Dear Ms. Ispentchian:

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) is pleased to present this *2024 Annual Report* for the Xerox Corporation (Xerox) Facility in Webster, New York for the reporting period 1 January 2024 through 31 December 2024. This report is provided to meet the requirements of the Corrective Action Module of Xerox's 6NYCRR Part 373 Hazardous Waste Management Facility Permit issued by the New York State Department of Environmental Conservation (NYSDEC).

Please do not hesitate to contact us should you have any questions regarding this submittal or any other aspects of the project.

Sincerely yours,
H & A OF NEW YORK ENGINEERING AND GEOLOGY, LLP

Executive Summary

2024 ANNUAL REPORT

This report presents the results of site monitoring and activities implemented and completed at the Xerox Corporation (Xerox) Webster, New York facility (Facility) between 1 January 2024 and 31 December 2024. This report is required by the Corrective Action Module of Xerox's 6NYCRR Part 373 Hazardous Waste Management Facility Permit (Part 373 Permit) issued by New York State Department of Environmental Conservation (NYSDEC or Department) and the Statement of Basis issued by NYSDEC in March 2015.

Consistent with past reports, a hydrogeologic assessment of the site determined that natural groundwater flow in both the overburden and bedrock units is generally to the north/northwest across the site. The four on-site groundwater recovery networks continue to be effective in preventing off-site migration of target volatile organic compounds (VOCs) in groundwater.

Xerox, in conjunction with H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York), continues to monitor trends and assess the need for additional measures to address more localized site conditions. In May 2024, Xerox implemented piping modifications at REC-21 to improve recovery well operations and maintenance.

Xerox continues to carefully monitor and assess groundwater concentrations in exceedance of the trigger (TR) limits at TR wells in the Building 201/206/218 Area. TR well exceedances were observed at well RW-14I during the reporting period; however, concentrations remained within the historical range of approximately 400 to 500 micrograms per liter (µg/L) total VOCs. The well is within the capture zone of the REC-218-10 Blasted Bedrock Trench (BBT), the main groundwater migration control feature in this area, and concentrations at downgradient monitoring wells remain non-detect.

Concentrations at Salt Road well R-119 continue to exceed the TR limit. The concentration fluctuations observed in the monitoring data and exceedances noted in R-119 are consistent with historical data and generally remain within recent historical ranges of approximately 150 to 250 µg/L total VOCs. Control of the detections at R-119 are managed through the recovery of groundwater from the source area, near R-6 and SR-12, via operations of key groundwater migration engineering control features (recovery wells and associated BBTs) within the Salt Road Area, primarily the REC-21 BBT.

Salt Road TR well OR-70 had a detection of 26.5 µg/L total VOCs and slightly exceeded the TR limit of 25 µg/L, which is not typical based on historical concentrations at this well. Xerox has plans to resample this well in March of 2025 and will review concentrations and evaluate next steps.

Line of compliance wells in the Salt Road area continue to remain non-detect for VOCs, with the exception of LOC well R-64 which exhibited concentrations of 5.3 µg/L tetrachloroethene and 2.1 µg/L vinyl chloride, slightly exceeding the LOC limits of 5 µg/L and 2 µg/L respectively. The well will be resampled in March of 2025 to confirm the results and to determine any next steps.

Concentrations at Inactive Landfill well B-13 exceeded the TR limit during two of the four sampling events in 2024. B-13 exhibited TR exceedances of 84.4 and 123 µg/L total VOCs, slightly lower than the exceedances observed in 2023. Concentrations at surrounding TR and GQM wells were consistent with

historical values and remained below TR limits. The TR limit exceedances at B-13 correlated with extended downtime and lower overall groundwater extraction rates from the Inactive Landfill and Building 200 pumping wells and associated BBTs observed in 2023 and 2024. Building 200 pumping operations were restored in 2024, and Xerox continues to work on evaluating the pumping operations in the Inactive Landfill area.

Concentrations at Building 119 well MW-16 exceeded the TR limit during the annual sampling event in 2024. MW-16 exhibited a concentration of 580.8 µg/L, exceeding the trigger limit of 396 µg/L. A similar exceedance was observed in 2022, which correlated with an increase in VOC concentrations in upgradient wells in the Building 119 area and was followed by a decrease in concentrations below the TR limit in 2023. In 2024, sample results for upgradient wells in the Building 119 area remained stable or decreased from 2022 levels. Concentrations at downgradient well MW-26 remained non-detect.

There were no property transactions during 2024. In September 2019, Xerox submitted a revised work plan to NYSDEC for review and comment to conduct an environmental assessment of the West Complex property to support potential future sale of the property. The work plan revisions addressed comments received from NYSDEC via conference call in August 2019. Xerox is still awaiting a response from NYSDEC on the submitted work plan.

Xerox continues to await NYSDEC response to the October 2018 letter requesting discontinuing the indoor air monitoring program included in the draft *Site Management Plan* for the Facility and continues to operate under the proposed provisions included in that letter. Xerox will evaluate the 2024 data along with upcoming 2025 data to determine if indoor air sampling should be performed during the 2025-2026 heating season.

An annual inspection of the inactive landfill cap was performed by Colliers. Crack filling and weed control/removal were implemented in October of 2024 by the Xerox Facilities Department.

Xerox submitted a full draft SMP to NYSDEC in 2015, with edits in 2017, portions of which have already been approved and implemented. NYSDEC provided its review comments on the SMP to Xerox in October 2021. Xerox has initiated edits to the SMP and plans to submit the updated version in 2025 for final NYSDEC review and approval.

Xerox continues to work with NYSDEC to change the regulatory framework in which it manages corrective and closure actions for the Facility from the existing RCRA permit to a Consent Order. The draft Consent Order is currently under review by NYSDEC.

1. Introduction

This *2024 Annual Report* presents the results of site monitoring and activities implemented and completed at the Xerox Corporation (Xerox) Webster, New York facility (Facility) between 1 January 2024 and 31 December 2024. This report is required by the Corrective Action Module of Xerox's 6NYCRR Part 373 Hazardous Waste Management Facility Permit (Part 373 Permit), and the March 2015 Statement of Basis issued by New York State Department of Environmental Conservation (NYSDEC or Department).

2. Groundwater Monitoring

During the reporting period, groundwater monitoring wells were sampled in accordance with the *Sampling and Analysis Plan* (SAP) dated 2 April 2018. Sampling and analyses were completed by ALS Environmental (ALS), a New York State ELAP-certified laboratory. Groundwater monitoring well locations are shown on Figure 1.

2.1 GROUNDWATER QUALITY FINDINGS

2.1.1 Line of Compliance Wells

All 47 Line of Compliance (LOC) wells were sampled during the 2024 reporting period, and there were no volatile organic compounds (VOCs) detected, with the exception of R-64 located in the northern portion of the Salt Road Area (see Table 1, Figure 2, and table below). R-64 sample results exhibited a total VOC concentration of 7.4 µg/L, consisting of 5.3 µg/L tetrachloroethene (PCE) and 2.1 µg/L vinyl chloride (VC), during the December 2024 Semi-Annual 2 (SA2) sampling event. LOC well OS-45 was not sampled during the December 2024 SA2 event due to dry conditions in the well; VOC concentrations were non-detect at OS-45 during the Semi-Annual 1 event in February 2024. LOC well locations are shown on Figure 1.

Concentrations at R-64 had been non-detect since 2012. R-64 is located downgradient and north of intermediate bedrock Trigger (TR) and Groundwater Quality Monitoring (GQM) wells including R-119, R-59 and R-19, which consistently have had detections of VOCs including VC and cis-1,2-dichloroethene (cis-1,2-DCE), and have been non-detect for PCE since 2000. Overall VOC concentrations at these wells have generally been stable or decreasing over the past 5 years. GQM well R-21, located further upgradient and south of R-64, R-119, and R-59, exhibited an increase in total VOC concentrations from the typical range of 100 to 200 µg/L to 1,820 µg/L in 2024, including detections of 1,300 µg/L PCE, 410 µg/L cis-1,2-DCE, and 110 µg/L VC during the SA2 event. Xerox will closely monitor R-64 to confirm the VOC detections and determine if additional sampling is required and review next steps. Groundwater concentration trends and pumping operations in the Salt Road continue to be closely monitored and adjusted as needed, including pumping well redevelopment and maintenance, in response to concentration and flow rate trends.

Well ID	Sample Date	VOCs (µg/L)	LOC Well Limit (µg/L)
R-64 (Salt Road)	02/29/2024	ND	2.0 VC 5.0 PCE
	12/03/2024	2.1 VC 5.3 PCE	

Notes:

1. *µg/L = micrograms per liter*
2. *Blue shading indicates that the LOC well limit was exceeded.*
3. *ND = not detected above laboratory detection limits*

2.1.2 Trigger and Groundwater Quality Monitoring Wells

All 41 Trigger (TR) and 67 Groundwater Quality Monitoring (GQM) wells were sampled during the reporting period. Well locations are shown on Figure 1. Analytical results are summarized in Table 2, Table 3, and Figure 2. Sample results exceeding TR well limits during 2024 were identified in a total of five wells from four building areas: Building 201/206/218 Area, Salt Road Area, Building 119 Area, and

Inactive Landfill. TR wells typically exceed limits in these areas with the exception of the Inactive Landfill and Building 119. Total VOC concentrations at GQM wells maintained a stable or decreasing trend during the reporting period, with the exception of well R-21 in the Salt Road Area. A discussion of TR well observations and GQM well results for these areas is provided below.

2.1.2.1 Building 201/206/218 Area

During 2024, total VOC concentrations at source area GQM wells RW-2 and RW-6 were within the range of post-2011 levels (see trend graphs in Appendix A). Total VOC concentrations were 9,350 and 4,960 µg/L at RW-2, and 1,797 and 1,842 µg/L at RW-6, which is down- and cross-gradient from RW-2.

Trigger Well RW-14I in the Building 201/206/218 Area (Figure 2) exceeded the established TR limit during the reporting period (see table below).

Well ID	Sample Date	Total VOCs (µg/L)	TR Well Limit (µg/L)
RW-14I	02/22/2024	413	343
	12/09/2024	421	

Notes:

1. *µg/L = micrograms per liter*
2. *Blue shading indicates that the TR well limit was exceeded.*

Exceedances in RW-14I were consistent with historical trends, and concentrations remained within historical ranges (see Appendix A for historical trend graphs). The well is within the capture zone of the REC-218-10 Blasted Bedrock Trench (BBT), the main groundwater migration control feature in this area. Fluctuations in concentrations at this well is attributed to fluctuations in concentrations of groundwater moving from the Building 201 source area (vicinity of RW-2 and RW-6) through the area of RW-14I toward the BBT.

LOC wells located downgradient of the REC-218-10 BBT remain non-detect (see Figure 2), indicating that contaminant mass observed at RW-14I is captured by the migration control features in this area of the site. Xerox continues to closely monitor groundwater quality at the source area, and at upgradient and downgradient locations to evaluate migration control performance.

2.1.2.2 Salt Road Area

Wells R-119 and OR-70 in the Salt Road Area (Figure 2) exceeded the established TR limits during the reporting period (see table below).

Well ID	Sample Date	Total VOCs (µg/L)	TR Well Limit (µg/L)
OR-70	02/28/2024	ND (5.0)	25
	12/03/2024	26.5	
R-119	01/25/2024	214	90
	04/16/2024	147	
	07/22/2024	218	
	11/05/2024	197	

Notes:

1. *µg/L = micrograms per liter*
2. *Blue shading indicates that the TR well limit was exceeded.*
3. *ND = not detected above the indicated laboratory detection limit*

Sample results at OR-70 resulted in total VOC concentrations of 26.5 µg/L, slightly exceeding the TR limit of 25 µg/L, and consisting of 19 µg/L PCE, 5.1 µg/L cis-1,2-DCE, and 2.4 µg/L VC. The exceedance at OR-70 is not typical compared to historical values, and concentrations have generally been low to non-detect over the previous five years. OR-70 is located east of Salt Road and remains at the limit of, or beyond, the capture zone of the nearest recovery well REC-6. Concentrations at downgradient LOC wells OR-110, OR-111, OR-118, OR-121, and OR-122 continue to remain non-detect. Xerox will closely monitor concentration trends in this area to determine next steps.

The concentration fluctuations observed in the monitoring data and exceedances noted in R-119 were consistent with historical data, and concentrations generally remained within recent historical ranges of approximately 150 to 250 µg/L total VOCs (see Appendix A for historical trend graphs). The detected concentrations in R-119 have been decreasing, indicating that local BBTs and pumping wells are operating as intended to control migration of groundwater contamination from the source area to this portion of the site. Concentrations at downgradient LOC wells remain non-detect, with the exception of R-64 (see Section 2.1.1.).

Control of the detections at R-119 are managed through the recovery of groundwater from the source area, near R-6 and SR-12, via operations of key groundwater migration engineering control features (recovery [REC] wells and associated BBTs) within the Salt Road Area, primarily the REC-21 BBT. In 2024, total VOC concentrations in source area GQM wells remained generally stable or continued to decrease, with the exception of GQM well R-21 (see trend graphs in Appendix A). Total VOC concentrations at source area GQM wells R-6 and SR-12 were 14,620 µg/L and 27,500 µg/L, respectively, consistent with concentrations reported in recent years. GQM well R-21, located upgradient and south of R-6 and SR-12, exhibited an increase in total VOC concentrations from the typical range of 100 to 200 µg/L to 1,820 µg/L in 2024 (Section 2.1.1).

Xerox continues to evaluate REC-21 BBT performance. Improvements to REC-21, including replacement of conveyance piping, were implemented in May 2024 to optimize pumping uptime and reduced operations and maintenance issues. Concentrations in this area of the site will continue to be closely monitored to assess groundwater migration control performance.

2.1.2.3 Building 119 Area

Well MW-16 in the Building 119 Area (Figure 2) exceeded the established TR limit during the reporting period.

Well ID	Sample Date	Total VOCs (ug/L)	TR Well Limit (ug/L)
119 MW-16	08/22/2024	580.7	396

Notes:

1. *µg/L = micrograms per liter*
2. *Blue shading indicates that the TR well limit was exceeded.*

TR limit exceedances at MW-16 are not typical based on historical data but have occurred during the 2022 and 2024 reporting years. The exceedance in 2022 correlated to the increase in total VOC

concentrations at other Building 119 area wells (GQM wells MW-4, MW-9, and MW-13) located upgradient of the MW-16 well location between 2020 and 2022 (see trend graphs in Appendix A). In 2024, only MW-9 exhibited a notably higher total VOC concentration compared to historical data, though concentrations were lower than observed in 2023. With the exception of MW-16, sample results for Building 119 wells have remained stable or decreased from 2022 levels (See Figure 2 and Tables 1-3). Concentrations at downgradient well MW-26 remain non-detect.

2.1.2.4 Inactive Landfill

Well B-13 in the Inactive Landfill Area (Figure 2) exceeded the established TR limit in Quarters 1 and 4 during the reporting period (see table below).

Well ID	Sample Date	Total VOCs (µg/L)	TR Well Limit (µg/L)
B-13	01/24/2024	123	65
	04/15/2024	45.3	
	07/23/2024	33	
	11/06/2024	84.4	

The sample results in TR well B-13 exhibited an increase in concentrations over the past two years, compared with historical data. Concentrations at this well had not exceeded the TR limit since 2011. Concentrations at surrounding TR and GQM wells were consistent with historical values and below TR limits in 2024. In addition, concentrations at downgradient LOC wells (B-20, B-22 and B-24 clusters) were non-detect in 2024.

Control of the detections at B-13 and the surrounding area are managed through the recovery of groundwater by the Inactive Landfill (IL) REC-1 and Building 200-2 and 200-3 recovery wells and associated BBTs. B-13 is located downgradient and north (approximately 700 feet) of the Building 200 Recovery well network and southwest (approximately 400 feet) of the Inactive Landfill recovery well network. During 2022 and 2023, IL-REC-1 experienced pumping issues that resulted in a decrease in recovered groundwater volumes compared to total volumes prior to 2022. In addition, REC-200-2 and REC-200-3 experienced extended downtime due to a failure in the conveyance piping and electrical conduit for the well and resulted in a decrease in the groundwater captured in that area via pumping. Pumping operations at REC-200-2 and REC-200-3 were restored in 2024 and continued to operate effectively. Xerox continues to assess and improve pumping operations as needed in the IL and Building 200 areas.

2.1.2.5 Building 200 Area

Total VOC concentrations in the Building 200 TR wells remained below TR limits in 2024. TR well B-19DR exhibited an increase in total VOC concentration of 152.5 µg/L during SA1 in 2024 and decreased to 69.3 µg/L during the SA2 event (see Figure 2 and Table 2). The observed increase could have been the result of the required well maintenance and pump downtime in 2024. The maximum total VOC concentration observed at GQM well SR200-11 decreased from 170,000 µg/L in 2023 to 80,000 µg/L in 2024 and was above the historical concentrations of less than 50,000 µg/L typically observed at this well. Concentrations at GQM wells BR19-IR and BR19-SR remained consistent with 2023 levels (see trend graphs in Appendix A). Following maintenance in 2023 and early 2024 to fix pumping issues, recovery well trenches operated effectively and continue to mitigate the migration of VOCs in groundwater. Xerox will continue to closely monitor concentration trends and recovery well operations in this area.

2.2 SITE HYDROGEOLOGY ASSESSMENT

General site hydrogeology is discussed in detail in the SMP for the Xerox Webster Facility. Potentiometric contour maps for the shallow and intermediate bedrock zones at the Facility are shown on Figures 3 and 4 for the synoptic round of water levels collected from 27 September 2024 through 2 October 2024. A potentiometric surface elevation posting map for the deep bedrock zone is shown on Figure 5. Measured groundwater elevations for 2024 are tabulated and included with the laboratory sampling and analytical data reports provided in Appendix B.

An evaluation of capture zones in relation to the occurrence of target VOCs in groundwater indicates that the groundwater recovery networks associated with the Building 201/206/218, Building 200, Salt Road, and the Inactive Landfill Areas remained largely effective in preventing off-site migration of target VOCs in groundwater during 2024. Total VOC concentrations at LOC wells were non-detect during 2024, with the exception of detections at R-64 in the Salt Road area (see Section 2.1.1), largely the VOC contamination plume within limits of the Facility and providing strong indication that migration control measures continue to be effective.

Xerox is closely monitoring total VOC trends at wells (TR and GQM) near Building 223 and northeast of this building in the Salt Road Area to assess whether additional corrective measures may be warranted. Potentiometric contour maps indicate that the capture zone of the migration control measures active in 2024 includes most but not all VOC-containing wells in the Salt Road Area. The eight wells in this area which typically contain VOCs, and which are likely located at the limit of, or beyond, zones of capture for the shallow and intermediate bedrock zones, include GQM wells R-19 and OR-69, and TR wells OS-46, R-59, R-66, SR-67, OR-70, and R-119 (see Figures 2 through 4).

These wells exhibited generally stable or decreasing VOC trends in 2024 as compared to historical data (see Appendix A trends), with the exception of TR well OR-70. Along the south wall of Building 223 (near the source area wells SR-12 and R-6), well R-19 had a total target VOC concentration of 850 µg/L. Wells R-66 and SR-67, located northwest of R-19 and west of Building 223, had concentrations of 8.1 and 7.0 µg/L, below the TR limits. At the northeast corner of Building 223, wells R-59 and R-119, and OS-46 further to the east had total target VOC concentrations that were similar to historical results. TR well R-119 had TR limit exceedances with total VOC concentrations up to 218 µg/L, and TR well R-59 had total VOC concentrations up to 225 µg/L, which are typical at these locations. OS-46 had a maximum concentration of 84.6 µg/L in 2024, similar to historical results. Well OR-69, located approximately 1,000 feet east of Building 223, had a concentration of 26.2 µg/L, which is consistent with the historical concentrations. Well OR-70, located near OR-69, typically has low-level detections of VOCs and slightly exceeded TR limits in 2024 (Section 2.1.2.2).

Xerox will conduct resampling at wells R-64 and OR-70, will continue to closely monitor concentration trends in 2025 at the wells described above, and will continue efforts to further optimize remedial system performance.

2.3 WELL INSTALLATION ACTIVITIES PERFORMED

No well installation activities were performed during the reporting period.

2.4 WELL MAINTENANCE ACTIVITIES PERFORMED

During 2024, Colliers Engineering & Design (Colliers) contracted Nothnagle Drilling to redevelop three recovery wells REC-13 and REC-21 on 9 August 2024, and REC-5 on 11 November 2024 in the Salt Road area. Nothnagle utilized suction with a tremie rod to remove sediment and buildup from the well screen in order to redevelop the wells. No other monitoring or recovery wells required repair in 2024. Details of the well redevelopment are included in Appendix C.

2.5 WELL DECOMMISSIONING ACTIVITIES

No well decommissioning activities were performed during the reporting period.

3. Remedial Systems

All four groundwater recovery systems were operational during 2024. Total annual groundwater recovery volumes were slightly lower overall in 2024 than 2023 primarily due to a decrease in recovery at the Salt Road Area. Total recovery volumes at the Inactive Landfill and Building 218 areas were similar compared to 2023, while recovery volumes at Building 200 increased in 2024 compared to 2023. Total VOC mass recovered from each of the groundwater recovery systems was slightly higher or similar in 2024 compared to 2023, except for the Landfill area which exhibited a slight decrease in VOC mass recovery compared to 2023. Totals of 37.6 pounds of VOCs and 21.6 million gallons of groundwater were recovered from remedial systems in 2024, compared to 37 pounds of VOCs and 24 million gallons recovered in 2023. The volume of groundwater pumped is based on metered operations, and estimates of VOC mass removed are calculated from concentrations detected in the recovered groundwater. A summary of remedial system recovery data is included in the table below. Annual groundwater volume and mass recovery rate trend graphs are provided in Appendix D.

Area	Groundwater Recovery		VOC Recovery	
	2024 Recovery (gal)	Total Recovery (gal)	2024 Recovery (lbs)	Total Recovery (lbs)
218	659,271	23,135,613	0.25	51
Salt Rd	17,606,970	635,110,797	28.14	2,071
Landfill	552,376	57,541,502	2.8	214
200	2,808,652	71,481,928	6.4	273

Notes:

gal = gallons

lbs = pounds

The following recovery wells were inoperable for more than 30 consecutive calendar days. Supply chain issues with obtaining replacement parts as well as complex electrical diagnostic issues caused delays in restart time. Xerox provided notice of these inoperable wells to NYSDEC and completed the assessments and follow-up summarized below:

Area	Pumping Well	Inoperable Time Period	Reason
Salt Road	REC-13	July 2024	The well was inoperable due to flow meter and pump issues. The flow meter issue was corrected, and the pump was replaced following well redevelopment in early August 2024.
W200	REC-200-1	October to December 2024	The well was not pumping due to the issues with the level sensor. The well was shut down and the level sensor was removed and replaced in January 2025. The pump is now operating.

3.1 REMEDIAL SYSTEM IMPROVEMENTS

Xerox had been evaluating the Salt Road recovery well network operations since pumping rates at REC-21 had been low due to increased fouling and buildup of sediment. In May 2024, Haley & Aldrich of New York contracted Matrix Environmental Technologies Inc. (Matrix) to complete modifications to the REC-21 recovery well system. The work was started on 6 May 2024 and included the installation of a new utility vault and replacement of the discharge line with larger diameter pipe to optimize pumping operations and improve access for future maintenance activities. In addition, a clean out was installed

on the recovery well system main header pipe to allow for future inspection and maintenance of the Salt Road recovery system.

Xerox will continue evaluating overall recovery well operations at the site and make adjustments as needed in 2025.

4. Solid Waste Management Unit Updates

The Solid Waste Management Units (SWMUs) identified for the Xerox Webster Facility and each current individual status is listed in Table 4. Updates to the SWMUs are summarized below.

4.1 NEW SWMUS

There were no new SWMUs added to the site in 2024.

4.2 PARTIAL CLOSURE OF SWMUS

The following eleven SWMUs underwent partial closure in 2024:

SWMU #	Description
111	W224 2014 Extruder Condensate Tank
113	W224 PK Solvent Mix Room Storage Area
114	W224 G Dock Storage Area
116	W148 Lab Pack Storage Room
117	W139 Chemical Analysis Storage Area
121	W119 Mix Room Tote Storage Area
124	W201 North XP Lab Mix Room Storage Area
125	W201 Southeast Dock 2 Storage Area
126	W206 Maintenance Storage Area
127	W208 Dock 4 Storage Area
135	W218 South Dock Storage Area

The SWMUs that underwent partial closure activities included ten 90-day storage areas and the W224 2014 Extruder Condensate Tank (SWMU 111). Additional details and a summary of overall SWMU status for the Facility are provided in Table 4.

5. Other Site Activities Performed During the Reporting Period

5.1 PROPERTY TRANSACTIONS

There were no property transactions completed during 2024.

In the past, Xerox has had prospective buyers interested in the West Complex property, in part or as a whole. In September 2019, Xerox submitted a revised work plan to NYSDEC for review and comment to conduct an environmental assessment of the West Complex property to support sale of the property ahead of renewed interest in the property. The work plan revisions addressed comments received from NYSDEC via conference call in August 2019. Xerox is still awaiting a response from NYSDEC on the submitted work plan.

5.2 SOIL AND GROUNDWATER MANAGEMENT PLAN ACTIVITIES

Xerox completed several projects in areas subject to the site Soil and Groundwater Management Plans in 2024. Xerox provided Haley & Aldrich with a summary of these activities, which are listed in Table 5. Soils were sampled and managed in accordance with the Soil Management Plan, with soils either returned to the original excavation or placed onsite at Keesler's. Groundwater was either treated at the Building 348 treatment building or discharged to sewer in accordance with the Groundwater Management Plan.

5.3 INDOOR AIR ASSESSMENT

On 23 October 2018, Xerox submitted for NYSDEC approval a request to discontinue indoor air monitoring where it had been completed for prior years at the Webster facility. Prior to submitting this request, Xerox met with NYSDEC in July 2018, and through those discussions NYSDEC indicated the program change could be supported by NYSDEC and the New York State Department of Health (NYSDOH). In anticipation of NYSDEC and NYSDOH approval of this program change, the annual indoor air monitoring event has not been performed since the 2017 to 2018 heating season.

Xerox continues to monitor groundwater concentration trends in the vicinity of the indoor air monitoring program buildings. Based on the recent years of groundwater data and the proposed requirements for monitoring presented in the October 2018 letter and follow-up email correspondence to NYSDEC in subsequent years, Xerox did not perform monitoring during the 2023 to 2024 heating season. Xerox will evaluate the 2024 data along with upcoming 2025 data to determine if indoor air sampling should be performed during the 2025-2026 heating season. If NYSDEC rejects Xerox's request to eliminate the indoor air monitoring program from the SMP requirements, or if site conditions indicate the need for indoor air monitoring based on the proposed conditions for monitoring stated in the October 2018 letter, indoor air monitoring would be conducted during the next available heating season. The requirements of that program would be determined through discussions between Xerox and the Department.

5.4 LANDFILL CAP INSPECTION AND REPAIRS

A landfill cap inspection was performed by Colliers on 1 August 2024 and identified areas of the landfill cap which needed repair. Xerox reviewed the 2024 landfill inspection notes provided by Colliers and utilized the Xerox Facilities Department to subcontract the repairs. The work was performed and completed in October 2024 and included the application of a commercial herbicide product to kill weeds growing out of the existing asphalt cracks and the removal of leaves and stone debris. Following this work, Xerox contracted a third party to apply hot tar crack filler as needed in multiple minor cracked areas of the cap. Colliers confirmed these repairs during their inspection on 15 October 2024 and summarized their findings in a report documenting the repairs. This report is included in Appendix E for reference.

5.5 TRANSITION TO CONSENT ORDER

Xerox continues to work with NYSDEC to change the regulatory framework in which it manages corrective and closure actions for the Facility from the existing RCRA permit to a Consent Order. The draft Consent Order is currently under review by NYSDEC.

6. Summary and Conclusions

Xerox continues to implement the NYSDEC-approved site-wide management/closure strategy for the Webster Facility to ensure site migration control requirements are maintained. An estimated 51,874 pounds of VOC contaminant mass has been recovered from the subsurface to date through completed interim remediation source reduction efforts and continued migration control measures. A calculated total of 37.6 pounds of VOCs were recovered in 2024 from existing groundwater migration control systems.

The groundwater monitoring network continues to demonstrate effectiveness in monitoring the contaminant plumes. The hydrogeology assessment of data collected during the 2024 reporting period indicated that the four groundwater recovery networks on site continued to be largely effective in maintaining plume migration control and preventing off-site migration of target VOCs in groundwater.

In 2024, Xerox reassessed conditions and implemented modifications to the REC-21 BBT to further optimize the performance and reliability of this key groundwater recovery feature. Xerox plans to continue well and pump assessments in 2025 to improve uptime of recovery wells and improve long-term operations and maintenance of the recovery system.

7. Future Activities

The following activities are planned for 2025:

- Continued groundwater monitoring per the revised site SAP;
- Continued operation of site recovery and treatment systems and associated trenches;
- Continued well maintenance efforts, including assessment of well fields;
- Inspection of the inactive landfill cap and completion of any necessary repairs;
- Perform SWMU updates/closures, as needed;
- Propose improvements, as appropriate, to the operations and maintenance program for groundwater recovery and treatment systems to increase uptime and performance and enhance conditions for plume assessment and migration control;
- Submittal of a revised SMP submitted 15 June 2015 and updated in 2017, in response to NYSDEC comments received in October 2021;
- Xerox will work with NYSDEC legal and technical teams to finalize the Consent Order for the site.

Xerox is awaiting formal NYSDEC comment and/or approval on the following:

- NYSDEC approval of the request to discontinue indoor air monitoring submitted on 23 October 2018; and
- NYSDEC approval of the West Complex Assessment Work Plan revised September 2019.

8. Certifications

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Notes and Abbreviations:
1. Values in bold are detected analytical results.
2. Gray indicates result exceeds Site Specific Line of Compliance Limit.
3. J: Indicates an estimated result.
4. ND: Indicates result was not detected.

Notes and Abbreviations:

1. Values in **bold** are detected analytical results.
2. Gray indicates result exceeds Site Trigger Limits.
3. J: Indicates an estimated result.
4. ND: Indicates result was not detected.
5. R: Indicates a rejected result.
6. SALT RD R-119 sampled again on 7/25/2024 to analyze conductivity.

Notes and Abbreviations:

1. Values in **bold** are detected analytical results.
2. Gray indicates result exceeds Site Trigger Limits.
3. J: Indicates an estimated result.
4. ND: Indicates result was not detected.
5. R: Indicates a rejected result.
6. SALT RD R-119 sampled again on 7/25/2024 to ana

Notes and Abbreviations:

1. Values in **bold** are detected analytical results.
2. Gray indicates result exceeds Site Trigger Limits.
3. J: Indicates an estimated result.
4. ND: Indicates result was not detected.
5. R: Indicates a rejected result.
6. SALT RD R-119 sampled again on 7/25/2024 to ana

APPENDIX B
Laboratory Data Reports and Sampling Forms

February 16, 2024 Service Request No:R2400664

Julia Ispentchain
Xerox Corporation USA
800 Phillips Road
Bldg #0207-01Z
Webster, NY 14580

Laboratory Results for: Webster Quarterly Wells 01/2024

Dear Julia,

Enclosed are the results of the sample(s) submitted to our laboratory January 25, 2024
For your reference, these analyses have been assigned our service request number **R2400664.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7475. You may also contact me via email at Meghan.Pedro@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Meghan Pedro
Project Manager

Client: Xerox Corporation USA
Project: Webster Quarterly Wells 01/2024
Sample Matrix: Water

Service Request: R2400664
Date Received: 01/25/2024

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Eighteen water samples were received for analysis at ALS Environmental on 01/25/2024. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Volatiles by GC/MS:

Method 8260C, 01/29/2024: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.
Method 8260C, 01/30/2024: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.

Field:

No significant anomalies were noted with this analysis.

Approved by _____ Date 02/16/2024

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Cooler Receipt and Preservation Check Form

Project/Client Xerox Folder Number

Cooler received on 1/25/24 by: SES COURIER: ALS UPS FEDEX VELOCITY CLIENT

1	Were **Custody seals** on outside of cooler?	Y (N)	5a	**Perchlorate** samples have required headspace?	Y N (NA)
2	**Custody papers** properly completed (ink, signed)?	(Y) N	5b	Did VOA vials, Alk,or Sulfide have sig* **bubbles**?	Y N NA
3	Did all bottles arrive in good **condition** (unbroken)?	(Y) N	6	Where did the bottles originate?	(ALS/ROC) CLIENT
4	Circle: **(Wet Ice)** **Dry Ice** **Gel packs** present?	(Y) N	7	Soil VOA received as: Bulk Encore 5035set	(NA)

8. Temperature Readings Date: 1/25/24 Time: 1235 ID: IR#12 (IR#11) From: Temp Blank (Sample Bottle)

Observed Temp (°C)	5.6						
Within 0-6°C?	(Y) N	Y N	Y N	Y N	Y N	Y N	Y N
If <0°C, were samples frozen?	Y N	Y N	Y N	Y N	Y N	Y N	Y N

If out of Temperature, note packing/ice condition: _____ Ice melted Poorly Packed (described below) Same Day Rule

&Client Approval to Run Samples: _____ Standing Approval Client aware at drop-off Client notified by: _____

All samples held in storage location: SMU by SES on 1/25/24 at 1238
5035 samples placed in storage location: _____ by _____ on _____ at _____ within 48 hours of sampling? Y N

Cooler Breakdown/Preservation Check**: Date: 1/25/24 Time: 1330 by: SES

9. Were all bottle labels complete (*i.e.* analysis, preservation, etc.)? YES (NO) *
10. Did all bottle labels and tags agree with custody papers? YES (NO)
11. Were correct containers used for the tests indicated? (YES) NO
12. Were 5035 vials acceptable (no extra labels, not leaking)? YES NO (N/A)
13. Were dissolved metals filtered in the field? YES NO (N/A)
14. Air Samples: Cassettes / Tubes Intact Y / N with MS Y / N Canisters Pressurized Tedlar® Bags Inflated (N/A)

pH	Lot of test paper	Reagent	Preserved? Yes	Preserved? No	Lot Received	Exp	Sample ID Adjusted	Vol. Added	Lot Added	Final pH
≥12		NaOH								
≤2		HNO_3								
≤2		H_2SO_4								
<4		$NaHSO_4$								
5-9		For 608pest			No=Notify for 3day					
Residual Chlorine (-)		For CN, Phenol, 625, 608pest, 522			If +, contact PM to add $Na_2S_2O_3$ (625, 608, CN), ascorbic (phenol).					
		$Na_2S_2O_3$	-							
		ZnAcetate	-	-						
		HCl	**	**						

**VOAs and 1664 Not to be tested before analysis. Otherwise, all bottles of all samples with chemical preservatives are checked (not just representatives).

Bottle lot numbers: _____

Explain all Discrepancies/ Other Comments:

*No sample dates or times on samples

HPROD	BULK

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

North Carolina #36701
North Carolina #676
Rhode Island LAO00333

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory. To verify NH accredited analytes, go to https://www4.des.state.nh.us/CertifiedLabs/Certified-Method.aspx.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Laboratory Results for: Webster Semi-Annual Wells

Dear Kim,

Enclosed are the results of the sample(s) submitted to our laboratory March 04, 2024
For your reference, these analyses have been assigned our service request number **R2401508.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7475. You may also contact me via email at Meghan.Pedro@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Meghan Pedro

Service Request: R2401508
Date Received: 02/23/2024 - 03/04/2024

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

One hundred two water samples were received for analysis at ALS Environmental on 02/23/2024 - 03/04/2024. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Volatiles by GC/MS:

Method 8260C, 03/07/2024: The lower control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). Since there were no detections of the analyte(s) above the MRL in the associated field samples, the quantitation is not affected. The data quality was not significantly affected and no further corrective action was taken.

Method 8260: Samples are routinely tested for pH after analysis to confirm that any acid added was sufficient to reduce the pH to <2 to extend the holding time from 7 days to 14 days. The following sample(s) were analyzed beyond 7 days and were found to be insufficiently preserved. List samples with pH: R2401508-047,052.

Method 8260C, 03/02/2024: The lower control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). Since there were no detections of the analyte(s) above the MRL in the associated field samples, the quantitation is not affected. The data quality was not significantly affected and no further corrective action was taken.

Field:

No significant anomalies were noted with this analysis.

Report was revised to correct a sample ID.

Approved by Date 03/12/2024

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Cooler Receipt and Preservation Check Form

Project/Client Xerox Folder Number

Cooler received on 2/28/24 by: KE COURIER: (ALS) UPS FEDEX VELOCITY CLIENT

1	Were **Custody seals** on outside of cooler?	Y (N)	5a	**Perchlorate** samples have required headspace?	Y N (NA)
2	**Custody papers** properly completed (ink, signed)?	(Y) N	5b	Did VOA vials, Alk,or Sulfide have sig* **bubbles**?	Y (N) NA
3	Did all bottles arrive in good **condition** (unbroken)?	(Y) N	6	Where did the bottles originate?	(ALS/ROC) CLIENT
4	Circle: (**Wet Ice**) **Dry Ice Gel packs** present?	(Y) N	7	Soil VOA received as: Bulk Encore 5035set	(NA)

8. Temperature Readings Date: 2/28/24 Time: 14:33 ID: IR#12 (IR#11) From: Temp Blank (Sample Bottle)

Observed Temp (°C)	0.8						
Within 0-6°C?	(Y) N	Y N	Y N	Y N	Y N	Y N	Y N
If <0°C, were samples frozen?	Y N	Y N	Y N	Y N	Y N	Y N	Y N

If out of Temperature, note packing/ice condition: _____ Ice melted Poorly Packed (described below) Same Day Rule

&Client Approval to Run Samples: _____ Standing Approval Client aware at drop-off Client notified by: _____

All samples held in storage location: SMO by KE on 2/28/24 at 14:38
5035 samples placed in storage location: _____ by _____ on _____ at _____ within 48 hours of sampling? Y N

Cooler Breakdown/Preservation Check**: Date: _____ Time: _____ by: _____

9. Were all bottle labels complete (*i.e.* analysis, preservation, etc.)? YES NO
10. Did all bottle labels and tags agree with custody papers? YES NO
11. Were correct containers used for the tests indicated? YES NO
12. Were 5035 vials acceptable (no extra labels, not leaking)? YES NO N/A
13. Were dissolved metals filtered in the field? YES NO N/A
14. Air Samples: Cassettes / Tubes Intact Y / N with MS Y / N Canisters Pressurized Tedlar® Bags Inflated N/A

pH	Lot of test paper	Reagent	Preserved? Yes	Preserved? No	Lot Received	Exp	Sample-ID Adjusted	Vol. Added	Lot Added	Final pH
≥12		NaOH								
≤2		HNO_3								
≤2		H_2SO_4								
<4		$NaHSO_4$								
5-9		For 608pest			No=Notify for 3day					
Residual Chlorine (-)		For CN, Phenol, 625, 608pest, 522			If +, contact PM to add $Na_2S_2O_3$ (625, 608, CN), ascorbic (phenol).					
		$Na_2S_2O_3$	-	-						
		ZnAcetate	-	-			**VOAs and 1664 Not to be tested before analysis. Otherwise, all bottles of all samples with chemical preservatives are checked (not just representatives).			
		HCl	**	**						

Bottle lot numbers: _____
Explain all Discrepancies/ Other Comments:

HPROD	BULK
HTR	FLDT
SUB	HGFB
(ALS)	LL3541

Labels secondary reviewed by: _____
PC Secondary Review: _____

*significant air bubbles: VOA > 5-6 mm ; WC > 1 in. diameter

Cooler Receipt and Preservation

R2401508 5
Xerox Corporation USA
Webster Semiannual Wells 2/2024

Project/Client Xerox Folder Number

Cooler received on 3/1/24 by: KE

COURIER: ALS UPS FEDEX VELOCITY CLIENT

1	Were **Custody seals** on outside of cooler?	Y (N)	
2	**Custody papers** properly completed (ink, signed)?	(Y) N	
3	Did all bottles arrive in good **condition** (unbroken)?	(Y) N	
4	Circle: (Wet Ice) Dry Ice Gel packs present?	(Y) N	

5a	**Perchlorate** samples have required headspace?	Y N (NA)	
5b	Did VOA vials, Alk, or Sulfide have sig* **bubbles**?	Y (N) NA	
6	Where did the bottles originate?	(ALS/ROC) CLIENT	
7	Soil VOA received as: Bulk Encore 5035set	(NA)	

8. Temperature Readings Date: 3/1/23 Time: 14:13 ID: IR#12 (IR#11) From: Temp Blank (Sample Bottle)

Observed Temp (°C)							
Within 0-6°C?	Y N	Y N	Y N	Y N	Y N	Y N	Y N
If <0°C, were samples frozen?	Y N	Y N	Y N	Y N	Y N	Y N	Y N

If out of Temperature, note packing/ice condition: _____ Ice melted Poorly Packed (described below) Same Day Rule

&Client Approval to Run Samples: _____ Standing Approval Client aware at drop-off Client notified by: _____

All samples held in storage location: SMO by KE on 3/1/24 at 14:23
5035 samples placed in storage location: _____ by _____ on _____ at _____ within 48 hours of sampling? Y N

Cooler Breakdown/Preservation Check**: Date: 3/1/24 Time: 14:28 by: KE

9. Were all bottle labels complete (*i.e.* analysis, preservation, etc.)? YES (NO)
10. Did all bottle labels and tags agree with custody papers? YES (NO)
11. Were correct containers used for the tests indicated? (YES) NO
12. Were 5035 vials acceptable (no extra labels, not leaking)? YES NO (N/A)
13. Were dissolved metals filtered in the field? YES NO (N/A)
14. Air Samples: Cassettes / Tubes Intact Y / N with MS Y / N Canisters Pressurized Tedlar® Bags Inflated (N/A)

pH	Lot of test paper	Reagent	Preserved? Yes	Preserved? No	Lot Received	Exp	Sample ID Adjusted	Vol. Added	Lot Added	Final pH
≥12		NaOH								
≤2		HNO_3								
≤2		H_2SO_4								
<4		$NaHSO_4$								
5-9		For 608pest			No=Notify for 3day					
Residual Chlorine (-)		For CN, Phenol, 625, 608pest, 522			If +, contact PM to add $Na_2S_2O_3$ (625, 608, CN), ascorbic (phenol).					
		$Na_2S_2O_3$	*							
		ZnAcetate	-	-						
		HCl	**	**	22080153	06/25				

**VOAs and 1664 Not to be tested before analysis. Otherwise, all bottles of all samples with chemical preservatives are checked (not just representatives).

Bottle lot numbers: 091222-3AXH, 022023-3AXH

PURGE INFORMATION

Well Depth ~~(ft.)~~ Purge Date 3/4/24 Purge Method

SWL (ft.) Start Time Stop Time

Standing Water (ft.) Volume Purged gal. # casings

Well Constant (gal/ft.) Observations

Well Volume (gal.)

SAMPLING INFORMATION

Sample Method Teflon Bailer Rinsate

Date 3/4/24 Time 1140 SWL —

Recharge Time — Recharge Rate —

Appearance Clear

Weather Conditions 60°F Sunny 48 hr. 50°F Cloudy

Sampling Technician (Print) Kelsey Foley Signature

Meter	Parameter	Unit	Replicate 1	Replicate 2
Myron 6p	pH	unit	8.13	8.13
Myron 6p	Conductivity	µmhos/cm	2	2
Myron 6p	Temperature	Degrees Celsius	15.5	15.5

Calibration Date/Time 3/4/~~22~~ 24 KF 0730 pH = Conductivity =

OBSERVATIONS Turbidity =

Sampling procedures were performed in accordance with all applicable protocols.

Miscellaneous Forms

ALS Environmental—Rochester Laboratory

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Rochester Lab ID # for State Accreditations[1]

NELAP States
Florida ID # E87674
New Hampshire ID # 2941
New York ID # 10145
Pennsylvania ID# 68-786
Texas ID#T104704581
Virginia #460167

Non-NELAP States
Connecticut ID #PH0556
Delaware Approved
Maine ID #NY01587
North Carolina #36701
North Carolina #676
Rhode Island LAO00333

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory. To verify NH accredited analytes, go to https://www4.des.state.nh.us/CertifiedLabs/Certified-Method.aspx.

ALS Laboratory Group

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

For analytical methods not listed, the preparation method is the same as the analytical method reference.	

ORGANIC

Preparation Methods for Organic methods are listed in the header of the Results pages.

Regarding "Bulk/5035A":
For soil/solid samples submitted in soil jars for Volatiles analysis, the prep method is listed as "Bulk/5035A". The lab follows the closed-system EPA 5035A protocols once the sample is transferred to a sealed vial, but collection in bulk in soil jars does not follow the collection protocols listed in EPA 5035A. In accordance with the NYSDOH technical notice of October 2012, all results or reporting limits <200 ug/kg are to be considered estimated due to potential low bias.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

April 25, 2024 Service Request No:R2403092

Julia Ispentchain
Xerox Corporation USA
800 Phillips Road
Bldg #0207-01Z
Webster, NY 14580

Laboratory Results for: Webster Quarterly Wells 4/2024

Dear Julia,

Enclosed are the results of the sample(s) submitted to our laboratory April 17, 2024
For your reference, these analyses have been assigned our service request number **R2403092.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7475. You may also contact me via email at Meghan.Pedro@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Meghan Pedro
Project Manager

Client: Xerox Corporation USA
Project: Webster Quarterly Wells 4/2024
Sample Matrix: Water

Service Request: R2403092
Date Received: 04/17/2024

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Seventeen water samples were received for analysis at ALS Environmental on 04/17/2024. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Volatiles by GC/MS:

No significant anomalies were noted with this analysis.

Field:

No significant anomalies were noted with this analysis.

Approved by _____ Date 04/25/2024

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Rochester Lab ID # for State Accreditations[1]

NELAP States
Florida ID # E87674
New Hampshire ID # 2941
New York ID # 10145
Pennsylvania ID# 68-786
Virginia #460167

Non-NELAP States
Connecticut ID #PH0556
Delaware Approved
Maine ID #NY01587
North Carolina #36701
North Carolina #676
Rhode Island LAO00333

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory. To verify NH accredited analytes, go to https://www4.des.state.nh.us/CertifiedLabs/Certified-Method.aspx.

ALS Laboratory Group

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Laboratory Results for: Quarterly Wells (Q3)

Dear Julia,

Enclosed are the results of the sample(s) submitted to our laboratory July 23, 2024
For your reference, these analyses have been assigned our service request number **R2406702.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7475. You may also contact me via email at Meghan.Pedro@alsglobal.com.

Respectfully submitted,

Phone (585) 288-5380 Fax (585) 288-8475
www.alsglobal.com

Client: Xerox Corporation USA
Project: Quarterly Wells (Q3)
Sample Matrix: Water

Service Request: R2406702
Date Received: 07/23/2024 - 07/25/2024

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Eighteen water samples were received for analysis at ALS Environmental on 07/23/2024 - 07/25/2024. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.
Sampling was performed by ALS personnel in accordance with ALS Field Sampling SOPs or by client specifications.

General Chemistry:

No significant anomalies were noted with this analysis.

Volatiles by GC/MS:

Report revised. Total Target Volatiles (TTV) were not included in the report.

Field:

No significant anomalies were noted with this analysis.

Approved by _____ Date 08/08/2024

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Rochester Lab ID # for State Accreditations[1]

NELAP States
Florida ID # E87674
New Hampshire ID # 2941
New York ID # 10145
Pennsylvania ID# 68-786
Virginia #460167

Non-NELAP States
Connecticut ID #PH0556
Delaware Approved
Maine ID #NY01587
North Carolina #36701
North Carolina #676
Rhode Island LAO00333

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory. To verify NH accredited analytes, go to https://www4.des.state.nh.us/CertifiedLabs/Certified-Method.aspx.

6010C or 6010D SPLP (1312) extract	3005A/3010A
7199	3060A
300.0 Anions/ 350.1/ 353.2/ SM 2320B/ SM 5210B/ 9056A Anions	DI extraction
For analytical methods not listed, the preparation method is the same as the analytical method reference.	

ORGANIC

Preparation Methods for Organic methods are listed in the header of the Results pages.

Regarding "Bulk/5035A":
For soil/solid samples submitted in soil jars for Volatiles analysis, the prep method is listed as "Bulk/5035A". The lab follows the closed-system EPA 5035A protocols once the sample is transferred to a sealed vial, but collection in bulk in soil jars does not follow the collection protocols listed in EPA 5035A. In accordance with the NYSDOH technical notice of October 2012, all results or reporting limits <200 ug/kg are to be considered estimated due to potential low bias.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Laboratory Results for: Webster Annual Wells

Dear Julia,

Enclosed are the results of the sample(s) submitted to our laboratory August 27, 2024
For your reference, these analyses have been assigned our service request number **R2408146.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7475. You may also contact me via email at Meghan.Pedro@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Meghan Pedro
Project Manager

Client: Xerox Corporation USA
Project: Webster Annual Wells
Sample Matrix: Water

Service Request: R2408146
Date Received: 08/26/2024 - 09/03/2024

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Eighty one water samples were received for analysis at ALS Environmental on 08/26/2024 - 09/03/2024. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Metals:

When analyzed without dilution, the concentration of one or more elements in one or more samples exceeded the associated single element interference check concentration. As per section 9.9.1 of EPA 6010D, affected samples were diluted to reduce the solution concentration of the high concentration element below the interference check concentration, whether or not the high concentration element was an analyte of interest. The dilution has increased the reporting limits accordingly.
When analyzed without dilution, the concentration of one or more elements in one or more samples exceeded the associated single element interference check concentration. As per section 9.9.1 of EPA 6010D, affected samples were diluted to reduce the solution concentration of the high concentration element below the interference check concentration, whether or not the high concentration element was an analyte of interest. The dilution has increased the reporting limits accordingly.
Mercury: The reporting limit is elevated for Mercury in one or more samples in this report. The sample matrix contained excessive amounts of organic matter that subsequently reduced the potassium permanganate added during sample preparation. An excess of oxidized permanganate must be maintained throughout the prep process in order to ensure no loss of mercury as vapor. As a result, a lesser amount of sample was utilized and the resulting reporting limits adjusted accordingly.
Mercury: The reporting limit is elevated for Mercury in one or more samples in this report. The sample matrix contained excessive amounts of organic matter that subsequently reduced the potassium permanganate added during sample preparation. An excess of oxidized permanganate must be maintained throughout the prep process in order to ensure no loss of mercury as vapor. As a result, a lesser amount of sample was utilized and the resulting reporting limits adjusted accordingly.

General Chemistry:

No significant anomalies were noted with this analysis.

Volatiles by GC/MS:

Method 8260D, 09/05/2024: The lower control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). Since there were no detections of the analyte(s) above the MRL in the associated field samples, the quantitation is not affected. The data quality was not significantly affected and no further corrective action was taken.
Method 8260D, 09/09/2024: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.

Method 8260: Samples are routinely tested for pH after analysis to confirm that any acid added was sufficient to reduce the pH to <2 to extend the holding time from 7 days to 14 days. The following sample(s) were analyzed beyond 7 days and were found to be insufficiently preserved. R2408176-077

Method 8260D, R2408146-077: Sample(s) required dilution due to the foaming nature of the matrix. The reporting limits are adjusted to reflect the dilution.

Approved by Date 09/27/2024

Method 8260D, 09/04/2024: The lower control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). Since there were no detections of the analyte(s) above the MRL in the associated field samples, the quantitation is not affected. The data quality was not significantly affected and no further corrective action was taken.
Method 8260D, 09/10/2024: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.

Field:

No significant anomalies were noted with this analysis.

Cooler Receipt and Preservation Check Form

Project/Client _____ Folder Number _____

Cooler received on 8/26/24 by: RDR

COURIER: (ALS) UPS FEDEX VELOCITY CLIENT

1	Were **Custody seals** on outside of cooler?	Y (N)
2	**Custody papers** properly completed (ink, signed)?	(Y) N
3	Did all bottles arrive in good **condition** (unbroken)?	(Y) N
4	Circle: **Wet Ice Dry Ice Gel packs** present?	(Y) N

5a	Did **VOA** vials have sig* **bubbles?**	Y (N) NA
5b	Sig* bubbles: **Alk?** Y N (NA) **Sulfide?**	Y (N) NA
6	Where did the bottles originate?	ALS/ROC CLIENT
7	Soil VOA received as: Bulk Encore 5035set	(NA)

8. Temperature Readings Date: 8/26/24 Time: 1651 ID: IR#12 (IR#1) From: Temp Blank Sample Bottle

Temp (°C)	11.3	6.1						
Within 0-6°C?	Y (N)	(Y) N	Y N	Y N	Y N	Y N	Y N	
If <0°C, were samples frozen?	Y N	Y N	Y N	Y N	Y N	Y N	Y N	

If out of Temperature, note packing/ice condition: _____ Ice melted Poorly Packed (described below) Same Day Rule

&Client Approval to Run Samples: _____ Standing Approval Client aware at drop-off Client notified by: _____

All samples held in storage location: Rec2 by RDR on 8/26/24 at 1651
5035 samples placed in storage location: _____ by _____ on _____ at _____ within 48 hours of sampling? Y N

Cooler Breakdown/Preservation Check**: Date: 8/27/24 Time: 940 by: SES

9. Were all bottle labels complete (*i.e.* analysis, preservation, etc.)? YES (NO) no times
10. Did all bottle labels and tags agree with custody papers? YES (NO)
11. Were correct containers used for the tests indicated? (YES) NO
12. Were 5035 vials acceptable (no extra labels, not leaking)? YES NO (N/A)
13. Were dissolved metals filtered in the field? YES NO (N/A)
14. Air Samples: Cassettes / Tubes Intact Y / N with MS Y / N Canisters Pressurized Tedlar® Bags Inflated (N/A)

pH	Lot of test paper	Reagent	Preserved? Yes	Preserved? No	Lot Received	Exp	Sample ID Adjusted	Vol. Added	Lot Added	Final pH
≥12		NaOH								
≤2	201523	HNO_3	√		bottle label ⇒					
≤2		H_2SO_4								
<4		$NaHSO_4$								
5-9		For 608pest			No=Notify for 3day					
Residual Chlorine (-)		For CN, Phenol, 625, 608pest, 522			If +, contact PM to add $Na_2S_2O_3$ (625, 608, CN), ascorbic (phenol).					
		$Na_2S_2O_3$								
		ZnAcetate	-	-						
		HCl	**	**	22080153	6/25				

**VOAs and 1664 Not to be tested before analysis. Otherwise, all bottles of all samples with chemical preservatives are checked (not just representatives).

Bottle lot numbers: 091227-3AM-7, bottle label cuts off

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Rochester Lab ID # for State Accreditations[1]

NELAP States
Florida ID # E87674
New Hampshire ID # 2941
New York ID # 10145
Pennsylvania ID# 68-786
Texas ID#T104704581
Virginia #460167

Non-NELAP States
Connecticut ID #PH0556
Delaware Approved
Maine ID #NY01587
North Carolina #36701
North Carolina #676
Rhode Island LAO00333

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory. To verify NH accredited analytes, go to https://www4.des.state.nh.us/CertifiedLabs/Certified-Method.aspx.

PREPARATION METHODS

The preparation methods associated with this report are found in these tables unless discussed in the case narrative.

INORGANIC

Water/Liquid Matrix

Analytical Method	Preparation Method
200.7	200.2
200.8	200.2
6010C or 6010D	3005A/3010A
6020A or 6020B	ILM05.3
9034 Sulfide Acid Soluble	9030B
SM 4500-CN-N-2016 Amenable and Residual Cyanide	SM 4500-CN-G and SM 4500-CN-B,C-2016
SM 4500-CN-E WAD Cyanide	SM 4500-CN-I

Solid/Soil/Non-Aqueous Matrix

Analytical Method	Preparation Method
6010C or 6010D	3050B
6020A or 6020B	3050B
6010C or 6010D TCLP (1311) extract	3005A/3010A
6010C or 6010D SPLP (1312) extract	3005A/3010A
7199	3060A
300.0 Anions/ 350.1/ 353.2/ SM 2320B/ SM 5210B/ 9056A Anions	DI extraction
For analytical methods not listed, the preparation method is the same as the analytical method reference.	

ORGANIC

Preparation Methods for Organic methods are listed in the header of the Results pages.

Regarding "Bulk/5035A":
For soil/solid samples submitted in soil jars for Volatiles analysis, the prep method is listed as "Bulk/5035A". The lab follows the closed-system EPA 5035A protocols once the sample is transferred to a sealed vial, but collection in bulk in soil jars does not follow the collection protocols listed in EPA 5035A. In accordance with the NYSDOH technical notice of October 2012, all results or reporting limits <200 ug/kg are to be considered estimated due to potential low bias.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Webster, NY 14580

Laboratory Results for: Webster Annual Wells

Dear Julia,

Enclosed are the results of the sample(s) submitted to our laboratory November 05, 2024
For your reference, these analyses have been assigned our service request number **R2411234.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7475. You may also contact me via email at Meghan.Pedro@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Service Request: R2411234
Date Received: 11/05/2024

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Two water samples were received for analysis at ALS Environmental on 11/05/2024. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

General Chemistry:

No significant anomalies were noted with this analysis.

Volatiles by GC/MS:

No significant anomalies were noted with this analysis.

Field:

No significant anomalies were noted with this analysis.

Approved by _____ Date 11/20/2024

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

CLIENT ID: 200 B-27I 2024 AN			Lab ID: R2411234-001			
Analyte	**Results**	**Flag**	**MDL**	**MRL**	**Units**	**Method**

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Rochester Lab ID # for State Accreditations[1]

NELAP States
Florida ID # E87674
New Hampshire ID # 2941
New York ID # 10145
Pennsylvania ID# 68-786
Texas ID#T104704581
Virginia #460167

Non-NELAP States
Connecticut ID #PH0556
Delaware Approved
Maine ID #NY01587
North Carolina #36701
North Carolina #676
Rhode Island LAO00333

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory. To verify NH accredited analytes, go to https://www4.des.state.nh.us/CertifiedLabs/Certified-Method.aspx.

7199	3060A
300.0 Anions/ 350.1/ 353.2/ SM 2320B/ SM 5210B/ 9056A Anions	DI extraction
For analytical methods not listed, the preparation method is the same as the analytical method reference.	

ORGANIC

Preparation Methods for Organic methods are listed in the header of the Results pages.

Regarding "Bulk/5035A":
For soil/solid samples submitted in soil jars for Volatiles analysis, the prep method is listed as "Bulk/5035A". The lab follows the closed-system EPA 5035A protocols once the sample is transferred to a sealed vial, but collection in bulk in soil jars does not follow the collection protocols listed in EPA 5035A. In accordance with the NYSDOH technical notice of October 2012, all results or reporting limits <200 ug/kg are to be considered estimated due to potential low bias.

Laboratory Results for: Webster Quarterly Wells

Dear Julia,

Enclosed are the results of the sample(s) submitted to our laboratory November 07, 2024
For your reference, these analyses have been assigned our service request number **R2411416.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7475. You may also contact me via email at Meghan.Pedro@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Meghan Pedro
Project Manager

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Seventeen water samples were received for analysis at ALS Environmental on 11/07/2024. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

General Chemistry:

No significant anomalies were noted with this analysis.

Volatiles by GC/MS:

No significant anomalies were noted with this analysis.

Field:

No significant anomalies were noted with this analysis.

Approved by _____ Date 11/21/2024

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Cooler Receipt and Preservation Check Form

Project/Client _____ Folder Number _____

Cooler received on 11/7/24 by: NE

COURIER: (ALS) UPS FEDEX VELOCITY CLIENT

1	Were **Custody seals** on outside of cooler?	Y (N)	
2	**Custody papers** properly completed (ink, signed)?	(Y) N	
3	Did all bottles arrive in good **condition** (unbroken)?	(Y) N	
4	Circle: (**Wet Ice**) **Dry Ice** **Gel packs** present?	(Y) N	

5a	Did **VOA** vials have sig* **bubbles?**	Y (N) NA	
5b	Sig* bubbles: **Alk?** Y N (NA) **Sulfide?**	Y N (NA)	
6	Where did the bottles originate?	(ALS/ROC) CLIENT	
7	Soil VOA received as: Bulk Encore 5035set (NA)		

8. Temperature Readings Date: 11/7/24 Time: 1525 ID: IR#12 (IR#11) From: Temp Blank (Sample Bottle)

Temp (°C)	2.8	6.0	0.9	1.1		
Within 0-6°C?	(Y) N	(Y) N	(Y) N	(Y) N	Y N	Y N	Y N
If <0°C, were samples frozen?	Y N	Y N	Y N	Y N	Y N	Y N	Y N

If out of Temperature, note packing/ice condition: _____ Ice melted Poorly Packed (described below) Same Day Rule

&Client Approval to Run Samples: _____ Standing Approval Client aware at drop-off Client notified by: _____

All samples held in storage location: R002 by NE on 11/7/24 at 15:42
5035 samples placed in storage location: _____ by _____ on _____ at _____ within 48 hours of sampling? Y N

Cooler Breakdown/Preservation Check**: Date: 11/8/24 Time: 857 by: AA

9. Were all bottle labels complete (*i.e.* analysis, preservation, etc.)? YES (NO) no date or time
10. Did all bottle labels and tags agree with custody papers? YES (NO)
11. Were correct containers used for the tests indicated? (YES) NO
12. Were 5035 vials acceptable (no extra labels, not leaking)? YES NO (N/A)
13. Were dissolved metals filtered in the field? YES NO (N/A)
14. Air Samples: Cassettes / Tubes Intact Y / N with MS Y / N Canisters Pressurized Tedlar® Bags Inflated (N/A)

pH	Lot of test paper	Reagent	Preserved? Yes	Preserved? No	Lot Received	Exp	Sample ID Adjusted	Vol. Added	Lot Added	Final pH
≥12		NaOH								
≤2		HNO_3								
≤2		H_2SO_4								
<4		$NaHSO_4$								
5-9		For 608pest			No=Notify for 3day					
Residual Chlorine (-)		For CN, Phenol, 625, 608pest, 522			If +, contact PM to add $Na_2S_2O_3$ (625, 608, CN), ascorbic (phenol).					
		$Na_2S_2O_3$								
		ZnAcetate	-	-						
		HCl	**	**	22080153	6/25				

**VOAs and 1664 Not to be tested before analysis. Otherwise, all bottles of all samples with chemical preservatives are checked (not just representatives).

Bottle lot numbers: 052223-3AXH

Explain all Discrepancies/ Other Comments:

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Rochester Lab ID # for State Accreditations[1]

PREPARATION METHODS

The preparation methods associated with this report are found in these tables unless discussed in the case narrative.

INORGANIC

Water/Liquid Matrix

Analytical Method	Preparation Method
200.7	200.2
200.8	200.2
6010C or 6010D	3005A/3010A
6020A or 6020B	ILM05.3
9034 Sulfide Acid Soluble	9030B
SM 4500-CN-N-2016 Amenable and Residual Cyanide	SM 4500-CN-G and SM 4500-CN-B,C-2016
SM 4500-CN-E WAD Cyanide	SM 4500-CN-I

Solid/Soil/Non-Aqueous Matrix

Analytical Method	Preparation Method
6010C or 6010D	3050B
6020A or 6020B	3050B
6010C or 6010D TCLP (1311) extract	3005A/3010A
6010C or 6010D SPLP (1312) extract	3005A/3010A
7199	3060A
300.0 Anions/ 350.1/ 353.2/ SM 2320B/ SM 5210B/ 9056A Anions	DI extraction
For analytical methods not listed, the preparation method is the same as the analytical method reference.	

ORGANIC

Preparation Methods for Organic methods are listed in the header of the Results pages.

Regarding "Bulk/5035A":
For soil/solid samples submitted in soil jars for Volatiles analysis, the prep method is listed as "Bulk/5035A". The lab follows the closed-system EPA 5035A protocols once the sample is transferred to a sealed vial, but collection in bulk in soil jars does not follow the collection protocols listed in EPA 5035A. In accordance with the NYSDOH technical notice of October 2012, all results or reporting limits <200 ug/kg are to be considered estimated due to potential low bias.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Laboratory Results for: Webster Semiannual Wells 11/2024

Dear Julia,

Enclosed are the results of the sample(s) submitted to our laboratory December 05, 2024
For your reference, these analyses have been assigned our service request number **R2412281.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7475. You may also contact me via email at Meghan.Pedro@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Meghan Pedro
Project Manager

CC: Janice Szucs

Client: Xerox Corporation USA
Project: Webster Semiannual Wells 11/2024
Sample Matrix: Water

Service Request: R2412281
Date Received: 11/27/2024 - 12/12/2024

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

One hundred one water samples were received for analysis at ALS Environmental on 11/27/2024 - 12/12/2024. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

General Chemistry:

No significant anomalies were noted with this analysis.

Volatiles by GC/MS:

Method 8260D, 12/17/2024: The lower control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). Since there were no detections of the analyte(s) above the MRL in the associated field samples, the quantitation is not affected. The data quality was not significantly affected and no further corrective action was taken.
Method 8260D, 12/18/2024: The lower control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). Since there were no detections of the analyte(s) above the MRL in the associated field samples, the quantitation is not affected. The data quality was not significantly affected and no further corrective action was taken.
Method 8260: Samples are routinely tested for pH after analysis to confirm that any acid added was sufficient to reduce the pH to <2 to extend the holding time from 7 days to 14 days. The following sample(s) were analyzed beyond 7 days and were found to be insufficiently preserved. List samples with pH: R2412281-007.

Field:

No significant anomalies were noted with this analysis.

Report was revised, based on historical data for the site samples were labeled incorrectly in the field for locations 200 B-19DR and 200 B-19IR. The report was revised.

Approved by Date 12/20/2024

SAMPLE DETECTION SUMMARY

This form includes only detections above the reporting levels. For a full listing of sample results, continue to the Sample Results section of this Report.

Cooler Receipt and Preservation Check Form

Project/Client _____ Folder Number _____

Cooler received on 12/4/24 by: RDA COURIER: (ALS) UPS FEDEX VELOCITY CLIENT

1	Were **Custody seals** on outside of cooler?	Y (N)	5a	Did **VOA** vials have sig* **bubbles?**	Y (N) NA
2	**Custody papers** properly completed (ink, signed)?	(Y) N	5b	Sig* bubbles: **Alk?**	Y N (NA) **Sulfide?** Y N (NA)
3	Did all bottles arrive in good **condition** (unbroken)?	(Y) N	6	Where did the bottles originate?	(ALS/ROC) CLIENT
4	Circle: **Wet Ice Dry Ice Gel packs** present?	(Y) N	7	Soil VOA received as:	Bulk Encore 5035set (NA)

8. Temperature Readings Date: 12/4/24 Time: 1638 ID: IR#12 (IR#1) From: Temp Blank Sample Bottle

Temp (°C)	5.1	4.7	3.8				
Within 0-6°C?	(Y) N	(Y) N	(Y) N	Y N	Y N	Y N	Y N
If <0°C, were samples frozen?	Y N	Y N	Y N	Y N	Y N	Y N	Y N

If out of Temperature, note packing/ice condition: _____ Ice melted Poorly Packed (described below) Same Day Rule

&Client Approval to Run Samples: _____ Standing Approval Client aware at drop-off Client notified by: _____

All samples held in storage location: Rec2 by RDA on 12/4/24 at 1647
5035 samples placed in storage location: _____ by _____ on _____ at _____ within 48 hours of sampling? Y N

Cooler Breakdown/Preservation Check**: Date: 12/6/24 Time: 842 by: AA

9. Were all bottle labels complete (*i.e.* analysis, preservation, etc.)? YES (NO) no date or time
10. Did all bottle labels and tags agree with custody papers? YES (NO)
11. Were correct containers used for the tests indicated? (YES) NO
12. Were 5035 vials acceptable (no extra labels, not leaking)? YES NO (N/A)
13. Were dissolved metals filtered in the field? YES NO (N/A)
14. Air Samples: Cassettes / Tubes Intact Y / N with MS Y / N Canisters Pressurized Tedlar® Bags Inflated (N/A)

pH	Lot of test paper	Reagent	Preserved? Yes	Preserved? No	Lot Received	Exp	Sample ID Adjusted	Vol. Added	Lot Added	Final pH
≥12		NaOH								
≤2		HNO_3								
≤2		H_2SO_4								
<4		$NaHSO_4$								
5-9		For 608pest			No=Notify for 3day					
Residual Chlorine (-)		For CN, Phenol, 625, 608pest, 522			If +, contact PM to add $Na_2S_2O_3$ (625, 608, CN), ascorbic (phenol).					
		$Na_2S_2O_3$								
		ZnAcetate	-	-			**VOAs and 1664 Not to be tested before analysis. Otherwise, all bottles of all samples with chemical preservatives are checked (not just representatives).			
		HCl	**	**	24008337	1/27				

Bottle lot numbers: 093024-3AXH, no lot
Explain all Discrepancies/ Other Comments:

HPROD	BULK
HTR	FLDT
SUB	HGFB
ALS	LL3541

Labels secondary reviewed by: AA *significant air bubbles: VOA > 5-6 mm ; WC >1 in. diameter

If out of Temperature, note packing/ice condition: _____ Ice melted Poorly Packed (described below) Same Day Rule

&Client Approval to Run Samples: _____ Standing Approval Client aware at drop-off Client notified by: _____

All samples held in storage location: SHO by RDA on 12/6/24 at 1620
5035 samples placed in storage location: _____ by _____ on _____ at _____ within 48 hours of sampling? Y N

Cooler Breakdown/Preservation Check**: Date: 12/6/24 Time: 1800 by: RDA

9. Were all bottle labels complete (*i.e.* analysis, preservation, etc.)? (YES) NO
10. Did all bottle labels and tags agree with custody papers? (YES) NO
11. Were correct containers used for the tests indicated? (YES) NO
12. Were 5035 vials acceptable (no extra labels, not leaking)? (YES) NO N/A
13. Were dissolved metals filtered in the field? YES NO (N/A)
14. Air Samples: Cassettes / Tubes Intact Y / N with MS Y / N Canisters Pressurized Tedlar® Bags Inflated (N/A)

pH	Lot of test paper	Reagent	Preserved? Yes	Preserved? No	Lot Received	Exp	Sample ID Adjusted	Vol. Added	Lot Added	Final pH
≥12		NaOH								
≤2		HNO_3								
≤2		H_2SO_4								
<4		$NaHSO_4$								
5-9		For 608pest			No-Notify for 3day					
Residual Chlorine (-)		For CN, Phenol, 625, 608pest, 522			If +, contact PM to add $Na_2S_2O_3$ (625, 608, CN), ascorbic (phenol).					
		$Na_2S_2O_3$								
		ZnAcetate	-	-						
		HCl	**	**						

**VOAs and 1664 Not to be tested before analysis. Otherwise, all bottles of all samples with chemical preservatives are checked (not just representatives).

Bottle lot numbers: CA1424-3AX11

Explain all Discrepancies/ Other Comments:

Cooler Receipt and Preservation Check Form

Project/Client _____ Folder Number _____

Cooler received on 11/27/24 by: MM

COURIER: (ALS) UPS FEDEX VELOCITY CLIENT

1	Were **Custody seals** on outside of cooler?	Y (N)	
2	**Custody papers** properly completed (ink, signed)?	(Y) N	
3	Did all bottles arrive in good **condition** (unbroken)?	(Y) N	
4	Circle: (Wet Ice) **Dry Ice Gel packs** present?	(Y) N	

5a	Did **VOA** vials have sig* **bubbles?**				(Y) N NA	*
5b	Sig* bubbles: **Alk?**	Y N (NA)	**Sulfide?**	Y N (NA)		
6	Where did the bottles originate?	(ALS/ROC) CLIENT				
7	Soil VOA received as:	Bulk Encore 5035set (NA)				

8. Temperature Readings Date: 11/27/24 Time: 14:21 ID: (IR#12) IR#11 From: Temp Blank (Sample Bottle)

Temp (°C)	1.2	5.7					
Within 0-6°C?	(Y) N	(Y) N	Y N	Y N	Y N	Y N	Y N
If <0°C, were samples frozen?	Y N	Y N	Y N	Y N	Y N	Y N	Y N

If out of Temperature, note packing/ice condition: _____ Ice melted Poorly Packed (described below) Same Day Rule

&Client Approval to Run Samples: _____ Standing Approval Client aware at drop-off Client notified by: _____

All samples held in storage location: SMO by MM on 11/27/24 at 14:24
5035 samples placed in storage location: _____ by _____ on _____ at _____ within 48 hours of sampling? Y N

Cooler Breakdown/Preservation Check**: Date: 11/27/24 Time: 16:11 by: MM

9. Were all bottle labels complete (*i.e.* analysis, preservation, etc.)? YES (NO)
10. Did all bottle labels and tags agree with custody papers? YES (NO)
11. Were correct containers used for the tests indicated? (YES) NO
12. Were 5035 vials acceptable (no extra labels, not leaking)? YES NO (N/A)
13. Were dissolved metals filtered in the field? YES NO (N/A)
14. Air Samples: Cassettes / Tubes Intact Y / N with MS Y / N Canisters Pressurized Tedlar® Bags Inflated (N/A)

pH	Lot of test paper	Reagent	Preserved? Yes	Preserved? No	Lot Received	Exp	Sample ID Adjusted	Vol. Added	Lot Added	Final pH
≥12		NaOH								
≤2		HNO_3								
≤2		H_2SO_4								
<4		$NaHSO_4$								
5-9		For 608pest			No=Notify for 3day					
Residual Chlorine (-)		For CN, Phenol, 625, 608pest, 522			If +, contact PM to add $Na_2S_2O_3$ (625, 608, CN), ascorbic (phenol).					
		$Na_2S_2O_3$								
		ZnAcetate	-	-						
		HCl	**	**	24008337	1/27				

**VOAs and 1664 Not to be tested before analysis. Otherwise, all bottles of all samples with chemical preservatives are checked (not just representatives).

Bottle lot numbers: 093024-3AXH

Explain all Discrepancies/ Other Comments:

* 1 vial: B-7B228

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Rochester Lab ID # for State Accreditations[1]

NELAP States
Florida ID # E87674
New Hampshire ID # 2941
New York ID # 10145
Pennsylvania ID# 68-786
Texas ID#T104704581
Virginia #460167

Non-NELAP States
Connecticut ID #PH0556
Delaware Approved
Maine ID #NY01587
North Carolina #36701
North Carolina #676
Rhode Island LAO00333

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory. To verify NH accredited analytes, go to https://www4.des.state.nh.us/CertifiedLabs/Certified-Method.aspx.

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

PREPARATION METHODS

The preparation methods associated with this report are found in these tables unless discussed in the case narrative.

INORGANIC

Water/Liquid Matrix

Analytical Method	Preparation Method
200.7	200.2
200.8	200.2
6010C or 6010D	3005A/3010A
6020A or 6020B	ILM05.3
9034 Sulfide Acid Soluble	9030B
SM 4500-CN-N-2016 Amenable and Residual Cyanide	SM 4500-CN-G and SM 4500-CN-B,C-2016
SM 4500-CN-E WAD Cyanide	SM 4500-CN-I

Solid/Soil/Non-Aqueous Matrix

Analytical Method	Preparation Method
6010C or 6010D	3050B
6020A or 6020B	3050B
6010C or 6010D TCLP (1311) extract	3005A/3010A
6010C or 6010D SPLP (1312) extract	3005A/3010A
7199	3060A
300.0 Anions/ 350.1/ 353.2/ SM 2320B/ SM 5210B/ 9056A Anions	DI extraction
For analytical methods not listed, the preparation method is the same as the analytical method reference.	

ORGANIC

Preparation Methods for Organic methods are listed in the header of the Results pages.

Regarding "Bulk/5035A":
For soil/solid samples submitted in soil jars for Volatiles analysis, the prep method is listed as "Bulk/5035A". The lab follows the closed-system EPA 5035A protocols once the sample is transferred to a sealed vial, but collection in bulk in soil jars does not follow the collection protocols listed in EPA 5035A. In accordance with the NYSDOH technical notice of October 2012, all results or reporting limits <200 ug/kg are to be considered estimated due to potential low bias.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

RE: REC-5 Well Development, Xerox Webster Campus, Webster, NY.

On November 6th, 2024, Colliers Engineering and Design (CED) and Nothnagle Drilling removed sediment from the bottom of Well REC-5, located to the west of Building 224 on the Xerox Webster, NY Campus. The well was developed and cleaned to facilitate the installation of the well pump.

Prior to removing sediment, a measurement was taken from the top of casing (TOC) down to the top of the sediment. That measurement was 35 feet 2 inches.

A tremie rod with a pump connection was then inserted to the bottom of the well. Suction was used to pull the sediment through the pump where it was discharged into 55-gallon drums. Between increments the well was blasted to remove additional sediment and given time to recharge. During suction, municipal water was injected in the well while the tremie rod was moved up and down into the sediment at the bottom of the well to loosen the material up and to increase recovery. Gravel was recovered and disposed of into the 55-gallon drums.

Approximately three (3) 55-gallon drums (165 gallons total) of orangish-brown water and sediment were removed from REC-5. After removal the tremie rod was used to tap the bottom of the well to confirm that it was a hard surface with no noticeable debris. The final well depth after sediment removal was 35 feet 3 inches feet from TOC. CED and Nothnagle noted that most of the sediment was stuck on the well screen itself. More than 1 inch of sediment was removed from the well screen. The change in well depth is not indicative of the volume of sediment removed from the well.

Xerox supplied labels for the drums of purge water and sediment and transported the drums to a 90-day storage area, located in building 348 to allow the sediment to settle before the groundwater was pumped into the groundwater treatment system for disposal.

Sincerely,

Mary K. Legawiec

RE: REC-13 Well Development, Xerox Webster Campus, Webster, NY.

On August 8th, 2024, Colliers Engineering and Design (CED) and Nothnagle Drilling removed sediment from the bottom of Well REC-13, located to the north-east of Building 214 on the Xerox Webster, NY Campus. The well was developed and cleaned to facilitate the installation of the well pump.

Prior to removing sediment, a measurement was taken from the top of casing (TOC) down to the top of the sediment. That measurement was 36.5 feet.

A tremie rod was then inserted to the bottom of the well and connected to a pump mounted on a drill rig. A pump mounted on a drill rig was inserted to the bottom of the well. Suction was used to pull the sediment through the pump where it was discharged into 55-gallon drums. Between increments the groundwater in the well was allowed to recharge and settle before pumping. During suction, municipal water was injected in the well while the tremie rod was moved up and down into the gravel sediment at the bottom of the well to loosen the material up and to increase recovery. Zip ties and other debris was during the development process.

Approximately 165 gallons of water and sediment were removed from REC-13. After removal the tremie rod was used to tap the bottom of the well to confirm that it was a hard surface with no noticeable debris. The final well depth after sediment removal was 36.7 feet from TOC, indicating that 0.2 feet of sediment was removed.

Xerox supplied labels for the drums of purge water and sediment and transported the drums to a 90-day storage area, located in building 348 to allow the sediment to settle before the groundwater was pumped into the groundwater treatment system for disposal.

Sincerely,

Mary K. Legawiec

RE: REC-21 Well Development, Xerox Webster Campus, Webster, NY.

On August 8th, 2024, Colliers Engineering and Design (CED) and Nothnagle Drilling removed sediment from the bottom of Well REC-21, located to the east of Building 224 on the Xerox Webster, NY Campus. The well was developed and cleaned to facilitate the installation of the well pump.

Prior to removing sediment, a measurement was taken from the top of casing (TOC) down to the top of the sediment. That measurement was 34 feet.

A tremie rod was then inserted to the bottom of the well and connected to a pump mounted on a drill rig. A pump mounted on a drill rig was inserted to the bottom of the well. Suction was used to pull the sediment through the pump where it was discharged into 55-gallon drums. Between increments the groundwater in the well was allowed to recharge and settle before pumping. During suction, municipal water was injected in the well while the tremie rod was moved up and down into the sediment at the bottom of the well to loosen the material up and to increase recovery. No gravel noted during the process.

Approximately 165 gallons of water and sediment were removed from REC-21. t The water was black-grey within the first 55-gallon drum, black-brown for the second 55-gallon drum, and iron-tinted reddish color in the final 55-gallon drum. After removal the tremie rod was used to tap the bottom of the well to confirm that it was a hard surface with no noticeable debris. The final well depth after sediment removal was 37.4 feet from TOC, indicating that 3.4 feet of sediment was removed.

CED and Nothnagle Drilling noted iron build-up on the end of the pump. Removal of excessive iron is recommended prior to reinstallation into the recovery well.

Xerox supplied labels for the drums of purge water and sediment and transported the drums to a 90-day storage area, located in building 348 to allow the sediment to settle before the groundwater was pumped into the groundwater treatment system for disposal.

Sincerely,

Mary K. Legawiec

Attention: Julia Ispentchian

Subject: Inactive Landfill Cap Inspection Results
Webster, New York Facility

Colliers Engineering and Design (CED) conducted a visual inspection of the asphalt cap associated with the inactive landfill at the Xerox Corporation (Xerox) Webster, New York facility (the Site) on August 1, 2024. The purpose of the inspection was to fulfill the requirements of the Site's New York State Department of Environmental Conservation Hazardous Waste Management Part 373 Permit. The inactive landfill is situated north of Caracas Drive in the vicinity of Building 343, see Figure 1. Maintenance issues, such as vegetative growth, cracks, and holes in the landfill cap that could potentially compromise the ability of the cap to reduce surface water infiltration into the landfill proper were identified.

INSPECTION OBSERVATIONS

Attached is a photograph log of the landfill cap condition taken during the inspection. The log includes 39 photographs that document the general condition and issues apparent at the time of the inspection.

Appendix A – Inactive Landfill Cap Inspection Photographs, includes photos of the overall landfill cap and disturbances on the cap. The following conditions were observed on the landfill cap during the August site visit:

1. Cracks were observed along asphalt seams and tar patches.
2. Cracks were observed in areas without previous, documented cracking.
3. Vegetation was observed penetrating through the asphalt cap throughout.
4. Cracks were observed extending from previously existing and documented cracks.
5. Vegetative growth was observed penetrating through the asphalt and along the fence.
6. Gravel/rock debris noted in the northeast corner of the building along the eastern boundary of the cap.

CONCLUSIONS AND RECOMMENDATIONS

Overall, the cap requires relatively simple repair and maintenance to minimize infiltration of surface water into the landfill. Several repaired cracks were observed to show signs of settling and splitting. The majority of the new cracks observed were short in length (1 to 5 feet) with vegetation growing out of it.

The recommended repairs for the vegetated areas are to remove the vegetation by applying a commercially available herbicide, such as Roundup® Weed & Grass Killer Ready-to-Use Plus, and to reseal large penetrations where plants have penetrated the landfill cap.

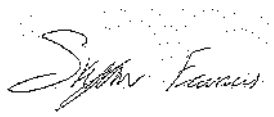
On July 21, 2011, the New York State Department of Environmental Conservation (NYSDEC) approved the application of this herbicide to the landfill cap in correspondence with Haley & Aldrich (see Appendix B). The approach to use this herbicide was approved for use in subsequent years as needed. To maintain the integrity of the cap perimeter and to prevent further maintenance problems caused by vegetation controls (e.g., trimming around the cap perimeter) should continue to be implemented. If these issues are not addressed, they could eventually compromise the performance of the cap. Therefore, CED recommends that the cap be repaired by a qualified asphalt contractor.

It is recommended that Xerox schedule a field visit with JLL to review the necessary repairs on the landfill cap before repair work is conducted. This work is anticipated to be completed during the fall of 2024.

We appreciate the opportunity to provide consulting services on this project. Please do not hesitate to call if you have any questions or comments.

Sincerely yours,

COLLIERS ENGINEERING AND DESIGN



Skylar Francis

Tel: 585.359.9000
Fax: 585.359.4650
HaleyAldrich.com

19 July 2011
File No. 36909-507

Mr. Thomas Festa
New York State Department of Environmental Conservation
Division of Environmental Remediation, Bureau E
625 Broadway
Albany, NY 12233

Subject: Use of Herbicide at Inactive Landfill Cap
Xerox Corporation
Webster, New York

Dear Mr. Festa:

On 28 June 2011, Haley & Aldrich conducted a visual inspection of the asphalt cap associated with the Inactive Landfill located on Caracas Drive at the Xerox Webster, New York facility. During the inspection, areas were observed where vegetation is penetrating through the asphalt cap, increasing the potential for infiltration of surface water into the landfill proper. Vegetation in these areas has been persistent, returning from year to year despite physical removal methods and resealing.

The purpose of this letter is to document our telephone conversation with you on 8 July 2011 and to confirm your verbal approval of the proposed approach to address the vegetation. As discussed and approved by you, the plan to address these areas is to apply a commercially available herbicide, such as Roundup® Weed & Grass Killer Ready-to-Use Plus, to kill the vegetation prior to resealing the penetrations. The intent is to kill the vegetation at the root and to reduce the frequency and number of areas of this recalcitrant vegetative growth. It is anticipated that approximately one (1) gallon of the herbicide will be point-applied according to manufacturer's directions to vegetation growing at various locations scattered throughout the landfill cap. This approach will be taken to address the vegetative growth observed during this year's inspection and in subsequent years as needed.

If you have any questions or concerns, please contact Janice Szucs at 585-321-4211 or jszucs@haleyaldrich.com.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Attention: Julia Ispentchian

Subject: Inactive Landfill Cap Repair Report 2024
Webster, New York Facility

Dear Mrs. Ispentchian:

Colliers Engineering and Design (CED) is pleased to provide this letter to document the repair activities performed on the asphalt cap of the inactive hazardous waste landfill at the Xerox Corporation (Xerox) Webster, New York facility. This cap was constructed in 1990 as part of the corrective measures implemented at the Xerox Webster facility. Routine maintenance of the asphalt cap is required to maintain the integrity of the cap system. The landfill is shown on the attached Figure 1 - Xerox Corporation Inactive Landfill.

A landfill cap inspection, performed by Bergmann on August 1, 2024, identified areas of the landfill cap which were in need of repair. These issues required attention in order to maintain the integrity of the cap and prevent further damage from occurring. Xerox reviewed the 2024 Landfill Inspection Report provided by CED and utilized the Xerox Facilities Department to subcontract the repairs. The work was performed and completed in October 2024.

The repair work began with the application of a commercial herbicide product to kill weeds growing out of the existing asphalt cracks by Xerox Facilities Department. Xerox Facilities also removed leaf and stone debris on the cap. Following this work, Xerox contracted a third-party for the application of hot tar crack filler designed to fill asphalt cracks in the cap.

CED conducted a post repair inspection on October 15, 2024. The 2024 repair work was successfully completed to maintain the performance of the cap system. Continued routine inspections and timely maintenance activities will be important elements to maintain the integrity of the cap system. Photographs from the October 15, 2024, work are included with this report.

Sincerely yours,

Mary Legawiec, MSc
