option to receive paper is available to individuals only. Groups, organizations, businesses, and government entities are assumed to have email access.

# FACT SHEET

State Superfund Program

Former Air Force Plant No.51

4777 Dewey Avenue  
Greece, Monroe County

SITE No. 828156

NYSDEC REGION 8

January 2024

## Notice of Availability: Record of Decision

The New York State Department of Environmental Conservation (NYSDEC) announces that it has issued the Record of Decision (ROD) for the Former Air Force Plant No. 51 site ("site") located at 4777 Dewey Avenue, Greece, Monroe County. Please see the map for the site location.

The ROD presents the remedy selected to address contamination related to the site and why the remedy was chosen. The ROD also includes a Responsiveness Summary that addresses public comments received about the proposal. The estimated cost to implement the remedy is \$31,000,000.

On Tuesday, August 22, 2023, NYSDEC held a public meeting presenting the Proposed Remedial Action Plan for the site. The comments received at this meeting and during the public comment period (August 09, 2023 through October 09, 2023), along with the administrative record, were considered in preparing the final ROD for the site.

- Access the ROD and other project documents online through the DECinfo Locator: <https://www.dec.ny.gov/data/DecDocs/828156/>.
- Documents also are available at the location(s) identified at left under "Where to find information."
- Two RODs are available for this site – one for the former plating pond area known as Operable Unit 1 and one for both the remaining on-site area (Operable Unit 2) and the off-site upland/wetland area to the west of the site (Operable Unit 3).

**Record of Decision:** The following is a summary of the chosen remedy described in the ROD:

- Excavation – Excavation and off-site disposal of approximately 15,800 cubic yards of contaminated soil.
- Importing clean material that meets the established soil cleanup objectives for use as backfill.
- Removal of infrastructure and contaminated soil associated with the Former Septic System/Leach Field Area and the Stormwater System.
- Maintaining of a site cover that currently exists in areas not occupied by buildings, including the concrete slabs, surface parking areas, and/or soil where the upper one foot of exposed surface soil is meeting the soil cleanup objectives for commercial use;
- Treatment of contaminated groundwater by injecting a chemical reducing agent into the subsurface in a 25,000 square foot area located in the southwestern portion of the site, and a second 19,000 square foot area located in the western portion.

# STATE SUPERFUND PROGRAM

- Installation of a Permeable Reactive Barrier (PRB) via linear injections along the southern end of the site.
- Implementing a Health and Safety Plan and Community Air Monitoring during all ground intrusive activities.
- Implementing a Site Management Plan (SMP) which will include monitoring and inspection requirements to assess the performance and effectiveness of the remedy.
- Recording of an Environmental Easement to ensure proper use of the site and a provision for the evaluation of potential soil vapor intrusion for any building that may be developed either on the site or any occupied buildings adjacent to the site.

**Site Description:** The site is 38.2-acres located just north of the Lake Ontario State Parkway, with surrounding land consisting of commercial and residential use to the east, undeveloped wooded upland areas to the south and wooded upland area leading to wetlands and Round Pond Creek to the west. The Monroe County Water Authority Shoremont Treatment Plant is located north of the site. The main building and several of the smaller buildings were demolished in 2015, with only their concrete slabs now remaining. Four smaller buildings remain on the site. None of which are occupied at this time. An outparcel, considered an off-site property, adjoins the site and was reportedly a part of the historic WWII Odenbach shipbuilding facility.

The site originally was the WWII Odenbach Shipbuilding plant. After WWII it was used by the Department of Defense for the production of B-52 bulkheads. It was declared excess by the United State government in 1959, and since 1963 the facility spaces have been leased to a variety of businesses including scrap metal recycling and metal plating.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, 828156) at:

<https://www.dec.ny.gov/cfm/external/derexternal/index.cfm?pageid=3>

**Summary of the Investigation:** The primary contaminants of concern at the site are volatile organic compounds (VOCs), particularly trichloroethene (TCE) and associated degradation products in groundwater, semi-volatile organic compounds (SVOCs), particularly polycyclic aromatic hydrocarbons (PAHs), PCBs, and metals, including arsenic, cadmium, chromium, copper, lead, mercury, nickel, and zinc in the soil.

**State Superfund Program:** New York's State Superfund Program (SSF) identifies and characterizes suspected inactive hazardous waste disposal sites. Sites that pose a significant threat to public health and/or the environment go through a process of investigation, evaluation, cleanup and monitoring.

NYSDEC attempts to identify parties responsible for site contamination before committing State funds for investigation and cleanup.

For more information about the SSF, visit:  
<https://www.dec.ny.gov/chemical/8439.html>
