<b>WEATHER:</b>	Temp: 87° Sunny, Wind: SW @ 9 mph

### Remedial Action Work Summary

#### Work Activities Performed Onsite:

- Mobilization of Geoprobe and injection equipment / material
- Installation of proposed injection point
- Mobile CAMP monitoring

Roux was onsite to coordinate with the subcontractor the mobilization of equipment and material for installation of proposed injection points. TREC Environmental, Inc. set up a staging and mixing area for the injection material and completed the injection work for 2 locations in the vicinity of monitoring well MW-35M: IP-3 and IP-4. A Geoprobe direct push drill rig was used to inject the ABC+ and ZVI into the points. The injection points were completed to a depth of 16 feet below land surface (bls). Injection fluids were placed at least 6 feet in the saturated zone, approximately 10-16 feet bls. Field screening for odor, VOCs and daylighting occurred throughout the day. No unexpected impacts were observed.

Due to the relatively small area and mobile nature of groundwater injection work, ambient air was monitored at each injection location using a handheld five-gas meter and personal dust monitor. Volatile organic compounds (VOCs) levels were monitored throughout the day and compared to the action limits of both the Site-specific HASP and Generic NYSDOH CAMP guidelines. No exceedances were observed. PID readings were not recorded during the middle of the work day due to equipment malfunction. Dust was not observed at any point during the course of the work and not detected above background levels.

Kathryn Lovell representing the NYSDEC was onsite to observe the work.

### CAMP

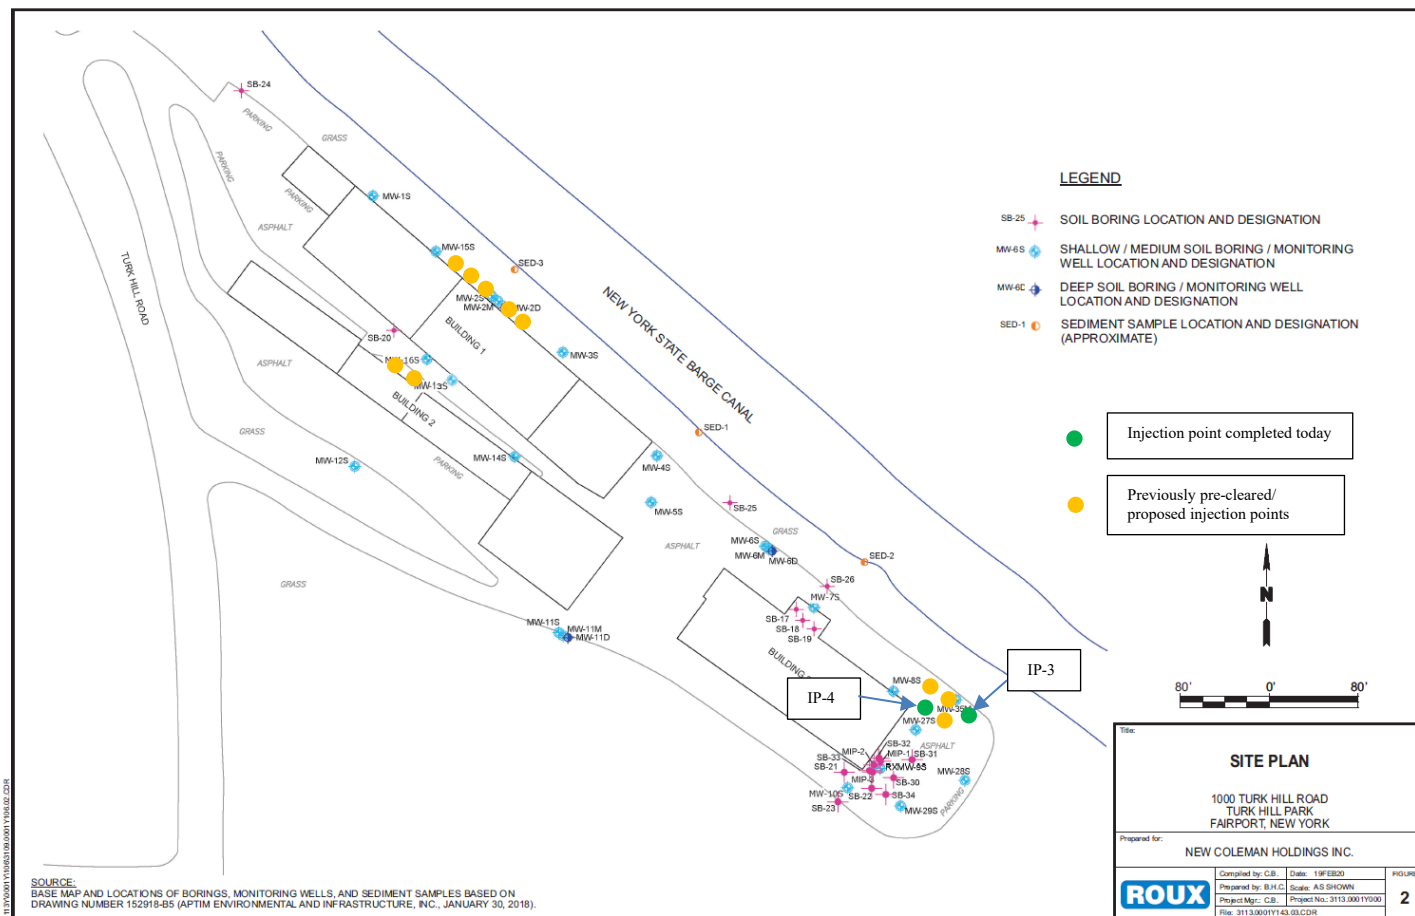

Time	PID (ppm)	Dust (mg/m <sup>3</sup> )
12:35 PM	0.0	0.030
1:40 PM	-	0.031
3:15 PM	-	0.027
4:10 PM	-	0.017
5:10 PM	0.0	0.037

### Anticipated Upcoming Work:

- Continue the 2<sup>nd</sup> phase of injections.
