

Act Now to Continue Receiving Information About This Site!

DEC's Division of Environmental Remediation (DER) now distributes information about contaminated sites electronically by email.

If you would like to continue to receive information about the contaminated site featured in this fact sheet:

You must sign up for the DER email listserv:

<https://dec.ny.gov/environmental-protection/site-cleanup/regional-remediation-project-information/environmental-cleanup-email-newsletters>

DER cannot register your email address - only the email address owner can do so. If you already have signed up for the listserv for the county in which the site is located, you need do nothing.

Why You Should Go “Paperless”:

- Get site information faster and share it easily;
- Receive information about all sites in a chosen county - read what you want, delete the rest;
- It helps the environment and stretches your tax dollars.

If “paperless” is not an option for you, call or write to the DER project manager identified in this fact sheet. Indicate that you need to receive paper copies of fact sheets through the Postal Service. Include the site name in your correspondence. The option to receive paper is available to individuals only. Groups, organizations, businesses, and government entities are assumed to have email access.

Cleanup Action to Begin at State Superfund Site

Action is about to begin that will address contamination related to the City of Corning Fire Department site ("site") located at 2 Corning Boulevard, Corning, Steuben County under New York's State Superfund Program. Please see the map for the site location. The cleanup activities will be performed by a state contractor, Finger Lakes Enviro-Tech, LLC dba T&R Env., with oversight provided by the New York State Department of Environmental Conservation (DEC) and HRP Associates, Inc.

Cleanup activities are expected to begin in late May 2026, and last about 3 months. The estimated cost to implement the cleanup is approximately \$634,000.

The site is listed as a Class "2" site in the State Registry of Inactive Hazardous Waste Sites (list of State Superfund sites). A Class 2 site represents a significant threat to public health or the environment; action is required. The final version of the draft Interim Remedial Measure Work Plan that was noticed for public comment can be accessed below, including the project design drawings.

- Access project documents online through the DECinfo Locator: <https://extapps.dec.ny.gov/data/DecDocs/851050/>.
- Documents also are available at the location(s) identified under "Where to find information."

Highlights of the Upcoming Cleanup Activities

The goal of the cleanup action for the site is to achieve cleanup levels that protect public health and the environment. The key components of the cleanup are:

- Excavation and off-site disposal of the upper 1 foot of soil that exceed the Commercial soil cleanup objectives ("SCOs") or contain ash, brick, and/or glass (ABG).
- Collection and analysis of post-excavation soil samples to evaluate the performance of the cleanup with respect to attainment of the SCOs.
- Construction of a soil cover across the entire site using existing clean cover soils and hardscapes in combination with a new soil cover in certain areas. Where the new soil cover is required, it will be a minimum of one foot of soil, meeting the SCOs for cover material for commercial use, with a demarcation layer and the upper six inches of soil of sufficient quality to establish and maintain a vegetative layer of grass.
- Recording an Environmental Easement to control future land use and to ensure implementation of the Site Management Plan.

A site-specific health and safety plan (HASP) and a Community Air Monitoring Plan (CAMP) will be implemented during cleanup activities. The HASP and CAMP establish procedures to protect on-site workers and residents and includes required air monitoring as well as dust and odor suppression measures.

Next Steps

After cleanup activities are completed, DEC will prepare a Construction Completion Report (CCR) and a draft No Further Action with Site Management Proposed Remedial Action Plan (PRAP) for public comment. The CCR will describe the cleanup activities completed and certify that cleanup requirements have been achieved or will be achieved. The PRAP will describe institutional and engineering controls necessary to ensure the effectiveness of the remedy.

DEC will keep the public informed throughout the cleanup of the site.

Site Description

The site is approximately 8.68-acre, currently operated by the City of Corning Fire Department and is bounded by Corning Boulevard and Guthrie Medical Center property to the north, the NYS flood control land, and the Chemung River to the south, residential and Memorial Stadium to the east, and Center Way and the Corning Family YMCA to the west. The site property includes one fire station building, asphalt pavement driveway and parking lots, lawn areas, and the City of Corning Municipal Water Supply Well #9 with its associated building located in the southeastern portion of the property. The City of Corning Municipal Water Supply Well #9 and an associated building is located on the southeast portion of this site. The City's Municipal Water Supply Well #9 is being analyzed for contaminants of concern as part of the Glass Manufacturing Waste Disposal Area (Site No. 851074).

Following cleanup of the site, the site will continue to operate as a fire department. The cleanup standard for the site will be the Commercial Soil Cleanup Objectives.

Additional site details, including environmental and health assessment summaries, are available on DEC's Environmental Site Remediation Database (by entering the site ID, 851050) at:

<https://appfactory.dec.ny.gov/DERExternalSearch/ERDSearch>

Summary of the Investigation

The primary contaminants of concern at the site are inorganics (namely, arsenic, barium, boron, cadmium, chromium, lead, mercury) and semi-volatile organic compounds (SVOCs) which are associated with ABG and present site-wide in soil.

State Superfund Program

New York's State Superfund Program (SSF) identifies and characterizes suspected inactive hazardous waste disposal sites. Sites that pose a significant threat to public health and/or the environment go through a process of investigation, evaluation, cleanup and monitoring. DEC attempts to identify parties responsible for site contamination before committing State funds for investigation and cleanup.

For more information about the SSF, visit:

<https://dec.ny.gov/environmental-protection/site-cleanup/brownfield-and-state-superfund-programs/state-superfund-sites>

Stay Informed with DEC Delivers

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.
