Work Plan	P-Site Characterization Work Plan: Corning Refractories Plant

EXECUTIVE SUMMARY

Integral Engineering, P.C. (Integral), on behalf of Corning Incorporated (Corning), has prepared this Site Characterization Report (Report) to provide the results of the 2022 and 2023 investigation work performed at the former Corning Refractories Plant (Refractories) (New York State Department of Environmental Conservation [NYSDEC] Site No. 851048). Refractories is located at 1 Front Street in Corning, Steuben County, New York (the Property). The site characterization was conducted in accordance with the NYSDEC-approved P-Site Characterization Work Plan (Work Plan; Integral 2022), and included a boundary survey, geophysical survey, drilling of soil borings, logging of soil cores, installation of monitoring wells, and soil and groundwater sampling.

The investigations performed to date, including the Phase I and Phase II site investigations (Haley & Aldrich 2014 a,b) and this site characterization, have included 33 soil sample locations and 12 groundwater sample locations for a total of 107 soil samples and 16 groundwater samples collected for laboratory analysis. These investigations provide consistent findings and offer a comprehensive characterization of subsurface and groundwater conditions at the Property. ~~The results of these investigations serve to fully delineate the nature and extent of any impacts on the Property (excluding those associated with the former manufactured gas plant [MGP] facility). The findings of these investigations confirm that there are no impacts associated with the former Refractories operations that pose a threat to human health or the environment. The site characterization has fulfilled the scope of work required under the Work Plan, and the results indicate that a remedial investigation is not warranted on the Property. Within the former MGP footprint, the NYSEG MGP site investigation includes data collection to further characterize impacts associated with the former MGP facility~~The requirements of the Site Characterization, as per the NYSDEC-approved Site Characterization Work Plan, have been met and the Site Characterization is complete.

The results of the site characterization are summarized below:

- The Property is underlain by ~~generally high-quality~~ construction fill material that largely consists of sand and sandy silt with incidental ash or building brick, typical of industrial fill material. There is no clear layer or pattern of ash, brick, and/or glass that may be associated with Corning-related material used on the Property. The ~~high-quality~~ construction fill present at the Property was likely brought in during historical construction activities and is not associated with historical disposal or floodplain development. Non-native fill materials such as incidental ~~red building~~ brick (primarily red building brick), slag, glass, ash, and coal were observed and documented in the boring logs in discontinuous zones or pockets of material, not consistent with disposal.
- There are widespread occurrences of low-level exceedances of the relevant soil cleanup objectives (SCOs; industrial and protection of groundwater) for metals and polycyclic

aromatic hydrocarbons (PAHs) that are consistent with historical industrial use. Potential sources include:

  - Metals and PAHs associated with the former New York Central Railroad along and adjacent to the former rail tracks and historical foundry operations.
  - Metals and PAHs associated with industrial fill containing various types of incidental ash and combustion byproducts, which are typically observed at historical industrial-use locations.
  - PAHs, volatile organic compounds, and metals associated with the former ~~MGP~~manufactured gas plant (MGP) facility in the southeast corner of the Property, and potentially migrating horizontally and vertically through the subsurface.

- There are sporadic elevated lead concentrations that appear to be associated with observations of incidental ash in fill material.
- There is no pattern of SCO exceedances horizontally or vertically in the soil column, indicating the soil has been reworked over time, and that specific sources (e.g., cracks in impervious surfaces or concrete or masonry that is not completely watertight) of historical or ongoing contamination are not likely (with the exception of the former MGP facility).
- The constituents observed in the soil are consistent with those found during previous investigations. There is no indication of use or disposal of hazardous substances beyond the limited use understood from historical operations (Corning 1967).
- Two soil boring locations seem to have a different analytical signature, SB4 and SB6. SB4 was located on the northern boundary of the Property and installed inside one of the buildings. Shallow fill was observed in this boring from 0 to 2.5 ft below ground surface (bgs). The laboratory results showed high levels of lead and dibenz[*a*,*h*]anthracene. SB6 was drilled in the grass on the southeastern corner of the Property. This location is associated with a historical MGP. The analytical results at SB6 have multiple PAH and metals exceedances, which would be associated with material from the former MGP operations. The surface and subsurface of the southeastern corner in the vicinity of the SB6 location is within the footprint of the MGP site characterization.
- There were limited groundwater exceedances found during the site characterization, and only for sodium, with one exception. A single benzene exceedance was observed in one location, and that was notably within the footprint of the former MGP site. These results confirm the lack of current or future mobility of the substances detected in the soil investigation and the matrix in which they were detected (i.e., no observations of indications of the presence of product/nonaqueous-phase liquid); none of the constituents that exceeded the protection of groundwater SCO in soils were observed to exceed the Class GA groundwater water quality standard.

- There were no direct observations of evidence of spills of regulated substances in soils or dissolved-phase plumes in groundwater, or indirect evidence that would be indicated by elevated concentrations declining with distance away from a potential source to groundwater.
- The relatively uniform elevated arsenic signature across the Property suggests some influence on the soil chemical characteristics attributable to the black shales native to the region, which are enriched in sulfides and metals such as arsenic and cadmium (Paikaray 2012; Duan et al. 2020). Lead is also a known element in the minerals commonly associated with such rocks in the region. Evidence of the presence of these and similar source rocks (e.g., silt particles, subangular gravels) in soil borings was observed at multiple locations.

The generally limited soil and groundwater exceedances and the presence of concrete slabs~~,~~ and pavement~~, or grass cover~~ that span ~~the totality~~approximately 80–85 percent of the Property limit contaminant fate and transport pathways. There is limited ~~or no~~ water infiltration, and therefore limited opportunity for ~~and no indication of~~ horizontal or vertical transport of contaminants through the soil. The limited transport of contaminants through the soil to groundwater is confirmed by the general lack of ~~meaningful~~ water quality exceedances in groundwater.

Potential exposure pathways at the Property could include contact with soil and/or groundwater. However, it should be noted that the Property is located within a secure fenced area, and the concrete slabs, pavement, and grass cover are present over the entirety of the Property, thus limiting current exposure to soil. Exposure to groundwater is an incomplete pathway ~~due to the general lack of water quality exceedances in~~because groundwater~~.~~[1] is not used for potable purposes at or around the site.

[1] ~~The one exception is benzene in the former MGP footprint; this area is part of the New York State Electric & Gas Corporation MGP site investigation.~~

1 INTRODUCTION

Integral Engineering, P.C. (Integral), on behalf of Corning Incorporated (Corning), has prepared this Site Characterization Report (Report) to provide the results of the 2022 and 2023 investigation work performed at the former Corning Refractories Plant (Refractories) (New York State Department of Environmental Conservation [NYSDEC] Site No. 851048). Refractories is located at 1 Front Street in Corning, Steuben County, New York (Figure 1-1) (the Property). The site characterization was conducted in accordance with the NYSDEC approved P-Site Characterization Work Plan (Work Plan; Integral 2022), and included a boundary survey, geophysical survey, drilling of soil borings, logging of soil cores, installation of monitoring wells, and soil and groundwater sampling.

1.1 CHARACTERIZATION REPORT ORGANIZATION

This Report follows the guidance for investigation work plans as described in Section 3.3 of DER-10 (NYSDEC 2010). This Report includes the following:

- Section 1—Introduction
- Section 2—Previous Investigations
- Section 3—Conceptual Site Model
- Section 4—Characterization Activities
- Section 5—Data Management and DUSR
- Section 6—Nature and Extent of Contamination
- Section 7—Site Characterization Findings
- Section 8—References.

The following appendices are included in this Report:

- Appendix A—Property Boundary Survey Map
- Appendix B—Weekly Update Reports
- Appendix C—Disposal Documentation
- Appendix D—Photo Log
- Appendix E—Boring/Monitoring Well Logs
- Appendix F~~—Laboratory Reports~~—Well Development Logs and Groundwater Sampling Logs

- Appendix G—Final Data Usability Summary Report
- Appendix H—Laboratory Reports. ~~Final Data Usability Summary Report.~~

1.2 BACKGROUND

In 2015, NYSDEC classified the Property as a State Superfund Program Classification P (potential) site. The P site classification was based on the findings of Phase I/II environmental site assessments (ESAs) performed in 2014 (Haley & Aldrich 2014 a,b); a 1967 report, *Report on Industrial Waste Water Discharges to the Chemung River from Corning Glass Works Plants Located in Corning, New York*~~,~~ (Corning 1967); and an environmental spill reported to NYSDEC Spills Division in June 2014 (Spills #1402937) (NYSDEC 2015). This site characterization was performed in accordance with DER-10 to determine if the Property poses a threat to public health or the environment and if further investigation is required.

1.3 REFRACTORIES OPERATIONAL HISTORY

Refractories manufactured refractories materials from the 1930s until it was shut down in 2014. Operations consisted of mixing, forming, baking, and finishing refractory-type material (i.e., temperature-resistant material such as bricks to be used in kilns or furnaces) and using ceramic material in the production of cast items such as heater panels and drain casts (Corning 1967).

Materials used in the previous Refractories manufacturing process include alumina, zircon, and clay (Corning 1967). Rinse water from operations was discharged to dry wells, and water from cooling operations was discharged to floor drains and/or sump pits (Corning 1967). Most of the waste/rinse water contained dry solid material (listed above) consistent with Refractories' operations. The water-borne wastes from ~~the~~ Refractories~~y Plant~~ were discharged to the Chemung River through a 12-in. pipe identified as Outfall #13 (Corning 1967). The waste discharged included wash water and floor scrapings, which was first transferred to a settling tank in the floor that then overflowed to the storm sewer. Cooling water and floor scrapings from the Ball Mill were transferred to a settling tank in the floor, and overflow from this tank discharged to Outfall #13. Cooling water was transferred to waste drains, and then trench drains connected to a manhole (cleaned every 3 months); overflow from the manhole led to a catch basin (cleaned every 6 months) and then to Outfall #13 (Tables 5 and 6, Corning 1967). Some solvent and paint strippers were generated from the forming room and mineral solids from the casting room. The finishing area operations had minimal use of petroleum products (water soluble oil) for machine and cutting equipment (Integral 2022). ~~The~~ Refractories ~~Plant~~ had many drains/drainage structures, not all of which discharged to the Chemung River, as shown on the Corning Refractories Plant Multi-Sector General Permit (NYR00E145) Storm Water Map included in the Risk Logic Inc. Property Loss Prevention Report, which is Appendix B of the Haley & Aldrich (2014a) Phase I Environmental Site Assessment. The City of Corning

issued an Industrial Sewer Use Permit for Refractories' discharges to the sewer system (Permit No. SIU-04, effective 2/1/2012–2/6/2017) and NYSDEC issued a SPDES Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activity for Refractories' stormwater discharges (GP-0-12-001) (Haley & Aldrich 2014a).

Another industrial facility that operated on the southeast portion of the Property was a former manufactured gas plant (MGP) with large gas holders (Figure 1-2). This portion of the Property is part of the investigation and sampling by New York State Electric & Gas Corporation (NYSEG) under NYSDEC Site #851035 Corning Chestnut Street Former Manufactured Gas Plant Site.

1.4 ENVIRONMENTAL SETTING

The Property consists of a ±102,882-ft^2 slab-on-grade structure situated on 3.87 acres of land. The Property is located on the eastern side of Bridge Street, on the south side of Front Street and approximately 350 ft south of the Chemung River (Figure 1-1). Refractories comprises 13 interconnected buildings/additions and was used by Corning for the manufacture of refractory brick for Corning use. Refractory manufacturing occurred between the 1930s, when Corning acquired the property, and 2014. Historically, the Property was used for industrial and residential purposes since the late 1800s. The historical industrial uses include a foundry, railroad tracks, and lumber yard (Haley ~~and~~& Aldrich 2014a).

1.4.1 Land Use

The Property is located in a primarily commercial area in the City of Corning. The Property is composed of two different tax parcels, both of which are zoned as business development by the City of Corning. The northwestern portion of the property that contains Refractories is approximately 3.21 acres, and the City property class is high-tech manufacturing (Tax Map ID 317.08-01-057.000). The southeastern portion of the Property, which was separated by the former New York Central Railroad line until the mid-1990s, is approximately 0.66 acre, and the City property class is vacant land in commercial area (Tax Map ID 317.08-01-053.200) (Integral 2022). The current industrial manufacturing end use is acceptable under business development zoning. There are no current plans to change the use of the Property.

The Property has undergone considerable changes in industrial use and development since the late 1880s. In particular, the Property has a long history of railroad operations (construction, maintenance, and demolition of railroad tracks and ancillary infrastructure, and locomotive, freight, and other railway vehicle transportation on and across the property) first recorded in the 1893 Sanborn map. The 1893 Sanborn map showed multiple railroad tracks bisecting the Property, entering from the southwest corner near Bridge Street, turning northward, and exiting at the northeast corner. The multiple rail tracks converged down to one track to go over the

Chemung River on a rail bridge. The rail line was still present dividing the Property through at least 1968 as shown on the 1968 Sanborn map and 1968 aerial image. The next aerial image was taken in 1995 and shows the Property underwent significant changes during the 27-year period. There was no longer a rail yard on the western side of Bridge Street, and the railroad tracks that bisected the Property had been removed along with the rail bridge over the Chemung River (Integral 2022).

The properties adjacent to the Property include other parcels zoned as business development and commercial. The parcel north of the Property is zoned as business development (City of Corning 2022) and consists of a parking area and Front Street. Further north, the land adjacent to the Chemung River is zoned as public/conservation land and includes the NYS Flood Control Levee (City of Corning 2022). The property immediately east of the Property includes a New York State Electric & Gas Corporation electric substation, parking lots, and Corning Headquarters building, all zoned as business development (City of Corning 2022). The properties immediately south of the Property include railroad tracks beyond which is a credit union, Market Street, and public parking lots zoned as business development and commercial. Bridge Street is located immediately west of the Property and beyond is Wegmans Food Markets Inc. zoned as commercial (City of Corning 2022).

1.4.2 Topography and Drainage

The Property is generally flat, with gentle slope to the north toward the Chemung River. The Corning, New York, 1976 U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle map indicates that the Property is approximately 934 ft above mean sea level.

The USGS land cover maps classify the area land cover as "high intensity developed" (https://www.mrlc.gov/viewer/). The Property is south of the Chemung River and the flood control berm. The Property is not located within the Federal Emergency Management Agency 100-year or 500-year flood zones (Integral 2022).

1.4.3 Geology and Soils

The Property is located in the Chemung River valley and contains predominantly sand, silt, and gravel deposits of glaciofluvial origin and more recent alluvial deposits (Miller et al. 1982). In the vicinity of the Property, alluvial silt, sand, and gravel overlie high-permeability glacial outwash sand and gravel that is present at a depth of approximately 16 to 20 ft below ground surface (bgs). An approximate 10-ft-thick lens of low-permeability lake silt and clay is present within the glacial outwash sand and gravel throughout the site and much of Steuben County (Miller et al. 1982). At the Property, the lake silt and clay lens is present at approximately 26 to 30 ft bgs.

Bedrock underlying the area consists of flat-lying shale, limestone, siltstone, and sandstone that was eroded by preglacial drainage and is present in the vicinity of the Property at approximately 100 ft bgs (Olcot 1995). The mineralogic composition of the regional siltstone and shales is known to contain trace concentrations of naturally occurring metals, including but not limited to arsenic and lead. (Paikaray 2012; Roen 1984).

The presence of fill has been observed at the Property: "Fill soil comprised predominantly of reworked soil with lesser amount of ash derived from coal and small to trace amount of red brick fragments at some locations" (Haley & Aldrich 2014b).

1.4.4 Hydrogeology

The saturated portions of the Chemung River valley deposits are recharged principally through the infiltration of precipitation. This valley-filled glacial/alluvial aquifer is generally unconfined (i.e., the water table forms the upper boundary of the aquifer) and saturated approximately to the elevation of nearby rivers. Groundwater in the valley-filled glacial/alluvial aquifer generally flows toward and discharges to principal streams (Olcot 1995).

2 PREVIOUS INVESTIGATIONS

Previous studies at the Property have included Phase I and Phase II ESAs, and field reconnaissance and decommissioning work completed in 2021. The findings of these investigations are summarized below.

2.1 PHASE I/II ENVIRONMENTAL SITE ASSESSMENTS

Haley ~~and~~& Aldrich, on behalf of Corning, performed Phase I and Phase II ESAs of the Property[2] (Haley ~~and~~& Aldrich 2014a,b). The Phase I ESA identified recognized environmental conditions (RECs) relating to former operations of Refractories, as well as potential impacts from historical activities on and off the Property. The RECs included ~~subsurface~~an undocumented site drainage system with five drainage structures ~~identified~~shown as ~~suspected~~unconfirmed/possible dry wells on a drawing provided by Corning, the unknown nature of surface soil fill material on the Property from historical use and development, and the possibility for the presence of waste material associated with a historical MGP near the Property (Figure 1-2~~), and reported spills in the general area of the Property associated with chlorinated solvents (trichloroethene [TCE] and tetrachloroethene [PCE]) from unidentified sources (Haley and Aldrich 2014a).~~) (Haley & Aldrich 2014a).

A Phase II ESA was performed to assess the potential for release of substances associated with the RECs identified in the Phase I ESA. Key findings of the Phase II ESA are ~~quoted below~~ as follows:

- "Fill soil comprised predominantly of reworked soil with lesser amount of ash derived from coal and small to trace amount of red brick fragments at some locations. This material appears characteristic of fill historically used during development and was encountered throughout the Site at depths of 4 to 10 feet across the ~~Refractories p~~Property. In general, results of composite samples intended to characterize the fill strata did not indicate detectable levels of the analyzed parameters with exception of slight exceedances of several naturally occurring metals. These detections appear to be indicative of ambient conditions and not related to the Refractories operation. Several discreet fill samples were also collected targeted to the locations where elevated photoionization detector (PID) readings and/or black staining was observed during drilling indicating potentially impacted soil. The results of discreet fill samples did not indicate detectable levels of the analyzed parameters with exception of several metals and semi-volatile organic compounds (SVOCs). A cyanide detection and several inorganics detections were detected above the comparison criteria as were the SVOCs. These substances are characteristic of MGP waste that were obtained in the area of the P

[2] The Phase II ESA included the Refractories Property as well as a small area off-site to the north.

~~Refractories p~~roperty where the historic MGP waste is identified, and do not appear associated with the Refractories operation.

- Contaminants were detected in soil and groundwater on the property that appear linked to MGP waste based on observations of naphthalene/tar-like odors and low level PID readings during drilling. Cyanide was also detected and is linked to MGP as related to ferro-cyanide generation from gas filtration associated with the gas purification process. MGP impacts may extend broadly within the ~~Refractories p~~Property based the Phase II ESA. We understand a responsible party other than Corning has been identified who will undertake the investigation and remediation of MGP waste with Corning's review and approval. Nevertheless, Corning should anticipate that future investigation and remediation of the MGP waste may significantly affect/disturb the P~~Refractories p~~roperty as well as other Corning property. The scope and timing of these activities will need to be taken in account relative to demolition and future development of the ~~Refractories p~~Property.
- Five drainage interior and exterior structures are shown on a figure provided by the facility that are identified as "suspected dry wells" in the Phase I ESA. Facility personnel were not certain of the origin of the figure or information depicted or the purpose and function of these structures. One drainage structure had solid sidewalls and an open bottom, two other contiguous structures appear to be interconnected and may function as a dry well possibly associated with stormwater discharge; one structure appears to have a solid concrete bottom and sidewalls (apparent sump); and one of the interior structures was previously closed and sealed/covered by concrete level with the floor surface. Additional assessment would be required to confirm construction of these structures as dry wells. Soil and groundwater sampling at these locations were mostly reported as non-detect with the exception of two metals and certain SVOCs detected in samples obtained within the drainage structures. These detections appear incidental lacking detection of any of these or other substances in soil and groundwater samples obtained from adjacent and nearby borings and temporary wells.

  From a regulatory perspective, unless further confirmation can be obtained to determine that the purpose and function of these structures are not as dry wells, regulatory exposure may be needed to notice the closure of these structures under the USEPA Underground Injection Control (UIC) program. This program requires filing of a work plan with advance approval by USEPA that provides pertinent background and describes the closure and assessment process for these structures. Filing of a closure report after the work is done is also required. In our experience with this program, USEPA will copy/inform the New York State Department of Environmental Conservation (NYSDEC) Division of Water on communications who may or may not choose to become involved or provide additional requirements on the closure process. While results of the Phase II sampling within and/or directly adjacent to each of the drainage structures do not indicate presence of environmental impact from prior use,

closure may necessitate regulatory exposure and response to the extent that additional investigation or closure/remedial action is required by the agencies.

- The comprehensive suite of volatile organic compounds (VOCs), including the chlorinated substances associated with the reported spills in the area of the Property, ~~Refractories facility~~ were analyzed in soil and ground water samples obtained broadly across the P~~Refractories p~~roperty including in soil samples obtained from within the suspected dry wells. The ground water samples were obtained from locations within and at each outside perimeter boundary of the P~~p~~roperty. Other than the petroleum related BTEX compounds obtained in the MGP area there were no VOCs detected above laboratory detection limits in any of the samples obtained during this investigation.
- Apparent petroleum was observed during the Phase II boring program ~~that~~and was reported to the NYSDEC Bureau of Spill Response upon discovery ~~and~~. NYSDEC Spill File Number 1402937 was assigned to this matter. ~~Response and/or closure of this Spill File will require follow-up and reporting to NYSDEC to document~~ Based on the ~~nature of the apparent spill, its significance relative to NYS standards, and whether additional~~Phase II investigation ~~or remedial action is warranted to mitigate the condition. Based on this Phase II, it appears the conditions reported are~~, the spill appeared to be linked to ~~the~~ MGP ~~waste~~residuals and thus will be investigated and managed by the party responsible ~~party. Any future requirements by NYSDEC~~ for ~~further investigation to support closure of the associated Spill File will be determined based on future Corning submittals and NYSDEC concurrence with the findings, which at this point indicate the reported petroleum~~the former MGP site. The spill ~~to be associated with MGP residuals~~record was closed on May 12, 2022.
- The Phase II ESA included a pre-demolition asbestos survey of the Refractories building and fixed equipment contained therein. The survey was performed by Colden Corporation (Colden) of Syracuse, New York under subcontract to Haley & Aldrich. Results of this survey which identifies the location, quantity, and condition of asbestos containing material (ACM) is contained in an asbestos survey report by Colden dated 31 July 2014. Colden identifies several ACMs with recommendations for abatement of this material and provided an estimate for abatement of the ACM as necessary for demolition of the Refractories building dated 4 August 2014.The Colden reports have been provided to Corning under separate cover~~."~~.

2.2 FIELD RECONNISSANCE AND DECOMMISSIONING ACTIVITIES

Integral performed a field reconnaissance and visual inspection of the Property on April 13, 2021. The objective of the reconnaissance was to confirm the locations of the dry wells for sampling. The structures identified as "suspected dry wells" in the Phase II ESA (Haley ~~and~~& Aldrich 2014b) were inspected to determine whether they were used as dry wells (Figure 2-1). The following observations were made:

- Suspected Dry Well #1—This structure is located in the southeast portion of Building #1. It has a dirt bottom below concrete structure walls with little accumulated material. This structure was confirmed to be a dry well. No material was observed in this dry well.
- Suspected Dry Well #2—This structure is located in the north part of Building #1, which conflicts with the location presented in the Phase II ESA. It has brick side walls and a hard bottom (likely brick) with accumulated material. This structure was confirmed not to be a dry well.
- Suspected Dry Wells #3&4—This structure is located outside of Building #7. It is a single structure with one cover and an internal cinder block baffle. The bottom appears to be soft with accumulated material. The bottom of the suspected dry well (3&4) was probed, and a hard bottom could not be identified. This structure is suspected to be a single dry well. This suspected dry well is referred to as Dry Well #3 in the remainder of this Report.
- Suspected Dry Well #5—This structure is located in Building #8. It has concrete sidewalls and a concrete bottom. This structure was confirmed not to be a dry well.
- A crawl space beneath the slab in the vicinity of the boundary between Buildings #6 and #9 was observed during the field reconnaissance. This crawl space is located in the northwest corner of Refractories. It is composed of a solid brick wall, three open sides, and a hard bottom (likely concrete). Solid, light-colored material was observed in this crawl space.

Samples from the material in each structure were collected for the purposes of waste characterization and laboratory analyses included toxicity characteristic leaching procedure (TCLP) metals, TCLP pesticides, TCLP herbicides, TCLP VOCs, TCLP SVOCs, target compound list (TCL) VOCs, TCL SVOCs, ignitability/flashpoint, pH, and percent moisture. Materials from each suspected dry well were excavated and transported offsite for disposal. The ~~sample locations,~~ laboratory results~~,~~ and disposal documents are presented in Appendix F of the Work Plan.

3 CONCEPTUAL SITE MODEL

A preliminary conceptual site model (CSM) was developed based on available information to characterize historical uses of the Property, the potential for hazardous materials and constituents to be present on the Property, potential contamination sources, constituent migration pathways to the surface and subsurface, ~~and~~ the nature and extent of observed hazardous constituents~~. The preliminary CSM was used to develop the site characterization objectives and related activities described in the Work Plan (Integral 2022) to obtain the necessary data to understand,~~ the current Property conditions, and ~~assess~~ potential exposure pathways for humans or other environmental receptors.

~~As previously discussed, (Section 1.3), since~~Since the 1930s, the Property has contained primarily industrial-use structures situated on a concre~~a~~te slab of various thicknesses (10–11 in. or greater), and the exterior areas consisting of impermeable (concrete and asphalt) pavements with minimal pervious areas (grass and mulched landscaped). The Property is not currently situated in the 100-year floodplain. Constituent migration pathways for surface and subsurface soils are thus primarily limited to those associated with the minimal grassed/mulched areas of the Property and have been assessed accordingly by this site characterization.

~~Constituent migration~~ Surface soils that contain historical waste materials (ash, brick, glass, or other wastes) could potentially serve as a source of contamination via migration to subsurface soils and groundwater. In addition, constituent migration pathways to the subsurface soils and groundwater ~~would only~~could be available via slab penetrations, such as dry wells, sumps, pits, and drains, ~~and only~~ if the bottoms of those features were structurally compromised or soil disturbed~~, allowing access to~~. Cracks in impervious surfaces at the Property~~subsurface soils~~ could also provide migration pathways. Constituent migration is possible through the sides or bottom of structures such as dry wells, sumps, pits, and ~~only~~drains even if ~~those constituents or materials would be considered significantly mobile in the environment~~not structurally compromised, as concrete, masonry, and other materials of construction are not completely impervious. The current locations, construction, and condition of existing structures are not necessarily the same as throughout the history of the Property. Field observations indicate current conditions and do not necessarily represent prior conditions and potential historical migration locations or pathways. Of note, the evidence gathered to date supports the conclusion that the Property—especially in the southeastern corner—has been historically exposed to constituents sourced from a former MGP site partially located on and to the east of the Property.

The results of the site characterization were evaluated to refine the CSM (Section 7). The following summarizes the preliminary CSM, based on historical information:

1. **Significant historical industrial use**. The Property has a long history of industrial use and development since the 1880s. The historical use of the northern portion of the

Property was as a foundry (kilns, dryers, annealing room), and for more than 100 years, the New York Central Railroad rail track and related operations bisected the Property over a large area. Historically, railroad operations (construction, maintenance, and demolition of railroad tracks and ancillary infrastructure, and locomotive, freight, and other railway vehicle transportation on and across the Property) are generally considered a source of regulated constituents (e.g., polycyclic aromatic hydrocarbons [PAHs] and metals) to the environment, as well as substantial industrial fill, including railroad ties and ballast.

The southeast corner of the Property was used as an MGP beginning in at least 1898 when the first iron gasometer (aka gas holder) was shown on the relevant Sanborn map. A second gasometer was installed in this area in 1921, and in 1948, both gasometers were removed by the New York Electric Corporation.

These MGP-related activities, including related release and migration of hazardous dense and light nonaqueous-phase liquids (NAPLs) as well as associated dissolved-phase constituents from the gas holders would likely have resulted in the NAPLS, metals, PAHs, VOCs, and other regulated constituents being present in soil and potentially groundwater at the Property. Note that MGP-related NAPLs are well-documented in their ability to migrate significant distances horizontally, as well as above and below the water table.

An objective of the site characterization was to assess the nature and extent of the potential historical conditions in fill and soil~~, and~~ across the entire Property including the former MGP portion of the Property. MGP-related impacts were reported as observed.

2. **No record of disposal associated with the Property development or operations.** There is no documentation of disposal at the Property. Fill (e.g., generally sands/silty sands of various textures, with occasional ~~red building~~ brick (primarily red building brick), and various types of coal, ash, and glass) observed during prior environmental and geotechnical soil boring programs ~~is likely~~may be residual materials left behind from foundation development and/or post-use structure demolition and reworking of fill associated with prior industrial use on the Property. In addition, this material ~~is likely to~~may have been reworked and compacted in the course of development of portions of the Refractories operation itself. Additional clean/engineered fill (e.g., sand with specific geotechnical properties) may have been emplaced during this period as well. Records regarding the types or origins of fill materials are not available.

   Characterization of shallow soils and fill was an objective of the site characterization.

3. **Minimal hazardous materials/substances used at the Property.** Refractories manufactured refractories materials, primarily different types of refractory bricks, from the 1930s until it was shut down in 2014.

The vast majority of materials stored and used at Refractories consisted of substances such as alumina-rich clays and silica products used in forming, firing, and shaping various types of refractory bricks. The hazardous materials stored onsite were generally composed of lubricants, cutting oils, and solvents for operations and maintenance purposes, such as machine maintenance and painting. As noted above, potential release and migration of these materials to the subsurface would have occurred via the facility dry well system~~. It should be noted that most of these materials would have had limited solubility and/or insignificant mobility in the subsurface if released, as well as minimal potential to generate meaningful concentrations of dissolved-phase constituents in groundwater.~~, cracks in impervious surfaces, concrete or other masonry materials that may not have been watertight, or direct discharge to the ground surface.

Confirmatory identification, location, and characterization of the dry wells/system and associated soils and groundwater was an objective of the site characterization.

4. **No historical or current open spills.** The available information indicates that there are no open historical NYSDEC-regulated spills or spill numbers for the Property. In addition, there is no indication in the record of any petroleum substances or regulated constituent releases to the subsurface from the historical Refractories operations.

   Notably, black oily staining and/or "naphthalene tar-like odors" and PID readings increasing with depth in soils indicative of MGP-related impacts were observed at three locations in the southeast during the 2014 Phase II investigation work; the observations were reported to NYSDEC, and a spill number was opened. This spill record was closed on May 12, 2022.

   The potential nature and extent of impacts related to the reported spill was characterized as part of the soil and groundwater investigation portion of the site characterization, and MGP-related impacts have been reported accordingly if observed. Note that the southeast corner of the Property is within the footprint of the Corning Chestnut Street Former Manufactured Gas Plant Site investigation work (NYSDEC Site #851035).

5. **MGP-related impacts are not associated with Refractories operations.** Impacts in the southeast corner of the Property are due to former MGP operations and are distinguished by their physical disposition in the subsurface, as well as a characteristic analytical signature (several PAH compounds, discussed more in the Nature and Extent of Contamination in Section 6) different from petroleum products. Minimal use of petroleum products onsite from Refractories operations included various lubricants and oils for machinery and routine operations for manufacturing of various types of refractory brick.

   Identifying the nature and extent of soil and groundwater impacts from such substances, if any, was an objective of the site characterization.

6. **Regional soil constituent influences from bedrock mineralogical sources.** The soil boring laboratory analytical results show shallow (2 ft or less), low level arsenic exceedances of NYSDEC Soil Cleanup Objective (SCO) commercial use criteria (NYSDEC 2006). The bedrock of the region consists of Devonian marine shales, siltstones, and sandstones of the Allegheny Plateau. Black shales that are enriched in sulfides and metals, such as arsenic and cadmium, weather faster than other rocks and minerals. As a result, sediments in the region can be naturally enriched with these metals (Paikaray 2012; Duan et al. 2020). An objective of the site characterization was to support characterization of the shallow soil and fill.

4 CHARACTERIZATION ACTIVITIES

Characterization at the Property included surveying, and soil and groundwater sampling, as described in the sections below. These activities were completed to address the four data gaps identified in the NYSDEC-approved Work Plan: 1) confirm the dry wells were identified and the structures characterized; 2) characterize the soil and groundwater beneath the dry wells; 3) determine groundwater flow and characterize metals concentrations; and 4) characterize shallow soil/fill.

4.1 BOUNDARY SURVEY

A boundary survey of the Property was completed on July 22, 2022, by C.T. Male Associates Engineering, Surveying, Architecture, Landscape Architecture and Geology, DPC. The property lines and corners were marked prior to the drilling investigation work. The boundary survey is included as Appendix A.

4.2 GEOPHYSICAL SURVEY

Prior to drilling activities, New York State One-Call system was notified to clear public buried utilities in the vicinity of the drilling area. The soil boring locations were also cleared during a private utility mark out completed by Ground Penetrating Radar Systems, LLC, using geophysical and ground-penetrating radar methods. No subsurface anomalies were identified during the geophysical and ground penetrating radar surveys. Gas lines, storm sewer, water, and sanitary sewer lines were located near some of the boring locations and marked with spray paint.

4.3 GPS MAPPING

Each monitoring well location was horizontally and vertically (top of casing) surveyed by a professional New York State licensed land surveyor after installation. The spatial information for each sample location is reported in Table 4-1.

4.4 COMMUNITY AIR MONITORING

The community air monitoring plan (CAMP) was implemented during ground intrusive activities to provide a measure of protection for the downwind community and residents from potential airborne particulate or contaminant releases. One individual alert was triggered for particulates on July 29, 2022, but the alarm condition lasted for 1 minute and is not considered an exceedance per DER-10 Appendix 1A, which considers an exceedance to be a 15-minute

average concentration period that is over background levels. No intrusive work was being performed during this alarm, and it was considered a false positive detection related to the startup/warmup process of the equipment. This alarm was reported to NYSDEC and the New York State Department of Health (NYSDOH) the same day it occurred. VOC and particulates measurements for the remainder of the subsurface investigation work were compiled and included in the weekly progress reports included as Appendix B.

4.5 WASTE HANDLING

Soil and water investigation-derived waste (IDW) were handled in accordance with DER-10 Section 3.3(e). Soil drill cuttings, water, and decontamination fluids generated during investigation activities (including dedicated/disposable sampling equipment and personal protective equipment) were collected and placed in sealed 55-gallon drums. The drums were staged onsite, pending offsite disposal, in accordance with regulatory requirements.

Non-dedicated sampling equipment (e.g., drill-cutting shoe and stainless-steel hand trowel) was decontaminated by washing with Alconox detergent and rinsed with distilled water prior to and between sampling locations. Dedicated disposable sampling equipment (e.g., spoons, bowls, Macro-core sleeves) were used and containerized for disposal. Drilling equipment (drill rods and augers) were decontaminated by washing with a pressure washer prior to and between sampling locations. All decontamination rinse water, well development water, and purge water were collected and containerized pending offsite disposal in accordance with regulatory requirements. Copies of the IDW disposal documents are attached as Appendix C.

4.6 FIELD REPORTS

Weekly progress reports were prepared and submitted to NYSDEC and NYSDOH to summarize field activities performed during the week. These documents outlined the activities performed, discussed any modifications to the Work Plan, and included air monitoring results and an updated schedule for remaining work onsite. The false positive alarm related to the CAMP startup/warmup process was also communicated to NYSDEC and NYSDOH within 12 hours of occurrence. The weekly progress reports are attached as Appendix B.

4.7 SOIL AND GROUNDWATER ACTIVITIES

Field activities were performed ~~in accordance with~~following the NYSDEC-approved Work Plan (Integral 2022~~).~~); however, minor deviations occurred during the field implementation due to site conditions and Property constraints but had no material impacts on the data. These deviations are described in Section 4.8. A summary of the field activities and laboratory analysis is provided below.

4.7.1 Soil Sampling and Subsurface Boring Activities

Soil sampling activities were conducted from July 2022 to January 2023 and consisted of collecting soil of three types: surface soil, shallow soil, and soil borings.

Surface soil samples were collected using a stainless-steel hand trowel. Shallow soil and subsurface soil ~~boring~~ samples were collected using a direct-push Geoprobe® drill rig for continuous sample collection in acetate Macro-core sleeves. The direct-push drill method was used to preserve the soil structure to identify a 1-in. interval of ash, brick, and/or glass, if present.

The soil lithology at each location was described, noting the color, moisture content, texturing, layering, and evidence of non-native material, and the soil was screened with a PID. If present, ~~layers of~~ fill material containing ash, brick, and/or glass ~~were~~was noted in the field logs, including observations of layers of fill material. A "layer" of fill is defined as non-native material containing ash, brick, and/or glass with a thickness of greater than 1 in. in accordance with the NYSDEC-approved Work Plan (Integral 2022). Samples were analyzed for target analyte list (TAL) metals, VOCs, and SVOCs. Twenty percent of samples were analyzed for per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane in accordance with the quality assurance project plan (QAPP).

The location of each sample was recorded using a handheld global positioning system (GPS) unit with submeter accuracy (Table 4-1). Field photographic logs are provided in Appendix D. Soil boring logs are provided in Appendix E.

4.7.1.1 Surface and Shallow Soil Sampling

Surface soil and shallow soil samples were collected from seven locations along the building exteriors (Figure 4-1). Surface soil samples were collected from the ground surface, as measured below the vegetative cover or sod layer, to a depth of 2 in. bgs. The surface soil samples were collected with a stainless-steel trowel that was decontaminated prior to collecting each sample. The collected surface soil was transferred to a new stainless-steel bowl to homogenize with a new stainless-steel spoon prior to placing in the appropriate laboratory-prepared sample containers, except for the VOC sample. The VOC sample was collected using a Terra Core Soil Sampler *in situ* from the sidewall of the 2-in. excavation used to collect the surface soil. The stainless-steel trowel was decontaminated prior to collecting each surface soil sample and the stainless-steel bowls and spoons were new and not reused. The lithology of the 0- to 2-in. interval was described using the shallow soil core collected via Geoprobe® at each location.

Shallow soil samples were collected using a direct-push Geoprobe® drill rig. Multiple cores were collected from each shallow soil sample location to obtain sufficient sample volume for

analysis. Some shallow soil sample locations, SS1 to 3 ft bgs, SS3 to 3 ft bgs, SS4 to 3 ft bgs, and SS5 to 4 ft bgs, were over drilled to ensure 2 ft of soil recovery was achieved.

The cores were reviewed, and the lithologic descriptions are reflective of the observations from each core. Visually similar core intervals were identified and combined for sampling. Shallow soil samples were collected from 0 to 6 in. bgs, 6 to 12 in. bgs, and 12 to 24 in. bgs, as measured below the vegetative cover or sod layer. The shallow cores were logged and scanned with a PID as described in Section 4.7, and the shallow soil sample intervals were collected from the core with a new stainless-steel spoon and transferred to a new stainless-steel bowl for homogenization prior to placing the samples in the appropriate laboratory-prepared sample containers, except for the VOC sample. VOC samples were collected directly from the soil core upon opening using a Terra Core Soil Sampler.

4.7.1.2 Subsurface Soil Boring Sampling

~~Soil~~Subsurface soil borings were advanced at six locations at the Property using a direct-push Geoprobe® rig (Figure 4-1). ~~Soil~~Subsurface soil borings intended to be completed as monitoring wells (SB1, SB2, SB3, and SB5) were advanced to target a completion depth 10 ft beyond the water table; however, the water table information at the Property is limited, and boring termination depths were targeted for 10 ft beyond groundwater encountered in the water bearing zone. Additionally, the termination depth varied based on the depth at which the water-bearing zone was encountered and the thick lacustrine clay lens underlying the water-bearing zone at the site. The six soil borings were completed as follows:

- SB1 was advanced to a depth of approximately 25 ft bgs. Groundwater was encountered at approximately 16 ft bgs, but the boring was terminated at approximately 25 ft bgs because the lacustrine clay lens was encountered~~.~~ at approximately 17 ft bgs. Soil boring SB1 was advanced at the structure identified as Dry Well #1.
- SB2 was originally advanced inside the Refractories building; however, refusal was encountered at a depth of 16.5 ft bgs after multiple attempts. An alternative location was selected outside the building (Figure 4-1). The alternative location was advanced to a target depth of approximately 32 ft bgs. Groundwater was encountered in the 20- to 24-ft bgs interval but the boring was terminated at 32 ft bgs because the lacustrine clay lens was encountered~~.~~ at approximately 29.5 ft bgs.
- SB3 was installed at the structure identified as Dry Well #3. Dry Well #3 was previously backfilled with clean gravel fill, performed as part of decommissioning activities mentioned in Section 2.2 above, to approximately 10 ft bgs, which resulted in a lack of recovery from 0 to 10 ft bgs during boring installations~~.~~, and no samples being collected from the shallow intervals (0–0.5, 0.5–1, and 1–2 ft). In July 2022, SB3 was advanced to a depth of 20 ft bgs, and an attempt was made to install a monitoring well, but the borehole collapsed~~. An~~ as the augers were pulled back. The borehole was abandoned

with grout. A second attempt was made in September 2022 to install ~~a monitoring well~~MW3 to a depth of 20 ft bgs using a 10-ft sand pre-pack and 5-ft bentonite pre-pack, but the well was dry. ~~In~~ A third attempt approximately 5 ft west of the second attempt to install MW3 was successful in January 2023~~,~~. SB3 was advanced in the same former dry well structure to a depth of approximately 30 ft bgs. Sampling and logging of SB3 was completed and a 2-in. PVC well was installed. Groundwater was encountered at approximately 20 ft bgs and the boring was terminated at approximately 30 ft bgs upon encountering the lacustrine clay lens at approximately 26.25 ft bgs.

- SB4 was advanced inside the Refractories building until refusal was reached at approximately 8 ft below the upper surface of the subsurface soils after multiple attempts. The concrete floor at ground surface inside the building (upper concrete floor) was cut to access subsurface soil, but a layer of select gravel and sand fill was observed between the upper concrete floor and a second concrete subfloor below the select fill. Subsurface soils were encountered below the second concrete floor at a depth of approximately 32 in. below the upper concrete floor in the building. The boring was advanced from the upper surface of the subsurface soil encountered below the second concrete floor. The material at the bottom of the boring was dry, and no soil sample was collected from the interval 2 ft above the water table because it was not encountered. The lacustrine clay was not encountered at this location.
- SB5 was advanced to a depth of approximately 30 ft bgs. Groundwater was encountered at approximately 15 ft bgs, and the boring was advanced to 30 ft bgs for well installation. The lacustrine clay was not encountered at this location.
- SB6 was advanced into the water-bearing zone to a termination depth of 20 ft bgs. The water-bearing zone at this location was not targeted, but the boring was advanced to 20 ft bgs to confirm native material was reached. The lacustrine clay was not encountered at this location. One sample, SB-6(15-20), was collected for archive based on field observations, but not analyzed.

Soil boring samples were collected from four intervals: 0 to 6 in. bgs, 6 to 12 in. bgs, 12 to 24 in. bgs, and 24 in. above the water table or water-bearing zone. The soil boring cores were logged and scanned with a PID, and the ~~shallow~~ soil sample intervals were collected from the core with a new stainless-steel spoon and transferred to a new stainless-steel bowl for homogenization (no bowls or spoons were reused) prior to placing the samples in the appropriate laboratory-prepared sample containers, except for the VOC sample. VOC samples were collected directly from the soil core upon opening using a Terra Core Soil Sampler.

4.7.2 Monitoring Well Installation

Four monitoring wells (MW1, MW2, MW3 and MW5) were installed at the corresponding soil boring locations (SB1, SB2, SB3, and SB5, respectively) to characterize groundwater flow direction and collect groundwater samples. Upon completing sampling at the soil borings via

direct-push methods, the borings were ~~overdrilled~~over drilled using hollow stem augers to a target depth of approximately 10 ft below the first observation of water in the water-bearing zone, which was encountered in a sand and/or gravel layer between approximately ~~16 to~~15 and 25 ft bgs.

Monitoring wells were installed and constructed in accordance with the NYSDEC-approved work plan as follows:

- MW1 was installed as a piezometer inside Dry Well #1 located inside Building 1 due to access limitations with the drill rig. MW1 was constructed using a 1-in.-diameter, flush threaded, schedule 40 polyvinyl chloride (PVC) casing with a schedule 40 PVC 10-ft 0.010-in slot screen. Following placement of the screen and riser, a filter pack consisting of clean quartz sand was placed from the bottom of the well screen to approximately 2 ft above the top of the well screen. A bentonite seal (approximately 2 ft thick) was placed above the filter pack and hydrated. The remainder of the annular space above the bentonite seal was backfilled with a cement/bentonite grout mixture to ground surface. MW1 was completed as a stick-up well inside the dry well.
- For MW2, an initial attempt in September 2022 was unsuccessful at installing a monitoring well inside the building. Refusal was encountered at 16.5 ft bgs. A 1-in. PVC piezometer was installed because of the moist to wet material observed at the bottom of the boring. The next day, a water level indicator revealed that the well was dry. An alternative location outside the building was selected to install MW2 deeper, to reach the water table. MW2 was installed in December 2022, approximately 60 ft northwest at a location outside the building and clear of buried utilities.
- MW4 was not installed because the water table was not encountered due to refusal at 8 ft. MW2, MW3, and MW5 were constructed using 2-in.-diameter, flush-threaded, schedule 40 PVC casing with 10 ft of 2-in.-diameter, 0.010-in. slot PVC screen. Following placement of the screen and riser, a filter pack consisting of clean quartz sand was placed from the bottom of the well screen to approximately 2 ft above the top of the well screen. A bentonite seal (approximately 2 ft thick) was placed above the filter pack and hydrated. The remainder of the annular space above the bentonite seal was backfilled with a cement/bentonite grout mixture to ground surface. These wells were completed as flush-mount wells.

Monitoring wells MW1 and MW5 were installed in July 2022 and developed in September 2022. MW2 was installed in December 2022, and MW3 was installed in January 2023. Both MW2 and MW3 were ~~installed and~~ developed in January 2023. Detailed well construction drawings are provided in Appendix E.

The monitoring wells were developed using a submersible pump to surge and pump the well until the purged groundwater was relatively clear (10 nephelometric turbidity units or less), as practical. Well Development Logs are included in Appendix F.

4.7.3 Groundwater Monitoring

Groundwater monitoring activities consisted of collecting groundwater samples from the monitoring wells and collecting quarterly groundwater elevation measurements. Following installation and development, MW1 and MW5 were sampled on October 5, 2022. Following the installation of MW2 and MW3 in January 2023, groundwater samples were collected from MW1, MW2, MW3 and MW5 on January 31, 2023. Prior to sampling, water level measurements were collected from each ~~of~~ well using an electronic water level sounder and measured from the surveyed top of the well casing. Additional quarterly groundwater measurements were collected in April 2023 ~~and~~, July 2023, and October 2023. Groundwater elevation measurements are provided in Table 4-2.

The monitoring wells were purged and sampled using low-flow sampling techniques, a peristaltic pump, and dedicated equipment. Dissolved metal samples were collected with dedicated disposable 0.45-micron filters. New low-density polyethylene tubing was placed inside the wells to the approximate center of the well screen, and water quality parameters (temperature, pH, dissolved oxygen, and specific conductance) were collected through a flow-through cell and allowed to stabilize in accordance with the criteria in Low Stress Purging and Sampling Procedure (USEPA 2017), prior to sampling. Once the parameters stabilized, the flow-through cell was removed, and the samples were collected directly from the peristaltic pump into laboratory-supplied sample containers. Groundwater Sampling Logs are included in Appendix F.

The groundwater samples were analyzed for total and dissolved metals, VOCs, and SVOCs. Twenty percent of samples were analyzed for PFAS and 1,4-dioxane in accordance with the QAPP.

4.8 WORK PLAN DEVIATIONS

Minor work plan deviations occurred during the implementation of the site characterization investigation. These deviations generally occurred because of Property constraints and conditions where samples were collected; they had no material impacts on the data. NYSDEC oversight staff were made aware of the deviations during the performance of field activities. Work Plan deviations included:

- MW1 was constructed with 1-in. PVC due to limitations drilling inside the building.

- The location of SS1 was moved approximately 20 ft southeast to avoid buried utilities and to remain within the Property boundary.
- The following shallow soil sample locations were over drilled: SS1 to 3 ft bgs, SS3 to 3 ft bgs, SS4 to 3 ft bgs, and SS5 to 4 ft bgs. These locations were over drilled to ensure 2 ft of soil recovery was achieved.
- Installation of MW2 inside the building was attempted in September 2022, and refusal was encountered at 16.5 ft bgs. ~~A 1-in. PVC piezometer was installed because of the moist to wet material observed at the bottom of the boring. The next day, a water level indicator was used to measure the water level in the well, but it was dry.~~ An alternative location outside the building was selected ~~to install MW2 deeper to reach the water table.~~ and MW2 was installed in December 2022~~, approximately 60 ft northwest to a location outside the building and clear of buried utilities~~.
- SB3 was installed in July 2022. No samples were collected from the shallow intervals (0–0.5, 0.5–1, and 1–2 ft) ~~as there was insufficient~~since no material was recovered from the ~~specified sample intervals.~~first 10 ft. Installation of MW3 was attempted, but ~~the borehole collapsed as the augers were pulled back and the bore hole was abandoned with grout.~~unsuccessful. In September ~~2022~~, a second attempt to install MW3, was performed, using a 10-ft sand pre-pack and 5-ft bentonite pre-pack~~.~~, but the well was dry. A third attempt to install MW3 was ~~installed to a depth~~successful in January 2023. Sampling and logging of ~~20 ft bgs. The depth to water~~SB3 was ~~measured the day after the~~completed and a 2-in. PVC well was installed~~, and the well was dry.~~.
- MW4 was not installed, and no soil sample was collected from the interval 2 ft above the water table due to refusal encountered at 8 ft below the upper surface of the subsurface soils.

4.9 QUALITY ASSURANCE AND QUALITY CONTROL

The following laboratory quality assurance and quality control (QA/QC) samples were collected during this field effort:

- Field duplicates at a rate of 1 per 20 samples
- Matrix spike/matrix spike duplicates at a rate of 1 per 20 samples
- Equipment rinsate blanks at a rate of 1 per 20 samples per type of equipment used
- Field blanks at a rate of 1 per day
- One trip blank per cooler containing VOC samples.

The data usability summary report (DUSR) for these data is discussed in Section 5 and provided in Appendix G.

4.10 LABORATORY ANALYSIS AND DATA VALIDATION

The analytical methods and protocols used during this project, as well as the expanded list of constituents for analysis, were provided in the Work Plan QAPP (Integral 2022). Samples and appropriate quality control samples (e.g., duplicate samples) were placed in appropriate laboratory-prepared containers, properly labeled, packed on ice, and shipped with completed chain-of-custody documentation to Eurofins TestAmerica Laboratories, Inc. in Buffalo, New York (Eurofins) for analysis. The laboratory reports are provided in Appendix ~~F~~H.

Data validation information is provided within the DUSR in Section 5 and Appendix G.

5 DATA MANAGEMENT AND DUSR

Field measurements and laboratory analytical data are managed in an electronic database and were uploaded to the NYSDEC's EQuIS database in an electronic data deliverable (EDD) format.

In accordance with the Work Plan, laboratory analytical data produced during the site characterization was validated by an Integral data validator in accordance with DER-10 Appendix 2B DUSR requirements. The validation indicated that all data are valid and usable for the purposes of the site characterization with the exceptions described in the data validation report. Of more than 13,814 analyses performed, 151 volatile organic analysis results were rejected because of associated internal standard recoveries for a completeness of 99 percent. All other results are acceptable for their intended use, as qualified.

The final DUSR was accepted by the NYSDEC on July 12, 2023, and a copy is attached as Appendix G.

6 NATURE AND EXTENT OF CONTAMINATION

The soil and groundwater analytical results are summarized below from the July 2022 to January 2023 field activities.

6.1 SOIL BORING RESULTS

PID readings and odor observations documented during completion of the soil borings are provided in the table below.

PID Readings and Odor Observations

Location	PID readings
SB1	0.6–12.2 ppm.
SB2 (Attempt 2)	2.6–18.5 ppm
SB2/MW2	0–8.3 ppm
SB3	6.7–15.3 ppm
SB3/MW3	0.1–0.2 ppm
SB4	0.1–3.0 ppm
SB5/MW5	6.3–11.1ppm
SB6	0.1–32.5 ppm Slight petroleum-like odor from 7.9 to 20 ft bgs.
SS1–SS5	0–0.1 ppm
SS6	0.2–3 ppm

Laboratory analytical results show generally shallow (2 ft or less) and ~~generally~~ low-level exceedances of some metals and PAHs above NYSDEC SCO unrestricted use, industrial use, and protection of groundwater criteria (NYSDEC 2006).

~~Limited low-level~~ Shallow and subsurface soil sample results exceeding the applicable SCOs are shown on Figure 6-1 and Figure 6-2, respectively. SCO exceedances were observed for arsenic, barium, cadmium, copper, lead, manganese, mercury, nickel, and silver, as discussed below:

- **Arsenic** ~~exceedances were measured~~exceeded the unrestricted SCO of 13 mg/kg across most of the Property, except ~~in the northwest corner of the Property~~ at ~~SS2~~SB1, SB3, and ~~SB2~~SS5. The low-level arsenic exceedances ranged from ~~16.2~~13.8 to 27.7 mg/kg~~, compared with~~. Exceedances of the industrial use and protection of groundwater SCOs of 16 mg/kg~~.~~

- ~~**Cadmium** exceeded the protection of groundwater SCO~~ occurred at SB4, SB5, SB6, SS1, SS3, SS4, SS6 and SS7.
- **Barium** exceeded the unrestricted SCO of 350 mg/kg at one location (SB~~16~~) in two of the ~~0~~shallow soil intervals~~ to 0.5 ft interval~~, with ~~a~~ concentrations ranging from ~~of 11.6 mg/kg compared with the SCO of 7.5 mg/kg.~~426 to 445 mg/kg. No samples exceeded the industrial use SCO of 10,000 mg/kg or the protection of groundwater SCO of 820 mg/kg.
- **Cadmium** exceeded the unrestricted SCO of 2.5 mg/kg at two locations: SB1 with a concentration of 11.6 mg/kg, and SB4 with a concentration of 4.3 mg/kg. The protection of groundwater SCO of 7.5 mg/kg was also exceeded at SB1. There were no exceedances of the industrial use SCO of 60 mg/kg.
- **Copper** exceeded the unrestricted SCO of 50 mg/kg across most of the Property, except at SB1, SB3, SS2, and SS7, with concentrations ranging from 50.9 to 334 mg/kg. No samples exceeded the industrial use SCO of 10,000 mg/kg or the protection of groundwater SCO of 1,720 mg/kg.
- **Lead** ~~SCO exceedances~~exceeded the unrestricted SCO of 63 mg/kg across most of the Property, except at SB3 and SS5. The lead concentrations ranged from 65.3 to 9,670 mg/kg. The protection of groundwater SCO of 450 mg/kg was exceeded at five locations (SB2, SB4, SB6, SS2, and SS6) with concentrations ranging from 492 to 9,670 mg/kg~~, compared with the industrial and protection of groundwater SCOs of 3,900 mg/kg and 450 mg/kg, respectively.~~ . Only one sample, SB4 ~~the 1- to 2-ft interval at SB4,~~ had a concentration of lead (9,670 mg/kg) above the industrial SCO of 3,900 mg/kg.
- **Manganese** exceeded the unrestricted SCO of 1,600 mg/kg at one location (SS6) with a concentration of 1,950 mg/kg. There were no exceedances of the industrial use SCO of 10,000 mg/kg or the protection of groundwater SCO of 2,000 mg/kg.
- **Mercury** exceeded the ~~protection of groundwater~~unrestricted SCO of 0.18 mg/kg at ~~one soil sample location. In~~six locations (SB1, SB4 ~~the soil sample collected~~, SB5, SB6, SS3, and SS7) with concentrations ranging from ~~1~~0.19 to ~~2 ft bgs, the concentration of mercury was~~ 0.79 mg/kg~~, compared with the~~. The protection of groundwater SCO of 0.73 mg/kg~~.~~ was exceeded at SB4 with a concentration of 0.79 mg/kg. There were no exceedances of the industrial use SCO of 5.7 mg/kg.
- **Nickel** exceeded the unrestricted SCO of 30 mg/kg at one location (SB2, in two intervals), with concentrations ranging from 39.60 to 50.4 mg/kg. There were no exceedances of the industrial use SCO of 10,000 mg/kg or the protection of groundwater SCO of 2,480 mg/kg.
- **Silver** exceeded the unrestricted SCO of 2 mg/kg at two locations, SS3 and SS5, with concentrations ranging from 2.70 to 10.20 mg/kg. One sample, SS5 exceeded the protection of groundwater ~~criteria in one sample, SS5~~SCO of 8.3 mg/kg, with a ~~measured~~

concentration of 10.2 mg/kg ~~compared with the SCO of 8.3 mg/kg.~~. There were no exceedances of the industrial use SCO of 6,800 mg/kg.

- **Zinc** exceeded the unrestricted SCO of 109 mg/kg at five locations (SB1, SB4, SB6, SS1, and SS3) with concentrations ranging from 119 to 333 mg/kg. There were no exceedances of the industrial use SCO of 10,000 mg/kg or the protection of groundwater SCO of 2,480 mg/kg.

PAH compounds that exceeded the unrestricted, industrial, and/or protection of groundwater criteria include benz[*a*]anthracene, benzo[*a*]pyrene, benzo[*b*]fluoranthene, benzo[*k*]fluoranthene, ~~and~~ chrysene, dibenz[*a,h*]anthracene and indeno[1,2,3-*cd*]pyrene. The distribution of these exceedances varies across the Property; however, multiple compounds exceed in the northwest and southeast of the Property:

- **Benz[*a*]anthracene** ~~exceedances were found~~ exceeded the unrestricted and protection of groundwater SCOs of 1 mg/kg at six locations ~~and ranged~~(SB2, SB4, SB6, SS2, SS3, and SS7), with concentrations ranging from 1.2 to 8.2 mg/kg ~~when compared to the protection of groundwater SCO of 1 mg/kg.~~. There were no exceedances of the industrial use SCO of 11 mg/kg.
- **Benzo[*a*]pyrene** exceeded the unrestricted SCO of 1 mg/kg and industrial ~~SCOs~~ SCO of 1.1 mg/kg at ~~five~~six sample locations~~, primarily in the northwest and southeast corners of the Property. Exceedances ranged~~ (SB2, SB4, SB6, SS2, SS3, and SS7), with concentrations ranging from 1.2 to 8.9 mg/kg~~, compared with the industrial use SCO of 1.1 mg/kg~~. There were no exceedances of the protection of groundwater SCO of 22 mg/kg.
- **Benzo[*b*]fluoranthene** exceeded the ~~protection of groundwater~~unrestricted SCO of 1~~.7~~ mg/kg at ~~five~~seven locations (~~SS3, SS7,~~ SB2, SB4, ~~and~~ SB6, SS2, SS3, SS5, and SS7), with concentrations ranging from 1.2 to 10 mg/kg. Five locations (SB2, SB4, SB6, SS3, and SS7) exceeded the protection of groundwater SCO of 1.7 mg/kg, with concentrations ranging from 2.4 to 10 mg/kg. There were no exceedances of the industrial use SCO of 11 mg/kg.
- ~~**Benzo[*k*]fluoranthene** exceeded the protection of groundwater SCOs at four locations (SS3, SB2, SB4, and SB6). Concentrations ranged from 1.9 to 4.1 mg/kg, compared with the protection of groundwater SCO of 1.7 mg/kg. There were no exceedances of the industrial use~~unrestricted SCO of ~~110 mg/kg.~~
- ~~**Chrysene** exceeded the~~ 0.8 mg/kg at five locations (SB2, SB4, SB6, SS3, and SS7), with concentrations ranging from 1.1 to 4.1 mg/kg. Four locations (SB2, SB4, SB6, and SS3) exceeded the protection of groundwater SCO ~~criterion~~ of 1.7 mg/kg ~~at seven locations (SS2, SS3, SS5, SS7, SB2, SB4 and SB6). Concentrations ranged~~, with concentrations ranging from 1.~~9~~ to ~~7.5~~ 4.1 mg/kg. There were no exceedances of the industrial use SCO of 110 mg/kg.

- **Chrysene** exceeded the unrestricted and the protection of groundwater SCOs of 1 mg/kg at seven locations (SB2, SB4 SB6, SS2, SS3, SS5, and SS7), with concentrations ranging from 1.1 to 7.5 mg/kg. There were no exceedances of the industrial use SCO of 110 mg/kg.
- **Dibenz[*a*,*h*]anthracene** exceeded the unrestricted SCO of 0.33 mg/kg at four locations (SB4, SB6, SS3, and SS7), with concentrations ranging from 0.35 to 2.1 mg/kg. One location (SB6) exceeded the industrial use ~~SCOs in one sample at location SB6. The~~ SCO of 1.1 mg/kg with a concentration ~~was 2.1 mg/kg, compared with the industrial use SCO of 1.7 mg/kg.~~of 2.1mg/kg. There were no exceedances of the protection of groundwater SCO of 1,000 mg/kg.
- **Indeno[1,2,3-cd]pyrene** exceeded the unrestricted SCO of 0.5 mg/kg at eight locations (SB2, SB4, SB5, SB6, SS2, SS3, SS5, and SS7), with concentrations ranging from 0.55 to 5.80 mg/kg. There were no exceedances of the protection of groundwater SCO of 8.2 mg/kg or the industrial SCO of 11 mg/kg.

The soil concentration~~s~~ results do not show a horizontal or vertical pattern~~, and~~ based on visual observation, and based on groundwater results (Section 6.2), constituents ~~were~~do not ~~observed~~appear to be in a matrix that had potential for downward migration of the compound.

Industrial fill, as described below, was observed in all soil boring locations except SB1, SB3, and SS5. The depth of fill encountered at most locations was shallow (within the top 3 ft bgs or less); however, some fill was observed at deeper intervals. Fill was encountered at the Property (e.g., SB-2 and SB-4) in discontinuous zones or pockets and was composed variously of sand and sandy silt with incidental ash, cinder, glass, slag, coal particles, and ~~large gravel sized red building~~ brick fragments (primarily red building brick). The deepest intervals where fill was observed were in the SB2 location installed inside the building under the concrete floor. Ash, cinder, and slag were observed in SB2 at the 8.0- to 9.1-ft bgs interval, as well as in the 13.0- to 14.0-ft bgs interval. There was no evidence to suggest continuous layers of fill between borings indicative of intentional disposal; rather, reworked, industrial fill and/or waste materials with incidental occurrences of ash, brick, or glass were observed at the Property. Non-native fill materials such as incidental ~~red building~~ brick (primarily red building brick), slag, glass, ash, and coal were observed and documented in the boring logs (Appendix E).

Apparent petroleum (black oily staining) was observed at two locations in the southeast of the Property during the 2014 Phase II investigation work. In July 2022, SB5/MW5, SB6, and SS7 borings were installed to evaluate the southeast corner of the Property. Soil boring results from SB6 location reported several PAH (benz[*a*]anthracene, benzo[*b*]fluoranthene, benzo[*k*]fluoranthene, and chrysene) and metals exceedances (arsenic and lead) with a different chemical signature when compared to soil results from the other borings installed in the southeastern side of the Property. SB6 had the highest benz[*a*]anthracene exceedance onsite (8.2 mg/kg) when compared to the protection of groundwater SCO criterion of 1 mg/kg. Chrysene

exceedances ranged from 1.1 to 7.5 mg/kg when compared to the protection of groundwater SCO of 1 mg/kg. The highest chrysene concentrations were found in SB6. Arsenic exceedances were 17.6 and 18.3 mg/kg, compared with the protection of groundwater SCO criterion of 16 mg/kg. SB6 had a lead concentration of 2,370 mg/kg, exceeding the protection of groundwater SCO criterion of 450 mg/kg.

Two of the borings (SB4 and SB6) had analytical signatures that differed from the majority of the borings. The boring on the northern boundary of the property (SB4) was installed inside one of the buildings. Shallow fill was observed in this boring from 0 to 2.5 ft bgs. The laboratory results showed high levels of lead and dibenz[*a,h*]anthracene compared with other boring locations. SB4 had the highest concentration of lead on the Property in the 1- to 2-ft interval, measured at 9,670 mg/kg, compared with detected concentrations at other locations that ranged from 7.6 to 2,370 mg/kg. SB4 was the location with the second highest concentration (lower only to SB6) of dibenz[*a,h*]anthracene was measured at 0.67 mg/kg in the 0- to 0.5-ft interval, compared with concentrations below 0.53 mg/kg at the other locations where it was detected.

The boring drilled in the grass on the southeastern corner of the Property (SB6) was in a location associated with the historical MGP. The analytical results at this location show more PAH (benz[*a*]anthracene, benzo[*a*]pyrene, benzo[*b*]fluoranthene, dibenz[*a,h*]anthracene, and indeno[1,2,3-*cd*]pyrene) and metal (arsenic, barium, and lead) exceedances compared to the other boring locations. Specifically:

- Benz[*a*]anthracene was 8.2 mg/kg in the 1- to 2- ft interval and 6.5 mg/kg in the 0.5- to 1- ft interval, compared with 0.06 to 4.0 mg/kg in other samples where it was detected.
- Benzo[*a*]pyrene in the 1- to 2- ft interval was 8.9 and 5.0 mg/kg in the 0.5- to 1- ft interval, compared with 0.05 to 4.4 mg/kg in other samples where it was detected.
- Indeno[1,2,3-*cd*]pyrene in the 1- to 2- ft interval was 5.8 mg/kg, compared with 0.03 to 3.4 mg/kg in other samples where it was detected.
- Benzo[*b*]fluoranthene in the 1- to 2- ft interval was 10 and 6.1 mg/kg in the 0.5- to 1-ft interval, compared with 0.05 to 5.4 mg/kg in other samples where it was detected.
- Arsenic in the 1- to 2-ft interval was 17.6 mg/kg and ranged from 10.3 to 18.3 mg/kg in the surface intervals.
- Lead in the 1- to 2-ft interval was 2,370 mg/kg, the second highest on the Property.
- Barium in the 1- to 2-ft interval was 445 mg/kg and 198 mg/kg to 426 mg/kg in the surface intervals, compared to 15.9 to 172 mg/kg in other samples where it was detected

The validated soil results are summarized in Table 6-1 and the full laboratory reports are included in Appendix ~~F~~H.

6.2 GROUNDWATER RESULTS

Groundwater sampling was performed in October 2022 (MW1 and MW5) and January 2023 (MW1, MW2, MW3 and MW5). Three rounds of water level measurements were collected using an electronic water-level indicator from the four monitoring wells on January 31, April 12, and July 25, 2023. These measurements were used to calculate the groundwater elevation using the surveyed top of casing elevation.

Groundwater was typically encountered in sand and gravel at the Property, although perched water was encountered under the Refractories building at depths of approximately 6 to 8 ft bgs in the northeastern portion of the Property and approximately 14 ft bgs in the western portion of the Property. Groundwater elevation at the Property was observed during the monitoring period to be approximately 909 to 915 ft, or approximately 16 to 25 ft bgs. Groundwater elevation data are tabulated in Table 4-2.

The groundwater elevation results from MW1, MW2, and MW5 are all within a few tenths of a foot of each other. The groundwater elevation at MW3 was observed to fluctuate at least a foot higher or lower than the other wells. The groundwater results, when considered together with the glacial, fluvial-influenced lithology in the region, suggest heterogeneous local hydrogeology with perched water conditions, as previously observed, and disconnected zones of high transmissivity. A fourth and final quarter of water level measurements will be collected in the fourth quarter of 2023.

One analyte, sodium, was detected in exceedance of the NYSDEC Ambient Groundwater Standards and Guidance Values contained in the Technical & Operational Guidance Series (TOGS) Water Quality Standards Table 1, Class GA (NYSDEC 1998) in all samples. MW5 also had an exceedance of benzene during the January 2023 sampling event. The benzene result was 3.10 µg/L and the Class GA standard is 1.0 µg/L. No other exceedances of the Class GA criteria were detected. Figure 6-3 shows the groundwater parameters that exceed the NYSDEC Class GA criteria.

The validated groundwater sample results are summarized in Table 6-2, and the full laboratory reports are included in Appendix ~~F~~H.

7 SITE CHARACTERIZATION FINDINGS

This section provides a summary of the findings and the conclusions that can be drawn from the investigations.

7.1 SUMMARY

The results of the site characterization are generally consistent with the historical data findings of the Phase II ESA and confirm the CSM presented in Section 4:

- The Property is underlain by ~~generally high quality~~ construction fill material that largely consists of sand and sandy silt with incidental ash or building brick, typical of industrial fill material. There is no clear layer or pattern of ash, brick, and/or glass that may be associated with Corning-related material used on the Property. The fill present at the Property was likely brought in during historical construction activities and is not associated with historical disposal of material or filling associated with historical floodplain development. Non-native fill materials, such as incidental ~~red building~~ brick (primarily red building brick), slag, glass, ash, and coal, were observed and documented in the boring logs (Appendix E) in discontinuous zones or pockets of material, not consistent with disposal.
- There are widespread occurrences of low-level exceedances of the relevant SCOs (industrial and protection of groundwater) for metals and PAHs that are consistent with historical industrial use. Potential sources include:
  - Metals and PAHs associated with the former New York Central Railroad along and adjacent to the former rail tracks and historical foundry operations.
  - Metals and PAHs associated with industrial fill containing various types of incidental ash and combustion byproducts, which are typically observed at historical industrial-use locations.
  - PAHs, VOCs, and metals associated with the former MGP facility in the southeast corner of the Property, and potentially migrating horizontally and vertically through the subsurface.
- There are sporadic elevated lead concentrations that appear to be associated with observations of incidental ash in fill material.
- There is no pattern of SCO exceedances horizontally or vertically in the soil column, indicating soil that has been reworked over time, and that there are not likely specific sources (e.g., cracks in impervious surfaces or concrete or masonry that is not completely watertight) of historical or ongoing contamination (with the exception of the former MGP facility).

- The constituents observed in the soil are consistent with those found during previous investigations. There is no indication of use or disposal of hazardous substances beyond the limited use understood from historical operations (Corning 1967).
- Two soil boring locations seem to have a different analytical signature, SB4 and SB6. (see Section 6.1 for a detailed discussion). SB4 was located on the northern boundary of the Property and installed inside one of the buildings. Shallow fill was observed in this boring from 0 to 2.5 ft bgs. The laboratory results showed high levels of lead and dibenz[*a*,*h*]anthracene. SB6 was drilled in the grass on the southeastern corner of the Property. This location is associated with a historical MGP. The analytical results at SB6 have multiple PAH and metals exceedances, which would be associated with material from the former MGP operations. The surface and subsurface of the southeastern corner in the vicinity of the SB6 location is within the footprint of the MGP site characterization (NYSDEC Site #851035, Figure 7-1).
- There were limited groundwater exceedances found during the site characterization, and only for sodium, with one exception. A single benzene exceedance was observed in one location, and that was notably within the footprint of the former MGP site.[3] These results confirm the lack of current or future mobility of the substances detected in the soil investigation and the matrix in which they were detected (i.e., no observations of indications of the presence of product/NAPL); none of the constituents that exceeded the protection of groundwater SCO in soils was observed to exceed the Class GA groundwater water quality standard.
- There were no direct observations of evidence of spills of regulated substances in soils or dissolved-phase plumes in groundwater, or indirect evidence that would be indicated by elevated concentrations declining with distance away from a potential source to groundwater.
- The relatively uniform elevated arsenic signature across the Property suggests some influence on the soil chemical characteristics attributable to the black shales native to the region, which are enriched in sulfides and metals such as arsenic and cadmium (Paikaray 2012; Duan et al. 2020). Lead is also a known element in the minerals commonly associated with such rocks in the region. Evidence of the presence of these and similar source rocks (e.g., silt particles, subangular gravels) in soil borings was observed at multiple locations. (e.g., SB2, SS2, SS3, and SS4 where exceedances of arsenic and/or lead were also observed).

[3] Results of the Phase II investigation indicated groundwater exceedances at multiple wells for multiple constituents; however, this was likely due to sampling of temporary wells at that time, resulting in overestimates of groundwater concentrations.

7.2 FATE AND TRANSPORT/MIGRATION PATHWAYS

The fate and transport and potential offsite migration pathways for the constituents observed in the soil and groundwater are summarized below.

There is limited opportunity for surface soil and associated constituents to migrate offsite, as the totality of the Property is overlain with concrete slabs, pavement, or grass cover, preventing erosion of surface soil. There is no indication of spills in the surface soil that would have migrated offsite (which would be evidenced by an area of high concentrations declining with distance). The lack of vertical concentration patterns indicates that there is no significant or ongoing vertical transport of contaminants (which would generally be limited in areal extent to the grass-covered areas subject to infiltration and potentially, historically, the now inactive dry wells).

Transport of constituents through the subsurface soil is limited. A potential historical pathway, through the drywell structures, is no longer viable due to the removal of any remaining material within the structures during the decommissioning activities and the cessation of water or other carrier fluid through the structure that may have occurred during the operation of the facility. As discussed above, there is limited or no infiltration, and therefore limited opportunity for and no indication of downward transport of contaminants through the soil.

The limited transport of contaminants through the soil to groundwater is confirmed by the ~~lack~~nature of water quality exceedances in groundwater. Although the SCO for groundwater protection is exceeded for several metals and PAHs at multiple locations around the site, there are no exceedances of the groundwater standards for any of these constituents. Groundwater quality exceedances are limited to sodium at four locations, and benzene in one location, the latter which is within the footprint of the former MGP facility.

The glacial, fluvial-influenced lithology in the region results in heterogeneous local hydrogeology with perched water conditions, as previously observed, and disconnected zones of high transmissivity. Net regional groundwater flow is influenced by the Chemung River, and the net flow direction is likely towards the Chemung River in a northerly or northeasterly direction. Groundwater migration offsite is not a pathway of concern due to the lack of constituents in the groundwater (with the exception of the MGP-related benzene occurrence).

7.3 EXPOSURE PATHWAYS

Potential exposure pathways at the Property could include contact with soil and/or groundwater. The Property is located within a secure fenced area, and concrete slabs, pavement, and grass cover are present over the entirety of the Property, thus limiting exposure to soil. Exposure to groundwater is an incomplete pathway ~~due to the general lack of water~~

~~quality exceedances in~~because groundwater.[4] is not used for potable purposes at or around the Property.

7.4 CONCLUSIONS

The investigations performed to date, including the Phase II site investigation and this site characterization, have included 33 soil sample locations and 12 groundwater sample locations for a total of 107 soil samples and 16 groundwater samples collected for laboratory analysis (Figure 7-1). These investigations provided consistent findings and a comprehensive characterization of subsurface and groundwater conditions at the Property. ~~The results of these investigations serve to fully delineate the nature and extent of any impacts on the Property (excluding those associated with the former MGP facility).~~ The requirements of the Site Characterization, as per the NYSDEC-approved Site Characterization Work Plan, have been met and the Site Characterization is complete.

~~The findings of these investigations confirm that there is no significant contamination associated with the former Refractories operations that poses a threat to human health or the environment. The site characterization has fulfilled the scope of work required under the Work Plan, and the results indicate that a remedial investigation is not warranted on the Property. Within the former MGP footprint, the NYSEG MGP site investigation includes data collection to further characterize impacts associated with the former MGP facility (Figure 7-1).~~

[4] ~~The one exception is benzene in the former MGP footprint, this area part of the NYSEG MGP site investigation.~~

SB6	Soil Boring	42.14508	-77.05932

Notes:

[a] SB2 boring was installed inside the building in September 2022 to a refusal depth of 16.5 ft below ground surface. An alternative location outside the building was selected to allow for a larger drill rig to advance the boring to the water table.

[b] SB2/MW2 location completed in January 2023 and installed outside of the building.

Notes:

Underlined = Exceeds NYSDEC SCOS 2006 Industrial Soil

Dark gray shading = Exceeds NYSDEC SCOS 2006 Protection of Groundwater

Bold = Exceeds NYSDEC SCO 2006 Unrestricted Use Soil

CAS = Chemical Abstract Service

NYSDEC = New York State Department of Environmental Conservation

Qualifiers:

J = The associated numerical value is an estimated quantity.

J- = The result is an estimated quantity, but the result may be biased low.

J+ = The result is an estimated quantity, but the result may be biased high.

NJ = The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.

R = Rejected. The data are unusable.

U = The material was analyzed for, but was not detected.

UJ = The material was analyzed for, but was not detected. The sample quantitation limit is an estimated quantity.

GRID NORTH

MAP NOTES

1.) NORTH ORIENTATION IS BASED ON GRID NORTH FROM RTK GPS OBSERVATIONS.

2.) FIELD WORK PERFORMED ON JUNE 1-2, 2022.

3.) THIS SURVEY WAS PREPARED WITHOUT THE BENEFIT OF AN ABSTRACT OR UP TO DATE TITLE REPORT AND IS THEREFORE SUBJECT TO ANY EASEMENTS, RESTRICTIONS, COVENANTS OR ANY STATEMENT OF FACTS THAT SUCH DOCUMENTS MAY DISCLOSE.

4.) UNDERGROUND FACILITIES, STRUCTURES AND UTILITIES HAVE BEEN PLOTTED FROM DATA OBTAINED BY FIELD SURVEY, PREVIOUS MAPS AND RECORDS, (AND PAROLE TESTIMONY). THEREFORE THEIR LOCATIONS MUST BE CONSIDERED APPROXIMATE ONLY. THERE MAY BE OTHER UNDERGROUND UTILITIES, THE EXISTENCE OF WHICH ARE NOT KNOWN TO THE UNDERSIGNED. SIZE AND LOCATION OF ALL UNDERGROUND UTILITIES AND STRUCTURES MUST BE VERIFIED BY THE APPROPRIATE AUTHORITIES PRIOR TO ANY CONSTRUCTION.

PROGRESS REPORT

To:	Samantha Salotto, P.E.
From:	Jeffrey Marsh, P.E.
Subject:	Corning Refractories Plant Site Characterization
Reporting Period:	December 20, 2022 – January 5, 2023
Integral Project No.:	EF1017
NYSDEC Project No.:	851048

ACTIVITIES PERFORMED

Site characterization field work was performed December 20 through December 23, 2022, and January 3 through January 5, 2023, in accordance with the NYSDEC-approved P-Site Characterization Work Plan. A summary of the work completed is as follows:

- Sampling and logging of SB2 was completed and a 2-inch PVC well was installed (MW2)
- Sampling and logging of SB3 was completed and a 2-inch PVC well was installed (MW3)
- MW2 and MW3 were developed.

WORK PLAN MODIFICATIONS

None.

AIR MONITORING RESULTS

Air monitoring was performed in accordance with the NYSDEC-approved Community Air Monitoring Plan (CAMP). Data was collected with a hand held DustTrak and PID unit collected manually in 30-minute increments. Data collected during this work are attached.

UPCOMING ACTIVITIES AND SCHEDULE

Groundwater sampling of MW1, MW2, MW3 and MW5 is scheduled to occur on January 31. Quarterly groundwater level measurements will also be collected at this time.

PROGRESS REPORT

To:	Samantha Salotto, P.E.
From:	Jeffrey Marsh, P.E.
Subject:	Corning Refractories Plant Site Characterization
Reporting Period:	July 25, 2022 – July 29, 2022
Integral Project No.:	EF1017
NYSDEC Project No.:	851048

ACTIVITIES PERFORMED

Site characterization field work was performed the week of July 25 through July 29, 2022, in accordance with the NYSDEC-approved P-Site Characterization Work Plan. A summary of the work completed is as follows:

- Sampling and logging of SB1 was completed and a 1-inch PVC well was installed (MW1).
- Sampling and logging of SB5 was completed and a 2-inch PVC well was installed (MW5).
- Surface and shallow soil samples were collected and logged from SS5, SS6 and SS7.
- Installation of borings SB2 and SB4 was attempted, however, at both locations the Geoprobe was not able to advance the boring due to concrete-like material.
- SB3 was installed. No samples were collected as there was insufficient material recovered from the specified sample intervals. During installation of MW3, the bore hole collapsed as the augers were pulled back and the bore hole was abandoned with grout.

WORK PLAN MODIFICATIONS

Due to overhead clearance limitations, a small drill rig (54LT) was/will be used to install the soil borings and monitoring wells inside the building. The small drill rig cannot spin augers and as a result the monitoring wells inside the building, MW1, MW2 and MW4, are/will be constructed with 1-inch PVC.

The location of SB4/MW4 was moved approximately 5 feet south to remain within the property boundary.

The location of SS1 will be moved approximately 20 feet south east to avoid buried utilities and remain within the property boundary.

AIR MONITORING RESULTS

Air monitoring was performed in accordance with the NYSDEC-approved Community Air Monitoring Plan (CAMP). Data collected during this work are attached. While the CAMP monitoring equipment was actively sampling site conditions, and alarm settings were active on the individual monitoring units, there were several issues with recording/logging of data at the CAMP stations. A summary of relevant data gaps is provided below:

- On July 25, 2022, a gap in the downwind photoionization detector (PID) data log took place between approximately 14:15 and 17:25. This occurred during the time that SB5/MW5 was being advanced. The work zone was actively monitored with a separate PID unit and ambient VOC concentrations did not exceed the CAMP limit of 5 parts per million (ppm). No audible alarms were triggered on the downwind PID unit.
- On July 27, 2022, a gap in the downwind aerosol meter (DustTrak™) data log occurred between approximately 13:20 and 15:37. Soil boring/monitoring well SB5/MW5 was advanced during this time period. No audible alarms were triggered on the downwind DustTrak unit, and no visible dust was observed in the work zone.
- On July 28, 2022, a gap in the downwind PID data log occurred between approximately 08:00 and 09:45. Monitoring well MW5 was being constructed (grout emplacement) during this time period; however, no drilling took place. The work zone was actively monitored with a separate PID unit and ambient VOC concentrations did not exceed 5 ppm. No audible alarms were observed in the downwind PID unit.

- On July 28, 2022, a gap in the downwind PID data log occurred between approximately 10:36 and 13:15. This was during advancement of soil boring/monitoring well SB3/MW3. The work zone was actively monitored with a separate PID unit and ambient VOC concentrations did not exceed 5 ppm. No audible alarms were observed in the downwind PID unit.
- On July 28, 2022, a gap in the DustTrak data log occurred between 09:58 and 13:15. Soil boring/monitoring well SB3/MW3 was advanced during this time. No audible alarms were triggered on the downwind DustTrak unit, and no visible dust was observed.

Throughout the entirety of the intrusive work performed, work zone air monitoring did not indicate a VOC concentration above 5 ppm and no visible dust was generated. As such, Integral is confident that no CAMP limit exceedances occurred as a result of the site characterization work. In general, the air monitoring stations appeared to be working properly and there was no indication to the field team that data was not being logged. In order to prevent the loss of logged data in the future, air monitoring with a hand held DustTrak and PID will be collected manually in 30-minute increments, in accordance with the NYSDEC-approved Work Plan.

UPCOMING ACTIVITIES

- Corning Incorporated is procuring a construction contractor in order to gain access to the necessary sub-slab areas and remove concrete-like material such that SB2/MW2 and SB4/MW4 can be completed.
- A second attempt to install MW3 will be made utilizing a 10 ft sand pre-pack and 5 ft bentonite pre-pack.
- Sample locations SS1 through SS4 will be completed.
- The five monitoring wells will be developed for future groundwater sampling (to be performed at least 2 weeks after the well development).

SCHEDULE

A revised schedule will be provided to NYSDEC once dates are confirmed with the construction contractor and driller. Notification will be provided to the NYSDEC at least 2-weeks in advance of field activities.

PROGRESS REPORT

To:	Samantha Salotto, P.E.
From:	Jeffrey Marsh, P.E.
Subject:	Corning Refractories Plant Site Characterization
Reporting Period:	September 12 – September 16, 2022
Integral Project No.:	EF1017
NYSDEC Project No.:	851048

ACTIVITIES PERFORMED

Site characterization field work was performed September 12 through September 16, 2022, in accordance with the NYSDEC-approved P-Site Characterization Work Plan. A summary of the work completed is as follows:

- Sampling and logging of SS1 through SS4 was completed.
- Boring SB2 was completed to a refusal depth of 16.5 ft below ground surface (bgs). A second attempt was made but refusal was again encountered at 16.5 ft bgs. A 1-inch PVC stick up monitoring well was installed as the bottom portion of the boring was saturated. The depth to water was measured the day after the well was installed and the well was dry.
- Boring SB4 was completed to a refusal depth of 8 ft bgs. A second attempt was made but refusal was again encountered at 8 ft bgs.
- SB3 was installed using a 10 ft sand pre-pack and 5 ft bentonite pre-pack. MW3 was installed to a depth of 20 ft bgs. The depth to water was measured the day after the well was installed and the well was dry.
- MW1 and MW5 were developed.

WORK PLAN MODIFICATIONS

MW4 was not installed and no soil sample was collected from the interval 2 feet above the water table due to refusal at 8 ft bgs.

MW2 was installed but may not be a viable well due to refusal at 16.5 ft bgs.

AIR MONITORING RESULTS

Air monitoring was performed in accordance with the NYSDEC-approved Community Air Monitoring Plan (CAMP). Data was collected with a hand held DustTrak and PID unit collected manually in 30-minute increments. Data collected during this work are attached.

UPCOMING ACTIVITIES AND SCHEDULE

Groundwater sampling of MW1 and MW5 will be performed the week of October 3. Water levels will be recorded for MW2 and MW3 at this time.

Notes:

CAMP = Community Air Monitoring Plan

NYSDEC = New York State Department of Environmental Conservation

PID = photoionization detector

ppb = parts per billion

ppm = parts per million

VOC = volatile organic compound

[a] Alarms were as set as defined in the CAMP: at 100 ppb and 150 ppb for Particulates; and at 5 ppm (5,000 ppb), > 5 ppm (5,000 ppb) and <25 ppm (25,000 ppb), and >25 ppm (25,000 ppb) for VOCs. All alarm settings were in reference to the upwind air monitoring. Note that 1 ppb equals 1 mg/m^3.

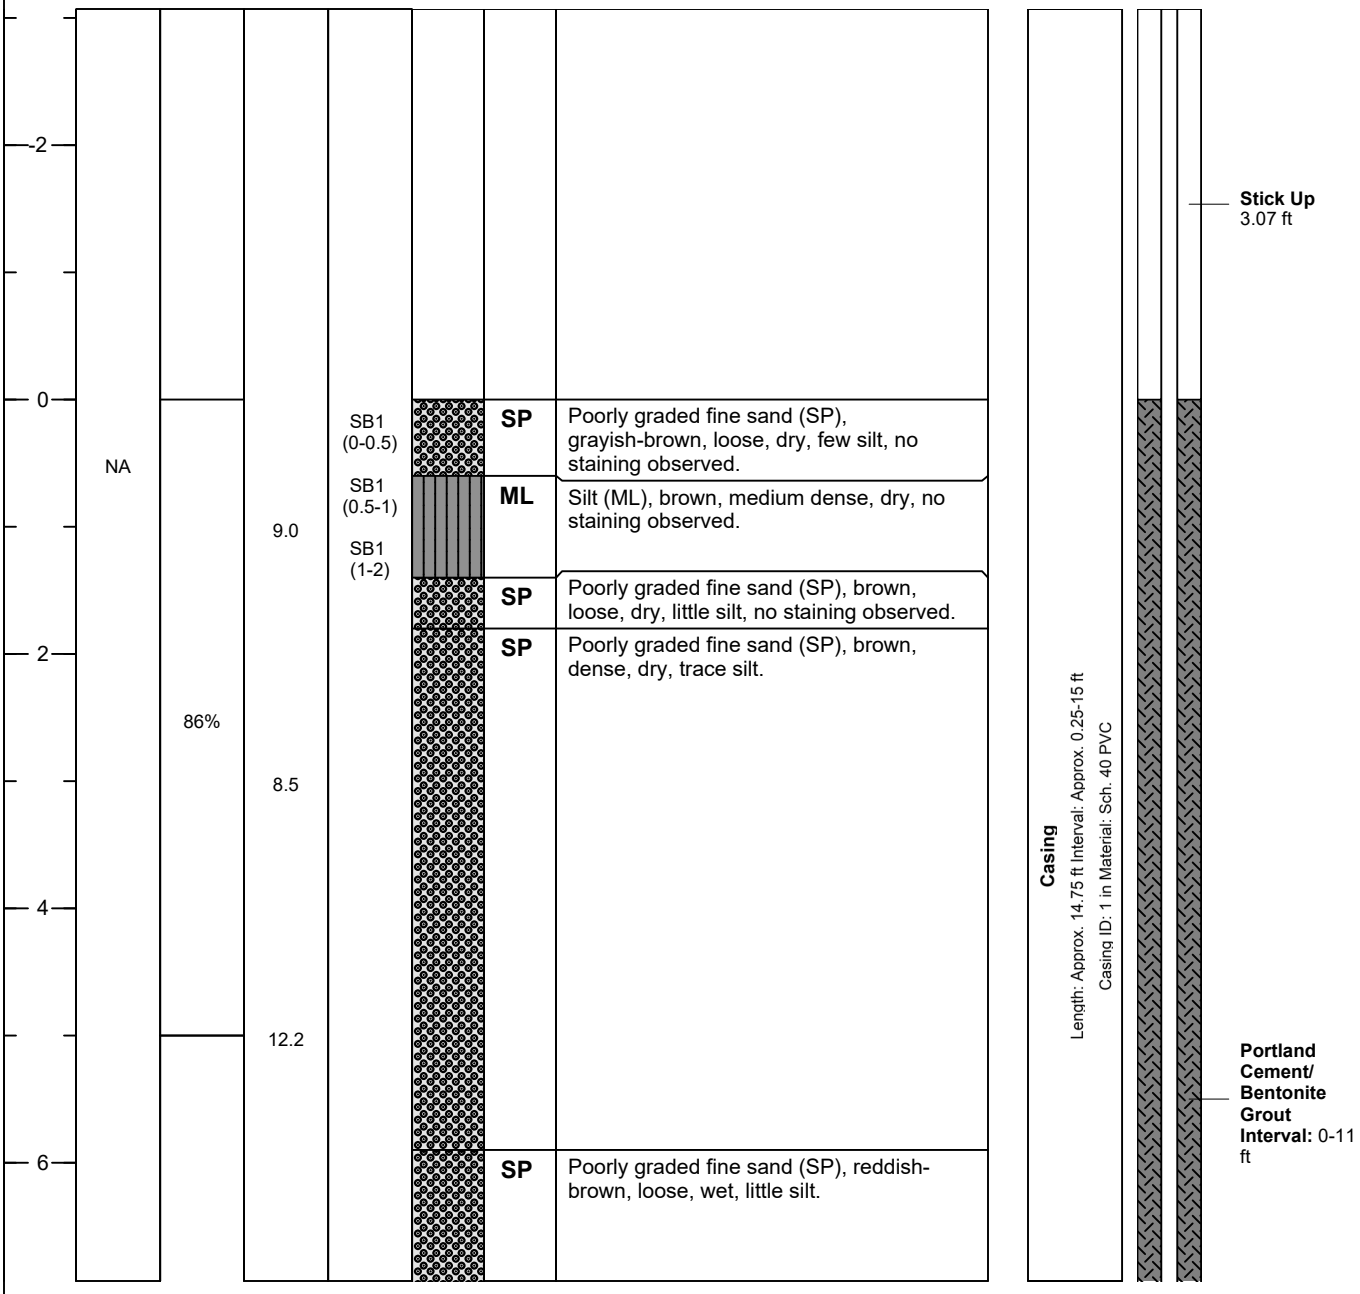
Boring/Monitoring Well Logs



SETTLEMENT CONFIDENTIAL
INADMISSIBLE IN THIS OR ANY OTHER PROCEEDING

integral engineering p.c.

Boring ID: **SB1 / MW1**

		Location:	**Corning, NY**		
		Date Started:	**7/26/22**	Northing:	**42.145876**
Project Name:	**Refractories**	Date Completed:	**7/27/22**	Easting:	**-77.059104**
Project Number:	**EF1017**	Drilling Contractor:	**Cascade Environmental**	Projection:	**NA**
Drilling Method:	**Direct Push**	Logged by:	**Chris Wood**	Zone:	**18N**
Borehole Diameter:	**2-in**	Ground Elevation:	**927.30**	Vertical Datum:	**WGS 84**
Sampling Method:	**2-in Geoprobe Macro-Core**	Depth to Water:	**16.2 ft bgs**	Units:	**Degrees**

Depth (ft bgs)	Blow Count	% Recov. (depth ft)	PID Reading	Sample ID	USCS Group Symbol	Soil Description
0	NA	86%	9.0	SB1 (0-0.5)	SP	Poorly graded fine sand (SP), grayish-brown, loose, dry, few silt, no staining observed.
				SB1 (0.5-1)	ML	Silt (ML), brown, medium dense, dry, no staining observed.
				SB1 (1-2)	SP	Poorly graded fine sand (SP), brown, loose, dry, little silt, no staining observed.
2			8.5		SP	Poorly graded fine sand (SP), brown, dense, dry, trace silt.
4			12.2			
6					SP	Poorly graded fine sand (SP), reddish-brown, loose, wet, little silt.

Notes:

Borehole begins at bottom of a sump that is 4 ft bgs. Soil descriptions and well construction are based on 0 ft bgs at bottom of sump. Water encountered at 5.9 - 8.2 ft bgs interval is interprated to be perched water due to underlying tight and dryer sands. Groundwater interpreted at approx. 16.2 ft bgs.

bgs = below ground surface
ft = feet
in = inches

Notes:

bgs = below ground surface
ft = feet
in = inches
NA = not applicable

SB3 location is in an area that was previously backfilled with gravel clean fill to approximately 8.5-9.0 feet below ground surface. Lack of recovery from 0-10 feet below ground surface is potentially a result of the clean fill not being captured by GeoProbe MacroCore.

		Location:	**Corning, NY**		
		Date Started:	**7/25/22**	Northing:	**42.145241**
Project Name:	**Refractories**	Date Completed:	**7/25/22**	Easting:	**-77.059778**
Project Number:	**EF1017**	Drilling Contractor:	**Cascade Environmental**	Projection:	**NA**
Drilling Method:	**Direct Push/Auger**	Logged by:	**Chris Wood**	Zone:	**18N**
Borehole Diameter:	**8-in**	Ground Elevation:	**934.67**	Vertical Datum:	**WGS 84**
Sampling Method:	**2-in Geoprobe Macro-Core**	Depth to Water:	**15 ft bgs**	Units:	**Degrees**

Depth (ft bgs)	Blow Count	% Recov. (depth ft)	PID Reading	Sample ID	USCS Group Symbol	Soil Description
					SP-SM	Poorly graded fine sand with silt (SP-SM), gray, loose, wet.
22		50%			**GP**	Poorly graded gravel with sand (GP) gray, medium dense, wet, thin medium to coarse sand lens at approx. 22.6 ft bgs, pulverized stone at approx. 22.08 - 22.5 ft bgs.
24						
26						
28						
30						

Notes:

Soil from borehole was logged to 25 ft bgs. Driller drilled to 30 ft bgs for well installation.
Groundwater encountered at approximately 15 ft bgs.

bgs = below ground surface
ft = feet
in = inches

Depth (ft bgs)	Blow Count	% Recov. (depth ft)	PID Reading	Sample ID	USCS Group Symbol	Soil Description
0	NA	74%	0.1	SB6 (0-0.5)	SP	Poorly graded fine sand (SP), brown, loose, dry, no staining observed, roots and grass surface at surface.
			0.2	SB6 (0.5-1)	Fill	Fill consisting of poorly graded fine sand, dark brown, medium dense, dry, no staining observed, few gravel and large coal particles, little medium and coarse sand.
2			0.2	SB6 (1-2)	Fill	Fill consisting of small to large coal and off-white coal and ash particles, few or some black well graded sand, dry, no staining observed, tan silt (ML) lens at 2.4 - 2.5 feet bgs.
					Fill	Fill consisting of well graded sub-angular gravel, gray, medium dense, dry.
4					Fill	Fill consisting of poorly graded fine sand with fine coal particles, black, dry.
						Fill consisting of well graded sub-angular gravel, gray, medium dense, dry.
6		88%	18.7		Fill	Fill consisting of well graded sand with gravel, grayish-brown, medium dense, dry.
					Fill	Fill consisting of well graded sand, black, medium dense, dry, some fine to large coal particles.
					Fill	Fill consisting of well graded sand, reddish-brown, medium dense, dry.
8			22.9		Fill	Fill consisting of well graded sand, reddish-brown, medium dense, dry, few gravel and crushed stone.
					Fill	Fill consisting of well graded sand, black, loose, some fine coal particles, large gravel-sized red building brick fragment at 7.7 ft bgs.
10					ML	Silt with sand (ML), grayish-brown, medium dense, wet, slight petroleum-like odor.
		44%	32.5		ML	Silt with sand (ML), medium dense, moist, petroleum-like odor is stronger with depth, dark staining present throughout interior of core in this interval.
12						
				SB6 (13-15)		
14						
		34%		SB6 (15-20)	GW -GM	Well graded gravel with silt (GW-GM), grayish- brown, medium dense, wet, slight petroleum-like odor.
16						
18						
20						

Notes: SB-6(15-20) was collected and archived.

1 INTRODUCTION

This Data Usability Summary Report (DUSR) has been prepared by Integral Engineering, P.C. on behalf of Corning Incorporated to detail the quality assurance and quality control of analytical data collected within the Corning Refractories Plant P-Site (the "Refractories Plant"). The Refractories Plant is located at 1 Front Street in Corning, Steuben County, New York. The subject site consists of a ±102,882-ft^2 slab-on-grade structure situated on 3.87 acres of land. The structure comprises 13 interconnected buildings/additions.

Shallow soil, soil boring, and groundwater samples were collected on July 25–27, 2022, July 29, 2022, September 12–15, 2022, October 5, 2022, December 21, 2022, January 3, 2023, and January 31, 2023. The samples were analyzed by Eurofins TestAmerica in Buffalo, New York, Eurofins TestAmerica in Burlington, Vermont, and Eurofins Lancaster Laboratories Environment in Lancaster, Pennsylvania, in accordance with the quality assurance project plan (QAPP, Integral 2022). The Eurofins laboratories in all three locations are certified to conduct project analyses through the New York State Department of Health Environmental Laboratory Approval Program and the National Environmental Laboratory Accreditation Program. Sample preparation, extraction, and analyses were performed using laboratory standard operating procedures (SOPs) in accordance with U.S. Environmental Protection Agency (EPA) methods. Analytical results for these samples are reported in the laboratory data package sample delivery groups (SDGs), and analyses reviewed are listed in Table 2-1 of the data validation report (Appendix A). The SDGs covered by this report are:

- 480-200114-1
- 480-200130-1
- 480-200156-1
- 480-200248-1
- 480-201563-1
- 480-201615-1
- 480-201707-1
- 480-202448-1
- 480-204989-1
- 480-205124-1
- 480-205868-1
- 480-205868-2.

Integral Consulting Inc. validated all sample analytical results to ensure adherence to the required protocols and to evaluate usability. Data validation is performed in accordance with the requirements of the New York State Department of Environmental Conservation (NYSDEC) DER-10 Technical Guidance for Site Investigation and Remediation (NYSDEC 2010) and in accordance with method and QAPP specifications, NYSDEC's Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) under NYSDEC's Part 375 Remedial Programs (NYSDEC 2022), EPA Region 2 SOPs, and the guidance set forth in the EPA inorganic and organic data validation methods (USEPA 2020a,b). Any exceptions are noted.

2 OVERALL EVALUATION OF DATA AND POTENTIAL USABILITY ISSUES

The laboratory data deliverable packages were reviewed for the following:

- Completeness
- Chain-of-custody documents to verify sample identities
- Sample log-in documents to identify potential problems with factors including custody seals, container integrity, sample preservation, and labeling
- Sample analysis methods and holding times
- Method blank data to determine the presence of sources of contamination in the analytical process, where applicable
- Surrogate, laboratory control sample, matrix spike, and serial dilution data as a measure of analytical accuracy, where applicable
- Laboratory and field duplicate data as a measure of analytical and field sampling precision
- Instrument performance and initial and continuing calibration data
- Completeness as a percentage of measurements made that are judged to be valid measurements compared to the total number of measurements planned, where applicable
- Data summary sheets and qualifiers for consistency with raw data and qualifier definitions
- Sample preparation and analysis logs, system performance checks, raw data, mass spectral and target compound identification, and calculations.

Data validation has been completed for the data packages generated by the laboratory for the samples collected from the Refractories Plant and reported in the subject SDGs. A data validation report was prepared to document the specific findings from review of the data packages and the validation of analytical results (Appendix A). Category B laboratory data deliverables are provided in Appendix B.

Data validation was performed by individuals qualified to perform these tasks (Appendix C). The data validators do not have other positions on the project that involve project productivity or profitability as a criterion for job performance.

Verification of the analytical data packages and the data validation procedures performed for the subject SDGs and described in this DUSR meet the requirements of the DER-10 Appendix 2B guidance and yielded the following findings:

- The laboratory data packages are complete and meet the requirements of a NYSDEC Analytical Services Protocol (ASP) Category B data deliverable. No data were qualified based on these findings.
- All holding times were met unless otherwise noted in the appended data validation report.
- All quality control data including blanks, calibration standards, instrument tunings, calibration verifications, spike recoveries, replicate analyses, laboratory controls, and sample data fall within the protocol limits and specifications unless otherwise noted in the appended data validation report.
- Evaluation of the raw data confirms the results provided in the data summary sheets and quality control verification forms unless otherwise noted in the appended data validation reports.
- Correct data qualifiers consistent with the NYSDEC ASP have been used in the analytical data package or have been subsequently applied in the validated analytical results summary table.
- Quality control exceedances are specifically noted in the appended data validation report. Copies of quality control summary forms associated with any exceedances are provided in Appendix B.

Based on validation, qualified sample results are usable as estimated values in conjunction with the qualifiers presented and discussed in this report. Validation qualifiers are described in Table 1-3 of the data validation report (Appendix A). Summaries of the validated analytical results and qualifiers from the SDGs covered in this DUSR are provided in Table 3-2 of the data validation report. Rejected sample results are considered unusable. Sample results to which validation qualifiers were not applied met the criteria for those quality control parameters that were evaluated. The data qualifications resulting from the data validation review and statements on the laboratory analytical precision, accuracy, representativeness, completeness, and comparability are discussed in the data validation report.

A total of 13,814 results were reported. A total of 2,241 results (16 percent) were qualified as estimated, tentatively identified, or not detected. Some data points were qualified for multiple reasons; therefore, the sum of the qualifiers assigned is greater than the total number of data points qualified. A total of 151 results (1.1 percent) were rejected based on very low internal standard or matrix spike recoveries. Completeness was 99 percent, which meets the completeness goal of 90 to 100 percent. Sixty-seven rejected results were qualified as do-not-report because a more appropriate result was available, and these results were not included in

the completeness calculation. A summary of the validated results, excluding trip blank, equipment blank, field blank results, and rejected (do-not-report) results, is presented in Tables 2-1 and 2-2.

Notes:

Underlined = Exceeds NYSDEC SCOS 2006 Industrial Soil

Dark gray shading = Exceeds NYSDEC SCOS 2006 Commercial Soil

CAS = Chemical Abstract Service

NYSDEC = New York State Department of Environmental Conservation

Qualifiers:

J = The associated numerical value is an estimated quantity.The associated numerical value is an estimated quantity.

J+ = The result is an estimated quantity, but the result may be biased high.

NJ = The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.

R = Rejected. The data are unusable.

U = The material was analyzed for, but was not detected.

UJ = The material was analyzed for, but was not detected. The sample quantitation limit is an estimated quantity.

1 INTRODUCTION

This report presents the findings of the data validation of soil, groundwater, and associated quality control samples analyzed for 1,4-dioxane, total and dissolved metals, per- and polyfluoroalkyl substances (PFAS), semivolatile organic compounds (SVOCs), and volatile organic compounds (VOCs). The sample delivery groups (SDGs) reviewed are summarized in Table 1-1, and the laboratory parameters and analytical methods are listed in Table 1-2.

The samples received a 90 percent Stage 2B validation, which included a review of all laboratory summary forms of quality control and instrument performance data, and 10 percent received Stage 4 validation, which included a review of all laboratory summary forms of quality control and instrument performance data, instrument raw data, and recalculation of instrument and sample results. The data validation was based upon criteria described in the U.S. Environmental Protection Agency (EPA) functional guidelines for organic and inorganic data review (USEPA 2020a,b); EPA data review and validation guideline for PFAS (USEPA 2018); EPA Region II guidelines for data validation (USEPA 2010, 2014b, 2016a,b); *Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) under NYSDEC's Part 375 Remedial Programs* (NYSDEC 2022); the quality assurance project plan (QAPP; Integral 2022); and the referenced analytical methods.

The quality assurance and quality control (QA/QC) parameters reviewed are discussed in Section 2. The electronic data deliverables (EDDs) were compared to the hard copy data packages, and 100 percent of the results were verified. Qualifiers resulting from the validation process were entered into the EDDs. A reason code indicating the reason for qualification was also entered into the EDDs. The definitions of the data qualifiers used are provided in Table 1-3, and descriptions of the reason codes used are provided in Table 1-4. For example, if a data point was estimated as the result of a matrix spike outlier biased high, the qualifier "J+" and the reason code "MS" were entered into the EDD, indicated as J+, MS in the discussion of findings in Section 2.

2 FINDINGS

The data validation findings are provided in this section.

2.1 PARAMETERS REVIEWED

The QA/QC parameters reviewed for each analytical parameter are discussed below and listed in Table 2-1.

2.2 SAMPLE RECEIPT AND HOLDING TIMES

Samples were received with complete chain-of-custody forms and in good condition. Sample receipt temperatures were recorded at ≤6°C, with the following exceptions.

Because of delays during shipping, the samples submitted with SDG 480-200156-1 for PFAS analysis were received outside of temperature criteria at 23.3°C. The associated PFAS results were qualified as estimated (J-/UJ, HT). Also because of delays during shipping, Sample FB_091222 submitted with SDG 480-201563-1 for PFAS analysis was received outside of temperature criteria at 10.9°C. The associated PFAS results were qualified as estimated (UJ, HT).

The laboratory received bottles for PFAS analysis of Samples FB_091422, ERB1_091422 and ERB2_091422 submitted with SDG 480-201707-1; however, PFAS analysis was not recorded on the associated chain-of-custody form. The laboratory logged in these samples for PFAS analysis.

All analyses were conducted within the holding times referenced in the methods or QAPP, with the following exceptions.

Sample FB_072922 submitted with SDG 480-200248-1 was reextracted for SVOCs 3 days beyond the 7-day method-recommended holding time. Naphthalene was the only analyte reported from this reextraction (see Section 2.9) and the result was qualified as estimated (J-,HT).

Samples FB_091422, ERB1_091422, ERB2_091422, and FB_091522 submitted with SDG 480-201707-1 were reextracted for SVOCs 2 or 3 days beyond the 7-day method-recommended holding time because of a recovery outlier in the associated laboratory control sample (LCS). The SVOC results for these samples were qualified as estimated (J-/UJ,HT).

2.3 BLANKS

Results from the laboratory method blanks, calibration blanks, field blanks, and equipment blanks were reported as less than the laboratory method detection limit with several exceptions.

Field blank results were applied to all soil samples collected during the associated sampling event using the highest concentration between the field blanks for evaluation. Equipment blanks were assigned to specific samples and any qualification was assigned accordingly.

Qualified samples based on blank results are described in the following table.

SDG	Sample(s)	Analyte(s)	Qualifiers Assigned
VOCs			
480-201563-1	SS1 (0-2), SS1 (6-12) SS1 (12-24), FDUP_091222	Chloroform	U, LB

	SS1 (12-24)	PFDoA, PFDS	U, LB

2.4 SURROGATE RECOVERY

Surrogates were added to all samples for organic analyses. All surrogate percent recoveries were within the laboratory control limits with the following exceptions.

SDG	Sample(s)	Surrogate(s)	Qualifiers Assigned
VOCs			
480-200130-1	SB5 (0.5-1), SB5 (1-2)	1,2-Dichloroethane-d4 Dibromofluoromethane Toluene-d8	J+, SSR all detected results
480-185463-1	SS7 (0-6), SS7 (6-12)	Toluene-d8 4-Bromofluorobenzene	UJ, SSR all results
	SS7 (12-24)	Toluene-d8 4-Bromofluorobenzene	J/UJ, SSR all results
480-200248-1	SB6 (0-0.5) SB6 (0.5-1)	Toluene-d8 4-Bromofluorobenzene	J/UJ, SSR all results
	SS6 (0-6) FDUP_072922	Toluene-d8	VOCs were not detected in the samples; no qualifiers were assigned because of potentially high analytical bias.
	SB6 (1-2)	Toluene-d8 4-Bromofluorobenzene	J/UJ, SSR all results
	SB6 (1-2)MS SB6 (1-2)MSD	Toluene-d8 4-Bromofluorobenzene	No qualifiers assigned to QC samples.
480-201563-1	SS1 (0-2) SS1 (12-24) FDUP_091222	Toluene-d8	J+, SSR detects
	SS1 (6-12)	Toluene-d8	VOCs were not detected in the samples; no qualifiers were assigned because of potentially high analytical bias.
480-201615-1	SS2 (0-2), SS3 (0-2) SS4 (0-2)	Toluene-d8	J+, SSR detected results
	SS3 (0-6), SS3 (6-12) SS4 (0-6), SS4 (6-12) SS4 (12-24)	Toluene-d8 4-Bromofluorobenzene	J/UJ, SSR all results
	SS3 (12-24) FDUP2_091322	1,2-Dichloroethane-d4 Toluene-d8 4-Bromofluorobenzene	J/UJ, SSR all results
480-201707-1	SB2 (0-0.5)	Toluene-d8 4-Bromofluorobenzene	J/UJ, SSR all results
SVOCs			
480-200248-1	SB6 (0.5-1)	p-Terphenyl-d14	J-/UJ, SSR all base/neutral SVOCs

SDG	Sample(s)	Surrogate(s)	Qualifiers Assigned
480-201615-1	SS2 (0-2)	2,4,6-Tribromophenol	All acid extractables were not detected and no qualifiers assigned because of the potentially high analytical bias.
	SS2 (0-6)	Nitrobenzene-d5	J+, SSR detected base neutral compound results.
480-201707-1	SB2 (0-0.5)	p-Terphenyl-d14	J-/UJ, SSR all base neutral compound results.
	FDUP_091422	2-Fluorobiphenyl 2,4,6-Tribromophenol p-Terphenyl-d14	J+, SSR all detected results
	SB2 (13.5-15.5)	2,4,6-Tribromophenol	No acid compounds were detected and no qualifiers assigned because of the potentially high analytical bias.
	SB4 (1-2)	p-Terphenyl-d14	J+, SSR all detected base neutral compound results.
480-204989-1	SB-2 (1-2), MS, MSD FDUP_122122	2-Fluorophenol Phenol-d5 Nitrobenzene-d5 2,4,6-Tribromophenol	These samples were analyzed at either 10-fold or 100-fold dilutions and no qualifiers were assigned.
	FB_122122	2-Fluorobiphenyl	No base neutral compounds were detected and no qualifiers assigned because of the potentially high analytical bias.
	LCSD 480-654335/3-A	2-Fluorobiphenyl	No qualifiers were assigned based on outlier in this quality control sample.
480-205124-1	LCS 480-655242/2-A LCSD 480-655242/3-A	2,4,6-Tribromophenol 2,4,6-Tribromophenol	No qualifiers were assigned based on outlier in these quality control samples.

2.5 LABORATORY CONTROL SAMPLES

The percent recoveries and relative percent difference (RPD) values of all LCSs and laboratory control sample duplicates (LCSDs) were within the laboratory control limits, with the following exceptions.

VOCs: The percent recovery values for bromoform and dibromochloromethane were greater than the laboratory control limits in LCS/LCSD 480-635335/1-A and for bromoform, carbon tetrachloride, and dibromochloromethane in LCS 480-635770/1-A submitted with SDG 480-200130-1. Because these analytes were not detected in the associated samples, no qualifiers were assigned on the basis of the potentially high analytical bias.

The percent recovery values for bromoform, dibromochloromethane, *tert*-butylbenzene, and tetrachloroethene were greater than the laboratory control limits in LCS 480-636092/1-A submitted with SDG 480-200156-1. Because these analytes were not detected in the associated samples, no qualifiers were assigned based on the potentially high analytical bias.

The percent recovery values for 2-butanone (MEK) were greater than the laboratory control limits in LCS/LCSD 480-654333/5 submitted with SDG 480-204989-1. Because these analytes were not detected in the associated samples, no qualifiers were assigned on the basis of the potentially high analytical bias.

The percent recovery values for acetone, bromoform, and carbon tetrachloride were greater than the laboratory control limits in LCS/LCSD 480-655113/5 submitted with SDG 480- 205124-1. Because these analytes were not detected in the associated samples, no qualifiers were assigned on the basis of the potentially high analytical bias.

SVOCs: The percent recovery values for 4-nitroaniline and carbazole were greater than the laboratory control limits in the LCS submitted with SDG 480-200156-1. Because these analytes were not detected in the associated samples, no qualifiers were assigned.

The percent recovery values for carbazole and naphthalene were greater than the laboratory control limits in the LCS/LCSD submitted with SDG 480-200248-1. In addition, the RPD values for acetophenone and naphthalene were greater than the laboratory control limits.

- Carbazole and acetophenone were not detected in the associated samples, and no qualifiers were assigned because of the potentially high analytical bias or imprecision.
- Naphthalene was not reported from the associated original extraction, and this result was previously qualified as do-not-report (see Section 2.9). Further qualification was not warranted.

The percent recovery values for carbazole and diethyl phthalate were greater than the laboratory control limits in one LCS submitted with SDG 480-201615-1.

- Carbazole was not detected in the associated sample, and no qualifiers were assigned because of the potentially high analytical bias.
- The diethyl phthalate result in Sample FB_091322 was qualified as estimated (J+, LCS).

The percent recovery value for carbazole was greater than the laboratory control limits in LCS 480-644800/2-A submitted with SDG 480-202448-1. Because this analyte was not detected in the associated samples, no qualifiers were assigned.

The percent recovery values for atrazine were greater than the laboratory control limits in LCS/LCSD 480-654335/2-A submitted with SDG 480-204989-1. In addition, the RPD value for 2,4,5-trichlorophenol was greater than the control limits. Because these analytes were not detected in the associated samples, no qualifiers were assigned.

The percent recovery values for several analytes were greater than the laboratory control limits in LCS\LCSD 480-655242/2-A submitted with SDG 480-205124-1. Because these analytes were not detected in the associated samples, no qualifiers were assigned on the basis of the potentially high analytical bias.

PFAS: The RPD value for PFTriA in the LCS/LCSD submitted with SDG 480-205124-1 was greater than the laboratory control limits. This analyte was not detected in the associated samples and no qualifiers were assigned on the basis of the observed imprecision.

2.6 MATRIX SPIKES AND MATRIX SPIKE DUPLICATES

The percent recoveries and RPDs of all matrix spikes and matrix spike duplicates (MS/MSDs) were within the laboratory control limits, with the following exceptions.

Metals: The percent recovery values for aluminum, antimony, barium, calcium, copper, iron, manganese, potassium, zinc, and mercury were outside the laboratory control limits in the MS/MSD submitted with SDG 480-200248-1. In addition, the aluminum, barium, cobalt, iron, manganese, nickel, and zinc recovery values in the associated post-digestion spike were outside the laboratory control limits.

- The detected aluminum, antimony, barium, iron, manganese, zinc, and mercury results for associated Sample SB6 (1-2) were qualified as estimated bias low (J-, MS).
- The detected aluminum, cobalt, copper, nickel, and potassium results for Sample SB6 (1-2) were qualified as estimated bias high (J+, MS).

The percent recovery values for aluminum, antimony, barium, calcium, iron, manganese, and potassium were outside the laboratory control limits in the MS/MSD submitted with SDG 480-201563-1. In addition, the aluminum, iron, and manganese recovery values in the associated post-digestion spike were outside the laboratory control limits.

- The detected aluminum, antimony, barium, and potassium results for associated Sample SS1(0-2) were qualified as estimated bias high (J+, MS).

- The detected aluminum results were also qualified as estimated bias low (J-, MS) based on the post-digestion spike (PDS) recovery.
- The iron and manganese concentrations in the unspiked sample were greater than 4 times the concentration of the spike added, and no qualifiers were assigned.

The percent recovery values for aluminum, antimony, barium, calcium, iron, lead, magnesium, manganese, and potassium were outside the laboratory control limits in the MS/MSD of Sample SS2 (0-2) submitted with SDG 480-201615-1. In addition, the zinc recovery value in the associated post-digestion spike was outside the laboratory control limits.

- The detected antimony, barium, calcium, magnesium, and potassium results for Sample SS2 (0-2) were qualified as estimated (J+, MS) bias high and the antimony results were qualified as estimated bias low (J-, MS).
- The detected zinc result in Sample SS2 (0-2) was qualified as estimated (J-, MS) bias low based on the PDS recovery.
- The aluminum, iron, and manganese concentrations in the unspiked sample were greater than 4 times the concentration of the spike added, and no qualifiers were assigned.

The aluminum, antimony, barium, calcium, iron, lead, magnesium, manganese, and potassium recovery values in the MS/MSD for Sample SS2 (6-12) submitted with SDG 480-201615-1 were outside the laboratory control limits. The RPD value for magnesium was greater than the laboratory control limits.

- The detected barium, calcium, magnesium, and potassium results for Sample SS2 (6-12) were qualified as estimated (J+, MS) bias high, and the antimony result was qualified as estimated bias low (J-, MS).
- The magnesium result for Sample SS2 (6-12) was qualified as estimated based on the observed imprecision (J, REP).
- The lead recovery value in the matrix spike was within control limits, the recovery value in the MSD was within 10 percentage points of the control limits, and no qualifiers were assigned.
- The aluminum, iron, and manganese concentrations in the unspiked sample were greater than 4 times the concentration of the spike added, and no qualifiers were assigned.

The percent recovery values for mercury were less than the laboratory control limits in the MS/MSD submitted with SDG 480-201707-1. The mercury result for Sample SB2 (0-0.5) was qualified as estimated, biased low (J-, MS).

The percent recovery values for aluminum, barium, calcium, copper, magnesium, manganese, potassium, zinc, antimony, iron, lead, and vanadium were outside the laboratory control limits in the MS/MSD of Sample SB-2 (1-2) submitted with SDG 480-204989-1. In addition, the RPD values for arsenic, barium, potassium, zinc, antimony, cadmium, iron, lead, nickel, silver, and vanadium were greater than the laboratory control limits. The aluminum, barium, lead, nickel, and zinc recovery value in the associated post-digestion spike was outside the laboratory control limits.

- The following qualifiers were assigned to Samples SB-2 (1-2) and FDUP_122122 based on the MS/MSD results:
  - J, MS: Aluminum
  - J-, MS: Calcium, Copper
  - J, MS, REP: Barium, Potassium, Zinc, Antimony, Lead, Nickel, Vanadium
  - J, REP: Arsenic, Cadmium.
- Because the magnesium matrix spike recovery value was within limits and the MSD recovery value was within 10 points of limits, no qualifiers were assigned.
- The iron and manganese concentrations in the unspiked sample were greater than 4 times the concentration of the spike added, and no qualifiers were assigned.
- Silver was not detected in the associated samples and no qualifiers were assigned on the basis of the observed imprecision.

The calcium, sodium, and dissolved calcium recovery values in the PDS submitted with SDG 480-205868-1 were less than the laboratory control limits. The concentrations for these analytes in the unspiked sample were greater than 4 times the concentration of the spike added, and no qualifiers were assigned.

VOCs: The percent recovery values for 13 VOCs were outside the laboratory control limits in the MS/MSD submitted with SDG 480-200248-1. In addition, the RPD values for 20 VOCs were greater than the laboratory control limits.

- The results for 26 VOCs for associated Sample SB6 (1-2) were qualified as estimated (UJ, MS).
- The 1,2,4-trichlorobenzene result for Sample SB6 (1-2) was qualified as rejected (R, MS) because the associated MS/MSD recovery values were less than 10 percent.
- Four VOCs were not qualified because the recovery bias was high and these VOCs were not detected for Sample SB6 (1-2).

The percent recovery values for 20 VOCs were outside the laboratory control limits in one of two MS/MSDs submitted with SDG 480-201615-1. In addition, the RPD values for two VOCs were greater than the laboratory control limits.

- The results for 11 VOCs for Sample SS2 (0-2) were qualified as estimated (UJ, MS).
- The recoveries for eight VOCs were within limits in the MS or MSD and within 10 percentage points of the limits in the associated MS or MSD, and no qualifiers were assigned.
- Isopropylbenzene was not qualified because the recovery bias was high and this VOC was not detected for Sample SS2 (0-2).
- All analytes with RPD values greater than the laboratory control limits were not detected in the unspiked sample, and no qualifiers were assigned on the basis of the potential imprecision.

The percent recovery values for 12 VOCs were outside the laboratory control limits in the second of two MS/MSDs submitted with SDG 480-201615-1. In addition, the RPD values for 32 VOCs were greater than the laboratory control limits.

- The results for three VOCs for Sample SS2 (6-12) were qualified as estimated (UJ, MS).
- The recoveries for eight VOCs were within limits in the MS or MSD and within 10 percentage points of the limits in the associated MS or MSD, and no qualifiers were assigned.
- No analytes with RPD values greater than the laboratory control limits were detected in the unspiked sample, and no qualifiers were assigned on the basis of the potential imprecision.

The percent recovery values for 11 VOCs were outside the laboratory control limits in the MS/MSD submitted with SDG 480-204989-1. In addition, the RPD value for methylcyclohexane was greater than the laboratory control limits.

- The nondetected results for 1,2,4-trichlorobenzene and bromoform in associated Samples SB-2 (1-2) and FDUP_122122 were qualified as estimated (UJ, MS).
- The recoveries for eight VOCs were within limits in the MS or MSD and within 10 percentage points of the limits in the associated MS or MSD, and no qualifiers were assigned.
- The recoveries for three VOCs were biased high and these analytes were not detected in the associated samples and no qualifiers were assigned on the basis of the potentially high analytical bias. Methylcyclohexane was not detected in the associated samples, and no qualifiers were assigned on the basis of the observed imprecision.

SVOCs: The percent recovery values for 27 SVOCs were less than the laboratory control limits in the MS/MSD submitted with SDG 480-200248-1. In addition, the percent recovery values for four SVOCs were greater than the laboratory control limits.

- The acenaphthylene, benzo[ghi]perylene, chrysene, and indeno[1,2,3-cd]pyrene results for Sample SB6 (1-2) were qualified as estimated (J-, MS).
- The 1,4-dioxane, 2,4-dinitrophenol, and hexachlorocyclopentadiene results for Sample SB6 (1-2) were qualified as rejected (R, MS) because the associated MS/MSD recovery values were less than 10 percent.
- Six SVOC results for Sample SB6 (1-2) were qualified as estimated (J, REP) because of MS/MSD imprecision.
- The remaining SVOCs were not qualified because the sample concentrations were greater than 4 times the spike concentration or the analytes were not detected in the parent sample.

The percent recovery values for 25 SVOCs were outside the laboratory control limits in one MS/MSD submitted with SDG 480-201615-1. In addition, the RPD values for the majority of SVOCs were greater than the laboratory control limits.

- The diethyl phthalate, bis(2-chloroethyl)ether, and fluoranthene results for Sample SS2 (0-2) were qualified as estimated (J/UJ, MS).
- The 2,4-dinitrophenol, 3,3′-dichlorobenzidine, benzaldehyde and N-nitrosodiphenylamine results for Sample SS2 (0-2) were qualified as rejected (R, MS) because the associated MS/MSD recovery values were less than 10 percent.
- Eight SVOC results for Sample SS2 (0-2) were qualified as estimated (J, REP) because of MS/MSD imprecision.

2,4-Dinitrophenol was not recovered in one MS/MSD submitted with SDG 480-201615-1. In addition, the RPD values for the majority of SVOCs were greater than the laboratory control limits.

- The 2,4-dinitrophenol results for Sample SS2 (6-12) were qualified as rejected (R, MS) because the associated MS/MSD recovery values were less than 10 percent.
- The diethyl phthalate result for Sample SS2 (6-12) was qualified as estimated (J, REP) because of MS/MSD imprecision.

The percent recovery values for carbazole were greater than the laboratory control limits in the MS/MSD submitted with SDG 480-202448-1. This analyte was not detected in the associated samples, and no qualifiers were assigned because of the potentially high analytical bias.

The percent recovery values for seven analytes were outside the laboratory control limits in the MS/MSD submitted with SDG 480-204989-1. In addition, the RPD values for benzo[ghi]perylene, benzo[k]fluoranthene, and phenanthrene were greater than the control limits.

- The MS/MSD was analyzed at 10-fold and 100-fold dilutions, and no qualifiers were assigned on the basis of recovery values.
- The detected benzo[ghi]perylene, benzo[k]fluoranthene, and phenanthrene results for Samples SB-2 (1-2) and FDUP_122122 were qualified as estimated (J, REP).

The RPD values for 38 analytes in the MS/MSD submitted with SDG 480-205124-1. These analytes were not detected in the associated sample, and no qualifiers were assigned on the basis of the observed imprecision.

The recovery value for bis(2-chloroethyl) ether in the MSD submitted with SDG 480-205868-1 was greater than the laboratory control limits. The recovery value was within the laboratory control limits in the matrix spike and within 10 percentage points of the limits in the MSD, and no qualifiers were assigned.

PFAS: The RPD value for 1H,1H,2H,2H-perfluorohexanesulfonic acid (4:2) in the matrix spike submitted with SDG 480-205868-2 was greater than the control limits. This analyte was not detected in the associated samples, and no qualifiers were assigned on the basis of the observed imprecision.

2.7 REPLICATES

Eight sets of field duplicates were submitted:

Field Duplicate Identification	Associated Parent Sample
FDUP2_072922	SS5 (12-24)
FDUP_072922	SB6 (0-0.5)
FDUP_091222	SS1 (12-24
FDUP2_091322	SS3 (12-24)
FDUP_091422	SB2 (1-2)
FDUP-100522	MW1-100522
FDUP_122122	SB-2 (1-2)
FDUP-013123	MW2-013123

For this project, the target control limit for field duplicates is an RPD less than 50 percent. As noted in the QAPP (Integral 2022), data were not qualified as estimated if the target control limit was exceeded. The control limits were met for all analytes, with the exceptions noted below.

For the majority of the RPD outliers, the difference between the results was less than 2 times the reporting limit when at least one result was less than the reporting limit, indicating acceptable precision.

Samples with precision outliers are described in the following table and indicate potential sample inhomogeneity.

Field Duplicates	Analytes with Precision Outliers
SB6 (0-0.5) FDUP_072922	benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo[ghi]perylene, benzo[k]fluoranthene, chrysene, fluoranthene, indeno[1,2,3-cd]pyrene, and pyrene
SB2 (1-2) FDUP_091422	2-butanone (MEK), acetone, and calcium
SS1 (12-24) FDUP_091222	PFOS
SB-2 (1-2) FDUP_122122	copper, cadmium, iron, and lead

The RPD values between laboratory duplicate analysis of mercury and percent moisture were within the laboratory-specified limits.

2.8 SERIAL DILUTIONS

The percent differences for all reported serial dilutions were evaluated against the control limit of 10 percent for values greater than 50 times the method detection limit (MDL). Detected results were estimated (J-ICPSD) when these control limits were not met. The following qualifiers were assigned based on the evaluation of the serial dilution samples.

SDG	Samples	Analytes	Qualifiers Assigned
480-200248-1	SB6 (1-2)	Cobalt, Nickel, Potassium	J+, ICPSD
480-201563-1	SS1 (0-2)	Barium, Magnesium	J+, ICPSD
480-201615-1	SS2 (0-2)	Barium, Calcium, Chromium, Iron, Magnesium, Manganese, Zinc	J+, ICPSD
480-204989-1	SB-2 (1-2) FDUP_122122	Aluminum, Barium, Calcium, Lead, Magnesium, Manganese, Zinc	J+, ICPSD

2.9 METHOD REPORTING LIMITS AND METHODOLOGY

The reporting limits specified in the QAPP (Integral 2022) were generally met for all analyses with the following exceptions.

- A number of reporting limits were slightly elevated because of the moisture content in the soils or volume used for extraction of waters.
- A number of samples for metals analyses were diluted at 2-, 5-, or 10-fold dilutions because of matrix interferences or analyte concentrations, and the reporting limits were elevated accordingly.
- A number of samples for SVOC analysis were diluted at 2-, 5-, 10-, 20-, or 100-fold dilutions because of associated sample extract viscosity, color, or appearance, and the reporting limits were elevated accordingly.

The laboratory did not include target analyte 1,2,3-trimethylbenzene in the LCSs and MS/MSDs and, therefore, accuracy and precision for these analytes could not be fully evaluated.

VOC internal standard and surrogate responses were outside of control limits for Samples SB5 (0-0.5), SB5 (0.5-1), and SB5 (1-2) submitted with SDG 480-200130-3, Samples SS7 (0-6), SS7 (6-12), SS7 (12-24), and SS7 (0-2) submitted with SDG 480-200156-11, Samples SB6 (1-2), SB6 (1-2)MS, SB6 (1-2)MSD, SB6 (0-0.5), SB6 (0.5-1), SS5 (0-2), SS6 (0-2), SS6 (0-6), and FDUP_072922 submitted with SDG 480-200248-1. The samples were reanalyzed and responses were outside control limits. The laboratory reanalyzed the samples and similar responses were observed. The laboratory submitted only the original analyses. See Sections 2.13 and 2.4 for effects on data quality.

The laboratory I-flagged PFAS results that did not meet transition mass ratio limits. These results were qualified as tentatively identified and estimated (NJ, EMPC).

The signal-to-noise ratio for the following samples and analytes were greater than the 10:1 method criteria for PFAS analysis. These detected results were qualified as not detected (U, Other).

SDG	Sample	Analyte
480-200248-1	SB6 (0.5-1)	PFHxA PFHpA PFHxS
	FDUP_072922	PFHxA PFOS
	SB6 (1-2)	PFHxA PFBS
480-201563-1	SS1 (0-2)	PFHxA

SDG	Sample	Analyte
	SS1 (6-12)	PFHxA, PFHpA, PFDoDA PFDS, PFPeA, PFTriA
	FDUP_091222	PFHxA, PFHpA, PFDoDA PFDS, PFPeA, PFTriA

The 1,4-dioxane results for Samples ERB_72722 and FB2_072722 submitted with SDG 480-200156-1 using Method 8270D were qualified as do-not-report (R-DNR). 1,4-Dioxane was also reported using Method 8270D SIM for these samples. Because the reporting limits were lower for the 8270D SIM method, these results were chosen as more appropriate to report.

The laboratory reextracted Sample FB_072922 submitted with SDG 480-200248-1 for SVOCs outside of holding time criteria because of a recovery outlier for naphthalene in the associated LCS/LCSD. Only naphthalene was reported from the reextraction, and all other results were qualified as do-not-report (R-DNR) because the results from the initial extraction were deemed more appropriate.

The laboratory reanalyzed the following samples for VOCs submitted with SDG 480-201615-1 because the internal standard and surrogate responses were outside of control limits: SS3 (0-2), SS3 (0-6), SS3 (6-12), SS3 (12-24), FDUP2_091322, SS4 (0-2), SS4 (0-6), SS4 (6-12), and SS4 (12-24). The laboratory did not provide the data for the reanalysis.

A few dissolved metals results in Samples MW1-100522, MW5-100522, and FDUP-100522 submitted with SDG 480-202448-1 and Samples MW2-013123, FDUP-013123, MW3-013123, MW5-013123, and MW1-013123 submitted with SDG 480-205868-1 were slightly higher than the associated total metals results. These results should be used with caution.

When a result was qualified with a positive bias (J+) and a negative bias (J-) during validation, the overall bias is unknown and the J qualifier was applied. When a result was qualified with a bias (J+ or J-) and an unknown bias (J), the J qualifier was applied.

The samples collected in January 2023 were analyzed for PFAS using EPA Draft Method 1633 (version 3) to report the list of PFAS noted in the New York State Department of Environmental Conservation's Sampling, Analysis, and Assessment of PFAS (November 2022).

2.10 INSTRUMENT PERFORMANCE

The gas chromatograph/mass spectrometer instrument performance checks ("tune") were analyzed at the start of each 12-hour analytical shift, and the method-specified acceptance criteria were met.

2.11 INITIAL CALIBRATION

Initial calibrations were analyzed on all instruments and met the acceptance criteria stated in the associated Region II data validation standard operating procedures, with the following exceptions.

SDG	Calibration	Analytes	Qualification
VOCs			
480-201563-1 480-201615-1 480-201707-1	ICV 480-639579/28	1,1-Dichloroethene Cyclohexane Carbon tetrachloride Methylcyclohexane	Because the bias was low, the results for these analytes in the following associated samples were qualified as estimated (J-/UJ, Cc): SS1 (0-2), SS1 (0-6), SS1 (6-12), SS1 (12-24) FDUP_091222, SS2 (0-2), SS2 (0-6) SS2 (6-12), SS2 (12-24), SS3 (0-2) SS3 (0-6), SS3 (6-12), SS3 (12-24) FDUP2_091322, SS4 (0-2) SS4 (0-6), SS4 (6-12), SS4 (12-24), SB2 (0-0.5), SB2 (0.5-1), SB2 (1-2) FDUP_091422, SB2 (13.5-15.5), SB4 (0-0.5), SB4 (0.5-1), SB4 (1-2).
480-202448-1	ICV 480-644313/35	*tert*-Butylbenzene	The bias was high and this analyte was not detected in the associated samples, and no qualifiers were assigned.
PFAS			
480-205868-2	ICVL 410-343978/10	PFOA	J+,Ci detected result Sample MW2-013123.
		1H,1H,2H,2H-perfluorodecanesulfonic acid (8:2)	The bias was high and this analyte was not detected in the associated samples and no qualifiers were assigned.
		NEtFOSAA	UJ-Ci nondetected results in Samples MW2-013123 and FB_013123
	ICVL 410-346561/10	Perfluorohexanoic acid Perfluorodecanoic acid Perfluorooctanesulfonic acid	The biases were high and these analytes were not detected in the associated samples, and no qualifiers were assigned.

2.12 CONTINUING CALIBRATION

Continuing calibrations were analyzed at the appropriate frequency and met the acceptance criteria stated in the associated methods, with the following exceptions.

SDG	Calibration Identification	Analyte	Qualifiers Assigned
Metals			
480-200114-1	CCVL 480-635565/27	Potassium	Because the bias was high and this analyte was not detected in the associated samples, no qualifiers were assigned.
480-183421-1	CCVL 480-636329/55 CCVL 480-636329/64	Potassium	Because the bias was high the result in associated Sample SS7 (0-2) was qualified as estimated (J+, Cc)
480-202448-1	CCVL 480-645252/51	Manganese	Because the total manganese results in the associated samples were significantly greater than the CCVL value (0.003 mg /L) and the other associated CCVL met criteria; no qualifiers were assigned.
480-204989-1	CCVL 480-654754/39	Iron	Because the bias was high, the results in associated Samples SB-2 (0-0.5), SB-2 (0.5-1), SB-2 (20.4-22.4),and FDUP_122122 were qualified (J+, Cc).
VOCs			
480-200130-1	CCVIS 480-635513/4	1,1,1-Trichloroethane	Because the bias was high, the results for this analyte in associated Sample SB5 (13-15) was qualified as estimated (J+, Cc)
		Carbon tetrachloride 1,2-Dichloroethane Bromodichloromethane Tetrachloroethene Dibromochloromethane Bromoform	Because the bias was high and these analytes were not detected in the associated sample, no qualifiers were assigned.
	CCVIS 480-635772/4	1,1,1-Trichloroethane	Because the bias was high, the results for this analyte in associated Samples SB5 (0.5-1) and SB5 (1-2) were qualified as estimated (J+, Cc)
		Trichlorofluoromethane Carbon tetrachloride Tetrachloroethene Dibromochloromethane 1,1,1,2-Tetrachloroethane Bromoform	Because the bias was high and these analytes were not detected in the associated samples, no qualifiers were assigned
480-200156-1	CCVIS 480-636094/4	Dibromochloromethane Bromoform	Because the bias was high and these analytes were not detected in the associated samples, no qualifiers were assigned.

SDG	Calibration Identification	Analyte	Qualifiers Assigned
480-200248-1	CCVIS 480-635636/4	Methyl acetate	Because the bias was low, the result for this analyte in associated Sample ERB_072822 was qualified as estimated (UJ, Cc)
	CCVIS 480-635717/4	1,2-Dibromo-3-chloropropane	Because the bias was low, the result for this analyte in associated Sample FB_072922 was qualified as estimated (UJ, Cc).
	CCVIS 480-637219/2	Chloroethane	Because the bias was high and these analytes were not detected in the associated samples, no qualifiers were assigned.
480-201563-1	CCVIS 480-641153/4	Chloromethane	Because the bias was low, the result for this analyte in associated Sample FB-091222 and TB-091222was qualified as estimated (UJ, Cc).
		Dibromochloromethane	Because the bias was high and these analytes were not detected in the associated samples, no qualifiers were assigned.
	CCVIS 480-641452/4	Chloromethane Dibromochloromethane n-Butylbenzene	Because the bias was high and these analytes were not detected in the associated samples, no qualifiers were assigned.
480-201615-1	CCVIS 480-641512/4	Dibromochloromethane Bromoform	Because the bias was high and these analytes were not detected in the associated samples, no qualifiers were assigned.
	CCVIS 480-641452/4	N-Propylbenzene *tert*-Butylbenzene n-Butylbenzene	Because the bias was high and these analytes were not detected in the associated samples, no qualifiers were assigned.
480-200248-1 480-201615-1	CCVIS 480-636252/9	Carbazole	Because the bias was high and these analytes were not detected in the associated samples, no qualifiers were assigned.
480-202448-1	CCVIS 480-644817/6	Chloroform Bromodichloromethane	Because the bias was high and these analytes were not detected in the associated samples, no qualifiers were assigned.
	CCVIS 480-644728/4	1,1,2-Trichloroethane Ethylbenzene *m,p*-Xylene N-Propylbenzene 1,3,5-Trimethylbenzene 1,2,4-Trimethylbenzene *sec*-Butylbenzene n-Butylbenzene	The nondetected results for these analytes in the following samples were qualified as estimated, biased low (UJ, Cc): TB-100522, FB-100522, ERB-100522

SDG	Calibration Identification	Analyte	Qualifiers Assigned
480-204989-1	CCVIS 480-654942/29	Vinyl chloride Chloroethane Cyclohexane N-Propylbenzene tert-Butylbenzene sec-Butylbenzene n-Butylbenzene	Because the bias was high and these analytes were not detected in the associated samples, no qualifiers were assigned.
480-205124-1	CCVIS 480-655113/3	Vinyl chloride Trichlorofluoromethane Carbon tetrachloride Dibromochloromethane Bromoform	Because the bias was high and these analytes were not detected in the associated samples, no qualifiers were assigned.
	CCVIS 480-655097/4	Dibromochloromethane 1,1,1,2-Tetrachloroethane Bromoform	The nondetected results for these analytes in Sample SB3 (23-25) were qualified as estimated, biased low (UJ, Cc)
SVOC			
480-201615-1	CCVIS 480-642901/4	Hexachlorocyclopentadiene	Because the bias was low, the result for this analyte in associated Sample SS2 (12-24) was qualified as estimated (UJ, Cc).
	CCVIS 480-642029/3	Carbazole	Because the bias was high and these analytes were not detected in the associated samples, no qualifiers were assigned.
480-201707-1	CCVIS 480-642351/4	2-Nitrophenol	This calibration verification standard was associated with a batch method blank and LCS, and no qualifiers were assigned.
480-202448-1	CCVIS 480-644815/3	Bis(2-chloroisopropyl)ether Di-n-butylphthalate	Because the biases were high and these analytes were not detected in the associated samples, no qualifiers were assigned.
	CCVIS 480-645033/3	Bis(2-chloroisopropyl)ether Hexachlorocyclopentadiene Carbazole	Because the bias was low, the result for hexachlorocyclopentadiene in associated Sample ERB-100522 was estimated (UJ, Cc). Because the biases were high for the other analytes and these analytes were not detected in the associated samples, no qualifiers were assigned

SDG	Calibration Identification	Analyte	Qualifiers Assigned
	CCVIS 480-645318/3	Bis(2-chloroisopropyl)ether Hexachlorocyclopentadiene Carbazole	Because the bias was low, the result for hexachlorocyclopentadiene in associated Sample FDUP-100522 was estimated (UJ, Cc). Because the biases were high for the other analytes and these analytes were not detected in the associated samples, no qualifiers were assigned.
480-204989-1	CCVIS 480-654983/3	2,4-Dinitrotoluene	Because the bias was high and this analyte was not detected in the associated samples, no qualifiers were assigned.
	CCVIS 480-654446/3	4-Methylphenol	Because the bias was low, the result in associated Sample FB_122122 was estimated (UJ, Cc).
480-205124-1	CCVIS 480-655370/3	Bis (2-chloroisopropyl) ether Nitrobenzene	Because the biases were low, the results in associated Samples EB_010323 and FB_010323 were estimated (UJ, Cc).
PFAS			
480-201563-1	CCVLIS 200-183694/5	PFHxDA	Because the bias was low, the result for this analyte in associated Sample FB-091222 was estimated (UJ, Cc)
480-201707-1	CCVLIS 200-183694/5	PFHxDA	This calibration verification standard was associated with a batch method blank and LCS, and no qualifiers were assigned.
480-207989-1	CCV 200-187284/22	M2-8:2 FTS d3-NMeFOSAA d5-NEtFOSAA	Because these surrogate recoveries were within limits in the associated samples, no qualifiers assigned.
480-205868-2	CCV 410-349204/245	13C5 PFPeA	These surrogates were within the recovery control limits in the associated sample and no qualifiers assigned.

2.13 INTERNAL STANDARDS

Internal standards were added to all samples for SVOC, VOC, PFAS, and inductively coupled plasma metals analyses, and the areas and retention times of all internal standards were within the method-specified control limits with the following exceptions for VOC analyses.

SDG	Samples	Internal Standard	Qualification	Associated Analytes
480-200130-1	SB5 (0-0.5) SB5 (0.5-1) SB5 (1-2)	Chlorobenzene-d5	UJ, IS UJ, IS J-/UJ, IS	See footnote a.
		1,4-Dichlorobenzene-d4	R, IS	See footnote b.
480-200156-1	SS7 (0-6) SS7 (6-12)	Chlorobenzene-d5 1,4-Dichlorobenzene-d4	UJ, IS	See footnotes a and b.
	SS7 (12-24)	Chlorobenzene-d5	UJ, IS	See footnote a.
		1,4-Dichlorobenzene-d4	R, IS	See footnote b.
	SS7 (0-2)	1,4-Dichlorobenzene-d4	UJ, IS	See footnote b.
480-200248-1	SB6 (1-2)	Chlorobenzene-d5	UJ, IS	See footnote a
		1,4-Dichlorobenzene-d4	R, IS	See footnotes b.
	SB6 (1-2)MS SB6 (1-2)MSD	Chlorobenzene-d5 1,4-Dichlorobenzene-d4	No qualifiers assigned to quality control samples.	
	SB6 (0-0.5)	Chlorobenzene-d5 1,4-Dichlorobenzene-d4	J-/UJ, IS	See footnotes a and b.
	SB6 (0.5-1)	Chlorobenzene-d5	UJ, IS	See footnote a
		1,4-Dichlorobenzene-d4	R, IS	See footnotes b.
	SS5 (0-2) SS6 (0-2) SS6 (0-6) SS6 (0-6) SS6 (12-24)	1,4-Dichlorobenzene-d4	J-/UJ, IS	See footnote b.
	FDUP_072922	Chlorobenzene-d5 1,4-Dichlorobenzene-d4	J-/UJ, IS	See footnotes a and b.
480-201563-1	SS1 (0-2) SS1 (6-12) SS1 (12-24) FDUP_091222	1,4-Dichlorobenzene-d4	UJ, IS	See footnote b.
480-201615-1	SS2 (0-2) SS3 (0-2)	1,4-Dichlorobenzene-d4	UJ, IS	See footnote b.
	SS3 (0-6) SS3 (6-12)	1,4-Dichlorobenzene-d4 Chlorobenzene-d5 Chlorobenzene-d5	UJ, IS	See footnotes a and b.
	SS3 (12-24)	1,4-Dichlorobenzene-d4	R, IS	See footnote b.
		Chlorobenzene-d5	J-/UJ, IS	See footnote a.
	FDUP2_091322	1,4-Dichlorobenzene-d4	R, IS	See footnote b.
		Chlorobenzene-d5	UJ, IS	See footnote a.
	SS4 (0-2)	1,4-Dichlorobenzene-d4	R, IS	See footnote b.
	SS4 (0-6)	1,4-Dichlorobenzene-d4 Chlorobenzene-d5	UJ, IS	See footnotes a and b.

SDG	Samples	Internal Standard	Qualification	Associated Analytes
	SS4 (6-12)	1,4-Dichlorobenzene-d4	R, IS	See footnote b.
		Chlorobenzene-d5	UJ, IS	See footnote a.
	SS4 (12-24)	1,4-Dichlorobenzene-d4	R, IS	See footnote b.
		Chlorobenzene-d5	UJ, IS	See footnote a.
480-201707-1	SB2 (0-0.5)	1,4-Dichlorobenzene-d4	UJ, IS	See footnote b.
480-204989-1	FDUP_122122	1,4-Dichlorobenzene-d4	UJ, IS	See footnote b.

[a] 1,1,1,2-Tetrachloroethane, 1,1,2-trichloroethane, 1,2-dibromoethane, 1,3-dichloropropane, 2-hexanone, 4-methyl-2-pentanone, bromoform, chlorobenzene, dibromochloromethane, ethylbenzene, *m,p*-xylene, *o*-xylene, styrene, tetrachloroethene, toluene, *trans*-1,3-dichloropropene.

[b] 1,1,2,2-Tetrachloroethane, 1,2,4-trichlorobenzene, 1,2,4-trimethylbenzene, 1,2-dibromo-3-chloropropane, 1,2-dichlorobenzene, 1,3,5-trimethylbenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, isopropylbenzene, n-butylbenzene, N-propylbenzene, *sec*-butylbenzene, *tert*-butylbenzene.

The PFAS internal standard ^{13}PFOA recovery was greater than the control limits in ICV 200-182319/12 submitted with SDGs 480-200156-1 and 480-200248-1. Because PFOA met criteria in this ICV, no qualifiers assigned.

2.14 INTERFERENCE CHECK

The interference check sample was analyzed at the beginning of each analytical sequence and met the acceptance criteria stated in EPA's Region II guidelines for ICP-AES data validation (USEPA 2016b) with the following exceptions.

Analytes detected in the Interference Check Sample A (ICSA) with absolute values greater than the MDL and samples with interferents with concentrations similar to the ICSA are reported below.

SDG	Analyte	Samples(s)	Qualifiers Assigned
480-200130-1	Antimony	SB5 (0-0.5), SB5 (0.5-1), SB5 (13-15)	J-, ICS
		SB5 (1-2)	UJ, ICS
480-200156-1	Cadmium	SB5 (13-15)	J+, ICS
	Antimony	SS7 (0-6), SS7 (6-12), SS7 (12-24)	J-, ICS
	Cadmium	SS7 (0-6)	J+, ICS
480-200248-1	Cadmium	SB6 (13-15), SS5 (6-12), SS6 (0-6)	J+, ICS
		SS6 (0-2)	UJ, ICS
			J-, ICS
480-201563-1	Cadmium	SS1(0-6), SS1(6-12), SS1(12-24)	J+ICS
	Selenium	SS1(0-6), SS1(6-12), SS1(12-24)	J+ICS
		FDUP_091222	

SDG	Analyte	Samples(s)	Qualifiers Assigned
480-204989-1	Antimony	SB-2 (1-2)	J-, ICS
	Chromium	SB-2 (0-0.5)	J-, ICS
		SB-2 (0.5-1)	
		SB-2 (1-2)	
		SB-2 (20.4-22.4)	
		FDUP_122122	

2.15 RECALCULATION CHECKS

Recalculation checks were performed on all SDGs undergoing Stage 4 data validation. No calculation or transcription errors were discovered during the data validation review.

3 OVERALL ASSESSMENT

3.1 DATA QUALIFICATION

A total of 13,814 results were reported. A total of 2,241 results (16 percent) were qualified as estimated, tentatively identified, or not detected. The reasons for qualification are presented in Table 3-1. Some data points were qualified for multiple reasons; therefore, the sum of the qualifiers assigned is greater than the total number of data points qualified. A total of 151 results (1.1 percent) were rejected, and completeness was 99 percent, which meets the completeness goal of 90 to 100 percent. Sixty-seven rejected results were qualified as do-not-report because a more appropriate result was available, and these results were not included in the completeness calculation. A summary of all qualified results is presented in Table 3-2.

3.2 DATA USABILITY

The data meet the criteria set forth in the method and referenced quality assurance documents, with the exceptions noted above. All other results are acceptable for their intended use, as qualified.

480-205868-1	5 groundwaters, 1 field blank, 1 trip blank
480-205868-2	2 groundwaters, 1 field blank

Notes:
SDG = sample delivery group

Table 1-2. Analytical Parameters and Methods

Analytical Parameter	Analytical Method	Reference
1,4-Dioxane	EPA 8270D SIM ID	USEPA (2014a)
PFAS	EPA 537 ID	USEPA (2009)
	EPA 1633	USEPA (2021)
Metals	EPA 6010C	USEPA (2000)
Mercury	EPA 7470A/7471B	USEPA (1994/2007)
SVOCs	EPA 8270D	USEPA (2014a)
VOCs	EPA 8260C	USEPA (2006)

Notes:
EPA = U.S. Environmental Protection Agency
ID = isotope dilution
PFAS = per- and polyfluoroalkyl substances
SIM = selective ion monitoring
SVOC = semivolatile organic compound
VOC = volatile organic compound

Table 1-3. Definition of Data Qualifiers

Data Qualifier	Definition
J	The associated numerical value is an estimated quantity.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.
R	Rejected. The data are unusable.
U	The material was analyzed for, but was not detected.
UJ	The material was analyzed for, but was not detected. The sample quantitation limit is an estimated quantity.

Table 1-4. Definition of Data Validation Reason Codes

Reason Code	Definition
Cc	Calibration (continuing)
Ci	Calibration (initial)
DNR	Do-not-report
EB	Equipment blank contamination
EMPC	Estimated maximum possible concentration
FB	Field or equipment rinsate blank contamination
HT	Holding time
ICPSD	ICP serial dilution % difference
ICS	Interference check sample
IS	Internal standard
LB	Laboratory blank contamination
LCS	Laboratory control sample
MS	Matrix spike
Other	Described in data validation report
REP	Precision
SSR	Surrogate standard recovery

Table 2-1. QA/QC Parameters Reviewed

QA/QC Parameter	Analytical Parameter						
	1,4-Dioxane EPA 8270D SIM ID	PFAS EPA 537 ID	PFAS EPA 1633	Metals EPA 6010C	Mercury EPA 7470A/7471B	SVOCs EPA 8270D	VOCs EPA 8260C
Sample Receipt and Holding Times	+	Q	+	+	+	Q	+

Notes:

Cc = calibration (continuing)
Ci = calibration (initial)
DNR = co-not-report
EMPC = estimated maximum possible concentration
FB/EB = field or equipment rinsate blank contamination
HT = holding time
ICPSD = ICP serial dilution % difference
ICS = interference check sample
IS = internal standard
LB = laboratory blank contamination
MS = matrix spike
Other = described in data validation report
REP = precision
SSR = surrogate standard recovery

Qualifiers:

J = The associated numerical value is an estimated quantity.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
NJ = The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value is the estimated concentration in the sample.

R = Rejected. The data are unusable.
U = The material was analyzed for, but was not detected.
UJ = The material was analyzed for, but was not detected. The sample quantitation limit is an estimated quantity.

List Creation: 08/03/22 09:00 AM

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	True	1979791
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Water present in cooler; indicates evidence of melted ice.
Cooler Temperature is acceptable.	False	Cooler temperature outside required temperature criteria.
Cooler Temperature is recorded.	True	23.3ºC
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	Received project as a subcontract.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	N/A	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

FORM VIII-IN

Job Narrative
480-201563-1

Comments
No additional comments.

Revision 1
The report being provided is a revision of the original report sent on 9/27/2022. The report (revision 1) is being revised due to: Client requested a character change in sample IDs for samples FB_091222 and TB_091222.

Receipt
The samples were received on 9/13/2022 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.4º C.

Receipt Exceptions
Method 537 (modified): The following sample was received at the laboratory outside the required temperature criteria: FB_091222 (480-201563-6). This does not meet regulatory requirements. The cooler was receievd with a corrected temperature of 10.9C. There was water in the cooler to indicate melted ice.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-641153 recovered outside acceptance criteria, low biased, for 2-Butanone (MEK), 2-Hexanone, Vinyl chloride, Chloromethane, and 4-Methyl-2-pentanone (MIBK) . A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported. The associated samples are impacted: FB_091222 (480-201563-6) and TB_091222 (480-201563-7).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-641153 recovered above the upper control limit for Chlorodibromomethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: FB_091222 (480-201563-6) and TB_091222 (480-201563-7).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-641452 recovered above the upper control limit for Isopropylbenzene, n-Butylbenzene, N-Propylbenzene, tert-Butylbenzene and Vinyl chloride. The sample(s) associated with this CCV were non-detects above the reporting limits for the affected analytes; therefore, the data have been reported. The associated sample is impacted: SS1 (12-24) (480-201563-4).

Method 8260C: Internal standard and surrogate response for the following samples were outside control limits: SS1 (0-2) (480-201563-1), SS1 (0-6) (480-201563-2), SS1 (6-12) (480-201563-3) and FDUP_091222 (480-201563-5). The samples were re-analyzed and responses were outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The following samples were diluted due to color , appearance, and viscosity: SS1 (0-2) (480-201563-1), SS1 (0-6) (480-201563-2) and SS1 (6-12) (480-201563-3). Elevated reporting limits (RL) are provided.

Method 8270D: The following compound has been spiked at a level above the upper range of the initial calibration: Benzaldehyde. The laboratory control sample (LCS) associated with preparation batch 480-641440 and analytical batch 480-641495 recovered within acceptable limits for this analyte and has been qualified with an "E" flag.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6010C: The following samples were diluted due to the presence of Total Iron which interferes with Chromium, Nickel, Lead, Manganese, and Vanadium: SS1 (12-24) (480-201563-4) and FDUP_091222 (480-201563-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS
Method 537 (modified): The method blank for preparation batch 200-183583 and analytical batch 200-183606 contained Perfluorododecanoic acid (PFDoA), Perfluorotridecanoic acid (PFTriA), Perfluoroheptanesulfonic acid (PFHpS) and Perfluorodecanesulfonic acid (PFDS) above the method detection limit. This target analyte concentration was less than half the reporting limit (1/2RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 537 (modified): Method 537 (modified): The “I” qualifier associated with sample SS1 (0-2) (480-201563-1) is applied because the transition mass ratio for the indicated analyte(s) was outside of the established ratio limits. The qualitative identification has some degree of uncertainty, however analyst judgment was used to positively identify the analyte(s).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job Narrative
480-201615-1

Comments
No additional comments.

Receipt
The samples were received on 9/14/2022 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.4º C, 2.7º C and 3.9º C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-641452 recovered above the upper control limit for Isopropylbenzene, n-Butylbenzene, N-Propylbenzene, tert-Butylbenzene and Vinyl chloride. The sample(s) associated with this CCV were non-detects above the reporting limits for the affected analytes; therefore, the data have been reported. The associated sample is impacted: SS2 (0-6) (480-201615-2).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-641512 recovered above the upper control limit for Dibromochloromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: FB_091322 (480-201615-14) and TB_091322 (480-201615-15).

Method 8260C: Internal standard and/or surrogate responses for the following samples were outside control limits: SS2 (0-2) (480-201615-1), SS2 (0-2) (480-201615-1[MS]) and SS2 (0-2) (480-201615-1[MSD]). The samples confirm responses were outside control limits.

Method 8260C: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 480-641652 and analytical batch 480-641653 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected. The associated samples are: SS2 (0-2) (480-201615-1[MS]) and SS2 (0-2) (480-201615-1[MSD]).

Method 8260C: Internal standard and surrogate responses for the following samples were outside control limits: SS3 (0-2) (480-201615-5), SS3 (0-6) (480-201615-6), SS3 (6-12) (480-201615-7), SS3 (12-24) (480-201615-8), FDUP2_091322 (480-201615-9), SS4 (0-2) (480-201615-10), SS4 (0-6) (480-201615-11), SS4 (6-12) (480-201615-12) and SS4 (12-24) (480-201615-13). The samples were re-analyzed and responses were outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The following samples were diluted due to color, appearance, and viscosity: SS2 (0-2) (480-201615-1), SS2 (0-2) (480-201615-1[MS]), SS2 (0-2) (480-201615-1[MSD]), SS2 (0-6) (480-201615-2), SS2 (6-12) (480-201615-3), SS2 (6-12) (480-201615-3[MS]), SS2 (6-12) (480-201615-3[MSD]), SS3 (0-2) (480-201615-5), SS3 (0-6) (480-201615-6), SS3 (6-12) (480-201615-7), SS3 (12-24) (480-201615-8), FDUP2_091322 (480-201615-9), SS4 (0-2) (480-201615-10), SS4 (0-6) (480-201615-11), SS4 (6-12) (480-201615-12) and SS4 (12-24) (480-201615-13). Elevated reporting limits (RL) are provided.

Method 8270D: The following sample required a dilution due to the nature of the sample matrix: SS2 (0-2) (480-201615-1). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270D: The method blank for preparation batch 480-641786 contained Diethyl phthalate above the reporting limit (RL). None of the samples associated with this method blank contained the target compound above the RL; therefore, re-extraction and/or re-analysis of samples were not performed.

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: SS2 (0-6) (480-201615-2). These results have been reported and qualified.

Method 8270D: The following samples were diluted due to the nature of the sample matrix: SS2 (0-2) (480-201615-1[MS]) and SS2 (0-2) (480-201615-1[MSD]). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270D: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 480-641786 and analytical batch 480-642158 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected.

Method 8270D: The following compound has been spiked at a level above the upper range of the initial calibration: Benzaldehyde. The laboratory control sample (LCS) associated with preparation batch 480-641786 and analytical batch 480-642158 recovered within acceptable limits for this analyte and has been qualified with an "E" flag.

Method 8270D: The following sample was diluted due to the nature of the sample matrix: FB_091322 (480-201615-14). Elevated reporting limits (RLs) are provided.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-642029 recovered outside acceptance criteria,

low biased, for 2,4-Dinitrophenol, 2,4-Dinitrotoluene, 3-Nitroaniline and Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-642029 recovered above the upper control limit for Carbazole. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: FB_091322 (480-201615-14).

Method 8270D: The laboratory control sample (LCS) for preparation batch 480-641523 and analytical batch 480-642029 recovered outside control limits for the following analytes: Carbazole. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported: FB_091322 (480-201615-14).

Method 8270D: The laboratory control sample (LCS) for preparation batch 480-641523 and analytical batch 480-642029 recovered outside control limits for the following analytes: Diethyl phthalate. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported: FB_091322 (480-201615-14).

Method 8270D: The method blank for preparation batch 480-641523 contained Diethyl phthalate above the reporting limit (RL). None of the samples associated with this method blank contained the target compound above the reporting limit; therefore, re-extraction and/or re-analysis of sample was not performed: FB_091322 (480-201615-14).

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-642901 recovered outside acceptance criteria, low biased, for Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6010C: The method blank for preparation batch 480-641524 and analytical batch 480-641879 contained Total Aluminum, Iron, and Manganese above the reporting limits (RL). Associated samples SS2 (0-2) (480-201615-1), SS2 (0-6) (480-201615-2), SS2 (6-12) (480-201615-3), SS2 (12-24) (480-201615-4), SS3 (0-2) (480-201615-5), SS3 (0-6) (480-201615-6), SS3 (6-12) (480-201615-7), SS3 (12-24) (480-201615-8), FDUP2_091322 (480-201615-9), SS4 (0-2) (480-201615-10), SS4 (0-6) (480-201615-11), SS4 (6-12) (480-201615-12) and SS4 (12-24) (480-201615-13) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method 6010C: The serial dilution and post spike (480-201615-A-1-C PDS) and (480-201615-A-1-C SD ^5), associated with batch 480-641524, exceeded the quality control limits for Total Iron, Manganese, and Zinc. Sample matrix is suspected, therefore, no corrective action was necessary.

Method 6010C: The serial dilution (480-201615-A-1-C SD ^5) associated with batch 480-641879, exhibited results outside the quality control limits for Total Barium, Calcium, Chromium, and Magnesium. However, the post digestion spike (PDS) was compliant, therefore no corrective action was necessary.

Method 6010C: The recovery of post spike, (480-201615-A-1-C PDS), associated with batch 480-641879, exhibited a result outside quality control limits for Total Aluminum. However, the serial dilution (SD) of this sample was compliant, therefore no corrective action was necessary.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
480-201707-1

Comments
No additional comments.

Receipt
The samples were received on 9/16/2022 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.6º C, 2.4º C and 2.4º C.

Receipt Exceptions

Volume for PFC method received. However, method was not selected on the COC. The method was assigned: FB_091422 (480-201707-4), ERB1_091422 (480-201707-7) and ERB2_091422 (480-201707-8).

GC/MS VOA
Method 8260C: Internal standard and/or surrogate responses for the following sample was outside control limits: SB2 (0-0.5) (480-201707-1). The sample(s) were re-analyzed and responses were outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The following compound has been spiked at a level above the upper range of the initial calibration: Benzaldehyde. The laboratory control sample (LCS) associated with preparation batch 480-641854 and analytical batch 480-642351 recovered within acceptable limits for this analyte and has been qualified with an "E" flag.

Method 8270D: The following samples were diluted due to color, appearance, and viscosity: SB4 (0-0.5) (480-201707-10), SB4 (0.5-1) (480-201707-11) and SB4 (1-2) (480-201712-1). Elevated reporting limits (RL) are provided.

Method 8270D: The method blank for preparation batch 480-641854 contained Diethyl phthalate above the reporting limit (RL). None of the samples associated with this method blank contained the target compound above the RL; therefore, re-extraction and/or re-analysis of samples were not performed: SB2 (0-0.5) (480-201707-1), SB2 (0.5-1) (480-201707-2), SB2 (1-2) (480-201707-3), FDUP_091422 (480-201707-5), SB2 (13.5-15.5) (480-201707-6), SB4 (0-0.5) (480-201707-10), SB4 (0.5-1) (480-201707-11) and SB4 (1-2) (480-201712-1).

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: SB2 (0-0.5) (480-201707-1), SB2 (13.5-15.5) (480-201707-6) and SB4 (1-2) (480-201712-1). These results have been reported and qualified.

Method 8270D: Surrogate recovery for the following sample was outside control limits: FDUP_091422 (480-201707-5). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8270D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 480-641992 and analytical batch 480-642153 recovered outside control limits for the following analytes: Diethyl phthalate: FB_091422 (480-201707-4), ERB1_091422 (480-201707-7), ERB2_091422 (480-201707-8) and FB_091522 (480-201707-9).

Method 8270D: The laboratory control sample (LCS) for preparation batch 480-641992 and analytical batch 480-642153 recovered outside control limits for the following analytes: Diethyl phthalate. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data have been reported: FB_091422 (480-201707-4), ERB1_091422 (480-201707-7), ERB2_091422 (480-201707-8) and FB_091522 (480-201707-9).

Method 8270D: The method blank (MB) for preparation batch 480-641992 and analytical batch 480-642153 recovered above the reporting limit (RL) for the following analytes: Diethyl phthalate. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data have been reported: FB_091422 (480-201707-4), ERB1_091422 (480-201707-7), ERB2_091422 (480-201707-8) and FB_091522 (480-201707-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS
Method 537 (modified): The method blank for preparation batch 200-183718 and analytical batch 200-183779 contained Perfluorododecanoic acid (PFDoA) and Perfluorodecanesulfonic acid (PFDS) above the method detection limit. This target analyte concentration was less than half the reporting limit (1/2RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 537 (modified): Method 537 (modified): The “I” qualifier associated with samples SB2 (1-2) (480-201707-3), FDUP_091422 (480-201707-5) and (MB 200-183718/1-A) is applied because the transition mass ratio for the indicated analyte(s) was outside of the

established ratio limits. The qualitative identification has some degree of uncertainty, however analyst judgment was used to positively identify the analyte(s).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 480-641992.

Method 3510C: The following samples were re-prepared outside of preparation holding time due to high diethyl phthalate recovery in the MB, LCS, and samples: FB_091422 (480-201707-4), ERB1_091422 (480-201707-7), ERB2_091422 (480-201707-8) and FB_091522 (480-201707-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job Narrative
480-201707-1

Comments
No additional comments.

Receipt
The samples were received on 9/16/2022 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.6º C, 2.4º C and 2.4º C.

Receipt Exceptions

Volume for PFC method received. However, method was not selected on the COC. The method was assigned: FB_091422 (480-201707-4), ERB1_091422 (480-201707-7) and ERB2_091422 (480-201707-8).

GC/MS VOA
Method 8260C: Internal standard and/or surrogate responses for the following sample was outside control limits: SB2 (0-0.5) (480-201707-1). The sample(s) were re-analyzed and responses were outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The following compound has been spiked at a level above the upper range of the initial calibration: Benzaldehyde. The laboratory control sample (LCS) associated with preparation batch 480-641854 and analytical batch 480-642351 recovered within acceptable limits for this analyte and has been qualified with an "E" flag.

Method 8270D: The following samples were diluted due to color, appearance, and viscosity: SB4 (0-0.5) (480-201707-10), SB4 (0.5-1) (480-201707-11) and SB4 (1-2) (480-201712-1). Elevated reporting limits (RL) are provided.

Method 8270D: The method blank for preparation batch 480-641854 contained Diethyl phthalate above the reporting limit (RL). None of the samples associated with this method blank contained the target compound above the RL; therefore, re-extraction and/or re-analysis of samples were not performed: SB2 (0-0.5) (480-201707-1), SB2 (0.5-1) (480-201707-2), SB2 (1-2) (480-201707-3), FDUP_091422 (480-201707-5), SB2 (13.5-15.5) (480-201707-6), SB4 (0-0.5) (480-201707-10), SB4 (0.5-1) (480-201707-11) and SB4 (1-2) (480-201712-1).

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: SB2 (0-0.5) (480-201707-1), SB2 (13.5-15.5) (480-201707-6) and SB4 (1-2) (480-201712-1). These results have been reported and qualified.

Method 8270D: Surrogate recovery for the following sample was outside control limits: FDUP_091422 (480-201707-5). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8270D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 480-641992 and analytical batch 480-642153 recovered outside control limits for the following analytes: Diethyl phthalate: FB_091422 (480-201707-4), ERB1_091422 (480-201707-7), ERB2_091422 (480-201707-8) and FB_091522 (480-201707-9).

Method 8270D: The laboratory control sample (LCS) for preparation batch 480-641992 and analytical batch 480-642153 recovered outside control limits for the following analytes: Diethyl phthalate. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data have been reported: FB_091422 (480-201707-4), ERB1_091422 (480-201707-7), ERB2_091422 (480-201707-8) and FB_091522 (480-201707-9).

Method 8270D: The method blank (MB) for preparation batch 480-641992 and analytical batch 480-642153 recovered above the reporting limit (RL) for the following analytes: Diethyl phthalate. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data have been reported: FB_091422 (480-201707-4), ERB1_091422 (480-201707-7), ERB2_091422 (480-201707-8) and FB_091522 (480-201707-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS
Method 537 (modified): The method blank for preparation batch 200-183718 and analytical batch 200-183779 contained Perfluorododecanoic acid (PFDoA) and Perfluorodecanesulfonic acid (PFDS) above the method detection limit. This target analyte concentration was less than half the reporting limit (1/2RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 537 (modified): Method 537 (modified): The “I” qualifier associated with samples SB2 (1-2) (480-201707-3), FDUP_091422 (480-201707-5) and (MB 200-183718/1-A) is applied because the transition mass ratio for the indicated analyte(s) was outside of the

established ratio limits. The qualitative identification has some degree of uncertainty, however analyst judgment was used to positively identify the analyte(s).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 480-641992.

Method 3510C: The following samples were re-prepared outside of preparation holding time due to high diethyl phthalate recovery in the MB, LCS, and samples: FB_091422 (480-201707-4), ERB1_091422 (480-201707-7), ERB2_091422 (480-201707-8) and FB_091522 (480-201707-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job Narrative
480-204989-1

Comments
No additional comments.

Receipt
The samples were received on 12/22/2022 11:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.6º C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-654333 recovered above the upper control limit for 2-Hexanone and 4-Methyl-2-pentanone. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: FB_122122 (480-204989-1) and TB_122122 (480-204989-2).

Method 8260C: Due to the coelution of Ethyl Acetate with 2-Butanone (MEK) in the full spike solution, these analytes exceeded control limits in the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) associated with batch 480-654333 . The following samples were affected : FB_122122 (480-204989-1) and TB_122122 (480-204989-2).

Method 8260C: Internal standard (ISTD) response for the following sample was outside of acceptance limits: FDUP_122122 (480-204989-7). The sample(s) was not re-analyzed due to insufficient volume.

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-654942 recovered above the upper control limit for Cyclohexane, Methylcyclohexane, n-Butylbenzene, N-Propylbenzene, sec-Butylbenzene, tert-Butylbenzene, Trichlorofluoromethane and Vinyl chloride. The samples associated with this CCV were non-detects above the reporting limits for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SB-2 (0-0.5) (480-204989-3), SB-2 (0.5-1) (480-204989-4), SB-2 (1-2) (480-204989-5), SB-2 (20.4-22.4) (480-204989-6) and FDUP_122122 (480-204989-7).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The continuing calibration verification (CCV) associated with batch 480-654446 recovered above the upper control limit for Atrazine. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: FB_122122 (480-204989-1).

Method 8270D: The continuing calibration verification (CCV) analyzed in batch 480-654446 was outside the method criteria for the following analyte(s): Phenol-d5 (Surr). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-654446 recovered outside acceptance criteria, low biased, for 4-Methylphenol, 4-Nitrophenol, bis (2-chloroisopropyl) ether, Hexachlorocyclopentadiene and Pentachlorophenol. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270D: The minimum response factor (RF) criteria for the continuing calibration verification (CCV) analyzed in batch 480-654446 was outside criteria for the following analyte(s): Bis(2-chloroethoxy)methane. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered estimated.

Method 8270D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 480-654335 and analytical batch 480-654446 recovered outside control limits for the following analytes: Atrazine. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 480-654335 and analytical batch 480-654446 recovered outside control limits for the following analytes: 2,4,5-Trichlorophenol.

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: FB_122122 (480-204989-1) and (LCSD 480-654335/3-A). These results have been reported and qualified.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-654983 recovered above the upper control limit for 2,4-Dinitrophenol and 2,4-Dinitrotoluene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: SB-2 (1-2) (480-204989-5).

Method 8270D: The following samples were diluted due color, appearance, and viscosity: SB-2 (0-0.5) (480-204989-3), SB-2 (0.5-1) (480-204989-4), SB-2 (1-2) (480-204989-5), SB-2 (1-2) (480-204989-5[MS]), SB-2 (1-2) (480-204989-5[MSD]) and FDUP_122122 (480-204989-7). Elevated reporting limits (RL) are provided.

Method 8270D: The following samples were diluted due to the nature of the sample matrix: SB-2 (1-2) (480-204989-5[MS]) and SB-2 (1-2) (480-204989-5[MSD]). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270D: The following samples were diluted due to the nature of the sample matrix: SB-2 (1-2) (480-204989-5) and FDUP_122122 (480-204989-7). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-654983 recovered above the upper control limit for 2,4-Dinitrophenol and 2,4-Dinitrotoluene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SB-2 (0-0.5) (480-204989-3), SB-2 (0.5-1) (480-204989-4), SB-2 (20.4-22.4) (480-204989-6) and FDUP_122122 (480-204989-7).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6010C: The low level continuing calibration verification (CCVL 480-654754/39) recovered above the upper control limit for Total Iron. The samples associated with this CCVL were either less than the reporting limit (RL) for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples SB-2 (0.5-1) (480-204989-4), SB-2 (20.4-22.4) (480-204989-6) and FDUP_122122 (480-204989-7) was not performed.

Method 6010C: The serial dilution and post spike (480-204989-B-5-A PDS) and (480-204989-B-5-A SD ^5), associated with batch 480-654477, exceeded the quality control limits for Total Aluminum, Barium, and Zinc. Sample matrix is suspected, therefore, no corrective action was necessary.

Method 6010C: The serial dilution (480-204989-B-5-A SD ^5) associated with batch 480-654754, exhibited results outside the quality control limits for Total Arsenic, Calcium, Magnesium, and Manganese. However, the post digestion spike (PDS) was compliant, therefore no corrective action was necessary.

Method 6010C: The following samples were diluted due to the presence of Total Iron which interferes with Silver, Cadmium, Nickel, Lead, Antimony, and Vanadium: SB-2 (1-2) (480-204989-5), SB-2 (1-2) (480-204989-5[MS]), SB-2 (1-2) (480-204989-5[MSD]), (480-204989-B-5-A PDS ^2) and (480-204989-B-5-A SD ^10). Elevated reporting limits (RLs) are provided.

Method 6010C: The serial dilution and post spike (480-204989-B-5-A PDS ^2) and (480-204989-B-5-A SD ^10), associated with batch 480-654477, exceeded the quality control limits for Total Nickel and Lead. Sample matrix is suspected, therefore, no corrective action was necessary.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS

Method 537 (modified): Method 537 (modified): The “I” qualifier associated with sample FDUP_122122 (480-204989-7) is applied because the transition mass ratio for the indicated analyte(s) was outside of the established ratio limits. The qualitative identification has some degree of uncertainty, however analyst judgment was used to positively identify the analyte(s).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 480-654335.

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 480-654366.

Method 3550C: Due to the matrix, the following samples could not be concentrated to the final method required volume: SB-2 (1-2) (480-204989-5[MS]) and FDUP_122122 (480-204989-7). The reporting limits (RLs) are elevated proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: Integral Consulting Inc
Job ID: 480-204989-1
Project/Site: Integral Consulting - EF1017 - Refractor

Data Validation Resumes

Craig Hutchings

Consultant

(360) 939-9617

Olympia, WA

chutchings@integral-corp.com

Craig Hutchings is a chemist with more than 30 years of experience in environmental analytical chemistry, litigation support, project management, environmental investigations, and QA/QC data review and validation. He has led projects using standard and non-standard methodologies for the analysis of per- and polyfluoroalkyl substances (PFAS) in soils, waters, and firefighting foams. Mr. Hutchings has also led PFAS litigation support projects involving data management, data interpretation and analysis, and reporting.

Mr. Hutchings has led the preparation of sampling and analysis plans and quality assurance project plans (QAPPs), data interpretation, and development of quality assurance programs for sites within various state and federal regulatory programs. He has performed and supervised gas chromatography, high-performance liquid chromatography, and gas chromatography/mass spectrometry analyses for contaminants in soil, sediment, water, and tissues using EPA and various state methods. He is experienced in the evaluation and review of analytical data including outputs from inductively coupled plasma instruments and chromatograms for Aroclors, pesticides, and other compounds. In addition, Mr. Hutchings has reviewed chemistry data from numerous projects involving a wide variety of analyses in air, water, soils, sediments, and tissues.

Education & Credentials

B.S., Environmental Studies, The Evergreen State College, Olympia, Washington, 1991

Professional Affiliations

American Chemical Society

Relevant Experience

PFAS

Per- and Polyfluoroalkyl Substances, Northeastern U.S. — Project chemist overseeing analyses and validation of PFAS in groundwater, drinking water, surface water, soil, sediment, and porewater. Reviews isomer profiles of PFAS samples and assists in investigations of potential third-party source contributions.

PFAS Water Treatment Litigation Support, Multiple Sites — Project manager for a team providing litigation support regarding the presence of PFAS in municipal water supplies, including development of cost estimates for PFAS water treatment.

PFAS Litigation Support, Confidential Location — Project manager providing litigation support related to PFAS contamination in drinking water, groundwater, surface water, and soils. Led evaluations of related chemistry data, chemical transport, source identification, and evaluation of treatment costs.

PFAS Analytical Methods — Prepared technical summary and evaluation of current and developing analytical methodologies for PFAS and replacement chemistries.

PFAS Fate and Transport — Provided technical review of PFAS homolog and isomer profiles of

ground water, surface water, porewater, and soil samples to inform plume delineation and source identification. Coordinated analyses using the total oxidizable precursor assay to assess presence of PFAS precursors. Developed site specific desorption coefficients for PFAS compounds.

PFAS Product Stewardship — Provided technical consulting support on short-chain PFAS and related fluorochemical products to the FluoroCouncil. Conducted scientific assessments and assisted with stakeholder communications related to the health and environmental safety of short-chain PFAS and fluorotelomers.

PFAS and Firefighting Foams — Managed a study investigating and evaluating the types of PFAS and other compounds in modern firefighting foams. Coordinated and reviewed data from standard and suspect screening analyses for PFAS and other surfactants. Led evaluation and summarization of analytical data and the effects on human and ecological health of the PFAS and non-PFAS compounds identified in the foam products.

PROJECT MANAGEMENT

Berry's Creek Superfund Site, Meadowlands, New Jersey — Project manager for team leading strategy development and implementation for monitoring remedy performance for PCBs, mercury, and methylmercury. The project team leads field sampling for biota.

Closed Landfill, Sartell, Minnesota — Project manager for team evaluating metals in groundwater near a closed landfill. Evaluated data quality of historical and current data sets for comparison to regulatory criteria. Project team evaluated site hydrogeology and geochemistry, potential remediation costs, and negotiated with state regulators.

Insurance Claim, North Carolina — Managed review of analytical methods and laboratory data for bacteria and coliform to ensure recommended procedures were followed for the analysis of water from a private well related to an insurance claim.

PFAS Water Treatment Litigation Support, Multiple Sites — Project manager for a team providing litigation support regarding the presence of PFAS in municipal water supplies, including development of cost estimates for PFAS water treatment.

PFAS Litigation Support, Confidential Location — Project manager providing litigation support related to PFAS contamination in drinking water, groundwater, surface water, and soils. Led evaluations of related chemistry data, chemical transport, source identification, and evaluation of treatment costs.

Biomonitoring Study, U.S. — Managed a biomonitoring study conducted in support of litigation related to a persistent organic pollutant. Coordinated study design and implementation, sample collection, laboratory oversight, and data management. Evaluated laboratory methodologies, provided laboratory oversight and coordination, evaluated data usability, and prepared a report summarizing the data and results.

CHEMISTRY

Petroleum Hydrocarbon Chromatogram Review, Confidential Project — Reviewed flame ionization detector and mass spectrometry chromatograms to evaluate total petroleum hydrocarbon and PAH patterns in support of a forensic investigation to differentiate between multiple sources.

Pesticide Use Profiles, Tule Lake and Lower Klamath National Wildlife Refuges, California — Participated in multiyear project with federal agencies in developing pesticide use profiles for several active ingredients. Performed toxicological assessments and fate and transport analysis to determine

potential effects of pesticide use on wildlife resources.

Laboratory Manual and Bid Package Review — Provided updates and revisions to manual used for requests for proposals from laboratory networks for a broad suite of analyses. Reviewed laboratory responses to assess completeness, capabilities, and responsiveness, and ranked proposals based on these categories.

Yosemite Slough, Technical Pre-Design Studies, San Francisco, California — Developed QAPP for technical pre-design studies related to the design of non-time-critical removal action. The QAPP addressed analyses of sediment, porewater, and surface water for PCBs, lead, and physical parameters to inform cap design and studies of sediment resuspension, hydrodynamics, and the potential use of monitored and enhanced natural attenuation as an alternative to capping or dredging.

San Jacinto River Waste Pits RI/FS, Houston, Texas — Project chemist for a remedial investigation of dioxin-contaminated sediments. Assisted in the development of QAPPs for sediment, soil, and tissue investigations. Performed laboratory coordination for all aspects of the investigation—soil, sediment, groundwater, and tissue.

Upper Columbia River RI/FS, Washington and British Columbia — Project chemist for a remedial investigation of the upper Columbia River. Carried primary responsibility for the development of QAPP sections related to laboratory activities, the preparation of a comprehensive laboratory request for proposal, and the selection of laboratories for approximately $3 million of analyses, including metals, PCBs, and pesticides. Performed laboratory coordination for beach sediment sampling events.

Portland Harbor RI/FS, Portland, Oregon — Provided assistance to lead project chemists and task managers for this ongoing remedial investigation of a 9-mile stretch of industrialized, urban river. Reviewed analytical data and chromatograms to resolve technical issues, including reviews of chromatograms to confirm Aroclor identifications and the effects of Aroclors on pesticide identifications. Reviewed historical chemistry data for stormwater and managed data to be added to the project database. Completed data validation for a wide variety of analyses, including dioxins and furans, PCB congeners, and EPA methods in sediment, tissue, surface water, and transition zone water samples.

SITE INVESTIGATION

Per- and Polyfluoroalkyl Substances, Northeastern U.S. — Project chemist overseeing analyses and validation of PFAS in groundwater, drinking water, surface water, soil, sediment, and porewater. Reviews isomer profiles of PFAS samples and assists in investigations of potential third-party source contributions.

San Jacinto River Waste Pits RI/FS, Houston, Texas — Project chemist for a remedial investigation of dioxin-contaminated sediments. Assisted in the development of QAPPs for sediment, soil, and tissue investigations. Performed laboratory coordination for all aspects of the investigation—soil, sediment, groundwater, and tissue.

Upper Columbia River RI/FS, Washington and British Columbia — Project chemist for a remedial investigation of the upper Columbia River. Carried primary responsibility for the development of QAPP sections related to laboratory activities, the preparation of a comprehensive laboratory request for proposal, and the selection of laboratories for approximately $3 million of analyses, including metals, PCBs, and pesticides. Performed laboratory coordination for beach sediment sampling events.

Portland Harbor RI/FS, Portland, Oregon — Provided assistance to lead project chemists and task

managers for this ongoing remedial investigation of a 9-mile stretch of industrialized, urban river. Reviewed analytical data and chromatograms to resolve technical issues, including reviews of chromatograms to confirm Aroclor identifications and the effects of Aroclors on pesticide identifications. Reviewed historical chemistry data for stormwater and managed data to be added to the project database. Completed data validation for a wide variety of analyses, including dioxins and furans, PCB congeners, and EPA methods in sediment, tissue, surface water, and transition zone water samples.

DATA QUALITY ASSURANCE

Data Quality Assessment, Litigation Support, Confidential Location — Evaluated data quality of sediment data for metals and alkylated PAHs collected in support of litigation addressing the issue of whether data was appropriately excluded from the fate and transport analysis.

Data Quality Assessment, Allocation Support, Confidential Location — Coordinated laboratory analyses for PAHs and alkylated PAHs collected in support of allocation at a sediment site. Validated and assessed quality of resulting analytical data.

Remediated Wood Treatment Facility, Cass Lake, Minnesota — Evaluated data quality of samples collected in support of a human health and ecological risk assessment at a former wood treatment facility.

Third-Party Data Integrity Evaluation, Confidential Location — Worked with project team to perform a detailed third-party review of 4 years of chemistry data to investigate allegations of improper practices and data falsification at a small-scale wastewater treatment plant laboratory. Examined hard copy and electronic data and ancillary documents to evaluate the validity of analytical results and conformity with analytical methods, laboratory standard operating procedures, and best laboratory practices. Assisted in preparation of a technical report summarizing the evaluation techniques and conclusions to support reporting by legal counsel to the state regulatory agency.

Third-Party Analytical Data Quality Review, Confidential Location — Worked with project team to provided extensive third-party review of 8 years of analytical chemistry data records from three laboratory instruments to identify and evaluate the impacts of improper laboratory practices. Examined raw instrument files, laboratory data packages, hard copy documentation, and the laboratory's information management system database to assess conformity with analytical methods, laboratory standard operating procedures, and best laboratory practices.

Deepwater Horizon, Gulf of Mexico — Worked in conjunction with the consulting team in responding to the *Deepwater Horizon* accident and oil spill in the Gulf of Mexico on behalf of BP Exploration & Production Inc. Provided quality assurance and offshore sample coordination roles to support sample collection, data management, and reporting activities for multiple technical work groups. Participated in the chemistry technical working group in review of the quality assurance plan, laboratory coordination, and other quality assurance review activities and data completeness tasks.

Regional-Scale Risk Assessment, Former Mill and Mine Sites, Illinois — Led the review and data validation of analyses of soil, sediment, and surface water for lead, cadmium, chromium, zinc, mercury, and cyanide.

BIOMONITORING

Biomonitoring Study, U.S. — Managed a biomonitoring study conducted in support of litigation

related to a persistent organic pollutant. Coordinated study design and implementation, sample collection, laboratory oversight, and data management. Evaluated laboratory methodologies, provided laboratory oversight and coordination, evaluated data usability, and prepared a report summarizing the data and results.

Presentations / Posters

Luz, A., C. Hutchings, J. Anderson, P. Goodrum, and J. Field. 2019. A novel approach for assessing hazard associated with firefighting foams. Poster presentation at SETAC North America 40th Annual Meeting, Toronto, Ontario, Canada. November 3–7.

Goodrum, P., A. Luz, J. Anderson, G. Ansell, and C. Hutchings. 2019. Approaches for perfluoroalkyl acid grouping and assessment of mixture toxicity. SETAC North America Focused Topic Meeting: Environmental Risk Assessment of PFAS, Durham, NC. August 12–15.

Hutchings, C., and S. Helgen. 2019. Identifying linear and branched isomers from standard PFAS analysis for source delineation. Platform presentation at Tenth International Conference on the Remediation and Management of Contaminated Sediments, New Orleans, LA. February 11–14.

Helgen, S., M. Marietta, C. Hutchings, and E. Palko. 2018. Site-specific desorption testing of perfluorononanoic acid (PFNA) to assess potential soil leaching to groundwater. Platform presentation at Eleventh International Conference on Remediation of Chlorinated and Recalcitrant Compounds, Palm Springs, CA. April 8–12.

Jones, L., and C. Hutchings. 2013. Superfund data validation. Lorman Education Services Audio Conference.

Hutchings, C., and A. Bailey. 2006. Variables in lipids analyses and effect on data quality. 22nd National Environmental Monitoring Conference, Arlington, VA.

Bailey, A.K., P. Kane, and C. Hutchings. 2006. Reference materials as indicators of analytical data quality for human and ecological risk assessments. Tenth International Symposium on Biological and Environmental Reference Materials, Charleston, SC.

Glenn Esler

Scientist

(503) 943-3617

Portland, OR

gesler@integral-corp.com

Mr. Glenn Esler has more than 30 years of experience in the field of environmental chemistry, including 15 years in laboratory quality assurance and data quality management and 5 years as a GC/MS analyst. His technical specialties include design and implementation of laboratory quality management programs, laboratory and field audits, and data interpretation and assessment of compliance with regulatory requirements and project objectives. He has an in-depth working knowledge of EPA environmental analytical methods and EPA Contract Laboratory Program (CLP) national functional guidelines for data review. His experience includes environmental analysis, data verification and validation, preparation of quality assurance documentation, and coordination of subcontracting laboratories. He is also credentialed as a Certified Laboratory Auditor.

Education & Credentials

B.S., Geography, Portland State University, Portland, Oregon, 2008

A.S., Chemistry, Millersville University, Millersville, Pennsylvania, 1984

Continuing Education

Sustainability Leadership Program Certificate, University of Oregon, Portland, Oregon (2013)

EPA Office of Emergency and Remedial Response, 40-Hour Health and Safety Course (2010)

Certified Laboratory Auditor Training and Credentialing Program, iNARTE (2009)

Naval Sea Systems Command Laboratory Quality and Accreditation Office Sampling and Laboratory Testing E-Learning Training (2009)

Radiometric Data Validation, American Radiochemistry Society (2009)

SDSFIE Web Online Training Course (2005)

Analysts Guide to NELAC Assessment Short Course, Advanced Systems, Inc. (2004)

Relevant Experience

DATA QUALITY ASSURANCE

Airplane Manufacturer Superfund Site, Laboratory and Field Audits, Washington — Conducted onsite laboratory and field audits in support of remedial action and treatment systems related to groundwater contamination. Wrote final report that provided an assessment of the laboratory and field sampling team's performance and ability to provide high-quality, defensible data, and areas where improvements are required.

NOAA, Lower Duwamish River (LDR), Washington — Conducted research related to the Natural Resources Damage Assessment program for PAH allocation in LDR sediments. Research was based on PAH footprint maps, tax parcel information, data from EPA and Washington State Department of Ecology files, site histories, and other publicly available reports produced over the last several decades. Also used Google Earth and ESRI's ArcView to aid in allocation to multiple sites along the LDR.

Energy Distribution Company, Indiana — Assisted with work plan preparation, laboratory coordination, and data validation, data review, and data quality assessment on public sewer sediments and stormwater sampling at the site. The site was identified as a potential source of PCBs to a public sewer system and river sediments associated with a National Priorities List site.

Railroad Transportation Laboratory Audits, Multiple Sites, United States — Conducted onsite laboratory audits and provided assistance in conjunction with the Laboratory Management Program. The program included establishment of a web site for distributing program information, development of a web-based project management tool to handle laboratory projects, documentation of laboratory procedures in an online and hard copy manual, solicitation and establishment of standardized pricing

Basics of Quality Improvement Short Course, University of Delaware (1996)

Environmental Data Quality Short Course, American Chemical Society (1992)

for laboratory work, and presentation of the program to railroad officials, laboratories, and consultants. Also audited laboratories analyzing NPDES samples on behalf of client; evaluated laboratory reports for completeness, verification of reporting limits, and laboratory standard operating procedures. Wrote final report that provided an assessment of the laboratory's performance and ability to provide high quality, defensible data, and areas where improvements were required.

Cleanup of Base Oil/Water Separators, Air Force Center for Environmental Excellence, Grissom Air Reserve Base, Indiana —
Assisted with quality assurance project plan (QAPP) preparation and data quality objectives (DQOs) and performed data validation, data review, and data quality assessment in conjunction with site activities, which included sampling, analyzing, cleaning, collecting, removing, manifesting, and properly disposing of materials for nine oil/water separators in accordance with applicable state regulations.

Selfridge Air National Guard Base, Michigan — Assisted with QAPP preparation and formulation of DQOs for the collection of data to support the evaluation of the corrective action measures, site characterization, and determination of extent of contamination at a Michigan Air National Guard Base.

U.S. Department of the Navy, Naval Facilities Engineering Command Southwest, California — Assisted with the preparation of the pre-design sampling and analysis plan (SAP) and remedial action work plan for the remedial design and remedial action at IR Site 1. Also assisted with laboratory procurement of analytical services and procurement of third-party data validation services.

Groundwater Monitoring Program, Arizona — Assisted in the development of the site-wide quality assurance management plan and the QAPP for an EPA Superfund site. Contaminants of concern were volatile organic compounds (VOCs) and perchlorate. Activities included groundwater program planning and execution, groundwater sampling, quarterly and annual reporting, QA/QC, data validation, and project problem solving. Supported the project quality assurance manager by providing data validation, tracking quality control parameters, and handling laboratory data quality issues.

Partial Database Rebuild for a Sawmill Facility, Montana — Provided technical support for the partial reconstruction of the project database after discrepancies were found during quality assurance activities. Review third-party data validation reports and updated associated electronic data deliverables as appropriate.

Emergency Response at Bulk Chemical Terminal, New Orleans, Louisiana — Assisted with data analyses and audit of the analytical laboratory charges for samples collected related to the emergency response and cleanup of a chemical spill caused by flooding of a bulk chemical terminal during Hurricane Isaac.

Engineering Evaluation and Cost Analysis for a Former Chemical Manufacturing Facility, Portland, Oregon —
Revised project QAPP based on EPA comments on a sediment sampling work plan, which was prepared to collect data for pre-remedial design to address sediments adjacent to the site. Coordinated with analytical laboratories for methods, quality control criteria, standard operating procedures, quality assurance documentation, and costs for additional analyses. Researched and co-authored technical memorandum to EPA on the passive sampling effort to measure the freely dissolved porewater concentrations of DDT and its metabolites, polychlorinated dibenzo-*p*-dioxins and dibenzofurans (PCDD/Fs), and PCBs described in the porewater chemistry section of the work plan.

Laboratory Forensics Investigation, Oregon — Supported the verification of possible reporting anomalies initiated by a respected commercial laboratory. Performed preliminary data review

activities, including review of laboratory documentation, quality control data, and selected instrument run data files followed by a more comprehensive review process for instrument run file outputs associated with reported data.

Forensics Investigation Municipal Wastewater Collection and Treatment Facility, Oregon — Supported a third party investigation of possible analysis procedural and data integrity issues associated with a municipal wastewater treatment plant. The project entailed a review of electronic data files, permit requirements, laboratory record books, and laboratory standard operating procedures, laboratory audits, and staff interviews. Included review of laboratory and corporate procedural guidance documents, instrument manuals, laboratory bench books, and discharge monitoring report data submitted in fulfillment of NPDES requirements. The technical evaluation included data verification by tracing records from sample analysis through reporting, evaluation of quality control data for compliance with laboratory control limits, visual evaluations of time series data and trends, and assessment of the impact of possible improper laboratory practices.

LITIGATION SUPPORT

Database Inventory in Support of Litigation, U.S. West Coast — Supported maintenance of database inventory, which included a summary of relevant information such as information types, sample material, geographic area, period of record, and source information for customized databases cataloging large numbers of publicly available data sets.

Biomonitoring Study Conducted in Support of Litigation, Missouri — Evaluated laboratory methodologies and data usability and prepared a report summarizing the data usability results associated with the collection of human serum from more than 500 participants.

Expert Testimony Report, Confidential Client — Performed research on the pervasiveness and persistence of organochlorine pesticide chemicals in environmental media and biota in support of expert testimony report.

CHEMISTRY

Railyard Air Monitoring, Various Sites, Montana — Served as project chemist for semiannual air sampling program related to indoor air monitoring at several active railyards throughout Montana. Oversaw data validation effort using various air analytical methods, including EPA TO-15 and MADEP VPH. Reviewed data validation reports and associated electronic data deliverables.

Air National Guard, One Clean Program, Multiple Sites, North/Midwest Region — Served as project chemist and oversaw preparation of the QAPP, data validation, and data management for this accelerated turnaround project, which included field investigation activities to determine the presence of environmental contamination at identified areas of concern at 38 sites at 11 installations in the Air National Guard's North/Midwest Region. Oversaw the following: management of all analytical data using the EQuIS™ data management tool; Level III data validation consistent with the Environmental Restoration Program Air National Guard Investigation Guidance; creation of export templates from the database; generation of data tables for the Site Inspection Report; and the electronic data deliverables for the ESOH-MIS database.

Niblack Mining Corporation, Ketchikan, Alaska — Prepared a QAPP revision in support of routine monitoring of surface water and groundwater quality. Assisted in coordinating project logistics, sending sampling equipment to a remote location in Alaska, and subsequent delivery of samples to the analytical laboratory. Monitored laboratory's progress on sample analyses and reviewed and

validated analytical results. Supported preparation of data quality reports summarizing analytical results.

Water Quality Monitoring for a Volcanogenic Massive Sulfide Mine Exploration Project, Alaska — Assisted with QAPP preparation in support of monitoring of surface water and groundwater quality. Assisted in coordinating project logistics, sending sampling equipment to a remote location in Alaska, and subsequent delivery of samples to the analytical laboratory. Monitored laboratories' progress on sample analyses and reviewed and validated analytical results.

Baseline Ecological Risk Assessment (BERA) for a Landfill Superfund Site, New Jersey — As the project's quality assurance chemist, assisted with QAPP preparation for analytical and field activities associated with soil, sediment, surface water, and biota samples to better characterize potential site risks and examine factors that influence metal bioavailability. Chemicals of potential concern included phthalates, PAHs, pesticides, PCBs, PCDD/Fs, metals, and cyanide. Performed laboratory and data validation coordination as well as review of sample receipt variances, laboratory quality control variances, analytical corrective actions, data verification issues (e.g., incomplete records), and data review corrective actions.

RI/FS Waiau Generating Station Honolulu, Hawai'i — Assisted with QAPP preparation for analytical and field activities for multiple sampling phases including onshore source investigation, sediment transport evaluation, biota sampling, source control investigation, and pipe and tunnel investigation. Coordinated with analytical laboratories and data validation firm. Reviewed data validation reports.

Groundwater Monitoring and Delineation of Impacted Soil at Former Mill Site, Centralia, Washington — Coordinated laboratory analytical proposals and work orders, performed review of laboratory deliverables and tabular data, and assisted with field sampling planning.

Per- and Polyfluoroalkyl Substances, Northeastern U.S. — Serving as project chemist overseeing analyses and validation of per- and polyfluoroalkyl substances (PFAS) in groundwater, drinking water, surface water, soil, sediment, and porewater. Review isomer profiles of PFAS samples.

Kenmore Navigation Channel Sediment Characterization, Kenmore, Washington — Under a subcontract, prepared QAPP and health and safety plan (HASP) for a sediment characterization in 2019 to support maintenance dredging. Assisted with development of SAP and sample collection effort.

Elliott Bay Bioaccumulation Study, Seattle, Washington — Under a subcontract, prepared QAPP and HASP for the collection of surface sediment in 2019 to support a benchmark bioaccumulation study. Assisted with development of SAP and sample collection effort.

Ecological Baseline Pre-Design Investigation, Centredale Manor Restoration Project Superfund Site, Rhode Island —
Prepared Uniform Federal Policy QAPP and performed quality assurance chemistry tasks in support of pre-remedial design investigation activities including ecological surveys and sampling stations, sampling equipment and procedures, sample designation, and sample handling. This Superfund site, based in North Providence, has multiple operating units. The site is associated with human health issues and ecological concerns from the presence of dioxins, furans, PCBs, pesticides, herbicides, and VOCs in all environmental media, but particularly in riverine and aquatic environments, associated biota, and floodplain soils.

Detailed Sediment Investigation, San Diego, California — Quality assurance chemistry in support of sediment investigation at two shipyards in San Diego Bay, focusing on the effects of metals, organo-

metallic compounds, PAH, PCBs, polychlorinated triphenyls, and petroleum hydrocarbons on aquatic life, aquatic-dependent wildlife, and human health. Managed laboratory and data validation subcontracting.

Site Investigation, Fairbanks, Alaska — Supported a remedial investigation of PFAS and sulfolane in groundwater and drinking water, including an assessment of potential receptors. Responsible for laboratory, data validation, and data coordination, as well as quality assurance review of third-party data validation reports.

PFAS Delineation in Groundwater and Soil, Denver, Colorado — Supported a large PFAS delineation effort in Denver, Colorado. Performed data validation for samples analyzed for PFAS compounds, total organic carbon, and grain size.

Superfund Site, Navassa, North Carolina — Supported the CERCLA process to characterize and remediate environmental impacts associated with a former wood treatment facility, including dense nonaqueous-phase liquid contamination and contaminated soil, groundwater, and intertidal marsh sediment and sediment porewater. Responsible for laboratory, data validation, and data coordination, as well as quality assurance review of third-party data validation reports.

Berry's Creek Superfund Site, New Jersey — Supported the remedial investigation for the Berry's Creek Study Area (BCSA) Superfund site. The BCSA is a watershed-based Superfund site that traverses six boroughs in northern New Jersey. The creek is a tidal tributary to the Hackensack estuary and encompasses 12 square miles of wetlands. The area contains industrial, commercial, and residential properties and has been impacted by human activities since the turn of the twentieth century. Performed data validation for sediment, surface water, and biota analyzed for mercury, methylmercury, PCBs, and numerous other contaminants.

Former Manufactured Gas Plant (MGP) Site, Missoula, Montana — Project chemist for the environmental assessment and remedial proposal for a former MGP in Missoula, Montana. Performed laboratory coordination and data validation. Provided support to data management for recent sample collection and historical data.

Former Steam Plant, Seattle, Washington — Project chemist for groundwater monitoring program to evaluate whether cleanup criteria were met, and currently participating in the development of a site RI/FS for multiple potentially responsible parties. Performed laboratory coordination and data validation. Provided support for data management.

DATA MANAGEMENT

Deepwater Horizon Oil Spill, Gulf of Mexico — Worked in conjunction with the natural resource damage assessment team responding to the Deepwater Horizon accident and oil spill in the Gulf of Mexico on behalf of BP Exploration & Production Inc. Provided chemistry support and performed data validation and review of data validation reports associated with the environmental sample collection activities.

Industrial Site Data Validation, Vancouver, Washington — Performed data validation for a project involving the presence of chlorinated solvents at an active manufacturing facility in Vancouver, Washington. Project included groundwater monitoring and nearby residential air sample analyses, which are being used by the Washington State Department of Ecology for human health risk assessment.

Electrical Equipment Repair Facility Site Investigation Data Validation and Data Quality Assessment, Oregon —
Performed data validation, data review, and data quality assessment for the site investigation of historical PCB releases at an electrical equipment inspection, service, and repair facility. The site was identified by the Oregon Department of Environmental Quality as a potential source of PCBs detected in the public stormwater system and in Willamette River sediments.

Groundwater Monitoring Program Data Validation, Beaverton, Oregon — Performed validation of groundwater chemistry results generated as part of a RCRA Corrective Action Program. Monitoring required for the project included VOCs and Appendix IX List compounds.

Fort Lewis Thermal Remediation Project Data Review and Validation, Fort Lewis, Washington —
Performed chemical data review and validation on project data, including water and air samples for hydrocarbon and VOC analyses, using GC/photoionization detector and GC/MS, for a remediation project at Fort Lewis using electric resistance heating. The project was designed by the U.S. Army Corps of Engineers to be performed using near-real-time data from a mobile laboratory to make decisions about the remediation process using the Triad Approach.

Field Investigation Oversight and Report Preparation for a Coal-Fired Electrical Power Plant, Indiana —
Performed data validation for a large environmental investigation of a coal-fired power plant. Data included groundwater, soils, and plant tissues.

Interim Remedial Actions/PCB Soil Removals, Cape Canaveral Air Force Station, Brevard County, Florida —
Performed data validation and data assessment for a RCRA interim measures delineation and cleanup effort at Space Launch Complex 40 at Cape Canaveral Air Station, Florida. The project involved delineating TSCA levels in soil to determine PCB concentrations >50 ppm.

Voluntary Property Assessment (VPA) Activities, Former Crosstie Chipping Facility, Alabama —
Performed data validation and data assessment for VPA investigation activities. Work included collection of numerous soil, sediment, surface water, groundwater, and macroinvertebrate samples to evaluate the extent of PAH impacts to the site and surrounding areas resulting from former crosstie chipping operations.

Former Truck Manufacturing Facility Remediation Data Validation and Data Quality Assessment, Washington —
Performed data validation, data review, and data quality assessment for remediation of a former truck manufacturing facility located adjacent to the Duwamish River. The project work consisted of the collection of stormwater and tidal sediments.

Memphis Air National Guard, Memphis, Tennessee — Performed data quality review and data assessment on VOC data from the risk assessment and remediation of petroleum-impacted soil and groundwater.

White Swan Cleaners/Sun Cleaners Superfund Site, New Jersey — Performed data validation on CLP data, and data quality review and assessment on the data for ongoing collection activities related to a Settlement Agreement with EPA Region 2 to conduct an RI/FS of a regional site that has been contaminated by the dry cleaning solvent PCE. PCE had potentially impacted municipal water supply wells at a popular shoreline resort community.

Former Pharmaceuticals Facility Data Validation, Oregon — Performed data validation on the results related to the release of VOCs on the site. The primary contaminants of concern included trichloroethene, *cis*-1, 2-dichloroethene, and vinyl chloride, which were found at concentrations

indicative of dense non-aqueous phase liquid.

Former Industrial Site Water Sampling Data Validation and Data Quality Assessment, New Jersey — Performed data validation, data review, and data quality assessment on the annual drinking water sampling at all homes surrounding a former industrial site, where the chemicals of concern in groundwater include VOCs—primarily 1,1,1-trichloroethane, 1,1-dichloroethylene, and 1,1-dichloroethane.

Groundwater and Surface Water Monitoring, Naval Facilities Engineering Command (NAVFAC), Fort Gordon, Georgia —
Performed data validation, data review, and data quality assessment on quarterly groundwater sampling. Quarterly monitoring of groundwater and surface water was performed under a NAVFAC contract in compliance with NPDES for a wastewater treatment facility and land-application system at the Pointes West Army Recreation Area in Columbia County, Georgia.

Site Characterization at Industrial Operation, Seattle, Washington — Performed data validation, data review, and data quality assessment on the soil boring and groundwater sampling at the site. Site activities included site characterization (i.e., field assessment, focused site characterization report, project management) at an industrial operation approximately 2.1 acres in size located in Seattle, Washington. The site was impacted with metals, PCBs, PAHs, TPH, and VOCs.

West Virginia Department of Environmental Protection Brownfield Sites Data Validation and Data Quality Assessment, West Virginia —
Performed data validation, data review, and data quality assessment using EPA Region 3 modifications to CLP national functional guidelines associated with Phase I surface soil sampling and follow-up Phase II subsurface soil sampling, groundwater investigations, and surface water and sediment sampling at various brownfield sites throughout West Virginia.

Massachusetts Military Reservation Closure Data Validation, Cape Cod, Massachusetts — Validated data for samples submitted for explosives compounds analysis and perchlorate, which are associated with verification that post-excavation bottom soils and expansion area soils are below established action levels in order to obtain closure determination for the CS-19 and CS-18 Source Area sites at the Massachusetts Military Reservation in Cape Cod. Soil samples from the expansion areas were collected using the multi-increment sampling approach proposed by Cold Regions Research and Engineering Laboratory.

Susanville Sawmill and Cogeneration Facility, Susanville, California — Performed expedited data validation and associated report writing associated with air, water, soil, and product samples collected during the overall scope of work, which included site investigations and remediation at the proposed treatment cell area and fuel and maintenance area.

Rosiclare Mine Site, Rosiclare, Illinois — Validated data associated with soil, sediment, and groundwater sampling and wrote data validation report for the RI/FS effort to clean up historical fluorspar mine tailings.

Rental Car Maintenance Facility, San Jose, California — Performed expedited data validation and report writing associated with samples collected during the overall scope of work, which included removal and disposal of underground storage tanks, an aboveground storage tank, below-ground hydraulic lifts, and a car wash structure.

Former Ashland Lease Area, Shoreham Facility, Minneapolis, Minnesota — Performed data validation of quarterly groundwater samples analyzed for anions, conventional parameters, and VOCs and report

writing for the monitoring program for the four remedial actions currently under way at the site: soil vapor extraction, light nonaqueous phase liquid monitoring and recovery, till bioremediation, and outwash pump and treat.

Smeltertown Superfund Site OU1, Salida, Colorado — Validated data from groundwater samples analyzed for metals and wrote report for the annual groundwater monitoring program.

Chemical Distribution Facility, Santa Ana, California — Validated data resulting from semiannual groundwater samples analyzed for PCE, TCE, chemical degradation products of PCE and TCE, and 1,4-dioxane and wrote data validation report as part of oversight of groundwater monitoring and soil remediation at the site.

Waste Rock Water Quality Assessment Open Pit Gold Mine Expansions, Nevada — Validated data associated with ongoing humidity cell test results of existing waste rock, alluvium, and drill cores of expansion material. Assisted with the quality assurance report associated with the 20-week results of the first round of humidity cell tests.

Former DDT Manufacturing Facility, Portland, Oregon — Validated data associated with stormwater monitoring at a former pesticide manufacturing facility under the jurisdiction of the Oregon Department of Environmental Quality. Also monitored laboratories' progress on sample analyses and reviewed and validated analytical results.

Blackwell Zinc Site, Blackwell Oklahoma — Validated data associated with mitigation strategies of metals loading to the city's wastewater treatment plant resulting from infiltration of contaminated groundwater to the city's sanitary collection system.

Soil and Groundwater Investigation at Former Allied Engineering Facility, Alameda, California — Validated historical data and recent data associated with assessment and potential remediation of groundwater and sediment at the site.

Slag and Sewage Site, Past Costs and River Sediment Evaluation, Fox Point Park, Wilmington, Delaware —

Performed Stage 2B and Stage 3 data validation associated with the sediment RI/FS in the Delaware River.

Hazardous Materials Assessment of Soils at Various Public Schools, Hawaii — Performed laboratory coordination and Stage 2B data validation associated with environmental hazard screening of select school sites for arsenic, lead, and organochlorine pesticides.

Former Wood Treating CERCLA Facility, Columbus, Mississippi — Performed data validation in support of a human health risk assessment, Operable Unit 1 focused feasibility study, and Operable Unit 1 removal action work plan, as well as implementation of the Operable Unit 1 voluntary removal action at a Superfund site.

Manon Tanner-Dave

Project Scientist

(503) 943-3616

Portland, OR

mtanner@integral-corp.com

Ms. Manon Tanner-Dave is a chemist with 15 years of experience providing support in project and data quality assurance. She has extensive experience writing field sampling plans and quality assurance project plans (QAPPs) related to a variety environmental media for both state and federal regulatory agencies, including Alaska Department of Environmental Conservation, Washington State Department of Ecology, EPA Regions 6 and 10, and the U.S. Army Corps of Engineers. She specializes in environmental chemistry and is experienced in data validation for organic and inorganic data using EPA's functional guidelines for data validation. She has coordinated analytical laboratory activities and works closely with clients, project teams, and laboratories to resolve any data quality issues, such as background contamination or analytical interference. In addition, Ms. Tanner-Dave is knowledgeable of many analytical methods for environmental matrices, including EPA SW-846, Standard Methods for the Examination of Water and Wastewater, and ASTM International standards.

Education & Credentials

M.S., Environmental Science, Oregon Health & Science University, Portland, Oregon, 2002

B.S., Chemistry, Pacific University, Forest Grove, Oregon, 2001

A.A., General, Modesto Junior College, Modesto, California, 1998

Continuing Education

Confined Space Entry Awareness Course (2007)

Red Cross CPR (2007) and First Aid Training (2004)

Hazardous Waste Operations and Emergency Response 40-Hour Certification (2004; refreshers current)

Oregon Department of Transportation Training (2009)

Relevant Experience

REMEDIAL DESIGN

Portland Harbor Superfund Site Remedial Investigation/Feasibility Study, Portland, Oregon — Assisted in the development of QAPPs and several QAPP addenda for an extensive list of organic and inorganic analytes of interest in soil, sediment, tissue, surface water, and groundwater. Prepared letters of authorization to participating analytical laboratories and data validation firms and assisted with budget projections. Coordinated and oversaw all analytical laboratory services and assisted in sample collection and shipment of samples to the analytical laboratories. Worked closely with the analytical laboratories on analytical method modifications needed for some problematic environmental matrices. Evaluated data and assisted in preparing field sampling reports and data quality assurance reports.

Former Chemical Manufacturing Facility, Portland, Oregon — Drafted QAPPs in support of interim and remedial measures for stormwater as well as post-construction stormwater monitoring for site-specific organic and inorganic analytes of concern. Coordinated laboratory analyses of samples. Reviewed and validated analytical results from stormwater interim and remedial measures, and post-construction stormwater monitoring of site-specific organic and inorganic analytes of concern. Prepared data quality assurance reports summarizing data results.

SAMPLING

Blood Lead Biomonitoring Study, Rico, Colorado — Assisted in developing a biomonitoring study for a

former lead mining town in Colorado. Prepared a QAPP for the study, coordinated field activities with the analytical laboratories, validated analytical results, and prepared a quality assurance data report. Sampled media included blood, house dust, drinking water, and paint. Results of this study were used to evaluate seasonal fluctuations of blood lead levels in town residents and to assess the effectiveness of soil remediation efforts.

Subslab Gas Sampling, Milwaukie International Way Site, Milwaukie, Oregon — Participated in semiannual subslab gas sampling Soil gas probes were installed and sampled following EPA guidance, Standard Operating Procedure (SOP) for Installation of Sub-Slab Vapor Probes and Sampling Using EPA Method TO-15 to Support Vapor Intrusion Investigations. Reviewed and validated analytical results from subslab air samples that were collected and analyzed according to EPA Method TO-15. Provided a data quality summary report for each sampling event.

Semiannual Groundwater Sampling at a Former Wood Waste Disposal Landfill, Oakridge, Oregon — Collected groundwater and surface water samples at a former wood waste landfill site. Analyzed field and analytical data to modify an existing environmental monitoring plan for the site that included a reduced list of analytes.

HUMAN HEALTH RISK ASSESSMENT

Human Health Risk Assessment at Smelter Facility, La Oroya, Peru — Assisted in developing a human health risk assessment for an active smelter. Prepared a study QAPP, coordinated field activities with the analytical laboratories (international and domestic), validated analytical results, and prepared a quality assurance data report. Also participated in one of two field sampling efforts in the community surrounding the smelter to characterize exposure media, including drinking water, surface soil, outdoor dust, and dust in homes. These data were combined with biomonitoring and dietary intake data for the population and air dispersion and deposition modeling results to complete the human health risk assessment. For this project all communications occurred in Spanish.

DATA ANALYSIS

Post-construction Groundwater Monitoring Program, Smeltertown Superfund Site, Operable Unit No. 1, Salida, Colorado —
Provided data validation services for a groundwater monitoring project. Analytes of interest included select metals and semivolatile organic compounds. Provided a data validation summary report.

Water Quality Monitoring for Mining Site, Ketchikan, Alaska — Prepared QAPPs in support of routine monitoring of surface water and groundwater quality, and quarterly monitoring of the wastewater treatment facility effluent for the site barge, which houses onsite employees. Reviewed and validated analytical results from quarterly groundwater, surface water, and wastewater treatment facility effluent from the site barge. Assisted with quarterly and annual data evaluation, reporting, and development of a database for analytical results.

Volcanogenic Massive Sulfide Project, Alaska — Prepared a QAPP using Alaska Department of Environmental Conservation guidance in support of assembling a sufficient data set to define baseline conditions for target analytes in surface water. Analytes of interest included conventional parameters, cations/anions, and total/dissolved metals. Baseline water quality data were used to characterize water quality typical of the project area prior to any potential underground exploration or mine development. Monitored laboratories' progress on sample analyses. Reviewed and validated analytical results from baseline water quality testing. Provided data quality reports summarizing analytical

results and assisted with development of a database for analytical results.

Glenbrook Nickel Site, Coos Bay, Oregon — Provided data validation services for sediment samples submitted for total organic carbon, grain size, and nickel analyses for site investigation purposes. Responsible for providing a data quality summary report of all analytical results.

Groundwater and Wastewater Sample Data Validation, Blackwell, Oklahoma — Reviewed and validated total and dissolved cadmium, lead, zinc, calcium, and magnesium results from groundwater samples. Reviewed and validated cadmium, lead, and zinc results from wastewater treatment plant influent samples. Reviewed and validated cadmium, lead, zinc, naphthalene, and select volatile organic compound results from groundwater treatment facility samples. Assisted with quarterly and annual reporting of analytical results.

Formerly Used Defense Sites — Performed data validation for munitions-related constituents. Provided data validation reports for each area of concern. Delegated role as lead data validator and performed senior review of data validation results and data validation reports.

Deepwater Horizon, Gulf of Mexico — Worked in conjunction with the Cardno ENTRIX team in responding to the Deepwater Horizon accident and oil spill in the Gulf of Mexico on behalf of BP Exploration & Production Inc. Provided support to the chemistry technical working group in quality assurance review activities and data completeness tasks. Primarily validated data and provided data validation review support according to project-specific quality assurance plan specifications.

Job ID: 480-200114-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 7/27/2022 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.8º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The continuing calibration verification (CCV) associated with batch 480-635511 recovered outside acceptance criteria, low biased, for 3-Nitroaniline. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6010C: The low level continuing calibration verification (CCVL 480-635565/27) recovered above the upper control limit for Total Potassium. The samples associated with this CCVL were either less than the reporting limit (RL) for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples FB_072622 (480-200114-1), ERB_072622 (480-200114-2), (LCS 480-635377/2-A), (MB 480-635377/1-A), (480-200114-E-1-C MS), (480-200114-E-1-D MSD), (480-200114-E-1-B PDS) and (480-200114-E-1-B SD ^5) was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Number: 480-200114-1

Login Number: 200114
List Number: 1
Creator: Wallace, Cameron

List Source: Eurofins Buffalo

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	INTEGRAL
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

John.Beninati@et.eurofinsus.com

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Integral Consulting Inc
Project/Site: EF1017 - Refractories

Job ID: 480-200130-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*3	ISTD response or retention time outside acceptable limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Laboratory: Eurofins Buffalo

Narrative

Job Narrative
480-200130-1

Comments
No additional comments.

Revision 1
The report being provided is a revision of the original report sent on 8/5/2022. The report (revision 1) is being revised due to: Additional analytes added to Method 8260C list in accordance with client QAPP.

Receipt
The samples were received on 7/27/2022 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.2º C.

Receipt Exceptions
The following samples were preserved via freezing on 7/27/22 at 1400: SB5 (0-0.5) (480-200130-1), SB5 (0.5-1) (480-200130-2), SB5 (1-2) (480-200130-3) and SB5 (13-15) (480-200130-4) .

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-635513 recovered above the upper control limit for 1,1,1-Trichloroethane, 1,2-Dichloroethane, Carbon tetrachloride, Chlorodibromomethane, Dichlorobromomethane, Tetrachloroethene and Trichlorofluoromethane. The sample(s) associated with this CCV were non-detects or below the reporting limit (RL) for the affected analytes; therefore, the data have been reported. The associated sample is impacted: SB5 (13-15) (480-200130-4).

Method 8260C: The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 480-635335 and analytical batch 480-635513 recovered outside control limits for the following analytes: Bromoform and Chlorodibromomethane. These analytes were biased high in the LCS/LCSD and were not detected in the associated sample(s); therefore, the data have been reported. The associated sample is impacted: SB5 (13-15) (480-200130-4).

Method 8260C: Internal standard and surrogate responses for the following sample were outside control limits: SB5 (0-0.5) (480-200130-1), SB5 (0.5-1) (480-200130-2) and SB5 (1-2) (480-200130-3). The samples were re-analyzed and responses were outside control limits.

Method 8260C: The laboratory control sample (LCS) for preparation batch 480-635770 and analytical batch 480-635772 recovered outside control limits for the following analytes: Bromoform, Carbon tetrachloride and Dibromochloromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. The associated samples are: SB5 (0-0.5) (480-200130-1), SB5 (0.5-1) (480-200130-2) and SB5 (1-2) (480-200130-3).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-635772 recovered above the upper control limit for 1,1,1-Trichloroethane, Bromoform, Carbon tetrachloride, Dibromochloromethane, Tetrachloroethene and Trichlorofluoromethane. The samples associated with this CCV were non-detects or above the reporting limits for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SB5 (0-0.5) (480-200130-1), SB5 (0.5-1) (480-200130-2) and SB5 (1-2) (480-200130-3).

Method 8260C: The surrogate Dibromofluoromethane (Surr) was outside the 20%D limits on the continuing calibration verification (CCV) but was within laboratory limits. The following samples are impacted: SB5 (0-0.5) (480-200130-1), SB5 (0.5-1) (480-200130-2) and SB5 (1-2) (480-200130-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The following sample was diluted due to viscosity: SB5 (0.5-1) (480-200130-2). Elevated reporting limits (RL) are provided.

Method 8270D: The following sample required a dilution due to viscosity: SB5 (0.5-1) (480-200130-2). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Job ID: 480-200130-1 (Continued)

Laboratory: Eurofins Buffalo (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

List Source: Eurofins Buffalo

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	INTEGRAL
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*3	ISTD response or retention time outside acceptable limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

LCMS

Qualifier	Qualifier Description
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 7/28/2022 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.6º C.

Receipt Exceptions
Method 537 (modified): Due to a FedEx delay, the following samples were received at the laboratory outside the required temperature criteria: SS7 (0-6) (480-200156-8), SS7 (6-12) (480-200156-9), SS7 (12-24) (480-200156-10), SS7 (0-2) (480-200156-11) and FB2_072722 (480-200156-12). This does not meet regulatory requirements. The cooler was received with a corrected temperature of 23.3C. There was water in the cooler to indicate melted ice.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-635938 recovered above the upper control limit for Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The associated samples are impacted: SB1 (0.5-1) (480-200156-3), SB1 (1-2) (480-200156-4) and SB1 (15-16) (480-200156-6).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-636094 recovered above the upper control limit for Carbon tetrachloride and Dibromochloromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SB1 (0-0.5) (480-200156-2), SS7 (0-6) (480-200156-8), SS7 (6-12) (480-200156-9), SS7 (12-24) (480-200156-10) and SS7 (0-2) (480-200156-11).

Method 8260C: The laboratory control sample (LCS) for preparation batch 480-636092 and analytical batch 480-636094 recovered outside control limits for the following analytes: tert-Butylbenzene, Bromoform, Dibromochloromethane and Tetrachloroethene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. The associated samples are: SB1 (0-0.5) (480-200156-2), SS7 (0-6) (480-200156-8), SS7 (6-12) (480-200156-9), SS7 (12-24) (480-200156-10) and SS7 (0-2) (480-200156-11)

Method 8260C: Internal standard and/or surrogate responses for the following samples were outside control limits: SS7 (0-6) (480-200156-8), SS7 (6-12) (480-200156-9), SS7 (12-24) (480-200156-10) and SS7 (0-2) (480-200156-11). The samples were re-analyzed and responses were outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The laboratory control sample (LCS) for preparation batch 480-635534 and analytical batch 480-635707 recovered outside control limits for the following analytes: 4-Nitroaniline and Carbazole. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270D: The following samples were diluted due to color and appearance: SS7 (6-12) (480-200156-9) and SS7 (12-24) (480-200156-10). Elevated reporting limits (RL) are provided.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-636030 recovered above the upper control limit for Pentachlorophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SB1 (0-0.5) (480-200156-2), SB1 (0.5-1) (480-200156-3), SB1 (1-2) (480-200156-4), SB1 (15-16) (480-200156-5), SS7 (0-6) (480-200156-8), SS7 (6-12) (480-200156-9), SS7 (12-24) (480-200156-10) and SS7 (0-2) (480-200156-11).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 480-200156-1 (Continued)

Laboratory: Eurofins Buffalo (Continued)

Metals

Method 6010C: The low level continuing calibration verification (CCVL) for analytical batch 480-636329 recovered above the upper control limit for (Potassium). The sample associated with this CCVL contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples SS7 (0-2) (480-200156-11) was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS

Method 537 (modified): Method 537 (modified): The “I” qualifier associated with samples SS7 (0-6) (480-200156-8) and SS7 (0-2) (480-200156-11) is applied because the transition mass ratio for the indicated analyte(s) was outside of the established ratio limits. The qualitative identification has some degree of uncertainty, however analyst judgment was used to positively identify the analyte(s).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.
