State Superfund Site Classification Notice

The Inactive Hazardous Waste Disposal Site Program is New York State's superfund program for identifying, investigating, and cleaning up sites where the disposal of hazardous waste may present a threat to public health and/or the environment. The New York State Department of Environmental Conservation (DEC) maintains a list of these sites in the Registry of Inactive Hazardous Waste Disposal Sites (Registry). The site identified above, and located on a map on the reverse side of this page, has been added to the Registry as a Class 2 site that presents a significant threat to public health and/or the environment for the following reason(s):

- Elevated levels of volatile organic compounds (VOCs) are present in on-site soil, groundwater, soil vapor, and indoor air. VOCs are also present at elevated levels in groundwater off-site. Applicable standards, criteria and guidance values are exceeded for trichloroethene in groundwater (6,400 micrograms per liter off-site). Further investigation is needed to identify the nature and extent of contamination and to evaluate potential exposure pathways.

DEC will keep you informed throughout the investigation and cleanup of the site.

If you own property adjacent to this site and are renting or leasing your property to someone else, please share this information with them. If you no longer wish to be on the contact list for this site or otherwise need to correct our records, please contact the DEC Project Manager listed below.
