RE: Phase I Environmental Site Assessment **190500605**
15 Richmond Street
City of Rochester, Monroe County, New York

Dear Mr. Marvald:

Pursuant to our contractual agreement, please find enclosed our Phase I Environmental Site Assessment (ESA) of 15 Richmond Street in the City of Rochester, Monroe County, New York. This investigation was conducted using the ASTM International E 1527-05 Standard (Standard Practice for Phase I Environmental Site Assessments: Phase I Environmental Site Assessment Process). All the information contained herein is true to the best of our knowledge and can be relied upon by Richmond Street, LLC.

Should you have any questions or require further information, please feel free to call.

Very truly yours,

Michael P. Storonsky
Managing Senior Associate, Environmental Management

Enclosure

PHASE I ENVIRONMENTAL SITE ASSESSMENT
15 RICHMOND STREET
CITY OF ROCHESTER, MONROE COUNTY, NY

Executive Summary

This report presents the results of a Phase I Environmental Site Assessment (ESA) performed by Stantec Consulting Services Inc. (Stantec) of the property located at 15 Richmond Street in the City of Rochester, Monroe County, New York. The location of the subject property is shown on attached Figure 1, Site Location Map.

Stantec understands that the User, Richmond Street, LLC, is interested in purchasing the subject property. The User requested that Stantec complete a Phase I ESA to fulfill the requirements of the ASTM International E 1527-05 Standard (Standard Practice for Phase I Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E 1527-05)).

The purpose of the Phase I ESA was to identify, to the extent feasible, recognized environmental conditions (RECs) in connection with the subject property. ASTM E 1527-05 defines the term RECs to mean the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, past release or material threat of release into structures, the ground, groundwater or surface water of the property.

Summary of Current Site Conditions

The subject property is a 0.083± acre parcel located at 15 Richmond Street (Tax I.D. No. 106.81-2-35), southeast of East Main Street in the City of Rochester, Monroe County, New York (see Figure 1, Site Location Map and Figure 2, Site Plan). The property is zoned CCD for Center City District.

The subject property is currently improved with an asphalt paved parking lot. The subject property is bordered to the north by Richmond Street. East Main Street, the Downstairs Cabaret Theater Center, and a commercial building are located opposite the site north of Richmond Street. The property is bordered to the west by two commercial buildings housing a restaurant, food and grocery markets, a barber shop and beauty supply shop, and a dry cleaner. The site is bordered on the south by Haags Alley, and vacant land is located to the south across Haags Alley. A restaurant is located on the adjacent property to the east.

Findings and Conclusions

We have performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E 1527-05 and our proposal dated May 7, 2010 for 15 Richmond Street located in the City of Rochester, New York. Any exceptions to, or deletions from, this scope of work are described in Sections 1.2, 1.3, and 1.4 of this report.

Recognized Environmental Conditions (RECs)

This assessment has revealed no recognized environmental conditions except for the following:

- Available information indicates that a dry cleaning business has been located on adjacent properties to the west since the 1930's and that subsurface conditions in the area of the subject property have been impacted by past releases of dry cleaning solvents.

  City directory records indicate that 527 East Main Street, adjacent to the north half of the subject property, was occupied by Vogue Dry Cleaners from 1936 through 1962, Elite Vogue Dry Cleaners from 1972 through 1993, and Elite Custom Tailoring and Cleaning in 2003. Sanborn maps depict a Cleaning Room at the southeast side of the 527 East Main Street building with two solvent tanks listed. The dry cleaner appears to have relocated to the neighboring building between approximately 2003 and 2008. Elite Custom Tailoring and Cleaning was listed at 525 East Main Street, which is adjacent to the south half of the subject property, in 2008. Elite Tailors Dry Clean and Alteration currently occupies the adjacent building located at 525 East Main Street.

  Soil and groundwater analysis done during a series of previous investigations by others of the block of properties located between Haags Alley and Charlotte Street detected contamination by dry cleaning solvent related compounds in samples collected in the Haags Alley right of way adjacent to the subject property. Reports on the previous investigations indicate that approximately 300 parts per million (ppm) of volatile organic compounds (VOCs) were detected by field screening of soil samples in a soil boring adjacent to the south side of the dry cleaner property west of the subject property, 506 ppm were detected $10^{\pm}$ feet (ft) west of the southwest corner of the subject property, and 1,708 ppm were detected $45^{\pm}$ ft east of the southeast corner of the subject property. A total petroleum hydrocarbon scan revealed petroleum at 819 ppm in soil $10^{\pm}$ ft west of the subject property, and mineral spirits were detected in groundwater at the same location. The previous investigation reports identified the dry cleaner as a suspected source of the Haags Alley contamination. The previous investigation reports also indicate that groundwater flow in the area is generally easterly and the subject property is downgradient of the dry cleaner. Available information therefore indicates the likelihood that the subject property has been impacted by past releases of dry cleaning solvent from the adjacent (off-site) dry cleaning operations is high.

- Several Charlotte Street properties that back up to Haags Alley opposite the south side of the subject property were occupied by auto repair shops or auto parts suppliers from approximately 1942 through 1972, and 14 Charlotte Street was occupied by Industrial Workshops in 1929. Two spills, at 14-16 Charlotte Street (DEC Spill No. 0070044) and 26-60 Charlotte Street (DEC Spill No. 0070043), have been listed for the Charlotte Street properties. During the previous investigations of this area by others referenced above, petroleum contamination was found in soil, groundwater, and bedrock from on- and off-site sources. Buildings, USTs, and underground lifts were removed and 1,900 tons of soil was excavated and disposed of off-site pursuant to a DEC approved Corrective Action Plan. Some contamination remains, which is to be addressed through an Environmental Management Plan and an Environmental Engineering Control Plan. These two spill files remain open.

  Given the direction of groundwater flow identified in the previous reports of the Charlotte

Street investigations, the likelihood of impacts to the subject property from this area appear to be low to moderate.

- The 1892 Sanborn map indicates the presence of a paint shop at the rear of 17 Richmond Street, the adjacent property to the east. The rear of that property is designated as auto painting in the 1950 and 1971 Sanborn maps. Given the direction of groundwater flow, the likelihood of impacts to the subject property from this area appears to be low to moderate.

Opinions

- A Phase II Environmental Site Assessment was needed to determine whether soil, soil vapor, or groundwater conditions at the subject property had been impacted by the RECs identified above. A Phase II ESA was therefore performed concurrently with this Phase I ESA. A report on the results of the Phase II ESA is provided under separate cover.

1.0 Introduction

1.1 PURPOSE

This investigation was requested to identify, to the extent feasible, recognized environmental conditions (RECs) in connection with the subject property. The investigation was conducted in conformance with the ASTM International E 1527-05 Standard (Standard Practice for Phase I Environmental Site Assessments: Phase I Environmental Site Assessment Process).

1.2 DETAILED SCOPE OF SERVICES

The Scope of Services developed for this Phase I ESA was outlined in our proposal of May 7, 2010, and was approved by Mr. Kenneth A. Marvald, Esq., representative for Richmond Street, LLC, on May 7, 2010. All work associated with this assessment was performed as proposed.

1.3 SIGNIFICANT ASSUMPTIONS

No significant assumptions, other than those listed in the relevant sections, have been made in the preparation of this Phase I ESA.

1.4 LIMITATIONS AND EXCEPTIONS

This report presents a description of the conditions observed within and immediately surrounding the subject property at the time of the site visits. In addition, this assessment was based on a review of reasonably ascertainable federal, state, and local environmental records, a site reconnaissance of the subject property, and interviews with individuals familiar with the current and historical uses of the subject property.

The findings, opinions, and conclusions presented in this report are based only on information gathered during these activities. Therefore, since much of the information has been provided by others, the accuracy of the conclusions drawn from this information is inherently related to the accuracy and reliability of the information that was provided.

1.5 SPECIAL TERMS AND CONDITIONS

As stated in the Scope of Services, this Phase I ESA does not include any of the following “non-scope considerations,” listed in E 1527-05, section 13.1.5: asbestos, lead-based paint, lead-in-drinking water, mold, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, and high-voltage power lines.

1.6 USER RELIANCE

This document may not be used or relied upon by others without the expressed written consent of Stantec and Richmond Street, LLC, to which reliance on this report is expressly provided.

2.0 Site Description

2.1 LOCATION AND LEGAL DESCRIPTION

The subject property is a 0.083± acre parcel located at 15 Richmond Street (Tax I.D. No. 106.81-2-35), southeast of East Main Street in the City of Rochester, Monroe County, New York (see Figure 1, Site Location Map and Figure 2, Site Plan). The property is zoned CCD for Center City District.

2.2 SITE AND VICINITY GENERAL CHARACTERISTICS

Physical setting sources reviewed for this ESA included: a United States Geological Survey (USGS) 7.5 Minute Series topographic map (Rochester East, 1978) and the Monroe County Soil Survey (1973), prepared by the United States Department of Agriculture (USDA) Soil Conservation Service (SCS).

The subject property slopes slightly to the southeast and lies at an average elevation of 520± feet above mean sea level. Surface water drainage on the subject property and surrounding properties is controlled by roadways and storm sewers surrounding the property.

Results of previous investigations of adjacent properties by others indicate that groundwater flow is generally to the east. An eastbound groundwater flow direction is consistent with the direction of flow that would be expected from the local topography.

According to the Surficial Geologic Map of New York - Finger Lakes Sheet (Caldwell, and others, 1986) overburden soils beneath the subject property consist of lacustrine silt and clay.

According to the Geologic Map of New York (Finger Lakes Sheet, by Rickard and Fisher, dated 1970) bedrock beneath the subject property is identified as Guelph Dolostone, part of the Lockport Group.

According to the Monroe County Soil Survey, soils on the subject property and throughout the more developed areas of the City of Rochester are identified as Urban Land, which consist of areas that have been so altered or obscured by public works and structures that identification of the native soils is not feasible.

2.3 CURRENT USE OF THE PROPERTY

At the time of the property visit, the subject property was improved with an asphalt paved parking lot. We understand that until recently the property was leased for use as a parking lot by the owner of the restaurant located at 17 Richmond Street, but that the lease recently expired. According to City of Rochester Building Information System records, the property was previously improved with a house for which a demolition permit was issued on August 19, 1981.

2.4 DESCRIPTIONS OF STRUCTURES, ROADS, OTHER IMPROVEMENTS ON THE SITE

The subject property is currently improved with a paved parking lot. The subject property does not currently maintain any connections to utilities; however, potable water is available to the subject property from the municipal water supply system (Rochester Water Bureau). Properties in the vicinity of the subject property are serviced by the municipal sanitary sewer system. Natural gas and electric services are provided to properties in the vicinity of the subject property by Rochester Gas and Electric (RG&E).

2.5 CURRENT USES OF THE ADJOINING PROPERTIES

The subject property is bordered to the north by Richmond Street. East Main Street, the Downstairs Cabaret Theater Center, and a commercial building are located opposite the site north of Richmond Street. The property is bordered to the west by two commercial buildings housing a restaurant, food and grocery markets, a barber shop and beauty supply shop, and a dry cleaner. The site is bordered on the south by Haags Alley, and vacant land is located to the south across Haags Alley. A restaurant is located on the adjacent property to the east.

3.0 User Provided Information

Richmond Street, LLC, the User, provided Stantec with the following information as part of the completion of this Phase I ESA:

- A Survey Map of the adjacent property located at 17 Richmond Street dated July 23, 1991 prepared by Ronald W. Staub Land Surveyors, which shows the subject property in its entirety to be a gravel parking area;
- A Historical Report Environmental Review – City Block Roughly Contained by Main Street, Richmond, Haags Alley, and Pitkin Streets, City of Rochester, New York, dated April 7, 2008 and prepared by Panamerican Environmental Inc.; and
- Exhibit C – Environmental Conditions and New York State Approval, which includes a NYSDEC Letter to the City of Rochester concerning Spill No's: 0070043 and 0070044 at 14-16 Charlotte Street dated January 31, 2005 and a Description of Environmental Conditions at 14-60 Charlotte Street dated March 8, 2005, a report that summarizes environmental conditions on the properties to the south of the subject property on Haags Alley.

3.1 TITLE RECORDS

The Abstract of Title was not available for review at the time this report was prepared.

3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

The owner, Michael Grosodonia, stated in a telephone interview on May 13, 2010 that he is unaware of any environmental cleanup liens against the subject property or any activity and land use limitations in place or on file for the subject property.

3.3 SPECIALIZED KNOWLEDGE

The User, Richmond Street, LLC, provided no specialized knowledge or experience that is material to any recognized environmental conditions in connection with the property.

3.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

It is Stantec's understanding that all commonly known or reasonably ascertainable information was provided by the User, Richmond Street, LLC, to complete this Phase I ESA.

3.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Stantec requested that information be provided concerning whether the valuation of the subject property has been affected by environmental issues. No information was provided to Stantec by the user or the owner.

3.6 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

According to Monroe County Real Property Tax information, Phil Grosodonia currently owns the subject property. According to Michael Grosodonia, he is the current owner of the property and Phil Grosodonia, his father, originally purchased the property.

3.7 REASON FOR PERFORMING PHASE I ENVIRONMENTAL SITE ASSESSMENT

This investigation was requested to identify, to the extent feasible, recognized environmental conditions in connection with the subject property. It is understood that Richmond Street, LLC is interested in purchasing the subject property. Richmond Street, LLC has requested that Stantec complete a Phase I ESA to fulfill the requirements of the ASTM International E 1527-05 Standard (Standard Practice for Phase I Environmental Site Assessments: Phase I Environmental Site Assessment Process).

4.0 Records Review

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

An environmental regulatory database report prepared by Environmental Data Resources (EDR) of Milford, Connecticut was obtained to assist in identifying recognized environmental conditions (RECs) in connection with the subject property. A copy of EDR's database report is included as Appendix B of this report. A written Freedom of Information Law (FOIL) request was submitted to the New York State Department of Environmental Conservation (DEC) to review their files regarding the subject property (see Appendix A). On May 26, 2010, the DEC responded, indicating that there are no files on record regarding environmental issues at this property.

	Subject Property	Facilities	Radius

US Brownfields:

Subject Property: Not listed.

Surrounding Properties: There is one (1) site located within one-half mile of the subject property that is found on the US Brownfields registry. The site is 80-100 Charlotte Street (EPA ACRES ID 15173), which is located 0.10± miles south-southeast of the subject property. According to Dr. Richard Young's Groundwater Contour Maps for Monroe County (1980), and based on topographic gradient, groundwater in the vicinity of the 80-100 Charlotte Street site is expected to flow to the northeast, cross gradient to the subject property. Based upon this anticipated regional groundwater flow direction and the distance from the subject property, this DEC IHWDS site does not appear to present a recognized environmental condition for the subject property.

DEC IHWDS:

Subject Property: Not listed.

Surrounding Properties: There are two (2) sites located within one (1) mile of the subject property that are found on the DEC IHWDS registry. The first site is the Mill Street Drums site (DEC Site Code 828058), which is located at 208 Mill Street, 0.94± miles west of the subject property. The second site is the Davis-Howland Oil Corp site (DEC Site Code 828088), which is located at 200 Anderson Drive, 0.89± miles east of the subject property. The Mill Street Drums site is located on the west side of the Genesee River, which is expected to act as a surface water and groundwater divide. According to Dr. Richard Young's Groundwater Contour Maps for Monroe County (1980), and based on topographic gradient, groundwater in the vicinity of the Davis-Howland Oil Corp site is expected to flow to the northeast, toward Irondequoit Bay and away from the subject property. Based upon the

anticipated regional groundwater flow directions and their distances from the subject property, these DEC IHWDS sites do not appear to present recognized environmental conditions for the subject property.

DEC Active Solid Waste Facility (ASWF):

Subject Property:	Not listed.
Surrounding Properties:	There is one facility listed on the EDR database report within one-half mile of the subject property. The listed facility is Russell Gas and Electric, located at 89 East Avenue, 0.26± miles southwest of the subject property. However, it is our understanding that 89 East Avenue is the location of a Rochester Gas and Electric (RG&E) office building, and that RG&E has an electric power generating facility known as Russell Station that is located at 1101 Beach Avenue, several miles north of the property. In any case, based on topographic gradient, regional groundwater flow in the vicinity of the 89 East Avenue property is anticipated to flow easterly, cross gradient to the subject property. Based upon this anticipated regional groundwater flow direction and the distance from the property, this site does not appear to present a recognized environmental condition for the subject property.

DEC LTANK Spill Incidents:

Subject Property:	Not listed.
Surrounding Properties:	There have been twenty-six (26) spill incidents involving leaking storage tanks (LTANKs) reported to the DEC within one-half mile from the subject property. None appear to be located directly up-gradient of the subject property. All of these LTANKs spill incidents have been closed/inactivated by the DEC, which suggests that they were resolved to the satisfaction of the DEC. Additional information pertaining to these sites is included in Appendix B.

DEC Petroleum Bulk Storage (PBS) Facilities:

Subject Property:	Not listed
Surrounding Properties:	There is one (1) PBS facility listed adjacent to the subject property. The facility is the Real Estate Board of Rochester (DEC ID No. 8-444995), located at 550 East Main Street, adjacent to the northeast. According to the DEC PBS database, this facility previously maintained one (1) 6,000-gallon fuel oil UST which was closed and removed on February 1, 1993. One spill (DEC Spill No. 9212469), which has been closed, is listed for this tank, as described below. Based on previous investigations, groundwater flow in the area is anticipated to flow east, cross gradient to the subject property. Given the anticipated groundwater flow direction and the removal of this tank, this former tank does not appear to present a recognized environmental condition for the subject property.

DEC Index of Surficial Spill Incidents:

Subject Property:	Not listed.
Surrounding Properties:	There have been six (6) surficial spill incidents reported to the DEC that occurred at an adjacent property.

Four of the spills occurred at 550 East Main Street, adjacent to the northeast. The first incident was reported at Mercier Realty on February 2, 1993 (DEC Spill No. 9212469) when contamination was found during a fuel oil UST removal. The contaminated soil was excavated and disposed of. This incident was closed on May 8, 1995. The second incident was reported at Mercier Realty on January 1, 1993 (DEC Spill No. 9415772) when lube oil was found in a sump in the basement. The sump was cleaned and the floor sealed, and cleanup was followed up under spill 9600070. This incident was closed on May 6, 1998. The third incident was reported on March 28, 1983 (DEC Spill No. 8383328) when a gasoline complaint was made and follow up was moved to spill 9600070. This incident was closed on April 18, 2003. The fourth incident was reported at Action for a Better Community on May 6, 1993 (DEC Spill No. 9600070) due to a historical problem of oil entering the basement. A limited cleanup was performed and the system was dismantled. This incident was closed on May 19, 2003. These four spill incidents were closed/inactivated by the DEC, which suggests that they were resolved to their satisfaction.

The remaining two spills occurred on nearby properties located on the adjacent block south of Haags Alley opposite the south end of the subject property. The first of these spills was reported at 26-60 Charlotte Street, adjacent to the southwest, on April 19, 2000 (DEC Spill No. 0070043). This spill is being handled along with the second spill, which was reported at 14-16 Charlotte Street on May 6, 1993 (DEC Spill No. 0070044), adjacent to the southeast. Petroleum contamination was found in soil, groundwater, and bedrock from on- and off-site sources. Buildings, USTs, and underground lifts were removed and soil was excavated and disposed of off-site pursuant to a DEC approved Corrective Action Plan. Some contamination remains, which are to be addressed through an Environmental Management Plan and an Environmental Engineering Control Plan. These two incidents remain open. Additional information pertaining to these incidents is included in Appendix B. The 14-16 Charlotte Street site is potentially up-gradient or cross-gradient to the subject property, and the 26-26 Charlotte Street site is potentially cross-gradient or down-gradient to the subject property. The remaining two open spills appear to present a recognized environmental condition for the subject property due to the active nature of the spills and the proximity to the subject property.

4.2 ADDITIONAL ENVIRONMENTAL RECORD SOURCES

A Historical Report Environmental Review – City Block Roughly Contained by Main Street, Richmond, Haags Alley, and Pitkin Streets, City of Rochester, New York, dated April 7, 2008 and

prepared by Panamerican Environmental Inc. was reviewed. Exhibit C – Environmental Conditions and New York State Approval, which includes a NYSDEC Letter to the City of Rochester concerning Spill No's: 0070043 and 0070044 at 14-16 Charlotte Street dated January 31, 2005 and a Description of Environmental Conditions at 14-60 Charlotte Street dated March 8, 2005, was also reviewed. Copies are presented in Appendix F.

During a series of previous investigations by others of the block of properties located between Haags Alley and Charlotte Street, petroleum contamination was found in soil, groundwater, and bedrock from on- and off-site sources. Buildings, USTs, and underground lifts were removed and 1,900 tons of soil were excavated and disposed of off-site pursuant to a DEC approved Corrective Action Plan. Some contamination remains, which is to be addressed through an Environmental Management Plan and an Environmental Engineering Control Plan. The DEC issued a letter on January 31, 2005 approving the Corrective Action Plan dated October 2001, the Interim Remedial Measure Report dated October 2002, and the Environmental Engineering Control Plan prepared by Day Engineering on behalf of the City.

Soil and groundwater analysis done during the series of previous investigations of the block of properties located between Haags Alley and Charlotte Street detected contamination by dry cleaning solvent related compounds in samples collected in the Haags Alley right of way adjacent to the subject property. Reports on the previous investigations indicate that approximately 300 parts per million (ppm) of volatile organic compounds (VOCs) were detected by field screening of soil samples in a soil boring adjacent to the south side of the dry cleaner property west of the subject property, 506 ppm were detected $10^{\pm}$ feet (ft) west of the southwest corner of the subject property, and 1,708 ppm were detected $45^{\pm}$ ft east of the southeast corner of the subject property in the Haags Alley right-of-way. A total petroleum hydrocarbon scan revealed petroleum at 819 ppm in soil $10^{\pm}$ ft west of the subject property, and mineral spirits were detected in groundwater at the same location. The previous investigation reports identified the dry cleaner as a suspected source of the Haags Alley contamination. The previous investigation reports also indicate that groundwater flow in the area is generally easterly and the subject property is downgradient of the dry cleaner.

4.3 PHYSICAL SETTING SOURCES

Physical setting sources reviewed for this Phase I ESA included: a United States Geological Survey (USGS) 7.5 Minute Series topographic map (Rochester East, 1978); the Monroe County Soil Survey (1973), prepared by the United States Department of Agriculture (USDA) Soil Conservation Service (SCS); the Surficial Geologic Map of New York - Finger Lakes Sheet (Caldwell, and others, 1986); the Geologic Map of New York (Finger Lakes Sheet, by Rickard and Fisher, dated 1970); and Dr. Richard Young's Groundwater Contour Maps for Monroe County (1980).

4.4 HISTORICAL USE INFORMATION ON THE PROPERTY

The subject property history was developed through a review of: historical aerial photographs provided by EDR dated 1958, 1966, 1971, 1980, 1985, 1994, and 2006 and by Monroe County dated 1930, 1951, 1961, 1970, 1975, 1988, 1993, 1996, and 1999 (see Appendix E); historical Sanborn maps provided by EDR dated 1892, 1911, 1912, 1938, 1950, and 1971; and Polk City

Directories dated 1892, 1901-02, 1911-12, 1922, 1929, 1936, 1942, 1952, 1962, 1972, 1981-82, 1993, 2003, and 2008.

Aerial Photographs

Aerial photographs from 1930 through 2006 were examined. Though the scale of images was small, from 1930 through 1980, the property appeared to have been improved with a building. The 1985 photograph was of too poor quality to be interpreted, and from 1988 through 2006, the property appears to have been vacant.

Historical Sanborn Fire Insurance Map

Date of Sanborn Map	Subject Property Conditions
1892	A residential dwelling appeared at the north side of the property.
1911-12	A residential dwelling appeared at the north side of the property.
1938	A residential dwelling appeared at the north side and a storage building appeared at the south side of the property.
1950	An apartment building appeared at the north side and a storage building appeared at the south side of the property.
1971	An apartment building appeared at the north side and a storage building appeared at the south side of the property.

Polk City Directories

Polk City Directories for the City of Rochester were examined. The subject property is listed as residential from 1892 through 1972. It is not listed in 1981-82, 1993, and 2003. In 1892, Richmond Street was called Richmond Place.

4.5 HISTORICAL USE INFORMATION ON ADJOINING PROPERTIES

Aerial Photographs

Aerial photographs from 1930 through 2006 were examined. Though the scale of images was small and the 1985 photograph was of too poor quality to be interpreted, from 1930 through 1999, the property was surrounded by mixed commercial and residential buildings along with Richmond Street, East Main Street, and Haags Alley. In the 2006 photograph, the property is surrounded to the west, north, and east by mixed commercial and residential buildings along with East Main Street and Richmond Street. To the south across Haags Alley, buildings had been removed leaving a vacant lot.

Historical Sanborn Fire Insurance Map

Date of Sanborn Map	Adjacent Property Conditions
1892	North: Richmond Street, East Main Street, stores, a mason and black smith shop, and a dwelling East: A dwelling and a paint shop South: Haags Alley, dwellings and apartments, stables, a black smith, and a sausage shop with a smoke house West: Dwellings, a saloon, a stable, and a store
1911	North: Richmond Street, East Main Street, stores, a wagon and black smith shop, and a cobbler East: A store and a stable South: Haags Alley, dwellings and apartments, stables, a black smith, and lard kettles West: Dwellings, a saloon, a stable, and a restaurant
1938	North: Richmond Street, East Main Street, not shown East: A store and an auto and storage building South: Haags Alley, dwellings and apartments, two auto repair shops, and gas tanks at the northwest side West: Commercial building including a dry cleaner and stores. A Cleaning Room is shown at the southeast side of the building with 2 solvent tanks listed.
1950	North: Richmond Street, East Main Street, and stores East: A store and an auto painting and storage building South: Haags Alley, dwellings and apartments, two auto repair shops, and gas tanks at the northwest side West: Commercial building including a dry cleaner, a restaurant, and stores. A Cleaning Room is shown at the southeast side of the building with 2 solvent tanks listed.
1971	North: Richmond Street, East Main Street, an office building, and an office machines sales and service building East: A store and an auto painting and storage building South: Haags Alley, a dwelling, a pipe storage yard, an auto parts storage building, fire ruins, an auto repair shop, and an auto storage yard West: Commercial building including a dry cleaner and stores. A Cleaning Room is shown at the southeast side of the building with 2 solvent tanks listed.

Polk City Directories

Polk City Directories for the City of Rochester were examined. Neighboring properties were generally commercial or residential throughout the period examined. 527 East Main Street, adjacent to the west, was occupied by Vogue Dry Cleaners from 1936 through 1962, Elite Vogue Dry Cleaners from 1972 through 1993, and Elite Custom Tailoring and Cleaning in 2003. Elite Custom Tailoring and Cleaning was listed at 525 East Main Street in 2008. The dry cleaner appears to have relocated to the neighboring building between approximately 2003 and 2008. Several properties on Charlotte Street, adjacent to the south, were occupied by auto repair shops or auto parts suppliers from 1942 through 1972, and 14 Charlotte St was occupied by Industrial Workshops in 1929. 529 East Main Street, adjacent to the west, was occupied by several auto parts companies or automobile companies from 1922 through 1942. 521 East Main Street was occupied by a tire company in 1922. 544 East Main Street was occupied by a blacksmith in 1911-12 and wagon makers in 1892 and 1901-02. 552 East Main Street, adjacent to the north, was occupied by an automobile company in 1942, and 548 East Main Street was occupied by automobile parts and supplies companies in 1922 and 1929.

5.0 Site Reconnaissance

On May 17, 2010, Stantec conducted a site visit to the subject property to obtain information indicating the likelihood of identifying "recognized environmental conditions" (RECs), as defined in the ASTM International E 1527-05 Standard, in connection with the subject property. Photographs from the site visit are included as Appendix D of this report.

The site reconnaissance focused on the following elements: topographic conditions; indications of current uses of the sites; evidence of past uses; indications of environmental issues; identification of buildings; outdoor drainage features; miscellaneous debris; areas of disturbed soils; and areas of stressed vegetation. This section describes the observations made by Stantec during the site reconnaissance.

5.1 METHODOLOGY AND LIMITING CONDITIONS

The Phase I ESA site visit did not include any destructive investigation to expose concealed elements on the subject property. A Phase II ESA was conducted concurrently with the Phase I ESA site visit, and is presented under separate cover. For additional limiting conditions, please refer to Section 1.4.

5.2 GENERAL SITE SETTING

The subject property is currently improved with an asphalt paved parking lot. The property is located at 15 Richmond Street, southeast of East Main Street.

Additional information regarding the general site setting was discussed previously in Section 2.0.

5.3 INTERIOR AND EXTERIOR OBSERVATIONS

Current Use(s) of the Property

The property visit was conducted on May 18, 2010. Representative photographs are presented in Appendix D.

Past Use(s) of the Property

There were no readily apparent indications of the past use(s) of the subject property. Interviews and records reviewed pertaining to the past use(s) of the property are discussed in Sections 4.4 and 6.0 of this report.

Hazardous Substances and Petroleum Products in Connection with Identified Uses

No readily apparent indications of hazardous substances and petroleum products in connection with identified uses were observed on the subject property at the time of the property visit.

Storage Tanks

There were no above ground storage tanks (ASTs) and no readily apparent indications (e.g. fill ports, vent pipes) of underground storage tanks (USTs) on the subject property at the time of the property visit.

Odors

No readily apparent indications of odors were noted on the subject property at the time of the property visit.

Pools of Liquid

No readily apparent indications of standing surface water or pools or sumps containing liquid were observed on the subject property at the time of the property visit.

Drums

During the property visit, there were no readily apparent indications of drums observed on the subject property.

Unidentified Substance Containers

During the property visit, there were no readily apparent indications of unidentified substance containers observed on the subject property.

Hazardous Substance and Petroleum Product Containers (Not Necessarily in Connection With Identified Uses)

During the property visit, there were no readily apparent indications of hazardous substance or petroleum product containers (not necessarily in connection with identified uses) observed on the subject property.

Polychlorinated Biphenyls (PCBs)

During the property visit, there were no readily apparent indications of PCB containing equipment observed on the subject property.

5.4 INTERIOR OBSERVATIONS

Heating/Cooling

Given that the subject property is a parking lot, no heating or cooling equipment was observed on the subject property.

Stains or Corrosion

No readily apparent indications of stains or corrosion were observed at the time of the property visit.

Drains and Sumps

No drains or sumps were observed on the subject property at the time of the property visit.

5.5 EXTERIOR OBSERVATIONS

Pits, Ponds, or Lagoons

During the property visit there were no readily apparent indications of pits, ponds or lagoons observed on the subject property; nor were there readily apparent indications of pits, ponds or lagoons observed on adjoining properties.

Stained Soil or Pavement

At the time of the property visit, no readily apparent indications of stained soil or pavement were observed on the subject property.

Stressed Vegetation

No readily apparent indications of stressed vegetation were observed on the subject property at the time of the property visit.

Solid Waste Disposal

No readily apparent indications of waste disposal apart from minor trash were observed on the subject property at the time of the property visit.

Wastewater

According to the Monroe County Real Property Data website, properties in the vicinity of the subject property are serviced by the municipal sanitary sewer system, which is maintained by the City of Rochester.

There were no readily apparent indications of wastewater or other liquid (including stormwater) being discharged into a ditch, underground injection system, or stream on, or adjacent to, the subject property at the time of the property visit.

Wells

No groundwater-monitoring wells or potable water supply wells were observed on the subject property during the site visit. A Phase II Environmental Assessment was completed at the subject property which included temporary groundwater monitoring wells; the report is provided under separate cover.

Septic Systems

During the property visit, there were no readily apparent indications of septic systems observed on the subject property.

6.0 Interviews

The following individuals/agencies were interviewed or requested to provide information on the subject property.

6.1 INTERVIEW WITH OWNER

Mr. Michael Grosodonia, property owner, was interviewed by telephone on May 18, 2010. Information provided by Mr. Grosodonia is included in Sections 2.3 and 3.6 of this report.

6.2 INTERVIEW WITH SITE MANAGER

Given that the subject property is a parking lot, no site manager for this property was interviewed.

6.3 INTERVIEW WITH OCCUPANTS

Given that the subject property is a parking lot, no tenants from this property were interviewed.

6.4 INTERVIEW WITH LOCAL GOVERNMENT OFFICIALS

Written FOIL requests were submitted to the City of Rochester and Monroe County to review their files regarding the subject property. On June 3, 2010, Monroe County responded, and the records provided did not indicate environmental issues at this property. On June 8, 2010, the City of Rochester responded, and the records provided did not indicate environmental issues at this property (see Appendix A).

6.5 INTERVIEW WITH OTHERS

A written Freedom of Information Law (FOIL) request was submitted to the New York State Department of Environmental Conservation (DEC) to review their files regarding the subject property. On May 26, 2010, the DEC responded, indicating that there are no files on record regarding environmental issues at this property (see Appendix A).

7.0 Findings and Conclusions

This report presents the results of a Phase I Environmental Site Assessment (ESA) performed by Stantec Consulting Services Inc. (Stantec) of the property located at 15 Richmond Street in the City of Rochester, Monroe County, New York. The location of the subject property is shown on attached Figure 1, Site Location Map.

Stantec understands that the User, Richmond Street, LLC, is interested in purchasing the subject property. The User requested that Stantec complete a Phase I ESA to fulfill the requirements of the ASTM International E 1527-05 Standard (Standard Practice for Phase I Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E 1527-05)).

The purpose of the Phase I ESA was to identify, to the extent feasible, recognized environmental conditions (RECs) in connection with the subject property. ASTM E 1527-05 defines the term RECs to mean the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, past release or material threat of release into structures, the ground, groundwater or surface water of the property.

Summary of Current Site Conditions

The subject property is a 0.083± acre parcel located at 15 Richmond Street (Tax I.D. No. 106.81-2-35), southeast of East Main Street in the City of Rochester, Monroe County, New York (see Figure 1, Site Location Map and Figure 2, Site Plan). The property is zoned CCD for Center City District.

The subject property is currently improved with an asphalt paved parking lot. The subject property is bordered to the north by Richmond Street. East Main Street, the Downstairs Cabaret Theater Center, and a commercial building are located opposite the site north of Richmond Street. The property is bordered to the west by two commercial buildings housing a restaurant, food and grocery markets, a barber shop and beauty supply shop, and a dry cleaner. The site is bordered on the south by Haags Alley, and vacant land is located to the south across Haags Alley. A restaurant is located on the adjacent property to the east.

Findings and Conclusions

We have performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E 1527-05 and our proposal dated May 7, 2010 for 15 Richmond Street located in the City of Rochester, New York. Any exceptions to, or deletions from, this scope of work are described in Sections 1.2, 1.3, and 1.4 of this report.

Recognized Environmental Conditions (RECs)

This assessment has revealed no recognized environmental conditions except for the following:

- Available information indicates that a dry cleaning business has been located on adjacent properties to the west since the 1930's and that subsurface conditions in the area of the subject property have been impacted by past releases of dry cleaning solvents.

  City directory records indicate that 527 East Main Street, adjacent to the north half of the subject property, was occupied by Vogue Dry Cleaners from 1936 through 1962, Elite Vogue Dry Cleaners from 1972 through 1993, and Elite Custom Tailoring and Cleaning in 2003. Sanborn maps depict a Cleaning Room at the southeast side of the 527 East Main Street building with two solvent tanks listed. The dry cleaner appears to have relocated to the neighboring building between approximately 2003 and 2008. Elite Custom Tailoring and Cleaning was listed at 525 East Main Street, which is adjacent to the south half of the subject property, in 2008. Elite Tailors Dry Clean and Alteration currently occupies the adjacent building located at 525 East Main Street.

  Soil and groundwater analysis done during a series of previous investigations by others of the block of properties located between Haags Alley and Charlotte Street detected contamination by dry cleaning solvent related compounds in samples collected in the Haags Alley right of way adjacent to the subject property. Reports on the previous investigations indicate that approximately 300 parts per million (ppm) of volatile organic compounds (VOCs) were detected by field screening of soil samples in a soil boring adjacent to the south side of the dry cleaner property west of the subject property, 506 ppm were detected $10^{\pm}$ feet (ft) west of the southwest corner of the subject property, and 1,708 ppm were detected $45^{\pm}$ ft east of the southeast corner of the subject property. A total petroleum hydrocarbon scan revealed petroleum at 819 ppm in soil $10^{\pm}$ ft west of the subject property, and mineral spirits were detected in groundwater at the same location. The previous investigation reports identified the dry cleaner as a suspected source of the Haags Alley contamination. The previous investigation reports also indicate that groundwater flow in the area is generally easterly and the subject property is downgradient of the dry cleaner. Available information therefore indicates the likelihood that the subject property has been impacted by past releases of dry cleaning solvent from the adjacent (off-site) dry cleaning operations is high.

- Several Charlotte Street properties that back up to Haags Alley opposite the south side of the subject property were occupied by auto repair shops or auto parts suppliers from approximately 1942 through 1972, and 14 Charlotte Street was occupied by Industrial Workshops in 1929. Two spills, at 14-16 Charlotte Street (DEC Spill No. 0070044) and 26-60 Charlotte Street (DEC Spill No. 0070043), have been listed for the Charlotte Street properties. During the previous investigations of this area by others referenced above, petroleum contamination was found in soil, groundwater, and bedrock from on- and off-site sources. Buildings, USTs, and underground lifts were removed and 1,900 tons of soil was excavated and disposed of off-site pursuant to a DEC approved Corrective Action Plan. Some contamination remains, which is to be addressed through an Environmental Management Plan and an Environmental Engineering Control Plan. These two spill files remain open.

  Given the direction of groundwater flow identified in the previous reports of the Charlotte

Street investigations, the likelihood of impacts to the subject property from this area appear to be low to moderate.

- The 1892 Sanborn map indicates the presence of a paint shop at the rear of 17 Richmond Street, the adjacent property to the east. The rear of that property is designated as auto painting in the 1950 and 1971 Sanborn maps. Given the direction of groundwater flow, the likelihood of impacts to the subject property from this area appears to be low to moderate.

8.0 Opinions

A Phase II Environmental Site Assessment was needed to determine whether soil, soil vapor, or groundwater conditions at the subject property had been impacted by the RECs identified above. A Phase II ESA was therefore performed concurrently with this Phase I ESA. A report on the results of the Phase II ESA is provided under separate cover.

9.0 Deviations

No deletions or deviations were made from the ASTM International E 1527-05 Standard (Standard Practice for Phase I Environmental Site Assessments: Phase I Environmental Site Assessment Process).

10.0 Additional Services

The Scope of Services developed for this Phase I ESA was outlined in our proposal of May 7, 2010, and was approved by Mr. Kenneth A. Marvald, Esq., representative for Richmond Street, LLC, on May 7, 2010. All work associated with this assessment was performed as proposed. No additional services beyond the scope of the ASTM International E 1527-05 Standard were contracted between Richmond Street, LLC and Stantec.

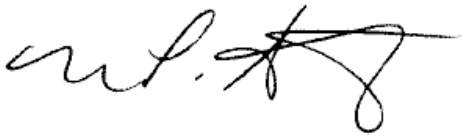
12.0 Signature(s) of Environmental Professional(s)

The following Stantec employees participated in the Phase I Environmental Site Assessment of the 15 Richmond Street in the City of Rochester, Monroe County, New York. Copies of resumes for these individuals are presented in Appendix G.

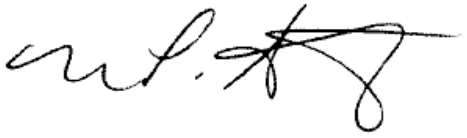
We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Part 312.10 of 40 CFR 312.



Michael P. Storonsky
Managing Senior Associate, Environmental Management

Thomas D. Wells
Senior Geologist

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.



Michael P. Storonsky
Managing Senior Associate, Environmental Management

Thomas D. Wells
Senior Geologist

Dorothy Bauch-Barker
Environmental Geologist

13.0 Qualifications of Environmental Professionals Participating in Phase I ESA

Copies of resumes for the environmental professionals involved in the completion of this report are presented in Appendix G.

DISCLAIMER

This report has been prepared for the exclusive use of the client. It is a professional opinion and judgment, dependent upon Stantec's knowledge, information supplied by the present owners of the property or their managers, employees, agents or tenants, and data and information provided by governmental agencies. Stantec warrants only that it provides services in accordance with generally accepted practices in the environmental site assessment field. No other warranty or representation, either expressed or implied, is included or intended as part of its services, proposals, contracts or reports.

In addition, Stantec cannot provide guarantees, certifications or warranties that the property is or is not free of environmental impairment without a subsurface investigation involving drilling, vapor analysis, laboratory soil analysis, groundwater monitoring well installation, and laboratory groundwater analysis. Even with such a program, the data and samples from any given soil boring or monitoring well will indicate conditions that exist only at that location and may not necessarily apply to the general site as a whole.

RE: Freedom of Information Request 10-1014

Dear Ms. Bauch-Baker:

Your request for information under the Freedom of Information Law (F.O.I.L.) has been approved as to existing records.

Please remit payment in the amount of $3.00 ($.25/page), along with the enclosed invoice, to cover copying expenses. Checks can be made payable to Monroe County and mailed to: Freedom of Information, 39 West Main Street, Room 204, Rochester, New York, 14614.

At this time the Monroe County Department of Communication now considers this request closed.

You may appeal this decision, in writing, within 30 days. The Appeals Officer for Monroe County is Dan Delaus, 39 W. Main Street, Suite 110, Rochester, New York, 14614.

Sincerely,

Noah M. Lebowitz
Records Access Officer

RECORDS CUSTODIAN

- **TO THE APPLICANT:**

–Records Provided

☐ The reproduction costs for the records provided are $ _____

☐ Records have been (partially, fully) provided. (If not fully provided, date when records are expected to be fully provided: _____)

–Records Not Available

☐ Records cannot be found after diligent search

☐ The Department is not the custodian for records indicated

–Records Denied

I hereby certify that access to the records–or part of the records–circled above has been denied to the applicant for the reason(s) checked below:

☐ Specifically exempt by other statute

☐ Unwarranted invasion of personal privacy

☐ Would impair present or imminent contract awards or collective bargaining negotiations

☐ Are examination questions or answers

☐ Are inter-agency or intra-agency materials that are not:
- statistical or factual tabulations or data
- instructions to staff that affect the public
- final agency policy or determinations; or
- external audits, including but not limited to audits performed by the comptroller and the federal government

☐ Are trade secrets

☐ Could endanger the life of any person

☐ Are compiled for law enforcement purposes and which, if disclosed would:
- interfere with law enforcement investigations or judicial proceedings
- deprive a person of the right to a fair trial or or impartial adjudication
- identify a confidential source or disclose confidential information relating to a criminal investigation, or
- reveal criminal investigative techniques or procedures, except routine techniques and procedures

☐ Would jeopardize an agency's capacity to guarantee the security of its information technology assets, such assets encompassing both electronic information systems and infrastructures

Identification of records withheld (attach listing if additional space is required) and/or explanation if appropriate:

FOIL Request Number **10-0403**

Dear Ms. Bauch-barker:

This is to acknowledge receipt of your Freedom of Information Law (FOIL) request and to advise you we are conducting a file search for the following parcel(s) of real property:

15 Richmond Street, Rochester, NY 14604

Please note, we do not search for spill files without a spill number. If you are interested in spill information and have not already provided us with a spill number, we refer you to the NYSDEC spill website: http://www.dec.ny.gov/chemical/8437.html.

If you locate a spill number from the database you may contact me for a copy of the spill fact sheet or other information that is included in the file. If you do not have access to a computer, please call me at (585) 226-5363.

Also, be advised if you are asking us to check for properties in the surrounding area, we are unable to do a search by radius. We need names and addresses for each property. Due to the large volume of requests we receive, you may expect a reply in about four weeks.

If you call or write, refer to Request Number 10-0403.

Sincerely,

Jill Bishop

FOIL ID: 10-0403

Subject: 15 Richmond Street, Rochester, NY 14604

Dear Ms. Bauch-barker:

Your request has been reviewed for the above referenced records under the New York State's Freedom of Information Law (FOIL). Please note that most of our records are filed by names of individuals or corporations. We have no way of locating or retrieving records if they are filed under names or addresses other than those you have provided. If no records have been located, this does not necessarily mean, and should not be interpreted to mean that there have never been any violations, complaints, claims, investigations, or inquiries involving those names or addresses. We cannot make any representations as to whether there are or have been any such violations, complaints, claims, investigations, or inquiries.

Please Note: Unless you gave us a spill number, we did not do a search of the spills files. We did not inquire whether the Albany office or other regional offices of our Department have records of the type you requested. We did not check for the existance or proximity to a State regulated wetland.

[X] ***After a diligent search, no records could be located for the names and/or addressses you provided.***

[ ] ***Records have been found by the following units and are available for review and/or copying. The size of the file(s) are listed to the right of the unit(s).***

There is no charge to review records or for copies of seven or fewer pages. By law, copy charges will not exceed 25 cents per page or the actual cost of copying. Photographs, maps, oversized documents, videotapes, or audio tapes generally cost more than 25 cents per page to copy. You may be required to pay a deposit prior to copies being made and/or to pay all copy charges prior to copies being sent.

Depending on the volume of copies requested, they may be sent to an outside copy service. If you desire to review the records, please be aware that due to limited office space, only two people can be accomodated in the document review area.

Please inform us within 14 days from the date of this letter how you wish to proceed. After that time you will need to resubmit your request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 01/13/2010 has revealed that there is 1

RCRA-SQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SPEEDYS CLEANERS	*50 SCIO ST*	*SW 0 - 1/8 (0.119 mi.)*	*G31*	*107*

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 01/13/2010 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
FERRELS GARAGE INC	*365 UNIVERSITY AVE*	*E 1/8 - 1/4 (0.245 mi.)*	*54*	*248*

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 03/26/2010 has revealed that there are 2 SHWS sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
DAVIS-HOWLAND OIL CORP	*200 ANDERSON AVENUE*	*E 1/2 - 1 (0.891 mi.)*	*72*	*338*
Class Code: Significant threat to the public health or environment - action required.				
MILL STREET DRUMS	*208 MILL STREET*	*W 1/2 - 1 (0.937 mi.)*	*73*	*347*

VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil.Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the VAPOR REOPENED list, as provided by EDR, and dated 02/02/2010 has revealed that there are 2 VAPOR REOPENED sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 04/13/2010 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
RUSSELL GAS & ELECTRIC	89 EAST AVE.	SW 1/4 - 1/2 (0.262 mi.)	O58	291

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 04/01/2010 has revealed that there are 22 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 23 HIST LTANKS sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 04/01/2010 has revealed that there are 18 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 11 NY Hist Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 01/13/2010 has revealed that there are 18 RCRA-NonGen sites within approximately 0.25 miles of the target property.

MILLER TELCON W/GEORGE HEISEL-NATIONAL AMBULANCE. PLAN TO TAKE OVER SPILL CLEANUP, LETTER WILL BE FORTHCOMING. 01/07/91: P. MILLER TELCON W/TOM WALSE-NIXON HARGRAVES, WILL SEND ACCEPTANCE OF RESPONSIBILITY LETTER BY 01-14-91, H & A OF NY WILL PROBABLY BE CONTRACTOR. 01/07/91: P. MILLER TELCON W/ED JONES-AES, WILL PUT V.E.S. ON SEPARATE OUTLET. 01/10/91: P. MILLER TELCON W/JIM MACKECKNIE, AES,. MACKECKNIE ON SITE @ SCHOOL 58-STRONG ODOR OF GASOLINE EMITTING FROM CATCH BASIN. 01/10/91: P. MILLER TELCON W/ROCHESTER FIRE DEPT, ASK THEM TO SEND CREW TO FLUSH SEWER AND TAKE EXPLOSION READINGS. 01/11/91: P. MILLER TELCON W/BOB DILAURA, ROCHESTER FIRE SAFETY. MR. DILAURA RESPONDED TO SCHOOL 58 ON 01-10-91. SMELLED ODOR OF GASOLINE EMANATING FROM SEWER BUT DETECTED NOTHING ON THEIR INSTRUMENTS. 01/11/91: P. MILLER TELCON W/MIKE SHIFFANO, MONROE COUNTY PURE WATERS. WILL ARRANGE TO TELEVISE SEWERS ON UNIVERSITY AVE BETWEEN SCIO & MAIN STREETS. 01/14/91: P. MILLER TELCON W/JIM MACKECKNIE A.E.S. ASKED HIM TO HAVE CRAWL SPACE AROUND GYM SEALED AS WELL AS POSSIBLE AND HAVE FAN SHUT OFF OVERNIGHT, THEN TAKE READINGS THE FOLLOWING MORNING IN CRAWL SPACE. 01/16/91: P. MILLER ON SITE W/K.R. PENDRAGON, A.E.S. THEY ARE MONITORING WELLS. MW 2B NO PRODUCT, 9.52' DEPTH TO H2O, 10 NOT ACCESSIBLE, 3B NO PROD, 8.63' DEPTH TO H20, 40 SCUMMY SHEEN, 3B NO PROD, 1.40' TO H2O. 01/16/91: A.E.S. DETECTED READINGS OF 100 PPM WITH DRAEGER TUBE ON EXHAUST OF VAPOR EXTRACTION. 01/16/91: P. MILLER & B. FINSTER, DEC; DAVE NAPIER, NYSDOH; GEORGE HEISEL, NATIONAL AMBULANCE; TOM WALSH, NIXON HARGRAVES; VINCE DICK, H & A OF NY MEET TO DISCUSS SCHOOL 58 REMEDIATION. 01/16/91: NATIONAL AMBULANCE AGREES TO TAKE OVER REMEDIATION WITH NYSDEC AND DEPT OF HEATLH APPROVAL. 01/24/91: P. MILLER ON SITE. CHECKED W/PRINCIPAL LEWIS, NO ODORS NOTICED I SCHOOL LATELY. WELL ACROSS STREET AT NAT'L AMBULANCE HAS BEEN INSTALLED. 01/25/91: P. MILLER TELCON W/V. DICK OF H & A OF NY, MONITORING WELL INSTALLATION COMPLETE. STRONG ODORS NOTED IN SPLIT SPOONS NEAR BEDROCK INTERFACE & SHEEN IN DRILLING WATER DURING ROCK BORING. 02/05/91: P. MILLER TELCON W/VINCE DICK, H & A; REPLACEMENT FAN FOR GYM AREA TO BE INSTALLED 02-08-91. UNIT WILL CONSIST OF 12" RIDGID PIPING TO FAN AND 12" DUCT UP SIDE OF BUILDING. 02/05/91: NO PRODUCT YET FOUND IN WELL AT NATIONAL AMBULANCE. LATEST HNU READINGS AT SCHOOL: 30 PPM INTO BLOWER, AND AT EXHAUST, 7-10 PPM IN GYM CRAWL

NATIONAL AMBULANCE/SCH 58 (Continued) **S100879019**

SPACE, <5 PPM IN SPRINKLER ROOM. 02/07/91: DUE TO DISPUTE OVER BILL, A.E.S. SUBMITS PAYMENT PACKAGE TO NYSDEC FOR PAYMENT. NATIONAL AMBULANCE AT SITE AGREES TO PAY $20,000 TO A.E.S. FOR WORK PERFORMED TO DATE. 02/12/91: A.E.S. AGREES TO ACCEPT NATIONAL AMUBLANCE'S OFFER. 02/26/91: P. MILLER TELCON W/GEORGE HEISEL; VENT FOR CRAWL SPACE WILL BE INSTALLED AS SOON AS APPROVAL FROM SCHOOL DISTRICT IS GRANTED. HNU MONITORING AT SCHOOL SHOULD BE CHECKED BY ANOTHER PARTY PERIODICALLY. 02/26/91: P. MILLER TELCON W/VINCE DICK, H & A OF NY; PRODUCT PUMP IS REMOVING MOSTLY WATER AS RECHARGE OF PRODUCT TO RECOVERY WELL IS TOO SLOW. FOR PRESENT TIME PRODUCT IN WELLS WILL BE HAND BAILED. 03/13/91: P. MILLER ON SITE WITH DAVE NAPIER, NYSDOH. CHECKED WELLS, V.E.S. & ROOMS AT SCHOOL 58 WITH PHOTOVAC P.D. MAX 56 PPM AT SEWER GRATE IN FRONT OF NATIONAL AMBULANCE. 05/31/91: P. MILLER TELCON W/VINCE DICK; SITE MONITORING TO BE REDUCED TO ONCE A WEEK UNTIL SCHOOL IS OUT. DURING SUMMER BREAK, TWICE ONTHLY MONITORING WILL BE PERFORMED. 06/06/91: P. MILLER TELCON W/ED YURSTAS, MCDOH; TEACHERS AT SCHOOL AR HAVE BEEN COMPLAINING OF ODORS IN SCHOOL. CLASSROOMS 17B & 18B WHICH ARE ACROSS COURTYARD FROM SCHOOL 58. 06/06/91: ODORS IN 18B SEEM TO BE COMING FROM FLOOR DRAIN. 10/11/91: P. MILLER ON SITE; TOURED SCHOOL 14/58 MONITORING POINTS W/JIM MARSHNER OF H & A OF NY. SLIGHT ODOR IN PSYCHOLOGISTS ROOM, ABOUT 4 PPM W/HNU. 10/11/91: V.E.S. PULLING 90 PPM. MS GRACIELA PEREZ, PRINCIPAL OF SCHOOL 14 DISCUSSED GASOLINE ODOR PROBLEMS. 10/25/91: P. MILLER MEETS WITH REPS OF NATIONAL ABULANCE, H & A OF NY, MCDOH, AND RCSD TO DISCUSS REMEDIATION AT SCHOOL. 10/25/91: P MILLER MET W/NATIONAL AMBULANCE, MCHD, RCSD, & H & A OF NY TO DISCUSS FUTURE REMEDIATION & CURRENT CONCERNS. SEVERAL ACTION PLANS OUTLINE FOR FURTHER WORK TO BE CONDUCTED PRIOR TO NEXT MTG -11/22/91. 11/22/91: P MILLER MET AT NATIONAL AMBULANCE WITH REPS OF MCHD, RCSD, NIXON-HARGRAVES, H&A OF NY & NAT'L AMBULANCE TO DISCUSS REMEDIATION. ROOF DRAINS/VENTS IDENTIFIED AS A SOURCE OF GASOLINE ODORS... 11/22/91: FLOOR DRAINS IN BUILDING WILL BE PLUGGED WITH "DOLLAR" PLUGS SUPPLIED BY NATIONAL AMBULANCE. 12/18/91: P. MILLER ON SITE WITH JIM TALPEY - H&A, D. DUFORD - RCSD, G. HEISEL- NAT. AMB., TOOK BAG SAMPLES IN THREE LOCATIONS. 01/16/92: P. MILLER MET WITH YURKSTAS, NAPIER, DUFORD AND KOSTICH TO DISCUSS REMEDIATION OF SITE. 01/31/92: P MILLER TELCON W/TOM WALSH; GASOLINE FOUND IN MW AT NATIONAL AMBULANCE FOLLOWING VAPOR EXTRACTION PILOT TEST PERFORMED BY H & A. 05/01/92: P MILLER TELCON W/ED YURKSTAS OF MCHD; INVESTIGATED ODORS AT SCHOOL. ODORS SEEM TO BE COMING FROM FLOOR DRAINS IN STORE ROOM. VAPORS MAY BE TRANSMITTED BY TRENCH 1.5 FT BELOW FLOOR LEVEL IN SCHOOL 14. 05/12/92: > 1000 PPM WITH HNU IN SOME FLOOR DRAINS AND SOME ROOF VENTS. 07/20/92: D TILTON ON SITE. B & D CONTRACTOR TANK #022 REMOVED. #003 TO BE REMOVED LATER TODAY. 07-21 B & D TO REMOVE #004 & #005. TAKE SAMPLES OF SOIL AND INSTALL VAPOR EXTRACTION SYSTEM. 07/23/92: P MILLER ON SITE; OBSERVED EXCAVATION FROM 6 UST'S REMOVED PREVIOUS TWO DAYS. FILM OF PRODUCT ON STANDING WATER IN EXCAVATION. V.E.S. PARTIALLY IN PLACE. 10/22/92: P MILLER TELCON W/VINCE DICK OF H & A; V.E.S. RUNNING FOR ABOUT 3 WEEKS, EMMISSIONS >1000 PPM. 12/04/92: V.E.S. BLOWER BROKEN DOWN AT NATIONAL AMBULANCE AS PER VINCE DICK. HOPE TO HAVE REPAIRED IN A FEW DAYS. 09/28/95: This is additional information about material spilled from the translation of the old spill file: FUMES IN SEWERS. 05/21/2003: SITE CLEANUP COMPLETED BY NATIONAL AMBULANCE. BUSINESS SOLD TO RURAL METRO. NO FURTHER ACTI9ON NECESSARY AT THIS TIME.

Remarks: PRINCIPAL AT SCHOOL 58 WROTE A LETTER TO THE CALLER COMPLAINING OF FUMES IN THE SCHOOL BUILDING. SUSPECTED SOURCE MAY BE NATIONAL

MILLER MEETS WITH REPS OF NATIONAL ABULANCE, H A OF NY, MCDOH, AND RCSD TO DISCUSS REMEDIATION AT SCHOOL. 10/25/91: P MILLER MET W/NATIONAL AMBULANCE, MCHD, RCSD, H A OF NY TO DISCUSS FUTURE REMEDIATION CURRENT CONCERNS. SEVERAL ACTION PLANS OUTLINE FOR FURTHER WORK TO BE CONDUCTED PRIOR TO NEXT MTG -11/22/91. 11/22/91: P MILLER MET AT NATIONAL AMBULANCE WITH REPS OF MCHD, RCSD, NIXON-HARGRAVES, H A OF NY NAT L AMBULANCE TO DISCUSS REMEDIATION. ROOF DRAINS/VENTS IDENTIFIED AS ASOURCE OF GASOLINE ODORS... 11/22/91: FLOOR DRAINS IN BUILDING WILL BE PLUGGED WITH DOLLAR PLUGS SUPPLIED BY NATIONAL AMBULANCE. 12/18/91: P. MILLER ON SITE WITH JIM TALPEY - H A, D. DUFORD - RCSD, G. HEISEL- NAT. AMB., TOOK BAG SAMPLES IN THREE LOCATIONS. 01/16/92: P. MILLER MET WITH YURKSTAS, NAPIER, DUFORD AND KOSTICH TO DISCUSS REMEDIATION OF SITE. 01/31/92: P MILLER TELCON W/TOM WALSH; GASOLINE FOUND IN MW AT NATIONAL AMBULANCE FOLLOWING VAPOR EXTRACTION PILOT TEST PERFORMED BY H A. 05/01/92: P MILLER TELCON W/ED YURKSTAS OF MCHD; INVESTIGATED ODORS AT SCHOOL. ODORS SEEM TO BE COMING FROM FLOOR DRAINS IN STORE ROOM. VAPORS MAY BE TRANSMITTED BY TRENCH 1.5 FT BELOW FLOOR LEVEL IN SCHOOL 14. 05/12/92: > 1000 PPM WITH HNU IN SOME FLOOR DRAINS AND SOME ROOF VENTS. 07/20/92: D TILTON ON SITE. B D CONTRCTOR TANK 022 REMOVED. 003 TO BE REMOVED LATER TODAY. 07-21 B D TO REMOVE 004 005. TAKE SAMP0LES OF SOIL AND INSTALL VAPOR EXTRACTION SYSTEM. 07/23/92: P MILLER ON SITE; OBSERVEDEXCAVATION FROM 6 UST S REMOVED PREVIOUS TWO DAYS. FILM OF PRODUCT ON STANDING WATER IN

NATIONAL AMBULANCE/SCH 58 (Continued) **S100879019**

EXCAVATION. V.E.S. PARTIALLY IN PLACE. 10/22/92: P MILLER TELCON W/VINCE DICK OF H A; V.E.S. RUNNING FOR ABOUT 3 WEEKS, EMMISSIONS >1000 PPM. 12/04/92: V.E.S. BLOWER BROKEN DOWN AT NATIONAL AMBULANCE AS PER VINCE DICK. HOPE TO HAVE REPAIRED IN A FEW DAYS. 09/28/95: This is additional information about material spilled from the translation of the old spill file: FUMES IN SEWERS.

Spill Cause: PRINCIPAL AT SCHOOL 58 WROTE LETTER TO CALLER COMPLAINING OF FUMES IN SCHOOL BLDG. SUSPECT SOURCE MAY BE NATIONAL AMBULANCE PROPERTY, ACROSS THE STREET AT 177 UNIVERSITY AVE.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TW" 6/6/2002 TW PHONE CONVERSATION WITH MARK LESZCZYNSKI OF MCHD. MCHD RESTAURANT SECTION AND MONROE COUNTY PURE WATERS RESPONDING TO THE SITE. LAW ENFORCEMENT NOTIFIED, AND ECO CHRIS WARD IS ON SITE. MONROE COUNTY HEALTH DEPARTMENT AND MONROE COUNTY PURE WATERS TO HANDLE FOLLOW UP. NO FURTHER ACTION NEEDED AT THIS TIME BY SPILLS.
Remarks:	THE CATHAY PAGODA HAD A KITCHEN FIRE NOT LONG AGO AND ARE GUTTING THE KITCHEN. EARLIER THIS WEEK AND TODAY ESPECIALLY, THEY HAVE BEEN DISPOSING OF THE GREASE VATS IN THE STREET IN FRONT OF THE DOWNSTAIRS CABARET AND AT THE SIDE OF THE PAGODA. CABARET PERSONNEL ARE WORRIED ABOUT PATRONS HAVING TO WALK THROUGH THE GREASY MESS. THIS GREASE IS IMPACTING THE SEWER. FORWARDED TO LAW ENFORCEMENT AND FAXED TO MCHD ON

Environmental Interest/Information System

LIFT LINE INC (Continued) **1000392631**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Bob Corcoran 3/17/05: DD FILE AND DATABASE REVIEW. NO FURTHER ACTIONS REQUIRED BY SPILLS UNIT AT THIS TIME - SPILL FILE CLOSED. 02/28/07: PAPER FILE REMOVED PER FILE RETENTION POLICY.
Remarks:	Minor spillage by persons unknown which got into basement of Real Estate Board of Rochester and was flushed. Combined sewers near Main and University affected. Fumes in sewer. No action necessary. Sewer maintenance (city) reported that there was fuel oil in sewers. Believed to be from leaking UST from National Ambulance. They reported sewer would be flushed by fire department and that fire prevention would order the leaking tank to be pumped out. 3/29/83 Investigation by Lt DiLaura revealed National Ambulance tanks had not leaked. Approx 1 gal of product (gas) had been dumped on Bleecher St and leaked into walls at 550 E Main St causing fumes in basement and back stairwell. Walls and product were flushed and fumes subsided. No readings in sewer w/explosion meter. Nat'l Ambulance had trouble w/leaking tanks about one year ago and had them replaced.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TW" 11/25/2002 NYSDEC RECEIVES PHASE II ENVIRONMENTAL STUDY REPORT. 01/31/05 DEPT MET WITH CITY OF ROCH TO GO OVER SPILL SITES. THE CITY HAS OWNED THIS PROPERTY SINCE OCTOBER 2003. THIS IS AN EPA GRANT SITE. THE LOT IS GRAVEL AND IS FENCED. DAY ENGR IS PREPARING A CAP. CITY IS PREPARING A CITIZEN PARTICIPATION PLAN THAT WILL BE FORWRDED TO DEC UPON COMPLETION. 06/17/05 ANALYSIS OF BROWNFIELD CLEANUP ALTERNATIVES RECEIVED FROM CITY OF ROCHESTER. 06/29/05 CITIZEN PARTICIPATION PLAN RECEIVED FROM CITY OF ROCHESTER. 10/31/05 DEPT REC'D CAP FOR SITE. 12/9/05 DEPT MET WITH JOE BIONDOLILLO (C/O ROCH) AND JEFF DANZINGER (DAY ENGR) TO GO OVER RAP. 1/19/06 RAP APPEARS ACCEPTABLE. LETTER SENT TO JOE B. 3/8/07 DEPT MET WITH CITY OF ROCHESTER STAFF TO DISCUSS STATUS OF SPILLS. DEC PROVIDED WITH COPY OF FINAL REMEDIAL CONSTRUCTION/CLOSURE REPORT. APPROX 93% OF CONTAMINATED SOIL HAS BEEN REMOVED FROM SITE. VOC'S IN GW HAVE BEEN REDUCED APPROX 97% WHEN COMPARED TO PRE-REMEDIATION LEVELS. AN ENVIRONMENTAL MANAGEMENT PLAN TO BE PREPARED. APPROX 1257 TONS OF CONTAMINATED SOIL WERE EXCAVATED AND DISPOSED OF AT MILL SEAT LANDFILL. APPROX 12,000 GALLONS OF WATER THAT WAS PUMPED FROM THE SITE WAS DISCHARGED VIA A SEWER USE PERMIT WITH MONROE COUNTY PURE WATERS. ORC WAS PLACED IN EXCAVATION IN THE AREA ADJACENT TO HAAGS ALLEY. 22 CONFIRMATORY SOIL SAMPLES WERE COLLECTED AND ANALYZED. SAMPLE FOR C-11 (8.5 FT) HAD EXCEEDANCES ABOVE TAGM 4046. SAMPLES C-7, C-8 AND C-14 HAD TOTAL VOC'S (INCLUDING TICS) ABOVE 10,000PPB. THESE WERE ALL IN AREA ALONG HAAG ALLEY WHERE EXCAVATION COULD NOT BE EXTENDED AND WHERE ORC WAS USED BEFORE BACKFILLING. A TOTAL OF 10 OVERBURDEN AND BEDROCK WELLS WERE INSTALLED FOLLOWING THE REMEDIATION TO EXAMINE THE POST REMEDIAL GROUNDWATER. MW-103 AND 108 HAD A COUPLE COMPUNDS THAT SLIGHTLY EXCEEDED GROUNDWATER STDS. 6 SOIL VAPOR POINTS WERE INSTALLED APPROX 6 FT BELOW GRADE TO ASSESS VOC VAPOR IN THE SOIL AT THE SITE. ALL 6 SOIL VAPOR POINTS EXHIBITED ELEVATED LEVELS OF SOIL VAPOR FOR SEVERAL COMPOUNDS. REPORT RECOMMENDS THAT QUARTERLY GROUNDWATER MONITORING CONTINUE FOR 4 QUARTERS. ALSO RECOMMENDS THAT AN ENVIRONMENTAL MANAGEMENT PLAN (EMP) BE PREPARED TO ADDRESS SOIL AND GROUNDWATER MANAGEMENT AS WELL AS INSTITUTIONAL CONTROLS. 4/18/07 DEPT REC'D ENVIRONMENTAL MANAGEMENT PLAN (EMP). 6/6/07 BASED ON ENVIRONMENTAL MANAGEMENT PLAN, THE SITE WORK PERFORMED AND THE SOIL MGMT PLAN, NO FURTHER ACTION REQUIRED BY SPILLS. NFA LETTER SETNT TO JOE BIONDOLILLO (CITY OF ROCH) AND COPIED TO JOE ALBERT (MCDOH). 08/27/07: PAPER FILE REMOVED PER FILE RETENTION POLICY.
Remarks: DURING A PHASE II ENVIRONMENTAL STUDY CONDUCTED BY THE CITY OF ROCHESTER, CONTAMINATION WAS DISCOVERED. THE SITE IS CURRENTLY VANDERLINDE ELECTRIC. FAXED TO MCHD.

VACANT PARCEL (Continued) **S108131491**

Contact Name:	DENNIS PECK
Contact Phone:	(585) 469-6372
DEC Region:	8
DER Facility ID:	319483
DEC Memo:	DENNIS PECK STATES THE SIDEWALLS OF THE EXCAVATION APPEARED TO BE CLEAN. THE BOTTOM OF THE EXCAVATION WAS APPROXIMATELY 7 FEET. HE ESTIMATES BEDROCK TO BE AT 10 FEET BASED ON OTHER WORK PERFORMED AT THE SITE. THERE WERE NUMEROUS HOLES IN THE BOTTOM PORTION OF THE TANK. THEY WILL TRY AND DIG OUT OF THE CONTAMINATION AND WILL TAKE CONFIRMATORY SAMPLES. THE BUILDING THAT WAS FORMERLY PRESENT HAS BEEN TAKEN DOWN AND THE SITE IS VACANT. PECK STATES THERE WAS A FORMER SPILL THAT HAS BEEN CLOSED AT THIS SITE FROM A PREVIOUSLY REMOVED TANK. THE SPILL # WAS 0270542 AND WAS HANDLED BY PETE MILLER. COPY OF SPILL FORWARDED TO MCHD AT APPROXIMATELY AT 1700 HRS. 03/02/2009: REVIEW OF DECEMBER 2006 REPORT INDICATES SIGNIFICANT LEVELS OF WEATHERED GASOLINE COMPONENTS (IE ,2,4 - TRIMETYLBENZENE, M,P - XYLENE). CITY TO CONDUCT MORE INVESTIGATION WORK AND REPORT BACK TO DEC WITH RAP. 10/21/09: SPILL TRANSFERRED FROM PM TO MZ FOR FOLLOWUP
Remarks:	DENNIS PECK CALLS TO REPORT THEY HAVE REMOVED A TANK THEY SUSPECTED WAS ON SITE FROM REVIEW OF CITY RECORDS WHICH INDICATED A 1000 GALLON GAS TANK WAS ABANDONED IN 1953 AT THE SITE. PECK STATES THE TANK WAS FOUND TO HAVE BEEN HALF FULL OF CONCRETE AND HALF FULL OF WATER. WHEN THE TANK WAS REMOVED FROM THE GROUND, CONTAMINATED SOIL WAS ENCOUNTERED UNDER THE TANK.

DEC Memo:	01/23/2009: COPY TO MCDOH. 4/29/09 MZ TELCON WITH NATE SIMON (DAY ENV) WHO STATED THEY ARE REMOVING THE 4 HYDRAULIC LIFTS TODAY AND THEN WILL PERFORM DELINEATION OF CONTAMINATION. 5/4/09 MZ ON SITE WITH NATE SIMON AND RAY KAMPFF (DAY). 4 LIFT PITS EXCAVATED. LIFTS #1 AND #4 HAVE PRODUCT ON WATER IN BOTTOM OF EXCAVATION. THERE IS AN APPROX 4-6 INCH LENSE OF IMPACTED SOIL IN EACH LIFT AT THE APPROX 8 FT RANGE. DAY TO SUBMIT REMEDIAL PROPOAL TO DEC. 06/11/09 DATA SUMMARY REPORT RECEIVED FROM DAY ENVIRONMENTAL. 6/16/09 MZ ON SITE WITH DAY ENGR (NATE SIMON AND DAVE DAY) AND H&A OF NY. TEST PITS #1, #2 AND #4 DID NOT HAVE ANY OIL FLOATING ON THE WATER IN THE TEST

RURAL METRO AMBULANCE (Continued) **S109414660**

PITS. SATURAED SOIL NOT APPARANT IN BOTTOM OR ON SIDEWALLS OF TEST PITS. MZ GAVE OK TO BACKFILL. TEST PIT #3 HAD A LAYER OF FREE PHASE OIL ON WATER. MZ DIRECTED DAY ENGR TO SKIM OFF PRODUCT AND SEE WHAT RECHARGES. MZ DISCUSSED NEED FOR A SOIL AND GROUNDWATER MGMT PLAN TO BE PREPARED FOR THE LIFT PIT AREAS TO ADDRESS ANY RESIDUAL CONTAMINAITON THAT EXISTS AND MIGHT BE UNCOVERED IN THE FUTURE. 6/19/09 MZ ON SITE. TREK HAD EXCAVATED SOME ADDITIONAL SOIL FROM THE BOTTOM AND THE EAST WALL. WILL LET SIT OVER WEEKEND TO SEE IF PRODUCT SEEPS INTO TEST PIT. 6/22/09 MZ ON SITE WITH SIMON AND RAY KAMPFF (DAY) PRODUCT ON WATER. THEE IS A NOTICEABLE LENSE AT THE BOTTOM OF THE TEST PIT WHERE THE OIL IS SEEPING FROM. OPTIONS ARE TO INSTALL RECOVERY WELL AND CONTINUE PUMPING OR TO EXCAVATE ADDITIONAL SOIL. 6/22/09 MZ REC'D CALL FROM NATE SIMON STATING THAT THE CONCRETE FLOOR WAS SAWCUT AND AN ADDITIONAL 4-5 FEET OF SOIL (TO THE EAST) WAS EXCAVATED. WATER HAS RECHARGED SOMEWHAT AND NO PRODUCT IS EVIDENT. MZ TO INSPECT SITE. 6/22/09 MZ ON SITE WITH SIMON AND DAVE DAY. THE LENSE OF SATURATED SOIL HAS BEEN EXCAVATED. WATER HAS A SLIGHT SHEEN ON IT. DAY TO PUMP OUT WATER AND LET RECHARGE OVER NIGHT AND INSPECT IN MORNING. 6/23/09 MZ RECIVED CALL FROM NATE SIMON WHO STATED THAT WATER IN TEST PIT IS FREE OF OIL AND SHEEN. MZ GAVE VERBAL APPROVAL TO BACKFILL TEST PIT #3. 08/31/09 SITE MANAGEMENT PLAN RECEIVED FROM DAY. 9/16/09 NO FURTHER ACTION LETTER SENT TO RURAL METRO WITH COPIES TO DAY ENV, PROPERTY OWNER (GEORGE HEISEL) AND H&A. A SEPARATE SPILL HAS BEEN ASSIGNED FOR THE GAS CONTAMINATION AT THE SITE. SEE SPILL 0906903 FOR FOLLOW UP ON GAS CONTAMINATION. 09/16/09 PAPER FILE REMOVED PER FILE RETENTION POLICY.

Remarks: CALLER WAS PERFORMING A PHASE II INVESTATION AND CAME ACROSS SOIL CONTAMINATED WITH HYDRAULIC OIL (HEAVIER TYPE OIL). SOIL IS BLACK STAINED OILY SOIL WITH ODOR. SOILS ARE WET BUT NOT APPEAR TO BE IN GROUNDWATER. CALLER TO CHECK WITH RURAL METRO REGARDING SUBMISION OF PHASE II REPORT. CALLER WAS HIRED BY PROPERTY OWNER. RURAL METRO IS LEASING THE BLDG AND OWNS THE LIFTS AND EQUIPMENT.

DEC Memo:	H&A PHASE II FROM APRIL 2009 SHOWED STRONG GAS ODOR AND PID READINGS = 830 PPM AT 8-11 FT IN GP-12. STRONG PETRO ODORS AND PID UP TO 1676 PPM IN GP-13. GP-2 SOILS HAD STRONG PETRO ODORS AND PID = 2000 PPM. GROUNDWATER FROM GP-2 HAD 230 PPB BENZENE AND ELEVATED LEVELS OF OTHER BTEX. DAY ENV'S 4/09 REPORT SHOWED MW-3/TB-4 HAVING ELEVATED BTEX IN GROUNDWATER AND PID = 1173 PPM (8-12 FT).
Remarks:	PAST PHASE II SUBSURFACE INVESTIGATIONS (H&A DID ONE AS WELL AS DAY ENVIRONMENTAL) IDENTIFIED SOIL AND GROUNDWATER IMPACTS ON PROPERTY. HYDRAULIC OIL CONTAMINATION WAS HANDLED UNDER SPILL #0811628 WITH RURAL METRO AS THE RP (RURAL METRO OPERATED HYDRAULIC LIFTS AT THIS SITE THAT THEY LEASED). THE PHASE II'S ALSO IDENTIFIED GASOLINE IMPACTS IN THE SUBSURFACE. RURAL METRO NOT CONSIDERED RP FOR GASOLINE

Land type: Facility is not located on Indian land. Additional information is not known.
Classification: Small Small Quantity Generator
Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Owner/Operator Summary:
Owner/operator name: NEIL HELLMAN
Owner/operator address: 50 SCIO ST
ROCHESTER, NY 14604
Owner/operator country: US
Owner/operator telephone: (716) 546-7120
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:
U.S. importer of hazardous waste: Unknown
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: Unknown
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: Unknown
Furnace exemption: Unknown
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:
U.S. importer of hazardous waste: Unknown
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: Unknown
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: Unknown
Furnace exemption: Unknown
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:
Date form received by agency: 01/01/2006
Facility name: MONROE LITHO INC - XEROX PPU
Classification: Not a generator, verified

Date form received by agency: 10/16/1996
Facility name: MONROE LITHO INC - XEROX PPU
Classification: Conditionally Exempt Small Quantity Generator

Violation Status: No violations found

Registry ID: 110004529528

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TW" 5/19/06: DEC LEAD TRANSFERRED FROM TWALSH TO DDAKE FOR REVIEW/FOLLOWUP. NO INFORMATION FOUND IN SPILL FILE, BUT FOUND TANK CLOSURE INFORMATION/ANALYTICAL/REPORT IN PBS FILE (#8-407941/FACILITY CLOSED). SENTINEL TECHNOLOGIES UST CLOSURE REPORT INCLUDES FIGURE WHICH ILLUSTRATES APPROX. 230-TON CONTAMINATED SOIL PILE, BUT NO SOIL DISPOSAL RECEIPTS ARE INCLUDED. REPORT INCLUDED CONFIRMATORY SOIL LAB ANALYSIS FOR VOCs AND SVOCs FOR SIDEWALL AND BOTTOM SOIL SAMPLES - ALL COMPOUNDS NON-DETECT. NO GROUNDWATER WAS ENCOUNTERED. DD TELECON WITH RAY ISAAC (585-303-1199) TO DISCUSS PROJECT AND GET SOIL DISPOSAL RECEIPTS. ISAAC RECALLS SOME CONTAMINATED SOIL BEING GENERATED (NOT SURE OF QUANTITY) - DD STATED THAT DEC NEEDS PROPER SOIL DISPOSAL RECEIPTS BEFORE SITE CLOSURE CAN BE ISSUED. ISAAC TO LOOK INTO HIS FILES AND POSSIBLY CONTACT OKAR OF THE LANDFILL. 5/31/06: DD RECEIVES FAX FROM RAY ISAAC: DISPOSAL INFORMATION INCLUDING BILL-OF-LADING AND DISPOSAL RECEIPTS FOR APPROX. 138 TONS AT MILLSEAT LANDFILL. BASED ON AVAILABLE INFORMATION, DISPOSAL RECEIPTS, AND LAB ANALYSIS, NO FURTHER ACTIONS REQUIRED BY SPILLS UNIT AT THIS TIME - SPILL FILE CLOSED. 11/17/08: PAPER FILE REMOVED PER FILE RETENTION POLICY.
Remarks:	WHILE REMOVING THREE 4,000 GALLON UNDERGROUND DIESEL STORAGE TANKS, CONTAMINATED SOIL WAS ENCOUNTERED AROUND THE FIRST TANK. OKAR WILL PULL THE TANKS AND ADVISE US OF THE EXTENT OF THE CONTAMINATION. FAXED TO MCHD ON 12/02/98 AT 0830 HRS.

FUDS Description Details:

The Navy Reserve Center occupied less than 1 acre in Rochester, New York. The facilities were used for the training and conditioning of Navy personnel and included an indoor firing range for small arms. The backstop of the range could contain lead. T
The site is currently being used as a gymnasium.

FUDS History Details:

The site was leased in July 1956 and used until December 1970, when the Navy built a new facility on Paul Road. The site was returned to New York State, which sold it in 1992 to a private party. A recommended project includes further investigation of
f the backstops of two small arms firing ranges for lead contamination.

Site Description: The site covers the area of approximately one acre from 190-220 Anderson Avenue and portions of adjacent properties in the city of Rochester. The site is bounded by a railroad yard to the north and residential and light commercial on the other three sides. The company mixed and repackaged petroleum products and chemicals at this location. In June of 1991, DEC staff inspected the site in response to an oil spill complaint and found several hundred drums of oils and solvents and several areas of stained soils. A NYSDEC contractor was subsequently hired to overpack leaking drums and obtain soil samples. The analytical results indicated that the surficial soils were contaminated with petroleum products and solvents. Davis-Howland conducted an additional soil investigation and the results confirmed the DEC analyses. As a result, Davis-Howland removed all drums of

DAVIS-HOWLAND OIL CORP (Continued) **U003315360**

liquid wastes and completed a surficial soil clean-up in July 1992. Following the soil removal, the excavated area was filled with clean soil. Approximately 341 tons of soil was disposed offsite as hazardous waste and approximately 120 cubic yards of soils were disposed offsite as non-hazardous petroleum contaminated soils. In 1991, Davis Howland conducted a groundwater investigation and the sampling results indicated heavy groundwater contamination with chlorinated and non-chlorinated solvents with levels exceeding groundwater standards by as much as five orders of magnitude. In September of 1994, this site was referred to the State Superfund (SSF) program. An SSF Remedial Investigation (RI) was completed in early 1997. A Record of Decision (ROD) was signed in March of 1997. The ROD called for air sparging, soil vapor extraction and soil removal. Groundwater contamination at deep levels was encountered during pre-design sampling activities, consequently deep groundwater contamination will also be addressed in the remedy. The Remedial Design was completed in September of 2000. Remedial construction began in 2001 and was completed in 2002. Since that time, the NYSDEC has been responsible for operation, monitoring, and maintenance of the entire groundwater collection and treatment system. Currently, treated water is being sampled, monitored and discharged through a dedicated discharge line to the sanitary sewer line along Anderson under permit with discharge limits established by Monroe County. Treated air is also being sampled, monitored and discharged in accordance with New York State guidelines. During 2004 and 2005 heating seasons, the NYSDEC and NYSDOH completed a soil vapor intrusion (SVI) study within the downgradient residential area. As a result of those investigations, indoor air in one structure is being monitored. Mitigation of another adjacent structure, through the installation of sub-slab depressurization (SSD) systems, may be necessary pending further review by NYSDOH. Site management continues in 2009. We have removed the catylitic oxidizer because concentrations of contaminants have declined significantly.

Env Problem: The groundwater beneath this site, both shallow and deep is contaminated by volatile organic compounds(VOCs). Two small areas of surface soil that were contaminated by metals were removed during the remedial action, and the subsurface soils,contaminated by VOCs, are being treated by air sparge/sve technology per the ROD Remedial construction of the air sparge/soil vapor extraction treatment system and groundwater extraction and treatment system required of the ROD was completed in 2002. Since that time, the NYSDEC has been responsible for site management of the entire air sparge/sve and groundwater collection and treatment system. Currently, treated water is being sampled, monitored and discharged through a dedicated discharge line to the sanitary sewer line along Anderson under permit with discharge limits established by Monroe County. Treated air is also being sampled, monitored and discharged in accordance with New York State guidelines. During 2004 and 2005 heating seasons, the NYSDEC and NYSDOH completed a soil vapor intrusion (SVI) study within the downgradient residential area. As a result of those investigations, indoor air in one structure is being monitored. Mitigation of another adjacent structure, through the installation of sub-slab depressurization (SSD) systems, may be necessary pending further review by NYSDOH.

Health Problem: Exposures via drinking water are not expected because this mixed commercial/residential area is served by public water. Recent groundwater data indicate that the potential for soil vapor intrusion

DAVIS-HOWLAND OIL CORP (Continued) **U003315360**

exists in on-site and off-site buildings. A soil vapor investigation is proposed for early 2005 to evaluate this potential exposure pathway. The site is partially fenced to discourage public access. However, during the December 1996 site visit, NYSDOH noted evidence of trespassing. NYSDOH will monitor the progress of the remedial actions to ensure that public health is protected.

Site Description: Several drums of cyanide wastes and other materials were abandoned and not leaking on Mill Street. NYSDEC assumed responsibility for

MILL STREET DRUMS (Continued) **S106905185**

cleanup under the Superfund Drum Removal Program. A NYSDEC-hired contractor sampled and disposed of the drums off-site. The site was successfully remediated, and no further actions were required.

Env Problem: The site was successfully remediated and no further actions were required.

Health Problem: Municipal water serves the area so exposures via drinking water are not expected. The potential for exposure was eliminated once the discarded drummed wastes and other materials were removed from the site to an approved disposal facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/31/2010

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 01/13/2010

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 01/13/2010
Date Data Arrived at EDR: 01/15/2010

Data Release Frequency: Annually

VAPOR REOPENED: Vapor Intrustion Legacy Site List

"Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil.Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 02/02/2010

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

SSTS: Section 7 Tracking Systems
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2008

Next Scheduled EDR Contact: 06/28/2010
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995
Date Data Arrived at EDR: 07/03/1995

Next Scheduled EDR Contact: 06/07/2010
Data Release Frequency: Biennially

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers
Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)

Longitude (West):	77.5981 - 77° 35' 53.2''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	288768.9
UTM Y (Meters):	4781522.5
Elevation:	520 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	43077-B5 ROCHESTER EAST, NY
Most Recent Revision:	1978

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

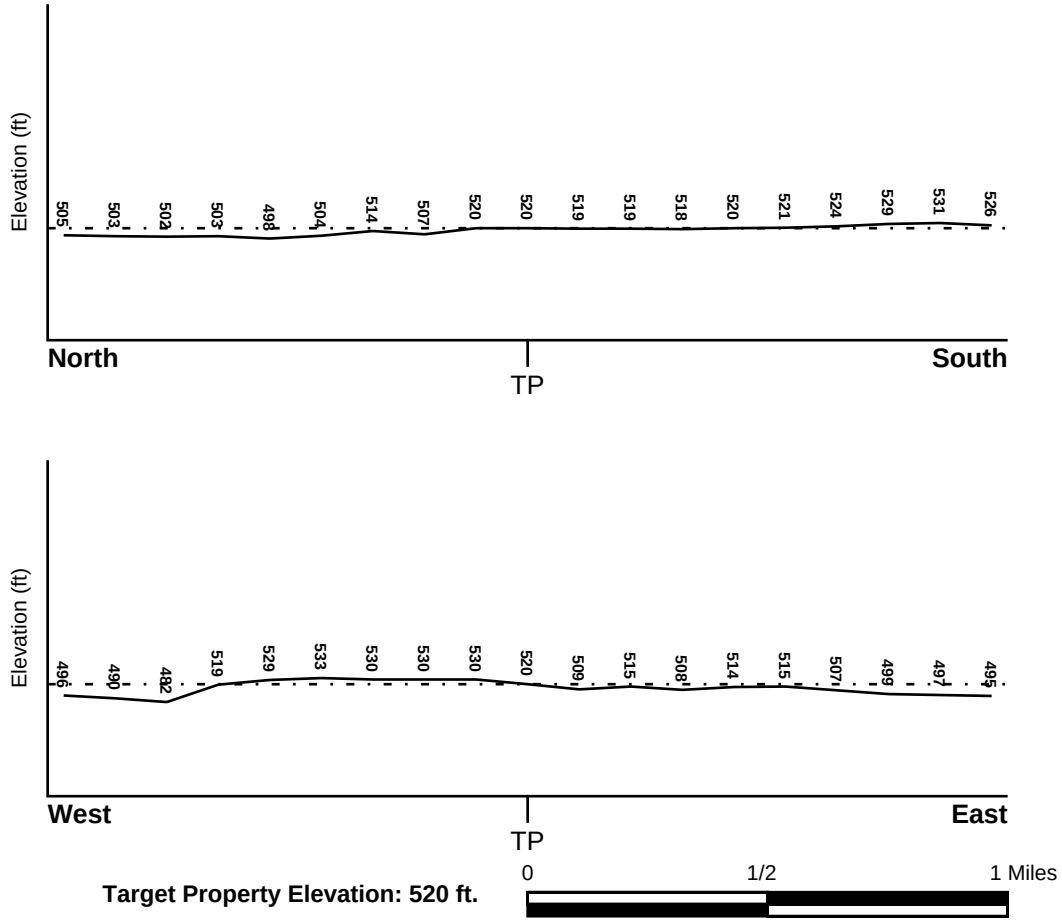
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 520 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
MONROE, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 36055C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
ROCHESTER EAST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
A1	0 - 1/8 Mile North	NNE
A2	0 - 1/8 Mile NNW	NE
3	0 - 1/8 Mile WSW	E
7	1/2 - 1 Mile South	NNW

For additional site information, refer to Physical Setting Source Map Findings.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Re: Historical Report Environmental Review — City Block Roughly Contained by Main Street, Richmond, Haags Ally and Pitkin Streets, City of Rochester, New York

Dear Mr. Trobe:

Panamerican Environmental, Inc. (PEI) is pleased to provide a summary of the pertinent information obtained during our review of historical records/reports concerning the environmental status of the subject and adjacent properties. The subject property includes a series of parcels contained in a city block roughly contained by Main Street, Richmond, Haags Alley and Pitkin Streets in the City of Rochester, New York.

PEI was not provided with and is not aware of any reports specific to this property (please note, PEI did not contact any agencies to determine if specific reports exist). The purpose was to examine existing reports pertaining to the adjacent parcel as a first step in the process of understanding the environmental concerns in the area. A significant amount of investigation and remediation has occurred on the block immediately adjacent to the subject property resulting in numerous reports and data.

For this task and as requested, PEI reviewed a total of seven documents which are listed and summarized at the end of this letter report. The up-front portion of this letter report is a summary of pertinent information, conclusions and recommendations based on our review of those reports with emphasis on environmental concerns potentially effecting the subject property (i.e., potential contaminants, sources and degree). Additionally, baseline environmental information regarding geology, depth to groundwater, bedrock, etc that was obtained from the reports is also presented. Conclusions and recommendations are provided.

Pertinent Information Summary

The purpose of this review was to obtain information concerning the subject parcels through a

Hector Socbet
Craig + Slater 716·853·1616

thorough review of the extensive environmental work completed on the immediately adjacent parcels south of the property. Additionally, the intent was to add to the understanding of the property to assist in a future purchase decision.

Historically, the subject property has largely been used for commercial and retail use. During the late 1800's the subject block and surrounding area was mostly residential. By 1912, the block was a combination residential and commercial/retail use and by 1938 the block was mostly commercial/retail and included the dry cleaner use. The immediate adjacent property south along Charlotte Street (which was the subject of the investigations and remediations) was also commercial by 1938 and included underground storage tanks (USTs).

The subject property was mostly commercial through at least the 1970's including the dry cleaner, auto painting and other uses. Historical information suggests that the dry cleaner occupied a portion of the subject property for (at least) 30-40 years of commercial operation (as a dry cleaner). While the practices of this particular dry cleaning establishment is unknown over this time period, these operations typically have a history of environmental release.

Typically, environmental releases from dry cleaning operations were from two sources/operational habits as follows:

- Leaks or spills from tanks used to store the solvent and waste solvent.
- Emptying waste or drying filters typically in the rear outside area behind a dry cleaning operation.

It is unknown if either of these occurred at this facility. However, the reports for the adjacent southern parcels suggest the strong possibility that the source for some of the contamination which was found on those properties, and more importantly in Haags Alley, is the dry cleaner. This is primarily based on findings of soil and groundwater analysis in Haags Alley immediately adjacent to the property. These reports suggest that the contaminants found in Haags Alley (which separates the subject property and the properties that were investigated) included **mineral spirits or stoddard solvent, chlorinated solvents and some petroleum compounds.**

Based on the review of the seven reports for the adjacent properties, the following pertinent baseline environmental information was obtained:

- Bedrock ranged between 9-12 feet below ground surface (bgs).
- Bedrock was reported to be moderately to highly fractured.
- Groundwater was at average approximately 9 feet bgs and appears to be at the soil/bedrock interface.
- Groundwater flow is generally east.

Brief History of Dry-Cleaning Chemical Use

At the beginning of the twentieth century, gasoline was the dry cleaning solvent of choice in the

United States. Because of fire and explosions associated with its use, Joseph Stoddard and others developed a less volatile petroleum dry cleaning solvent in 1924 which was known as Stoddard solvent. From the late 1920's until the late 1950's, Stoddard solvent was the predominant dry cleaning solvent in the United States. Although Stoddard solvent is still used by a few dry cleaners today, it has not been the predominate solvent used since the 1960's. Other dry cleaning compounds consisting of chlorinated solvents such as carbon tetrachloride and trichloroethylene have been used since the 1920's. By the early 1960s, perchloroethylene (PCE) was the most widely used dry cleaning solvent due to its superior cleaning ability. Recently, more "environmentally friendly" dry cleaning solvents have been used.

Stoddard solvent is a mixture of petroleum distillate fractions which is comprised of over 200 different compounds. Although many people refer to any petroleum dry cleaning solvent as Stoddard solvent, this is incorrect. More properly, Stoddard solvent is a mixture of C-5 thru C-12 petroleum hydrocarbons containing 30-50% straight and branched chained alkanes, 30-40% cycloalkanes, and 10-20% alkyl aromatic compounds (Sciences International).

Conclusions/Recommendations

The information contained in the reports and the history of the property suggests the potential for the release of dry-cleaning chemicals and possibly petroleum-type compounds to the environment from sources on the subject property. It appears that the adjacent southern property has been remediated. However, this adjacent property has the potential to be re-contaminated if a source exists on the subject property.

Further consideration of purchase should include the following to better identify the potential concern:

- Complete a combination Phase I/Phase II on the subject parcels which may involve soil sampling immediately adjacent to the buildings especially along Haags Alley, inventory and review of containers and tanks inside the buildings with possible sampling, and a vapor intrusion/soil gas sampling inside the dry-cleaner building. Cost would range between $6,000-$12,000. This would require access to the property. Also, please note, **if the subsurface investigation indicates contamination, there is an obligation to notify the New York State Department of Environmental Conservation (DEC).** New York State regulations require that any person with knowledge of a spill, leak or discharge of petroleum or chemicals must report the incident to the DEC within two hours of discovery. The results of any inventory record, test, or inspection which shows a facility is leaking must be reported (6 NYCRR 613.8). The reporting requirement includes any person with knowledge such as an owner, operator, or consultant. **If indication of a release is present,** PEI or the client/owner may be obligated by law to report a spill or release to the DEC.

If the property is found to be contaminated above NYSDEC levels, remedial actions would most likely be necessary for re-development and these may include:

- Demolition of existing building, removal of existing dry-cleaning tanks and excavation of contaminated soil - Rough cost may be ±$100,000-$300,0000 for soil remediation/tank removal. Cost of demolition would vary depending on asbestos containing materials (need survey to estimate).
- Re-development design may require the installation of sub-floor vapor barrier/depressurization system.

Note, remediation of groundwater in a fractured bedrock would be extremely difficult. The NYSDEC may approve removal of source (impacted soil and tanks) plus vapor barrier system as the final fix, however, additional groundwater remediation/monitoring may be required.

The following is a summary of the reports of environmental work completed on the adjacent property and information in those reports. A copy of pertinent figures from those reports are also attached and provide additional historical and environmental perspective.

List and Summary of Reports Reviewed

1) Interim Status Report. Supplemental Phase II Environmental Study, 26-42 Charlotte Street, Rochester, New York. Prepared for The City of Rochester; prepared by Day Environmental, Inc. July 2000.

This report summarizes the findings of a supplemental Phase II environmental Services conducted at 26-42 Charlotte Street, City of Rochester, NY. (Identified as Grammatico parcels).

Background

Day completed a Phase I Environmental Site Assessment in 1997 for the 26-42 Charlotte Street properties and identified the following environmental concerns: these properties contained suspected and/or former underground storage tanks (USTs); these properties have historically been used for auto repair, lumber, industrial workshop, gasoline service station, battery service and a car lot; previous test pit investigations found indication of contamination; hydraulic floor lifts; and stains.

Day followed the Phase I with a Phase II Study in September 1997 and a follow-up in December 1997 which was completed on the Charlotte Street properties and the **adjoining right-of-way property (Haags Ally)**. The results indicated hydrocarbon and chlorinated volatile organic compounds (VOCs) and suggested they were associated with petroleum products, paint thinner, and dry cleaning solvents identified as Stoddard Solvent and Tetrachloroethene. These were identified in the Haags Alley and 48-60 Charlotte Street areas. The report also identified cadmium and lead and other metals in fill material.

During demolition of the structure at 14-16 Charlotte Street in 1998 or 1999 a fill port for an UST and in-ground hydraulic lifts were found.

In conjunction with the studies on the Grammatico parcels, similar studies were completed on adjacent parcels including 14-16 Charlotte Street and 48-60 Charlotte Street parcels. Three USTs, one hydraulic lift and petroleum contaminated soil was removed from the 14-16 Charlotte Street parcels. Evidence of soil and groundwater contamination were found on both 14-16 and 48-60 Charlotte Street parcels: 14-16 Charlotte Street parcel was contaminated with kerosene, gasoline, lube oil, and diesel (the report attributes these to unidentified on-site and off-site sources); **48-60 Charlotte Street parcel is contaminated mineral spirits or Stoddard solvent and lube oil and the report suggests this was from an off-site source.** Other pertinent information includes:

- The report suggests groundwater flows east/northeast
- Mercury was detected in fill material
- Spill Numbers: #0070043 - 26-60 Charlotte Street and #0070044 - 14-16 Charlotte Street

Report Findings

The tasks identified as having been completed on the Grammatico parcels included; electromagnetic geophysical survey, test borings/test pits subsurface soil assessment, and groundwater assessment.

Fill material included brick, ash, wood, glass, asphalt, crushed stone, coal, cinders and organics was found to an average thickness of about 6 feet. Groundwater was identified as at 10 feet bgs. Top of bedrock was identified between 8-10 feet bgs. Field observations noted indications of contamination at between 0-4 feet bgs and at the 9-10 foot bgs interval.

2) Supplemental Phase II Environmental Studies, 14-60 Charlotte Street, Rochester, New York. Prepared for The City of Rochester; prepared by Day Environmental, Inc. November 2000.

Report summarizes findings of supplemental studies at 14-60 Charlotte Street. The site is defined as seven contiguous parcels designated as the Grammatico parcels and City parcels. Identifies that a Phase I was completed by Day in May 1997 that identified a series of environmental concerns. The Phase I was followed up by Day completing a Phase II study in September 1997 on 48-60 Charlotte and a supplemental Phase II in December 1997 on 48-60 Charlotte **plus within the Haags right-of-way**. The results indicated hydrocarbon and chlorinated VOCs in Haags Alley and on the 48-60 Charlotte property. The studies also indicated elevated metals in the fill material. In 1998-1999 the commercial building located on 14-16 Charlotte Street was demolished and UST was discovered.

Report Findings

Field work during this November supplemental Phase II included: site recon, geophysical survey, test borings/soil assessment and groundwater assessment.

USTs and one hydraulic lift and limited amount of petroleum impacted soil were removed.

Evidence of VOC, SVOC and petroleum hydrocarbon impacted soil and groundwater was identified in Haags Alley. The petroleum contaminants were identified as mineral spirits and/or stoddard solvent, gasoline, kerosene, diesel, and lube oil. The solvent contaminants were identified as chlorinated VOCs that may be associated with dry cleaning solvents and degreasers, particularly in/near Haags Alley. Report suggested that petroleum and solvent VOCs could be from on and off-site sources. **The report identifies the following potential off-site sources:**

- **A dry cleaner with solvent tanks located north of 14-16 Charlotte parcel**
- **A former auto painting and storage facility located north of the 32-34 Charlotte Street parcel**
- Commercial properties with USTs and petroleum releases south of the property at 68-86 Scio Street and a trucking facility at 37 Charlotte Street.

Mercury was found in the fill. Groundwater flow is east-southeast.

3) Supplemental Environmental Studies, 14-60 Charlotte Street, Rochester, New York. NY Spills #0070043 & #0070044. Prepared for The City of Rochester; prepared by Day Environmental, Inc. July 2001.

Report summarizes findings of supplemental studies at 14-60 Charlotte Street and on portions of the adjoining right-of-way on Haags Alley. Day previously completed environmental studies in these areas (November 2000).

Report Findings

Fill consists of brick, ash, cobbles, asphalt, metal, coal, rock, cinders and wood and roots ranging from 1-10 feet bgs (average thickness of 3.5 ft).

Bedrock ranged between 9-12 feet bgs. Groundwater was at average approximately 9 feet bgs and appears to be at the soil/bedrock interface. Flow is generally east. Bedrock was reported to be moderately to highly fractured.

Found VOCs, SVOCs associated with petroleum and some chlorinated VOCs. Petroleum found in high concentrations in Haags Alley. Report suggests that sites north of Haags Alley are hydraulically cross-gradient or upgradient of Charlotte Street. Suggest that potential source is dry cleaning facility with solvent tanks, former auto storage and painting facility. **Chlorinated VOCs in MW-1 and MW-12 and 13 in Haags Alley.**

4) Phase I Environmental Site Assessment (ESA), Vanderlinde Electric, 80-100 Charlotte Street, Rochester, New York. Prepared for The City of Rochester; prepared by Day Environmental, Inc. May 2002

This report is a Phase I ESA for portion of Charlotte Street which is listed as historically used for electric motor repair and residential. The following recognized environmental conditions were identified:

- Active NYSDEC spills on adjoining up-gradient properties
- Fill material
- Removal of an UST from the property in 1988
- Staining on floors and sheens in floor drains; staining near solvent wash
- Possible storage of transformers
- Drums and other containers that contain waste oil, waste solvent and parts cleaner including 1,1,1 trichloromethane, dichloromethane, and tetrachloromethane.

5) Environmental Management Plan, 14-60 Charlotte Street, Rochester, New York. Prepared for The City of Rochester; prepared by Day Environmental, Inc. April 2003

This document is an Environmental Management Plan (EMP) for this specific property. The intent is that this EMP should be implemented when work is performed at the property that has the chance of disturbing impacted fill, soil or groundwater.

Report Summary

The report defines the property as consisting of seven contiguous parcels owned by the City and totaling approximately 1.1-acres. This plan suggests that the property will be re-developed for residential use. **The report summarizes the findings of the previous investigations and identifies the contaminants as described in the previous reports and suggests that the contamination in Haags Alley and portions of the property may be due to an off-site source (dry cleaner) as suggested in the previous reports.**

The report identifies two Interim Remedial Measures (IRMs) completed on the property in 2001 and 2002 including:

- Removal of two hydraulic lifts on 14-16 and 42 Charlotte properties.
- Removal of 1,000-gallon UST on 14-16 Charlotte
- Removal of 1,887 tons of petroleum-impacted soil to bedrock except at two locations including southern portion of 14-16 Charlotte and along the northern property boundary of 42 Charlotte. Removal of soil was discontinued in these areas due to proximity of the excavation to street improvements and buried utilities in Charlotte and Haag Alley right-of-ways. **The report highlights that soil was also left because the soil contamination in Haags Alley was attributable to an offsite source (dry cleaner).**

The plan indicates that as part of the re-development, environmental engineering controls (such as soil venting, vapor barriers, etc) will be required to mitigate the contamination attributed to the off-site source.

6) Groundwater Monitoring Study, 14-60 Charlotte Street, Rochester, New York. Prepared for The City of Rochester; prepared by Day Environmental, Inc. July 2003

This report summarizes the findings of a groundwater study at 14-60 Charlotte Street, City of Rochester, NY. **and adjacent right-of-way - Haags Alley. The City of Rochester previously installed two monitoring wells in Haags Alley, south of a former off-site dry-cleaning facility, and south of a former auto repair and a former auto painting facility to assess if these were the source of the petroleum contamination in the groundwater.**

Report Findings

A slight sheen and solvent/petroleum-type odors as well as elevated total organic vapor readings were identified during sampling. Findings were as follows:

- Groundwater flows towards the east
- **Volatile organic compounds (VOCs) were detected in wells MW-1, MW-12, and MW-13 (wells in/or adjacent to Haags Alley)** at concentrations that exceed groundwater standards
- **The report suggests that the potential source is medium-weight diesel fuel near Haags Alley and closest to MW-12. The highest VOCs were in wells MW-12 and MW-13 located in Haags Alley indicating a potential off-site source.**
- **Exceedance suggest engineering controls may be necessary to mitigate/allow for re-development**

7) Remedial Construction/Closure report, 80-100 Charlotte Street, Rochester, New York. NYSDEC Spill #0270474. Prepared for The City of Rochester; prepared by Day Environmental, Inc. February 2007.

The report documents the remedial measures completed on 80-100 Charlotte Street under a NYSDEC approved Corrective Action Plan (CAP) dated September 2005 and a stipulation agreement between the CITY and NYSDEC dated February 24, 2006. Remedial measures included removal of approximately 93% of contaminated soil from the site and a 97% reduction in targeted VOCs in groundwater. The report suggests that additional soil and groundwater remediation is not necessary, but does identify engineering and environmental institutional controls (including quarterly groundwater sampling) as necessary for future use.

Based on high total volatile organic vapor readings on field instruments, measured at bedrock and standing water, Oxygen Release Compound (ORC) was placed in the bottom of the excavation adjacent to Haags Alley. ORC is a formulation of calcium oxy-hydroxide that releases oxygen for a period of 12 months when hydrated. The released oxygen is used to enhance the rate of naturally occurring aerobic contaminant biodegradation in groundwater and saturated soils. A groundwater monitoring program was installed which included three source wells installed prior to backfilling the excavation (MW-101 to MW103); five rotary-drilled wells (MW-104 to MW-108) which were installed into bedrock with screens that extended into the

overburden; two overburden wells were installed using Geoprobe technology (MW-109 and MW-110).

The report also provides results of a soil vapor analysis and exposure assessment on these properties and recommends continuation of a groundwater monitoring program in accordance with the CAP.

We appreciate the opportunity to be of service to you on this project. Please do not hesitate to contact us if you have any questions regarding the contents of this review.

Sincerely,

Peter J. Gorton,
President
Panamerican Environmental, Inc.

Dear Mr. Biondolillo:

Re: Spill Nos: 0070043 and 0070044
14-16 Charlotte Street
Rochester (C), Monroe County

As a follow up to your recent inquiry, this office has reviewed our files regarding the above referenced sites. Please be advised that after review of the Corrective Action Plan dated October 2001, the Interim Remedial Measure Report dated October 2002 and the Environmental Engineering Control Plan prepared by Day Engineering on behalf of the City this office concurs with the conclusions and findings included in these reports and has no objection with the City proceeding as outlined in these Plans.

If you have any further questions about this matter, please feel free to contact me at the address above or by phone at (585) 226-5437.

Sincerely,

Timothy P. Walsh, P.E.
Environmental Engineer II

Description of Environmental Conditions
14-60 Charlotte Street
Rochester, New York

Created: December 3, 2001
Revised: March 8, 2005

1.0 Summary

This document provides a summary of the environmental conditions and recommended remedial measures to address environmental issues at the seven parcels of land located at 14-60 Charlotte Street, Rochester, New York (Site).

All of the parcels are currently owned by the City of Rochester (City), and are generally bound by Charlotte Street to the south, Haags Alley to the north, Pitkin Street to the east, and Scio Street to the west. The City has performed several environmental studies to define environmental conditions at the Site, and has completed Interim Remedial Measures to address on-site sources of contamination. This summary in not meant to be a comprehensive description, and any corporation, agency or individual that anticipates working at the Site is responsible for completing its own due diligence, including reviewing the existing reports documenting the environmental conditions at the Site. Existing environmental reports and documentation include:

- Phase I Environmental Site Assessment, 14-16 Charlotte St. & 28-60 Charlotte St., May 1997
- Phase II Study, 48-58 Charlotte St., Sept. 1997
- Supplemental Phase II Study, 48-58 Charlotte St., December 1997
- Supplemental Phase II Environmental Studies, 14-60 Charlotte St., November 2000
- Supplemental Phase II Environmental Study, 14-60 Charlotte St., February 2001
- Corrective Action Plan (CAP), 14-60 Charlotte Street, Rochester, NY, October 2001
  (Note: The CAP also includes an Exposure Assessment Report dated June 2001, a Health & Safety Plan dated August 2001, and an Environmental Management Plan dated October 2001)
- Interim Remedial Measure Report, 14-60 Charlotte Street, October 2002.
- Environmental Engineering Control Plan, Section, and Notes, Corrective Action Plan, 14-60 Charlotte Street, December 2004.
- NYSDEC Letter to City of Rochester dated January 31, 2005.

The reports listed above document the findings and conclusions of the environmental studies performed to date at the Site, and in the Charlotte Street and Haags Alley Right-of-Ways (ROWs). In general, petroleum-contaminated soil, groundwater, and bedrock have been identified at the Site. The petroleum-contamination has been characterized as gasoline, diesel fuel, fuel oil, lube oil, mineral spirits and/or stoddard solvent. Lesser concentrations of halogenated (chlorinated) hydrocarbons have also been detected in soil gas and in groundwater samples collected both on-site and in the adjacent ROW. Surface and subsurface fill and soil contain various semi-volatile organic compounds and metals, including mercury, which have been detected at concentrations above typical background ranges and/or the New York State Environmental Conservation (NYSDEC) soil cleanup objectives. In April 2000 the environmental conditions were reported to the NYSDEC, and the NYSDEC opened two spill files (Spill No. 0070043 and Spill No. 00070044) for the Site. Both NYSDEC spill files are currently listed as active.

Contamination detected on-site is attributed to several former on-site sources, and from the migration of contaminants from off-site sources. On-site sources of contamination included former underground storage tanks, hydraulic lifts, and contamination associated with former uses of the Site. The on-site sources of petroleum contamination (i.e., sources of contamination that originated on-site) have been addressed by the City via various remedial measures, including:

- The demolition of various on-site buildings,
- the removal of underground storage tanks,
- the removal of hydraulic lifts and hydraulic oil tanks,
- the removal of various subsurface structures acting as a potential source of contamination (i.e., drains, sumps, etc.),
- the removal of approximately 1,900 tons of grossly contaminated soil from several different on-site source areas, and
- the removal of recoverable free petroleum product present in groundwater in one area of the Site.

The City completed the remedial measures summarized above in the Spring of 2002. While these remedial measures have addressed the primary on-site source of petroleum contaminated soil, residual petroleum contamination is still present in the bedrock and groundwater. Additional remedial measures and engineering controls are required to mitigate and address the remaining contamination.

Previous investigations have also indicated that several likely off-site sources of contamination also exist, and that contaminants associated with these off-site sources of contamination are migrating onto the Site and are impacting on-site soil, bedrock, and groundwater. The probable sources of off-site contamination are all privately owned, and have been previously identified to the NYSDEC, USEPA, and the MCDOH. Active remediation of contamination migrating onto the Site from these privately owned off-site sources poses significant challenges, and may not be technically feasible or cost effective until the actual source(s) of contamination have been addressed by the responsible parties.

As of the date of this summary, the City is not aware of any investigations by the regulatory agencies (e.g., NYSDEC, USEPA) or private parties to evaluate or remediate environmental conditions at the suspected off-site sources. Therefore, contamination above NYSDEC cleanup guidelines and standards will potentially be present on-site after completion of the proposed remedial measures. As a result, environmental engineering controls and institutional controls to mitigate exposures to contaminants will be an important part of the overall Corrective Action Plan (CAP) and have been important in obtaining regulatory agency approvals for the environmental cleanup of the Site.

2.0 Conceptual Reuse

The CAP prepared by the City assumes the Site will be redeveloped for residential reuse following completion of the remedial measures outlined in the CAP. The CAP is predicated upon the following assumptions regarding the conceptual reuse of the Site:

- Multistory residential condominium, townhouse or apartment structure with no subsurface living space.

- A partially below grade parking garage, if necessary, which will have natural ventilation on all four sides, vapor barriers and passive venting systems; or other designs which take into account the environmental condition of the site.

- All residential development will take place above the garage or above grade level.

Any deviations from the reuse parameters summarized above will require obtaining regulatory agency approvals, and possibly a revision to the existing CAP for this Site.

3.0 Remedial Measures That Have Been or Will Be Completed by the City:

The remedial measures discussed below have been incorporated into a written Corrective Action Plan (CAP) dated October 2001 which was submitted to the NYSDEC, the Monroe County Department of Health (MCDOH), and the New York State Department of Health (NYSDOH). Verbal approval of the CAP was obtained in 2001, and formal written approval of the CAP by the NYSDEC was obtained via a letter to City dated January 31, 2005. The remedial measures completed by the City under the CAP are further discussed below:

1. The City has developed and submitted a CAP to the NYSDEC, the MCDOH, and the NYSDOH for approval. The CAP describes the various remedial measures to be implemented by all parties (i.e., City and developer/owner) involved in the project (Project) to address the environmental conditions at the Site. The CAP included Interim Remedial Measures (IRMs), institutional controls (e.g., flagging the Site in the City's Building Information System, deed restrictions, etc.), engineering controls (e.g., venting systems), and long-term monitoring requirements. The City satisfied all regulatory agency questions and technical comments to the CAP, and obtained regulatory agency approval of the CAP.

2. Removed an abandoned and leaking underground storage tank, and two hydraulic lift systems on the 14-16 Charlotte Street parcel during the IRM.

3. As part of an Interim Remedial Measure (IRM), the City excavated approximately 1,900 tons of petroleum-contaminated soil from various locations on the Site, and disposed of the impacted soil at a permitted off-site landfill. This included the removal of petroleum-contaminated soil from several discrete on-site source areas where contamination has been previously identified. The extent of soil removal was based on photoionization detector readings, visual and olfactory observations, and previous analytical results. The City's IRM began in the Fall of 2001 and was completed in the Spring of 2002.

4. After removing contaminated soil, twenty-three (23) confirmatory soil samples were collected from the various excavations for subsequent laboratory analysis. Only one of the 23 confirmatory soil samples contained volatile organic compounds (VOCs) and semi-VOCs that exceeded their respective NYSDEC soil cleanup objectives. The confirmatory sample results confirmed that the source removal adequately addressed on-site sources of petroleum contamination.

   It should be noted that while the IRMs addressed the primary source areas of petroleum contamination, some residual petroleum contamination is still present on the Site, generally within the deeper saturated zone at the Site, which is generally located at the one to two feet above the top of bedrock and extending into the upper bedrock. Petroleum-contaminated soil is also present in close proximity to the western and southwestern property lines, and

could not be completely removed due to concerns with damaging non-City owned property, improvements (e.g., sidewalks), and underground utilities in the Charlotte Street ROW.

5. Placed 510 pounds of Oxygen Release Compounds (ORC) in excavations located on the 14-16 Charlotte Street parcel to enhance the biodegradation of petroleum hydrocarbon contaminated groundwater as a result of on-site sources of contamination present on or in the vicinity of the 14-16 Charlotte Street parcel.

6. Installed two recovery wells to monitor for the presence of free floating petroleum product on the 14-16 Charlotte Street parcel. The City conducted ten (10) post-IRM monitoring events, and no free floating product was observed. The lack of free floating petroleum product is attributed to the various IRMs (e.g., tank removals, soil removal, etc.), which have removed the primary on-site sources of petroleum.

7. Based on the redevelopment parameters previously discussed (refer to section 2.0 - Conceptual Reuse), the City developed a generic design for environmental engineering controls, including a vapor barrier and a passive soil venting system which will be required to be installed under new buildings and structures constructed at the Site. The generic design was included in the CAP. Subsequent to the development of the CAP, preliminary design drawings were developed, which allowed the City to prepare a detailed, site-specific environmental engineering control plan. The environmental engineering control plan, dated December 10, 2004, was developed with input from the NYSDEC and the MCDOH. The engineering control plan specified an elastomeric membrane (i.e., Liquid Boot) vapor barrier under the residential portions of the new structures, and poly-sheeting vapor barrier under the vehicle access driveway. Liquid Boot was selected as the vapor barrier material under the residential portions of the new structures because it is impermeable to gases and vapors, including aromatic hydrocarbons. Liquid Boot is cold spray-applied membrane that is applied by contractors trained and approved by the manufacturer, and is inspected and tested to ensure it has been properly installed. A passive venting system will be installed under both vapor barriers. The engineering control design plan has been reviewed and approved by the NYSDEC and the MCDOH.

8. The City has installed environmental institutional controls, or a "flag" in the City's computerized Building Information System (BIS) for each parcel on the Site. The Flag provides notification to permit applicants before a new permit is issued that certain environmental conditions exist, and that the permit applicant is responsible for the proper handling and management of contamination should any residual contamination be encountered during the work. The flag notifies the permit applicant that environmental engineering controls are required under all new structures at the Site.

9. An Interim Remedial Measure Closure Report was developed and submitted the NYSDEC for review. This report summarized the findings and conclusions of the IRM work performed by the City. In a letter dated January 31, 2005, the NYSDEC stated that they concurred withe findings and conclusions of the IRM Closure Report.

4.0 Remedial Work to Be Completed by Developer / New Owner:

The developer and/or new owners will be responsible for performing their own due diligence, including reviewing the previous environmental studies and related documentation. The CAP includes an Environmental Management Plan and a Health and Safety Plan (Plans) based on

existing information. These Plans specify the procedures to be used when contaminated materials are encountered or disturbed at the site during redevelopment, and procedures to be used to protect construction workers, on-site and off-site occupants from potential exposure to constituents of concern. The Plans will also assist in outlining the procedures to characterize, handle, and dispose of potentially contaminated materials. These Plans may need to be revised as new site development and environmental information is obtained.

In general, the developer or new owner is responsible for the following:

1. Retain an experienced and qualified environmental consultant to implement the remaining remedial measures outlined in the CAP and the Plans. The developer / owner will be responsible for directly retaining an environmental consultant to document and monitor subsurface conditions in accordance with the existing CAP and Plans throughout the redevelopment Project, and to document the implementation of the remaining remedial measures and engineering controls required by the CAP. Depending upon the actual design and construction of new residential structures, it may be necessary to renegotiate and obtain regulatory agency approvals for a revised CAP.

2. Samples of surface and shallow subsurface soil and fill materials contain elevated concentrations of certain metals and other contaminants. The developer / owner will be responsible for ensuring that the surface and shallow subsurface soil meets all NYSDEC soil cleanup standards, is covered by an impervious material (e.g., buildings, concrete, asphalt, etc.), or covered with a minimum one-foot layer of clean cover (e.g., topsoil). Contaminated fill materials and soil disturbed during development (e.g., by excavation, grading, etc.) must be managed in accordance with the CAP, the Plans, and applicable State and federal regulations. Generally, options include such things as:

   (A) Remove, characterize and dispose of impacted soil and fill materials at an approved and permitted off-site landfill.

   (B) Potentially reuse the impacted materials on-site with permission of the NYSDEC and the MCDOH and in accordance the conditions set forth in the CAP and Plans. Generally, materials reused on-site will need to be covered by impervious materials (e.g., buildings, concrete, asphalt, etc.), or by a minimum one-foot layer of clean cover (e.g., topsoil)

3. It is possible that petroleum-contaminated soil in the unsaturated zone may be present in limited quantities in areas not previously investigated by the City. If disturbed, the materials should be characterized, treated and/or disposed in accordance with applicable regulations.

4. Environmental engineering controls are required to be installed under any buildings or structures which will be used as a residence or as a working space (e.g., office). A detailed environmental engineering control plan dated December 10, 2004, was developed by Day Environmental, Inc. on behalf of the City. The engineering control plan, which includes a vapor barrier and passive venting system, has been reviewed and approved by the NYSDEC and the MCDOH. The developer or owner will be responsible installing and constructing the engineering controls per the approved engineering control plan. If any changes or modifications are made to the approved engineering control plan, the owner or developer will be responsible for obtaining NYSDEC and MCDOH approval of the changes.

5. Install long-term monitoring equipment, including sampling ports in venting systems, groundwater monitoring wells, etc. per the approved CAP. Perform pre-occupancy air sampling and analysis per the CAP. Develop and implement monitoring, and sampling plans, and periodically provide regulatory agencies with reports documenting the results and findings.

6. Continue to implement any institutional controls required by the CAP or by the regulatory agencies involved in the Project.

7. Develop a closure report describing and documenting all post IRM remedial measures completed, and any additional investigation, remediation, engineering controls, or long-term monitoring required.

The environmental conditions and remedial measures summarized above are not intended to be a comprehensive description. The City cannot guarantee that unanticipated environmental conditions will not be encountered. The City recommends that any individual or firm performing work at this Site review the existing reports and other documentation available on this Site. Please contact Mr. Joseph Biondolillo of the City's Division of Environmental Quality at 428-6649 to review environmental documentation and reports maintained by the City.

Geotechnical

The previous environmental studies have not directly evaluated geotechnical conditions related to site redevelopment. The developer or new owner is responsible for evaluating geotechnical conditions at the Site.

APPENDIX G

Dorothy Bauch

Environmental Geologist

Ms. Bauch has an academic background in geology and geophysics, supplemented by background in physics and astronomy. She has experience with cryogenic magnetometer, CO2 laser, paleomagnetic oven, alternating gradient force magnetometer and magnetic properties measurement system.

EDUCATION

Bachelor of Science, Geology, University of Rochester, Rochester, New York, 2005

Bachelor of Arts, Physics and Astronomy, University of Rochester, Rochester, New York, 2005

Master of Science, Geology, University of Rochester, Rochester, New York, 2007

40-Hour OSHA Hazardous Waste Site Operations; 8-Hour Refresher, Rochester, New York, 2008

OSHA Ten-Hour Construction Safety Certification, Rochester, New York, 2008

REGISTRATIONS

Asbestos Inspector #07-12593, New York State Department of Labor

Member, American Geophysical Union

PROJECT EXPERIENCE

Asbestos Management

Asbestos

Performed several asbestos inspections in residential, commercial, and industrial properties.

Environmental Management

Rochester Genesee Regional Transportation Authority, Rochester, New York

Performed extraction well installation, product level monitoring, excavation oversight and sampling, and initial product removal associated with the replacement of bus lifts, concrete drive replacement, and tank closure.

Environmental Site Assessments Phase I, II, III

St. Salome, Irondequoit, New York

Performed Phase I Environmental Site Assessment for the 4.1 acre convent, rectory and school as well as a Phase II and asbestos survey.

Kennedy Valve Railroad Spur, EPA Brownfield, Elmira, New York

Performed sampling and data analysis for monitoring wells and test pits.

Interstate 190 Fiber Optic Project, Buffalo, New York

Performed a hazardous waste screening for a 20 mile length of Interstate 190 prior to installation of a fiber optic line.

399 Gregory Street Brownfield Assessment, Rochester, New York

Performed active soil vapor monitoring and Geoprobe borings.

Phase I ESA's, Various Locations, New York

Performed various Phase I Environmental Site Assessments of residential and commercial sites throughout New York State.

Dorothy Bauch

Environmental Geologist

Environmental Restoration Program, Olean Street Revitalization Project, Rochester, New York
Performed monitoring well installation, development, and sampling for a remedial investigation.

Brownfields Cleanup Agreement, Germanow-Simon Ward Street Site, Rochester, New York
Performed passive soil vapor monitoring activies, test pit investigations and monitoring well installation and development as well as air sampling.

Cortland Park Apartments, Cortland, New York
Performed Phase I Environmental Site Assessment and update for the 5.57-acre property that was improved with the Cortland Park Apartments.

Environmental Site Remediation

Mt. Hope Avenue Brownfield Site Cleanup, Rochester, New York
Performed excavation monitoring and community air monitoring plan for a 4,500 ton remedial excavation plan.

Landfill Services

Orleans Sanitary Landfill Quarterly Monitoring, Albion, New York
Completed quarterly monitoring of groundwater, quarterly landfill gas monitoring and monthly site inspections.

Bachelor of Science, Wildlife Biology, SUNY College of Environmental Science and Forestry, Syracuse, New York, 1979

Associate in Applied Science, Fish and Wildlife Technology, SUNY Agricultural and Technical College, Cobleskill, New York, 1976

PROFESSIONAL ASSOCIATIONS

Board of Directors, Center for Environmental Information

President, Rochester Committee for Scientific Information

PROJECT EXPERIENCE

Environmental Site Management

Sub-Slab Depressurization System (SSDS), Gates, New York (Project Manager)

Responsible for the completion of a pressure extension test, as well as preliminary design and development of an opinion of probable cost to install and operate a sub-slab depressurization system at a large former industrial facility to mitigate soil vapor intrusion. Design and installation are expected to be completed in 2008.

Vacuum Oil, Phase I Environmental Site Assessment, Rochester, New York (Project Manager)

Completed Phase I ESAs of two parcels comprising a portion of a former oil refinery that operated from 1866 until the 1930s. Also responsible for the Phase II ESA of the site, anticipated to be completed in 2008.

Brownfield Cleanup Agreement, Machine Shop Remedial Investigation, Rochester, New York (Project Manager)

Managed a remedial investigation of an active manufacturing facility involving TCE groundwater contamination pursuant to a Brownfields Cleanup Agreement with New York State. On-site and off-site investigations included sub-slab soil vapor surveys to investigate the TCE plume. An interim remedial measure involving the removal of grossly impacted soils from beneath the building was performed during a holiday shutdown period. An Alternatives Analysis report is presently being prepared.

NYS Superfund Site Investigation and Delisting, Rochester, New York (Project Manager)

Managed the DEC Phase II investigation at an apartment complex constructed on the site of a former municipal incinerator ash landfill, which resulted in de-listing of the site from New York State's Superfund list.

Solvent Spill Cleanup, Brighton, New York (Project Manager)

Managed emergency response, remedial investigations, and design of a soil vapor extraction and groundwater collection and treatment system. Also responsible for permitting, agency negotiations, construction observation and system monitoring for an 800 gallon Stoddard solvent spill at an industrial facility. This work resulted in successful closure of the New York State spill file.

Rochester City School District Underground Storage Tank Removal, Rochester, New York (Project Manager)

Developed an investigation, testing, clean up and removal program for 35 underground petroleum and fuel oil storage tanks at 23 facilities owned by the Rochester City School District.

Michael P. Storonsky

Managing Senior Associate

Closure of Five RCRA Hazardous Waste Storage Facilities, Corning, New York (Project Manager)
Managed the preparation and implementation of closure plans for five RCRA hazardous waste storage facilities.

NYS Superfund Site, Storm Sewer Installation, Syracuse, New York (Project Manager)
Managed the installation of a storm sewer within a New York State listed inactive hazardous waste site.

Fast Track Phase I ESAs, Various Locations, New York (Project Manager)
Managed fast-track Phase I ESAs for a pool of 34 properties, involving shopping malls totaling 22 million ft² of building space and proposed mall sites, to prepare them for a proposed sale anticipated to gross between $2-4 billion.

Friable Asbestos Survey, Elmira, New York (Project Manager)
Managed a friable asbestos survey of a regional office building to assess spray-on fireproofing and provide recommendations for long-term management and short-term HVAC maintenance activities.

Petroleum UST Removal, Senior Care Facility, Rochester, New York (Project Manager)
Managed the removal of an abandoned fuel oil tank and contaminated soil at an active senior care facility.

PCB Contaminant Testing*, Hudson River, New York (Wildlife Technician)
Responsible for the collection and preparation of fisheries samples from the Hudson River for PCB contaminant testing relating to the General Electric NPL Superfund site.

Petroleum Spill Site Inactivation Evaluation, Rochester, New York (Project Manager)
Coordinated preparation of a petroleum spill site inactivation evaluation, resulting in successful inactivation of a New York State spill file and, thereby, saving the customer an estimated $100,000 in cleanup costs.

Nursing Home Facility, Abatement of Boiler Room Asbestos, Bath, New York (Project Manager)
Managed Phase I and Phase II ESA's and preparation of design specifications for the abatement of boiler room asbestos at a nursing home facility.

Voluntary Cleanup Agreement, Two Former Industrial Facilities, Big Flats, New York (Project Manager)
Managed the investigation program, preparation of work plans, building demolition, and successful cleanup of two former industrial facilities with PCB and metals soil and groundwater contamination pursuant to the first Voluntary Cleanup Agreement completed in New York State.

Frontier Communications, Rochester, New York (Project Manager)
Managed a hazardous materials compliance audit for 80 buildings and several subsequent site assessment and remedial engineering design projects.

Asbestos Survey, Rochester, New York (Project Manager)
Managed an asbestos survey of the 500,000 ft² multi-story Midtown Plaza commercial office building.

Voluntary Cleanup Agreement, Former Railroad Yard, Buffalo, New York (Project Manager)
Managed Brownfield site investigations, remedial alternatives evaluation, work plan preparation, agency negotiations, and successful site remediation at a former railroad yard occupied by a vacant warehouse. Inactive underground storage tanks and the associated petroleum contaminated soils were removed, while elevated levels of lead and various petroleum hydrocarbons were allowed to remain in place.

Voluntary Cleanup Agreement, Service Station, Medina, New York (Project Manager)
Managed the investigations, evaluation of remedial alternatives, preparation of work plans, agency negotiations, risk assessment, and remediation of soil and groundwater contamination at an abandoned gasoline service station pursuant to a Voluntary Cleanup Agreement with New York State.

** denotes projects completed with other firms*

Michael P. Storonsky

Managing Senior Associate

Voluntary Cleanup Agreement, Former Dry Cleaning Facility, Rotterdam, New York (Project Manager)

Managed the remedial investigation, feasibility study, agency negotiations, design, construction oversight, and operation and monitoring of a combined groundwater sparging/soil vapor extraction system that successfully cleaned up tetrachloroethylene (PCE) contaminated soil and groundwater from a former dry cleaning facility. This was accomplished within one year, pursuant to a Voluntary Cleanup Agreement with New York State on behalf of the nation's largest retail chain.

Voluntary Cleanup Agreement, FLLC Groundwater Remediation System, Geneva, New York (Project Manager)

Managed the Remedial Investigation of a former dry cleaner, including off-site soil vapor surveys, which culminated in the design and installation of a zero valent iron permeable reactive barrier (PRB) pursuant to a Voluntary Cleanup Agreement with New York State to passively treat PCE and TCE contaminated groundwater.

Environmental Restoration Program Site Cleanup, Former Industrial Facility, Buffalo, New York (Project Manager)

Managed an Environmental Restoration Program site cleanup, through the New York State Clean Water/Clean Air Bond Act, of a former industrial facility involving remedial design, construction bid documents, construction management services, field observation/ documentation and a final engineering report. The clean up involved the removal and disposal of approximately 2,600 tons of petroleum impacted soils and miscellaneous surface debris.

Voluntary Cleanup Agreement, Former Dry Cleaning Chemical Distribution Facility, Rochester, New York (Project Manager)

Managed the investigation of a former dry cleaning chemical distribution facility which identified PCE and trichloroethylene (TCE) soil and groundwater contamination pursuant to a Voluntary Cleanup Agreement and recommended installation of a two phase soil vapor and groundwater extraction system which was installed by New York State.

Former Gasoline Service Station Site Investigation and Cleanup, Henrietta, New York (Project Manager)

Managed the investigation, design and remediation of a former gasoline service station involving the excavation, removal and backfilling of approximately 4,300 tons of petroleum impacted soil. Use of petroleum fingerprinting techniques allowed the owner to recoup the majority of the cleanup costs from the prior owner.

Petroleum Impacted Site Investigation, Rochester, New York (Project Manager)

Managed the investigation of a petroleum-impacted site, which underwent successful negotiations regarding a Voluntary Cleanup Agreement with New York State.

Hydrogeologic Investigation, Bolivar, New York (Project Manager)

Managed a hydrogeologic investigation, a remedial program involving closure of lagoons impacted with chlorinated solvents, and the design and construction of an industrial wastewater treatment plant under the terms and conditions of a New York State imposed Consent Order.

Superfund Remedial Investigation, Cadmium and Nickel Contaminated Marathon Battery Site*, Foundry Cove, New York (Environmental Scientist)

Assisted in the development, implementation, evaluation and report preparation for the $600,000 NYSDEC/USEPA NPL Superfund Remedial Investigation at the cadmium and nickel contaminated Marathon Battery Site. This program involved the collection, analysis and interpretation of sediment, surface water, aquatic vegetation, and wildlife samples and the resultant data. These data were used for the evaluation, development and eventual successful implementation of the selected remedial alternative.

Manufacturing Facility, Remedial System Operations, Ithaca, New York (Project Manager)

Responsibilities include managing the ongoing operations and maintenance of a two-phase vacuum extraction system designed to remediate chlorinated solvent impacts in bedrock at an inactive hazardous waste site.

** denotes projects completed with other firms*

Michael P. Storonsky

Managing Senior Associate

Phase I Environmental Site Assessments, Multiple Locations (Project Manager)

Managed fast-track Phase I Environmental Site Assessments of 2.5 million sq. ft. of manufacturing and distribution space involving ten facilities, located in multiple states and countries, with some operations dating back to the civil war.

Phase II Environmental Site Assessment, Former Manufacturing Facility, Henrietta, New York (Project Manager)

Responsible for the soil and groundwater characterization of impacts from a former nickel plating manufacturing facility. Included installation of borings, monitoring wells, analytical sampling, report generation and a remedial cost estimate.

Phase I and Phase II ESAs and Petroleum Corrective Action Plan, Chili, New York (Project Manager)

Managed Phase I and Phase II ESAs, Tank Removal, and Preparation and Implementation of DEC Approval Corrective Action Plan, involving excavation and treatment of 2,200 cubic yards of petroleum impacted soil in an ex-situ bioremediation cell and monitored natural attenuation of groundwater impacts. Implementation of the CAP is nearing completion.

Phase II ESA and Petroleum Cleanup Program, Scottsville, New York (Project Manager)

Managed a Phase II ESA, tank removal, impacted soil removal, application of ORC groundwater treatment and ongoing groundwater monitoring program of a former gas station site that was redeveloped with a bank.

EPA Brownfield Investigation, Elmira, New York (Project Manager)

Managed an EPA Brownfield investigation of a two-mile long railroad spur for the City of Elmira. The corridor, which travels through the heart of the city, is expected to be redeveloped for both commercial purposes adjacent to major thoroughfares and a recreation trail along its entire length.

Petroleum Groundwater Pump and Treatment System, Massena, New York (Project Manager)

Managed Phase II ESA, remedial design and installation of a groundwater pump and treatment system for BTEX contaminated groundwater. System included surfactant application, installation and operation of a pneumatic bladder pump with granular activated carbon treatment and discharge via permit to a storm sewer.

Stewart Terrace, New Windsor, New York (Environmental Program Coordinator)

Managed the preparation of Phase I ESA, Phase II ESA, Environmental Management Plans for asbestos containing materials, lead based paint, mercury-containing equipment, polychlorinated biphenyl-containing light fixtures, hazardous & universal waste, miscellaneous hazardous and toxic substances, pesticides in soil, and mold. Also responsible for asbestos abatement and hazardous material building abatement specifications. This work was performed for a 299-unit military housing subdivision in conjunction with complete site engineering, landscape architecture and surveying services also performed by Stantec.

Building 606, USMA, West Point, New York (Environmental Program Coordinator)

Responsible for completion of an asbestos pre-demolition survey of this historic, 90-year-old, 125,000 ft² masonry multi-use facility. He was responsible for preparing asbestos survey reports and detailed asbestos abatement specifications and drawings.

Brownfield Cleanup Agreement, Former AB Dick Facility, Henrietta, New York (Project Manager)

Responsibilities included Phase I ESA, Phase II ESA, Asbestos Pre-Demolition Survey, Asbestos Abatement and Building Demolition Specifications, and Remedial Oversight to assist in the identification and management of environmental hazards at this 167,000 sq. ft. former manufacturing facility. Also responsible for the oversight of remedial cleanup activities by a former tenant. A Brownfield Cleanup Program Remedial Investigation Work Plan was approved by DEC and the Remedial Investigation is ongoing.

** denotes projects completed with other firms*

Michael P. Storonsky

Managing Senior Associate

Brownfield Site Investigation, Former Laundry and Machine Shop, Rochester, New York (Project Manager)
Responsibilities included conducting a Remedial Investigation of this former laundry and machine shop property. Implementation of remedial measures is expected to be completed in 2008.

Petroleum Investigation and Cleanup, 1650 Elmwood Avenue, Brighton, New York (Project Manager)
Managed the investigation and cleanup of a former gas station to facilitate redevelopment of the site as a drug store in order to obtain inactivation of a DEC petroleum spill file.

Voluntary Cleanup Agreement, Gonsenhauser Farm, Brighton, New York (Project Manager)
Managed Phase I and Phase II ESAs, remedial cost estimate, remedial design, remedial construction and ongoing groundwater monitoring program to address soil and groundwater impacts from three former underground storage tanks at an abandoned farm. The site has been successfully transformed into a public park.

Brownfield Cleanup Agreement, Germanow-Simon Ward Street Site, Rochester, New York (Project Manager)
Managed the investigation of an active manufacturing facility to assess the extent of PCE, TCE, Stoddard Solvent, and petroleum soil and groundwater contamination. Coordinated the proper closure of nine underground storage tanks. Managed the design and construction of a multi-phase vacuum extraction system. Remediation of the site is ongoing. A certificate of completion was obtained in December 2006 allowing the client to apply for the applicable refundable tax credits.

EPA Brownfield Cleanup, 151-191 Mt. Hope Avenue, Rochester, New York (Project Manager)
Managed the implementation of a Corrective Action Plan for the City of Rochester at an EPA-funded city park site that formerly housed three gas stations. Differential GPS was used to provide real-time reports to the client for this 4,500-ton soil cleanup program.

EPA Brownfield Investigation, Former Davidson Collision, Rochester, New York (Project Manager)
Managed the Remedial Investigation and Alternatives Analysis report at this NYS Superfund site and prepared an opinion of probable remedial cost for the City of Rochester. A Remedial Action Work Plan was submitted to NYSDEC.

Environmental Restoration Program Brownfield Site Investigation and Cleanup, Former Contractor's Yard, Rochester, New York (Project Manager)
Managed a $4-million Brownfields Site investigation and cleanup for the City of Rochester pursuant to the New York State Clean Water/Clean Air Bond Act of a former contractor's yard involving a state grant that covered 90% of the costs. Activities completed include Site Investigation, Remedial Alternatives Evaluation, Interim Remedial Measures, Design Phase Investigation, Remedial Design, and Remedial Construction. Implementation of remedial activities included excavation and disposal of over 26,000 cu.yds. of construction and demolition debris as well as petroleum, pesticide and heavy metal contaminated soils. Also included were installation of an oxygen injection system to treat contaminated groundwater and construction of a 5,200 cu.yd. ex-situ bioremediation cell to treat petroleum-contaminated soil. Operations, monitoring and maintenance activities were successfully completed for the two remedial systems. This urban site was redeveloped as a 27-unit single-family residential market rate subdivision. The project won one local award and two state awards for environmental engineering excellence from the American Public Works Association and the American Council of Engineering Consultants.

Environmental Restoration Program Brownfield, Olean Street Revitalization Project, Rochester, New York (Project Manager)
Managed the Phase I and Phase II ESAs, and Remedial Investigation and Alternatives Analysis Report for the City of Rochester to facilitate the development of a single-family residential subdivision pursuant to NYSDEC Environmental Restoration Program Brownfield guidelines.

** denotes projects completed with other firms*

Michael P. Storonsky

Managing Senior Associate

Genesee Marina, Phase I & II Environmental Site Assessments, Geotechnical Investigation and Wetland Delineation, Rochester, New York (Project Manager)

Managed Phase I and Phase II Environmental Site Assessments, preparation of opinions of probable environmental remedial costs, geotechnical investigation and a wetlands delineation of a 29-acre marina located one mile upstream from the Port of Rochester.

Brooks Landing, Environmental Site Assessments and Corrective Action Plans, Rochester, New York (Project Manager)

Managed Phase I and Phase II Environmental Site Assessments and Preparation and Implementation of Corrective Action Plans, a Soil and Groundwater Management Plan, and a sub-slab depressurization system for the City of Rochester. This work allowed the VOC-impacted, cinder-filled waterfront property, containing a former canal, rail line and gas station, to be redeveloped with a hotel.

Corn Hill Landing, Environmental Site Assessments and Corrective Action Plans, Rochester, New York (Project Manager)

Managed Phase I and Phase II Environmental Site Assessments and Preparation and Implementation of Corrective Action Plans and a Soil and Groundwater Management Plan for hazardous waste lead-impacted soil from a former lead works facility and petroleum impacted soil from a former leaking underground tank. This work was to allow the riverfront, cinder-filled, former railroad yard to be redeveloped into a $20 million mixed residential-retail complex.

Platinum Group, Rochester, New York (Project Manager)

Responsibilities included Phase I ESA, Phase II ESA, petroleum spill file closure, pre-demolition asbestos survey and preparation of asbestos containing materials building specifications to allow demolition of four buildings covering the majority of a city block in downtown Rochester.

Phase I and II Environmental Site Assessments, Multiple Locations (Project Manager)

Coordinated, implemented and managed more than 2,500 Phase I and Phase II environmental site assessments at various locations.

** denotes projects completed with other firms*

Thomas Wells

Senior Geologist

Mr. Wells has more than 19 years of experience in environmental consulting. As an environmental geologist and project manager, he has been responsible for the development, implementation and management of remedial investigation, feasibility study, and remedial action projects regulated under CERCLA, RCRA, Brownfields and other state-regulated property transfer and cleanup programs. He also has extensive experience in due-diligence environmental site assessments and site investigation programs.

EDUCATION

Bachelor of Arts, Geology, Williams College, Williamstown, Massachusetts, 1978

PROFESSIONAL ASSOCIATIONS

10-Hour Construction Site Safety and Health Training, Occupational Safety & Health Administration

Hazwoper 40-Hour Annual Refresher, Occupational Safety & Health Administration

Past President, Finger Lakes Chapter, Academy of Certified Hazardous Materials Managers, Inc.

Member, New York State Council of Professional Geologists

PROJECT EXPERIENCE

Environmental Management

Consent Order Negotiation Support, Industrial Facility, Lakewood, NY* (Senior Geologist)

Prepared a comprehensive report presenting the history and results of previous investigations and remedial actions. The client was the attorney for a small manufacturing facility site facing state registry listing. Prior to agency involvement, an enhanced bioremediation remedy had been implemented to address a chlorinated solvent plume in groundwater. The de-facto RI/FS report served to promote agency acceptance of the remedy at the beginning of consent order negotiations.

Brownfields Cleanup Program Application, Corning Fall Brook Site, Corning, NY* (Project Manager)

Prepared a Brownfields Cleanup Program application with companion Phase I Site Assessment report and Phase II Site Investigation work plan for a former glass plant site with a 150-year history of industrial activities. The site is located in a downtown industrial, commercial and residential setting.

Due Diligence Activities, Automotive Manufacturing Facilities, NY, OH, MI, Mexico, France* (Project Manager/Project Geologist)

Senior Environmental Geologist and Project Manager for Phase I Environmental Site Assessment (ESA) and Environmental Compliance Audit (ECA) projects related to the sale or closing of several other auto parts plants with up to 2-million square feet of manufacturing space each. Project experience included addressing property transfer programs regulatory requirements and preparation of a delisting petition which successfully sought removal of one site from the state waste site registry. Provided support to the client on resolving environmental regulations compliance and operational issues at the time of transfer, and participated with the client's project managers in negotiations with buyers to resolve pre- and post-sale environmental issues. In addition to Phase I ESA and ECA reports, also prepared Phase II and III sampling and analytical plans, bid specifications for Phase III/Phase IV RFPs, and estimates of the range of potential remedial costs associated with the recognized environmental conditions and compliance issues identified.

Thomas Wells

Senior Geologist

Environmental Management Plan (EMP), Ryan Center Construction Project, Rochester, NY (Project Geologist)

Prepared and implemented a site management plan to evaluate, address and manage potential subsurface contamination during construction of a new library and community center at the site of public grade school. Implementation of the EMP was performed in concert with a Phase I and Phase II Environmental Site Assessment.

Remedial Investigation Reports, Brownfield Cleanup Program Sites, Active Manufacturing Facilities, Rochester, NY (Project Geologist)

Prepared the RI reports and NYSDEC public notice fact sheets for two Brownfield Cleanup Program sites located in Rochester. Site issues include contaminant source areas under active manufacturing areas, on- and off-site groundwater contamination by chlorinated solvents, petroleum-product LNAPL, and potential need for mitigation of off-site vapor intrusion concerns. Remediation is ongoing at one site, and an Alternatives Analysis report is presently being prepared for the second site.

Vacuum Oil Site, Phase I Environmental Site Assessment, Rochester, NY (Project Geologist/Environmental Professional)

On behalf of the City of Rochester, completed Phase I ESAs of two several-acre parcels that are part of what was formerly the site of an oil refinery which operated from 1866 until the 1930's. Activities also included review and critique of the responsible party's Subsurface Investigation Work Plan (SIWP) for the former refinery site and preparation of a scope of work for Phase II investigations to supplement the SIWP. The Phase II investigation is anticipated in 2008.

Petroleum Spill Cleanup Program, Scottsville, NY (Project Geologist)

Implemented an application of Oxygen Releasing Compound (ORC) for supplemental groundwater treatment as part of an ongoing groundwater monitoring program for a former gas station that was redeveloped with a bank.

RI/FS, Former GM Delco Chassis Site, Rochester, NY (Project Manager)

Senior Geologist and Project Manager for a Remedial Investigation and Feasibility Study of a NYSDEC Inactive Hazardous Waste Site Registry (State Superfund) site. Since joining Stantec, serving as consultant project manager for GM during ongoing remedy selection process. While with previous firm, served as project manager and provided technical leadership on due diligence site assessment, Phase II investigation, environmental compliance audit, contaminated soil removals, RI/FS consent-order negotiation support, RI/FS work plan preparation, implementation of the remedial investigation, a risk assessment, preparation of the feasibility study, and preparation of an interim remedial measures work plan. Budget managed since 2001 = $1,500,000.

Consent Order Negotiation Support, Industrial Facility, Lakewood, New York (Senior Geologist)

Prepared a comprehensive report presenting the history and results of previous investigations and remedial actions. The client was the attorney for a small manufacturing facility site facing state registry listing. Prior to agency involvement, an enhanced bioremediation remedy had been implemented to address a chlorinated solvent plume in groundwater. The de-facto RI/FS report served to promote agency acceptance of the remedy at the beginning of consent order negotiations.

** denotes projects completed with other firms*

Thomas Wells

Senior Geologist

Due Diligence Activities, Automotive Manufacturing Facilities, NY, OH, MI, Mexico, France* (Project Manager/Project Geologist)

Performed and managed environmental site assessments and investigations related to the sale or closing of several auto parts plants. Project work scopes included preparation of Phase I ESA and ECA reports, preparation of Phase II and III sampling and analytical plans, preparation of specifications for Phase III/Phase IV Requests For Proposals, and implementation of investigative activities to assess environmental conditions. Project experience also included addressing regulatory programs stemming from property transfer laws and the writing of a delisting petition which successfully sought removal of one site from the state waste site registry. Provided support to the client on resolving environmental regulations compliance and operational issues at the time of transfer, and participated with the client's project managers in negotiations to resolve pre- and post-sale environmental issues between the clients and buyers of their facilities.

RI/FS Projects, Automotive Manufacturing Facilities, NY, NJ, CT* (Project Manager)

RI/FS Projects, Automotive Manufacturing Facilities, NY, NJ, CT (Project Manager)*

Considerable project experience has been focused on remedial investigation, feasibility study and remedial action programs at large auto-plant sites. The four largest projects managed were long term projects for General Motors or Delphi Corporation with investigation budgets ranging from $700,000 to $2,600,000. Provided cross-functional leadership and project management of project work scopes that included phases from preparation of Preliminary Assessment (PA) or Documentation of Current Condition (DOCC) reports through remedial investigation, risk assessment, feasibility study to implementation of interim remedial measures (IRMs) and remedial actions. Site issues included characterization of 10+-acre construction and manufacturing debris disposal areas, removal of hundreds of buried waste drums, widespread ash and cinders layers, cutting-oil LNAPL plumes, petroleum-solvent LNAPL plumes, LNAPL containing PCBs, dissolved-phase petroleum-product and chlorinated-solvent plumes in groundwater, chromium contamination of soil, bedrock, and groundwater, blasting for enhancement of bedrock permeability in groundwater recovery zones, and on- and off-site vapor intrusion concerns.

Brownfields Cleanup Application, Former Glass Manufacturing Site, Corning, New York* (Project Manager)

Prepared a Brownfields Cleanup Program application with companion Phase I Site Assessment report and Phase II Site Investigation work plan for a former glass plant site with a 150-year history of industrial activities. The site is located in a downtown industrial, commercial and residential setting and represents a major redevelopment asset for the community.

** denotes projects completed with other firms*

Thomas Wells

Senior Geologist

Geological Assessments

Previous Experience

Prior to his career in environmental consulting, Mr. Wells worked as a geologist in mineral exploration consulting. He managed base-metal and gold exploration field work on projects located across the U.S., participated in evaluations of coal and industrial minerals properties and mines, and performed a year-long assignment in Nicaragua for a gold mine reserves evaluation project.

** denotes projects completed with other firms*
