Subject:

Pre-Design Investigation Summary Report  
Newark Former Manufactured Gas Plant Site  
Newark, New York  
Site No. 8-59-021

ENVIRONMENT

Dear Mr. Squire:

Date:

September 10, 2018

This letter summarizes the pre-design investigation (PDI) activities completed at the New York State Electric & Gas Corporation (NYSEG) Newark Former Manufactured Gas Plant (MGP) Site (the site) located in Newark, New York.

Contact:

Jason Golubski, P.E.

PDI Activities were completed from April 19, 2018 to April 30, 2018 (and on August 22, 2018) in accordance the New York State Department of Environmental Conservation- (NYSDEC-) approved August 2017 Remedial Design Work Plan (RDWP).

Phone:

315.671.9437

Email:

Jason.Golubski@arcadis.com

A summary of the activities and associated results is presented below.

Our ref:

B0013094.0006 #10

### **Task 1 – Utility Identification**

As an initial step of the PDI, following utility identification activities were conducted to identify overhead and subsurface utilities at and in the immediate vicinity of the anticipated remedial limits:

- Arcadis conducted a detailed visual site inspection to identify utilities present at the site in comparison to the site survey and available utility plans.
- Personnel from utility owners and/or locators (on behalf of the owners) marked out their respective electric, natural gas, communication, sanitary and storm sewers, and water lines in response to Dig-Safely New York ticket requests issued by the geophysical survey and drilling subcontractors (TREC Environmental Inc. [TREC] of Spencerport, New York and Nothnagle Drilling, Inc. [Nothnagle] of Scottsville, New York).
- Arcadis retained a private utility locating service (TREC) to perform a geophysical survey using ground-penetrating radar (GPR) techniques to

identify and mark the location of underground utilities and obstructions at and in the immediate vicinity of anticipated remedial areas. TREC performed the utility clearance on April 19 and April 20, 2018, including marking subsurface utilities and performing soft digging (i.e., via air-knife) to confirm the utility locations. Utility survey information is included as Attachment 1.

Arcadis' survey subcontractor Fischer Associates (Fisher) of Rochester, New York surveyed and documented the locations of the identified utilities. Utility information will be incorporated into the forthcoming remedial design (including potential utility relocation requirements).

## **Task 2 – Soil Investigation**

Nothnagle completed 11 soil borings (SB-100 through SB-110) using conventional hollow-stem auger drilling techniques and two test pits (TP-100 and TP-101) using a track-mounted mini-excavator. Soil borings and test pits were completed, from April 23 to April 27, 2018, at the locations shown on Figure 1 to achieve the following objectives:

- Further delineating the extent of required soil removal.
- Evaluating the conditions of subsurface structures/foundations.
- Assessing handling requirements for soil to be removed as part of the remedy.
- Evaluating the geotechnical properties of soil within the excavation areas.

Prior to drilling, asphalt pavement was saw-cut and soil was removed from each boring by vacuum/manual excavation to a depth of approximately 5 feet bgs as an additional measure to identify/avoid subsurface utilities/obstructions. Soil borings were drilled to target depths of 17 to 23 feet below ground surface (bgs) in the eastern holder area and to 9 to 15 feet bgs in the northern area. Soil boring logs are included as Attachment 2.

Soil samples were collected continuously using 2-foot long, 2-inch-diameter split-spoon samplers. Arcadis' field geologist visually characterized each sample for soil type, texture, moisture content, compactness, plasticity, and the presence/absence of impacts (e.g., non-aqueous phase liquid [NAPL]). The field geologist also screened representative samples from each sampling interval for the presence of volatile organic vapors using a photoionization detector (PID). Following the completion of drilling, bore holes were filled with grout.

Prior to excavating the test pits, the existing asphalt surface was saw-cut to create a clean break-line. Test pit logs are included as Attachment 3. The excavated material was placed into roll-offs staged near the test pits and subsequently transported offsite for disposal (as discussed below). Following the completion of the excavation activities, the test pits were backfilled with crushed stone and the asphalt pavement was repaired (at soil boring and test pit locations) on May 29, 2018.

In accordance with the RDWP, air monitoring was completed during the soil investigation activities; no exceedances occurred. Additional PDI soil investigation details are presented below and a summary of the soil samples collected as part of the PDI is presented as Table 1.

## **Delineation**

Soil samples were collected from both soil borings and test pits to further refine the extent of required soil removal. Per the March 2013 Record of Decision [ROD], soil containing gross visual impacts and/or total

polycyclic aromatic hydrocarbons (PAHs) at concentrations greater than 500 milligrams per kilograms (mg/kg) requires removal.

In general, samples submitted for laboratory analysis were collected from the bottom of the boring/test pit (i.e., at the target depth or top of till) or where the most visually impacted material or highest PID field screening readings were noted. Arcadis field personnel did not encounter any gross visual impacts. Potential impacts (visual and odors) were limited to the following locations:

- SB-103 – A fuel-like odor at the 7 to 9 to 13 to 18 ft bgs. Although these observations were not gross visual impacts, as a conservative measure, “step-out/contingency” boring SB-109 was completed west of boring SB-103.
- SB-106 – NAPL blebs from 19 to 21 ft bgs.
- SB-107 – A slight MGP-like odor and slight sheen on water in the pore space at the 15 to 19 ft bgs.

“Step-out/contingency” borings were not required for soil borings SB-106 and SB-107; other PDI (and Remedial Investigation [RI]) borings were planned (or previously completed) to the north and east. At soil boring SB-101 (and at SB-100), soil samples contained slag/debris (consistent with RI samples collected in this area). As a conservative measure, “step-out/contingency” boring SB-110 was completed west of boring SB-101 (but samples were not analyzed based on the results of soil delineation samples from boring SB-101).

Per the RDWP, two test pits (TP-101 and TP-102) were to be excavated, with the objective of further evaluating a visual impact noted in RI soil boring SB-2 (i.e., isolated hard tar observed at 7.5 ft bgs) completed in the western holder area. However, no visual impacts were observed during excavation of the test pit TP-101. Therefore, in accordance with the RDWP, test pit TP-102 was not excavated.

Arcadis collected and submitted a total of 11 soil samples to SGS Accutest Laboratories (SGS) located in Dayton, New Jersey for analysis of semi-volatile organic compounds (SVOCs) for excavation delineation purposes. Note that analytical results for waste characterization sample were also considered when refining excavation limits. Analytical results indicated that total polycyclic aromatic hydrocarbons (PAHs) at concentrations greater than 500 milligrams per kilograms (mg/kg) were not present in any of the soil samples, including a sample collected from test pit TP-101. Soil delineation sample analytical results (as well as SVOC analytical results for waste characterization samples) are presented in Table 2 and laboratory reports are included in Attachment 4. Analytical results for delineation samples were validated and Data Usability Summary Reports (DUSRs) are included as Attachment 5.

Based on the results of the PDI, proposed revised soil excavation limits are presented on Figure 2. The rationale for the proposed modifications is as follows:

- Given the minor degree of observed visual impacts and low-level PAH concentrations, soil in the eastern holder area does not meet the ROD-required criteria for removal and therefore, the eastern holder area will not be excavated.
- The horizontal limits of excavation north of the hotel have been slightly expanded to “clean” locations (i.e., does not contain gross visual impacts and does not contain PAHs concentrations greater than 500 mg/kg).
- Similarly, the excavation north of the West Shore Boulevard has been slightly expanded to “clean” locations.

- Given the absence of visual impacts and low-level PAH concentrations, soil in the western holder area does not meet the ROD-required criteria for removal and therefore, the western holder area will not be excavated.

### **Subsurface Structure Evaluation**

Gas holder/MGP foundations structures were not encountered during test pit excavations. In addition to delineation and waste characterization sampling, test pits TP-100 and TP-101 were also used to assess hotel foundation construction/conditions. An approximately 22" curb was present approximately 2 to 3 feet off the hotel wall, with the area between the curb and hotel wall filled with topsoil/fill and covered with landscaping. The hotel wall/footing extends approximately 1.5' below ground surface (bgs) and consist of cast-in-place concrete. At test pit TP-100 (north side of the hotel), a 4-inch thick concrete slab is located below the cast-in-place concrete wall/footing. At test pit TP-101 (west side of the hotel), mortared stones/cobbles (12-inch thick) was located below the cast-in-place concrete wall/footer. Photographs of the subsurface structures/ foundation observed during the test pitting are included in Attachment 7.

The hotel foundation observations will be considered during the development of an excavation approach as part of the forthcoming remedial design.

### **Soil Waste Characterization Sampling**

Arcadis submitted a total of 22 soil samples, collected from both soil borings and test pits, to SGS to characterize material for waste characterization purposes. Waste characterization results will support profiling for offsite treatment/disposal and facilitate direct-loading of the excavated materials during remedial construction. Samples were analyzed per Seneca Meadows Landfill requirements (base parameters and additional parameters, to support non-hazardous waste disposal) and ESMI Fort Edward requirement (to support low-temperature thermal desorption [LTTD] treatment of conditionally-exempt material).

Waste characterization sample analytical results are presented in Table 3 and laboratory reports are included in Attachment 5, and will be used to develop waste handling/disposal requirements to be presented in the forthcoming remedial design and subsequently used to develop waste profiles prior to remedial construction.

### **Geotechnical Soil Sampling**

Arcadis submitted a total of six samples (from borings SB-100, SB-101; SB-105; SB-107; TP-100; TP-101) collected from the test pits and soil borings to Geotechnical & Geosynthetic Testing (Geotechnics) located in Pittsburgh, Pennsylvania for geotechnical testing (i.e., moisture content, grain size analysis and Atterberg limits). Geotechnical laboratory reports area included as Attachment 6. Geotechnical testing results will be used during the development of an excavation approach as part of the forthcoming remedial design.

### **Task 3 – Qualitative Structural Review**

Qualitative structural reviews of the two-story hotel (at 125 West Shore Boulevard) and the one-story building at 101 West Shore Boulevard were conducted on April 25 and August 22, 2018 (respectively) to

evaluate existing structure details. A photo log of representative conditions of the two structures is included as Attachment 7 and a summary of the structures is presented below.

Based on the proximity of the anticipated excavation limits relative to buildings, structural monitoring is anticipated to be completed during the remedial construction activities. Potential monitoring activities may include, but may not be limited to: pre- and post-construction structural inspections to document building conditions; vibration monitoring to assess ground vibrations; and structural monitoring to evaluate potential movement (e.g., tiltmeters, optical survey points, etc.). Structural monitoring requirements will be developed as part of the remedial design.

### **Hotel Building (125 West Shore Boulevard)**

The building at 125 North Main Street is currently operating as a hotel. The floor consists of a concrete slab on grade and there is no basement level. Test pits completed along the northern and western sides of the building (discussed above) indicated that the building is supported by shallow, cast-in-place concrete footings. Because of the stucco finish covering the exterior walls and columns, building wall construction details could not be determined. General construction of the building, given the size and visible exterior features, is assumed to be metal framing with concrete (or brick) masonry walls.

The façade of this two-story structure is mostly glass windows with metal paneling. Building columns along the façade are spaced at approximate 15 feet on center, typically defining the limits of the individual hotel rooms. The interior of two of the hotel rooms adjacent to the test pits was also reviewed. Both rooms contained carpeted flooring with plaster ceilings. The exterior wall of the rooms consisted of three large windows with metal paneling and the room's heating/cooling ventilation unit positioned below. Interior wall finishes were either plaster or wall paper. No cracks were observed in the walls. Cracks were observed in the ceiling panel joints in both rooms.

### **101 West Shore Boulevard**

The building at 101 West Shore Boulevard is currently occupied by a hair salon (front half) and a drywall company (rear half). The building is a single story, wood framed structure with exterior metal siding and roofing. The floor is concrete slab on grade and there is no basement level. Although the buildings foundations were not visible, they are assumed to be shallow, spread footing foundations.

The interior walls and ceilings are finished with drywall. Floor coverings include either linoleum tiles or wood. One area of the building's floor is not covered and the exposed slab on grade was visible. No cracks were observed in this portion of the floor. No cracks or deteriorated areas were observed in the walls or ceiling.

### **Task 4 – Groundwater Investigation**

Arcadis conducted groundwater sampling near potential excavation areas and site-wide water level measurements on April 23, 2018. Arcadis field personnel collected and submitted groundwater grab samples (using a bailer) from three monitoring wells (MW-3A, MW-10-02, MW-11-06) to SGS for analysis to support treatment/disposal requirements and/or the design of the temporary water treatment system (to be used to support remedial construction). Groundwater sampling logs are included as Attachment 8.

Water level measurements are summarized in Table 4. Groundwater sample analytical results are presented on Table 5 and the laboratory reports are included in Attachment 5. Groundwater analytical results will be used to evaluate potential water handling/disposal requirements as part of the remedial design.

### **Task 5 – Site Survey**

Fisher surveyed the project area to document the PDI soil borings and test pit locations, identified utilities, and generate one-foot topographic site contours. Survey information will be used to develop a new site base map for remedial design drawings. A copy of Fisher's survey is included as Attachment 9.

### **Investigation-Derived Waste**

Investigation-derived waste (IDW) generated during the PDI was containerized onsite. Material excavated from test pits (as well as soil cuttings, personal protective equipment, and spent disposable sampling materials) was placed into three lined and tarped roll-off containers. Generated water (groundwater sampling purge water and decontamination water) was placed into two 55-gallon steel drums.

NYSEG's waste disposal vendor, Clean Harbors, completed the waste characterization sampling and transported the IDW for off-site disposal. Clean Harbor disposal documentation is included as Attachment 10.

### **Conclusion**

As indicated previously, based on the results of the PDI, soil removal limits have been modified as shown on Figure 2 and as follows:

- The eastern and western holder areas do not require excavation (based on PAH analytical results and the absence of gross visual impacts).
- The remaining excavation north of the hotel and the excavation north of the West Shore Boulevard have been expanded slightly to terminate at "clean" locations (i.e., meet the requirements of the ROD).

Please note that Arcadis is currently preparing a Preliminary (50%) Remedial Design Report and anticipates providing the preliminary design to NYSDEC for review by November 2018.

Michael H. Squire

**Notes:**

1. ESMI and Seneca Meadows waste characterization samples collected but not analyzed based on delineation sample analytical results.
2. Delineation sample collected from SB-110 but not analyzed based on analytical results for sample from SB-101.

**Table 2**  
**Soil Delineation Sample Analytical Results**  
**NYSEG, Newark Former MGP Site, Newark, New York**

**Notes:**

1. Samples collected by Arcadis on the dates indicated.
2. Samples analyzed by SGS Accutest Laboratories in Dayton, NJ
3. J = an estimated value.
4. U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
5. ND = None Detected.
6. NA = Not Analyzed.
7. "A" and "B" ID/depth indicates various waste characterization analyses.
8. Data results have been validated.

**Table 3**  
**Soil Waste Characterization Sample Analytical Results**  
**NYSEG, Newark Former MGP Site, Newark, New York**

**Notes:**

1. Samples collected by ARCADIS on the dates indicated.
2. Samples analyzed by SGS Accutest Laboratories in Dayton, NJ
3. J = an estimated value.
4. U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
5. ND = None Detected.
6. NA = Not Analyzed.
7. "A" and "B" ID/depth indicates various waste characterization analyses.

**Notes:**

1. Monitoring wells could not be located
2. SG-1 @ Bridge to canal water
3. SG-2 @ outfall along towpath 3.03' to water (little to no water; almost dry)
4. Gauging was performed on April 23, 2018
5. DTW = Depth to water in feet
6. DTB = Depth to bottom in feet
7. PID = Photoionization detector detector in parts per million
8. TOC = Top of casing
9. AMSL = Above mean sea level
10. Elevations relative to 1988 North American Vertical Datum (NAVD)

**Notes:**

1. Samples collected by ARCADIS on the dates indicated.
2. Samples analyzed by SGS Accutest Laboratories in Dayton, NJ
3. J = an estimated value.
4. U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
5. ND = None detected.
6. SU = Standard Units
7. mg/L = Milligrams per liter.
8. ug/L = Microgram per liter.

Utility Site Survey

## **TREC Environmental Inc.**

Technician: Jim Agar

Date: 4/25/18

Site Address: 125 N Main St., Newark, NY

Contact Person: Jason Golubski

Scope of Work: Locate existing utilities.

### **Type of Service:**

- Fault Detection       Utility Location/GPR  
 Infrastructure Assessment       Utility Mapping

### **Type of Equipment Used:**

- Mala Easy Locator HDR       SPX RD 7000

### **Marking Used:**

- Paint       Flags       Chalk       Updated Existing Maps       Other

Instructions from Onsite Contact: Locate existing utilities for soft dig excavation.

### **Notes:**

The communication line running east/west ran at a depth of 4 feet.

The communication service running into the building on the north left the main at 4 feet and rose to 2.5 feet.

The water main running east/west ran at a depth of 5.5 feet on the western end and over 6 feet on the eastern end. The water service was at a depth of 9 feet as it entered the building.

A storm drain in the north end parking lot ran a depth of 6 feet, catch basin to catch basin.

A road/curb drain ran from the catch basin down Main St at a depth of 18 inches. The line started in the road and transitioned over to the south side the curb.

The gas line ran at a depth of 4 feet.

On the west side of the building a drain line ran from the catch basin towards the building on a diagonal as shown on the map. The line ran at a depth of 2.5 feet.

On the north side of Main St there is a street light electric line that runs in line with the poles at a depth Ranging from 2-2.5 feet.

### **Information Relayed on site:**

Verbal       GPR Photos     Digital Photos       Hand drawn Map

**Reporting Options:**

Letter Report

Comprehensive Report

**TREC will guarantee the accuracy of utility markings only when subsurface utility location methods are used which meet the ASCE's *Standard Guidelines for the Collection and Depiction of Existing Subsurface Utility Data CI/ASCE 38-02*, Quality Level A. This process exposes subsurface utility systems to confirm location, size and identity.**

**Remarks:** bgs = below ground surface; NA = Not Applicable/Available; AMSL = Above Mean Sea Level.

Location hand cleared 0 - 5 ft bgs.  
 3-inch diameter split spoon used to collect soil samples.

Soil samples collected for: Total SVOCs at 7 - 9 ft bgs.  
 ESMI at 0 - 8 and 8 - 11 ft bgs.

| -15   | -15       |                   |                 |                 | 9<br>22          |           |                     |                   |                 | Dark olive brown very fine SAND and fine to coarse GRAVEL, angular to sub angular; little Silt; wet, loose, very slight fuel-like odor. 3" diameter cobble at 15.2' to 15.4' bgs.                                   |  |

**Remarks:** bgs = below ground surface; NA = Not Applicable/Available; AMSL = Above Mean Sea Level.

Location hand cleared 0 - 5 ft bgs. Switched to 3-inch diameter split spoon at 15' bgs.

Soil samples collected for: Total SVOCs at 7 - 9 ft bgs.  
 ESMI at 9 - 19 ft bgs.  
 Seneca Meadows Landfill at 0 - 5 ft bgs.

Site Location:

Borehole Depth: 21' bgs

125 North Main Street  
Newark, NY 14513

**Remarks:** bgs = below ground surface; NA = Not Applicable/Available; AMSL = Above Mean Sea Level.  
 Location Hand cleared 0 - 5 ft bgs.  
 Soil samples collected for: Total SVOCs at 17 - 20 ft bgs.  
 ESMI at 17 - 21 ft bgs.  
 Seneca Meadows Landfill at 3 - 5 and 11 - 15 ft bgs.

Site Location:

125 North Main Street  
Newark, NY 14513

Borehole Depth: 21' bgs

| Depth Interval (feet) | PID Screening Result (ppm) | Description of Soil/Material   |
|-----------------------|----------------------------|--|
| 0-0.5                 | 0.0                        | Asphalt  |
| 0.5-10                | 0.0-0.8                    | (Imported FILL Material) Brown fine to medium SAND; some fine to coarse Gravel, trace 3" to 14" diameter cobbles and boulders, sub-angular to sub-round; trace Silt; moist, very dense to dense. |
|                       | <b>Samples:</b>            | Delineation for PAHs collected from 8'-10' bgs.<br>ESMI Waste Characterization collected from 6'-8' and 8'-10'bgs. (two samples)   |
|                       |                            | Seneca Meadows Waste Characterization collected from 2'-6' bgs.<br>Geotechnical collected from 4'-8' bgs.  |

**Notes:**

Undermining of the Sand and Gravel occurred under the asphalt on the east side of the north end of the test pit. There could have possibly been a preferential pathway through the soils due to surface runoff draining through cracks in the asphalt.

## Technical Report for

### Arcadis

NYSEG - Newark Former MGP Site, Newark, NY

B0013094.0006

SGS Job Number: JC64857

Sampling Date: 04/23/18

### Report to:

Arcadis  
295 Woodcliff Drive Suite 301  
Fairport, NY 14450  
Jason.Golubski@arcadis.com; Nicholas.Beyrle@arcadis.com  
  
ATTN: Jason Golubski

Total number of pages in report: 250

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

A handwritten signature in black ink that reads "Nancy F. Cole".

Nancy Cole  
Laboratory Director

Client Service contact: Diane Komar 732-329-0200

Certifications: NJ(12129), NY(10983), CA, CT, FL, IL, IN, KS, KY, LA, MA, MD, ME, MN, NC, OH VAP (CL0056), AK (UST-103), AZ (AZ0786), PA, RI, SC, TX, UT, VA, WV, DoD ELAP (ANAB L2248)

This report shall not be reproduced, except in its entirety, without the written approval of SGS.  
Test results relate only to samples analyzed.

## CASE NARRATIVE / CONFORMANCE SUMMARY

**Client:** Arcadis

**Job No** JC64857

**Site:** NYSEG - Newark Former MGP Site, Newark, NY

**Report Date** 5/14/2018 11:54:15 A

On 04/25/2018, 3 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 3.9 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of JC64857 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Please refer to certification exceptions summary for additional certification information.

Compounds qualified as out of range in the continuing calibration summary report are acceptable as per method requirements when there is a high bias but the sample result is non-detect.

### MS Volatiles By Method EPA 624

**Matrix:** AQ

**Batch ID:** VN11346

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64857-1DUP, JC64857-2MS were used as the QC samples indicated.
- Matrix Spike Recovery(s) for Bromoform, Dichlorodifluoromethane, Trichlorofluoromethane are outside control limits. Outside control limits due to matrix interference.
- JC64857-1: Results reported from the HCl preserved sample. The reported result for acrolein is for screening only and cannot be used for compliance purposes.
- JC64857-2: Results reported from the HCl preserved sample. The reported result for acrolein is for screening only and cannot be used for compliance purposes.
- JC64857-3: Results reported from the HCl preserved sample. The reported result for acrolein is for screening only and cannot be used for compliance purposes.
- Matrix Spike Recovery(s) for 2-Chloroethyl vinyl ether are outside control limits. Outside control limits due to acid preservation.

Monday, May 14, 2018

Page 1 of 5

## MS Semi-volatiles By Method EPA 625

**Matrix:** AQ

**Batch ID:** OP11610

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- JC64857-1 for Pentachlorophenol: Associated CCV outside of control limits low.
- JC64857-3 for bis(2-Chloroethyl)ether: Associated CCV outside of control limits high, sample was ND.
- JC64857-1 for bis(2-Ethylhexyl)phthalate: Associated CCV outside of control limits high, sample was ND.
- JC64857-1 for n-Nitrosodimethylamine: Associated CCV outside of control limits high, sample was ND.
- JC64857-2 for bis(2-Chloroethyl)ether: Associated CCV outside of control limits high, sample was ND.
- JC64857-1 for Butyl benzyl phthalate: Associated CCV outside of control limits high, sample was ND.
- JC64857-1 for N-Nitroso-di-n-propylamine: Associated CCV outside of control limits high, sample was ND.
- JC64857-3 for Benzidine: Associated CCV outside of control limits low.
- JC64857-1 for Benzidine: Associated CCV outside of control limits low.
- JC64857-3 for Pentachlorophenol: Associated CCV outside of control limits low.
- OP11610-BSD for Benzidine: Analytical precision exceeds in-house control limits.
- JC64857-1 for Phenol: Associated CCV outside of control limits high, sample was ND.
- JC64857-2 for Phenol: Associated CCV outside of control limits high, sample was ND.
- JC64857-2 for Butyl benzyl phthalate: Associated CCV outside of control limits high, sample was ND.
- JC64857-1 for bis(2-Chloroethyl)ether: Associated CCV outside of control limits high, sample was ND.
- JC64857-3 for Phenol: Associated CCV outside of control limits high, sample was ND.
- JC64857-3 for Butyl benzyl phthalate: Associated CCV outside of control limits high, sample was ND.
- JC64857-2 for n-Nitrosodimethylamine: Associated CCV outside of control limits high, sample was ND.
- JC64857-2 for Benzidine: Associated CCV outside of control limits low.
- JC64857-2 for Di-n-octyl phthalate: Associated CCV outside of control limits high, sample was ND.
- JC64857-2 for Pentachlorophenol: Associated CCV outside of control limits low.
- JC64857-3 for Di-n-octyl phthalate: Associated CCV outside of control limits high, sample was ND.
- JC64857-2 for bis(2-Ethylhexyl)phthalate: Associated CCV outside of control limits high, sample was ND.
- JC64857-3 for bis(2-Ethylhexyl)phthalate: Associated CCV outside of control limits high, sample was ND.
- JC64857-3 for n-Nitrosodimethylamine: Associated CCV outside of control limits high, sample was ND.
- JC64857-1 for Di-n-octyl phthalate: Associated CCV outside of control limits high, sample was ND.
- JC64857-3 for N-Nitroso-di-n-propylamine: Associated CCV outside of control limits high, sample was ND.
- JC64857-2 for N-Nitroso-di-n-propylamine: Associated CCV outside of control limits high, sample was ND.

## Metals Analysis By Method SW846 6010C

**Matrix:** AQ

**Batch ID:** MP6829

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64768-2MS, JC64768-2MSD, JC64768-2SDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Chromium, Copper, Iron, Nickel, Zinc are outside control limits. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- Samples(s) JC64857-1, JC64857-1F, JC64857-2, JC64857-2F, JC64857-3, JC64857-3F: New York does not offer 3010A certification for antimony and silver. The laboratory is certified for method 3010A (Acid Digestion for Total Metals) for all other metals and is certified for the associated analytical methods of 6010C (ICP Analysis) and 6020A (ICP-MS Analysis). New York does certify for method 3005A (Acid Digestion for Total Recoverable or Dissolved Metals) for antimony and silver and the laboratory holds that certification, but that provides total recoverable rather than total metals results.
- JC64857-1 for Selenium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Barium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Antimony: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Cobalt: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Silver: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Potassium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Nickel: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Magnesium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Aluminum: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Copper: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Chromium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Calcium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Beryllium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Iron: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Cadmium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Thallium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Lead: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Iron: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Copper: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Zinc: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Vanadium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Magnesium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Cobalt: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Barium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Aluminum: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Antimony: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Arsenic: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Beryllium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Calcium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Chromium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Zinc: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Vanadium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Manganese: Elevated sample detection limit due to difficult sample matrix.

Page 3 of 5

## Metals Analysis By Method SW846 6010C

**Matrix:** AQ

**Batch ID:** MP6829

- JC64857-3 for Manganese: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Cadmium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Thallium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Arsenic: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Lead: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Sodium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Sodium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Silver: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Selenium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Potassium: Elevated sample detection limit due to difficult sample matrix.
- JC64857-3 for Nickel: Elevated sample detection limit due to difficult sample matrix.

## Metals Analysis By Method SW846 7470A

**Matrix:** AQ

**Batch ID:** MP6849

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64873-1AMS, JC64873-1AMSD were used as the QC samples for metals.
- JC64857-3 for Mercury: Elevated sample detection limit due to difficult sample matrix.
- JC64857-1 for Mercury: Elevated sample detection limit due to difficult sample matrix.

## General Chemistry By Method EPA 1664A

**Matrix:** AQ

**Batch ID:** GP12722

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64857-1MS, JC65049-1DUP were used as the QC samples for HEM Oil and Grease.
- RPD(s) for Duplicate for HEM Oil and Grease are outside control limits. RPD acceptable due to low duplicate and sample concentrations.

## General Chemistry By Method EPA 335.4/LACHAT

**Matrix:** AQ

**Batch ID:** GP12684

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64857-1MS, JC65010-1DUP were used as the QC samples for Cyanide.

## General Chemistry By Method SM2340 C-11

**Matrix:** AQ

**Batch ID:** GN79357

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC65050-2DUP, JC65050-2MS were used as the QC samples for Hardness, Total as CaCO<sub>3</sub>.

### General Chemistry By Method SM2540 C-11

**Matrix:** AQ                      **Batch ID:** GN79194

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64782-1DUP were used as the QC samples for Solids, Total Dissolved.

### General Chemistry By Method SM2540 D-11

**Matrix:** AQ                      **Batch ID:** GN79175

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64854-1DUP were used as the QC samples for Solids, Total Suspended.

### General Chemistry By Method SM4500H+ B-11

**Matrix:** AQ                      **Batch ID:** GN79370

- Sample(s) JC64857-1DUP were used as the QC samples for pH.
- JC64857-1 for pH: Field analysis required. Received out of hold time and analyzed by request.
- JC64857-2 for pH: Field analysis required. Received out of hold time and analyzed by request.
- JC64857-3 for pH: Field analysis required. Received out of hold time and analyzed by request.

### General Chemistry By Method SM5210 B-11

**Matrix:** AQ                      **Batch ID:** GP12626

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64857-1DUP were used as the QC samples for BOD, 5 Day.

### General Chemistry By Method SM5220 C-11,HACH8000

**Matrix:** AQ                      **Batch ID:** GP12766

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64857-1MS, JC64857-1DUP were used as the QC samples for Chemical Oxygen Demand.
- RPD(s) for Duplicate for Chemical Oxygen Demand are outside control limits. RPD acceptable due to low duplicate and sample concentrations.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by SGS North America Inc indicated via signature on the report cover

(a) Elevated sample detection limit due to difficult sample matrix.

(b) Field analysis required. Received out of hold time and analyzed by request.

(c) Results reported from the HCl preserved sample. The reported result for acrolein is for screening only and cannot be used for compliance purposes.

# Parameter Certification Exceptions

**Job Number:** JC64857  
**Account:** AGMNYF Arcadis  
**Project:** NYSEG - Newark Former MGP Site, Newark, NY

The following parameters included in this report are exceptions to NELAC certification. The certification status of each is indicated below.

| Parameter              | CAS#     | Method  | Mat | Certification Status                                  |
|------------------------|----------|---------|-----|---|
| Bis(chloromethyl)ether | 542-88-1 | EPA 624 | AQ  | SGS is not certified for this parameter. <sup>a</sup> |
| Ethylenimine           | 151-56-4 | EPA 624 | AQ  | SGS is not certified for this parameter. <sup>a</sup> |
| 1,2-Dichlorobenzene    | 95-50-1  | EPA 625 | AQ  | SGS is not certified for this parameter. <sup>b</sup> |
| 1,3-Dichlorobenzene    | 541-73-1 | EPA 625 | AQ  | SGS is not certified for this parameter. <sup>b</sup> |
| 1,4-Dichlorobenzene    | 106-46-7 | EPA 625 | AQ  | SGS is not certified for this parameter. <sup>b</sup> |

- (a) Result is indeterminate. Compound is unstable and there is no associated quality control.
- (b) Lab cert for analyte not supported by NJDEP, OQA. Only methods/analytes required for reporting by the State of NJ can be certified in NJ. Use of this analyte for compliance must be verified through the appropriate regulatory office.

Certification exceptions shown are based on the New Jersey DEP certifications. Applicability in other states may vary. Please contact your laboratory representative if additional information is required for a specific regulatory program.

- IS 1** = Tert Butyl Alcohol-D9
- IS 2** = Pentafluorobenzene
- IS 3** = 1,4-Difluorobenzene
- IS 4** = 1,4-Dichlorobenzene-d4
- IS 5** = Chlorobenzene-D5

(a) Upper Limit = + 100% of check standard area; Retention time + 0.5 minutes.  
 (b) Lower Limit = -50% of check standard area; Retention time -0.5 minutes.  
 (c) Results reported from the HCl preserved sample. The reported result for acrolein is for screening only and cannot be used for compliance purposes.

## Metals Analysis

---

### QC Data Summaries

---

Includes the following where applicable:

- Instrument Runlogs
- Initial and Continuing Calibration Blanks
- Initial and Continuing Calibration Checks
- High and Low Check Standards
- Interfering Element Check Standards
- Method Blank Summaries
- Matrix Spike and Duplicate Summaries
- Blank Spike and Lab Control Sample Summaries
- Serial Dilution Summaries

## Technical Report for

Arcadis

NYSEG - Newark Former MGP Site, Newark, NY

B0013094.0006

SGS Job Number: JC64996

Sampling Dates: 04/24/18 - 04/25/18

Report to:

Arcadis  
295 Woodcliff Drive Suite 301  
Fairport, NY 14450  
Jason.Golubski@arcadis.com; Nicholas.Beyrle@arcadis.com  
  
ATTN: Jason Golubski

Total number of pages in report: **1008**

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

Nancy Cole  
Laboratory Director

Client Service contact: Diane Komar 732-329-0200

Certifications: NJ(12129), NY(10983), CA, CT, FL, IL, IN, KS, KY, LA, MA, MD, ME, MN, NC, OH VAP (CL0056), AK (UST-103), AZ (AZ0786), PA, RI, SC, TX, UT, VA, WV, DoD ELAP (ANAB L2248)

This report shall not be reproduced, except in its entirety, without the written approval of SGS.  
Test results relate only to samples analyzed.

---

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

## CASE NARRATIVE / CONFORMANCE SUMMARY

2

**Client:** Arcadis

**Job No** JC64996

**Site:** NYSEG - Newark Former MGP Site, Newark, NY

**Report Date** 5/22/2018 5:07:13 PM

On 04/26/2018, 10 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 5.1 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of JC64996 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Please refer to certification exceptions summary for additional certification information.

Compounds qualified as out of range in the continuing calibration summary report are acceptable as per method requirements when there is a high bias but the sample result is non-detect.

### MS Volatiles By Method SW846 8260C

**Matrix:** SO

**Batch ID:** V3C6521

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC65047-1MS, JC65047-3DUP were used as the QC samples indicated.
- JC64996-9: Sample was not collected per 5035A specifications. Sample preserved from intact soil by laboratory.
- JC64996-9 for Freon 113: Associated CCV outside of control limits low.

**Matrix:** SO

**Batch ID:** VI8838

- All samples were analyzed within the recommended method holding time.
- Sample(s) JC64660-1DUP, JC64924-5MS were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- JC64996-6: Sample was not collected per 5035A specifications. Sample preserved from intact soil by laboratory.
- JC64996-6 for Trichlorofluoromethane: Associated CCV outside of control limits low.
- JC64996-6 for Dichlorodifluoromethane: Associated CCV outside of control limits low.
- JC64996-6 for Carbon disulfide: Associated CCV outside of control limits low.

**Matrix:** SO

**Batch ID:** VI8852

- All method blanks for this batch meet method specific criteria.
- Sample(s) JC65686-5MS, JC65686-6DUP were used as the QC samples indicated.
- The following samples were run outside of holding time for method SW846 8260C: JC64996-10, JC64996-7 Sample was not collected per 5035A specifications. Sample preserved from intact soil by laboratory out of hold time.
- Matrix Spike Recovery(s) for Methyl Acetate are outside control limits. Outside control limits due to matrix interference.
- JC64996-7: Sample was not collected per 5035A specifications. Sample preserved from intact soil by laboratory out of hold time.
- JC64996-10: Sample was not collected per 5035A specifications. Sample preserved from intact soil by laboratory out of hold time.
- VI8852-BS for 1,2,3-Trichlorobenzene: High percent recoveries and no associated positive reported in the QC batch.
- VI8852-BS for 1,2-Dibromo-3-chloropropane: High percent recoveries and no associated positive reported in the QC batch.
- VI8852-BS for 1,2,4-Trichlorobenzene: High percent recoveries and no associated positive reported in the QC batch.

## MS Semi-volatiles By Method SW846 8270D

**Matrix:** SO

**Batch ID:** OP11642

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64996-6MS, JC64996-6MSD were used as the QC samples indicated.
- JC64996-6 for 2,6-Dinitrotoluene: Associated CCV outside of control limits high, sample was ND.
- JC64996-6 for 2-Nitroaniline: Associated CCV outside of control limits high, sample was ND.
- JC64996-2 for Caprolactam: Associated CCV outside of control limits high, sample was ND.
- JC64996-2 for Benzaldehyde: Associated CCV outside of control limits low.
- JC64996-2 for 2-Nitroaniline: Associated CCV outside of control limits high, sample was ND.
- JC64996-2 for 2,6-Dinitrotoluene: Associated CCV outside of control limits high, sample was ND.
- JC64996-3 for Caprolactam: Associated CCV outside of control limits high, sample was ND.
- JC64996-6 for Benzaldehyde: Associated CCV outside of control limits low.
- JC64996-9 for Benzo(a)pyrene: Associated CCV outside of control limits high.
- JC64996-3 for 2-Nitroaniline: Associated CCV outside of control limits high, sample was ND.
- JC64996-1 for 2,6-Dinitrotoluene: Associated CCV outside of control limits high, sample was ND.
- JC64996-1 for 2-Nitroaniline: Associated CCV outside of control limits high, sample was ND.
- JC64996-1 for Caprolactam: Associated CCV outside of control limits high, sample was ND.
- JC64996-1 for Benzaldehyde: Associated CCV outside of control limits low.
- JC64996-9 for 2,6-Dinitrotoluene: Associated CCV outside of control limits high, sample was ND.
- JC64996-4 for 2-Nitroaniline: Associated CCV outside of control limits high, sample was ND.
- JC64996-4 for Caprolactam: Associated CCV outside of control limits high, sample was ND.
- JC64996-9 for 2-Nitroaniline: Associated CCV outside of control limits high, sample was ND.
- JC64996-4 for 2,6-Dinitrotoluene: Associated CCV outside of control limits high, sample was ND.
- JC64996-9 for Benzaldehyde: Associated CCV outside of control limits low.
- JC64996-3 for 2,6-Dinitrotoluene: Associated CCV outside of control limits high, sample was ND.
- JC64996-6 for Caprolactam: Associated CCV outside of control limits high, sample was ND.
- JC64996-4 for Benzaldehyde: Associated CCV outside of control limits low.
- JC64996-9 for Caprolactam: Associated CCV outside of control limits high, sample was ND.
- JC64996-3 for Benzaldehyde: Associated CCV outside of control limits low.

**Matrix:** SO

**Batch ID:** OP12122

- Sample(s) JC66239-1MS, JC66239-1MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- JC64996-10: Sample extracted outside the holding time per client's request.
- JC64996-7: Sample extracted outside the holding time per client's request.
- JC64996-7 for 1,4-Dioxane: Associated CCV outside of control limits high, sample was ND.
- JC64996-10 for Hexachlorocyclopentadiene: Associated CCV outside of control limits high, sample was ND.
- JC64996-7 for 4-Chlorophenyl phenyl ether: Associated CCV outside of control limits high, sample was ND.
- JC64996-7 for Pyrene: Associated CCV outside of control limits low.
- JC64996-7 for Benzaldehyde: Associated CCV outside of control limits low.
- JC64996-10 for 4-Nitrophenol: Associated CCV outside of control limits high, sample was ND.
- JC64996-7 for 2,4,6-Trichlorophenol: Associated CCV outside of control limits high, sample was ND.
- JC64996-7 for Hexachlorocyclopentadiene: Associated CCV outside of control limits high, sample was ND.

### MS Semi-volatiles By Method SW846 8270D

**Matrix:** SO**Batch ID:** OP12122

- JC64996-10 for Benzaldehyde: Associated CCV outside of control limits low.
- JC64996-10 for Hexachlorobutadiene: Associated CCV outside of control limits high, sample was ND.
- JC64996-10 for 4-Chlorophenyl phenyl ether: Associated CCV outside of control limits high, sample was ND.
- JC64996-10 for 2,4,6-Trichlorophenol: Associated CCV outside of control limits high, sample was ND.
- JC64996-7 for Hexachlorobutadiene: Associated CCV outside of control limits high, sample was ND.
- JC64996-10 for 1,4-Dioxane: Associated CCV outside of control limits high, sample was ND.
- JC64996-7 for 4-Nitrophenol: Associated CCV outside of control limits high, sample was ND.

### GC Volatiles By Method SW846 8015C

**Matrix:** SO**Batch ID:** GPF4599

- All samples were analyzed within the recommended method holding time.
- Sample(s) JC64996-5QMS, JC64996-5QMSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

### GC/LC Semi-volatiles By Method SW846 8015C

**Matrix:** SO**Batch ID:** OP11620

- All samples were extracted within the recommended method holding time.
- Sample(s) JC64962-1MS, JC64962-1MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

### GC/LC Semi-volatiles By Method SW846 8081B

**Matrix:** SO**Batch ID:** OP11640

- All samples were extracted within the recommended method holding time.
- Sample(s) JC64960-1MS, JC64960-1MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

## GC/LC Semi-volatiles By Method SW846 8082A

**Matrix:** SO**Batch ID:** OP11639

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64843-1MS, JC64843-1MSD were used as the QC samples indicated.

**Matrix:** SO**Batch ID:** OP11668

- All samples were extracted within the recommended method holding time.
- Sample(s) JC65130-1MS, JC65130-1MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

**Matrix:** SO**Batch ID:** OP11775

- All samples were extracted within the recommended method holding time.
- Sample(s) JC65281-54MS, JC65281-54MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- JC64996-9 for Decachlorobiphenyl: Outside control limits due to matrix interference.

**Matrix:** SO**Batch ID:** OP12045

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64996-7MS, JC64996-7MSD were used as the QC samples indicated.
- OP12045-BSD for Aroclor 1260: Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
- OP12045-BS for Aroclor 1260: Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
- OP12045-BSD for Aroclor 1016: Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
- OP12045-BS for Aroclor 1016: Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

## GC/LC Semi-volatiles By Method SW846 8151A

**Matrix:** SO**Batch ID:** OP11638

- All samples were extracted within the recommended method holding time.
- Sample(s) JC64996-8QMS, JC64996-8QMSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

## Metals Analysis By Method SW846 6010C

**Matrix:** SO

**Batch ID:** MP6862

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC65015-2MS, JC65015-2SDL, JC65015-2MSD were used as the QC samples for metals.
- Matrix Spike Recovery(s) for Antimony, Calcium, Magnesium are outside control limits. Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
- Matrix Spike Duplicate Recovery(s) for Antimony are outside control limits. Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
- Matrix Spike Recovery(s) for Aluminum, Iron are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.
- RPD(s) for MSD for Calcium, Magnesium, Potassium, Sodium are outside control limits for sample MP6862-S2. High rpd due to possible sample nonhomogeneity.
- RPD(s) for Serial Dilution for Antimony, Arsenic, Cadmium, Silver, Thallium are outside control limits for sample MP6862-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

**Matrix:** SO

**Batch ID:** MP6996

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TD20533-1DUP, TD20533-1MSD, TD20533-1SDL, TD20533-1PS were used as the QC samples for metals.
- Matrix Spike Recovery(s) for Sulfur are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.
- MP6996-PS1 for Sulfur: Spike recovery indicates possible matrix interference.

**Matrix:** SO

**Batch ID:** MP7131

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC65891-6MS, JC65891-6MSD, JC65891-6SDL were used as the QC samples for metals.
- Matrix Spike Recovery(s) for Aluminum are outside control limits. Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
- Matrix Spike Duplicate Recovery(s) for Antimony are outside control limits. Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
- RPD(s) for Serial Dilution for Arsenic, Cadmium, Selenium, Silver, Thallium are outside control limits for sample MP7131-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- JC64996-10 for Thallium: Elevated detection limit due to dilution required for high interfering element.
- MP7131-SD1 for Potassium: Serial dilution indicates possible matrix interference.

## Metals Analysis By Method SW846 7471B

**Matrix:** SO

**Batch ID:** MP6890

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC65018-1MS, JC65018-1MSD were used as the QC samples for metals.

**Matrix:** SO

**Batch ID:** MP7152

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC65784-50MS, JC65784-50MSD were used as the QC samples for metals.

### General Chemistry By Method ASTM D129-95

|                   |                          |
|-------------------|--------------------------|
| <b>Matrix:</b> SO | <b>Batch ID:</b> GP13154 |
|-------------------|--------------------------|

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64996-7DUP were used as the QC samples for Percent Sulfur.

### General Chemistry By Method ASTM D240-92

|                   |                          |
|-------------------|--------------------------|
| <b>Matrix:</b> SO | <b>Batch ID:</b> GP12667 |
|-------------------|--------------------------|

- Sample(s) TD20089-1DUP were used as the QC samples for Heat Content, BTU.

|                   |                          |
|-------------------|--------------------------|
| <b>Matrix:</b> SO | <b>Batch ID:</b> GP13163 |
|-------------------|--------------------------|

- Sample(s) JC64996-7DUP were used as the QC samples for Heat Content, BTU.

### General Chemistry By Method SM2540 G-97

|                   |                          |
|-------------------|--------------------------|
| <b>Matrix:</b> SO | <b>Batch ID:</b> GN79286 |
|-------------------|--------------------------|

- The data for SM2540 G-97 meets quality control requirements.

### General Chemistry By Method SW846 9012B/LACHAT

|                   |                          |
|-------------------|--------------------------|
| <b>Matrix:</b> SO | <b>Batch ID:</b> GP12755 |
|-------------------|--------------------------|

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC65018-1DUP, JC65018-1MS were used as the QC samples for Cyanide.

|                   |                          |
|-------------------|--------------------------|
| <b>Matrix:</b> SO | <b>Batch ID:</b> GP13030 |
|-------------------|--------------------------|

- All method blanks for this batch meet method specific criteria.
- Sample(s) JC66031-1DUP, JC66031-1MS were used as the QC samples for Cyanide.
- The following samples were prepared outside of holding time for method SW846 9012B/LACHAT: JC64996-10, JC64996-7  
Analysis done out of holding time.

### General Chemistry By Method SW846 9034 M

|                   |                          |
|-------------------|--------------------------|
| <b>Matrix:</b> SO | <b>Batch ID:</b> GP12727 |
|-------------------|--------------------------|

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC64996-6DUP, JC64996-6MS were used as the QC samples for Sulfide, Neutral Extraction.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by SGS North America Inc indicated via signature on the report cover

- (a) Sample was not collected per 5035A specifications. Sample preserved from intact soil by laboratory out of hold time.
- (b) Sample extracted outside the holding time per client's request.
- (c) Sample extracted outside the holding time per client's request. Associated CCV outside of control limits low.
- (d) Analysis done out of holding time.
- (e) Sample was not collected per 5035A specifications. Sample preserved from intact soil by laboratory.
- (f) Associated CCV outside of control limits high.

- (a) Sample was not collected per 5035A specifications. Sample preserved from intact soil by laboratory out of hold time.
- (b) Associated CCV and BS outside of control limits high, sample was ND.

ND = Not detected      MDL = Method Detection Limit      J = Indicates an estimated value  
 RL = Reporting Limit      B = Indicates analyte found in associated method blank  
 E = Indicates value exceeds calibration range      N = Indicates presumptive evidence of a compound

# Parameter Certification Exceptions

**Job Number:** JC64996  
**Account:** AGMNYF Arcadis  
**Project:** NYSEG - Newark Former MGP Site, Newark, NY

The following parameters included in this report are exceptions to NELAC certification. The certification status of each is indicated below.

| Parameter                   | CAS#       | Method       | Mat | Certification Status                                  |
|-----------------------------|------------|--------------|-----|---|
| Sulfur                      | 7704-34-9  | SW846 6010C  | SO  | SGS is not certified for this parameter. <sup>a</sup> |
| Percent Sulfur              |            | ASTM D129-95 | SO  | SGS is not certified for this parameter. <sup>a</sup> |
| Sulfide, Neutral Extraction | 18496-25-8 | SW846 9034 M | SO  | SGS is not certified for this parameter. <sup>b</sup> |

- (a) Lab cert for analyte not supported by NJDEP, OQA. Only methods/analytes required for reporting by the State of NJ can be certified in NJ. Use of this analyte for compliance must be verified through the appropriate regulatory office.
- (b) Lab is certified for 9034 titration, but not for neutral extraction modification which is not on the standard list of certifiable methods. Its use for regulatory programs must be verified through the appropriate regulatory office.

Certification exceptions shown are based on the New Jersey DEP certifications. Applicability in other states may vary. Please contact your laboratory representative if additional information is required for a specific regulatory program.

## Response Factor Report GCMSI

Method : C:\MSDCHEM\1\METHODS\MI8822.M (RTE Integrator)  
 Title : Method SW846 8260C, Rxi-624 60m x 0.25mm x 1.4um  
 Last Update : Tue May 08 11:42:16 2018  
 Response via : Initial Calibration

# Continuing Calibration Summary

**Job Number:** JC64996  
**Account:** AGMNYF Arcadis  
**Project:** NYSEG - Newark Former MGP Site, Newark, NY

**Sample:** VI8852-CC8822  
**Lab FileID:** I220084.D

## Evaluate Continuing Calibration Report

Data File : C:\msdchem\1\data\kenrickb\vi8852\i220084.d Vial: 1  
 Acq On : 11 May 2018 7:15 am Operator: Gabriela  
 Sample : cc8822-20 Inst : GCMSI  
 Misc : MS26129,VI8852,5.0,,,,,1 Multiplr: 1.00  
 MS Integration Params: rteint.p

Method : C:\MSDCHEM\1\METHODS\MI8822.M (RTE Integrator)  
 Title : Method SW846 8260C, Rxi-624 60m x 0.25mm x 1.4um  
 Last Update : Mon Sep 13 11:48:20 2010  
 Response via : Multiple Level Calibration
