### QC Data Summaries

---

Includes the following where applicable:

- Method Blank Summaries
- Blank Spike Summaries
- Matrix Spike and Duplicate Summaries
- Internal Standard Area Summaries
- DDT/Endrin Breakdown Checks
- GC Identification Summaries (Hits)
- Surrogate Recovery Summaries
- GC Surrogate Retention Time Summaries
- Initial and Continuing Calibration Summaries

**Method Blank Summary**

### QC Data Summaries

---

Includes the following where applicable:

- Instrument Runlogs
- Initial and Continuing Calibration Blanks
- Initial and Continuing Calibration Checks
- High and Low Check Standards
- Interfering Element Check Standards
- Method Blank Summaries
- Matrix Spike and Duplicate Summaries
- Blank Spike and Lab Control Sample Summaries
- Serial Dilution Summaries

# NYSEG – Newark Former MGP Site

## Data Usability Summary Report

### Newark, New York

Semivolatile Analysis

SDG #JC64996

Analyses Performed By:  
SGS Laboratories  
Dayton, New Jersey

Report #30510R  
Review Level: Tier III  
Project: B0013094.0006.00032

## DATA REVIEW REPORT

### SUMMARY

This data usability summary report (DUSR) summarizes the review of Sample Delivery Group (SDG) # JC64996 for samples collected in association with the NYSEG Newark Site. The review was conducted as a Tier III evaluation and included review of data package completeness. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

| SDG     | Sample ID            | Lab ID     | Matrix | Sample Collection Date | Parent Sample | Analysis |      |                     |     |      |
|---------|----------------------|------------|--------|------------------------|---------------|----------|------|---------------------|-----|------|
|         |                      |            |        |                        |               | VOC      | SVOC | HERB<br>PEST<br>PCB | MET | MISC |
| JC64996 | TP-101 (7-8)         | JC64996-1  | Soil   | 4/24/2018              |               |          | X    |                     |     |      |
|         | SB-102 (19-21)       | JC64996-2  | Soil   | 4/24/2018              |               |          | X    |                     |     |      |
|         | SB-107 (15-17)       | JC64996-3  | Soil   | 4/24/2018              |               |          | X    |                     |     |      |
|         | SB-106 (17-20)       | JC64996-4  | Soil   | 4/25/2018              |               |          | X    |                     |     |      |
|         | SB-102 (17-21)       | JC64996-6  | Soil   | 4/24/2018              |               |          | X    |                     |     |      |
|         | SB-106 (17-21)       | JC64996-7  | Soil   | 4/25/2018              |               |          | X    |                     |     |      |
|         | SB-102 (0-17)        | JC64996-9  | Soil   | 4/24/2018              |               |          | X    |                     |     |      |
|         | SB-106 (3-5) (11-15) | JC64996-10 | Soil   | 4/24/2018              |               |          | X    |                     |     |      |

Note: Per request by the project team, only the semivolatile organic compound analysis was reviewed in the DUSR.

## DATA REVIEW REPORT

### ANALYTICAL DATA PACKAGE DOCUMENTATION

The table below is the evaluation of the data package completeness.

| Items Reviewed  | Reported |     | Performance Acceptable |     | Not Required |
|---|----------|-----|------------------------|-----|--------------|
|   | No       | Yes | No                     | Yes |              |
| 1. Sample receipt condition                             |          | X   |                        | X   |              |
| 2. Requested analyses and sample results                |          | X   |                        | X   |              |
| 3. Master tracking list                                 |          | X   |                        | X   |              |
| 4. Methods of analysis                                  |          | X   |                        | X   |              |
| 5. Reporting limits                                     |          | X   |                        | X   |              |
| 6. Sample collection date                               |          | X   |                        | X   |              |
| 7. Laboratory sample received date                      |          | X   |                        | X   |              |
| 8. Sample preservation verification (as applicable)     |          | X   |                        | X   |              |
| 9. Sample preparation/extraction/analysis dates         |          | X   |                        | X   |              |
| 10. Fully executed Chain-of-Custody (COC) form          |          | X   |                        | X   |              |
| 11. Narrative summary of QA or sample problems provided |          | X   |                        | X   |              |
| 12. Data Package Completeness and Compliance            |          | X   |                        | X   |              |

Note:

QA - Quality Assurance

## DATA REVIEW REPORT

### ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Method 8270D. Data were reviewed in accordance with USEPA Region II SOPs and USEPA National Functional Guidelines of October 1999 and applicable Region II SOPs. USEPA NFGs and Region II SOPs were followed for qualification purposes.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - UB Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

## DATA REVIEW REPORT

### SEMIVOLATILE ORGANIC COMPOUND (SVOC) ANALYSES

#### 1. Holding Times

The specified holding times for the following methods are presented in the following table.

| Method       | Matrix | Holding Time  | Preservation  |
|--------------|--------|---|---------------|
| SW-846 8270D | Water  | 7 days from collection to extraction and 40 days from extraction to analysis  | Cool to <6 °C |
|              | Soil   | 14 days from collection to extraction and 40 days from extraction to analysis | Cool to <6 °C |

The analyses that exceeded the holding are presented in the following table.

| Sample Locations                       | Holding Time          | Criteria |
|--|-----------------------|----------|
| SB-106 (3-5) (11-15)<br>SB-106 (17-21) | 27 days to extraction | <28 days |

Sample results associated with sample locations analyzed by analytical method SW-846 8270 were qualified, as specified in the table below. All other holding times were met.

| Criteria  | Qualification     |                     |
|---|-------------------|---------------------|
|   | Detected Analytes | Non-detect Analytes |
| Analysis completed less than two times holding time | J                 | UJ                  |

Note: the samples were extracted outside of holding time per request of the project team.

#### 2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

## DATA REVIEW REPORT

### 3. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

### 4. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

#### 4.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (20%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

#### 4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

| Sample Locations  | Initial/Continuing | Compound                  | Criteria |
|---|--------------------|---------------------------|----------|
| SB-106 (3-5) (11-15)<br>SB-106 (17-21)  | ICAL RSD           | Caprolactam               | 24.3%    |
|   | CCV %D             | Hexachlorobutadiene       | +47.8%   |
|   |                    | Hexachlorocyclopentadiene | +33.8%   |
|   |                    | 4-Nitrophenol             | +48.9%   |
|   |                    | 2,4,6-Trichlorophenol     | +23.9%   |
|   |                    | Benzaldehyde              | -26.8%   |
| TP-101 (7-8)<br>SB-102 (19-21)<br>SB-107 (15-17)<br>SB-106 (17-20)<br>SB-102 (17-21)<br>SB-102 (0-17) | CCV %D             | Caprolactam               | +20.7%   |
|   |                    | 2-Nitroaniline            | +28.9%   |
|   |                    | 2,6-Dinitrotoluene        | +24.6%   |
|   |                    | Benzaldehyde              | -23.6%   |

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

## DATA REVIEW REPORT

| Initial/Continuing                 | Criteria                                      | Sample Result | Qualification |
|------------------------------------|---|---------------|---------------|
| Initial and Continuing Calibration | RRF <0.05                                     | Non-detect    | R             |

|                                    | %D >20% (decrease in sensitivity)             | Non-detect    | UJ            |
|                                    |   | Detect        | J             |
|                                    | %D >90% (increase/decrease in sensitivity)    | Non-detect    | R             |
|                                    |   | Detect        | J             |

Note:

<sup>1</sup> RRF of 0.01 only applies to compounds which are typically poor responding compounds (i.e., ketones, 1,4-dioxane, etc.)

### 5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

All surrogate recoveries were within control limits.

### 6. Internal Standard Performance

Internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the internal standard compounds associated with the SVOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

### 7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

## DATA REVIEW REPORT

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD exhibited acceptable recoveries and RPD between the MS/MSD recoveries.

### 8. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the LCS/LCSD analysis exhibited recoveries within the control limits.

### 9. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 30% for water matrices and 50% for soil matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices or three times the RL is applied for soil matrices.

A field duplicate was not performed on a sample within this SDG.

### 10. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

Sample results associated with compound that exhibited a concentration greater than the linear range of the instrument calibration are summarized in the following table.

| Sample ID      | Compound             | Original Analysis | Diluted Analysis | Reported Analysis |
|----------------|----------------------|-------------------|------------------|-------------------|
| SB-106 (17-20) | Fluoranthene         | --                | 4970             | 4970 D            |
|                | Pyrene               | --                | 7460             | 7460 D            |
| SB-106 (17-21) | Benzo(a)anthracene   | --                | 4050             | 4050 D            |
|                | Benzo(a)pyrene       | --                | 5990             | 5990 D            |
|                | Benzo(b)fluoranthene | --                | 3810             | 3810 D            |
|                | Benzo(g,h,i)perylene | --                | 4100             | 4100 D            |
|                | Chrysene             | --                | 3630             | 3630 D            |
|                | Fluoranthene         | --                | 7930             | 7930 D            |
|                | Pyrene               | --                | 15600            | 15600 D           |
| SB-102 (0-17)  | Benzo(a)anthracene   | --                | 4420             | 4420 D            |
|                | Benzo(a)pyrene       | --                | 4510             | 4510 D            |
|                | Benzo(b)fluoranthene | --                | 5340             | 5340 D            |
|                | Benzo(k)fluoranthene | --                | 2220             | 2220 D            |

## DATA REVIEW REPORT

| Sample ID | Compound     | Original Analysis | Diluted Analysis | Reported Analysis |
|-----------|--------------|-------------------|------------------|-------------------|
|           | Chrysene     | --                | 3880             | 3880 D            |
|           | Fluoranthene | --                | 9620             | 9620 D            |
|           | Phenanthrene | --                | 5580             | 5580 D            |
|           | Pyrene       | --                | 8180             | 8180 D            |

Note: In the instance where both the original analysis and the diluted analysis sample results exhibited a concentration greater than and/or less than the calibration linear range of the instrument; the sample result exhibiting the greatest concentration will be reported as the final result.

Sample results associated with compounds exhibiting concentrations greater than the linear range are qualified as documented in the table below when reported as the final reported sample result.

| Reported Sample Results                                   | Qualification |
|---|---------------|
| Diluted sample result within calibration range            | D             |
| Diluted sample result less than the calibration range     | DJ            |
| Diluted sample result greater than the calibration range  | EDJ           |
| Original sample result greater than the calibration range | EJ            |

### 11. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

- (a) Sample extracted outside the holding time per client's request.
- (b) Associated CCV outside of control limits high, sample was ND.
- (c) Result is from Run# 2
- (d) Associated CCV outside of control limits low.

## DATA REVIEW REPORT

### SUMMARY

This data usability summary report (DUSR) summarizes the review of Sample Delivery Group (SDG) # JC65058 for samples collected in association with the NYSEG Newark Site. The review was conducted as a Tier III evaluation and included review of data package completeness. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

| SDG     | Sample ID           | Lab ID     | Matrix | Sample Collection Date | Parent Sample | Analysis |      |                     |     |      |
|---------|---------------------|------------|--------|------------------------|---------------|----------|------|---------------------|-----|------|
|         |                     |            |        |                        |               | VOC      | SVOC | HERB<br>PEST<br>PCB | MET | MISC |

## DATA REVIEW REPORT

### ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Method 8270D. Data were reviewed in accordance with USEPA Region II SOPs and USEPA National Functional Guidelines of October 1999 and applicable Region II SOPs. USEPA NFGs and Region II SOPs were followed for qualification purposes.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - UB Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

## DATA REVIEW REPORT

### SEMIVOLATILE ORGANIC COMPOUND (SVOC) ANALYSES

#### 1. Holding Times

The specified holding times for the following methods are presented in the following table.

| Method       | Matrix | Holding Time  | Preservation  |
|--------------|--------|---|---------------|
| SW-846 8270D | Water  | 7 days from collection to extraction and 40 days from extraction to analysis  | Cool to <6 °C |
|              | Soil   | 14 days from collection to extraction and 40 days from extraction to analysis | Cool to <6 °C |

All samples were analyzed within the specified holding time criteria.

#### 2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

#### 3. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

#### 4. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

##### 4.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (20%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

## DATA REVIEW REPORT

### 4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

| Sample Locations   | Initial/Continuing | Compound                  | Criteria |
|--|--------------------|---------------------------|----------|
| TP-100 (8-10) (JC65058-1)<br>DUP-042518<br>SB-108 (15-17)<br>SB-105 (13-15)<br>SB-104 (13-17)<br>TP-100 (8-10) (JC65058-8) | CCV %D             | Hexachlorocyclopentadiene | +36.9%   |
|  |                    | 4-Nitrophenol             | +20.2%   |
|  |                    | 2,3,4,6-Tetrachlorophenol | +25.3%   |
|  |                    | Pentachlorophenol         | +39.7%   |
|  |                    |                           |          |
| DUP-042518   | CCV %D             | Benzo[b]fluoranthene      | +23.8%   |
|  |                    | Benzo[a]pyrene            | +22.1%   |
|  |                    | Indeno[1,2,3-cd]pyrene    | +24.0%   |
| TP-100 (6-8)<br>SB-104 (5-9)   | CCV %D             | Caprolactam               | +30.2%   |
|  |                    | Hexachlorocyclopentadiene | +48.9%   |
|  |                    | 2-Nitroaniline            | +21.0%   |
|  |                    | 4-Nitrophenol             | +25.2%   |
|  |                    | Pentachlorophenol         | +32.2%   |
|  |                    | Benzo[a]pyrene            | +20.4%   |
| TP-100 (2-6)<br>SB-105 (8-15)<br>TP-100 (2-6)  | CCV %D             | 2-Nitrophenol             | +21.6%   |
|  |                    | 2,4-Dinitrotoluene        | +25.7%   |
|  |                    | Di-n-octylphthalate       | +22.8%   |
| SB-104 (2-5) (9-13)<br>SB-105 (0-5)  | CCV %D             | Caprolactam               | +22.5%   |
|  |                    | 2-Nitroaniline            | +21.0%   |
|  |                    | 2,4-Dinitrotoluene        | +20.7%   |
|  |                    | Di-n-butylphthalate       | +21.1%   |
|  |                    | Di-n-octylphthalate       | +29.6%   |

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

| Initial/Continuing                 | Criteria               | Sample Result | Qualification |
|------------------------------------|------------------------|---------------|---------------|
| Initial and Continuing Calibration | RRF <0.05              | Non-detect    | R             |
|                                    |                        | Detect        | J             |
|                                    | RRF <0.01 <sup>1</sup> | Non-detect    | R             |

## DATA REVIEW REPORT

| Initial/Continuing     | Criteria                                      | Sample Result | Qualification |
|------------------------|---|---------------|---------------|
|                        |   | Detect        | J             |
|                        | RRF >0.05 or RRF >0.01 <sup>1</sup>           | Non-detect    | No Action     |
|                        |   | Detect        |               |
| Initial Calibration    | %RSD > 15% or a correlation coefficient <0.99 | Non-detect    | UJ            |
|                        |   | Detect        | J             |
|                        | %RSD >90%                                     | Non-detect    | R             |
|                        |   | Detect        | J             |
| Continuing Calibration | %D >20% (increase in sensitivity)             | Non-detect    | No Action     |
|                        |   | Detect        | J             |
|                        | %D >20% (decrease in sensitivity)             | Non-detect    | UJ            |
|                        |   | Detect        | J             |
|                        | %D >90% (increase/decrease in sensitivity)    | Non-detect    | R             |
|                        |   | Detect        | J             |

Note:

<sup>1</sup> RRF of 0.01 only applies to compounds which are typically poor responding compounds (i.e., ketones, 1,4-dioxane, etc.)

### 5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

All surrogate recoveries were within control limits.

### 6. Internal Standard Performance

Internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the internal standard compounds associated with the SVOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

### 7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

The MS/MSD exhibited acceptable recoveries and RPD between the MS/MSD recoveries.

## DATA REVIEW REPORT

### 8. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

All compounds associated with the LCS/LCSD analysis exhibited recoveries within the control limits.

### 9. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 30% for water matrices and 50% for soil matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices or three times the RL is applied for soil matrices.

Results for duplicate samples are summarized in the following table.

| Sample ID/Duplicate ID    | Compound               | Sample Result | Duplicate Result | RPD    |
|---------------------------|------------------------|---------------|------------------|--------|
| TP-100 (8-10)/ DUP-042518 | Acenaphthene           | 296           | 1620             | 138.2% |
|                           | Acenaphthylene         | 93.0          | 37.0             | AC     |

## DATA REVIEW REPORT

### Notes:

AC                    Acceptable  
 NC                    Not compliant

All of the detected compounds except Acenaphthylene and 1,1'-Biphenyl associated with sample locations TP-100 (8-10) and DUP-042518 exhibited a field duplicate RPD greater than the control limit. The associated sample results from sample locations for the listed analyte were qualified as estimated.

### 10. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

Sample results associated with compound that exhibited a concentration greater than the linear range of the instrument calibration are summarized in the following table.

| Sample ID                 | Compound               | Original Analysis  | Diluted Analysis | Reported Analysis |
|---------------------------|------------------------|--------------------|------------------|-------------------|
| TP-100 (8-10) (JC65058-1) | Fluoranthene           | --                 | 5250             | 5250 D            |
|                           | Pyrene                 | --                 | 3850             | 3850 D            |
| DUP-042518                | Benzo(a)anthracene     | --                 | 7330             | 7330 D            |
|                           | Benzo(a)pyrene         | --                 | 6740             | 6740 D            |
|                           | Benzo(b)fluoranthene   | --                 | 8070             | 8070 D            |
|                           | Chrysene               | --                 | 6250             | 6250 D            |

## DATA REVIEW REPORT

| Sample ID | Compound | Original Analysis | Diluted Analysis | Reported Analysis |
|-----------|----------|-------------------|------------------|-------------------|
|           | Pyrene   | --                | 3720             | 3720 D            |

Note: In the instance where both the original analysis and the diluted analysis sample results exhibited a concentration greater than and/or less than the calibration linear range of the instrument; the sample result exhibiting the greatest concentration will be reported as the final result.

Sample results associated with compounds exhibiting concentrations greater than the linear range are qualified as documented in the table below when reported as the final reported sample result.

| Reported Sample Results                                   | Qualification |
|---|---------------|
| Diluted sample result within calibration range            | D             |
| Diluted sample result less than the calibration range     | DJ            |
| Diluted sample result greater than the calibration range  | EDJ           |
| Original sample result greater than the calibration range | EJ            |

### 11. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

## Data Usability Summary Report

### Newark, New York

Semivolatile Analysis

SDG # JC65157

Analyses Performed By:  
SGS Laboratories  
Dayton, New Jersey

Report #30512R  
Review Level: Tier III  
Project: B0013094.0006.00032

## DATA REVIEW REPORT

### SUMMARY

This data usability summary report (DUSR) summarizes the review of Sample Delivery Group (SDG) # JC65157 for samples collected in association with the NYSEG Newark Site. The review was conducted as a Tier III evaluation and included review of data package completeness. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

| SDG     | Sample ID      | Lab ID     | Matrix | Sample Collection Date | Parent Sample | Analysis |      |                     |     |      |
|---------|----------------|------------|--------|------------------------|---------------|----------|------|---------------------|-----|------|

## DATA REVIEW REPORT

### ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Method 8270D. Data were reviewed in accordance with USEPA Region II SOPs and USEPA National Functional Guidelines of October 1999 and applicable Region II SOPs. USEPA NFGs and Region II SOPs were followed for qualification purposes.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
  - E The compound was quantitated above the calibration range.
  - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
  - UB Compound considered non-detect at the listed value due to associated blank contamination.
  - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
  - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

## DATA REVIEW REPORT

### SEMIVOLATILE ORGANIC COMPOUND (SVOC) ANALYSES

#### 1. Holding Times

The specified holding times for the following methods are presented in the following table.

| Method       | Matrix | Holding Time  | Preservation  |
|--------------|--------|---|---------------|
| SW-846 8270D | Water  | 7 days from collection to extraction and 40 days from extraction to analysis  | Cool to <6 °C |
|              | Soil   | 14 days from collection to extraction and 40 days from extraction to analysis | Cool to <6 °C |

All samples were analyzed within the specified holding time criteria.

#### 2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Compounds were not detected above the MDL in the associated blanks; therefore, detected sample results were not associated with blank contamination.

#### 3. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

#### 4. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

##### 4.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (20%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

## DATA REVIEW REPORT

### 4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

| Sample Locations   | Initial/Continuing | Compound                   | Criteria |
|--|--------------------|----------------------------|----------|
| E6P2189-CC2164<br>SB-103 (7-9)<br>SB-109 (7-9)<br>SB-109 (15-17)<br>SB-101 (7-9)<br>SB-103 (9-19)<br>SB-101 (0-9)<br>SB-100 (0-8)<br>SB-100 (8-11)<br>SB-103 (0-5)<br>SB-101 (0-9)<br>SB-100 (0-8) | CCV %D             | Hexachlorobutadiene        | -22.3%   |
|  |                    | Hexachlorocyclopentadiene  | -24.9%   |
|  |                    | 2,4-Dinitrophenol          | -20.6%   |
|  |                    | 2,3,4,6-Tetrachlorophenol  | -26.7%   |
|  |                    | 4-Nitroaniline             | -26.8%   |
|  |                    | 1,2,4,5-Tetrachlorobenzene | -27.0%   |
|  |                    | Butylbenzylphthalate       | +24.2%   |
|  |                    | bis(2-Ethylhexyl)phthalate | +21.8%   |
|  |                    | Di-n-octylphthalate        | +30.0%   |

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

| Initial/Continuing                 | Criteria                                      | Sample Result | Qualification |
|------------------------------------|---|---------------|---------------|
| Initial and Continuing Calibration | RRF <0.05                                     | Non-detect    | R             |
|                                    |   | Detect        | J             |
|                                    | RRF <0.01 <sup>1</sup>                        | Non-detect    | R             |
|                                    |   | Detect        | J             |
|                                    | RRF >0.05 or RRF >0.01 <sup>1</sup>           | Non-detect    | No Action     |
|                                    |   | Detect        |               |
| Initial Calibration                | %RSD > 15% or a correlation coefficient <0.99 | Non-detect    | UJ            |
|                                    |   | Detect        | J             |
|                                    | %RSD >90%                                     | Non-detect    | R             |
|                                    |   | Detect        | J             |
| Continuing Calibration             | %D >20% (increase in sensitivity)             | Non-detect    | No Action     |
|                                    |   | Detect        | J             |
|                                    | %D >20% (decrease in sensitivity)             | Non-detect    | UJ            |
|                                    |   | Detect        | J             |
|                                    | %D >90% (increase/decrease in sensitivity)    | Non-detect    | R             |
|                                    |   | Detect        | J             |

Note:

## DATA REVIEW REPORT

<sup>1</sup> RRF of 0.01 only applies to compounds which are typically poor responding compounds (i.e., ketones, 1,4-dioxane, etc.)

### 5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

All surrogate recoveries were within control limits.

### 6. Internal Standard Performance

Internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the internal standard compounds associated with the SVOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

### 7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

Sample locations associated with the MS/MSD exhibiting recoveries outside of the control limits are presented in the following table.

| Sample Locations | Compound               | MS Recovery | MSD Recovery |
|------------------|------------------------|-------------|--------------|
| SB-101 (7-9)     | 2,4-Dinitrophenol      | AC          | <10%         |
|                  | Acenaphthene           | AC          | >UL          |
|                  | Acenaphthylene         | AC          | >UL          |

**Note:**

AC Acceptable

The criteria used to evaluate the MS/MSD recoveries are presented in the following table. In the case of an MS/MSD deviation, the sample results are qualified as documented in the table below.

| Control Limit   | Sample Result | Qualification |
|---|---------------|---------------|
| > the upper control limit (UL)  | Non-detect    | No Action     |
|   | Detect        | J             |
| < the lower control limit (LL) but > 10%  | Non-detect    | UJ            |
|   | Detect        | J             |
| < 10%   | Non-detect    | R             |
|   | Detect        | J             |
| Parent sample concentration > four times the MS/MSD spiking solution concentration. | Detect        | No Action     |
|   | Non-detect    |               |

Sample locations associated with MS/MSD recoveries exhibiting an RPD greater than of the control limit presented in the following table.

| Sample Locations | Compound             |
|------------------|----------------------|
| SB-101 (7-9)     | 2,4-Dimethylphenol   |
|                  | 4,6-Dinitro-o-cresol |
|                  | 3&4-Methylphenol     |
|                  | 4-Nitrophenol        |
|                  | Phenol               |

## DATA REVIEW REPORT

|                  | 2-Methylnaphthalene    |
|                  | 4-Nitroaniline         |
|                  | Naphthalene            |
|                  | Phenanthrene           |
|                  | Pyrene                 |

The criteria used to evaluate the RPD between the MS/MSD recoveries are presented in the following table. In the case of an RPD deviation, the sample results are qualified as documented in the table below.

| Control Limit | Sample Result | Qualification |
|---------------|---------------|---------------|
| > UL          | Non-detect    | UJ            |
|               | Detect        | J             |

### 8. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

## DATA REVIEW REPORT

All compounds associated with the LCS/LCSD analysis exhibited recoveries within the control limits.

### 9. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 30% for water matrices and 50% for soil matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices or three times the RL is applied for soil matrices.

A field duplicate was not performed on a sample within this SDG.

### 10. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

Sample results associated with compound that exhibited a concentration greater than the linear range of the instrument calibration are summarized in the following table.

| Sample ID     | Compound               | Original Analysis | Diluted Analysis | Reported Analysis |
|---------------|------------------------|-------------------|------------------|-------------------|
| SB-103 (7-9)  | Anthracene             | --                | 12100            | 12100 D           |
|               | Benzo(a)anthracene     | --                | 9910             | 9910 D            |
|               | Benzo(a)pyrene         | --                | 7970             | 7970 D            |

Note: In the instance where both the original analysis and the diluted analysis sample results exhibited a concentration greater than and/or less than the calibration linear range of the instrument; the sample result exhibiting the greatest concentration will be reported as the final result.

Sample results associated with compounds exhibiting concentrations greater than the linear range are qualified as documented in the table below when reported as the final reported sample result.

| Reported Sample Results                                   | Qualification |
|---|---------------|
| Diluted sample result within calibration range            | D             |
| Diluted sample result less than the calibration range     | DJ            |
| Diluted sample result greater than the calibration range  | EDJ           |
| Original sample result greater than the calibration range | EJ            |

### 11. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

Geotechnical Laboratory Report

May 14, 2018

Project No. 2018-275-001

Mr. Jason Golubski  
ARCADIS  
One Lincoln Center  
110 W. Fayette Street, Suite 300  
Syracuse, NY 13202

**Transmittal**  
**Laboratory Test Results**  
**NYSEG-NEWARK FORMER MGP SITE**

Please find attached the laboratory test results for the above referenced project. The tests were outlined on the Project Verification Form that was transmitted to your firm prior to the testing. The testing was performed in general accordance with the methods listed on the enclosed data sheets. The test results are believed to be representative of the samples that were submitted for testing and are indicative only of the specimens that were evaluated. We have no direct knowledge of the origin of the samples and imply no position with regard to the nature of the test results, i.e. pass/fail and no claims as to the suitability of the material for its intended use.

The test data and all associated project information provided shall be held in strict confidence and disclosed to other parties only with authorization by our Client. The test data submitted herein is considered integral with this report and is not to be reproduced except in whole and only with the authorization of the Client and Geotechnics. The remaining sample materials for this project will be retained for a minimum of 90 days as directed by the Geotechnics' Quality Program.

We are pleased to provide these testing services. Should you have any questions or if we may be of further assistance, please contact our office.

Respectfully submitted,  
**Geotechnics, Inc.**

David R. Backstrom  
Laboratory Director

***We understand that you have a choice in your laboratory services  
and we thank you for choosing Geotechnics.***

## ATTERBERG LIMITS

ASTM D 4318-17

Client: ARCADIS  
 Client Reference: NYSEG-Newark Former MGP Site  
 Project No.: 2018-275-001  
 Lab ID: 2018-275-001-001

Boring No.: SB-100  
 Depth (ft): 8-11  
 Sample No.: SB-100 (8-11)  
 Soil Description: DARK BROWN LEAN CLAY

**Note: The USCS symbol used with this test refers only to the minus No. 40** (Minus No. 40 sieve material, Air dried)  
**sieve material. See the "Sieve and Hydrometer Analysis" graph page for the complete material description.**

## ATTERBERG LIMITS

ASTM D 4318-17

Client: ARCADIS  
 Client Reference: NYSEG-Newark Former MGP Site  
 Project No.: 2018-275-001  
 Lab ID: 2018-275-001-002

Boring No.: SB-101  
 Depth (ft): 9-11  
 Sample No.: SB-101 (9-11)  
 Soil Description: BROWN LEAN CLAY

**Note: The USCS symbol used with this test refers only to the minus No. 40** (Minus No. 40 sieve material, Air dried)  
**sieve material. See the "Sieve and Hydrometer Analysis" graph page for the complete material description.**

## ATTERBERG LIMITS

ASTM D 4318-17

Client: ARCADIS  
 Client Reference: NYSEG-Newark Former MGP Site  
 Project No.: 2018-275-001  
 Lab ID: 2018-275-001-005

Boring No.: TP-100  
 Depth (ft): 4-8  
 Sample No.: TP-100 (4-8)  
 Soil Description: BROWN SILT

**Note: The USCS symbol used with this test refers only to the minus No. 40** (Minus No. 40 sieve material, Air dried)  
**sieve material. See the "Sieve and Hydrometer Analysis" graph page for the complete material description.**

## ATTERBERG LIMITS

ASTM D 4318-17

Client: ARCADIS  
 Client Reference: NYSEG-Newark Former MGP Site  
 Project No.: 2018-275-001  
 Lab ID: 2018-275-001-006

Boring No.: TP-101  
 Depth (ft): 8-10  
 Sample No.: TP-101 (8-10)  
 Soil Description: BROWN LEAN CLAY

**Note: The USCS symbol used with this test refers only to the minus No. 40** (Minus No. 40 sieve material, Air dried)  
**sieve material. See the "Sieve and Hydrometer Analysis" graph page for the complete material description.**

SURVEY NOTES:

- COORDINATES AND NORTH ORIENTATION SHOWN HEREON ARE REFERENCED TO THE NEW YORK STATE PLANE COORDINATE SYSTEM, CENTRAL ZONE, TRANSVERSE MERCATOR PROJECTION, NAD 83 (2011) EPOCH 2010.00 USING GPS PROCEDURES AND THE NEW YORK STATE DOT CORS NETWORK.
- ELEVATIONS SHOWN HEREON ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (GEOID 12A) USING GPS PROCEDURES.
- UNDERGROUND UTILITIES SHOWN HEREON WERE PLOTTED FROM VISIBLE EVIDENCE LOCATED AT THE TIME OF THE FIELD SURVEY AND DESIGNATIONS BY A SUBSURFACE UTILITY MARKING COMPANY. THE LOCATIONS OF ALL UNDERGROUND UTILITIES SHOULD BE STAKED BY THE RESPECTIVE UTILITY COMPANY PRIOR TO ANY CONSTRUCTION.
