Executive Summary

Keywell LLC (Keywell) Vac-Air Division (Site) is located at 300 Falconer Street in the Town of Carroll immediately north of the Village of Frewsburg, New York (**Figure 1**). The property is bound by Conewango Creek to the north; open fields, wooded, and low-lying areas to the east; commercial and residential properties to the south; and Falconer Street and Frewsburg Water District Supply Well 2A to the west (**Figure 2**). An unnamed, intermittent drainage way consisting of sections of buried culvert and open swale transverses the property and discharges to a low-lying wetland area at the north end of the Site. This low-lying area drains to Conewango Creek.

The property was formerly owned by Vac-Air Alloys, which began metal processing operations at the site in 1969. As part of the facility operations, trichloroethene (TCE) was used to clean and degrease metals. Prior to 1969, the property was used for the manufacture of wafer board. Keywell purchased the facility in 1987, filed a petition for reorganization under Chapter 11 of the bankruptcy laws in 2013, and underwent a name change on January 14, 2014 (to SGK Venture, LLC). SGK Venture, LLC processed stainless steel, titanium, and other high grade scrap metal until March 31, 2015 at which time operations ceased.

As discussed in Section 2.0, remedial measures to address solvent releases by the former owners were undertaken by Keywell beginning in 1997.

The following is a summary of the remedial actions and monitoring performed at the Site in 2022:

- Semi-annual groundwater sampling and groundwater elevation measurements.
- Monthly system discharge sampling.
- Monthly system influent sampling.
- Transfer pump replacement.
- Variable Frequency Drive (VFD) Installation.
- Weekly Site inspections and overall Site maintenance in accordance with the *Post-Remedial Operation, Maintenance, & Monitoring (OM&M) Plan* (revised April 2015).
 - An annual Site inspection was completed by Groundwater & Environmental Services, Inc. (GES) on January 13, 2023. All engineering controls (ECs) outlined in the OM&M plan were found to be in good condition with no new evidence of damage except as noted below:
 - Portions of the paved cap (e.g., asphalt) covering the Site is cracked and has vegetation growing in cracks.

As outlined in the OM&M Plan, semi-annual groundwater monitoring and sampling events were conducted on April 5 through April 7, 2022, and October 31 through November 2, 2022. Samples were analyzed for volatile organic compounds (VOCs) via United States Environmental Protection Agency (USEPA) Method 8260C. This data was compared to the New York State Department of Environmental Conservation (NYSDEC) technical and operations guidance series 1.1.1 (TOGS

1.1.1) groundwater (Class GA) Ambient Water Quality Standards (AWQS). General observations from the groundwater sampling events are detailed below:

- Spring 2022 results: Of the 16 samples collected, eight (8) contained AWQS exceedances for at least one (1) VOC compound (MW-2, MW-3, MW-4, MW-9R, MW-11R, MW-12, MW-13, and MW-14).
- Fall 2022 results: All seven (7) samples collected contained AWQS exceedances for at least one (1) VOC compound (MW-2, MW-3, MW-4, MW-9R, MW-11R, MW-13, and MW-14).

Based on these concentrations, multiple wells exceed NYSDEC TOGS 1.1.1 Class GA AWQS. The following action items are recommended:

- Continuance of semi-annual groundwater monitoring activities.
- Continued use of the dual-phase extraction system to treat groundwater on Site.
- See **Section 5** for additional recommendations to increase system effectiveness, increase uptime, and maintain the system and associated building.

1 Site Overview

1.1 Site Background

The Site is located at 300 Falconer Street in the Town of Carroll near the northern boundary of the Village of Frewsburg, New York (**Figure 1**). It is located in a rural-industrial area off of Falconer Street. The Site lies within a fenced in manufacturing area. It is bordered to the northwest by the Conewango Creek, and across Falconer Street from the Frewsburg Water District Supply Well 2A (**Figure 2**). There are two (2) large and several small buildings on the parcel, as well as paved, grassy, and wooded areas. An unnamed, intermittent drainage way consisting of sections of buried culvert and open swale transverses the property and discharges to a low-lying wetland area at the north end of the Site. This low-lying area drains to Conewango Creek.

The Site is currently vacant and zoned for industrial-manufacturing and processing. Prior to 1969, the property was used for the manufacture of wafer board. Vac-Air started operations at this Site in 1969. The facility operations consisted of sorting, cleaning and packaging of high-grade scrap metal. The metal was cleaned by shot blasting, and degreased with solvents, mainly trichloroethene (TCE). Waste produced from process operations included TCE sludge, spent TCE, and waste lubricating and hydraulic oils. Keywell LLC (Keywell) purchased the facility in 1987 and processed stainless steel, titanium, and other high grade scrap metal. The company signed a Consent Order to conduct the Remedial Investigation/Feasibility Study (RI/FS) and remedial action at the Site. Based upon the RI/FS a Record of Decision (ROD) was signed in 1996. A remedial design was completed and construction began in 1997. The Site remediation included solvent recovery, construction of a barrier wall, air sparging/soil vacuum extraction (SVE), groundwater extraction and treatment, sediment excavation, storm water controls, capping, and long-term monitoring. The remedial construction was completed in 1999. Keywell filed a petition for reorganization under Chapter 11 of the bankruptcy laws in 2013, and underwent a name change on January 14, 2014 (to SGK Venture, LLC). SGK Venture, LLC continued operations until March 31, 2015.

The Site is located in the Allegheny Plateau physiographic province of New York State. Geology is highly varied and multi-layered. Generally, the geology is composed of a Surficial Overburden Unit over the Upper Sand and Gravel Unit and a Confining Unit of lacustrine sediments which contains a channeled, meandering Lower Sand and Gravel Unit overlying a layer of glacial outwash till and bedrock. The total depth of the surficial overburden unit ranges from 0 to 6 feet below ground surface (bgs) and the Upper Sand and Gravel Unit varies in thickness from 3 feet (north) to 22 feet (south). The Confining Unit varies in thickness from 106 feet to 13.5 feet where it separates the Upper Sand and Lower Sand and Gravel Units below which is another 50 feet of glacial outwash sand gravel and clay over Upper Devonian, Conewango Group gray shale and fine grained sandstones located at 156 feet bgs. Groundwater is found in two stratigraphic units, the Water Table Aquifer (shallow) and the Frewsburg Aquifer (deep). Separated by the Confining Unit whose presence allows the Frewsburg Aquifer to normally exhibit artesian conditions. Depth to water (DTW) in the Water Table Aquifer varies from 3 to 6 feet bgs flowing northward toward Conewango Creek.

1.2 Historical Site Activities

In March 1996, a ROD was made in regards to the Site. In September 1996, Keywell signed a Consent Order to conduct the RI/FS. Following the ROD, remedial measures began in 1997 in accordance with the ROD and *Evaluation of North Soil Area Remedial Alternatives* dated May 1996. The majority of the remedial construction activities were completed by January 1998. The remedial measures included:

- Installation of a slurry wall along the down gradient boundary of the North Soil Area.
- Installation of a 12-well groundwater extraction system (EW-1 through EW-12).
- Construction of a groundwater treatment system consisting of two bag filters, an air stripper, and a catalytic combustion unit (CCU) for vapor treatment, with treated effluent discharge to the surface water of Conewango Creek.
- Installation of a six (6) well SVE collection and treatment system within the Center Soil Area (EW-13 through EW-18).
- Installation of two (2) monitoring wells (MW-13 and MW-14) and two (2) piezometers (PZ2 and PZ3).
- Installation of a new storm sewer along the west side of the Main Building consisting of the replacement of the 36-inch corrugated metal pipe storm sewer that traversed the property with a 28-inch high-density polyethylene (HDPE) sewer and installation of a precast concrete oil/sediment/water separation unit (stormceptor) in-line, and other controls to isolate runoff from potentially contaminated groundwater.
- Excavation and off-site disposal of contaminated sediments from the low-lying wet area.
- Asphalt paving of areas north and west of the Main Building.

A *Final Remedial Design Report* dated June 1997 outlined the final design specifications for the remedial measures being implemented at the Site. The *Final Remedial Construction Report* dated July 1998 summarized all remedial measures completed, thus far, following the requirements laid out in the *Final Remedial Design Report* and the Consent Order.

In August 2004, operation of the SVE system was discontinued with New York State Department of Environmental Conservation (NYSDEC) approval since it was demonstrated that the mass of TCE removed by the SVE system under optimal operating conditions was insignificant in contrast to the effectiveness of the treatment system.

In December 2004, pumping began at MW-2 due to persistence of volatile organic compounds (VOCs) in groundwater outside of the barrier wall; however, the well would run dry sooner than anticipated.

In November 2007, a voluntary program was initiated to pump groundwater from MW-14 due to elevated VOC concentrations compared to nearby extraction well concentrations.

On January 19, 2010, the CCU was taken off-line with NYSDEC approval, as it was no longer required to provide treatment of VOC off gases from the air stripper to achieve compliance with air emission discharge limitations.

In May 2011, a NYSDEC approved *Post-Remedial Operation, Maintenance & Monitoring (OM&M) Plan* was implemented to update OM&M activities as part of the long-term operation of the various components of the remedial measures.

In March 2015, a request was submitted to NYSDEC to suspend the OM&M requirements for monthly pumping and sampling of monitoring wells MW-2 and MW-14 due to minimal recovery of impacted groundwater.

From January 2010 to February 2016, Benchmark Environmental Engineering & Science, PLLC performed OM&M at the Site. Work completed was reported in annual Periodic Review Reports (PRRs).

In February 2016, Groundwater & Environmental Services, Inc. (GES) was contracted by the NYSDEC to conduct routine O&M of the remediation system, groundwater sampling, Site/system repairs as needed, and other associated activities.

In July 2016, GES performed a pilot test to determine total fluid recovery flow rates to allow sizing of a proper total-phase extraction (TPE) pump to replace the existing centrifugal pump.

On October 4, 2016, GES submitted a *Pilot Test Summary Report* to the NYSDEC. The report recommended the installation of a TPE skid to help increase system effectiveness and reliability.

Between February 22, 2019 and March 13, 2019, GES plumbed and installed a TPE skid and control panel, built by Newterra of Brockville, Ontario.

From February 24 through March 12, 2020, a GES subcontractor, TREC Environmental, performed Geoprobe subsurface investigation at 93 locations that were probed to depths ranging from 10 feet bgs to 22 feet bgs.

On April 7 and April 8, 2020, GES took the on-Site water treatment system oil water separator (OWS) offline for cleaning. The OWS was bypassed directly to the air stripper (AS).

On June 6, 2020, GES performed electrical upgrades to the control panel to install remote access via a cellular based internet connection.

On November 6, 2020, GES installed a new bedding pump in the confined space vault.

On February 8, 2021, GES performed system upgrades by raising the knock-out tank and upgrading plumbing.

1.3 Recent Project Activities

Work performed at the Site during the 2022 period included:

- On February 11, 2022, a replacement transfer pump was installed. However, the pump failed again on September 2, 2022. Another replacement was ordered and will be installed in 2023.

- On February 8, 2022, a VFD was installed on the VLS transfer pump. The VFD allows GES to regulate pumping speeds of the transfer pump in order to maximize VOC treatment efficiency through the air stripper and maintain system operational uptime.
- On April 5, 2022, a Site-wide well gauging event took place. However; only 15 monitoring wells were gauged. The remaining piezometers and extraction wells were not gauged due to a miscommunication with the field staff.
- On April 5 through April 7, 2022, low-flow groundwater sampling spring event was performed at 16 wells. Normal Site groundwater sampling wells were analyzed for VOCs.
- On October 31 through November 2, 2022, low-flow groundwater sampling fall event was performed at seven (7) wells; well MW-12 was inadvertently not sampled due to a clerical error that was copied over from a previous event. Samples were analyzed for VOCs.
- On November 1, 2022, a Site-wide well gauging event took place. All 18 extraction wells along with 15 monitoring wells, two (2) piezometers, and one (1) staff gauge reading were completed. One (1) monitoring well and one (1) piezometer were not gauged due to area flooding and artesian conditions.
- On January 13, 2023, an annual site inspection took place. The inspection was originally planned in December, 2022 and had to be postponed due to site snow cover.
- Bi-weekly OM&M events were performed to maintain the system and monitor the Site throughout 2022.

2 Site Operation, Maintenance & Monitoring Plan Compliance Report

The Site remedies include monitoring to evaluate the performance of the remedies as follows:

- Site cover system and drainage monitoring
- Groundwater monitoring
- Monthly system effluent sampling
- Monthly system influent sampling

The annual engineering Site inspection was completed by GES personnel on January 13, 2023. Nearly all engineering controls (ECs) as outlined in the OM&M Plan were found to be in good condition and operating as designed with the exception of the asphalt cap which has deficiencies described in the next paragraph. Inspections should be performed annually as a component of the institutional controls (ICs) as presented in the OM&M Plan. The next annual inspection will be performed in the summer of 2023.

As a component of the ICs presented in the OM&M Plan, on-site EC systems (specifically the groundwater treatment system, cover system, storm water control, subsurface barriers, and fencing/access control) must be protected and replaced as necessary to ensure the devices function in the manner specified in the OM&M Plan. During the Site inspection, the only deficiency noted was that the paved cap was found to have cracks and vegetation growing through the

cracks. If the NYSDEC determines that asphalt cap repairs are required at the vacant Site, vegetation will need to be cleared and the cracks patched to restore the paved cap. No Site ICs or ECs have been modified by any Site work since GES took over OM&M activities for the Site in February 2016.

Semi-annual groundwater level monitoring is conducted approximately concurrently with the semi-annual groundwater sampling events. Gauging is performed on the 18 extraction wells, 16 monitoring wells, and three (3) piezometers. **Figure 2** shows the location of all on-Site wells and **Table 1** shows the extraction well construction information.

Groundwater sampling is performed at 16 monitoring wells in the spring and at eight (8) monitoring wells in the fall. **Table 2.1** summarizes the sample names, locations, sampling schedule, and describes the hydrogeologic location for all monitoring wells included in the groundwater monitoring program. Samples are tested for the parameters listed in the **Table 2.2**.

Table 2.1 Monitoring Well Network Summary

Well ID	Physical Location	Sampling Schedule	General Hydrogeologic Location
MW-1	On-site	Spring Only	Upgradient
MW-2	On-site	Spring and Fall	Downgradient
MW-3	On-site	Spring and Fall	Downgradient
MW-4	On-site	Spring and Fall	Downgradient
MW-4D	On-site	Spring Only	Deep Aquifer Downgradient
MW-5	On-site	Spring Only	Upgradient
MW-5D	On-site	Spring Only	Deep Aquifer Upgradient
MW-6	On-site	Spring Only	Cross/Downgradient
MW-7	Off-site	Spring Only	Crossgradient
MW-8	On-site	Spring Only	Upgradient
MW-9R	On-site	Spring and Fall	Downgradient
MW-10	On-site	Spring Only	Upgradient
MW-11R	On-site	Spring and Fall	Source Area
MW-12	Off-site	Spring and Fall	Cross/Downgradient
MW-13	On-site	Spring and Fall	Downgradient
MW-14	Off-site	Spring and Fall	Downgradient

System influent and effluent samples are collected monthly and analyzed for the parameters listed in **Table 2.2**. Effluent samples are collected from a dedicated sample port located in the discharge piping from the air stripper effluent. System influent sampling is performed to monitor trends in influent concentrations and verify treatment system efficiency.

Table 2.2 Media Monitoring Schedule For 2022

Monitoring Program	Frequency	Matrix	Analysis
Groundwater	Semi-Annual	Water	Routine Field Parameters: 1. Static Water Level 2. Specific Conductance 3. Temperature 4. pH 5. Oxidation-Reduction Potential 6. Dissolved Oxygen 7. Turbidity
			Laboratory Analytes: 1. Target Compound List VOCs
Treatment Effluent	Monthly	Water	Routine Field Parameters 1. pH Laboratory Analytes 1. Target Compound List VOCs 2. Oil & Grease 3. Total Aluminum, Iron, and Zinc
Treatment Influent	Monthly	Water	Laboratory Analytes 1. Target Compound List VOCs

Laboratory analysis is performed using United States Environmental Protection Agency (USEPA) Method 8260C (TCL VOCs), USEPA Method 200.7 (Total Aluminum, Iron, and Zinc), and USEPA Method 1664A (Oil & Grease). Samples were analyzed by Contest-Pace Analytical of East Longmeadow, MA under contract by the NYSDEC.

As outlined in the OM&M Plan, semi-annual groundwater monitoring and sampling events were conducted from April 5 through April 7, 2022 and October 31 through November 2, 2022. Samples were collected via low-flow methods utilizing dedicated tubing, a peristaltic pump, and field parameters were collected using a flow-thru cell and a water quality meter. Low-flow sample logs are included in **Appendix A**.

Spring 2022 Groundwater Sampling Summary

- VOCs in the shallow and deep zones are summarized below:
 - In the shallow zone, monitoring wells MW-2, MW-3, MW-4, MW-9R, MW-11R, MW-12, MW-13, and MW-14 had concentrations that exceeded NYSDEC Technical and Operational Guidance Series 1.1.1 (TOGS 1.1.1) groundwater (Class GA) ambient water quality standards (AWQS), while monitoring wells MW-1, MW-5, MW-6, MW-7, MW-8, and MW-10 did not exceed standards.
 - In the deep zone, MW-4D and MW-5D concentrations were below NYSDEC TOGS 1.1.1 Class GA AWQS.

Fall 2022 Groundwater Sampling Summary

- VOCs in the shallow and deep zones are summarized below:
 - In the shallow zone, all seven (7) monitoring well samples, MW-2, MW-3, MW-4, MW-9R, MW-11R, MW-13, and MW-14 had concentrations that exceeded NYSDEC TOGS 1.1.1 Class GA AWQS.
 - No samples were collected from the deep zone during this sampling event.

Groundwater sampling activities conducted in 2022 indicate that current groundwater conditions do not meet the NYSDEC TOGS 1.1.1 Class GA AWQS in multiple monitoring wells.

Results of the 2022 monitoring activities are summarized in **Tables 2** and **3**. Figures showing groundwater contouring for the gauging events are included as **Figure 3** and **Figure 4**. Complete results, including quality assurance/ quality control (QA/QC) sample results, are provided in **Appendix B**. The results of this monitoring program are discussed at greater length in **Section 3**.

3 Remedy Performance, Effectiveness, and Protectiveness Evaluation

Operation, maintenance, and monitoring activities are conducted at the Site as part of the ongoing implementation of the OM&M Plan. These activities provide the data to evaluate remedy performance, effectiveness, and protectiveness which are summarized below.

3.1 Site Inspections

The Site is inspected by GES personnel under the following schedule: twice weekly as part of the OM&M schedule and the treatment system is inspected annually by a licensed Professional Engineer (P.E.) or the P.E.'s designee. The annual system inspection form is included as **Appendix C**. During the 2022 period, the annual treatment system inspection was completed immediately after the period, on January 13, 2023.

The paved cap, namely the asphalt, is in poor condition and exhibiting cracking and vegetation growth. The remainder of the Site cover system is in good condition and operating as designed. The Site fence and gate are in good condition and working as designed. Additionally, there was evidence of Site security issues including minor vandalism.

The stormceptor unit is inspected quarterly, and was found to be free of any collected product. The groundwater monitoring points remained in good condition with well covers in place and secured.

3.2 Groundwater Quality Monitoring

As outlined in the OM&M Plan, semi-annual groundwater monitoring and sampling was conducted by GES on April 5 through April 7, 2022 and October 31 through November 2, 2022. VOC data is presented in **Table 3** and laboratory analytical reports are included in **Appendix B**.

Groundwater monitoring results are summarized below:

Spring 2022 Groundwater Quality Results

2-Butanone (MEK) had exceedances in the following monitoring well samples:

- MW-3 at 120 µg/L (detected below the Reporting Limit, estimated concentration)
- MW-9R at 95 µg/L (detected below the Reporting Limit, estimated concentration)
- MW-11R at 68 µg/L (detected below the Reporting Limit, estimated concentration)

1,1-Dichloroethene had exceedances in the following monitoring well samples:

- MW-2 at 180 µg/L (detected below the Reporting Limit, estimated concentration)
- MW-9R at 6.6 µg/L (detected below the Reporting Limit, estimated concentration)

cis-1,2-Dichloroethene had exceedances in the following monitoring well samples:

- MW-2 at 59,000 micrograms per liter (µg/L)
- MW-3 at 120 µg/L
- MW-4 at 1,800 µg/L
- MW-9R at 1,700 µg/L
- MW-11R at 91 µg/L (and at 110 µg/L in the Matrix Spike/Matrix Spike Duplicate [MS/MSD])
- MW-12 at 60 µg/L
- MW-13 at 380 µg/L
- MW-14 at 1,000 µg/L (and at 1,000 µg/L in the Field Duplicate)

trans-1,2-Dichloroethene had an exceedance in the following monitoring well sample:

- MW-2 at 180 µg/L (detected below the Reporting Limit, estimated concentration)
- MW-9R at 25 µg/L

Trichloroethene had exceedances in the following monitoring well samples:

- MW-3 at 2,400 µg/L
- MW-4 at 37,000 µg/L
- MW-9R at 340 µg/L
- MW-11R at 460 µg/L (and at 580 µg/L in the MS/MSD)
- MW-12 at 5,100 µg/L
- MW-13 at 620 µg/L
- MW-14 at 6,300 µg/L (and at 6,800 µg/L in the Field Duplicate)

Vinyl Chloride had exceedances in the following monitoring well samples:

- MW-2 at 35,000 µg/L
- MW-9R at 250 µg/L

- MW-11R at 3.0 µg/L (detected below the Reporting Limit, estimated concentration)
- MW-13 at 11 µg/L (detected below the Reporting Limit, estimated concentration)

In the deep interval, MW-4D and MW-5D sample locations did not exceed NYSDEC TOGS 1.1.1 Class GA AWQS.

Fall 2022 Groundwater Quality Results

1,1-Dichloroethene had exceedances in the following monitoring well samples:

- MW-2 at 220 µg/L (detected below the Reporting Limit, estimated concentration)
- MW-9R at 12 µg/L (detected below the Reporting Limit, estimated concentration)
- MW-11R at 7.2 µg/L (detected below the Reporting Limit, estimated concentration)

cis-1,2-Dichloroethene had exceedances in the following monitoring well samples:

- MW-2 at 87,000 µg/L
- MW-3 at 190 µg/L
- MW-4 at 1,400 µg/L
- MW-9R at 2,300 µg/L
- MW-11R at 2,200 µg/L
- MW-13 at 1,900 µg/L
- MW-14 at 1,100 µg/L (and at 1,200 µg/L in the Field Duplicate)

trans-1,2-Dichloroethene had exceedances in the following monitoring well sample:

- MW-9R at 38 µg/L
- MW-11R at 19 µg/L (detected below the Reporting Limit, estimated concentration)
- MW-14 at 16 µg/L (detected below the Reporting Limit, estimated concentration from the Field Duplicate)

Trichloroethene had exceedances in the following monitoring well samples:

- MW-3 at 2,200 µg/L
- MW-4 at 34,000 µg/L
- MW-9R at 940 µg/L
- MW-11R at 4,000 µg/L
- MW-13 at 6,000 µg/L
- MW-14 at 6,400 µg/L (and at 6,700 µg/L in the Field Duplicate)

Vinyl Chloride had exceedances in the following monitoring well samples:

- MW-2 at 28,000 µg/L
- MW-9R at 670 µg/L

- MW-13 at 94 µg/L (detected below the Reporting Limit, estimated concentration)

The deep interval wells, MW-4D and MW-5D, were not sampled during the fall 2022 event.

2022 Groundwater Level Monitoring

Groundwater level monitoring was performed semi-annually concurrently with groundwater sampling. In addition to the water level measurements, the thickness of light non-aqueous phase liquid (LNAPL), if present, was measured and recorded. No LNAPL was detected during the 2022 monitoring activities. An oil/water interface probe was used to measure depth to product (DTP) and depth to water (DTW) levels with an accuracy of approximately ±0.01 feet. Groundwater gauging and elevation data is presented in **Table 2**.

Groundwater contour maps were developed based on the Spring (April) 2022 (**Figure 3**) and Fall (November) 2022 (**Figure 4**) water level data.

Both the Spring (April) 2022 and Fall (November) 2022 gauging events were performed while the system was partially shut off. The Spring (April) 2022 event occurred while the extraction wells in the middle of the site were offline due to a damaged line; however, the extraction wells were not gauged. Therefore, **Figure 3** does not reflect the offline or online extraction wells. The Fall (November) 2022 event occurred while the system was partially off due to a broken transfer pump (no groundwater recovery from the extraction wells was occurring). The bedding pump and air stripper were on for the gauging event. The fall 2022 data show that the natural groundwater flow direction is to the north.

Previous years' groundwater contour maps show that there are variations in flow direction that are observed across the Site, but are minimal during normal system operation. The Site groundwater flow direction is primarily to the north, towards the barrier wall and the extraction wells during normal system operation.

Monitoring of the wells will continue on a semi-annual basis to continue to evaluate contamination levels and groundwater flow conditions.

3.3 Remedial System Summary

A TPE skid and control panel, built by Newterra of Brockville, Ontario, were plumbed and installed between February 22, 2019 and March 13, 2019 by GES staff. The TPE skid consists of a 140 gallon vapor/liquid separator (VLS), a high efficiency vacuum pump, inlet vacuum filters, pulse meter (skid totalizer), and transfer pump. The TPE system is capable of continuous vacuum at 24 inches of mercury ("Hg). This vacuum is tied into 18 extraction wells located across the Site, allowing for increased groundwater extraction and treatment. Results are showing an increase in the water table depression across the Site during system operation.

Groundwater is pulled from the 18 extraction wells to the water treatment building. It enters the 140 gallon VLS where larger solids can settle out before a float system triggers the transfer pump. The groundwater is then pumped through two (2) 50 micron bag filters, where smaller sediments are removed. From the bag filters, the water then moves to an air stripper before discharge. In 2020, GES bypassed the OWS allowing water to be sent directly to the air stripper for treatment.

From December 29, 2021 through February 11, 2022, the system treated 150,885 gallons of groundwater with an average flow rate of approximately 2.4 gallons per minute (gpm) predominantly from the sewer bedding pump.

On February 11, 2022, the VLS transfer pump was replaced and the system began normal operations. From February 11, 2022 through March 31, 2022, the system treated 798,051 gallons of groundwater with an average flow rate of approximately 11.5 gpm combined from the extraction wells and the sewer bedding pump.

On March 31, 2022, the system began to pump increasingly turbid water. It was later discovered that Trec Environmental had advanced a boring through the system line near EW-18 at the center of the site. The extraction line that connects to the extraction wells at the center of the site was closed. From March 31, 2022 through September 2, 2022, the system treated 1,028,225 gallons of groundwater with an average flow rate of approximately 4.8 gpm combined from one half of the extraction wells and the sewer bedding pump.

Starting on September 2, 2022, the VLS transfer pump began to experience issues and by September 7, 2022 it had failed resulting in only the sewer bedding pump running. From September 2, 2022 through December 28, 2022, the system treated 171,102 gallons of groundwater with an average flow rate of approximately 1.7 gpm predominantly from the sewer bedding pump.

The system up-time for 2022 period was approximately 97.81%, which takes system downtime into account due to standard system maintenance, repairs, and upgrades.

System operational data for the reporting period including hour meters and totalizer readings is included in **Table 4**.

2022 System Water Quality Results

System effluent samples are collected monthly for Target Compound List (TCL) VOCs, oil and grease, aluminum, iron, and zinc. **Table 5** presents a summary of the monthly effluent results for 2022 compared to the NYSDEC Effluent Limits provided in the 2015 OM&M Manual. **Table 6** presents a summary of monthly treatment system influent and effluent VOC analytical data.

System effluent water VOC concentration results were below effluent limits (10.0 µg/L) in 2022 with the exception of February (101 µg/L) and March 2022 (48.2 µg/L). The effluent water will continue to be sampled and monitored for exceedances of the effluent limits. The air stripper was evaluated for sources of inefficiency (e.g., clogging) and cleaned on April 5, 2022. Subsequent sampling results showed VOC concentrations were below effluent limits for the remainder of the year. See **Table 5** for monthly effluent analytical results.

3.4 Remedial Evaluation

Although the Site remedies and ECs are still in place and functional, an evaluation of the Site 2022 groundwater sampling results reveals the following items of note:

1. The highest groundwater VOC concentrations in the Site monitoring well network are present at monitoring well MW-2, which is located downgradient of the slurry wall barrier system, between the barrier and Conewango Creek. However, a drum field has been discovered to the north of MW-2, outside the existing slurry wall adjacent up to where MW-2 is located. Due to the presence of the drum field adjacent to monitoring well MW-2, the source of the VOC impacts at MW-2 is not defined. Further testing must be conducted to identify the source of VOC impacts at MW-2 in order to evaluate plans for remediation.
 - Operation of the groundwater treatment system in conjunction with the barrier wall is not eliminating all groundwater VOC impacts downgradient of the barrier system (in the vicinity of monitoring well MW-2).
 - Monitoring well MW-2 concentrations are indicating an increasing trend since 2020, specifically related to concentrations of cis-1,2-dichloroethylene.
 - Modification of the Site ECs to address groundwater impacts at monitoring well MW-2 should be evaluated.
 - Because VOC concentrations at MW-2 have not been affected by the upgraded TPE system, it is recommended test pits be dug on the downgradient side of MW-2 where the drum field is located to evaluate the extent of the source area contributing to groundwater concentrations observed at MW-2. This evaluation should be utilized to develop a remedial plan for the area surrounding monitoring well MW-2, downgradient of the current barrier system.
 - Due to the location of the drum field in relation to Conewango Creek, measures must be taken to ensure disturbing the drum field will not send potential impacts into the creek.
2. Elevated groundwater VOC concentrations are observed at monitoring wells MW-3, MW-4, MW-13, and MW-14, located to the west of the end of the slurry wall and adjacent to and downgradient of the groundwater recovery system extraction wells, respectively.
 - VOC concentrations at monitoring wells MW-3, MW-4, MW-13, and MW-14 appear to be increasing since 2022. Therefore, operation of the TPE system at the Site in 2022 is not adequately capturing dissolved-phase VOCs from migrating past the line of extraction wells located to the west of the barrier wall.
 - Continued groundwater monitoring in 2023 is recommended to observe if longer-term operation of the upgraded TPE system will reduce groundwater VOC concentrations at monitoring wells MW-3, MW-13, and MW-14. If VOC concentrations at these wells do not decrease in 2023, an extension of the groundwater recovery system to these monitoring wells or an alternate remedial solution to address groundwater VOCs in the vicinity of monitoring wells MW-3, MW-4, MW-13, and MW-14 should be evaluated.
3. Elevated groundwater VOC concentrations are still observed at off-Site monitoring well MW-12 based on April 2022 sampling results, located west of Falconer Street from monitoring well MW-13.
 - Therefore, the Site ECs are not preventing migration of impacted groundwater off-Site to the west. There is likely a component of groundwater flow at the Site which extends northwest instead of directly north. Therefore, all impacted groundwater from the Site is not captured by the existing groundwater recovery system.

- Expansion of the Site groundwater recovery system or implementation of an alternate remedial solution along the Site's northwestern property boundary (between approximately monitoring well MW-13 and MW-4) should be evaluated to mitigate additional off-Site migration of the dissolved-phase plume.

4 Institutional Control/Engineering Control Compliance Report

The Keywell LLC Vac-Air Division Site remedies involve the use of both ICs and ECs, which include the following:

- ICs
 - Land Use restriction
 - Groundwater Use Restriction
 - Long-term OM&M Plan
- ECs
 - Groundwater treatment system
 - Barrier wall
 - Stormwater control with sediment catch basins
 - Paved cap
 - Subsurface barriers
 - Fencing/Access control

Based on review of project documentation and Site inspections, each of the ICs and ECs at the Site are fully in place and have not been significantly modified by any Site work since GES took over OM&M activities in February 2016, with the exception of the groundwater treatment system process equipment and paved cap. The changes to the system can be found in Sections 1.2 and 1.3. Repairs to the asphalt cover where there are large cracks and vegetation growing through the asphalt is recommended.

5 Summary, Conclusions, and Recommendations

5.1 Compliance with OM&M Plan

The controlling document for the Site is the approved *Post Remediation OM&M Plan* (prepared by Benchmark Environmental Engineering & Science, PLLC, dated May 2011, revised April 2015). The requirements of the OM&M Plan have been met during the reporting period of this PRR.

5.2 Performance and Effectiveness of the Remedies

- The system was partially down due to a broken transfer pump from December 29, 2021 through February 11, 2022. The system treated 150,885 gallons of groundwater with an average flow rate of approximately 2.4 gpm, predominantly from the sewer bedding pump during this time period.
- The system was fully operational from February 11, 2022 through March 31, 2022. The system treated 798,051 gallons of groundwater with an average flow rate of approximately 11.5 gpm during this time period.
- The system was partially down due to a subcontractor damaging the system line connecting to EW11 through EW18 from March 31, 2022 through September 2, 2022. The system treated 1,028,225 gallons of groundwater with an average flow rate of approximately 4.8 gpm combined from one half of the extraction wells and the sewer bedding pump during this time period.
- The system was partially down due to a broken transfer pump from September 2, 2022 through December 28, 2022. The system treated 171,102 gallons of groundwater with an average flow rate of approximately 1.7 gpm, predominantly from the sewer bedding pump, during this time period.
 - In comparison, during 2021 the system treated 4,145,141 gallons at an approximate flow rate of 10.7 gpm while fully operational and treated 347,828 gallons at an approximate flow rate of 2.6 gpm while partially operational.
- The groundwater treatment system uptime was 97.81% for the 2022 reporting period (operating either from the groundwater extraction wells and/or the sewer bedding pump). In comparison, the 2021 uptime was 94.03%. Uptime in 2022 was affected by system shut downs related to the extraction line damage along with normal downtime for system maintenance and cleaning.
 - Site groundwater concentration trends in 2023 should continue to be evaluated to determine if reductions in the groundwater VOC concentrations at monitoring wells MW-2, MW-3, MW-12, MW-13, and MW-14 are observed following operation of the enhanced groundwater treatment system at a higher groundwater extraction flow rate.
- The upgrades to all 18 extraction wells in 2019 have allowed GES to gauge the system while it is operating, allowing for measurement of groundwater table depression during system operation at each extraction well. Recent gauging data has shown DTW ranging from 2.8 feet bgs to 6.4 feet bgs across all 18 extraction wells during partial operation.
 - Site wide groundwater level measurements in 2022 were measured while the system was partially operational [either only a portion of the groundwater extraction wells were operational (April 2022) or only the sewer bedding pump was operational (November 2022)]. In **Figure 3** and **Figure 4**, groundwater contours indicate groundwater flows to the north. A Site-wide gauging event is planned for

early 2023 after the system repairs occur. Site-wide gauging events will continue to be conducted during 2023 while the system is operating normally to determine the effectiveness of groundwater depression.

- Increased pumping rates from the extraction wells in 2023 may increase the groundwater depression zone downgradient of the barrier wall, potentially increasing mitigation of the Site dissolved-phase VOC; therefore, preventing migration towards Conewango Creek.
- Installation of the transfer pump VFD is expected to increase system efficiency and uptime.
- The upcoming work described in Section 5.3 is expected to increase system efficiency and uptime.
- VOC concentrations remain elevated at monitoring wells MW-12 (to the west of Falconer Street in the direction of Municipal Supply Well 2A), MW-3, MW-13, and MW-14 (located downgradient of the barrier wall and extraction system wells in the northwest of the Site), and at monitoring well MW-2 located upgradient of the Site remedial measures between the barrier wall and Conewango Creek.
 - Therefore, the System ECs of the barrier wall and groundwater extraction system are not adequately mitigating off-Site migration of impacted groundwater.
 - Additional contaminant plumes may exist outside the barrier wall and could account for the levels of VOCs in upgradient wells. Test pitting should be conducted outside the barrier wall, in a recently discovered drum field, to determine if contamination is present.
 - An evaluation of additional remedial measures to address these groundwater impacts should be completed after an additional year of TPE system operation.

5.3 Upcoming work

GES will conduct additional Site repairs and upgrades in 2023. This work has already been scheduled or is in the process of being scheduled and will take place throughout 2023.

- System Line Repair - The system line that was damaged is scheduled to be repaired in January 2023.
- Municipal Water Line Repair - The municipal water line servicing the building housing the remediation system is scheduled to be repaired in January 2023.
- Transfer Pump Replacement - The transfer pump is scheduled to be repaired or replaced in January 2023. Once the new pump is repaired or replaced, the system will return to being fully operational.
- Well Development Evaluation - After the system line repair and transfer pump repair, the system wells will be evaluated to see if well development is necessary.

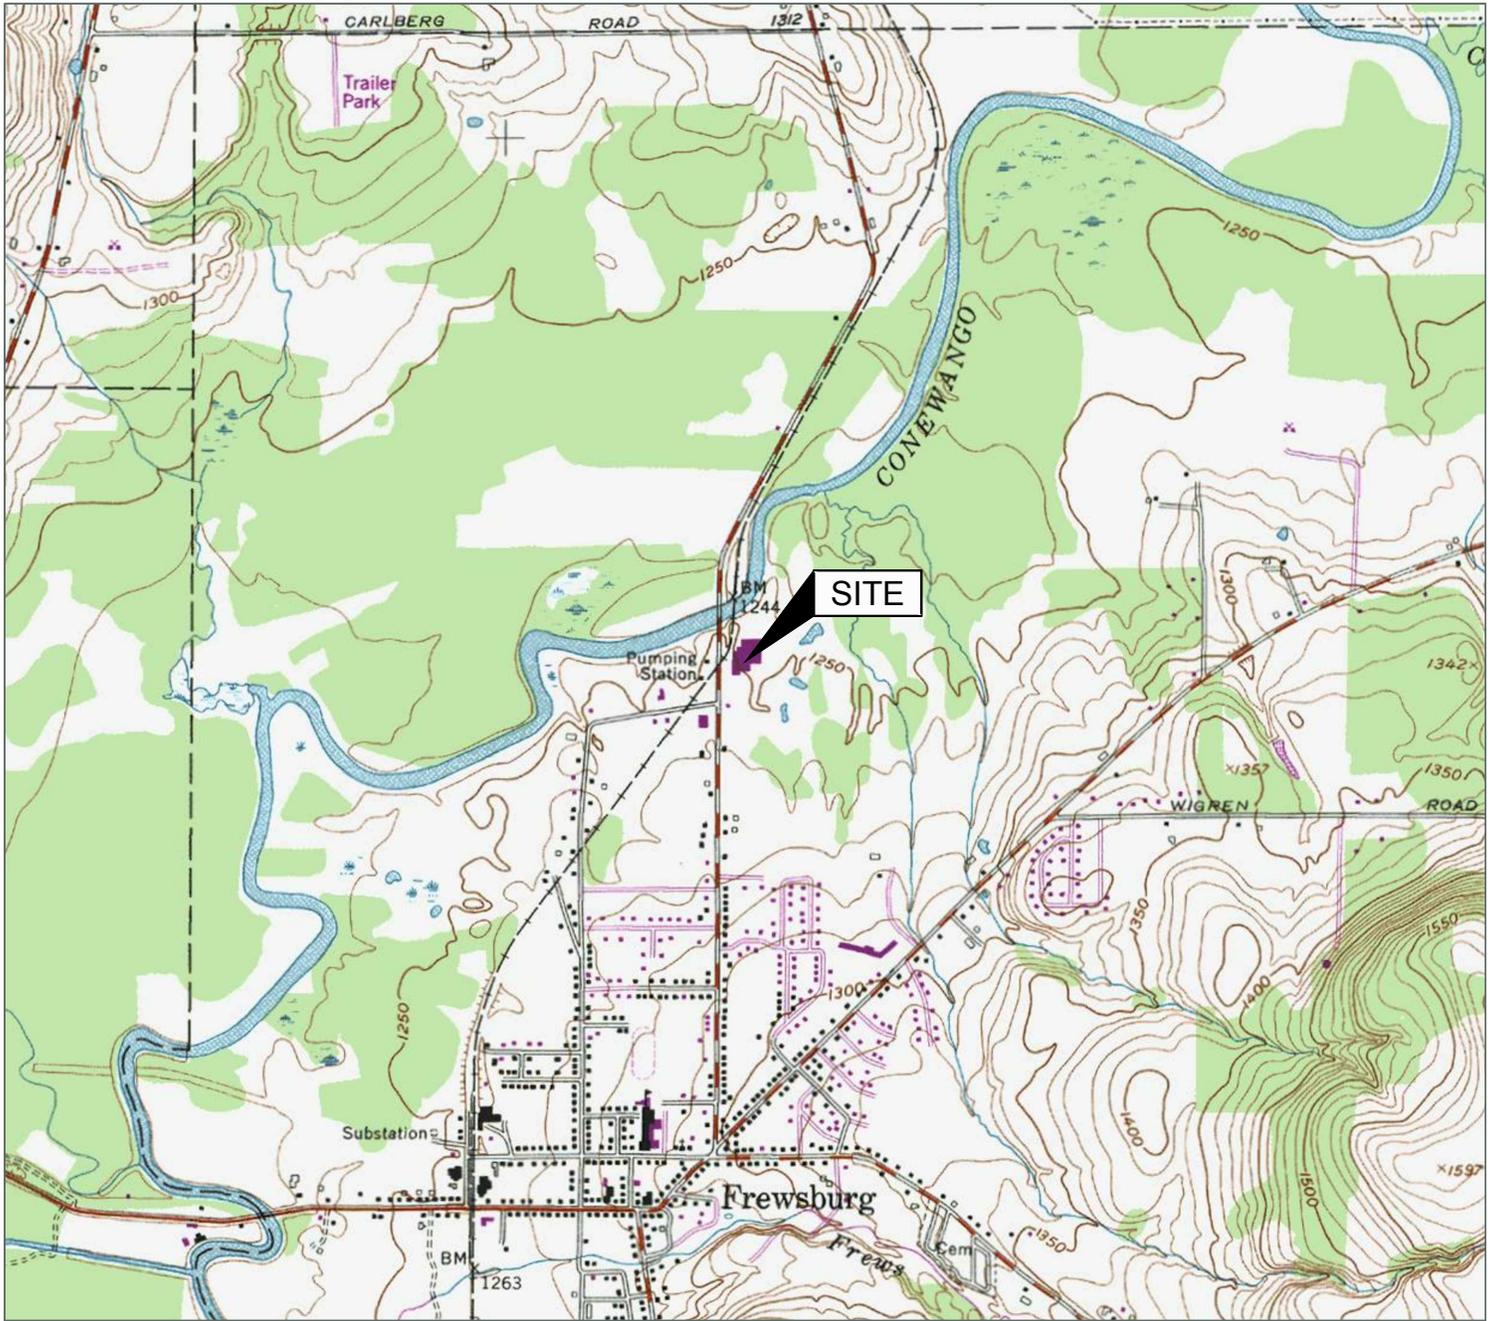

5.4 Recommendations

To increase the groundwater treatment system effectiveness, further understand the extent and distribution of on-Site contaminants, and evaluate alternate remedial options to address various areas of Site impacts, GES recommends completion of the activities and evaluations detailed below.

- Repairs & Upgrades:
 - Air stripper effectiveness evaluation – Exceedances continued to occur in 2022. System analytical results for 2022 are presented in **Table 5** and **Table 6**. Effluent exceedances were observed in February and March 2022. Analytical data will continue to be tracked monthly throughout 2023 to determine whether or not the trend continues. However, installation of the VFD on the VLS transfer pump is expected to increase VOC treatment efficiency through the AS.
 - OWS Removal – The OWS was bypassed, and cleaned in 2020. The system has been monitored for the presence of product and system water analytical data for any changes related to the removal of the OWS with no changes observed. It is recommended that the OWS be removed from the system.
 - Paved Cap – The paved cap was found to be cracked with vegetation growing through the cracks. The paved cap will continue to be monitored. If the NYSDEC determines that cracks in the paved cap are an unacceptable detriment to the EC at the vacant site, the vegetation should be removed and the cracks sealed.
- Investigation Activities:
 - Water level study – To better evaluate the effect of the treatment system and on-going upgrades on the groundwater elevation, Site wide gauging will be performed while the system has been operational for at least one week.
- Additional Remediation Evaluation:
 - Remedial option evaluations: northwest portion of the Site – In order to address groundwater VOC impacts at monitoring wells MW-3, MW-13, and MW-14 (located adjacent to and downgradient of the system extraction wells in the northwest corner of the Site) and to address off-Site VOC impacts observed at monitoring well MW-12, evaluation of the current system to mitigate this migration and/or evaluation of alternate remedial options should be completed.
 - Investigation: In order to assess the source area location and extent around monitoring well MW-2, an investigation should be completed in this area downgradient of the existing barrier wall and groundwater extraction barrier. Results of this investigation could be utilized to complete a remedial option evaluation for the area around monitoring well MW-2.

Notes:

mg/L = milligrams per litre

ug/L = micrograms per liter

Bold values exceed the historic permitted discharge of 10 ug/L.

ND <# = Indicates compound was analyzed for, but not detected at or above the indicated reporting limit.

J = Result is less than the Reporting Limit but greater than or equal to the Method Detection Limit and the concentration is an approximate value.

TCE = Trichloroethene

cis-1,2-DCE = cis-1,2-Dichloroethene

TCL = Target Compound List

VOCs = Volatile Organic Compounds

VOCs are reported as a sum of cis-1,2-DCE, Vinyl Chloride, and TCE

PURCHASE ORDER NUMBER: 142802

PROJECT NUMBER: 907016

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22D0546

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 300 Falconer st, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED 12/30/22: Report revised to include RL/MDL for Total Xylene results.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

SW-846 8260D

Qualifications:**DL-01**

Elevated reporting limits for all volatile compounds due to foaming sample matrix.

Analyte & Samples(s) Qualified:

22D0546-08[MW-6]

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:**Methyl Acetate**

B305476-BSD1

MS-24

Either matrix spike or matrix spike duplicate is outside of control limits, but the other is within limits. Analysis is in control based on laboratory fortified blank recovery.

Analyte & Samples(s) Qualified:**cis-1,2-Dichloroethylene**

B305476-MSD1

Trichloroethylene

B305476-MSD1

R-05

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:**Chloromethane**

22D0546-01[MW-1], 22D0546-02[MW-2], 22D0546-03[MW-3], 22D0546-04[MW-4], 22D0546-05[MW-4D], 22D0546-06[MW-5], 22D0546-07[MW-5D], 22D0546-08[MW-6], 22D0546-09[MW-7], 22D0546-10[MW-8], 22D0546-11[MW-9], 22D0546-12[MW-10], 22D0546-13[MW-11], 22D0546-14[MW-12], 22D0546-15[MW-13], 22D0546-16[MW-14], 22D0546-17[4/5/22 MS/MSD], 22D0546-18[4/6/22 DUP], 22D0546-19[Trip Blank], B305476-BLK1, B305476-BS1, B305476-BSD1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22D0546-02[MW-2], 22D0546-03[MW-3], 22D0546-04[MW-4], 22D0546-11[MW-9], 22D0546-13[MW-11], 22D0546-14[MW-12], 22D0546-15[MW-13], 22D0546-16[MW-14], 22D0546-17[4/5/22 MS/MSD], 22D0546-18[4/6/22 DUP]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:**Chloromethane**

22D0546-01[MW-1], 22D0546-02[MW-2], 22D0546-03[MW-3], 22D0546-04[MW-4], 22D0546-05[MW-4D], 22D0546-06[MW-5], 22D0546-07[MW-5D], 22D0546-08[MW-6], 22D0546-09[MW-7], 22D0546-10[MW-8], 22D0546-11[MW-9], 22D0546-12[MW-10], 22D0546-13[MW-11], 22D0546-14[MW-12], 22D0546-15[MW-13], 22D0546-16[MW-14], 22D0546-17[4/5/22 MS/MSD], 22D0546-18[4/6/22 DUP], 22D0546-19[Trip Blank], B305476-BLK1, B305476-BS1, B305476-BSD1, B305476-MS1, B305476-MSD1, S070278-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:**Methyl Acetate**

B305476-BS1, B305476-BSD1, B305476-MS1, B305476-MSD1, S070278-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Tod E. Kopycinski
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
DL-01	Elevated reporting limits for all volatile compounds due to foaming sample matrix.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
MS-24	Either matrix spike or matrix spike duplicate is outside of control limits, but the other is within limits. Analysis is in control based on laboratory fortified blank recovery.
R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332
SW-846 8260D

Qualifications:**E**

Reported result is estimated. Value reported over verified calibration range.

Analyte & Samples(s) Qualified:**Vinyl Chloride**

22K0845-01[MW-2]

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:**1,1,2-Trichloro-1,2,2-trifluoroethane**

B322287-BS1, B322287-BSD1, B322287-MS1, B322287-MSD1, S078998-CCV1

Carbon Disulfide

B322287-BS1, B322287-BSD1, B322287-MS1, B322287-MSD1, S078998-CCV1

Methyl Acetate

B322287-BS1, B322287-BSD1, B322287-MS1, B322287-MSD1, S078998-CCV1

L-04

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:**Carbon Disulfide**

B322398-BLK1, B322398-BS1, B322398-BSD1

L-06

Laboratory fortified blank/laboratory control sample recovery and/or duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:**trans-1,2-Dichloroethylene**

22K0845-04[MW-9R], 22K0845-05[MW-11R], 22K0845-08[DUP], B322287-BS1, B322287-BSD1, B322287-MS1, B322287-MSD1, S078998-CCV1

Vinyl Chloride

22K0845-01[MW-2], 22K0845-04[MW-9R], 22K0845-06[MW-13], B322287-BS1, B322287-BSD1, B322287-MS1, B322287-MSD1, S078998-CCV1

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:**Chloroethane**

B322398-BSD1

Methyl tert-Butyl Ether (MTBE)

B322287-BS1

L-07A

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound.

Analyte & Samples(s) Qualified:**1,1-Dichloroethane**

B322287-BS1

MS-12

Matrix spike recovery and matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a high bias for reported result or non-homogeneous sample aliquots cannot be eliminated.

Analyte & Samples(s) Qualified:**cis-1,2-Dichloroethylene**

22K0845-06[MW-13], B322287-MS1, B322287-MSD1

Vinyl Chloride

22K0845-06[MW-13], B322287-MS1, B322287-MSD1

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

MS-15

Matrix spike and matrix spike duplicate recoveries are outside of control limits. Data validation is not affected since results for this compound in this sample are "not detected", and recovery bias is on the high side.

Analyte & Samples(s) Qualified:**1,1,2-Trichloro-1,2,2-trifluoroethane**

B322287-MS1, B322287-MSD1

Carbon Disulfide

B322287-MS1, B322287-MSD1

Methyl Acetate

B322287-MS1, B322287-MSD1

Methyl tert-Butyl Ether (MTBE)

B322287-MS1, B322287-MSD1

trans-1,2-Dichloroethylene

B322287-MS1, B322287-MSD1

MS-19

Sample to spike ratio is greater than or equal to 4:1. Spiked amount is not representative of the native amount in the sample. Appropriate or meaningful recoveries cannot be calculated.

Analyte & Samples(s) Qualified:**Trichloroethylene**

22K0845-06[MW-13], B322287-MS1, B322287-MSD1

MS-22

Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.

Analyte & Samples(s) Qualified:**1,1-Dichloroethane**

B322287-MSD1

MS-24

Either matrix spike or matrix spike duplicate is outside of control limits, but the other is within limits. Analysis is in control based on laboratory fortified blank recovery.

Analyte & Samples(s) Qualified:**1,2,3-Trichlorobenzene**

B322287-MS1

1,2,4-Trichlorobenzene

B322287-MS1

Bromomethane

B322287-MSD1

R-05

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:**1,1-Dichloroethane**

22K0845-01[MW-2], 22K0845-02[MW-3], 22K0845-03[MW-4], 22K0845-04[MW-9R], 22K0845-05[MW-11R], 22K0845-06[MW-13], 22K0845-07[MW-14], 22K0845-08[DUP], 22K0845-09[Trip Blank], B322287-BLK1, B322287-BS1, B322287-BSD1, B322287-MS1, B322287-MSD1, S078998-CCV1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22K0845-01[MW-2], 22K0845-02[MW-3], 22K0845-03[MW-4], 22K0845-04[MW-9R], 22K0845-05[MW-11R], 22K0845-06[MW-13], 22K0845-07[MW-14], 22K0845-08[DUP]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:**1,2-Dibromo-3-chloropropane (DBP)**

B322398-BLK1, B322398-BS1, B322398-BSD1, S079077-CCV1

Bromomethane

B322398-BLK1, B322398-BS1, B322398-BSD1, S079077-CCV1

Carbon Disulfide

B322398-BLK1, B322398-BS1, B322398-BSD1, S079077-CCV1

Chloroethane

B322398-BLK1, B322398-BS1, B322398-BSD1, S079077-CCV1

V-06

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:**trans-1,2-Dichloroethylene**

22K0845-04[MW-9R], 22K0845-05[MW-11R], 22K0845-08[DUP], B322287-BS1, B322287-BSD1, B322287-MS1, B322287-MSD1, S078998-CCV1

Vinyl Chloride

22K0845-01[MW-2], 22K0845-04[MW-9R], 22K0845-06[MW-13], B322287-BS1, B322287-BSD1, B322287-MS1, B322287-MSD1, S078998-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:**1,1,2-Trichloro-1,2,2-trifluoroethane**

B322287-BS1, B322287-BSD1, B322287-MS1, B322287-MSD1, S078998-CCV1

1,1-Dichloroethane

B322287-BS1, B322287-BSD1, B322287-MS1, B322287-MSD1, S078998-CCV1

Bromomethane

B322287-BS1, B322287-BSD1, B322287-MS1, B322287-MSD1, S078998-CCV1

Carbon Disulfide

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
E	Reported result is estimated. Value reported over verified calibration range.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
L-06	Laboratory fortified blank/laboratory control sample recovery and/or duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the high side.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
L-07A	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound.
MS-12	Matrix spike recovery and matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a high bias for reported result or non-homogeneous sample aliquots cannot be eliminated.
MS-15	Matrix spike and matrix spike duplicate recoveries are outside of control limits. Data validation is not affected since results for this compound in this sample are "not detected", and recovery bias is on the high side.
MS-19	Sample to spike ratio is greater than or equal to 4:1. Spiked amount is not representative of the native amount in the sample. Appropriate or meaningful recoveries cannot be calculated.
MS-22	Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.
MS-24	Either matrix spike or matrix spike duplicate is outside of control limits, but the other is within limits. Analysis is in control based on laboratory fortified blank recovery.
R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22A1436

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 300 Falconer St, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Treatment Effluent	22A1436-01	Ground Water		EPA 1664B EPA 200.7 SW-846 8260D	
Treatment Influent	22A1436-02	Ground Water		SW-846 8260D	
Trip Blank	22A1436-03	Ground Water		SW-846 8260D	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22B0968

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 300 Falconer St, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Treatment Effluent	22B0968-01	Ground Water		EPA 1664B EPA 200.7 SW-846 8260D	
Ftreatment Influent	22B0968-02	Ground Water		SW-846 8260D	
Trip Blank	22B0968-03	Ground Water		SW-846 8260D	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332
SW-846 8260D

Qualifications:

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:**1,1,2-Trichloro-1,2,2-trifluoroethane**

B301426-BS1, B301426-BSD1, S068403-CCV1

Bromomethane

B301426-BS1, B301426-BSD1, S068403-CCV1

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:**Acrylonitrile**

B301426-BSD1

Tetrahydrofuran

B301426-BS1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22B0968-02[Ftreatment Influent]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:**2,2-Dichloropropane**

22B0968-03[Trip Blank], B301431-BLK1, B301431-BS1, B301431-BSD1, S068389-CCV1

Bromomethane

22B0968-03[Trip Blank], B301431-BLK1, B301431-BS1, B301431-BSD1, S068389-CCV1

Chloromethane

22B0968-01[Treatment Effluent], 22B0968-02[Ftreatment Influent], B301426-BLK1, B301426-BS1, B301426-BSD1, S068403-CCV1

trans-1,4-Dichloro-2-butene

22B0968-03[Trip Blank], B301431-BLK1, B301431-BS1, B301431-BSD1, S068389-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:**1,1,2-Trichloro-1,2,2-trifluoroethane**

B301426-BS1, B301426-BSD1, S068403-CCV1

Acrylonitrile

B301426-BS1, B301426-BSD1, S068403-CCV1

Bromochloromethane

B301426-BS1, B301426-BSD1, S068403-CCV1

Bromomethane

B301426-BS1, B301426-BSD1, S068403-CCV1

Carbon Disulfide

B301431-BS1, B301431-BSD1, S068389-CCV1

Methyl Acetate

B301431-BS1, B301431-BSD1, S068389-CCV1

tert-Butyl Alcohol (TBA)

B301426-BS1, B301426-BSD1, B301431-BS1, B301431-BSD1, S068389-CCV1, S068403-CCV1

Tetrahydrofuran

B301426-BS1, B301426-BSD1, S068403-CCV1

V-34

Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Bromomethane

22B0968-01[Treatment Effluent], 22B0968-02[Ftreatment Influent], B301426-BLK1, B301426-BS1, B301426-BSD1, S068403-CCV1

Chloromethane

22B0968-01[Treatment Effluent], 22B0968-02[Ftreatment Influent], B301426-BLK1, B301426-BS1, B301426-BSD1, S068403-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Tod E. Kopyscinski
Laboratory Director

Project Location: 300 Falconer St, Frewsburg, NY

Sample Description:

Work Order: 22B0968

Date Received: 2/16/2022

Field Sample #: Ftreatment Influent

Sampled: 2/15/2022 10:40

Sample ID: 22B0968-02

Sample Matrix: Ground Water

Sample Flags: RL-11

Volatile Organic Compounds by GC/MS

Analyte	Results	RL	Units	Dilution	Flag/Qual	Method	Date Prepared	Date/Time Analyzed	Analyst
Diisopropyl Ether (DIPE)	ND	12	µg/L	25		SW-846 8260D	2/17/22	2/17/22 18:52	KMB

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

REPORT DATE: 3/22/2022

PURCHASE ORDER NUMBER: 142802

PROJECT NUMBER: 907016

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22C0703

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 300 Falconer St, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Treatment Effluent	22C0703-01	Water		EPA 1664B EPA 200.7 SW-846 8260D	
Ftreatment Influent	22C0703-02	Water		SW-846 8260D	
Trip Blank	22C0703-03	Water		SW-846 8260D	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260D

Qualifications:

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

Methyl Acetate

B303005-BS1, B303005-BSD1

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

Bromoform

B303005-BSD1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22C0703-02[Ftreatment Influent]

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Bromoform

B303005-BS1, B303005-BSD1, S069149-CCV1

Methyl Acetate

B303005-BS1, B303005-BSD1, S069149-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

PROJECT NUMBER: 907016

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22D1179

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 300 Falconer St, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Treatment Effluent	22D1179-01	Ground Water		EPA 1664B EPA 200.7 SW-846 8260D	
Ftreatment Influent	22D1179-02	Ground Water		SW-846 8260D	
Trip Blank	22D1179-03	Ground Water		SW-846 8260D	
Puddle	22D1179-04	Ground Water		EPA 300.0	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED 12/30/22: Report revised to include RL/MDL for Total Xylene results.

SW-846 8260D

Qualifications:

DL-01

Elevated reporting limits for all volatile compounds due to foaming sample matrix.

Analyte & Samples(s) Qualified:

22D1179-01[Treatment Effluent]

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

Methyl Acetate

B306122-BS1, B306122-BSD1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22D1179-02[Ftreatment Influent]

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Bromochloromethane

B306122-BS1, B306122-BSD1, S070573-CCV1

Methyl Acetate

B306122-BS1, B306122-BSD1, S070573-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Project Location: 300 Falconer St, Frewsburg, NY

Sample Description:

Work Order: 22D1179

Date Received: 4/16/2022

Field Sample #: Puddle

Sampled: 4/15/2022 11:00

Sample ID: 22D1179-04

Sample Matrix: Ground Water

Conventional Chemistry Parameters by EPA/PHA/SW-846 Methods (Total)

Analyte	Results	RL	DL	Units	Dilution	Flag/Qual	Method	Date Prepared	Date/Time Analyzed	Analyst

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
DL-01	Elevated reporting limits for all volatile compounds due to foaming sample matrix.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

PURCHASE ORDER NUMBER: 142802

PROJECT NUMBER: 907016

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22E0441

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 300 Falconer St, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Treatment Effluent	22E0441-01	Ground Water		EPA 1664B EPA 200.7 SW-846 8260D	
Treatment Influent	22E0441-02	Ground Water		SW-846 8260D	
Trip Blank	22E0441-03	Ground Water		SW-846 8260D	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260D

Qualifications:

R-05

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:

Chloromethane

22E0441-01[Treatment Effluent], 22E0441-02[Treatment Influent], 22E0441-03[Trip Blank], B307939-BLK1, B307939-BS1, B307939-BSD1, S071344-CCV1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22E0441-02[Treatment Influent]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Chloromethane

22E0441-01[Treatment Effluent], 22E0441-02[Treatment Influent], 22E0441-03[Trip Blank], B307939-BLK1, B307939-BS1, B307939-BSD1, S071344-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Bromoform

B307939-BS1, B307939-BSD1, S071344-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

PURCHASE ORDER NUMBER: 142802

PROJECT NUMBER: 907016

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22F0445

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 300 Falconer Street, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Treatment Effluent	22F0445-01	Water		EPA 1664B EPA 200.7 SW-846 8260D	
Ftreatment Influent	22F0445-02	Water		SW-846 8260D	
Trip Blank	22F0445-03	Water		SW-846 8260D	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260D

Qualifications:

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22F0445-02[Ftreatment Influent]

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Bromomethane

B310422-BS1, B310422-BSD1, S072612-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

PROJECT NUMBER: 907016

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22G0685

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 300 Falconer St, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Treatment Effluent	22G0685-01	Ground Water		EPA 1664B EPA 200.7 SW-846 8260D	
Treatment Influent	22G0685-02	Ground Water		SW-846 8260D	
Trip Blank	22G0685-03	Water		SW-846 8260D	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260D

Qualifications:

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

Carbon Disulfide

B312956-BS1, B312956-BSD1, S073962-CCV1

Methyl Acetate

B312956-BS1, B312956-BSD1, S073962-CCV1

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

1,1,2-Trichloro-1,2,2-trifluoroethan

B312956-BS1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22G0685-02[Treatment Influent]

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,1,2-Trichloro-1,2,2-trifluoroethan

B312956-BS1, B312956-BSD1, S073962-CCV1

Carbon Disulfide

B312956-BS1, B312956-BSD1, S073962-CCV1

Dichlorodifluoromethane (Freon 12)

B312956-BS1, B312956-BSD1, S073962-CCV1

Methyl Acetate

B312956-BS1, B312956-BSD1, S073962-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Project Location: 300 Falconer St, Frewsburg, NY

Sample Description:

Work Order: 22G0685

Date Received: 7/13/2022

Field Sample #: Trip Blank

Sampled: 7/12/2022 00:00

Sample ID: 22G0685-03

Sample Matrix: Water

Volatile Organic Compounds by GC/MS

Analyte	Results	RL	DL	Units	Dilution	Flag/Qual	Method	Date Prepared	Date/Time Analyzed	Analyst

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

PURCHASE ORDER NUMBER: 142802

PROJECT NUMBER: 907016

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22H0526

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 300 Falconer St, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Treatment Effluent	22H0526-01	Ground Water		EPA 1664B EPA 200.7 SW-846 8260D	
Treatment Influent	22H0526-02	Ground Water		SW-846 8260D	
Trip Blank	22H0526-03	Ground Water		SW-846 8260D	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260D

Qualifications:

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

Vinyl Chloride

B314932-BS1, B314932-BSD1, S075203-CCV1

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

Carbon Disulfide

B314932-BS1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22H0526-02[Treatment Influent]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

1,2-Dibromo-3-chloropropane (DBP)

22H0526-01[Treatment Effluent], 22H0526-02[Treatment Influent], 22H0526-03[Trip Blank], B314932-BLK1, B314932-BS1, B314932-BSD1, S075203-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Vinyl Chloride

B314932-BS1, B314932-BSD1, S075203-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Project Location: 300 Falconer St, Frewsburg, NY

Sample Description:

Work Order: 22H0526

Date Received: 8/10/2022

Field Sample #: Trip Blank

Sampled: 8/9/2022 00:00

Sample ID: 22H0526-03

Sample Matrix: Ground Water

Volatile Organic Compounds by GC/MS

Analyte	Results	RL	DL	Units	Dilution	Flag/Qual	Method	Date Prepared	Date/Time Analyzed	Analyst

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

PROJECT NUMBER: 907016

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 2210691

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 300 Falconer St, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Treatment EFF	2210691-01	Ground Water		EPA 1664B EPA 200.7 SW-846 8260D	
Treatment INF	2210691-02	Ground Water		SW-846 8260D	
Trip Blank	2210691-03	Trip Blank Water		SW-846 8260D	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260D**Qualifications:****L-02**

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:**Methyl Acetate**

B317265-BS1, B317265-BSD1

L-06

Laboratory fortified blank/laboratory control sample recovery and/or duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:**Vinyl Chloride**

2210691-02[Treatment INF], B317265-BS1, B317265-BSD1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

2210691-02[Treatment INF]

V-06

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:**trans-1,2-Dichloroethylene**

2210691-02[Treatment INF], B317265-BS1, B317265-BSD1, S076593-CCV1

Vinyl Chloride

2210691-02[Treatment INF], B317265-BS1, B317265-BSD1, S076593-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:**2-Hexanone (MBK)**

B317265-BS1, B317265-BSD1, S076593-CCV1

4-Methyl-2-pentanone (MIBK)

B317265-BS1, B317265-BSD1, S076593-CCV1

Carbon Disulfide

B317265-BS1, B317265-BSD1, S076593-CCV1

Cyclohexane

B317265-BS1, B317265-BSD1, S076593-CCV1

Methyl Acetate

B317265-BS1, B317265-BSD1, S076593-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Project Location: 300 Falconer St, Frewsburg, NY

Sample Description:

Work Order: 2210691

Date Received: 9/14/2022

Field Sample #: Trip Blank

Sampled: 9/13/2022 00:00

Sample ID: 2210691-03

Sample Matrix: Trip Blank Water

Volatile Organic Compounds by GC/MS

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-06	Laboratory fortified blank/laboratory control sample recovery and/or duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the high side.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22J1325

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 300 Falconer St, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Treatment Effluent	22J1325-01	Ground Water		EPA 1664B EPA 200.7 SW-846 8260D	
Treatment Influent	22J1325-02	Ground Water		SW-846 8260D	
Trip Blank	22J1325-03	Ground Water		SW-846 8260D	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332
SW-846 8260D

Qualifications:**L-02**

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:**1,1,2-Trichloro-1,2,2-trifluoroethane**

B319569-BS1, B319569-BSD1, S077856-CCV1

Bromomethane

B319569-BS1, B319569-BSD1, S077856-CCV1

Carbon Disulfide

B319569-BS1, B319569-BSD1, S077856-CCV1

Methyl Acetate

B319569-BS1, B319569-BSD1, S077856-CCV1

L-06

Laboratory fortified blank/laboratory control sample recovery and/or duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:**trans-1,2-Dichloroethylene**

22J1325-02[Treatment Influent], B319569-BS1, B319569-BSD1, S077856-CCV1

Vinyl Chloride

22J1325-02[Treatment Influent], B319569-BS1, B319569-BSD1, S077856-CCV1

L-07A

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound.

Analyte & Samples(s) Qualified:**Methyl tert-Butyl Ether (MTBE)**

B319569-BS1

R-05

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:**Methyl tert-Butyl Ether (MTBE)**

22J1325-01[Treatment Effluent], 22J1325-02[Treatment Influent], 22J1325-03[Trip Blank], B319569-BLK1, B319569-BS1, B319569-BSD1, S077856-CCV1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22J1325-02[Treatment Influent]

V-06

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:**trans-1,2-Dichloroethylene**

22J1325-02[Treatment Influent], B319569-BS1, B319569-BSD1, S077856-CCV1

Vinyl Chloride

22J1325-02[Treatment Influent], B319569-BS1, B319569-BSD1, S077856-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:**1,1,2-Trichloro-1,2,2-trifluoroethane**

B319569-BS1, B319569-BSD1, S077856-CCV1

Bromomethane

B319569-BS1, B319569-BSD1, S077856-CCV1

Carbon Disulfide

B319569-BS1, B319569-BSD1, S077856-CCV1

Methyl Acetate

B319569-BS1, B319569-BSD1, S077856-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-06	Laboratory fortified blank/laboratory control sample recovery and/or duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the high side.
L-07A	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound.
R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Client Job Number:
Project Number: 907016
Laboratory Work Order Number: 22K2370

Enclosed are results of analyses for samples as received by the laboratory on November 16, 2022. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kyle K. Stuckey
Project Manager

REPORT DATE: 11/30/2022

PURCHASE ORDER NUMBER: 142802

PROJECT NUMBER: 907016

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22K2370

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 330 Falconer Street, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Treatment Effluent	22K2370-01	Ground Water		EPA 1664B EPA 200.7 SW-846 8260D	
Treatment Influent	22K2370-02	Ground Water		SW-846 8260D	
Trip Blank	22K2370-03	Ground Water		SW-846 8260D	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260D

Qualifications:

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

Carbon Disulfide

B323347-BS1, B323347-BSD1, S079847-CCV1

Methyl Acetate

B323347-BS1, B323347-BSD1, S079847-CCV1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22K2370-02[Treatment Influent]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

1,2-Dibromo-3-chloropropane (DBP)

22K2370-01[Treatment Effluent], 22K2370-02[Treatment Influent], 22K2370-03[Trip Blank], B323347-BLK1, B323347-BS1, B323347-BSD1, S079847-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Bromomethane

B323347-BS1, B323347-BSD1, S079847-CCV1

Carbon Disulfide

B323347-BS1, B323347-BSD1, S079847-CCV1

Methyl Acetate

B323347-BS1, B323347-BSD1, S079847-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Login Sample Receipt Checklist - (Rejection Criteria Listing - Using Acceptance Policy) Any False Statement will be brought to the attention of the Client - State True or False

Client GES
 Received By LA Date 11/16/22 Time 946
 How were the samples received? In Cooler No Cooler On Ice No Ice
 Were samples within Temperature? Direct From Sample Within 2-6°C By Gun # 5 Ambient Actual Temp -4.6
 By Blank # Actual Temp
 Was Custody Seal In tact? N/A Were Samples Tampered with?
 Was COC Relinquished? Does Chain Agree With Samples?
 Are there broken/leaking/loose caps on any samples?
 Is COC in ink/ Legible? Were samples received within holding time?
 Did COC include all pertinent Information? Client? Analysis? Sampler Name?
 Project? ID's? Collection Dates/Times?
 Are Sample labels filled out and legible?
 Are there Lab to Filters? Who was notified?
 Are there Rushes? Who was notified?
 Are there Short Holds? Who was notified?
 Samples are received within holding time? Is there enough Volume?
 Is there Headspace where applicable? N/A MS/MSD?
 Proper Media/Containers Used? splitting samples required
 Were trip blanks receive On COC?
 Do All Samples Have the proper pH? Acid Base

Vials	#	Containers:	#	#	Base
Unp-		1 Liter Amb.	2	1 Liter Plastic	16 oz Amb.

REPORT DATE: 1/4/2023

PURCHASE ORDER NUMBER: 142802

PROJECT NUMBER: 907016

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22L2911

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: 300 Falconer Street, Frewsburg, NY

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
Treatment Effluent	22L2911-01	Ground Water		EPA 1664B EPA 200.7 SW-846 8260D	
Treatment Influent	22L2911-02	Ground Water		SW-846 8260D	
Trip Blank	22L2911-03	Ground Water		SW-846 8260D	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

EPA 200.7**Qualifications:****B**

Analyte is found in the associated laboratory blank as well as in the sample.

Analyte & Samples(s) Qualified:**Aluminum**

22L2911-01[Treatment Effluent], B327259-BLK1

SW-846 8260D**Qualifications:****L-07**

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:**Methyl Acetate**

B326948-BSD1

PR-08

pH of sample (pH 5) is outside of method specified preservation criteria.

Analyte & Samples(s) Qualified:

22L2911-02[Treatment Influent]

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22L2911-02[Treatment Influent]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:**1,2-Dibromo-3-chloropropane (DBCP)**

22L2911-01[Treatment Effluent], 22L2911-02[Treatment Influent], 22L2911-03[Trip Blank], B326948-BLK1, B326948-BS1, B326948-BSD1, S081302-CCV1

Bromomethane

22L2911-01[Treatment Effluent], 22L2911-02[Treatment Influent], 22L2911-03[Trip Blank], B326948-BLK1, B326948-BS1, B326948-BSD1, S081302-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:**4-Methyl-2-pentanone (MIBK)**

B326948-BS1, B326948-BSD1, S081302-CCV1

Methyl Acetate

B326948-BS1, B326948-BSD1, S081302-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
B	Analyte is found in the associated laboratory blank as well as in the sample.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
PR-08	pH of sample (pH 5) is outside of method specified preservation criteria.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Login Sample Receipt Checklist - (Rejection Criteria Listing - Using Acceptance Policy) Any False Statement will be brought to the attention of the Client - State True or False

Client GES
 Received By LA Date 12/2/22 Time 10:41
 How were the samples received? In Cooler T No Cooler _____ On Ice T No Ice _____
 Direct From Sample F Ambient _____ Melted Ice _____
 Were samples within Temperature? Within 2-6°C T By Gun # 5 Actual Temp -38
 By Blank # _____ Actual Temp _____
 Was Custody Seal In tact? _____ Were Samples Tampered with? F
 Was COC Relinquished? T Does Chain Agree With Samples? T
 Are there broken/leaking/loose caps on any samples? F
 Is COC in ink/ Legible? T Were samples received within holding time? F
 Did COC include all Client? T Analysis? T Sampler Name? _____
 pertinent Information? Project? _____ ID's? T Collection Dates/Times? T
 Are Sample labels filled out and legible? _____
 Are there Lab to Filters? _____ Who was notified? _____
 Are there Rushes? F Who was notified? _____
 Are there Short Holds? _____ Who was notified? _____
 Samples are received within holding time? _____ Is there enough Volume? T
 Is there Headspace where applicable? N.A MS/MSD? F
 Proper Media/Containers Used? T splitting samples require F
 Were trip blanks receive F On COC? F
 Do All Samples Have the proper pH? T Acid T Base _____

Appendix C – Annual System Inspection Form

SYSTEM INSPECTION FORM

Client Name:	NYSOEC		
Site Name:	Gannock Vcc Air		
Address:	300 Falconer St		
GES PM:	T. Palmer	GES Engr:	G. Bond
Inspected By:	M. Karz	Date:	11/13/23
Inspection:	<input checked="" type="checkbox"/> Routine Annual <input type="checkbox"/> Transition <input type="checkbox"/> Startup <input type="checkbox"/> or Recommission (circle one)		

The following checklist is to be completed for all OM&M system sites. If the response to any item is "No," explain reasons in the comment section. For items requiring additional explanation, use comments section to discuss findings and/or provide additional information needed to perform corrective measures. For additional comment space, use back of page. A loss or near loss report may be required based on the findings of the inspection.

Equipment/Information needed to complete the inspection	
<input type="checkbox"/>	Previously completed system inspection form
<input type="checkbox"/>	Tools to open control panel and other equipment
<input type="checkbox"/>	Tools to open manholes and well vaults
<input type="checkbox"/>	Digital Camera to document conditions
<input type="checkbox"/>	Multimeter/amperage clamp to check equipment amperage and voltages
<input type="checkbox"/>	Knowledge of the IBC, NEC, fire codes, pressure vessel codes and client specific requirements

Site Health & Safety / General Site Conditions		
1.	Is current Health & Safety Plan (HASP) in a conspicuous place?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
2.	Are Safety Data Sheets (SDS) in HASP?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
3.	Is GES' Emergency Sign Placard posted in a conspicuous place?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
4.	Is the site and enclosure clear of trash and debris?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
5.	Are walkways clear of trip hazards?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
6.	Are vaults/manholes/trenches in good conditions and locked?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
7.	Is vegetation (trees, vines, weeds) present that may pose trip or overhead hazards, including branches that could fall onto equipment, enclosures, or overhead utilities?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
8.	Is the log book present, protected from the elements and include all up-to-date permits, log sheets, checklists/forms and HASP?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
9.	Are on-site soil piles, if present, properly encapsulated?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A
10.	Are there drums or storage tanks on site? (If YES, answer questions below)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
	- Do drums/tanks have secondary containment?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
	- Are the drums/tanks in good condition?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
	- Are the drums/tanks properly vented and grounded (product drums must be grounded)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
	- Are the drums/tanks properly labeled, including a flammable sticker?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

COMMENTS:

Enclosure/Structure/Building (Requires knowledge of IBC to complete) Not applicable Not checked

- Is the enclosure in good condition? (check doors, roof, interior/exterior walls, trailer leveling jacks, fence material and posts, stack guy wires, structural elements) Yes No
- Is the enclosure properly heated, if necessary? Yes No N/A
- Is the air in the enclosure properly exhausted? Yes No
- Is the exhaust fan guard in place? Yes No
- Are there sufficient fresh air louvers? Yes No
- Are the louvers or exhaust vents sealed off in the winter? Yes No N/A
- Are all sheds/compounds locked? Yes No N/A
- Are fire extinguishers on site? (If YES, expiration date: 1/20/16) Yes No
- Are combustible/flammable materials separated from sources of ignition? Yes No

COMMENTS:

OM&M System
Describe major system components, noting any changes completed to the remedial system since the last inspection

- Skid w/ SUG blower, KO tank, Transfer pump, bag filters
Air stopper, Sump pump, Sewer Bedding pump

- Has the system changed since the last inspection? Yes No
- Was the system operating upon arrival? (Bedding Pump / Stopper only) Yes No N/A
- Is an accurate copy of system trenching diagram posted? Yes No
- Is the posted P&ID accurate? *not posted* Yes No
- Are CEs/CSDs/sample ports/manifolds/flow direction/equipment properly labeled? Yes No
- Reviewed system CEs/CSDs, interlock, alarm inspection forms and procedures? Yes No N/A
- Are pipe, tanks, hose, etc., supported properly and in acceptable condition (including those located in areas difficult to access [behind/under equipment])? Yes No
- Are piping, hoses, tubing, valves, and other system components rated for (e.g., pressure, temperature, flow capacity, fluid type, concentration, and chemical compatibility) the service for which they are used (e.g., compressed air, high-temperature vapors)? Yes No
- Are cam locks secured with pins, cable ties, or other equivalent means? Yes No N/A
- Is piping outside the structure properly insulated and heat traced? Yes No N/A
- Are buckle clamps used to connect hose to barbs? Yes No N/A
- Is there a floor sump (or other leak/spill detection) within the structure? Yes No N/A
- Is the system free of all additional hazards (e.g., confined space, ladders required)? Yes No
- Is there at least 24 inches of space between equipment, control panels, and walls to Yes No

allow OM&M to be conducted safely?

15. Are supports and braces on vibrating equipment tight?

16. Is all equipment in good operating condition?

- Yes No N/A
 Yes No

COMMENTS:

System down for Transfer pump issue

Electrical Elements and Code Compliance

1. Has any electrical component of this system changed since the last inspection?
(If YES, answer section below)

- Yes No

How are areas classified? (Write name of area below)

- a. Class I Div I Class I Div II Not Classified
 b. Class I Div I Class I Div II Not Classified
 c. Class I Div I Class I Div II Not Classified

- a)
b)
c)

2. Is the electrical classification correct?

- Yes No

3. Does all of the electrical equipment (lights, heaters, pumps, blowers, etc.) comply with the classification?

- Yes No

4. Is the voltage and amperage to the system and components correct?

- Yes No

5. Are proper voltage and phase labels posted on circuit breaker panel?

- Yes No

6. Is the proper high voltage (208 volts or greater) label on the outside of the panel?

- Yes No

7. Are circuit breakers labeled in conjunction with equipment?

- Yes No

8. Are the motor starters properly sized?

- Yes No

9. Are the **Thermal overloads** sized and set for the proper motor amperage?

- Yes No

10. Are the gages of the wire correct for the equipment?

- Yes No

11. Is wiring in acceptable condition (no frayed, mashed, or loose wiring or burnt)?

- Yes No

12. Is wiring neat and attached to walls (shed and vaults)?

- Yes No

13. Are seal-offs poured?

- Yes No

14. Are lights bulbs shatterproof, fluorescent, or shielded?

- Yes No N/A

15. Are GFIs and weather-proof outlets installed?

- Yes No

16. Is all equipment properly wired (no extension cords, etc)?

- Yes No

17. Has an Electrical Inspection Report been completed?

- Yes No

COMMENTS:

Compressed Air Systems and Pressure Vessels

- | | | |
|--|------------------------------|--|
| 1. Are compressed air vessels used with the system? (If no, skip this section) | <input type="checkbox"/> Yes | <input checked="" type="checkbox"/> No |
| 2. According to the pressure vessel code for the applicable state, the pressurized vessel does need to be inspected? (If yes, document in the comment section when the vessel was last inspected.) | <input type="checkbox"/> Yes | <input type="checkbox"/> No |
| 3. Are air compressor guards and warning labels (Danger – Hot) in place? | <input type="checkbox"/> Yes | <input type="checkbox"/> No |
| 4. Is integrity of compressed air lines acceptable? | <input type="checkbox"/> Yes | <input type="checkbox"/> No |
| 5. Are compressed air lines securely connected? | <input type="checkbox"/> Yes | <input type="checkbox"/> No |
| 6. Is air compressor oil compatible with piping (Synthetic oil and ABS piping are not)? | <input type="checkbox"/> Yes | <input type="checkbox"/> No |
| 7. The compressor coalescing filter is changed on a routine schedule? | <input type="checkbox"/> Yes | <input type="checkbox"/> No |
| 8. Has the oil been changed with the proper type? | <input type="checkbox"/> Yes | <input type="checkbox"/> No |
| 9. Has it been changed within 3 months? | <input type="checkbox"/> Yes | <input type="checkbox"/> No |
| 10. Have the air filters been inspected and replaced for the A/C and Filter/ Regulator? | <input type="checkbox"/> Yes | <input type="checkbox"/> No |

COMMENTS:

Empty space for handwritten comments.

System Inspection Corrective Action Form

- | | | |
|---|---|-----------------------------|
| 1. Was a system inspection corrective action form generated from this inspection? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No |
| 2. Is the completed system inspection corrective action form attached to the checklist? | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No |

Completed inspections must be reviewed and acknowledged by the following:

Title	Printed Name	Signature	Date
1. Technician	<u>Mr. Keisler</u>	<u>[Signature]</u>	<u>1/13/23</u>
2. Project Engineer	<u>Genevieve Bock</u>	<u>[Signature]</u>	<u>1/15/23</u>
3. Project Manager	<u>Thomas Palmer</u>	<u>[Signature]</u>	<u>1/15/23</u>
