Letter of Transmittal

To	Jason Kryszak, G.I.T. New York State Department of Environmental Conservation Division of Environmental Remediation, Region 9 700 Delaware Avenue Buffalo, NY 14209 jason.kryszak@dec.ny.gov
CC	Benjamin McPherson, P.E., NYSDEC Shannon Lloyd, Ashland, Inc. AECOM Project File 60730037
Subject	Ashland Tank 75 Remedial Investigation Report
From	Colin Wasteneys, P.G.
Date	October 28, 2025

Dear Mr. Kryszak:

On behalf of Ashland, Inc., AECOM is pleased to submit one (1) electronic copy of the revised Ashland Tank 75 Remedial Investigation Report.

Please let me know if you have any questions regarding this Report.

Best regards,

Colin Wasteneys

Certification

I, Colin Wasteneys, certify that I am currently a Qualified Environmental Professional as defined in 6 NYCRR Part 375 and that this Remedial Investigation Report was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and DER Green Remediation (DER-31) and that all activities were performed in full accordance with the DER-approved work plan and any DER-approved modifications.

Respectfully submitted,

Colin Wasteneys

Colin Wasteneys, P.G.

VOCs	volatile organic compounds

1. Introduction

This Remedial Investigation (RI) has been prepared by AECOM Technical Services, Inc. (AECOM) on behalf of Ashland Inc. (Ashland) for the Tank 75 Site located on a portion of the property at 4625 River Road, Tonawanda, New York (Site) (**Figure 1-1**).

The Site is being managed under a Consent Order within the New York State Department of Environmental Conservation (NYSDEC) State Superfund Program (Site No. 915008B, Index No. R9-20190829-112), dated May 4, 2022.

These RI activities were performed in accordance with the Site Characterization/Remedial Investigation Work Plan (SC/RIWP) dated October 11, 2023, and approved by the NYSDEC on October 31, 2023. This report presents data and information gathered between April 16, 2024, and November 13, 2024.

1.1 RI Objectives

The RI objectives listed in the SC/RIWP include:

- Confirm the exact property boundaries for the Site.
- Evaluate the presence of contaminants (i.e., volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls [PCBs], pesticides, metals, and the emerging contaminants 1,4-dioxane, and per- and polyfluoroalkyl substances [PFAS]) both within and around Tank 75.
- Evaluate the nature and extent of petroleum impacts observed in historical soil borings completed in the vicinity of Tank 75.
- Evaluate the possible presence of residual radioactive contamination in the surface and subsurface soils, sludges, and sediments using radiation surveys in the form of gamma walkover surveys (GWS) and soil cuttings/samples and Tank 75 sludge/sediment core screening.
- Evaluate the horizontal and vertical extent of contamination, including transport mechanisms.
- Evaluate actual and potential exposures related to contaminants on- and off-Site with a Qualitative Exposure Assessment.
- Assess potential or actual threats to public health and the environment, including potential or complete exposure pathways for human health and fish and wildlife resources per NYSDEC Division of Environmental Remediation (DER)-10.
- Assess the source(s) of contamination and determine if this source(s) has impacted soils outside the structure.
- Collect additional data to support the design and implementation of remedial actions.

RI field and reporting activities were conducted in general accordance with the SC/RIWP, the Quality Assurance Project Plan (QAPP), and the following regulatory documents and standards:

- NYSDEC Division of Water Technical & Operational Guidance Series 1.1.1 Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations (TOGS 1.1.1) (NYSDEC, 1998, 1999, 2000, 2004, 2023).
- NYSDEC Sampling, Analysis, and Assessment of Per- and polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC, 2023).
- NYSDEC 6 New York Codes, Rules and Regulations (NYCRR) 703.5(f) Surface Water and Groundwater Quality Standards and Groundwater Effluent Limitations (NYSDEC, 2004).

- NYSDEC, 6 NYCRR 375-6.8 Soil Cleanup Objectives (NYSDEC, 2006).
- NYSDEC DER-10, Technical Guidance for Site Investigation and Remediation (NYSDEC, 2010).
- NYSDEC DER-31, Green and Sustainable Remediation (NYSDEC, 2011).
- United States Environmental Protection Agency (USEPA) Guidance for Conducting Remedial Investigations and Feasibility Studies Under CERCLA (USEPA, 1988).

1.2 RI Structure

This RI is structured in accordance with DER-10 guidance. This report contains nine sections. Section 1 provides an introduction and overview of the project objectives and report organization. Section 2 presents the Site description, background, and summarizes previous investigation information. Section 3 outlines the scope of work and details the RI activities. Section 4 includes a description of the local and regional geology and hydrogeology. Section 5 identifies standards, criteria, and guidance values (SCGs) for the Site, and discusses the nature and extent of the contamination at the Site. Section 6 presents a conceptual model and discusses contaminant fate and transport. The Qualitative Human Health Exposure Assessment (HHEA) and the Fish and Wildlife Resources Impact Analysis (FWRIA) are included in Section 7. Section 8 includes a summary of the findings and recommendations offered for consideration by NYSDEC. Section 9 contains a list of references cited. Tables, Figures, and Appendices immediately follow the text.

2. Site Background

2.1 Site Description

The Tank 75 Site comprises approximately 2.2 acres situated in the western portion of an approximate 20-acre parcel owned by Ashland (**Figure 2-1**). However, it currently sits within the perimeter fence of the United Refining terminal facility (**Figure 2-2**). Tank 75 was constructed during World War II as an in-ground petroleum storage structure for the storage of fuel oil. The structure was constructed with a reinforced steel mesh, gunite lining approximately 3 to 4 inches thick. At the ground surface, Tank 75 measures approximately 200 feet wide by 300 feet long with sides that slope inward to a flat bottom approximately 28 feet below surrounding grade (**Figure 2-2**). Tank 75 was formerly equipped with two pumps, one for unloading oil and the second for removing accumulated precipitation. Steam coils (disconnected) are located on the bottom of the structure that were used to heat the fuel oil during cold weather. In addition to fuel oil, off-specification asphalt, other tank bottoms, and refinery sludge are believed to have been placed in Tank 75 for re-refining. It is possible that small amounts of soil and process piping has been deposited in the Tank. The Site and surrounding areas are zoned for mixed industrial use.

2.1.1 Adjacent Properties

The Tank 75 Site currently sits within the perimeter fence of the approximately 118-acre former Ashland Refinery/Terminal (now owned and operated by United Refining as a petroleum terminal). Ashland's refinery/terminal operations at one time included up to approximately 160 petroleum above-ground storage tanks (ASTs) with capacities up to 4,200,000 gallons. The Tank 75 Site is surrounded on the immediate north, west, and south by former AST clusters owned by United Refining. These former ASTs are in various stages of demolition and removal with some ASTs already removed or closed-in-place (**Figure 2-1**).

The surrounding area is predominantly industrial. Adjacent properties include several sites managed under the Formerly Utilized Sites Remedial Action Program (FUSRAP) including Ashland 1, Seaway Industrial Landfill Areas C and D (to the north and east), Ashland 2, and Rattle Snake Creek (to the northeast). The Site is also bounded by Tonawanda Terminals Company (to the north-northwest), and United Refining petroleum terminal (to the west and south) (**Figure 2-2**).

2.2 Site History

From 1933 to 1950, the property was owned and operated by Frontier Oil Refining Corporation (Frontier Oil). In 1950, Ashland acquired the refinery, including Tank 75, through its acquisition of Frontier Oil. Tank 75 was placed into operation in early 1940's and was taken out of service in 1980. The refinery itself discontinued production in July 1982; however, the facility was then operated as a petroleum terminal and active petroleum tanks remain in service. In 1992, the United Refining Company acquired the terminal facility from Ashland; however, Ashland retained the Tank 75 property. Dismantling of former refinery processes and disused petroleum storage tanks has been occurring for decades and continues, sporadically, today.

From 1980 to 1985, the only activity involving Tank 75 was to pump out accumulated precipitation in the structure using one of the two pumps discussed above. The rainwater, or supernatant water, was pumped to the refinery's oily water sewer system. The sewer system discharges to the Tonawanda publicly owned treatment works (POTW). In 1985, approximately 120,000 barrels (bbl.) (approximately 5 million gallons [gal]) of No. 6 fuel oil were recovered from Tank 75 and sent by barge to a reprocessor in Louisiana. During the summers of 1992 and 1993, approximately 34,000 bbl. (1.4 million gal) of top oily layer was recovered from Tank 75 and transported by tanker trucks to Ashland's Catlettsburg, Kentucky refining complex for reprocessing. Accumulated rainfall has occasionally been pumped to the facility's oil water separator to manage water levels.

Tank 75 is listed on the New York State Registry of Inactive Hazardous Waste Disposal Sites as Site # 915008B, Class 3 (does not represent a significant threat to the environment or to health). Since Tank 75 was taken out of service in 1980, wastes were not placed in the structure after the effective date of relevant Resource Conservation and Recovery Act (RCRA) regulations. Based on historical documents beginning with a Hazardous Waste Disposal Questionnaire dated August 27, 1984 (Ashland, 1984), listed hazardous wastes may have been placed into Tank 75. Potential listed hazardous wastes may include refinery wastes K049 (slop oil emulsion solids from the petroleum refining industry), K050 (heat exchanger bundle cleaning sludge from the petroleum refining industry), and K052 (tank bottoms (leaded) from the petroleum refining industry). Contents also meet the criteria for the ignitability characteristic (D001) with a flash point less than 140˚F. Contaminants associated with these refinery wastes include petroleum related VOCs, SVOCs, and metals.

2.3 Previous Investigation Work

Environmental investigations at Tank 75 have been conducted since its termination of service in 1980. These investigations have included groundwater monitoring well installation and sampling and structure content characterization of the tank contents (sludge, supernatant water, and top oily layer). A summary of these investigations is presented below. Historical sampling locations are shown in **Figure 2-3**. Historical boring logs and a summary of the results from groundwater sampling data (1997, 1998, 2005 and 2018 in tabular format from their respective reports) can be found in the NYSDEC-approved SC/RIWP.

2.3.1 1986 to 1987 Groundwater Monitoring Well Installation

From September 16 through September 18, 1986, Earth Dimensions, Inc. (EDI) installed six groundwater monitoring wells at the Site. Wells MW2S-86 and MW2D-86 were installed on the northwest side of the structure and are currently known as MW-02S and MW-02D. MW3-86, currently known as MW-03, was installed on the southwest side of the structure. MW-1/MW5-86, currently known as MW-5, was installed in the southeast portion of the Ashland property (located outside of the Tank 75 property boundary) to serve as the upgradient well. MW4S-86 and MW4D-86 were installed on the northeast portion of the structure and are currently known as MW-04S and MW-04D, respectively.

The boring logs for 2-86 and 3-86 located on the northwest and southwest sides of Tank 75, respectively, both indicate evidence of petroleum impacts in shallow fill. The boring log for 2-86 indicates black oily liquid was observed in fill from 0 to 0.5 feet below ground surface (bgs). The boring log for 3-86 indicates black oily liquid was observed in fill from 0 to 3.0 feet bgs. It is not known if the observed petroleum impacts were a result of the contents of Tank 75 or of historical general oil refinery operations.

EDI installed three additional monitoring wells in March 1987. These wells, 2-87 (MW2), 3-87 (MW3), and 4-87 (MW4), were all located in the northern portion of the Ashland refinery property at distances ranging from 2,000 to 2,700 feet northwest of Tank 75.

2.3.2 1993 to 1998 Annual Groundwater Monitoring

Annual groundwater sampling events were conducted from 1993 to 1998. For each sampling event, groundwater samples were collected from monitoring wells MW-02S, MW-02D, MW-03, MW-04S, MW-04D, and MW-5 and analyzed for VOCs using United States Environmental Protection Agency (USEPA) Method 8240 or 8260, SVOCs using USEPA Method 8270, and metals using USEPA Method 6020 inductively coupled plasma (ICP) gas chromatography/mass spectrometry (GC/MS).

The 1993 annual sampling event was conducted on September 14 and 15, 1993. Results indicated that lead in one well was the only metal to exceed its groundwater standard. No VOCs or SVOCs were detected.

The 1994 annual sampling event was conducted on September 30, 1994. The analytical results indicated that iron was the only metal to exceed its groundwater standard. Phenol was also detected in one well above its groundwater standard; however, the well was resampled on January 24, 1995, and the result for phenol was below the method detection limit (MDL). No other VOCs or SVOCs were detected.

1995/1996

The 1995 sampling event was conducted on August 23, 1995. Only iron exceeded its groundwater standard in several of the Site wells. No VOCs or SVOCs were detected.

The 1996 sampling event was conducted on August 27, 1996. Only cadmium exceeded its groundwater standard in one well. No VOCs or SVOCs were detected.

1997/1998

The 1997 annual groundwater sampling event was conducted on August 19, 1997. Methylene chloride was the only VOC detected in one well (MW-02D) above its groundwater standard. Methylene chloride is a common laboratory cleaning chemical, and its detection is believed to be related to cross-contamination. Three metals, cadmium, lead, and manganese exceeded their groundwater standards in at least one well. As for SVOCs, sulfolane was detected in one well, MW-04S, just above the MDL. There is no groundwater standard for sulfolane. Sulfolane, an extraction solvent used in the refining process, was never used at the Buffalo, New York refinery. MW-04S was resampled and sulfolane was not detected. The initial detection was most likely caused by cross-contamination introduced in the Ashland laboratory where the analyses were performed. No other SVOCs were detected.

The 1998 annual groundwater sampling event was conducted on July 17, 1998. No VOCs or metals were detected above their respective groundwater standards. Only one SVOC, sulfolane, was detected in MW-04S. The source of sulfolane is most likely an artifact from the Ashland laboratory (see discussion above for the 1997 groundwater sampling results).

2.3.3 2005 Groundwater Monitoring Well Installation and Sampling Event

Monitoring wells installed in 1986 are primarily screened in the deeper portion of the perched aquifer to intersect the elevation of the bottom of the structure. To determine if a floating layer of free product was present, URS Corporation (URS) installed four shallow groundwater monitoring wells in September 2005: MW05-01, MW05-02, MW05-03, and MW05-04. Boring logs for three of these wells, MW05-01, MW05-03, and MW05-04, indicate observations of petroleum impacted soil at depths ranging from surface to 8 feet bgs. The boring log for MW05-01 indicates a slight gasoline odor observed in soil from 4 to 6 feet bgs. It is not known if the observed petroleum impacts are a result of the contents of Tank 75 or of historical general oil refinery operations.

On September 13, 2005, groundwater samples were collected from existing monitoring wells MW-02S, MW-02D, MW-03, MW-04S, MW-04D, and newly installed wells MW05-01, MW05-02, and MW05-04. Two wells were not sampled: MW05-03, because it was dry and MW-5, because this background well is located in the southeastern portion of the Ashland property, not in proximity to Tank 75. The groundwater samples were analyzed for VOCs (USEPA Method 8260B), SVOCs (USEPA Method 8270C), and Target Analyte List (TAL) Metals (USEPA Method 6010B/7470A).

Two VOCs were detected – carbon disulfide at MW05-01, MW05-02, and MW05-04 and cis-1,2-dichloroethene (cis-1,2-DCE) at MW05-02. These analytes were not detected above their respective groundwater quality standards.

Two SVOCs, phenol and pentachlorophenol, were detected in MW-02D and MW-04S respectively. Both exceeded their groundwater standard. Pentachlorophenol has not been detected in groundwater during previous sampling events. Phenol was detected in one well in 1994; however, the well was resampled, and the result was below the MDL. Neither of these SVOCs are associated with refining operations. Thus, there appears to be no connection between these two SVOC detections and the contents of Tank 75.

Five metals were detected above their respective groundwater standards in at least one monitoring well: cadmium, iron, manganese, sodium, and nickel.

2.3.4 2018 Groundwater Sampling

The 2018 groundwater sampling event was conducted from January 29 to February 2, 2018. Metals detected above their groundwater standards included iron, magnesium, manganese, and sodium, which are all naturally occurring groundwater constituents. These metal concentrations detected in the Site wells have not changed significantly since the 2005 sampling event.

VOCs were detected at very low levels (generally around 1 microgram per liter (µg/L) or less) in only three Site wells (MW-04S, MW05-02, and MW05-04). Detected VOCs were three chlorinated solvents (1,1-dichloroethane [1,1-DCA], cis-1,2-DCE, and vinyl chloride), benzene, and acetone. Of these, only benzene, detected in well MW05-04, could be associated with typical refinery sludge wastes. Only vinyl chloride, detected in well MW05-02, was detected at a concentration above its groundwater standard.

The 2018 groundwater sampling analytical results generally confirm historical data and indicate that petroleum refining wastes contained in Tank 75 are not impacting surrounding groundwater quality. A letter report presenting the 2018 groundwater sampling results was submitted to the NYSDEC in March 2018 (AECOM, 2018).

2.3.5 Tank 75 Contents Characterization

The contents of Tank 75 had previously been sampled for laboratory analysis to determine if the contents can be reprocessed and to evaluate disposal options. Past investigations have determined that the contents consisted of four discernable layers: pumpable sludge, non-pumpable sludge, a top oily layer (no longer present), and a water layer. This section summarizes the previous Tank 75 content characterization activities.

Sludge Characterization

On November 10, 1989, a sample of material from Tank 75 was submitted to the Ashland Environmental Support Group and Kemron Laboratories for characterization. The following metals were detected following total metals analysis: arsenic, chromium, and lead. For Extraction Procedure (EP) Toxicity, only barium was detected. The material passed the paint filter test, and the flashpoint exceeded 230°F.

In 1990, a physical sampling program was undertaken to determine the inventory and physical characteristics of the materials in the structure. The sampling program identified four specific layers. From ground surface to the bottom of the structure, the four layers consisted of:

- A top oily layer from 10 to 30 inches in thickness (estimated as 550,000 gallons).
- A water layer varying from 9 to 18 feet in thickness (estimated as 4,289,000 gallons).
- A pumpable sludge layer from 1 to 5 feet thick (estimated as 500,000+ gallons) consisting of water, oil, and solids.
- A bottom layer of non-pumpable sludge ranging in thickness from 2 to 3 feet (estimated as 4,000 cubic yards).

On March 2, 1990, two samples were collected from Tank 75: top oil and hard bottom sludge. The samples were submitted to Buffalo Testing Laboratories Inc. for analysis. Results indicated that for the top oil, the flash point exceeded 294°F and contained 18.8% water distillates. For the hard bottom sludge, the flash point exceeded 212°F, and for EP Toxicity analysis, only lead was detected. The result for lead of 1.5 ppm was below the EP toxicity criteria of 5.0 milligrams per liter (mg/L).

On June 18, 1998, two sludge samples were collected and analyzed for Toxicity Characteristic Leaching Procedure (TCLP) VOCs (USEPA Method 8260A), TCLP SVOCs (USEPA Method 8270), TCLP metals, total metals, pH, ignitability, reactive cyanide, and reactive sulfide.

An additional sample of sludge was collected for further characterization purposes on October 1, 1999. The sample was analyzed for VOCs and metals to determine if the sludge met the definition of a

hazardous waste. Benzene was the only VOC that exceeded the land disposal restriction (LDR) standards for K049, K050, and K052.

Weavertown Environmental Group conducted bench scale separation and solidification testing on samples of sludge collected on May 26, 2005. Results indicated that filter pressing was not a viable option and was not recommended for achieving sludge volume reduction. Centrifuging and solidification were both found to be viable technologies, although with limitations due to cost. These results were discussed in a draft Remedial Work Plan that was never submitted or acted upon. Four samples of treated sludge collected on May 26, 2005, from the bench scale testing were analyzed for TCLP VOCs (USEPA Method 8260B), TCLP SVOCs (USEPA Method 8270C), TCLP pesticides and PCBs (USEPA Method 8081A/8082), TCLP metals, and general chemistry. The results of the analyses were used to determine if the treated sludge, a K-listed RCRA waste, met LDRs, thereby allowing disposal in a hazardous waste landfill in place of incineration, a more costly disposal method. None of the standards for K049, K050, or K052 were exceeded.

To determine the appropriate method of disposal for the centrifuged solidified sludge, a sample was submitted for laboratory analysis on September 6, 2005. Analyses included TCLP VOCs and VOCs (USEPA Method 8260B), TCLP SVOCS and SVOCs, (USEPA Method 8270C), TCLP metals and metals (USEPA Method 6010B), and general chemistry. Matrix interference prevented the laboratory from reaching quantification limits less that LDR treatment standards for many SVOCs; as such, a sample was submitted to Meta Environmental, Inc. (Meta) on January 13, 2006, for further analysis. To achieve the required quantification limits, the sample was analyzed as a non-aqueous phase liquid (NAPL) by modified USEPA Method 8270 with selective ion monitoring. Five SVOCs from the centrifuged solidified sludge sample exceeded LDR universal treatment standards (UTSs).

Top Oily Layer Characterization

On October 1, 1992, a sample of top oil was submitted to the Ashland Environmental Support Group to determine if the material could be reprocessed in one of the Ashland refineries. The sample was analyzed for VOCs (USEPA Methods 8240 Mod and TCLP Extract), SVOCs (USEPA Methods 8270 and TCLP Extract), wax and asphalt fractions, high temperature Sim-D, and basic sediment and water analyses. Results indicated that this material could be reprocessed. Therefore, during the summers of 1992 and 1993, approximately 34,000 bbl. (1,428,000 gallons) of this top oily layer was removed and transported by tanker trucks to Ashland's Catlettsburg, Kentucky refining complex for reprocessing.

The top oily layer is no longer present in Tank 75 as a result of the 1992 and 1993 removal activities.

Supernatant Water Characterization

In March 1990, wastewater type testing was conducted on a sample of the supernatant water pumped from the structure for laboratory analysis. The results resembled a weak domestic sewage, and the supernatant water contents were acceptable for processing at the Tonawanda POTW. No past issues had been identified by the POTW.

During 2000, Ashland worked with United Refining to pump out nearly all of the water from Tank 75 to allow various companies to observe the structure and collect samples to prepare closure proposals. Ashland had previously thought that the material piled in the southeast corner of the structure was asphaltic in nature. Upon closer inspection and analysis, the southeast corner consisted of a mixture of dirt and heavy molecular weight petroleum sludge material. Since this material could not effectively be recycled, approximately 523 tons of the material was removed and transported to the Waste Management facility in Model City, New York, for treatment and disposal.

2.4 Consent Order

On May 4, 2022, NYSDEC and Ashland entered into an Order on Consent and Administrative Settlement (Index No. R9-20190829-112) for the Ashland Tank 75 Site (DEC Site No. 915008B). This SC/RI has been completed to provide additional investigation activities to evaluate the possible presence and current state of contaminants within, around, and beneath Tank 75. Investigation activities included

gamma radiation surveys and collection of soil, groundwater, surface water, and sediment samples analyzed for VOCs, SVOCs, PCBs, pesticides, and metals across the Site. Soil vapor screening is not relevant for the Site as there are no occupied buildings within the property boundary or close to the Site.

3. Remedial Investigation Activities

The RI field investigation was performed between April 16 and November 13, 2024. Investigation activities were supervised and documented by qualified AECOM personnel. Copies of the investigation field notes are provided in **Appendix A**. Photographs of the RI field activities are provided in **Appendix B**. Sampling locations are shown on **Figure 3-1**.

3.1 Scope of Work

The scope of work of the SC/RI consisted of the following:

- Performance of a Site clearing activities.
- Completion of a preliminary Site survey to identify and stake Site boundaries.
- Completion of a gamma walkover survey of planned investigation areas.
- Redevelopment of and collection of groundwater samples from nine (9) existing monitoring wells.
- Performance of hydraulic conductivity testing on four (4) existing monitoring wells.
- Completion of a bathymetric survey of Tank 75.
- Collection of three (3) surface water samples and 15 sediment samples using a vibracore sampler from Tank 75.
- Clearance of underground utilities surrounding Tank 75.
- Advancement of nine (9) soil borings (SB-01 through SB-05 and SB-07 through SB-10) by direct push technology (DPT) methods surrounding Tank 75 for the collection of three (3) subsurface soil samples per boring.
- Advancement of eight (8) hand augered borings (HA-01 through HA-08) surrounding Tank 75 for the collection of two (2) soil samples per boring.
- Completion of a final Site survey to accurately record the 2024 sampling locations.
- Management and disposal of investigation derived waste (IDW).
- Preparation of a Remedial Investigation report.

3.1.1 Deviations from Scope of Work

The scope of work outlined above, consistent with the SC/RIWP, was followed, except for the following deviations:

- Following submittal of Tank 75 sediment samples to Eurofins Laboratories, Inc. in Buffalo, New York (Eurofins), the lab informed AECOM that, due to the tar-like nature of the samples and the potential for damage to laboratory equipment, the sediment samples could not be analyzed for TCLP methods. Eurofins also stated that none of their other facilities could perform this analysis. AECOM also inquired with Pace Analytical Services and were told they wouldn't be able to analyze the oily sediment samples via the TCLP analyses either. Therefore, no oily sediment samples were analyzed via TCLP methods.
- Angled soil boring SB-06 located south of the Tank was unable to be advanced due to difficult drilling conditions, the presence of a berm and limited clearance within the Site boundary.

3.2 Site Clearing

Before other field activities commenced, between April 16 and 17, 2024, Site clearing activities were conducted by Ontario Specialty Contracting with oversight by AECOM field staff. A Link-Belt 210 X4 excavator with a brush flail mower attachment was utilized to clear and grub the vegetation within the

fenced perimeter of Tank 75. Hand clearing and grubbing with motorized hand tools was conducted in hard-to-reach places.

On June 27, 2024, additional Site clearing activities were conducted by Matrix Environmental Technologies Inc. (Matrix) with oversight by AECOM field staff to remove the overgrowth in the Site investigation areas. A Kubota L45 tractor with a brush hog attachment was utilized to clear and grub the vegetation along the perimeter of Tank 75. Hand clearing and grubbing with motorized hand tools was conducted in hard-to-reach places.

3.3 Site Surveys (AECOM)

On April 22, 2024, a survey of the Site boundaries, existing monitoring wells and Site reference points was completed to confirm the spatial relationship between the Site and surrounding parcels. The Site survey was completed by an AECOM NYS-licensed professional land surveyor. Site boundary corners in the vicinity of Tank 75 were marked with railroad spikes. The horizontal positions were tied into the North American Datum 1983 (NAD83) New York State Plane West. The vertical positions were tied to the North American Vertical Datum 1988 (NAVD88). Measuring points were recorded to a vertical accuracy of 0.01 feet.

Following all the field sampling activities, the locations and elevations of the 2024 investigation points (soil borings, hand auger locations, and monitoring wells) were surveyed on September 11, 2024, by an AECOM NYS-licensed professional land surveyor. Ground surface elevations were measured to an accuracy of 0.01 feet. Updated survey data were used to develop report figures and are summarized in **Table 3-1**.

3.4 Gamma Walkover Survey

On April 22, 2024, a radiological screening survey in the form of a gamma walkover survey (GWS) was completed within the Site boundary and around the perimeter of Tank 75 in areas where intrusive investigation activities were to take place. The GWS was completed by an AECOM certified health physicist (CHP). An Environmental Radiation Specialist of the NYSDEC visited the Site on April 22, 2024, to oversee the GWS.

The radiological screening results were used mainly to ensure worker safety while conducting intrusive activities, and to identify and segregate TENORM containing materials from the IDW for waste management purposes. TENORM containing materials are not a target of these RI activities.

A GWS is a screening technique useful for identifying locations worthy of additional study and for identifying locations that likely contain little or no radioactive contamination from gamma radiation emitting radionuclides. For the Tank 75 Site, there is no prior knowledge of historical radiological release directly on the Site; however, there have been documented wastes containing uranium ore tailings deposited at the adjacent Seaway Landfill and Ashland 1 sites immediately to the north and east of Tank 75. Due to this proximity of the Site to these properties with known radiological contaminants, the surface soils around Tank 75 were scanned to rule out radiological impacts.

The GWS process involved slowly scanning the soil with radiation detection equipment at a height of approximately 15 centimeters (6 inches) above the ground surface and at a speed of not greater than 0.5 meters per second (m/s). Equipment employed during the GWS included a Ludlum Model 44-9 detector with a Ludlum Model 12 instrument, a Ludlum Model 19 detector with an internal NaI instrument, and a Ludlum Model 44-10 detector with a Ludlum Model 3000 instrument. All instruments were obtained from and calibrated by Environmental Restoration Group, Inc. (ERG) of Albuquerque, NM, prior to equipment delivery to AECOM's Buffalo, New York office. Each instrument was checked with radioactive check sources to verify proper instrument response. Equipment calibration logs and logs indicating daily performance and response checks for each instrument used can be found in **Appendix C**. For mapping purposes, the gamma detector was directly interfacing with a global positioning system (GPS) unit with a data logger that automatically recorded the location and the gamma reading on a prescribed frequency (i.e., logging rate of once per second while the surveyor walks at 0.5 m/s). Soils were scanned along a

series of adjacent lanes to obtain full coverage of the land area around Tank 75 (within the limits of safe access).

To determine the mean background and standard deviation of the background data set, a “background” GWS was conducted in an area that is known to contain native soil, to have previously been remediated, or likely to contain non-radioactive fill materials. Two background GWS were performed in the same manner as the Tank 75 perimeter GWS, at a grassy area proximate the corner of River Road and the exit ramp of Interstate 190 North, and at a grassy area northwest of the Site within the United Refining Company property (4545 River Road, Tonawanda, New York).

The results of the GWS were evaluated prior to additional drilling, groundwater, soil, and sediment handling activities and the results of the survey determined if additional sampling precautions were needed. Should gamma walkover measurements exceed the established action levels, the radiation surveyor investigated if naturally occurring radioactive materials (NORM), or technologically enhanced NORM (TENORM) materials (e.g., slag or porcelain) were visually present. Should the detector response then exceed the United States Army Corps of Engineers (USACE) correlation gross count rate of 16,000 counts per minute (cpm), the impacted area would be flagged, work would temporarily stop, and the Ashland Project Manager would be notified. The Ashland Project Manager would then notify the NYSDEC Project Manager and NYSDEC Radioactive Materials Management Section as soon as possible to communicate the discovery of potential FUSRAP materials.

Several readings in excess of 16,000 cpm were detected in an area in the southwest portion of the Tank 75 Site, particularly along the southern perimeter fence of the Site. The highest GWS reading was 17,800 cpm. A figure with the gamma count rate is provided in **Appendix C** and shows readings exceeding 16,000 cpm as red dots. Based on elevated readings, one-minute static readings were completed at three locations (blue dots on the figure). The highest of these one-minute readings was 18,400 cpm. The elevated areas were marked with orange flagging. All of the GWS and one-minute static readings exceeding 16,000 cpm were located in an area where slag-like material is visible on the ground surface. The attached photos in **Appendix C** show examples of the slag-like material, which was visible over much of the southern border of Tank 75. Due to the presence of the slag-like material, it was the opinion of the CHP that the elevated readings were likely due to TENORM material rather than related to FUSRAP material. There was no additional action planned regarding this material. As part of the RI, there are soil sampling locations near these areas (HA-05, SB-06 and SB-07). Additional radiological screening was conducted during the soil sampling program, investigation activities were adjusted to avoid any location with an elevated reading, and all cuttings and soil samples were screened for radiological materials (as discussed further below). This information was conveyed to the NYSDEC in an email on April 22, 2024.

3.5 Groundwater Sample Collection

3.5.1 Groundwater Elevation Survey

Between April 25 and April 26, 2024, AECOM collected a synoptic round of water level readings from nine (9) monitoring wells surrounding the tank. Each well was gauged using an electronic Solinist 122 oil-water interface probe to determine the depth to water and the possible presence of any light non-aqueous phase liquids (LNAPL). The oil water interface probe was then lowered to the bottom of each well to measure depth to bottom and evaluate for the presence of any dense non-aqueous phase liquids (DNAPL). Levels were recorded on an appropriate log to the nearest 0.01 feet. The oil-water interface probe was field decontaminated between monitoring locations. No LNAPL or DNAPL was identified at monitoring well locations.

Additional water level readings were obtained from each of the nine (9) on-Site wells on July 11 and September 20, 2024.

3.5.2 Well Development

Prior to groundwater sampling, between April 25 and April 26, 2024, any dedicated tubing or equipment in the nine (9) existing monitoring wells were removed and the wells were redeveloped to clear any accumulated sediments and improve hydraulic connection between the formation and the well screen. Each monitoring well was developed using a foot valve and surge block attached to disposable high-density polyethylene (HDPE) tubing operated by a Waterra Hydrolift pump. New dedicated HDPE tubing was installed at each well during well development. Water quality measurements of temperature, pH, oxidation-reduction potential (ORP), specific conductivity, dissolved oxygen (DO), turbidity, color and odor were measured utilizing a Horiba U-52 flow-through cell, periodically during the well development process. Equipment calibration documentation can be found in **Appendix D**.

On April 25, 2024, four (4) monitoring wells were developed (MW05-01, MW05-02, MW05-03, and MW05-04). On April 26, 2024, five (5) monitoring wells were developed (MW-02D, MW-02S, MW-03, MW-04D, and MW-04S). Details of each well development are provided in the well development logs located in **Appendix D**. Following completion of the well development, the wells were allowed to stabilize for at least 72 hours, prior to sampling.

3.5.3 Groundwater Sampling

On April 29, 2024, five (5) monitoring wells were sampled (MW-02S, MW-03, MW05-01, MW05-03, and MW05-04). On April 30, 2024, four (4) monitoring wells were sampled (MW-02D, MW-04D, MW-04S, and MW05-02). Details of each sampling location are provided in the groundwater sampling logs located in **Appendix D**.

All monitoring wells were purged prior to sample collection using a peristaltic pump and dedicated disposable HDPE tubing to the extent possible. The pump intake was set at the midpoint of the screened interval, or as dictated by field conditions if there was minimal water in the well. The pump was operated at a target flow rate of 400 to 500 milliliters per minute (mL/min). During the purging process, the water quality parameters including temperature, pH, ORP, SC, DO, turbidity, color and odor, were measured utilizing a Horiba U-52 flow-through cell at five-minute intervals. Equipment calibration documentation can be found in **Appendix D**.

Well purging continued until these water quality parameters stabilized within specific tolerances for at least three consecutive readings. Monitoring wells MW-02D and MW-04D had minimal water following recharge, not allowing for the use of the peristaltic pump and flow-through cell; and instead, a bailer was used to sample at each well. Copies of low-flow purge logs are provided in **Appendix D**.

Groundwater samples were collected using low-flow sampling techniques to the extent practicable. Groundwater samples were submitted for analysis of TCL VOCs, TCL SVOCs, pesticides, PCBs, TAL metals, cyanide, and mercury. At each well, two sets of water samples were collected for metals analyses – one unfiltered and one field filtered through a 0.45-micron filter. Sample collected for metals analysis using a bailer at MW-02D and MW-04D were filtered by the receiving laboratory. Select groundwater samples were also analyzed for 1,4-dioxane and PFAS. Wells for PFAS analysis were selected to provide uniform distribution across the Site and to include shallow and deep sample intervals. Refer to **Table 3-2** for the groundwater sampling summary.

Groundwater sampling was completed in accordance with Groundwater Sampling Guidelines for Superfund and RCRA Project Managers (USEPA OSWER 542-S-02-001) and NYSDEC Sampling, Analysis, and Assessment of Per-And Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023). The default groundwater sampling method was in accordance with EPA's low stress (often referred to as low flow) sampling technique (EPA, 1996).

3.5.4 Hydraulic Conductivity Testing

Between May 23 and May 24, 2024, hydraulic conductivity (slug) tests were performed on one deep well (MW-02D) and three shallow wells (MW-02S, MW 03, and MW-04S). Prior to the start of slug testing, the depth to water was measured. Both rising and falling head tests were performed at MW-02S, however, only falling head tests were performed on MW-02D, MW-03, and MW-04S due to the extremely low rates of static hydraulic head recovery. A single falling head test was performed at MW-02D, and data indicated that hydraulic head increased during the duration of the test and did not decrease as expected. It is believed that the hydraulic head at this monitoring well was still recovering from purge and sampling activities completed between April 29 and 30, 2024, and this test was considered invalid.

Slug tests were performed in a similar manner as described in ASTM D-4044. The tests were performed using one of two solid plastic slugs approximately 2 feet long by 1.5 inches in diameter or approximately 2 feet long by 1.25 inches in diameter. Prior to testing, a Level TROLL 700 data logger was placed in the well. A slug was inserted into the well, and the drop in water level (falling head) was monitored using a Rugged Reader connected to the Level TROLL. At MW-02S the slug was removed after water level returned to approximately 95% of the original, static water level. The water level recovery (rising head) was monitored until it reached approximately 64% of the original, static water level when the test was ended due to time constraints following conversation with the AECOM project manager. At MW-03, data from a single falling head test was collected over an approximately 6-hour period. The drop in water level was removed after the water level returned to approximately 44% of the original, static water level when the test was ended due to time constraints following conversation with the AECOM project manager. Similarly, at MW-04S data from a single falling head test was collected over an approximately 19-hour period. The drop in water level was removed after the water level returned to approximately 30% of the original, static water level when the test was ended due to time constraints following conversation with the AECOM project manager.

The equipment (slug, water level meter, transducer) used in the test was decontaminated prior to use at the next well. A new length of nylon cord was used at each well to suspend the slug. The electronic transducer was set to collect water levels at appropriate intervals to provide adequate data to determine the hydraulic conductivity of the monitoring well. Data collected by the data logger was checked in the field immediately following each test. If the data were not adequate (incorrect timing, transducer cable moved or disturbed, etc.) from the judgement of the field geologist, the test was re-run so that adequate data were collected.

The testing data was reduced following the Bouwer and Rice Slug Test method (Bouwer and Rice, 1976; Bouwer, 1989) using AQTESOLV Version 4.5 software. Field notes regarding hydraulic conductivity are provided in **Appendix A**. Hydraulic conductivity testing parameters, calculations, results, and equipment calibration documentation are provided in **Appendix D**.

3.6 Bathymetry Survey (Thew Associates)

On May 22, 2024, a bathymetric survey of the Tank 75 bottom was completed by Thew Associates personnel with oversight by AECOM field staff to accurately estimate the volume of submerged sediment/sludge and to verify the depths of the sloping sides and bottom of the tank. A 16-foot shallow-draft survey vessel (boat) was mobilized to the Site with a Norbit iWBMS integrated multi-beam sonar system. The nominal range resolution of the sonar is less than 10 millimeters in up to 275 meters of water, with actual performance dependent on environmental factors. The Norbit iWBMS was capable of achieving high resolution data and 100% coverage of the investigation area. The boat was launched from the northeast corner of the tank where slip resistant mats had previously been placed. A Trimble® Model R12i GNSS receiver and a Seafloor Systems SonarMite® DFX dual frequency single-beam echo sounder were utilized to perform quality control verification of the depths received from the Norbit iWBMS. A Castaway® sound speed profiler was utilized to correct for the speed at which the sonar pulses travel through the water based on environmental factors such as depth, temperature, and salinity of water. HYPACK version 2023 was utilized for the data collection as the boat was navigated along grid transects within the tank. Post processing work was conducted to remove anomalous data and reduce the

sounding data to 3 square foot cells. Upon completion of the field work, the raw survey data was processed, and a hydrographic survey contour map of the sediment/sludge surface was generated with AutoCAD Civil 3D, as show in **Appendix E**. The resulting terrain surface was compared against the structure bottom elevation to develop an estimate of the volume of submerged sediment/sludge.

The water surface elevation at the time of the bathymetric survey was 590.75 feet. The Tank 75 bottom elevation was approximately 570 feet.

3.7 Radiological Screening during Ground Intrusive Work

Due to the possibility of encountering radioactive materials (discussed in Section 3.4 above) during the tank contents investigation (surface water and sediment sample collection activities) and ground intrusive activities (soil boring and sampling activities) radiological screening was conducted.

Prior to completion of radiological screening during intrusive work on-Site, AECOM provided the New York State Department of Health (NYSDOH) with a Notice of Proposed Use of Radioactive Material Under Reciprocity under license number 39-35587-01. Approval was received from NYSDOH under NYS Temporary Registration No. 16252 for each phase of work that included radiological screening (sediment and soil investigation work). Notice of Proposed Use of Radioactive Material Under Reciprocity and NYSDOH approval documentation is provided in **Appendix F**.

During sediment core screening activities, radiological screening was performed by an AECOM CHP using a Ludlum Model 44-9 detector with a Ludlum Model 12 instrument and a Ludlum Model 44-10 detector with a Ludlum Model 3000 instrument. During soil investigation activities, radiological screening was performed by an AECOM nuclear engineer using a Ludlum Model 44-9 detector with a Ludlum Model 2221 instrument and a Ludlum Model 44-10 detector with a Ludlum Model 2221 instrument. All instruments were obtained from and calibrated by ERG of Albuquerque, NM, prior to equipment delivery. Each instrument was checked with radioactive check sources to verify proper instrument response. Equipment calibration logs and logs indicating daily performance and response checks for each instrument used for both the radiological screening of sediment and soils are provided in **Appendix G** and **Appendix I**, respectively.

Radiologically impacted material with readings above the USACE pre-determined value of 16,000 cpm or Site background levels was not encountered in any of the sediment or soil core samples collected. Radiological screening activities are documented in field notes provided in **Appendix A**. Summaries of the radiological instrument readings for each sediment and soil core are provided in screening logs found in **Appendix G** and **Appendix I**.

As noted in Section 3.4, there is no prior knowledge of historical radiological release directly on the Site; however, there have been documented wastes containing uranium ore tailings deposited at the adjacent Seaway Landfill and Ashland 1 sites immediately to the northeast of Tank 75. Considering the proximity of the Site to these properties with known radiological contamination remediated under the FUSRAP program, the radiological screening results were used mainly to 1) ensure worker safety while conducting intrusive activities, 2) evaluate the possible presence of FUSRAP-related materials, and 3) to identify and segregate TENORM containing materials from the IDW for waste management purposes. TENORM containing materials are not a target of these RI activities.

In addition to radiological field screening, two subsurface soil samples, SB-01-C and SB-05-C, were collected and submitted for analysis of thorium-232, thorium-234, radium-226, radium-228, uranium-234, uranium-235, and uranium-238 by USEPA method 901.1. The submission of these samples was for quality control purposes to compare results to the MicroShield® modeling analysis used to determine the field screening threshold for radiologically impacted subsurface soil cores (200 cpm above background) based on 3 picocuries per gram (pCi/g) radium-226. According to a 1999 report on work sponsored by USACE for Seaway Area A, NY (Argonne National Laboratory, 1999), and as noted in the NYSDEC approved SC/RIWP, the 3 pCi/g radium-226 value corresponds with the USACE pre-determined threshold of 16,000 cpm. Results for both soil samples were less than 1 pCi/g radium-226, well below the threshold

for being considered radiologically impacted. The results of the soil analysis confirmed the modeling analysis criteria described in the SC/RIWP. Laboratory results are provided in **Appendix M**.

3.8 Surface Water and Sediment Sample Collection

Between June 3 and June 4, 2024, surface water and sediment testing were performed on Tank 75. A sampling vessel / pontoon boat provided by Atlantic Testing was placed onto the water by a Liebherr all-terrain crane provided by Clark Rigging. The crane was placed at the northeast corner of the Site just outside of the fenced area to lower the vessel into the northeast corner of the tank. Once the sampling vessel was in the water, two (2) Atlantic Testing personnel and one (1) AECOM staff member boarded the vessel from the northeast slope of the tank, where slip-resistant mats were previously placed.

Surface water and sediment samples were collected from Tank 75 over the course of two (2) days and logged by additional AECOM staff on the shore. Sampling locations are shown on **Figure 3-1**. Surface water and sediment sampling forms are provided in **Appendix G**.

The water surface elevation at the time of the surface water and sediment testing was 591.2 feet above mean sea level (AMSL).

3.8.1 Surface Water Sampling

Surface water samples were collected from approximately the center of Tank 75 (SW-01), from the sampling vessel (**Figure 3-1**). The surface water samples were collected using a peristaltic pump with weighted HDPE tubing. Following sample collection, water quality parameters were measured from a co-located aliquot which included pH, DO, SC, ORP, temperature, and turbidity.

Three (3) vertically distributed samples were collected at this location: the uppermost sample was collected from approximately one foot below the surface (SW-01-1); the second sample was collected from approximately the middle of the water column, approximately seven feet below the surface (SW-01-2); and the third water sample was collected from approximately one foot above the sediment/sludge surface, or approximately 13 feet below the water surface (SW-01-3). Surface water samples were submitted for analysis of TCL VOCs, TCL SVOCs, pesticides, PCBs, TAL metals, cyanide, and mercury. One (1) surface water sample (SW-01-2) was also be analyzed for 1,4-dioxane and PFAS. Refer to **Table 3-2** for the surface water sampling summary. Surface water sampling logs are provided in **Appendix G**. Surface water sampling activities were conducted in accordance with NYSDEC PFAS Guidance (NYSDEC, 2023).

3.8.2 Sediment/Sludge Sampling

Sediment cores were collected at 15 locations throughout Tank 75 based on an approximate 25-foot grid pattern (SED-01 to SED-15) using vibracore sampling methods from the sampling vessel (**Figure 3-1**). Vibracoring is a method of vibrating a core tube into underwater sediment. The vibration causes liquefaction of sediments along the exterior of the core tube and reduces friction, allowing easier core-barrel penetration into sediments. When the core is driven fully into the sediments, the vibration is stopped, and the core-barrel is pulled out. Suction due to the difference in pressure between the top and bottom of the core prevented sediments from falling out of the core barrel upon retrieval from the subsurface. Sediment core logs are provided in **Appendix G**.

Sediment cores were evaluated to identify each type of sludge / sediment material that is currently present and the nature of each phase of material. Prior to introduction of the vibracore sampler to the water, the top and bottom of the sediment were identified and measured using a measuring pole at each sediment sampling location. The depth to top of sediment and depth to refusal of the measuring pole (assumed tank bottom) were measured to the water's surface. Upon retrieval of each sediment core, a health physicist scanned each core for elevated gamma radiation. An AECOM geologist then performed core descriptions and measurements for the different sediment layers. One (1) sediment/sludge sample was collected from each sediment core for laboratory analysis. Discrete samples of either the soft sludge or medium-stiff sediment were collected from each core such that six samples were collected of the soft

sludge and nine samples were collected of the medium-stiff sediment. The sludge/sediment consistencies of the samples, either soft or medium-stiff/hard, are listed for each sample on Table 5-3. Sediment samples were submitted for analysis of TCL VOCs, TCL SVOCs, pesticides, PCBs, TAL metals, cyanide, mercury, and total organic carbon (TOC). Select sediment samples were also analyzed for 1,4-dioxane and PFAS. Samples for 1,4-dioxane and PFAS analysis were selected to provide uniform distribution across the Site and to include shallow and deep sample intervals to best characterize sediment within the tank. Refer to **Table 3-2** for the sediment/sludge sampling summary. Sediment sampling activities were conducted in accordance with NYSDEC PFAS Guidance (NYSDEC, 2023).

Thicknesses of each material in different areas of Tank 75 were recorded and used to help quantify the volume of sludge / sediment layers (see **Table 3-3**). The total depth to the gunite bottom of Tank 75 was gauged at each of the locations to provide the estimated structure bottom elevation/topography.

3.9 Drilling and Soil Sample Collection

3.9.1 Underground Utility Locating

Prior to the drilling activities, public underground utility locating was performed by the boring contractor by notifying UDig NY.

On July 8, 2024, AECOM retained GPRS Inc. (GPRS) to evaluate boring locations for the possible presence of subsurface utilities prior to the drilling activities. GPRS utilized a Ground Penetrating Radar (GPR) unit coupled with a 250 to 450-megahertz (MHz) antenna and an electromagnetic pipe and cable locator over the proposed boring locations and marked out detected features directly on the ground surface, as needed. GPRS documented their survey activities in a summary report. A copy of the private utility locating documents is provided in **Appendix H.** Due to the uneven ground surface and thick vegetation, specific utilities could not be identified with certainty. However, several underground anomalies were identified, and these are marked on the figure included with the summary report. The long, narrow anomaly located on the east side of Tank 75 was encountered during initial attempts at drilling of SB-10. The anomaly appears to be a concrete footer or foundation that may run the length of the eastern edge of Tank 75.

In addition, a Site walk was completed on July 8, 2024, with individuals from the adjacent United Refining Company (URC) Tonawanda Terminal with knowledge of the Site to assist in verifying the presence of subsurface utilities prior to drilling. URC personnel did not identify any previously unidentified underground utilities.

In addition, soil borings were manually precleared to a depth of approximately 5 feet prior to drilling using either a hand auger or air knife/vacuum extraction equipment.

3.9.2 Drilling

Between July 8 and 15, 2024, AECOM staff oversaw the installation of soil borings performed by Parratt-Wolff Inc. (Parratt-Wolff) using either a Geoprobe® 7822DT track-mounted DPT drill rig with Geoprobe® DT22 dual tube tooling (used between July 8 and July 12, 2024) or a Geoprobe® 6712DT track-mounted DPT drill rig with Macro-Core® tooling (used July 15, 2024). A total of four (4) soil borings were completed around Tank 75, including one (1) vertical boring (SB-05) and three (3) angled borings (SB-01, SB-04, and SB-10).

Between August 8 and August 9, 2024, AECOM staff oversaw the installation of soil borings performed by Matrix using a Geoprobe® 7822DT track-mounted DPT drill rig with Macro-Core® tooling. A total of five (5) vertical soil borings were completed around Tank 75 (SB-02, SB-03, SB-07, SB-08, and SB-09).

Angled soil boring SB-06 located south of Tank 75 was unable to be advanced due to difficult drilling conditions, the presence of a berm, and limited clearance within the Site boundary. As result of these conditions AECOM notified and received approval from the NYSDEC on August 12, 2024, to omit this boring from the remedial investigation.

The upper 5 feet of most borings was cleared using either a hand auger or air knife (i.e. Vac-Tron®). Due to inherent difficulties of performing angled borings using DPT equipment, angled borings SB-01 and SB-04 were not manually precleared at surface. These locations were previously investigated by GPRS, and discussions were held with representatives of the URC property regarding the potential presence of subsurface utilities in the area. Using these methods, it was confirmed that there were no subsurface utilities present. All other locations were cleared to 5 feet bgs using a hand auger except boring SB-10 which was cleared using air knife. The remaining length of each boring was continuously sampled via DPT methods using a 4-foot long, acetate-lined sampler (employed by Parratt-Wolff July 8 through 15, 2024) or a 5-foot long, acetate-lined sampler (employed by Matrix August 8 and 9, 2024), to attempt to achieve a maximum vertical depth of 30 feet bgs, except for SB-07 which was continuously sampled to 35 feet bgs due to the rise in grade in the southern portion of the Site. Soil borings were advanced to approximately the same vertical depths, with a maximum depth of approximately 2 feet below the bottom of the Tank 75 gunite liner (or approximately 30-35 feet bgs).

The angled borings SB-01 and SB-10 were each drilled at approximately a 37-degree angle measured from horizontal (53-degree angle from vertical), while the SB-04 angled boring was drilled at approximately a 45-degree angle measured from horizontal, all to a depth of 27 to 30 feet bgs to attempt to collected soil samples from beneath the bottom the Tank 75 structure. The variation in angle occurred due to the difficult nature of the angled borings. The 37-degree angle, closer to parallel with the ground surface when compared to the 45-degree angle, was not conducive to drilling at the lengths the investigation was looking to achieve and was identified as the limits of this drilling setup. Drilling at a 37-degree angle drastically increased time constraints on the project, increased the potential for equipment to break or get lost in the boring hole itself, increased the potential for safety hazards on-Site, and was determined to be unfeasible for the remainder of the investigation. A 45-degree angle was employed at SB-04 following discussion with the Parratt-Wolff drill team on-Site to continue the angled boring investigation, while making the work more technically feasible. The AECOM geologist classified the soils in accordance with the Unified Soil Classification System (USCS) and soils were continuously logged during subsurface sampling using EQuIS Collect. The soil boring locations are shown in **Figure 3-1**.

All soil borings were backfilled with a combination of soil cuttings that were not visibly contaminated (i.e. olfactory signs, elevated PID, staining, and/or visible product) and hydrated bentonite chips where necessary to backfill to surface grade. Angled borings were sealed with cement-bentonite grout. Any soil cuttings generated by soil boring activities that were not used for sampling or returned to the boring were containerized pending final disposition.

Subsurface observations were recorded on the boring logs presented in **Appendix I** and summarized in **Table 3-4**.

3.9.3 Hand Augering

Between July 10 and 11, 2024, AECOM staff advanced eight (8) borings via hand auger (HA-01 through HA-08) around Tank 75. The hand auger, consisting of a stainless-steel auger bit connected to a cylinder, was utilized to collect soil samples up to 4 feet bgs. The AECOM geologist classified the soils in accordance with the USCS and soils were continuously logged during subsurface sampling using EQuIS Collect. The hand augered locations are shown in **Figure 3-1**. Hand auger borings were backfilled with soils not utilized for sampling that were not visibly contaminated (i.e. olfactory signs, elevated PID, staining, and/or visible product), or a combination of soil and bentonite chips where necessary. Any soil cuttings generated by hand auger activities that were not used for sampling or returned to the boring were containerized pending final disposition.

Subsurface observations in the hand augers were recorded on boring logs presented in **Appendix I** and summarized in **Table 3-4**.

3.9.4 Soil Sampling

Soil sampling at soil borings (SB-01 through SB-05 and SB-07 through SB-10) was completed via DPT methods using a 4-foot long, acetate-lined dual tube or Macrocore sampler (employed by Parratt-Wolff

July 8 through 15, 2024) or a 5-foot long, acetate-lined Macrocore sampler (employed by Matrix August 8 and 9, 2024) up to a maximum vertical depth of 35 feet bgs. Three (3) soil samples were retained from each boring for laboratory analysis. Soil samples to be analyzed for VOCs were collected using Terra Core samplers.

Upon recovery, each soil sample was inspected for evidence of contamination (e.g., visible staining, odors, etc.) and screened for total VOCs using a PID. The first sample was collected from the surface (0' to 0.2 feet bgs) prior to the start of drilling at the investigation location. The second sample was collected from the interval exhibiting the greatest indication of contamination (e.g., elevated PID reading, odor, staining) above the water table. If no visible sign of contamination was present above the water table, the interval just above the water table was sampled. If both historical fill material and native material were present in a soil boring, a sample from each type of material was collected.

Shallow soil sampling at the hand augered locations (HA-01 through HA-08) was completed using a hand auger to depths of up to 4 feet bgs. Once extracted by the hand auger, soil samples were collected for analysis of VOCs using Terra Core samplers. Following collection of VOCs samples, soils from each stratigraphic unit to be sampled were placed in a stainless-steel mixing bowl to homogenize the sample, and then placed into the appropriate sampling containers. Two (2) soil samples were retained from each hand auger for laboratory analysis.

Soil samples collected at all locations were submitted for analysis of TCL VOCs, TCL SVOCs, pesticides, PCBs, TAL metals, cyanide, and/or mercury. Select soil samples were also analyzed for 1,4-dioxane and PFAS. Refer to **Table 3-2** for the soil sampling summary. Soil sampling activities were conducted in accordance with NYSDEC PFAS Guidance (NYSDEC, 2023).

3.10 Community Air Monitoring

In accordance with the CAMP for VOCs and particulates, monitoring was performed during intrusive activities associated with the Site, which included surface water and sediment sampling as well as the completion of soil borings and hand augers. CAMP monitoring was performed according to the guidance outlined in the SC/RIWP, the AECOM site-specific HASP, NYSDOH (2000) Generic CAMP, and NYSDEC DER-10 Guidance. For the surface water sand sediment sampling, only VOCs were monitored continuously at the upwind and downwind perimeters of the work area at temporary monitoring stations, which consisted of one MiniRae 3000 PID. For drilling and soil sampling, VOC and dust particulates were monitored continuously at the upwind and downwind perimeters of the work area at temporary monitoring stations, which consisted of one MiniRae 3000 PID and one Dusttrak II 8530 per station. In addition to using the particulate monitors, fugitive dust migration was visually assessed during ground intrusive work activities. During periods of heavy rain which were experienced at times during soil investigation work on July 10, 2024, CAMP monitoring was halted. No soil investigation work occurred during this time. Due to technical error, the upwind Dusttrak did not properly log on July 8, or after an initial 15-minute period on August 8, 2024. There was no evidence of fugitive dust noted during these instances and the downwind monitoring station indicated no exceeding particulate values.

There were no exceedances of VOCs during CAMP monitoring as part of the collection of surface water and sediment samples. Upwind and downwind monitoring data are summarized in **Appendix J**.

There were no exceedances of VOCs or particulate, or evidence of fugitive dust, during CAMP monitoring as part of the drilling and soil sampling activities. Upwind and downwind monitoring data are summarized in **Appendix J**.

3.11 Sample Analyses

Samples collected during the field investigations were delivered under chain-of-custody protocol to Eurofins, a NYSDOH Environmental Laboratory Approval Program (ELAP) certified laboratory. Analyses performed are listed in **Table 3-2**, and summarized below:

Groundwater: TCL VOCs, TCL SVOCs including 1,4-dioxane, pesticides, PCBs, PFAS, metals, mercury and cyanide.

Surface Water: TCL VOCs, TCL SVOCs including 1,4-dioxane, pesticides, PCBs, PFAS, metals, mercury, and cyanide.

Sediment: TCL VOCs, TCL SVOCs including 1,4-dioxane, pesticides, PCBs, PFAS, metals, mercury cyanide, and TOC.

Surface Soil: TCL SVOCs including 1,4-dioxane, pesticides, PCBs, PFAS, metals, mercury and cyanide.

Subsurface Soil: TCL VOCs, TCL SVOCs including 1,4-dioxane, pesticides, PCBs, PFAS, metals, mercury, and cyanide.

As discussed in Section 3.1.1, sediment samples collected from Tank 75 were originally supposed to be analyzed for waste characterization parameters by the TCLP method. However, following submittal of Tank 75 sediment samples to Eurofins, the lab informed AECOM that, due to the tar-like nature of the sediment and the potential for damage to laboratory equipment, the sediment samples could not be analyzed by TCLP methods. Eurofins stated that none of their other facilities could perform this analysis. AECOM also inquired with Pace Analytical Services and were told they would not analyze the oily sediment samples via the TCLP analyses either. Therefore, no oily sediment samples were analyzed via TCLP methods.

3.12 Management and Disposal of Investigation-Derived Waste

3.12.1 Waste Management

Well development and purged groundwater, surface water, decontamination water, and sludge / sediment generated from the investigation of Tank 75 contents, including water used for decontamination of sampling equipment, were returned to the structure.

Used disposable sampling equipment and personal protective equipment (PPE) that came in contact with non-visually impacted media exhibiting no gross contamination were containerized in 55-gallon steel drums. Soils with evidence of gross contamination and used disposable sampling equipment and PPE that came in contact with grossly contaminated soils were segregated and containerized in 55-gallon steel drums. Materials that may have come into contact with the Tank 75 contents, including sampling equipment and used PPE, were considered hazardous waste and containerized in 55-gallon steel drums.

All drums were labeled to identify contents and accumulation start date and staged within an on-Site accumulation and containment area prior to final disposal. The containment area consisted of polyethylene plastic sheeting equipped with 4”x4” lumber used to create a raised berm on all sides. Considering the formerly identified hazardous nature of Tank 75 contents (K049, K050, K052) and on-Site drummed material that may have come in contact with its content, the accumulation and containment area was inspected weekly as required by 40 CFR Part 262.16(b)(2)(iv). Based on the current sampling program, waste codes D007 [chromium], D008 [lead], K049 and K052 were identified.

Accumulation area weekly inspection logs are presented in **Appendix K**.

3.12.2 Radioactive Waste Management

As noted in Section 3.7, no IDW indicating elevated radiological readings was encountered during RI activities.

3.12.3 Decontamination Procedures

Non-disposable equipment used during the investigation of Tank 75 contents (e.g., bathymetry survey equipment, Vibracore sampler, and water vessels) were decontaminated with a combination of Simple Green® all-purpose cleaner or non-phosphate detergent (Alconox®) and a potable water solution with either a standard or hot water industrial pressure washer. Non-disposable equipment used during all other RI activities (e.g., Macrocore samplers and drilling rods) were decontaminated with a non-phosphate detergent (Alconox®) and potable water solution. Field equipment rinsate blanks were generated and analyzed to monitor the effectiveness of field decontamination procedures.

Wash buckets and potable water were set up at the decontamination area. This included an area for washing hands and a boot wash.

3.12.4 Waste Storage

IDW drums were stored and covered with plastic sheeting in the decontamination area located northeast of Tank 75, prior to waste characterization and off-Site disposal. Drums were properly labeled and indicated as “Hazardous Waste Pending Analysis”, where applicable, and also included the Site information, accumulation date, waste characterization (i.e., toxic), and sampling date.

The drums and drum storage area were inspected weekly, and inspections were documented on weekly inspection forms. The weekly inspection forms are attached to **Appendix K**.

Hazardous waste was removed from the Site within 180 days of the start of waste accumulation.

Following removal of all containers from the decontamination area, the drum storage area was properly closed on November 13, 2024.

3.12.5 Waste Characterization

AECOM collected waste characterization samples to classify the IDW and coordinate disposal at appropriate licensed facilities. Waste characterization samples were collected during the field investigations and delivered under chain-of-custody protocol to Eurofins in Buffalo, New York. Analyses performed are listed in **Table 3-2**, and summarized below:

Groundwater: None

Surface Water: Corrosivity, pH, ignitability, reactivity, ethylene glycol, British Thermal Unit (BTU), TEPH and paint filter.

Sediment: Corrosivity, pH, ignitability, reactivity, ethylene glycol, BTU, TEPH and paint filter.

Surface Soil: None

Subsurface Soil: None

3.12.6 Waste Transportation and Disposal

All IDW not managed on-Site was shipped for off-Site disposal to the following facilities:

- BU172468-MT: Nine (9) empty drums
    - Clean Harbors Spring Grove, Cincinnati, OH
    - Reclamation/Landfill
- CH2853762: One (1) drum with soils
    - EPA Waste Code D008 (lead)

    - Clean Harbors Lone Mountain, OK Sub-C landfill via Spring Grove
    - MICROENCAPSULATION-Landfill
- CH2853653, CH2853675, SB-07 & CH2853799: Seven (7) drums with soil and debris
    - EPA Waste Codes D007 (chromium), D008 (lead), K049, and K052
    - Clean Harbors El Dorado, AR
    - Incineration

Prior to off-Site shipment and disposal, the IDW information for the proposed waste transporter and disposal facility were provided to the NYSDEC on November 5, 2024, for review. A Hazardous Waste Manifest that documented shipping information, including transporter and disposal facility names and locations, accompanied all hazardous waste shipments. An Ashland-approved waste contractor, Clean Harbors, coordinated the waste disposal, transportation, treatment, and disposal.

Hazardous waste was removed from the Site on November 13, 2024.

Waste records and manifests are attached to **Appendix K**.

3.13 DER-31 Green and Sustainable Remediation

Pursuant to the NYSDEC DER-31 Green and Sustainable Remediation (GSR) initiative, GSR principles and techniques shall be implemented to the extent feasible in the Site management of the remedy. The major GSR components are as follows:

- Considering the environmental impacts of treatment technologies and remedy stewardship over the long term;
- Reducing direct and indirect greenhouse gas and other emissions;
- Increasing energy efficiency and minimizing use of non-renewable energy;
- Conserving and efficiently managing resources and materials;
- Reducing waste, increasing recycling, and increasing reuse of materials which would otherwise be considered a waste; and,
- Incorporating GSR principles and techniques to the extent feasible in the future development at this Site. Any future on-Site building shall be constructed, at a minimum, to meet the 2020 Energy Conservation Construction Code of New York (or most recent edition) to improve energy efficiency as an element of construction.

During the Remedial Investigation activities, the following GSR efforts were employed:

- Vehicle idling was reduced.
- Groundwater sampling pumps were powered by a battery instead of a gas-powered generator.
- Sample tubing was precisely measured as to not generate any excess which would contribute to additional waste.
- Waste materials amendable for recycling (i.e., carboard, glass, etc.) were disposed of in the proper recycling receptacle.
- IDW drums were removed from the Site in a single event at the end of entire program rather than daily pickups.
- When applicable, visits to stores to purchase field supplies, etc., and trips to the laboratory to drop off sample coolers were limited to save energy, reduce emissions, reduce localized noise, vibration, and wear and tear on roads.

4. Site Physical Characteristics

Information obtained during the current and previous investigations performed at the Site pertaining to topography, geology, and hydrogeology, is summarized in the following sections.

4.1 Physical Setting and Surface Water Drainage

The Site is generally flat with a gentle slope toward the Niagara River, located approximately 3,100 feet to the northwest. The dominant terrain feature is the Seaway Landfill, located approximately 500 feet northeast of the Site and forming a ridgeline running northwest to northeast.

Surface water drainage in the immediate area of Tank 75 is into the tank. To the south, west, and north, drainage is controlled by containment diking and is directed to the United Refining Company's oily water sewer system. Drainage east of the tank moves eastward and flows into Two Mile Creek via culverts and drainage swales.

4.2 Geologic Setting

The Site is located in the Erie-Ontario Lowlands Physiographic Province, composed of lake plains bordering the Great Lakes. The U.S. Department of Agriculture's Soil Conservation Service (USDA, 2024) identified the surface soils at the Site as Urban land consisting of highly disturbed land.

The Site and surrounding area are predominately underlain by reddish brown and gray varved glaciolacustrine silty clay and clayey silt deposits that are at least 40 feet thick. Soil boring logs from the Remedial Investigation Report for the Tonawanda Site (Bechtel, 1993), show that clay extends to a depth of 63 feet bgs in the vicinity of Tank 75, and depth to bedrock is approximately 77 feet bgs. Previous test borings on the Site indicate that the glaciolacustrine deposits contain desiccation cracks to depths of approximately 25 feet bgs that permit vertical groundwater recharge and may also provide the principal conduits for horizontal groundwater flow in this interval. The natural glaciolacustrine deposits have been disturbed and reworked to depths ranging between 0.3 to 7.0 feet (Earth Dimensions, Inc. [EDI], 1990). This altered material is identified as fill on the soil boring/monitoring well construction logs prepared by EDI.

Glaciolacustrine deposits of red-brown silty clays and clayey silts were identified during RI field activities to depths up to 35 feet bgs, including locations where angled borings were advanced to depths assumed to be below Tank 75. Blue-gray mottling was identified within native glaciolacustrine deposits and groundwater was primarily identified in soil cores at depths of 25 feet bgs or greater. Non-native fill material consisting of poorly graded sand with silt as well as disturbed or reworked native clays were identified from surface to depths up to 5 feet bgs. Impacts to subsurface soil including odor, visible staining, or elevated PID readings appear localized to specific shallow areas surrounding the tank and are most likely associated with former operations at or around the Site rather than attributable to a release of the tank itself.

Refer to **Figure 4-1.1** for the geological cross section lines on the Site Plan, and to **Figures 4-1.2** through **4-1.4** for the geological cross sections. Boring logs are provided in **Appendix I**.

4.3 Hydrogeologic Setting

The Site is underlain by 25 to 55 feet of glaciolacustrine clay with a low hydraulic conductivity. In the vicinity of Tank 75, shallow groundwater is believed to represent a perched system that is intermittent and associated with precipitation events. A shallow semi-confined hydrogeologic system has also been identified, which consists of sand lenses at depths of approximately 16 to 40 feet bgs associated with glaciolacustrine deposits.

Groundwater Levels and Flow Direction

Between April 25 and April 26, 2024, water level readings were collected by AECOM prior to well development. The depth to groundwater ranged from approximately 2.01 feet bgs (MW05-04) to 7.67 feet bgs (MW-02D), and the groundwater elevations ranged from approximately 588.52 feet AMSL (MW-02D) to 598.21 feet AMSL (MW05-03), as presented in **Table 4-1**. Due to the proximity of the monitoring well network to Tank 75, groundwater elevation contours were not generated. Based solely on groundwater elevations at each well, groundwater flow direction was generally towards the west/northwest, as shown on **Figure 4-2.1**.

On July 11, 2024, water level readings were collected by AECOM to obtain hydrogeological information during a different season. The depth to groundwater ranged from approximately 0.86 feet bgs (MW05-04) to 13.09 feet bgs (MW-02D), and the groundwater elevations ranged from approximately 583.10 feet AMSL (MW-02D) to 599.05 feet AMSL (MW05-03), as presented in **Table 4-2**. The groundwater flow direction was generally towards the west/northwest, as shown on **Figure 4-2.2**.

On September 20, 2024, the depth to groundwater ranged from approximately 2.53 feet bgs (MW-02S) to 9.13 feet bgs (MW-02D), and the groundwater elevations ranged from approximately 587.06 feet AMSL (MW-02D) to 594.88 feet AMSL (MW05-03), as presented in **Table 4-3**. The groundwater flow direction was generally towards the west/northwest, as shown on **Figure 4-2.3**.

Vertical hydraulic gradients were calculated for the two shallow/deep well pairs; MW-02S/MW-02D and MW-04S/MW-04D using data collected from the April 2024 gauging event. The calculated vertical hydraulic gradient for the MW-02S/MW-02D well pair is estimated at -0.58 feet per foot; indicating a downward gradient. The calculated vertical hydraulic gradient for the MW-04S/MW-04D well pair is estimated at -0.39 feet per foot; indicating a downward gradient.

Estimated Hydraulic Conductivity

Results of the May 2024 hydraulic conductivity testing indicate that the average hydraulic conductivities in overburden wells ranged from 2.44×10^{-5} centimeter per second (cm/s) at MW-02S to 6.90×10^{-7} cm/s at MW-03, as presented in **Table 4-4**.

4.4 Tank 75 Contents

Stormwater accumulates within Tank 75. At the time of SC/RI field activities, the total water depth was approximately 21 feet. Surface water has regularly been identified with a sheen because it comingles with impacted sludge and sediment located at the bottom of the tank. During warmer months, black, globular petroleum product has been identified at the surface most likely rising from deeper portions of the tank as the water within warms with increased air temperature. Accumulated stormwater has occasionally been pumped to lower the water levels within Tank 75. The water has been pumped to the Tonawanda POTW via the United Refining facility's API oil-water separator.

Two primary sediment types were identified within the tank during sediment investigation activities: a wet, soft, oily sludge with significant petroleum impacts, and a medium stiff to hard sediment, also with significant petroleum impacts, located below the previously noted unit. The soft sediment was identified via a combination of hand probing from the water vessel during vibracore sampling and sediment core logging on shore following collection. The identified depth of soft sediment ranged from 8.0 to 19.7 feet below the water surface (bws) with a thickness that ranged from 0.2 to 2.8 feet across 15 investigation locations. The medium stiff to hard sediment was identified below this unit at depths ranging from 10.4 to 21.6 feet bws with a thickness that ranged from 0.7 to 3.5 feet across 15 investigation locations. Total sediment thickness within the bottom of the tank ranged from 2.3 to 5.5 feet. The bottom of the hard sediment was inferred to be equivalent to the estimated bottom of Tank 75 and predominately determined via probe refusal. In some cases, as noted in sediment core logs provided in **Appendix G**, the total recovery of the sediment core completed to refusal exceeded the thickness of the sediment determined via hand probe. In these instances, the depth of the bottom of the tank (bottom of medium stiff / hard sediment) is estimated based on the total recovery of the sediment core.

Ambiguity in sediment thickness and tank bottom estimation arises from differences between hand probing and sediment core recovery methods. Hand probing provided tactile feedback to infer the bottom of the tank but may underestimate sediment thickness due to resistance from medium stiff to hard sediment that had been previously identified. Conversely, sediment core recovery can exceed the inferred sediment thickness if the vibracore sampler over-recovers material due to the effects of compaction or suction during sampling. Furthermore, it is possible that refusal of the vibracore sampler occurred due to refusal within medium stuff to hard sediment as opposed to the true tank bottom. Where discrepancies occur, the tank bottom is estimated based on total core recovery.

The total volume of the upper soft sludge was approximately 1,380 cubic yards; the total volume of the lower medium to hard sludge was approximately 4,570 cubic yards; resulting in a total estimated sludge/sediment volume of approximately 5,950 cubic yards.

The tank's gunite liner was noted as missing/removed from areas proximate two of the 15 sediment investigation locations (SED-03 and SED-15) considering glaciolacustrine silty clay similar to surrounding Site soils was identified within the bottom of the sediment core. These locations represent the northeast and southeast most sediment investigation locations.

Refer to **Figure 4-3.1** for the cross-section lines of Tank 75 on the Site Plan, and to **Figures 4-3.2** and **4-3.3** for the surface water and sediment/sludge cross sections.

5. Nature and Extent of Contamination

Upon receipt from the laboratory, the analytical results were validated by an AECOM chemist in accordance with NYSDEC DER-10 and USEPA Region II data validation procedures. The Data Usability Summary Reports (DUSRs) are provided in **Appendix L**. The laboratory certificates of analyses are provided in **Appendix M**.

5.1 Applicable Standards, Criteria, and Guidance

The data are compared to the following applicable SCG values.

Groundwater and Surface Water

The groundwater and surface water analytical results were compared to the class GA groundwater standards or guidance values listed in NYSDEC TOGS 1.1.1 (NYSDEC, 1998), as amended, protection for a source of drinking water.

The surface water analytical results were also compared to the class A, A-S, AA, AA-S surface water standards or guidance values listed in NYSDEC TOGS 1.1.1 (NYSDEC, 1998), as amended, protection for surface water. The lowest value available of the Source of Drinking Water (surface water), Human Consumption of Fish (fresh waters), Fish Propagation (fresh waters), Fish Survival (fresh waters), Wildlife Protection (fresh waters), and Aesthetic (fresh water), was selected as the standard.

Soil and Sediment / Sludge

The soil and sediment analytical results were compared to Unrestricted Use, Industrial Use, and Protection of Groundwater soil cleanup objectives (SCOs) presented in NYCRR Chapter IV Part 375.6, effective 12/14/06 (NYSDEC, 2006). Where there were no Part 375.6 SCOs, the NYSDEC (2010c) CP-51 Table 1 Supplemental SCOs, effective 12/2/10, were provided. Where there were no Unrestricted Use SCOs, the lowest of the Supplemental SCOs was selected.

For PFAS constituents, soil and sediment analytical results are compared to the guidance values presented in the NYSDEC PFAS Guidance, dated April 2023 (NYSDEC, 2023).

As the sediment is contained within the gunite lined tank and there is no outlet to natural waters, and thus no potential risk to aquatic or marine life, sediment sample results were not compared to NYSDEC sediment guidance values (NYSDEC, 2014). This data will be used in evaluating remedial options.

5.2 Groundwater Analytical Results

Nine (9) groundwater samples and one (1) field duplicate groundwater sample were collected from nine (9) monitoring wells during the RI field investigation activities completed on April 29 and 30, 2024. Groundwater samples were analyzed for VOCs, SVOCs including 1,4-dioxane, pesticides, PCBs, metals and inorganics, and PFAS. The groundwater analytical results are summarized in **Table 5-1**. Detected groundwater analytical results for all compounds are presented in **Figure 5-1**.

Field Measurements

Field water quality measurements of temperature, pH, ORP, specific conductivity, DO, turbidity, color and odor were recorded during well purging and groundwater sample collection. Well purging and sampling logs are provided in **Appendix D**.

The measurements recorded during groundwater sampling of the nine (9) monitoring wells in April 2024 are briefly discussed below.

- Temperatures ranged from 9.36 to 15.26 degrees Celsius.

- pH values were generally neutral, ranging from 7.48 standard units (SU) to 8.61 SU, except for an initially higher reading of 10.35 SU at MW05-02.
- ORP values ranged from 32 to 167 milliVolts (mV).
- Specific conductivity values ranged from 0.94 to 4.42 milliSiemens per centimeter (mS/cm).
- DO levels ranged from 1.50 to 7.26 mg/L, except for a higher reading of 396 mg/L at MW05-02.
- Turbidity values ranged from 2.5 to 98.9 nephelometric turbidity units (NTUs), except for initially high readings of 1,000 and 939 NTU at MW05-01 and MW05-04, respectively.
- Color was clear, except for an initial brown color at MW05-01 and MW05-04.
- There was no odor detected.

Monitoring wells MW-02D and MW-04D had minimal water following recharge, not allowing for the collection of water quality parameters.

VOCs

VOCs were not detected at concentrations above groundwater criteria in any of the nine (9) monitoring wells. One or more of five (5) VOCs (1,1-DCA, acetone, carbon disulfide, cis-1,2-DCE, and/or vinyl chloride), were detected in at least one of four (4) monitoring wells (MW-02D, MW-04S, MW05-02, and MW05-03) but at concentrations below the groundwater criteria.

SVOCs

SVOCs were not detected at concentrations above groundwater criteria in any of the nine (9) monitoring wells. One of three (3) SVOCs (caprolactam, di-n-butyl phthalate, and/or 1,4-dioxane) were detected in four (4) wells (MW-02D, MW-02S, MW-04D, MW05-01), but at concentrations below the groundwater criteria.

Pesticides

Pesticides were not detected in groundwater in any of the nine (9) monitoring wells.

PCBs

PCBs were not detected in groundwater in any of the nine (9) monitoring wells.

Metals and Inorganics

Metals were detected in groundwater in all nine (9) monitoring wells.

One or more of four (4) metals (iron (total and/or dissolved), magnesium (total and/or dissolved), manganese (total) and sodium (total and dissolved)) were detected at concentrations above their groundwater criteria in all nine (9) monitoring wells. Based on their ubiquitous distribution in soil and groundwater across the Site, these metals may be associated with background conditions rather than past fuel bulk storage activities. The highest concentrations of total metals exceeding criteria were detected in overburden well MW05-03 (screened at 3-28 feet bgs) and deeper overburden well MW-03 (screened at 17.5-27.5 feet bgs). The highest number of total metals exceeding criteria were detected in in overburden well MW05-03 (screened at 3-28 feet bgs). Metal concentrations also reduced when compared to the filtered (dissolved) groundwater samples, which may indicate the inclusion of sediment in the unfiltered groundwater samples.

Other metal and inorganic parameters were also detected in at least one monitoring well, but at levels below their groundwater criteria, including aluminum (total and dissolved), arsenic (total and dissolved), barium (total and dissolved), cadmium (total and dissolved), calcium (total and dissolved), chromium (total and dissolved), cobalt (total and dissolved), copper (total and dissolved), lead (total and dissolved), nickel (total and dissolved), potassium (total and dissolved), selenium (dissolved only), silver (dissolved only), vanadium (total and dissolved), zinc (total and dissolved), and cyanide (dissolved only).

PFAS

PFAS were detected in groundwater in all four (4) monitoring wells sampled.

Perfluorooctanesulfonic acid (PFOS) was detected in one (1) monitoring well MW05-01 (2.8-22.8 feet bgs) at a concentration marginally above its groundwater criterion (3.4 nanogram per liter (ng/L) detection compared to 2.7 ng/L groundwater criterion). Perfluorooctanoic acid (PFOA) was also detected at all four (4) monitoring wells sampled, but at concentrations below its groundwater criteria.

Other PFAS parameters were also detected, including 1H,1H,2H,2H-perfluorooctane sulfonic acid (6:2), perfluorobutanesulfonic acid (PFBS), perfluorobutanoic acid (PFBA), perfluorodecanoic acid (PFDA), perfluoroheptanoic acid (PFHpA), perfluorohexanesulfonic acid (PFHxS), perfluorohexanoic acid (PFHxA), perfluoropentanoic acid (PFPeA), and perfluorononanoic acid (PFNA); however, there are no groundwater criteria for these analytes at this time.

5.3 Surface Water Analytical Results

Three (3) surface water samples and one (1) field duplicate surface water sample were collected from one (1) central location within Tank 75 during the RI field investigation activities completed on June 3, 2024. Surface water samples were analyzed for VOCs, SVOCs including 1,4-dioxane, pesticides, PCBs, metals and inorganics, and/or PFAS, as well as various additional parameters to characterize the surface water samples. The surface water analytical results are summarized in **Table 5-2**. Detected surface water analytical results for all compounds are presented in **Figure 5-2**.

Field Measurements

Field water quality measurements of temperature, pH, ORP, specific conductivity, DO, and turbidity were recorded during surface water sample collection. Sampling logs are provided in **Appendix G**.

The measurements recorded during surface water sampling of the three (3) surface water depth intervals at SW-01 on June 3, 2024, are briefly discussed below.

- Temperatures ranged from 21.87 to 22.66 degrees Celsius.
- pH values were generally neutral, ranging from 6.97 to 7.84.
- ORP values ranged from 48 to 232 mV.
- Specific conductivity values ranged from 0.261 to 0.296 mS/cm.
- DO levels ranged from 1.91 to 6.83 mg/L.
- Turbidity values ranged from 1.6 to 23 NTU.
- No abnormal color or visual impacts identified in samples; however, a petroleum sheen has been identified on the surface water within the tank.
- Trace petroleum odor identified.

VOCs

VOCs were not detected at concentrations above the groundwater or surface water criteria in Tank 75. Five (5) VOCs (acetone, benzene, chlorobenzene, cyclohexane and methylcyclohexane) were detected in the deepest surface water sample (SW-01-3 at 13 feet bws), but at concentrations below the groundwater and surface water criteria.

SVOCs

SVOCs were not detected at concentrations above the groundwater or surface water criteria in Tank 75. Six (6) SVOCs (2-methylnaphthalene, 4-methylphenol (p-cresol), acenaphthene, fluorene, phenanthrene and phenol) were detected in the deepest surface water sample (SW-01-3 at 13 feet bws), but at concentrations below the groundwater and surface water criteria.

Pesticides

Pesticides were not detected at concentrations above the groundwater criteria in Tank 75. However, one or more of four (4) pesticides (delta-BHC, methoxychlor, p,p'-DDD, and/or p,p'-DDT) were detected at concentrations above their surface water criteria in all three (3) surface water samples. Endrin aldehyde or endrin ketone were also detected at two (2) surface water samples, but at concentrations below both the groundwater and surface water criteria.

PCBs

PCBs were not detected in surface water in Tank 75.

Metals and Inorganics

Metals were detected in surface water at all three (3) surface water depths in Tank 75.

Manganese (total) was detected at a concentration above the groundwater and surface water criteria in the deepest surface water sample (SW-01-3 at 13 feet bws). However, the dissolved phase manganese concentration was well below the groundwater and surface water criteria at this sample, indicating that the surface water sample SW-01-3 may have had sediment inclusion, and therefore may not be attributable to the surface water media, but rather the sediment inclusion. Manganese (dissolved) was detected above the groundwater and surface water criteria in the intermediate surface water field duplicate sample (SW-01-2 at 7 feet bws) but was non-detect in the original sample.

Other metal and inorganic parameters were also detected, but at levels below their groundwater and surface water criteria, including barium (total and dissolved), calcium (total and dissolved), cobalt (dissolved only), copper (dissolved only), iron (total and dissolved), magnesium (total and dissolved), nickel (total and dissolved), potassium (total and dissolved), sodium (total and dissolved), and zinc (total and dissolved).

PFAS

PFAS were detected in surface water at the one (1) surface water sample collected (SW-01-2 at 7 feet bws) in Tank 75.

PFOA was detected at concentrations marginally above its groundwater and surface water criteria (8.0-8.3 ng/L detection compared to 6.7 ng/L groundwater and surface water criteria). PFOS was also detected at a concentration marginally above its groundwater and surface water criteria (2.9 ng/L detection compared to 2.7 ng/L groundwater and surface water criteria).

Other PFAS parameters were also detected, including 1H,1H,2H,2H-perfluorodecane sulfonic acid (6:2), 1H,1H,2H,2H-perfluorooctane sulfonic acid (6:2), PFBS, PFBA, PFDA, PFHpA, PFHxS, PFHxA, and PFNA; however, there are no groundwater or surface water criteria for these parameters.

Additional Parameters

The following additional parameters were also analyzed to assist in the characterization of the surface water in Tank 75:

- The heat of combustion of liquid hydrocarbon fuels, which is a measure of the energy a fuel can provide, and as measured by Parr calorimeter were reported as "Did Not Fire" indicating that when prepped for Heat of Combustion/BTU analysis, the samples did not combust.
- The measurement of oil and grease, as measured by the silica gel treated n-hexane extractable material (SGT-HEM; non-polar material), was not detected above the reported limit for all samples.
- Flash point was determined to be >175 degrees Fahrenheit for all samples.
- Ethylene glycol was not detected.
- Reactive cyanide and sulfide were not detected.

- pH was slightly basic, ranging from 7.95 (SW-01-3) to 8.28 (SW-01-1).
- Temperature was consistent, ranging from 19.7 degrees Celsius (SW-01-3) to 19.9 degrees Celsius (SW-01-1 and SW-01-2).

5.4 Sediment Analytical Results

Fifteen (15) sediment samples and two (2) field duplicate sediment samples were collected from 15 locations in Tank 75 during the RI field investigation activities completed on June 3 and 4, 2024. Sediment samples were analyzed for VOCs, SVOCs including 1,4-dioxane, pesticides, PCBs, metals and inorganics, and/or PFAS, as well as various additional parameters to characterize the sediment samples. The sediment analytical results are summarized in **Table 5-3**. Detected sediment analytical results for all compounds are presented in **Figure 5-3**.

VOCs

VOCs were detected above one or more sol cleanup objective (SCO) at all 17 sediment samples collected from Tank 75.

Eight (8) VOCs, including 1,2-dichlorobenzene, 1,4-dichlorobenzene, chlorobenzene, isopropylbenzene (cumene), styrene, and/or benzene, toluene, ethylbenzene and xylenes (BTEX), were detected above the Unrestricted Use SCOs at all 17 sediment samples.

One (1) VOC, benzene, was detected above the Industrial Use SCO in 12 out of 17 sediment samples.

Seven (7) VOCs, 1,2-dichlorobenzene, 1,4-dichlorobenzene, chlorobenzene, isopropylbenzene (cumene), toluene, ethylbenzene and/or xylenes, were detected above the Protection of Groundwater SCOs at all 17 sediment samples.

SVOCs

SVOCs were detected above one or more SCO at all 17 sediment samples collected in Tank 75.

Seventeen (17) SVOCs, including most polycyclic aromatic hydrocarbons (PAHs), 2-methylnaphthalene, acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, biphenyl, chrysene, dibenzofuran, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene and pyrene were detected above the Unrestricted Use SCOs at all 17 sediment samples.

Seven (7) SVOCs, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, naphthalene, and/or phenanthrene, were detected above the Industrial Use SCOs at 12 out of 17 sediment samples.

Eleven (11) SVOCs, including 2-methylnaphthalene, acenaphthylene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, and/or phenanthrene, were detected above the Protection of Groundwater SCOs at all 17 sediment samples.

Pesticides

Pesticides were not detected in sediment in Tank 75.

PCBs

PCBs were detected at one (1) sediment sample (SED-03) in Tank 75, at a concentration of 4 milligram per kilogram (mg/kg) above its Unrestricted Use SCO of 0.1 mg/kg and its Protection of Groundwater SCO of 3.2 mg/kg, but below its Industrial Use SCO of 25 mg/kg.

PCBs were not detected at the remaining 16 out of 17 sediment samples collected.

Metals and Inorganics

Metals and inorganics were detected above one or more SCO at all 17 sediment samples collected in Tank 75.

Sixteen (16) metals, including aluminum, antimony, arsenic, barium, cadmium, calcium, chromium (total), cobalt, copper, iron, lead, mercury, nickel, selenium, vanadium, and/or zinc, were detected above the Unrestricted Use SCOs at all 17 sediment samples.

Five (5) metals, arsenic, chromium (total), copper, lead, and/or mercury, were detected above the Industrial Use SCOs at all 17 sediment samples.

Nine (9) metals, arsenic, barium, chromium (total), copper, lead, mercury, nickel, selenium, and/or zinc, were detected above the Protection of Groundwater SCOs at all 17 sediment samples.

Other metal and inorganic parameters were also detected, but at levels below their soil SCOs, including beryllium, manganese, silver, sodium, thallium, and cyanide.

PFAS

PFAS were detected in sediment at all six (6) sediment samples collected in Tank 75.

At this time, NYSDEC has only issued soil cleanup guidance values for PFOA and PFOS. PFOA was detected at concentrations marginally above the guidance levels for unrestricted use in five (5) out of the six (6) sediment samples. PFOA was also detected at concentrations marginally above guidance levels for protection of groundwater in two (2) out of six (6) sediment samples. Neither PFOA nor PFOS were detected above the guidance levels for industrial use in any of the sediment samples collected.

Other PFAS parameters were also detected, including 1H,1H,2H,2H-perfluorooctane sulfonic acid (6:2), 2-(n-methyl perfluorooctanesulfonamide) acetic acid, n-ethyl perfluoro-1-octanesulfonamide, n-ethyl-n-((heptadecafluorooctyl)sulphonyl) glycine, perfluorodecane sulfonic acid (PFDS), perfluorononanesulfonic acid (PFNS), PFHPA, perfluorooctane sulfonamide (PFOSA), PFOS, perfluoropentanoic acid (PFPeA), perfluorotridecanoic acid (PFTriA), perfluoroundecanoic acid (PFUnA), and PFNA; however, there are no soil guidance levels for these parameters.

Additional Parameters

The following additional parameters were also analyzed to assist in the characterization of the sediment in Tank 75:

- The heat of combustion of liquid hydrocarbon fuels, which is a measure of the energy a fuel can provide, and as measured by a Parr calorimeter and expressed in BTU, ranged from non-detect (SED-13) to 5,430 BTU/lb (SED-07).
- The measurement of oil and grease, as measured by the silica gel treated n-hexane extractable material (SGT-HEM; non-polar material), ranged from 10,400 mg/kg (SED-08) to 45,600 mg/kg (SED-13).
- TOC ranged from 140,000 mg/kg (SED-03) to 447,000 mg/kg (SED-05).
- Flash point was not detected.
- Ethylene glycol was not detected.
- Reactive sulfide ranged from 18.5 mg/kg (SED-15) to 377 mg/kg (SED-05).
- pH was generally neutral, ranging from 7.0 (SED-11) to 8.0 (SED-08).
- Temperature was consistent, ranging from 18.3 degrees Celsius (SED-09) to 20.1 degrees Celsius (SED-03, -04, -05)).
- There were no free liquids present in any samples, as measured by the paint filter liquids test.

5.5 Soil Analytical Results

A total of nine (9) soil borings were completed between July 8 and August 9, 2024, and a total of eight (8) hand augers were completed between July 10 and 11, 2024, during the RI field investigation activities.

5.5.1 Surface Soil Analytical Results

Seventeen (17) surface soil samples at depths of 0 to 0.2 feet bgs and two (2) field duplicate surface soil samples were collected between July 8 and August 8, 2024. In accordance with the SC/RIWP (AECOM, 2023), surface soil samples were not analyzed for VOCs. Surface soil samples were analyzed for SVOCs including 1,4-dioxane, pesticides, PCBs, metals and inorganics, and PFAS. The surface soil analytical results are summarized in **Table 5-4.1**. Detected surface soil analytical results for all compounds are presented in **Figure 5-4.1**.

SVOCs

SVOCs were not detected at concentrations above the soil SCOs.

Eleven (11) SVOCs, including acenaphthylene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene and/or pyrene, were detected in eight (8) surface soil samples but below SCOs.

Pesticides

Pesticides were detected above the soil SCOs at three (3) surface soil samples collected.

Two (2) pesticides, including p,p'-DDD and/or p,p'-DDT, were detected above the Unrestricted Use SCOs at three (3) surface soil samples (HA-01 0-0.2 feet bgs, HA-07 0-0.2 feet bgs, and SB-10 0-0.2 feet bgs).

Pesticides were not detected above Industrial Use or Protection of Groundwater SCOs and were not detected in the remaining surface soil samples.

PCBs

PCBs were detected above the soil SCOs at seven (7) surface soil samples collected.

PCB-1260 was detected above the Unrestricted Use SCO at seven (7) surface soil samples (HA-01 0-0.2 feet bgs, HA-04 0-0.2 feet bgs and its duplicate, HA-07 0-0.2 feet bgs, SB-02 0-0.2 feet bgs and its duplicate, and SB-08 0-0.2 feet bgs).

PCBs were not detected above Industrial Use or Protection of Groundwater SCOs and were not detected in the remaining surface soil samples.

Metals and Inorganics

Metals and inorganics were detected above one or more SCO at all 19 surface soil samples collected.

Eleven (11) metals, including aluminum, arsenic, calcium, chromium (total), copper, iron, lead, mercury, nickel, vanadium, and/or zinc, were detected above the Unrestricted Use SCOs at all 19 surface soil samples.

One (1) metal, arsenic, was detected above the Industrial Use SCO at one (1) surface soil sample (SB-01 0-0.2 feet bgs).

Five (5) metals, arsenic, chromium (total), lead, mercury, and/or nickel, were detected above the Protection of Groundwater SCOs at 17 surface soil samples (all except HA-05 0-0.2 feet bgs, and SB-07 0-0.2 feet bgs).

Other metal and inorganic parameters were also detected, but at levels below their soil SCOs, including antimony, barium, beryllium, cadmium, cobalt, magnesium, manganese, potassium, selenium, silver, sodium, and cyanide.

PFAS

PFAS were detected in soil at all three (3) surface soil samples analyzed, but at concentrations below the soil guidance levels.

PFOS was detected in two (2) surface soil samples (SB-01 0-0.2 feet bgs, and SB-07 0-0.2 feet bgs), but below the soil guidance levels.

Other PFAS parameters were also detected, including PFDA, PFHxA, PFTriA, PFUnA, and PFNA; however, there are no soil guidance levels for these parameters.

5.5.2 Subsurface Soil Analytical Results

Twenty-six (26) subsurface soil samples at depths greater than 0.2 feet bgs and three (3) field duplicate subsurface soil samples were collected between July 9 and August 9, 2024. Subsurface soil samples were analyzed for VOCs, SVOCs including 1,4-dioxane, pesticides, PCBs, metals and inorganics, and PFAS. The subsurface soil analytical results are summarized in **Table 5-4.2**. Detected subsurface soil analytical results for all compounds are presented in **Figure 5-4.2**.

VOCs

VOCs were detected above one or more SCO at three (3) subsurface soil samples collected.

Five (5) VOCs, including acetone, benzene, ethylbenzene, toluene, and/or xylenes, were detected above the Unrestricted Use and the Protection of Groundwater SCOs at three (3) subsurface soil samples (HA-03 2.3-2.5 feet bgs, HA-04 1.3-1.5 feet bgs, and SB-03 5-7 feet bgs).

VOCs were not detected above Industrial Use SCOs and were not detected above any soil SCOs in the remaining subsurface soil samples.

SVOCs

SVOCs were detected above one or more SCO at one (1) subsurface soil sample collected.

Twelve (12) SVOCs, including most PAHs 2-methylnaphthalene, acenaphthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluorene, naphthalene, phenanthrene and pyrene, as well as dibenzofuran, and n-nitrosodiphenylamine, were detected above the Unrestricted Use SCOs at one (1) subsurface soil sample (HA-03 2.3-2.5 feet bgs).

Four (4) SVOCs, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and chrysene, were detected above the Industrial Use SCOs at one (1) subsurface soil sample (HA-03 2.3-2.5 feet bgs).

Six (6) SVOCs, including 2-methylnaphthalene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, and naphthalene, were detected above the Protection of Groundwater SCOs at one (1) subsurface soil sample (HA-03 2.3-2.5 feet bgs).

SVOCs were not detected above any soil SCOs in the remaining subsurface soil samples.

Pesticides

Pesticides were detected above the soil SCOs at three (3) subsurface soil samples collected.

One (1) pesticide, p,p'-DDT, was detected above the Unrestricted Use SCO at three (3) subsurface soil samples (HA-01 2.5-3.5 feet bgs, HA-03 2.3-2.5 feet bgs, and HA-04 1.3-1.5 feet bgs).

Pesticides were not detected above Industrial Use or the Protection of Groundwater SCOs and were not detected above any soil SCOs in the remaining subsurface soil samples.

PCBs

PCB-1260 was only detected above the Unrestricted Use SCO at one (1) subsurface soil sample (SB-02 10-11 feet bgs).

PCBs were not detected above Industrial Use or the Protection of Groundwater SCOs and were not detected in the remaining surface soil samples.

Metals and Inorganics

Metals and inorganics were detected above one or more SCO at all 29 subsurface soil samples collected.

Eleven (11) metals, including aluminum, arsenic, calcium, chromium (total), iron, lead, manganese, mercury, nickel, vanadium, and/or zinc, were detected above the Unrestricted Use SCOs at all 29 subsurface soil samples.

One (1) metal, arsenic, was detected above the Industrial Use SCO at one (1) subsurface soil sample (HA-03 2.3-2.5 feet bgs).

Three (3) metals, arsenic, chromium (total), and/or manganese, were detected above the Protection of Groundwater SCOs at 27 subsurface soil samples (all except HA-06 3-4 feet bgs, and SB-07 1-2 feet bgs).

Other metal and inorganic parameters were also detected, but at levels below their soil SCOs, including antimony, barium, beryllium, cadmium, cobalt, copper, magnesium, potassium, selenium, silver, and sodium.

PFAS

PFAS were detected in subsurface soil at one (1) out of six (6) subsurface soil samples analyzed.

Only PFOS was detected in the subsurface soil sample collected from HA-05 (3-4 feet bgs), but at a concentration below all guidance levels. No other PFAS were detected in this subsurface soil sample or at the remaining five (5) subsurface soil samples collected.

5.6 Petroleum Impacted Soil Observations

Indications of petroleum impacted materials were observed in the field (i.e., petroleum odor or staining) in three shallow borings, HA-01, HA-03, and HA-04, all located in the immediate vicinity of Tank 75. Signs of petroleum impacts were observed from ground surface to the total depth of 4 feet bgs in boring HA-01 in the northeast corner of Tank 75 in the area where the gunite lining has been removed. Two hand auger borings located on the western perimeter of Tank 75 also exhibited petroleum impacts. A thin layer of asphaltic material was observed in Boring HA-03 from 2.3 to 2.5 feet bgs, and HA-04 also exhibited signs of petroleum impacted soil from 1.3 to 1.5 feet bgs. Refusal on concrete was encountered at 1.5 feet bgs in boring HA-04. Stained soil exhibiting a creosote odor was observed in DPT soil boring SB-07 from a depth of 2.0 to 5.4 feet bgs. The stained soil exhibited a creosote odor.

6. Contaminant Fate and Transport

This section describes fate and transport processes that may influence the behavior of the contaminants detected at the Site. The discussion emphasizes the processes that are essential in evaluating potential exposure of human and environmental receptors to the Site contaminants detected at concentrations above the SCGs. The following items are presented in this section:

1. A list of contaminants detected above applicable SCGs at the Site.
2. General description of fate and transport processes occurring in soil, soil vapor/indoor air, surface water/sediments, and groundwater systems.
3. Identification and description of properties of contaminants detected above the SCGs in the various media at the Site.
4. Media-specific and contaminant-specific evaluation of potential fate and transport mechanisms occurring at the Site.

6.1 Contaminants of Concern

Contaminants that exceeded SCGs at the Site during the RI include:

Groundwater	Metals:	iron, magnesium, manganese, and sodium
	PFAS:	PFOS
Surface Water	Pesticides:	delta-BHC, methoxychlor, p,p'-DDD, and p,p'-DDT
	Metals:	manganese
	PFAS:	PFOS, PFOA
Sediment	VOCs:	1,2-dichlorobenzene, 1,4-dichlorobenzene, chlorobenzene, isopropylbenzene, styrene, benzene, toluene, ethylbenzene, and xylenes
	SVOCs:	2-methylnaphthalene, acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, biphenyl, chrysene, dibenzofuran, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene and pyrene
	PCBs:	PCB-1248
	Metals:	aluminum, antimony, arsenic, barium, cadmium, calcium, chromium (total), cobalt, copper, iron, lead, mercury, nickel, selenium, vanadium, and zinc
	PFAS:	PFOA
Surface Soil	Pesticides:	p,p'-DDD, and p,p'-DDT
	PCBs:	PCB-1260
	Metals:	aluminum, arsenic, calcium, chromium (total), copper, iron, lead, mercury, nickel, vanadium, and zinc
Subsurface Soil	VOCs:	acetone, benzene, ethylbenzene, toluene, and xylenes
	SVOCs:	2-methylnaphthalene, acenaphthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluorene, naphthalene, phenanthrene, pyrene, dibenzofuran, and n-nitrosodiphenylamine
	Pesticides:	p,p'-DDT

PCBs: PCB-1260

Metals: aluminum, arsenic, calcium, chromium (total), iron, lead, manganese, mercury, nickel, vanadium, and zinc

Soil Vapor Not Analyzed

Indoor Air Not Analyzed

The above identified contaminants are evaluated further below.

6.2 General Description of Fate and Transport Mechanisms

This section provides general descriptions of the fate and transport processes that can occur in the environment in which samples were collected as part of the Site investigations. In addition, the Site characteristics that can affect these processes are discussed.

6.2.1 Transport Processes

Contaminant transport processes on the ground surface can occur through volatilization, wind erosion, and as movement of dissolved contaminants in surface water runoff.

Contaminant transport in the subsurface can occur as movement of dissolved contaminants in groundwater and/or as migration of volatilized contaminants in soil vapor. The primary transport mechanisms are mass partitioning, advection, and dispersion.

Mass partitioning is a process in which contaminants move between different environmental media in response to concentration gradients. For example, contaminants dissolved in groundwater may sorb (i.e., attach) onto soil particles or volatilize into the soil vapor. The process may involve mass transfer in any direction between any of the environmental media. The net result of mass partitioning is the distribution of the contaminant between all phases that remain in physical contact with each other. Typically, mass partitioning acts to inhibit the migration of contaminants in groundwater or soil vapor by immobilizing a part of the mass in the soil matrix (retardation). However, the process may be reversed, resulting in the release of the sorbed contamination into the groundwater or soil vapor.

In the unsaturated zone (i.e., between ground surface and the water table), the total mass of a contaminant is partitioned between the dissolved phase (soil moisture), the gas phase (soil vapor), and the solid phase (soil matrix). In the saturated zone, the soil vapor phase is absent, and the partitioning occurs only between the soil matrix and groundwater. Under equilibrium conditions, each phase contains a fraction of the total contaminant mass present in the system (i.e., total of all phases equals 100 percent of the contaminant mass present). The relative mass fractions are determined by the properties of each contaminant and by the nature of the soil matrix. Equilibrium conditions may be disturbed by phenomena such as migration of contaminated groundwater or soil vapor into an area, or removal of contaminant mass from one of the media through degradation processes or gravity flow. Under these circumstances, concentration gradients are created resulting in the occurrence of mass transfer between the media until equilibrium is re-established.

The contaminant mass sorbed onto the soil matrix is essentially immobile. The exception is the mass in the topmost soil layer near the ground surface, which can be transported by processes capable of moving soil particles (wind or surface water runoff).

Transport of contaminants dissolved in the soil moisture in the unsaturated zone is generally limited as a result of very low flow rates in the absence of full saturation. The only significant mechanisms may be driven by water level fluctuations and gravity-driven downward flow during wet-weather periods, or possibly sewer lines and manholes/catch basins which may be leaking and/or act as preferential pathways. Such vertical transport of contaminants acts as a source for the saturated zone below.

The contaminant mass, especially VOCs, contained within the soil vapor in the unsaturated zone and within groundwater in the saturated zone is more mobile. Soil vapor can migrate in both vertical and horizontal directions in response to pressure gradients. Soil vapor migration can create a discharge of contaminants into the atmosphere or act as a source of contamination for groundwater in the saturated zone. Migrating soil vapor may transfer mass into the soil matrix and soil moisture in previously uncontaminated areas, thus increasing the areal extent of soil contamination in the unsaturated zone.

The primary transport mechanisms for contaminants dissolved in groundwater are advection and dispersion. Advection is the movement of the dissolved contaminants carried by the flow of groundwater. Dispersion refers to dissolved contaminants spreading due to the presence of non-uniformities of the groundwater flow field. Dispersion results in a general widening of a plume, as well in smearing of the plume boundaries. Processes similar to those that occur for soil vapor can enable dissolved contaminants to reach a previously uncontaminated area and enter other environmental media. Given the relatively moderate hydraulic gradient observed in the groundwater levels, dispersion and advection are transport mechanisms in groundwater at this Site.

Contamination migrating with soil vapor or groundwater constantly interacts with the soil matrix. The driving forces behind this process are created by concentration gradients between different phases and the properties of the contamination and the soil matrix. Contaminant mass may either sorb from the mobile soil vapor or groundwater onto the soil particles or it may undergo a reverse process of desorption.

In the case of sorption, contaminant mass is transferred from the mobile medium into the immobile soil medium. This retardation phenomenon tends to decrease the velocity of contaminant migration. The magnitude of the retardation depends on the properties of each contaminant and the soil matrix. The key indicator parameter for the retardation properties of the soil is the organic carbon content. Soils with high organic carbon content sorb dissolved contaminants more readily and create a more significant retardation effect than soil with limited, or no organic carbon content. Desorption is the reverse process. Contamination is transferred from the soil matrix into the groundwater or soil vapor. As a result, soil containing contaminant mass may act as a source if exposed to the less-contaminated soil vapor or groundwater. Desorption from soil into the soil vapor or groundwater is increasingly inhibited by increasing content of organic carbon in the soil.

The primary transport mechanisms in the surface water at the Site are advection, dispersion, and mass partitioning. These are essentially the same as described for groundwater, although advection and dispersion of contaminants may be enhanced due to the increased water flow rates as compared to groundwater flow rates at the Site. In addition, volatilization is greater in surface water. The transport of contaminants in surface water is also affected by flocculation and/or precipitation of contaminants. These processes may change the rate at which contaminants are transported or may cause them to settle out of the surface water into the underlying sediment.

Mass partitioning and erosion/particle entrainment are two primary transport mechanisms of contaminants in sediment. Contaminants sorbed to sediment particles are in equilibrium with the water immediately adjacent to the particles, based on the organic carbon content of the sediment and portioning properties of each contaminant. Particle entrainment is a process where sediment particles are moved from one location to another due to turbulent water flow. Contaminants in the sediment are transported along with the sediment particles.

6.2.2 Mass Destruction Processes

Abiotic mass destruction processes that rely on the presence of air or exposure to sunlight (such as hydrolysis and photolysis) have not been proven to be effective on the contaminants present in the surface soil of the Site (i.e., PAHs and metals).

The most significant mass destruction process that takes place in the subsurface environment is microbial degradation. The most significant microbial degradation processes for organic contaminants that operate in the subsurface are biological oxidation (aerobic and anaerobic); reductive dechlorination; and co-

metabolic degradation. During degradation, organic compounds are transformed into daughter forms, which may be recalcitrant or further degradable. Daughter compounds can be either more or less toxic than the parent compounds. If a contaminant degrades into a sequence of degradable daughter compounds, it is ultimately fully metabolized into such compounds as carbon dioxide, methane, water, and chloride.

6.2.3 Properties of Site Contaminants

This section discusses the properties of the contaminants identified at the Site that will impact their fate and transport. As described in Section 5.0, groups of compounds detected at concentrations above SCGs include: VOCs, SVOCs, pesticides, PCBs, metals, and PFAS. These are briefly discussed below.

VOCs

VOCs were not detected in groundwater at concentrations above groundwater criteria in any of the nine (9) monitoring wells.

VOCs were not detected in surface water at concentrations above the groundwater or surface water criteria in any of the three (3) surface water sample depths collected from Tank 75.

VOCs were detected in sediment above one or more SCO in all 15 sediment sample locations collected from Tank 75. Eight (8) VOCs, including 1,2-dichlorobenzene, 1,4-dichlorobenzene, chlorobenzene, isopropylbenzene, styrene, and BTEX, were detected above the Unrestricted Use SCOs. One (1) VOC, benzene, was detected above the Industrial Use SCO. Seven (7) VOCs, including 1,2-dichlorobenzene, 1,4-dichlorobenzene, chlorobenzene, isopropylbenzene, toluene, ethylbenzene and xylenes, were detected above the Protection of Groundwater SCOs.

In accordance with the SC/RIWP (AECOM, 2023), surface soil samples were not analyzed for VOCs. VOCs were detected in subsurface soil above one or more SCO at three (3) subsurface soil samples collected. Five (5) VOCs, including acetone, benzene, ethylbenzene, toluene, and xylenes, were detected above the Unrestricted Use and the Protection of Groundwater SCOs.

In general, VOCs readily volatilize into the atmosphere or soil vapor. At the surface, these compounds may decay and/or volatilize upon exposure to sunlight and to the atmosphere. VOCs are soluble in water and their dissolved contaminants are transported by advection and dispersion in groundwater and surface water. The same processes of advection and dispersion are responsible for the migration of these compounds in the atmosphere or the soil.

1,2-Dichlorobenzene, 1,4-dichlorobenzene, chlorobenzene, ethylbenzene, styrene, and BTEX are simple aromatic hydrocarbons with a benzene ring. These VOC contaminants were only identified in sediment media within Tank 75. Simple aromatic hydrocarbons are volatile and moderately soluble in water. They are readily biodegraded under aerobic conditions and also degrade under anaerobic conditions, albeit at slower rates. They have low to moderate organic carbon-to-water partitioning coefficients and do not readily partition into the soil or sediment, making it relatively mobile in the environment.

SVOCs

SVOCs were not detected in groundwater at concentrations above groundwater criteria in any of the nine (9) monitoring wells.

SVOCs were not detected in surface water at concentrations above the groundwater or surface water criteria in the three (3) surface water sample locations collected from Tank 75.

SVOCs were detected in sediment above one or more SCO in all 15 sediment sample locations collected in Tank 75. Seventeen (17) SVOCs, including most PAHs: 2-methylnaphthalene, acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, biphenyl, chrysene, dibenzofuran, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene and pyrene, were detected above the Unrestricted Use SCOs. Seven (7) SVOCs, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene,

naphthalene, and phenanthrene, were detected above the Industrial Use SCOs. Eleven (11) SVOCs, including 2-methylnaphthalene, acenaphthylene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, naphthalene, and phenanthrene, were detected above the Protection of Groundwater SCOs.

SVOCs were not detected in surface soil at concentrations above the soil SCOs. SVOCs were detected in subsurface soil above one or more SCO at one (1) subsurface soil sample collected. Twelve (12) SVOCs, including most PAHs 2-methylnaphthalene, acenaphthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluorene, naphthalene, phenanthrene and pyrene, as well as dibenzofuran, and n-nitrosodiphenylamine, were detected above the Unrestricted Use SCOs. Four (4) SVOCs, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and chrysene, were detected above the Industrial Use SCOs. Six (6) SVOCs, 2-methylnaphthalene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, and naphthalene, were detected above the Protection of Groundwater SCOs.

Generally, SVOCs are characterized by low volatility, low solubility in water, and a high organic carbon-to-water partitioning coefficient. As a result, they are relatively immobile, and typically sorb onto the soil/sediment matrix. The potential for leaching from soil/sediment to groundwater or surface water decreases as the compound's molecular weight increases. As a result, the primary transport mechanism for SVOCs (PAHs especially) is mechanically by wind and erosion/particle entrainment. Biodegradation rates are relatively low. PAHs are often associated with the combustion of organic materials and are commonly found at elevated levels in industrial areas and adjacent to roadways.

Pesticides

Pesticides were not detected in groundwater in any of the nine (9) monitoring wells.

Pesticides were not detected in surface water at concentrations above the groundwater criteria in Tank 75. However, four (4) pesticides, including delta-BHC, methoxychlor, p,p'-DDD, and p,p'-DDT, were detected above their surface water criteria in all three (3) surface water sample locations.

Pesticides were not detected in sediment in Tank 75.

Pesticides were detected in surface soil above the soil SCOs at three (3) surface soil samples collected. Two (2) pesticides, including p,p'-DDD and/or p,p'-DDT, were detected above the Unrestricted Use SCOs. Pesticides were also detected in subsurface soil above the soil SCOs at three (3) subsurface soil samples collected. One (1) pesticide, p,p'-DDT, was detected above the Unrestricted Use SCO.

The high organic partition coefficients of pesticides, and their relatively low water solubilities, suggest that they will adsorb strongly to soil and will not partition into groundwater. The biodegradability of these compounds varies, but in general, these compounds will persist in a temperate climate such as found at the Site. These compounds can accumulate in some plants and can be absorbed by animals or humans eating the plants.

PCBs

PCBs were not detected in groundwater in any of the nine (9) monitoring wells.

PCBs were not detected in surface water in Tank 75.

PCBs were detected at one (1) sediment sample (SED-03) above its Unrestricted Use and Protection of Groundwater SCOs, but below its Industrial Use SCO. PCBs were not detected in the remaining 14 out of 15 sediment sample locations collected in Tank 75.

PCBs were detected in surface soil above the soil SCOs at seven (7) surface soil samples collected. PCB-1260 was detected above the Unrestricted Use SCO. PCBs were also detected in subsurface soil above the soil SCOs at one (1) subsurface soil sample collected. PCB-1260 was detected above the Unrestricted Use SCO.

PCBs are a group of manmade chemicals that are oily liquids or solids and were used widely in electrical equipment like capacitors and transformers. They are very stable mixtures that are resistant to extreme temperature and pressure. PCBs do not readily breakdown in the environment, and can remain for long periods cycling between air, water, and soil.

Metals and Inorganics

Metals and inorganics were detected in groundwater in all nine (9) monitoring wells. Four (4) metals, including iron, magnesium, manganese, and sodium, were detected above their groundwater criteria in all nine (9) monitoring wells. Based on their ubiquitous distribution in soil and groundwater across the Site, these metals may be associated with background conditions rather than past fuel bulk storage activities. The highest concentrations of total metals exceeding criteria were detected in overburden well MW05-03 (3-28 feet bgs) and deeper overburden well MW-03 (17.5-27.5 feet bgs). The highest number of total metals exceeding criteria were detected in in overburden well MW05-03 (3-28 feet bgs). Metal concentrations also reduced when compared to the filtered (dissolved) groundwater samples, which may indicate the inclusion of sediment in the unfiltered groundwater samples.

Metals and inorganics were detected in surface water at all three (3) surface water depths in Tank 75. Manganese (total) was detected above the groundwater and surface water criteria in the deepest surface water sample (SW-01-3 at 13 feet bws). However, the dissolved phase manganese concentration was well below the groundwater and surface water criteria at this sample, indicating that the surface water sample SW-01-3 may have had sediment inclusion, and therefore may not be attributable to the surface water media, but rather the sediment inclusion. Manganese (dissolved) was detected above the groundwater and surface water criteria in the intermediate surface water field duplicate sample (SW-01-2 at 7 feet bws) but was non-detect in the original sample.

Metals and inorganics were detected in sediment at all 15 sediment sample locations collected in Tank 75. Sixteen (16) metals, including aluminum, antimony, arsenic, barium, cadmium, calcium, chromium (total), cobalt, copper, iron, lead, mercury, nickel, selenium, vanadium, and zinc, were detected above the Unrestricted Use SCOs. Five (5) metals, arsenic, chromium (total), copper, lead, and mercury, were detected above the Industrial Use SCOs. Nine (9) metals, arsenic, barium, chromium (total), copper, lead, mercury, nickel, selenium, and zinc, were detected above the Protection of Groundwater SCOs.

Metals and inorganics were detected in surface soil above one or more SCO at all 19 surface soil samples collected. Eleven (11) metals, including aluminum, arsenic, calcium, chromium (total), copper, iron, lead, mercury, nickel, vanadium, and zinc, were detected above the Unrestricted Use SCOs. One (1) metal, arsenic, was detected above the Industrial Use SCO. Five (5) metals, arsenic, chromium (total), lead, mercury, and nickel, were detected above the Protection of Groundwater SCOs. Metals and inorganics were also detected in subsurface soil above one or more SCO at all 29 subsurface soil samples collected. Eleven (11) metals, including aluminum, arsenic, calcium, chromium (total), iron, lead, manganese, mercury, nickel, vanadium, and zinc, were detected above the Unrestricted Use SCOs. One (1) metal, arsenic, was detected above the Industrial Use SCO. Three (3) metals, arsenic, chromium (total), and manganese, were detected above the Protection of Groundwater SCOs.

Metals are generally persistent, and they may form complexes with other elements. They do not volatilize or degrade. However, in their soluble form, metals are mobile in groundwater and surface water. The preference of metals towards soil/sediment sorption as opposed to dissolution in water depends mostly on the acidity or alkalinity of the system.

PFAS

PFAS were detected in groundwater in all four (4) monitoring wells sampled. PFOS was detected in one (1) monitoring well MW05-01 (2.8-22.8 feet bgs) marginally above its groundwater criterion. PFOA was also detected at all four (4) monitoring wells sampled, but below its groundwater criteria.

PFAS were detected in surface water at the one (1) surface water sample collected (SW-01-2 at 7 feet bws) in Tank 75. PFOA and PFOS were detected marginally above their groundwater and surface water criteria.

PFAS were detected in sediment at all six (6) sediment samples collected in Tank 75. PFOA was detected marginally above guidance levels for unrestricted use in five (5) out of the six (6) sediment samples. PFOA was also detected marginally above guidance levels for protection of groundwater in two (2) out of six (6) sediment samples. There were no PFAS detected above guidance levels for industrial use in any of the sediment samples collected.

PFAS were detected in surface soil at all three (3) surface soil samples analyzed, but at concentrations below the soil guidance levels. PFAS were also detected in subsurface soil at one (1) out of six (6) subsurface soil samples analyzed, but below all guidance levels.

PFAS can be released into the air, water, and soil in places where they are produced or used. The highest levels are typically found near facilities that have made or used PFAS. PFAS do not occur naturally and do not readily biodegrade. As a result, they are persistent in the environment. PFAS are highly soluble in water and have very low volatility and can be transported long distances via groundwater or surface water.

6.3 Fate and Transport in the Unsaturated Zone

6.3.1 Migration

The propagation of contaminants in the unsaturated zone is dominated by three processes: migration of the dissolved phase contaminants with infiltrating precipitation; migration of the volatilized contaminants in the soil vapor; and migration of the sorbed contamination with fugitive dust emissions or surface runoff. Contaminants present on the surface or within the soil or sorbed to the soil may dissolve as precipitation percolates through the unsaturated zone. The flow is mostly gravity-driven and directed downwards. Such downward migration through the unsaturated zone may constitute a source of contamination of the saturated zone below.

Infiltration-induced migration is expected to be higher for the contaminants with higher solubility, such as VOCs and low molecular weight SVOCs, and lower for PAHs, pesticides, PCBs, and PFAS due to their lower solubility in water.

For metals, the degree of solubility is determined primarily by the type of metal and the pH of the environment with a general decrease in metals solubility with increasing pH. According to the purge logs for the monitoring wells sampled during the RI activities, the pH at the Site is generally neutral ranging from 7.1 to 9.2, which suggests limited solubility. The exception to this is the slightly elevated pH of 10.1 to 10.3 at shallow well MW05-02 during groundwater sampling, and of 10.6 at deeper well MW-04D during well development, which may be caused by mineral compounds and/or debris (e.g., concrete, wood and brick) present in the surrounding soils. However, the metals detected in groundwater at these monitoring wells were present at relatively low concentrations, consistent with the other monitoring wells, which suggests limited leaching and solubility.

Contaminants can enter the soil vapor through the process of volatilization. There are limited VOCs present at the Site, in subsurface soil, and, as a result, the migration of VOCs through the gas phase is not likely significant.

The Site contains vegetated areas and the exposed surfaces of soil at the Site would generate fugitive dust emissions. Erosion and transport of surface soils by wind and runoff are possible migration pathways for contamination present on the surface and adsorbed onto surface soils.

6.3.2 Degradation

Generally, the occurrence and rates of unsaturated zone degradation have to be determined by means of field studies, such as respiration tests. However, unsaturated zone biodegradation is limited by the amount of moisture present in the soil and transport processes between bacteria and contaminants. Sufficient moisture for active biological growth may not be present at all locations where contamination is elevated. Also, without a continuous aqueous phase, mass transfer between the bacteria and

contaminants will be low, especially for low mobility compounds such as PAHs, pesticides, and metals. These conditions tend to limit the amount of natural biodegradation of some compounds that will occur in the unsaturated zone.

6.4 Fate and Transport in the Saturated Zone

6.4.1 Migration

Contaminant migration in the saturated zone takes place predominantly by means of the transport of the dissolved-phase contamination in groundwater. The dominant factors are the direction of groundwater flow within the aquifer, the hydraulic gradient, the hydraulic conductivity of the aquifer material (both the average value and spatial distribution) and the chemical composition of the soil matrix.

Groundwater was observed within the overburden fill material and within native silty clay. The groundwater flow direction was generally towards the west/northwest, with a small component to the north. Horizontal hydraulic conductivity values for the shallow overburden ranged from 2.44×10^{-5} cm/s to 6.90×10^{-7} cm/s. This estimated horizontal groundwater velocity was approximately 0.02 feet per year. The estimated vertical groundwater flow was also fairly low, at 0.10 feet per year. As such, it is expected that contaminant migration in the saturated zone is minimal.

6.4.2 Degradation

Only metals and PFAS were detected in groundwater at the Site. PFAS are generally recalcitrant and therefore, degradation of these contaminants at the Site is expected to be minimal to nonexistent. Metals do not degrade.

6.5 Fate and Transport in Surface Water and Sediment in Tank 75

6.5.1 Migration

In natural settings, contaminant migration in surface water and sediment occurs primarily by physical transportation. However, given that Tank 75 is an isolated gunite-lined lagoon situated in low-permeability silty clay, migration of surface water and sediment contaminants does not occur. This is supported by groundwater sample analytical results indicating not significant impacts of Site-related compounds.

6.5.2 Degradation

Only pesticides, metals and PFAS were detected in surface water in Tank 75; whereas VOCs, SVOCs, PCBs, metals and PFAS were detected in sediment.

VOCs in sediment can degrade by both aerobic and anaerobic processes, and some phenolic compounds would typically degrade in anaerobic environments. DO measurements recorded during surface water sampling were less than 10 m/L, but ORP measurements were all positive, which indicates a slightly aerobic environment. As such, VOCs, and some SVOCs, are expected to naturally degrade within Tank 75.

PCBs, PFAS, and most SVOCs detected in sediment and/or surface water in Tank 75 are generally recalcitrant and therefore, degradation of these contaminants is expected to be minimal to nonexistent. Metals do not degrade.

7. Qualitative Human Health Exposure Assessment and Fish and Wildlife Assessment

This section presents the HHEA and FWRIA for the Site. The qualitative HHEA uses data and information collected during the RI to assess human health exposure in the immediate and surrounding areas. The qualitative HHEA provides an evaluation of potential adverse health effects under current and potential future Site conditions that may result from exposure to contaminants attributable to former activities at the Site.

7.1 Qualitative Human Health Exposure Assessment

This qualitative HHEA follows the general format and procedures set forth in DER-10. This qualitative HHEA uses data and information collected during site investigations, and appropriate information from site characterization activities to assess human health exposure in the immediate and surrounding areas. The qualitative HHEA provides an evaluation of potential adverse health effects under current and potential future site conditions that may result from exposure to contaminants attributable to former activities at the Site. The HHEA includes five components which are presented in this RI Report:

1. Description of contaminant source(s) (if known) and contaminated environmental medium.
2. Explanation of the contaminant release and transport mechanisms to the exposed population (see Section 6).
3. Identification of exposure points where actual or potential human contact with a contaminated medium could occur.
4. Description of the routes of exposure to potential human receptors (i.e., ingestion, inhalation, dermal absorption).
5. Characterization of the receptor populations who may be exposed to contaminants at a point of exposure (e.g., construction worker, onsite employee, public).

7.2 Source(s) of Contamination

Tank 75 is an in-ground petroleum storage structure constructed during World War II for the storage of fuel oil. Tank 75 was formerly equipped with two pumps, one for unloading oil and the second for removing accumulated rainfall. In addition to fuel oil, off-specification asphalt, other tank bottoms, soils, piping, and refinery sludge are believed to have been placed in Tank 75.

Since Tank 75 was taken out of service in 1980, wastes were not placed in the structure after the effective date of relevant RCRA regulations. The structure contents include both listed and characteristic hazardous wastes. Contaminants associated with these refinery wastes include petroleum related VOCs, SVOCs, and metals.

Contaminants identified in soil and groundwater adjacent to Tank 75 is likely associated with occasional spills over the years.

7.3 Identification of Contaminants of Potential Concern

Based upon the analytical data obtained and presented in Section 5, the contaminants listed in Section 6.1 (and summarized in **Table 7-1**) include all chemicals, organized by media of concern, for which there was at least one sample in at least one location where SCGs were exceeded. A “medium of concern” is identified as a physical medium (e.g., soil, groundwater) in which one or more contaminants were detected at concentrations exceeding their SCGs.

Media of concern at the Site include surface soil, subsurface soil, groundwater, sediment / sludge, surface water and vapor.

The primary contaminants of concern on the Site are VOCs, SVOCs and PCBs in soil and sediment; pesticides in soil and surface water; metals in all media of concern; and PFAS in groundwater, sediment and surface water. The contaminants of concern in each media are listed in **Table 7-1**.

7.4 Exposure Pathways

An exposure pathway is the manner by which an individual may come in contact with a contaminant. The exposure pathway is complete when all five elements associated with exposure pathways are documented (per Section 7.1). A potential exposure pathway exists when any one or more of the five elements is not known. If any of the five elements comprising an exposure pathway has never existed in the past, does not exist in the present, and is likely to not exist in the future, then an exposure pathway can be eliminated.

The Site and surrounding properties are zoned industrial and are located within the United Refinery property which is fenced in and restricted to the general public. There are no buildings on-Site and none are expected to be erected in the foreseeable future. The property predominantly consists of the in-ground petroleum storage structure that is fenced in, and the remainder is surrounded by vegetative cover. The reasonably anticipated future use of the Site is to remain industrial with the eventual decommissioning and removal or stabilization of the tank.

Under the current and continued industrial use of the Site, the relevant human receptors include long-term workers who regularly access the Site; short-term construction workers who may be involved in construction and/or repair work to existing Site infrastructure or remediation activities; visitors or trespassers who may enter the property occasionally; and neighboring workers on adjacent industrial properties.

The potentially complete exposure pathways include direct contact with surface soil by all on-Site receptors; direct contact with surface soil, subsurface soils, groundwater, sediment and surface water by short-term construction workers; dust inhalation with surface and subsurface soils by all relevant human receptors; and inhalation of trench air and outdoor air by short-term construction workers.

Incomplete exposure pathways include inhalation of indoor air since there are no buildings on or within vicinity of the Site; outdoor air by non-intrusive receptors since contaminants released into the environment would be quickly dispersed and diluted; ingestion of potable groundwater since the Site and surrounding properties are serviced by the municipal water supply which sources drinking water from the Niagara River; and the consumption of vegetation, fish and wildlife since the Site and surrounding properties are zoned industrial whereby foraging, fishing and hunting is not permissible. In addition, the nearest natural surface water body, Niagara River, is located more than 3,100’ northwest of the Site, which is sufficiently distant such that on-Site contaminants would be unlikely to discharge to the waterbody and be exposed to people.

Table 7-2 includes a conceptual site model of the relevant human receptors and exposure pathways at the Site. The following subsections present the exposure pathways assessed for the Site under the current and continued industrial land use scenario.

7.4.1 Groundwater

Groundwater is not accessible to most human receptors, except for construction workers who could come into contact with contaminated groundwater during ground intrusive activities. However, it is standard industry practice for construction workers to follow a HASP during ground intrusive work, including the use of PPE, such that the actual exposure to contaminated groundwater is expected to be minimal.

In addition, contaminated groundwater is not being used for drinking water. The Site and surrounding properties are serviced by the municipal water supply which sources drinking water from the Niagara River. There are also no known domestic water supply wells in the area.

7.4.2 Surface Water

There are no natural surface water bodies on or within vicinity of the Site. However, there is surface water (i.e., rainwater) that has accumulated within Tank 75. This surface water is not accessible to most human receptors given that the Site is fenced and access is restricted, except for construction workers who could come into contact with contaminated surface water during intrusive activities within the in-ground structure. Nevertheless, it is standard industry practice for construction workers to follow a HASP during intrusive work, including the use of PPE, such that the actual exposure to contaminated surface water is expected to be minimal.

7.4.3 Sediment

There are no natural surface water bodies on or within vicinity of the Site. However, there is sediment (i.e., sludge) that has accumulated within Tank 75. This sediment is not accessible to most human receptors given that the Site is fenced and access is restricted, except for construction workers who could come into contact with contaminated sediment during intrusive activities within the in-ground structure. Nevertheless, it is standard industry practice for construction workers to follow a HASP during intrusive work, including the use of PPE, such that the actual exposure to contaminated sediment is expected to be minimal.

7.4.4 Surface Soil

The Site predominantly consists of the in-ground petroleum storage structure that is fenced in, and the remainder is vegetative cover where surface soils may be disturbed.

Soil particulates could be dispersed as dust throughout the Site and neighboring properties during significant ground disturbance and/or high winds and inhaled by on- and off-Site receptors. Direct contact with surface soils may also occur for on-Site receptors who walk across the Site and who may handle the disturbed soils. It is unlikely for neighboring workers to enter the Site and therefore the direct contact exposure pathway is incomplete for off-Site receptors.

Based on the age of the source of contaminants (i.e., from the historical incidental spills while Tank 75 was in use) and the amount of significant vegetative cover across the Site, the soils are well compacted, and it is unlikely that surface soils will be significantly disturbed during non-intrusive activities such that direct contact or dust inhalation would be a concern.

In addition, it is standard industry practice for construction workers to follow a health and safety plan (HASP) during ground intrusive work, including the use of PPE, such that the actual exposure to contaminated surface soil is expected to be minimal.

7.4.5 Subsurface Soil

Subsurface soil is not accessible to most human receptors, except for construction workers who could come into contact with contaminated subsurface soil during ground intrusive activities. However, it is standard industry practice for construction workers to follow a HASP during ground intrusive work, including the use of PPE, such that the actual exposure to contaminated subsurface soil is expected to be minimal.

All human receptors may come into indirect contact with subsurface soils via dust inhalation during ground intrusive work. However, it is standard industry practice to control volatilization, erosion, and/or fugitive dust during construction activities, such that the actual dust inhalation exposure to contaminated subsurface soil is expected to be minimal.

7.4.6 Vapor

There may be vapor impacts at the Site sourced from known subsurface soil and sediment volatile impacts. However, it should be noted that vapor testing has not been conducted at the Site given that the vapor inhalation pathways are considered to be insignificant.

There are no buildings on Site and none are expected to be erected in the foreseeable future. As such, there are no complete indoor air inhalation exposure pathways.

Vapor contaminants released into the ambient air would be quickly dispersed and diluted, such that the outdoor air inhalation exposure pathway is considered to be incomplete for most human receptors, except for construction workers who could be exposed to contaminated outdoor air while working within Tank 75. Construction workers could also be exposed to potentially contaminated trench air while conducting ground intrusive work. However, it is standard industry practice for construction workers to follow a HASP during intrusive work, including the use of PPE, such that the actual exposure to potentially contaminated outdoor or trench air is expected to be minimal.

7.4.7 Summary

Under the current and continued industrial use of the Site, there are complete exposure pathways from surface soil, subsurface soil, groundwater, sediment, surface water, surface water and vapor for the long-term workers, short-term construction workers, visitors / trespassers, and neighboring workers.

7.5 Fish and Wildlife Resources Impact Analysis

The need to perform a FWRIA is discussed in the NYSDEC document titled *Fish and Wildlife Impact Analysis for Inactive Hazardous Waste Sites*, dated October 1994 [NYSDEC, 1994b]. The NYSDEC requires a FWRIA when there is a significant potential for fish and wildlife resources to be present at a site, and there is a significant potential for the migration of residuals to these resources.

As part of the SC/RI Work Plan (AECOM, 2023), the DER-10 Appendix 3C Fish and Wildlife Resources Impact Analysis Decision Key was completed (**Appendix N**). Also presented in **Appendix N** is a screenshot showing results of a search on the NYSDEC Environmental Resource Mapper indicating there are no records of rare or state-listed animals or plants, or significant natural communities at the Site or in its immediate vicinity. As stated in the SC/RI Work Plan, performance of a Fish and Wildlife Impact Analysis (FWIA), was not planned for this Site unless significant impacts were identified. Based on results of these RI sampling activities, the possibility of significant impacts was not identified. Therefore, in accordance with DER-10 Appendix 3C, performance of an FWRIA was not completed for this Site.

8. Summary and Recommendations

Based upon the results of the RI, the following summary of the findings and recommendations is provided. These RI activities were performed in accordance with the SC/RIWP dated October 11, 2023, and approved by the NYSDEC on October 31, 2023. This report presents data and information gathered in the field between April 16, 2024, and November 13, 2024.

8.1 Summary of Physical Characteristics and Geology

The Tank 75 Site comprises approximately 2.2 acres situated in the western portion of an approximate 20-acre parcel owned by Ashland. However, it currently sits within the perimeter fence of the United Refining terminal facility (**Figure 2-1**). The Site is predominantly occupied by the in-ground gunite-lined petroleum storage structure. The gunite liner is approximately 3 to 4 inches thick and is reinforced with steel mesh. At the ground surface, the structure measures approximately 200 feet wide by 300 feet long with sides that slope inward to a flat bottom approximately 26 feet below surrounding grade (**Figure 2-2**). Tank 75 was formerly equipped with two pumps, one for unloading oil and the second for removing accumulated rainfall. Steam coils (disconnected) are located on the bottom of the structure that were used to heat the fuel oil during cold weather.

Surface water has regularly been identified with a sheen or other petroleum impacts because it comingles with impacted sludge and sediment located at the bottom of the tank. During warmer months, black, globular petroleum product has been identified at the surface most likely rising from deeper portions of the tank as the water within warms with increased air temperature.

Two primary sediment types were identified within the tank during sediment investigation activities: a wet, soft, oily sludge with significant petroleum impacts, and a medium stiff to hard sediment also with significant petroleum impacts located below the previously noted unit. The soft sediment was identified at depths ranging from 8.0 to 19.7 feet below the water surface (bws) with a thickness that ranged from 0.2 to 2.8 feet across 15 investigation locations. The medium stiff to hard sediment was identified below this unit at depths ranging from 10.4 to 21.6 feet bws with a thickness that ranged from 0.7 to 3.5 feet across 15 investigation locations. Total sediment thickness within the bottom of the tank ranged from 2.3 to 5.5 feet.

The bottom of the medium stiff to hard sediment was interpreted as the tank bottom, primarily based on probe refusal. In some cases, sediment core recovery exceeded the depth inferred by probing, suggesting either over-recovery or misidentification of the tank bottom due to equipment limitations. Ambiguity in sediment thickness and tank bottom depth stems from differences in probing and coring methods. Hand probing may underestimate sediment thickness due to resistance from stiff sediment, while vibracore sampling may over-recover material due to compaction or suction. Additionally, refusal during coring may occur within stiff sediment rather than at the true tank bottom. Where discrepancies occur, the tank bottom is estimated based on total core recovery.

The total volume of the upper soft sludge was approximately 1,380 cubic yards; the total volume of the lower medium to hard sludge was approximately 4,570 cubic yards; resulting in a total volume of the sludge of approximately 5,950 cubic yards.

The tank's gunite liner was noted as missing/removed from areas proximate two of the 15 sediment investigation locations (SED-03 and SED-15) considering glaciolacustrine silty clay similar to surrounding Site soils was identified within the bottom of the sediment core. These locations represent the northeast and southeast most sediment investigation locations.

The Site is underlain by glaciolacustrine deposits of red-brown silty clays and clayey silts to depths up to 35 feet bgs. Blue-gray mottling was identified within native glaciolacustrine deposits and groundwater was primarily identified in soil cores at depths of 25 feet bgs or greater. Non-native fill material consisting of poorly graded sand with silt as well as disturbed or reworked native clays were identified from surface to depths up to 5 feet bgs. Impacts to subsurface soil including odor, visible staining, or elevated PID

readings appear localized to specific shallow areas surrounding the tank and are most likely associated with former operations at or around the Site rather than attributable to a release of the tank itself.

Water level readings were collected from the existing monitoring wells in April, July, and September 2024. The depth to groundwater ranged from approximately 0.87 feet bgs (MW05-04) in July 2024, to 13.37 feet bgs (MW-02D) in July 2024. The groundwater flow direction was generally towards the west/northwest with a small component to the north in April and July 2024, and generally towards the west and southwest, with a small component to the north in September 2024. Average hydraulic gradients ranged from 0.011 to 0.026 feet per foot, with a downward vertical gradient of 0.39 to 0.58 feet per foot. Hydraulic conductivity in overburden wells ranged from 2.44×10^{-5} cm/s (MW-02S) to 6.90×10^{-7} cm/s (MW-03).

8.2 Summary of Remedial Investigation

RI field activities were conducted between April 16 and November 13, 2024. The scope of field activities is summarized as follows:

- Performance of Site clearing activities between April 16 and 17, 2024, and again on June 27, 2024.
- Completion of a preliminary Site survey on April 22, 2024, to confirm Site boundaries.
- Completion of a gamma walkover survey on April 22, 2024, to screen for possible areas of elevated gamma radiation levels related to either former FUSRAP materials or slag. In addition, field screening for elevated radiological levels was performed on all solid material generated during RI sampling activities. No evidence of FUSRAP-related material was identified during field screening activities. The radiological screening results were used mainly to ensure worker safety while conducting intrusive activities, and to identify and segregate TENORM containing materials from the IDW for waste management purposes. TENORM containing materials are not a target of these RI activities.
- Redevelopment of nine (9) existing monitoring wells (MW-02S, MW-02D, MW-03, MW-04D, MW-04S, MW05-01, MW05-02, MW05-03, and MW05-04).
- Collection of groundwater samples between April 29 and 30, 2024, from nine (9) existing monitoring wells (MW-02S, MW-02D, MW-03, MW-04D, MW-04S, MW05-01, MW05-02, MW05-03, and MW05-04), for laboratory analysis.
- Performance of hydraulic conductivity testing between May 23 and May 24, 2024, on one (1) deep well (MW-02D) and three (3) shallow wells (MW-02S, MW-03, and MW-04S).
- Completion of a bathymetric survey of the tank on May 22, 2024, to estimate the volume of submerged sediment/sludge and to verify the depths of the sloping sides and bottom of the tank.
- Collection of three (3) surface water samples from Tank 75 at varying depths (SW-01-1 through SW-01-3), and 15 sediment samples using a vibracore sampler (SED-01 through SED-15) between June 3 and June 4, 2024, for laboratory analysis.
- Clearance of underground utilities surrounding Tank 75 on July 8, 2024.
- Advancement of nine (9) soil borings (SB-01 through SB-05 and SB-07 through SB-10) between July 8 and 15, 2024, and between August 8 and August 9, 2024, by DPT methods surrounding Tank 75 for the collection of surface and subsurface soil samples for laboratory analysis. Angled soil boring SB-06 located south of the Tank was unable to be advanced due to difficult drilling conditions, the presence of a berm, and limited clearance within the Site boundary.
- Advancement of eight (8) hand augered borings (HA-01 through HA-08) between July 10 and 11, 2024, surrounding Tank 75 for the collection of surface soil samples for laboratory analysis.
- Completion of a final Site survey on September 11, 2024, to measure the recently advanced sampling locations.
- Management, and disposal of IDW on November 13, 2024.

The laboratory analytical results are summarized in the following subsections.

Groundwater

Metals and PFAS were detected in groundwater above one or more SCG. The following parameters exceeded their applicable SCG:

- TOGS Class GA Protection for Source of Drinking Water exceedances:
  - Iron, magnesium, manganese, and sodium
  - PFOS

Based on their ubiquitous distribution in soil and groundwater across the Site, these metals may be associated with background conditions rather than past fuel bulk storage activities. Metal concentrations also reduced when compared to the filtered (dissolved) groundwater samples, which may indicate the inclusion of sediment in the unfiltered groundwater samples.

PFOS was detected marginally above the SCG in one monitoring well, which may be associated with background levels.

VOCs, SVOCs, pesticides, and PCBs were not detected in groundwater above groundwater criteria. As such, RI results do not indicate that Tank 75 materials are adversely impacting surrounding groundwater.

Tank 75 Surface Water

Pesticides, metals, and PFAS were detected in Tank 75 surface water above one or more SCG. The following parameters exceeded their applicable SCG:

- TOGS Class GA Protection for Source of Drinking Water exceedances:
  - Manganese
  - PFOA and PFOS
- TOGS Class A Protection for Surface Water exceedances:
  - delta-BHC, methoxychlor, p,p'-DDD, and p,p'-DDT
  - Manganese
  - PFOA and PFOS

Pesticides were detected marginally above their surface water criteria in all three (3) surface water sample locations but were not detected in surface water above the groundwater criteria. These pesticides may be associated with historical application on the adjacent vegetation surrounding Tank 75.

Manganese (total) was detected above the groundwater and surface water criteria in the deepest surface water sample (SW-01-3 at 13 feet bws). However, the dissolved phase manganese concentration was well below the groundwater and surface water criteria at this sample, indicating that the surface water sample SW-01-3 may have had sediment inclusion, and therefore may not be attributable to the surface water media, but rather the sediment inclusion. Manganese (dissolved) was detected above the groundwater and surface water criteria in the intermediate surface water field duplicate sample (SW-01-2 at 7 feet bws) but was non-detect in the original sample.

PFOS and PFOA were detected marginally above the SCG in surface water, which is likely associated with background levels.

VOCs, SVOCs, and PCBs were not detected in surface water above the groundwater or surface water criteria.

No abnormal color or visual impacts were identified in surface water samples collected from Tank 75; however, a petroleum sheen has been identified on the surface of the water within the tank, as well as petroleum odor.

Sediment

VOCs, SVOCs, PCBs, metals, and PFAS were detected in sediment above one or more SCG. The following parameters exceeded their applicable SCG:

- Unrestricted Use SCO exceedances:
  - BTEX, 1,2-dichlorobenzene, 1,4-dichlorobenzene, chlorobenzene, isopropylbenzene, and styrene
  - 2-Methylnaphthalene, acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, pyrene, biphenyl, dibenzofuran, and n-nitrosodiphenylamine
  - PCBs, specifically Aroclor 1248
  - Aluminum, antimony, arsenic, barium, cadmium, calcium, chromium (total), cobalt, copper, iron, lead, mercury, nickel, selenium, vanadium, and zinc
  - PFOA (exceedance of guidance level for unrestricted use)
- Industrial Use SCO exceedances:
  - Benzene
  - Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, naphthalene, and phenanthrene
  - Arsenic, chromium (total), copper, lead, and mercury
- Protection of Groundwater SCO exceedances:
  - 1,2-Dichlorobenzene, 1,4-dichlorobenzene, chlorobenzene, isopropylbenzene, toluene, ethylbenzene and xylenes
  - 2-Methylnaphthalene, acenaphthylene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, naphthalene, and phenanthrene
  - PCBs, specifically Aroclor 1248
  - Arsenic, barium, chromium (total), copper, lead, mercury, nickel, selenium, and zinc
  - PFOA (exceedance of guidance level for protection of groundwater)

Pesticides were not detected in sediment in Tank 75.

Surface Soil

Pesticides, PCBs, and metals were detected in surface soil above one or more SCG. The following parameters exceeded their applicable SCG:

- Unrestricted Use SCO exceedances:
  - p,p'-DDD, and p,p'-DDT
  - PCBs, specifically Aroclor 1260
  - Aluminum, arsenic, calcium, chromium (total), copper, iron, lead, mercury, nickel, vanadium, and zinc
- Industrial Use SCO exceedances:
  - Arsenic
- Protection of Groundwater SCO exceedances:

  - Arsenic, chromium (total), lead, mercury, and nickel

SVOCs, and PFAS were not detected in surface soil above the soil SCGs.

VOCs were not analyzed in surface soil.

Elevated gamma count rates were observed associated with slag-like material indicating the likely presence of TENORM-related slag.

Subsurface Soil

VOCs, SVOCs, pesticides, PCBs, and metals were detected in subsurface soil above one or more SCG. The following parameters exceeded their applicable SCG:

- Unrestricted Use SCO exceedances:
  - Acetone, benzene, ethylbenzene, toluene, and xylenes
  - 2-Methylnaphthalene, acenaphthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluorene, naphthalene, phenanthrene, pyrene, dibenzofuran, and n-nitrosodiphenylamine
  - p,p'-DDT
  - PCBs, specifically Aroclor 1260
  - Aluminum, arsenic, calcium, chromium (total), iron, lead, manganese, mercury, nickel, vanadium, and zinc
- Industrial Use SCO exceedances:
  - Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and chrysene
  - Arsenic
- Protection of Groundwater SCO exceedances:
  - Acetone, benzene, ethylbenzene, toluene, and xylenes
  - 2-Methylnaphthalene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, and naphthalene
  - Arsenic, chromium (total), and manganese

PFAS were not detected in subsurface soil above the soil guidance levels.

8.3 Qualitative Human Health Exposure Assessment

Under the current and continued industrial use of the Site, there are complete, albeit minimal, exposure pathways from surface soil, subsurface soil, groundwater, sediment, surface water, surface water and vapor for the long-term workers, short-term construction workers, visitors / trespassers, and neighboring workers.

8.4 Recommendations

The following recommendations are offered for consideration by the NYSDEC. The recommendations include additional Remedial Investigation/Feasibility Study activities:

Surface Soil

Surface soil exceedances of Pesticides, PCBs, and metals should be addressed in a feasibility study. Remedial action objectives include preventing ingestion/direct contact of impacted soils, preventing migration of contaminates from the Site to adjacent surface soils, and restoring impacted surface soils to below the appropriate SCG based current and anticipated future on land use.

Subsurface Soil

Surface soil exceedances of VOCs, SVOCs, pesticides, PCBs, and metals should be addressed in a feasibility study. Remedial action objectives include preventing ingestion/direct contact of impacted soils, preventing migration of contaminants from the Site to adjacent surface soils, and restoring impacted surface soils to below the appropriate SCG based current and anticipated future on land use.

Groundwater

Groundwater exceedances of Metals (iron, magnesium, manganese, and sodium) and PFAS (PFOS) are likely a result of background and are not a result of impacts from Tank 75 operations. No action for groundwater is recommended at this time.

Tank 75 Surface Water

Surface water exceedances of Pesticides, metals, and PFAS should be addressed in a feasibility study. Remedial action objectives include removing Tank 75 surface water and filling in Tank 75.

Tank 75 Sediment

Tank 75 sediment analytical results were compared to soil criteria. Exceedances of VOCs, SVOCs, PCBs, metals, and PFAS should be addressed in a feasibility study. Remedial action objectives include preventing ingestion/direct contact of impacted soils and preventing off-Site migration of contaminants.

Pesticides:				
P,P'-DDT	3.3	94000	136000	160

Parameter | Criteria Value | Detected Concentration (Red Text Indicates Exceedance)

Criteria: 6 NYCRR Part 375.6, Remedial Program Soil Cleanup Objectives (SCOs), Effective 12/14/06. Where there were no Part 375.6 SCOs, the NYSDEC CP-51 Table 1 Supplemental SCOs, Effective 12/2/10, and the NYSDEC April 2023 PFAS guidance values, were provided. Where there were no Unrestricted Use SCOs, the lowest of the Supplemental SCOs was selected.
(1) - Unrestricted Use SCOs
(2) - Industrial Use SCOs
(3) - Protection of Groundwater SCOs
Note: All criteria and detected concentrations are shown in mg/kg.

Notes:

Surveys performed on April 22 and September 11, 2024.

NAD 1983 State Plane New York West; North American Vertical Datum of 1988 (NAVD 88)

(1) Due to adverse drilling conditions, it was determined to be unfeasible to complete angled boring SB-06. Approval to omit SB-06 from the sampling plan was received from NYSDEC on August 12, 2024.

*Monitoring well locations where concrete surface seal/pad is not flush with ground surface. In these instances, both the ground elevation and the elevation of the concrete surface seal/pad were surveyed.

ft - feet

AMSL - above mean sea level

"-" - Not applicable

Notes:

NAD 1983 State Plane New York West; North American Vertical Datum of 1988 (NAVD 88)

1. Surface water elevation as measured on June 3, 2024 by Atlantic Testing Laboratories (ATL): 591.2 ft. AMSL.
2. Top of sediment measured via hand probe from water vessel during vibracore sampling.
3. Bottom of soft sediment determined via sediment core logging on shore proximate Tank 75.
4. Bottom of hard sediment is equivalent to the estimated bottom of Tank 75. This depth was determined via hand probe, however, where total recovery of the sediment core exceeded the thickness of the sediment determined via hand probe, the depth of the bottom of the tank (bottom of medium stiff / hard sediment) is estimated based on the total recovery of the sediment core.
5. Total sediment thickness is the sum of soft sediment thickness and medium stiff / hard sediment thickness.
6. Sediment log indicates the presence of clayey silt at 17.5 to 17.7 ft bws, below the medium stiff / hard sediment.
7. Sediment log indicates the presence of soft sediment layer at 14.0 to 14.2 ft bws. It is inferred that the medium stiff / hard sediment unit extends from 13.2 to 15.3 ft bws.

Table 3-4
Soil Boring and Hand Auger Details (July-August 2024)
Remedial Investigation
Ashland Tank 75, Tonawanda, New York

Boring/ Hand Auger ID	Approximate Angle of Boring (degrees from horizontal axis)	Total Angled Length (ft)	Total Vertical Depth (ft bgs)	Depth to Water During Drilling (ft bgs)	Maximum PID reading (ppm)	Depth to Top of Rock (ft bgs)	Remarks
SB-01	37	45.0	27.0	19.1	0.0	-	-
SB-02	90	-	30.0	-	0.0	-	Asphalt like sub-base noted at 0.3 ft bgs on north side of boring.
SB-03	90	-	30.0	25.0	0.0	-	-
SB-04	45	42.0	30.0	23.1	0.0	-	-
SB-05	90	-	33.0	-	0.0	-	-
SB-06	-	-	-	-	-	-	Boring removed from remedial investigation scope of work
SB-07	90	-	35.0	31.7	0.0	-	Hydrocarbon staining and odor noted from 2 to 5.4 ft bgs.
SB-08	90	-	30.0	28.3	0.0	-	-
SB-09	90	-	30.0	4.0	0.0	-	Assumed perched groundwater noted in hand clearing at 4 ft bgs. True groundwater assumed at 27.7 ft bgs.
SB-10	37	49.0	29.5	25.5	0.0	-	-
HA-01	90	-	4.0	-	0.2	-	Shallow subsurface soils noted as wet most likely due to recent precipitation, not believed to be true groundwater. Hydrocarbon odor and staining noted throughout.
HA-02	90	-	4.0	-	0.0	-	-
HA-03	90	-	4.0	-	10.5	-	Hydrocarbon staining noted from 2 to 4 ft bgs. Hydrocarbon odor noted from 2.3 to 2.5 ft bgs.
HA-04	90	-	1.5	-	0.4	-	Hydrocarbon staining and odor noted from 1.3 to 1.5 ft bgs. Concrete refusal noted at 1.5 ft bgs.
HA-05	90	-	4.0	-	0.0	-	-
HA-06	90	-	4.0	-	0.0	-	Surface soils noted as wet most likely due to recent precipitation.
HA-07	90	-	4.0	-	0.0	-	-
HA-08	90	-	4.0	3.4	0.0	-	-

Notes:
"-" - Not applicable
ft - feet
bgs - below ground surface
PID - photoionization detector
ppm - parts per million

Table 4-4
May 2024 Hydraulic Conductivity Results
Remedial Investigation
Ashland Tank 75, Tonawanda, NY

Well ID	Hydraulic Conductivity (cm/sec)			
	Test 1		N(1)	Mean(2)
	FH1	RH1		
MW-02S	5.76E-05	1.03E-05	2	2.44E-05
MW-02D	-	-	-	-
MW-03	6.90E-07	-	1	6.90E-07
MW-04S	2.27E-07	-	1	2.27E-07

Notes:

FH - Falling Head test
RH - Rising Head test
(1) - number of valid tests
(2) - geometric mean

-For all graphs, normalized head is defined as H(t)/Ho, where H(t) is the displacement measured at time t and Ho is the initial displacement at time t=0.
-While the geometric mean for both the falling and rising head tests are given, it is understood that the rising head tests more accurately describe the overall hydraulic characteristics of the aquifer.
(See attached reference, *The Bouwer and Rice Slug Test - An Update*)

Notes:

Criteria = NYSDEC TOGS (1.1.1), Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. June 1998 (includes addendums through 2/2023).

(1) - Class GA, Protection for Source of Drinking Water (groundwater)

Definitions:

ft bgs - feet below ground surface

ug/L - micrograms per liter

mg/L - milligrams per liter

ng/L - nanograms per liter

"--" - Not analyzed

ND - Non-detect

NA - Not applicable

J - Reported concentration is an estimated value.

J+ - Reported concentration is an estimated value, and may be biased high.

JN - Reported concentration is an estimated value, that has been "tentatively identified".

U - Analyte was analyzed for but was not detected above the reported limit.

UJ - Analyte was analyzed for but was not detected above the reported limit, but the reported limit is approximate.

Bold Analyte was detected

Highlight Detected concentration exceeds Criteria (1)

Notes:

Criteria = NYSDEC TOGS (1.1.1), Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. June 1998 (includes addendums through 2/2023).

(1) - Class GA, Protection for Source of Drinking Water (groundwater)

(2) - Class A, Protection for Surface Water. Lowest value of Source of Drinking Water (surface water), Human Consumption of Fish (fresh waters), Fish Propagation

Definitions:

ft bws - feet below water surface

ug/L - micrograms per liter

mg/L - milligrams per liter

ng/L - nanograms per liter

"--" - Not analyzed

NA - Not applicable

btu/lb - BTU per pound

deg F - degrees Fahrenheit

SU - standard units

deg C - degrees Celsius

DNF - When prepped for Heat of Combustion/BTU analysis, the sample did not combust. The sample was run in duplicate to confirm. The result is reported as "Did Not Fire" (DNF).

J - Reported concentration is an estimated value.

JN - Reported concentration is an estimated value, that has been "tentatively identified".

U - Analyte was analyzed for but was not detected above the reported limit.

UJ - Analyte was analyzed for but was not detected above the reported limit, but the reported limit is approximate.

Bold	Analyte was detected
Highlight	Detected concentration exceeds Criteria (1)
Highlight	Detected concentration exceeds Criteria (2)

Notes:
Criteria = 6 NYCRR Part 375.6, Remedial Program Soil Cleanup Objectives (SCOs), Effective 12/14/06. Where there were no Part 375.6 SCOs, the NYSDEC CP-51 Table 1 Supplemental SCOs, Effective 12/2/10, and the NYSDEC April 2023 PFAS guidance values, were provided. Where there were no Unrestricted Use SCOs, the lowest of the Supplemental SCOs was selected.
(1) - Unrestricted Use SCOs
(2) - Industrial Use SCOs
(3) - Protection of Groundwater SCOs

Definitions:
ft bws - feet below water surface
mg/kg - milligrams per kilogram
"--" - Not analyzed
btu/lb - BTU per pound
deg F - degrees Fahrenheit
SU - standard units
deg C - degrees Celsius
ml/100g - milters per 100 grams

DNF - When prepped for Heat of Combustion/BTU analysis, the sample did not combust. The sample was run in duplicate to confirm. The result is reported as "Did Not Fire" (DNF).

J - Reported concentration is an estimated value.
J+ - Reported concentration is an estimated value, and may be biased high.
JN - Reported concentration is an estimated value, that has been "tentatively identified".
U - Analyte was analyzed for but was not detected above the reported limit.
UJ - Analyte was analyzed for but was not detected above the reported limit, but the reported limit is approximate.

Bold	Analyte was detected
Underline	Detected concentration exceeds Criteria (1)
Highlight	Detected concentration exceeds Criteria (2)
Highlight	Detected concentration exceeds Criteria (3)

Notes:
Criteria = 6 NYCRR Part 375.6, Remedial Program Soil Cleanup Objectives (SCOs), Effective 12/14/06. Where there were no Part 375.6 SCOs, the NYSDEC CP-51 Table 1 Supplemental SCOs, Effective 12/2/10, and the NYSDEC April 2023 PFAS guidance values, were provided. Where there were no Unrestricted Use SCOs, the lowest of the Supplemental SCOs was selected.
(1) - Unrestricted Use SCOs
(2) - Industrial Use SCOs
(3) - Protection of Groundwater SCOs

Definitions:
ft bws - feet below water surface
mg/kg - milligrams per kilogram
"--" - Not analyzed
btu/lb - BTU per pound
deg F - degrees Fahrenheit
SU - standard units
deg C - degrees Celsius
ml/100g - milters per 100 grams

DNF - When prepped for Heat of Combustion/BTU analysis, the sample did not combust. The sample was run in duplicate to confirm. The result is reported as "Did Not Fire" (DNF).

J - Reported concentration is an estimated value.
J+ - Reported concentration is an estimated value, and may be biased high.
JN - Reported concentration is an estimated value, that has been "tentatively identified".
U - Analyte was analyzed for but was not detected above the reported limit.
UJ - Analyte was analyzed for but was not detected above the reported limit, but the reported limit is approximate.

Bold	Analyte was detected
Underline	Detected concentration exceeds Criteria (1)
Highlight	Detected concentration exceeds Criteria (2)
Highlight	Detected concentration exceeds Criteria (3)

Notes:
Criteria = 6 NYCRR Part 375.6, Remedial Program Soil Cleanup Objectives (SCOs), Effective 12/14/06. Where there were no Part 375.6 SCOs, the NYSDEC CP-51 Table 1 Supplemental SCOs, Effective 12/2/10, and the NYSDEC April 2023 PFAS guidance values, were provided. Where there were no Unrestricted Use SCOs, the lowest of the Supplemental SCOs was selected.
(1) - Unrestricted Use SCOs
(2) - Industrial Use SCOs
(3) - Protection of Groundwater SCOs

Definitions:
ft bgs - feet below water surface
mg/kg - milligrams per kilogram
"--" - Not analyzed
J - Reported concentration is an estimated value.
J+ - Reported concentration is an estimated value, and may be biased high.
J- - Reported concentration is an estimated value, and may be biased low.
JN - Reported concentration is an estimated value, that has been "tentatively identified".
U - Analyte was analyzed for but was not detected above the reported limit.
UJ - Analyte was analyzed for but was not detected above the reported limit, but the reported limit is approximate.

Bold	Analyte was detected
Underline	Detected concentration exceeds Criteria (1)
Highlight	Detected concentration exceeds Criteria (2)
Highlight	Detected concentration exceeds Criteria (3)

Notes:
Criteria = 6 NYCRR Part 375.6, Remedial Program Soil Cleanup Objectives (SCOs), Effective 12/14/06. Where there were no Part 375.6 SCOs, the NYSDEC CP-51 Table 1 Supplemental SCOs, Effective 12/2/10, and the NYSDEC April 2023 PFAS guidance values, were provided. Where there were no Unrestricted Use SCOs, the lowest of the Supplemental SCOs was selected.
(1) - Unrestricted Use SCOs
(2) - Industrial Use SCOs
(3) - Protection of Groundwater SCOs

Definitions:
ft bgs - feet below water surface
mg/kg - milligrams per kilogram
"--" - Not analyzed
J - Reported concentration is an estimated value.
J+ - Reported concentration is an estimated value, and may be biased high.
J- - Reported concentration is an estimated value, and may be biased low.
JN - Reported concentration is an estimated value, that has been "tentatively identified".
U - Analyte was analyzed for but was not detected above the reported limit.
UJ - Analyte was analyzed for but was not detected above the reported limit, but the reported limit is approximate.

Bold	Analyte was detected
Underline	Detected concentration exceeds Criteria (1)
Highlight	Detected concentration exceeds Criteria (2)
Highlight	Detected concentration exceeds Criteria (3)

Notes:
Criteria = 6 NYCRR Part 375.6, Remedial Program Soil Cleanup Objectives (SCOs), Effective 12/14/06. Where there were no Part 375.6 SCOs, the NYSDEC CP-51 Table 1 Supplemental SCOs, Effective 12/2/10, and the NYSDEC April 2023 PFAS guidance values, were provided. Where there were no Unrestricted Use SCOs, the lowest of the Supplemental SCOs was selected.
(1) - Unrestricted Use SCOs
(2) - Industrial Use SCOs
(3) - Protection of Groundwater SCOs

Definitions:
ft bgs - feet below water surface
mg/kg - milligrams per kilogram
"--" - Not analyzed
J - Reported concentration is an estimated value.
J+ - Reported concentration is an estimated value, and may be biased high.
J- - Reported concentration is an estimated value, and may be biased low.
JN - Reported concentration is an estimated value, that has been "tentatively identified".
R - The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
U - Analyte was analyzed for but was not detected above the reported limit.
UJ - Analyte was analyzed for but was not detected above the reported limit, but the reported limit is approximate.

Bold	Analyte was detected
Underline	Detected concentration exceeds Criteria (1)
Highlight	Detected concentration exceeds Criteria (2)
Highlight	Detected concentration exceeds Criteria (3)

Notes:

Criteria = 6 NYCRR Part 375.6, Remedial Program Soil Cleanup Objectives (SCOs), Effective 12/14/06. Where there were no Part 375.6 SCOs, the NYSDEC CP-51 Table 1 Supplemental SCOs, Effective 12/2/10, and the NYSDEC April 2023 PFAS guidance values, were provided. Where there were no Unrestricted Use SCOs, the lowest of the Supplemental SCOs was selected.

(1) - Unrestricted Use SCOs

(2) - Industrial Use SCOs

(3) - Protection of Groundwater SCOs

Definitions:

ft bgs - feet below water surface

mg/kg - milligrams per kilogram

"--" - Not analyzed

J - Reported concentration is an estimated value.

J+ - Reported concentration is an estimated value, and may be biased high.

J- - Reported concentration is an estimated value, and may be biased low.

JN - Reported concentration is an estimated value, that has been "tentatively identified".

R - The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

U - Analyte was analyzed for but was not detected above the reported limit.

UJ - Analyte was analyzed for but was not detected above the reported limit, but the reported limit is approximate.

Bold	Analyte was detected
Underline	Detected concentration exceeds Criteria (1)
Highlight	Detected concentration exceeds Criteria (2)
Highlight	Detected concentration exceeds Criteria (3)

Table 7-2
Human Health Exposure Assessment
Remedial Investigation
Ashland Tank 75, Tonawanda, NY

		Human Receptors				
Media of Concern	**Exposure Pathway**	**Long-Term Worker**	**Short-Term Construction Worker**	**Visitor / Trespasser**	**Neighboring Worker**	**Human Health Exposure Assessment**
Surface Soil	Direct Contact (including Incidental Ingestion)	X	X	X		- There are known surface soil impacts at the Site. - All on-site human receptors may come into direct contact with surface soils who walk across the Site. However, the vegetative cover is substantial which would reduce the amount of soil erosion. - Construction workers may come into direct contact with surface soils during ground intrusive work. However, it is standard industry practice for construction workers to follow a health and safety plan (HASP) during ground intrusive work, including the use of personal protective equipment (PPE).
	Dust Inhalation	X	X	X	X	- All human receptors may come into indirect contact with surface soils via dust inhalation during ground distrurbance such as strong winds and heavy machinery movement. However, the surface has significant vegetative cover which would limit the amount of soil erosion.
Subsurface Soil	Direct Contact (including Incidental Ingestion)		X			- There are known subsurface soil impacts at the Site. - Construction workers may come into direct contact with subsurface soils during ground intrusive work. However, it is standard industry practice for construction workers to follow a health and safety plan (HASP) during ground intrusive work, including the use of personal protective equipment (PPE).
	Dust Inhalation	X	X	X	X	- All human receptors may come into indirect contact with subsurface soils via dust inhalation during ground intrusive work. However, it is standard industry practice to control volatilization, erosion, and/or fugitive dust during construction activities.
Groundwater	Direct Contact		X			- There are known groundwater impacts at the Site, although likely associated with background levels. - Construction workers may come into direct contact with groundwater during ground intrusive work. However, it is standard industry practice for construction workers to follow a HASP during ground intrusive work, including the use of PPE.
	Ingestion (as drinking water)					- Contaminated groundwater is not being used for drinking water. The site and surrounding properties are serviced by the municipal water supply which sources drinking water from the Niagara River. - There are no known domestic water supply wells in the area.
Sediment	Direct Contact (including Incidental Ingestion)		X			- There are no natural surface water bodies on or within vicinity of the Site. - There is sediment (i.e., sludge) within Tank 75. Construction workers may come into contact with sediment / sludge impacts during disruptive work at Tank 75. However, it is standard industry practice for construction workers to follow a HASP during intrusive work, including the use of PPE.
Surface Water	Direct Contact (including Incidental Ingestion)		X			- There are no natural surface water bodies on or within vicinity of the Site. - There is surface water (i.e., accumulated rainwater) within Tank 75. Construction workers may come into contact with surface water impacts during disruptive work at Tank 75. However, it is standard industry practice for construction workers to follow a HASP during intrusive work, including the use of PPE.

Table 7-2
Human Health Exposure Assessment
Remedial Investigation
Ashland Tank 75, Tonawanda, NY

		Human Receptors				
Media of Concern	**Exposure Pathway**	**Long-Term Worker**	**Short-Term Construction Worker**	**Visitor / Trespasser**	**Neighboring Worker**	**Human Health Exposure Assessment**
Vapor	Indoor Air Inhalation					- There may be vapor impacts at the Site sourced from known subsurface soil and sediment impacts. - However, there are no buildings on-site and none are expected to be erected in the foreseeable future.
	Trench Air Inhalation		X			- Construction workers may inhale contaminated trench air sourced from the subsurface soil impacts during ground intrusive work. However, it is standard industry practice for construction workers to follow a HASP during ground intrusive work, including the use of PPE.
	Outdoor Air Inhalation		X			- Vapor contaminants released into ambient air from subsurface soil and sediment are low in concentration and would be quickly dispersed and diluted. - Construction workers may inhale contaminated outdoor air sourced from the sediment impacts during disruptive work at Tank 75. However, it is standard industry practice for construction workers to follow a HASP during intrusive work, including the use of PPE.
Vegetation, Fish or Wildlife	Consumption					- The site and surrounding properties are zoned industrial whereby foraging, fishing and hunting is restricted. - The nearest surface water body, Niagara River, is located more than 3100’ northwest of the Site, which is sufficiently distant such that on-site contaminants would be unlikely to discharge to the waterbody and be consumed by people fishing.

Note:
Shaded - indicates a potentially complete exposure pathway for the relevant receptor

Appendix A Field Notes

Location Tank 75 Site RI Date 4-16-24

Project / Client Ashland - 60730037

NYSDEC Site No. 915008B

0750 - ESmith on Site w/ C. Wasteneys (AECOM) and Rick Brant (United Refining Co.)
GATE CODE [redacted]

0800 - OSC on-site
- Dan Flanagan
- Brian Rudnick
- Hunter Hehir
- Shawn Hehir
- Matt Reardon
- Mike Richey (Manages Non-OSC attachment on excavator)
↳ Raymond Fisher

0815 - Crew drives to Site area proximate Tank 75, north corner

0830 - Begin kickoff and safety meeting, cover general Site hazards and plan of attack w/ crew listed above

Conditions AM: 50°, wind WNW 3mph, mostly clear, no precip
PM: 60°, wind WNW 4mph, clear, no precip

0900 - Raymond Fisher and Matt Reardon off-site
0930 - Dan Flanagan and Brian Rudnick off-site

Location Tank 75 Site RI Date 4-16-24

Project / Client AsWand - 60730037

NYSDEC Site No. 9150083

1000 - Shawn H. (OSC) moving Link-Belt 210x4 to southeast corner of permeter fence where he will enter to clear inside fence OSC crew prepping to begin clearing C. Wasteneys (AECOM) remains on-site to meet w/ Rick Brent E. Smith (AECOM) to go inside fence perimeter and mark wells w/ tape and mark piping w/ tape and paint

1015 - Shawn H. (OSC) begins clearing in ~~south~~east corner of Site
Hunter H. (OSC) running handtools clearing around MWs and in north of Site
- E. Smith and M. Richey (OSC) marking any above grade obstacles to clearing (MWs, metal piping, concrete)

1030 - C. Wasteneys off-site

1145 - Site clearing on-going along east side of Tank 75 w/ Link-Belt 210x4, no issues

Location Tank 75 RI Date 4-16-24

Project / Client Ashland 60730037

NYSDEC Site No. 9150083

1200 - Break for lunch. Hunter H. off-site to get food, to return shortly

1215 - Mike R. off-site for supplies, to return shortly

1220 - Hunter H. returns to Site

1230 - Shawn and Hunter H. resume work

1300 - Work ongoing (clearing/grubbing)
Shawn H. exits Tank 75 enclosure via south access, moving to north access

1310 - Mike R. returns to site
- Clearing and grubbing ongoing along northern perimeter

1410 - Electrical line on boom of excavator broke during clearing, SH and MR replacing it. Not a live line, does not connect to anything

1415 - Dan Flanigan (OSC) on-site

1430 - Dan Flanigan off-site. Work ongoing

1440 - Clearing/grubbing work done for the day. OSC, patching fence in south

1510 - OSC crew leaving Site
R. Brant (URC) notified

1515 - E. Smith off-site
Site secure

Location Tank 75 Site RI Date 4-17-24

Project / Client Ashland / Tonawanda, NY 60730037
NYSDEC Site No. 915008B

0720 - E. Smith (AECOM) on-site waiting for OSC crew

Conditions AM: 46°, wind ENE 10 mph, cloudy, no precip
PM: 51°, wind E 11 mph, rain

0730 - OSC crew on-site
Personnel includes:
- Hunter Hehr
- Shawn Hehir
- Mike Richey

0740 - E. Smith holds safety meeting w/ crew prior to start of work. Rick Brand (URC) rolled crew is on site
- Rain begins, forecasted on/off all day

0800 - Commence clearing/grubbing work along norther perimeter of tank 75
- Shawn Hehir running Link-Belt 210X4 w/ attachment, Hunter Hehir using hand ~~tools~~ tools in hand to reach areas

Location Tank 75 RI Date 4-17-24

Project / Client Ashland / Tonawanda, NY 60730037
NYSDEC Site No 915008B

0835 - Brian Rudnick (OSC) visits Site
0857 - Complete Site walkaround w/ crew to scope out remaining clearing work around west perimeter
0900 - Brian Rudnick off site
0945 - All clearing that can be done using Link-Belt 210x4 is complete Remainder of work includes clearing vegetation by hand along western Site perimeter (Hunter H. completing)
- Colin Wastenays provided w/ update and current photos via text
- Mike R. patched access area / fence in south Site perimeter
1100 - Clearing / grubbing work complete All areas safe / accessible for clearing have been cleared OSC crew off-site to retrieve trailer to put the mulching attachment on in order to de-mob from Site E. Smith (AECOM) remains on-site
1310 - Shawn H. and Hunter H. back on-site w/ trailer
1335 - Mike Ricley back on-site Crew working on detaching attachment

Location Tank 75 Site RI Date 4/17/24

Project / Client Ashland / Tonawanda, NY 60730037

NYSDEC Site No. 915008B

1430 - OSC crew off-site to return mulch head attachment to owner. Noted that Link-Belt machine is to be picked up for demob from Site tomorrow, 4-18-24

1440 - John w/ OSC visits Site

1450 - Above off-site Rick Brant (URC) notified all personel leaving Site

1500 - E. Smith (AECOM) off-site

Location Tank 75 Site RI Date 4-18-24

Project / Client Ashland / Tonawanda, NY 60730037
NYSDEC Site No. 915008B

0645 - E. Smith on-site

Conditions AM: 47°, wind SW 8 mph, cloudy, no precip.
PM: 55°, wind SW 11 mph, cloudy, no precip

0700 - Informed by M. Richey (OSC) that excavator is now scheduled to be picked up from Site at 11am as opposed to 7am as informed yesterday. E. Smith to leave Site and return for demob R. Brant (URC) informed

0705 - E. Smith off-site

1045 - E. Smith on-site
Awaiting arrival of M. Richey (OSC) and trucking company to demob excavator

1050 - M. Richey (OSC) on-site

Location Tank 75 Site RI Date 4-18-24

Project / Client Ashland / Tonawanda, NY 60730037
NYSDEC Site No. 915008B

1140 - M. Richey notified that low boy truck will not be on-site until ~1pm Will remain on-site until then

1300 - M. Richey informed that truck for demob will now not be on-site until ~1:30, pm. E. Smith, M. Richey remain on-site

1336 - Redwood Heavy Transport on-site

1355 - Link-Belt 210x4 getting loaded onto trailer
- C. Wasteneys (AECOM) informed of discharge from concrete sumps north of Tank 75 Site to asphalt pad north of Site. Sump and discharge (via submersible pump) all off-site

1410 - Redwood Heavy Transport off-site w/ equipment

1415 - E. Smith (AECOM) and M. Richey (OSC) leaving Site

Rite in the Rain

Location Tank 75 Site RI Date 4-22-24

Project / Client Ashland / Tonawanda, NY 60730037
NYSDEC Site No. 915008B

0730 - E. Smith (AECOM) on-site w/ M. Rozeski (AECOM)

Conditions AM: 36°, wind WNW 5 mph, clear, sunny, no precip
PM: 50°, wind W 7 mph, clear, sunny, no precip

Tasks: - Complete Site survey to note property corners and survey in monitoring well locations
- Complete gamma walkover survey of property

0755 - K. Beherry (AECOM) on-site to complete GWS

0830 - E. Smith held safety meeting prior to start of work

0900 - M. Rozeski completing Site survey, K. Beherry establishing background survey prior to starting GWS proximate grassy area where River Rd. meets the 190 (Location 1)

Location Tank 75 Site RI Date 4-22-24

Project / Client Ashland / Tonawanda, NY 60730037
NYSDEC Site No. 915008B

On-site Personnel: Ethan Smith (AECOM)
Mike Rozeski (AECOM)
Kara Beharry (AECOM)

0930 - Derick Dietrich (DEC) on-site

0940 - Met w/ D. Dietrich at site entrance. Introduced to K. Beharry who is establishing background at location 1 of 2

0955 - K. Beharry begins establishing background at 2nd location in grassy area northwest of site
- R. Brant visits site

1020 - Begin site walk to survey monitoring wells starting w/
MW-4D -> 4S -> 05-02 -> 05-01
-> MW-2S -> 2D -> 05-04 ->
MW-3 -> 05-03

1035 - C. Wasteneys (AECOM) on-site

Location Tank 75 Site RI Date 4-22-24

Project / Client Ashland / Tonawanda, NY 607300037

NYSDEC Site No 915008B

1100 - M. Rozek, off-site
Site survey work complete
- K. Behery processing background GWS data, then to begin GWS on Tank 75 property

1115 - Average reading from both background locations combined approx 7600 cpm

1150 - Begin GWS - K. Behery (AECOM) surveying, beginning in northeast corner
Derick Dietrich (NYSEC) working w/ Kara in tandem

1155 - C. Waslenchys (AECOM) off-site

1225 - Approx. location of RR spike located within access road: 6'10" east from west end of first panel ~~to~~ adjacent to northern access gate, 28'10" northeast of this point (perpendicular w/ fence)

Location Tank 75 Site RI Date 4-22-24

Project / Client Ashland / Tonawanda, NY 60730037
NYSDEC Site No. 9150083

1250 - Elevated readings in southeast corner (1)
12k-14.8k cpm. Flagged (within fence)

1330 - Elevated readings up to 17k cpm noted in southwest corner of Site (2)
K. Behany also noted a single reading in southeast corner of Site reached approx. 16k cpm. Material emitting elevated readings is a gray, porous slag material exposed on the southern berm. Readings are not being emitted from soils

1405 - Elevated reading at flagged location (3) noted at 18.4 k cpm

1500 - GWS continues around outside of Tank 75 fence. No elevated readings noted outside of what was found along southern portion of Site

1510 - GWS complete
E Smith and K. Behany to reconvene w/ C. Wasteneys

Location Tank 75 Site RI Date 4-22-24

Project / Client Ashland / Tonawanda, NY 60730037
NYSDEC Site No. 9150083

1545 - Meeting w/ C. Wasteneys via phone w/ K. Behamy
CW sent figure showing elevated readings along south side of property. Discussed slag like material in 3 areas noted within figure emitting elevated readings

1620 - CW sent photos of slag like material from each of the 3 locations in south of Site
- Work complete for the day

1630 - E. Smith and K. Behamy off-site

AECOM Imagine it. Delivered.

Dust: 8530091527
PID: 582 - 910541
Dust: 8530181802

0752 - Continue Geoprobe investigation at SB-10 and sampling/logging w/ iPad

0841 - PW having issues retrieving core barrels from soil boring
Boring ongoing at SB-10

0935 - Boring continues at SB-10 following break beginning at 0920
Currently logged 17-21' interval via iPad

1028 - C. Horrocks checked UW CAMP - Continued logging. SB-10 ongoing
Last log interval ~~21-25'~~ ~~Test~~ 25-~~29~~ next 29-~~33~~'

1130 - PW taking lunch. Currently at 37 out of 50 total feet
- Call to C. Wasteneys to provide update. Briefed him on current status of SB-10 and anticipated ~~30~~ 60° angled boring at SB-01. Noted he was OK w/ not hand clearing angled borings (still hand clear vertical) where GPRS has cleared.
B. McPherson (NYSDEC) to be on-site ~~at~~ later this afternoon following phone conversation w/ him. To ask about the necessity for CAMP during rain events

1140 - C. Higgins off-site to grab lunch. Back on-site 1157

1210 - B. McPherson (NYSDEC) on-site w/ Derick Detmk (NYSDEC)

1230 - Geoprobe investigation resumes. PW off lunch at 1200.

1315 - SB-10 39-42 sampled. See log for description

1420 - NYSDEC reps off-site
- No recovery on 49-51' sleeve. Drill team let sleeve at bottom of hole. Lee Penrod (Lead Driller) noted there was ~40' of drill rod lost in hole

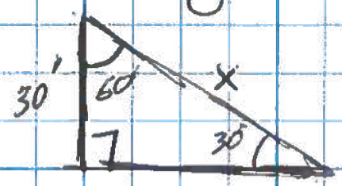
1425 - SB-10 - 48-49 sampled. Target depth of 50' not met due to lack of recovery and lost rods

4x4 = 1 in

AECOM Imagine it. Delivered.

JOB TITLE Tank 75 Site RI NYSDEC Site No 915008B
PROJECT/JOB NO. 60730037 CALCULATION NO. —
COMPUTED BY E. Smith DATE 7-9-24
VERIFIED BY — DATE —
SCALE — SHEET NO. 2 OF 2

1515 - Lee P. (PW) noted that a male end of the drill rod snapped while sub-grade. Thus why ~40' of rod are stuck in SB-10
- Team currently working on getting steps at SB-01 location (angled boring)
- SB-01 distance calculated based on 30° angle of tank slope determined in field (30° from horizontal / 60° vertical) and 30' target vertical depth



$\sin(30) = 30/x$

$x = 30/\sin(30) = 60'$

1545 - SB-01 0-0.2 sampled
Consists of fine light gray silty sand fill. No odors, no PID
PW begins positioning drill rig
1615 - Only way to achieve a 60° angle at SB-01 is to raise drill rig on 2 6x6 blocks horizontally. E. Smith made decision to ~~to~~ stop work and recassess due to safety concern w/ ~~for~~ diagonally raised drill rig and drill rod that would need to be exposed above grade. E. Smith called C. Wasteneys to explain and both agreed to attack boring at same angle as previous (53°) into tank and step closer to tank. Sacrificing overall horizontal distance but still achieving soil investigation under tank in a safer manner. Diagonal distance to be 50'
1636 - Begin SB-01 boring
1657 - Work complete for the day, begin cleanup. Currently at SB-01 final log is 5-9'
1708 - C. Higgins and PW team off-site
1730 - E. Smith and C. Hancock off site

4x4 = 1 in

Heavy rain at 0822
0803 - E. Charostkowska visits Site
0820 - E. Charostkowska off-site
- L. Penrod on-site
0831 - Both upwind and downwind CAMS stopped logging due to intense rainfall. Will set back up when work resumes
0900 - Rain, thunder/lightning stopped. Attempting to resume work
- UW CAMP back online running
0904 - NW CAMP back online running
0930 - Sampled HA-01-2.5-3.5 → HA-01-2.5-3.5-MS
includes MS/MSD → HA-01-2.5-3.5-MSD
0941 - Resume drilling at SB-01 location
1015 - E. Smith logging SB-01. C. Horacks and D. Vanmaster working on ~~soil boring~~ hand augers. C. Higgins continues to screen all investigation material

1100 - Resume heavy rain. CAMP down until further notice
C. Higgins off-site to grab lunch
Drilling shut down until further notice, crew on lunch
1117 - C. Higgins back on-site

ASIDE - HA-08-0-0.2 sampled @ 1030
HA-08 ~~2.5-3.5~~ 3.5-4 sample @ 1050

1129 - Call to C. Wasteneys to update on progress
- Resume work → E. Smith working w/ drillers, C. Horracks and D. Vanmaster moving to HA-07, C. Higgins working between both crews to screen soils for radiological impacts
CAMPs logging
1230 - Following extraction of 25-29' core and conversation w/ L. Penrod (Lead driller) the day will be called
T. Kimball (PW) and J. Perkins (PW) will be driving back to PW Syracuse office to retrieve additional necessary equipment to complete angled borings and rain / thunderstorms have halted work again. A tornado ~~watch~~ warning has also been initiated for the area
1240 - Conversation w/ C. Wasteneys (AECOM) to update on progress, discuss tornado warning and plans for continuing work. Looking for an answer from PW regarding availability next week
- PW team off-site, AECOM team cleaning up
1300 - AECOM (except E. Smith) off-site
ASIDE - C. Horracks and D. Vanmaster sampled:
HA-07-0-0.2 @ 1200
HA-07-3.0-4.0 @ 1220
1340 - E. Smith leaving Site to laboratory to drop-off samples

SCALE — SHEET NO. 1 OF 3

0700 - E. Smith on-site w/ team. Conditions AM: 67°, wind WNW 7 mph, light rain
Personell: - Ethan Smith (AECOM) - Chris Higgins (AECOM) - Collin Horacks (AECOM) - Dennis Vanmarke (AECOM) - Lee Penrod (P. Wolff) PM: 67°, wind NNW 9 mph, cloudy, no precip.
0710 - DV CAMP logging (PID SN: 592-910536, DustTrak: 8530092527)
0720 - UW CAMP logging (PID SN: 592-910541, DustTrak: 8530181802)
0725 - Remainder of drill team on-site
0749 - Begin drilling at SB-01. CH and DV to continue hand augers when rain stops. Left off yesterday at 25-29'
0835 - SB-01-26-31.7 sampled (No contamination, directly above observed water table)
↳ Analysis: VOCs, SVOCs + 1,4-Dioxane, Pests, PCBs, Metals + Hg + Cr, PFAS
0911 - Conversation w/ Lee Penrod: Rods still catching even after adjustments w/ additional equipment. Will need to grind out inside of rod ends that are mushrooming to continue ⇒ Drilling haulted
- C. Horacks and D. Vanmarke starting hand auger locations at ~~SB-06~~ HA-06
0930 - HA-06-0.0-0.2 sampled
0950 - HA-06-3.0-4.0 sampled
↳ corresponds w/ field duplicate HA-06-3.0-4.0-FD) from same time
1045 - Drill rig still down. Last core logged 33-37'
Hand auger work ongoing, currently at HA-05
1025 - HA-05-0.0-0.2 sampled (Metals, Cr(VI), Pests, PCB, SVOC)
1050 - HA-05-3.0-4.0 sampled (includes MS/MSD see below HA-05-3.0-4.0-MS and HA-05-3.0-4.0-MSD)
Subsurface sample analysis: Full list including PFAS and 1,4-dioxane
1110 - C. Higgins off-site grabbing lunch
- E. Smith called Pine Environmental to inform them CAMP rentals + PIDs will still be needed on Monday
1118 - Drill team putting rods back into hole at SB-01
1133 - Resume drilling following fixes to rods
- 37-41' received. Drillers breaking for lunch
ASIDE - HA-04-0.0-0.2 sampled @ 1130
HA-04-0.0-0.2-FD sampled @ 1130
HA-04-1.3-1.5 sampled @ 1150

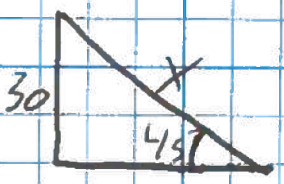
PROJECT/JOB NO. 60730037 CALCULATION NO. -
COMPUTED BY E. South DATE 7-11-24
VERIFIED BY - DATE -
SCALE - SHEET NO. 2 OF 3

1240 - Drillers return from lunch
- C. Horrocks and D. Vanmeter continue w/ hand auger work currently at HA-03 location. Only remaining hand auger location is HA-02
1300 - Resume drilling
1306 - Call to C. Wasteneys to discuss progress. Noted the time it is taking to complete this boring. He noted that if at any point the drillers feel the rods will get stuck like at SB-10, stop the boring. Also suggested using a more suitable angle for the drillers at the next boring (SB-04) suggest 45°
ASIDE - HA-03 - 0.0 - 0.2 sampled @ 1215
- HA-03 - 2.3 - 2.5 sampled @ 1300
1346 - Sampled SB-01 - 43.0 - 45.0
ASIDE: HA-02 - 0.0 - 0.2 @ 1330
HA-02 - 3.0 - 4.0 @ 1340, associated w/ 1
HA-02 - 3.0 - 4.0 ~~@ 1330~~ @ 1340
1346 con. - SB-01 completed - No gross contamination. D'd standing to setup at SB-04 location (angled)
1425 - Setting up @ SB-04 location. As per conversation w/ C. Wasteneys, attempting 45° angle at this location to increase probability of simpler boring given setbacks



$\sin 45 = \frac{30}{x}$

$x = \frac{30}{\sin 45} = 43\text{ ft}$

1433 - Danielle and Celia starting round of water levels
1441 - 45° angle at SB-04 will be used
1455 - SB-04 - 0.0 - 0.2 taken
↳ Consists of dark brown, moist, loose silty soil w/ trace sand. Some subangular gravel throughout, as well as vegetable roots from phragmites
1504 - Begin SB-04
1550 - Met refusal at 4 locations while attempting to move laterally east west at 2' for first 3 locations and 4' at 4th

COMPUTED BY E. Smith DATE 7-12-24
VERIFIED BY - DATE
SCALE SHEET NO. 1 OF 2

0700 - E. Smith onsite w/ team Conditions AM: 68°, wind SSW 3 mph, sunny
Personnel includes: PM: 80°, wind SW 5 mph, sunny
Collin Horrocks (AECOM)
Chris Higgins (AECOM)
Lee Penrod (P. Wolff)
Taylib Kimball (P. Wolff)
Jordan Perkins (P. Wolff)
0707 - DW CAMP up and logging
0715 - UW CAMP up and logging
0730 - Currently setting up at SB-04 (Aglod 45°) location. Plan is to complete this location today and grout borings to date (SB-10, SB-01 and SB-04)
0740 - Daily tailgate completed w/ team
0750 - Begin drilling at SB-04 location.
0815 - Sleeve slip catching on inner rod while trying to pull core sample out → Drill team has to pull inner rods + outer rods to retrieve sample like previous holes
0830 - Texted R. Brant (URC) to notify him that we will be continuing the soil boring investigation work on Monday (7-15-24) w/ only vertical borings. Plan is to start inside the fence at SB-08 move to SB-09 → SB-02 → SB-03 → SB-05 → SB-07 and complete as many as possible
Also confirmed that we are unable to move piping proximate SB-05 (See text from R. Brant). Boring to be moved north parallel w/ tank just north of ~~pipe~~ piping appx 15 ft.
1103 - Cores may appear wet in photos due to spraying/decon of rocks w/ water as the come up but so far all core centers are dry
0930 - RB-07122024 taken off of acetate liner
Aside - C. Horrocks noted DI water was used for metals RB instead of metals rinse water. Metals rinse water used today for RB-07112024

COMPUTED BY E. Smith DATE 08-08-24
VERIFIED BY — DATE —
SCALE — SHEET NO. 1 OF 2

0725 - E. Smith on-site w/ C. Higgins, C. Horrocks, and C. Finn (All AECOM personnel) Awaiting arrival of Matrix Environmental to complete soil borings around tank
Conditions AM: 67°, wind ESE 6 mph, mostly cloudy, no p.p.
PM: 76°, wind SSE 7 mph, mostly cloudy
0740 - AECOM team headed back to Site (Tank 75), E. Smith awaiting Matrix arrival off of River Rd.
Task - Complete soil borings SB-03, SB-02, SB-09, SB-08 and SB-07 between today (8/8) and tomorrow (8/9). Soil samples to be taken from each location (surface, middle (water table or greatest contamination) and bottom. Air monitoring to be employed for all work
0753 - Matrix Env. on-site w/ drill rig - Rick Regan (Matrix)
0759 - Upwind CAMP started (DustTrak: 8530102616, PID: 592-602803)
0803 - ~~Downwind CA~~ Additional Matrix personnel on-site - Jason Kuchey (Matrix)
0808 - Downwind CAMP started (DustTrak: 8530162403, PID: 592-910636)
0820 - E. Smith held safety meeting w/ team
- Begin mob to SB-03 location
0847 - Hand clearing w/ hand auger at SB-03 underway
0915 - Begin drilling at SB-03 w/ Geoprobe 7822DT using 5' foot cores, starting w/ 5-10 ft core following hand clear to 5'
0926 - C/H inputting data to iPad (Equis collect). Photos show top of core at left
1005 - Sample SB-03-5.0-7.0
1015 - Sample SB-03-28.0-30.0
- SB-03 complete
ASIDE: 1009 call received from C. Westerneys (AECOM) noting he had a conversation w/ B. McPherson (NYSDEC) concerning final angled boring. He noted B. McPherson was agreeable to omitting final angled boring which was originally planned @ SB-06 and potentially moved to SB-08. The plan to complete the angled boring at either of these locations is no longer in effect. All remaining borings (SB-02, -08, -09, -07) planned to be vertical

DAILY WORK LOG

IDW Purge Water Disposal
PROJECT # 60608603
Ashland Tank 75 – Tonawanda, NY

Weather: 50s partly cloudy

Personnel Onsite:

Name	Company	ARR	DEP
Christopher Finn	**AECOM**	**0800**	**1500**
Matt Stevener	**AECOM**	**0800**	**1500**

Field Notes/Description of Work:

Task: Empty purge water in five (5) 55-gallon drums into the tank in-ground tank per DEC approval.

0800: AECOM arrives on-site, tailgate meeting completed.
0830: Drums opened and waterra pump setup. Approximately 130 feet of ½ ID tubing was run from the drums to the tank.
0845: Pumping started.
0915: Pump not strong enough to get water full distance to the tank. Looking up potential solutions.
0930: All drums covered. AECOM offsite to purchase a small submersible fountain pump.
1000: Purchased fountain pump from Lowe's, heading back to Site.
1030: AECOM back on-site. New pump setup and turned on.
1105: First drum emptied beginning to pump down second drum.
1145: Second drum emptied.
1225: Third drum emptied.
1345: Fourth and fifth drums emptied.
1400: Cleanup started, tubing and gloves to be properly disposed of. Pump cleaned with Alconox & water solution.
1430: Cleanup completed. Drums covered with lids tightened down. C. Finn completing IDW weekly inspection.
1500: AECOM off-site

Safety Observations:

AECOM Employees wearing proper PPE including nitrile gloves, steel-toe boots, and hi-vis vests.
Potential for slips, trips, falls on-site.

Field Changes:

Rental pump was not able to get water the distance needed. Purchased pump from Lowe's to complete task.

Location Tank 75 Site Tonawanda, NY Date 11-13-24

Project / Client Ashland Inc. (NEC Site No. 9150088)

0700 - E. Smith (AECOM) on-site
M. Stevenes (AECOM)

Conditions: AM: 32°, wind E
5 mph, mostly clear
PM: ——

Task: Provide oversight for disposal of IDW from 2024 remedial investigation activities. Clean Harbors picking up drums from Site for disposal

Personnel: Ethan Smith (AECOM)
Matt Stevener (AECOM)
Clean Harbors Driver (Richard)

0710 - Tailgate meeting completed
Team to begin clean-up of IDW staging area and begin staging drums for removal from Site

Location Tank 75 Site Tonawanda, NY Date 11-13-24

Project / Client Ashland Inc. (NEC Site No. 9150088)

Disposal to include following:

- 9 empty drums Profile BU172466-MT
- 1 drum solids from SB-02, -03, -07, -08, -09 Profile CH2853762
- 1 drum soil/solids from HA-01, -03, -04 Profile: CH2853653
- 1 drum solids from SB-01, -04, -05, -10 Profile: CH2853675
- 1 drum soil/solids from SB-07 Profile: SB-07
- 4 drums solids that came in contact w/ tank contents Profile: CH2853799

0820 - All drums staged for pick up by Clean Harbors. All poly sheeting and municipal soil/waste bagged

0840 - Clean Harbors rep. on-site to take drums

0900 - 9 empty drums loaded

0910 - 4 Tank contents drums loaded

Location Tank 75 Site Tonawanda, NY Date 11/13/24

Project / Client Ashland Inc. (DEC Site No 915008B)

0925 - Remaining drums loaded onto Clean Harbors box truck

0945 - Clean Harbors rep off-site w/ all drums
M. Steiner and E. Smith completing general cleanup. Spoke w/ R. Brent (URC) earlier today @ 0806. He asked me can store 4 5-gallon buckets in garage on-site

1045 - 4 5-gallon buckets stored in URC garage. Spoke w/ Rick Rd w/ approval from URC rep. Rick Brent

1115 - Site left in good condition E. Smith and M. Steiner leaving site

11/13/24

Location Tank 75 Site Tonawanda, NY Date 11/13/24

Project / Client Ashland Inc. (DEC Site No 915008B)

Note:In case of repair, "As Found Reading" contains the pre-repair measurements and the "Meter Reading" contains the post-repair measurements.

Notes: Multimeter uncertainty within 1.1% of reading (volts, amps). Count rate uncertainty is within 3% of reading. Measurement results represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2. The calibration results presented on this ERG Calibration Certificate relate only to the items calibrated by ERG. ERG certifies that the above instrument has been calibrated by standards traceable to the National Institute of Standards and Technology (NIST) or to the calibration facilities of other International Standards Organization members, or have been derived from accepted values of natural physical constants or have been derived by the ratio type of calibration techniques. The calibration system conforms to the requirements of ANSI N323A-1997 and ISO/IEC 17025:2017.
DECISION RULE: Measurements from the meter, adjusted for the measurement uncertainty, must be within tolerance limits as stated in the Comments or Compliance Statement section. Otherwise the calibration is rejected.

Ludlum Measurements, Inc. certifies that the above instrument has been calibrated by standards traceable to the National Institute of Standards and Technology, or to the calibration facilities of other International Standards Organization members, or have been derived from accepted values of natural physical constants or have been derived by the ratio type of calibration techniques.
All pass/fail determinations are based on the manufacturer's specifications without considering uncertainty factors.
Measurement results represent expanded uncertainties expressed at approximately the 95% level of confidence, using a coverage factor of k=2.
The calibration system conforms to the requirements of ANSI/NCSL Z540-1-1994 and ANSI N323AB-2013

Tank 75 Site - Slug Tests
Well Construction Details

Well ID	Formation	Ground Elevation	MP Elevation	Depth to Ground-water (below MP)	Screen Length		Radii			Aquifer Thickness	Depth from Aquifer Top	
					Total	Submerged	Screen (*)	Casing			to Top of Screen	to Bottom of Screen
								Actual	Equivalent			
				(below MP)	L_e	$L_{e\text{-}sub}$	r_w	r_c	$r_{c\text{-}eq}$ (**)	b	d	H
		[ft]	[ft]	[ft]	[ft]	[ft]	[in]	[in]	[in]	[ft]	[ft]	[ft]
MW-02S	Overburden	596.31	599.68	5.25	10.0	10.00	5.25	2.00	2.00	28.12	17.12	27.12
MW-02D	Overburden	596.19	597.87	24.15	5.0	5.00	5.25	2.00	2.00	13.53	8.03	13.03
MW-03	Overburden	595.70	597.97	4.20	10.0	10.00	5.25	2.00	2.00	28.07	15.57	25.57
MW-04S	Overburden	597.62	598.87	4.32	10.0	10.00	5.25	2.00	2.00	21.93	10.93	20.93

Notes:
(*) - sand pack (overburden wells)
(**) - $r_{c\text{-}eq} = [(1 - n)\, r_c^2 + n\, r_w^2]^{1/2}$ if $L_{e\text{-}sub} < L_e$
$r_{c\text{-}eq} = r_c$ if $L_{e\text{-}sub} = L_e$
MP - measuring point
ft - feet
in - inch

Assumptions:
(1) AQTESOLV ver. 4.50 was used for slug test analyses.
(2) Sandpack porosity of 0.32 was used for wells that were not fully submerged during testing.
(3) Bouwer and Rice (1976) solution was used for unconfined aquifers.
(4) Formulas and parameters used for this slug test analysis can be found in:
Bouwer, H., 1989. The Bouwer and Rice slug test--an update, Ground Water, vol. 27, no. 3, pp. 304-309.
(5) Used depth to water below ground surface (ft) and depth to bottom of borehole below ground surface (ft) to determine aquifer thickness.

Summary of Results
Tank 75 Site
Slug Tests

Well ID	Hydraulic Conductivity [cm/sec]			
	FH1	RH1	N(**)	Mean (***)
MW-02S	5.76E-05	1.03E-05	2	2.44E-05
MW-02D	-	-	-	-
MW-03	6.90E-07	-	1	6.90E-07
MW-04S	2.27E-07	-	1	2.27E-07

(**) - number of valid tests
(***) - geometric mean

FH - Falling Head test
RH - Rising Head test

Note:
-For all graphs, normalized head is defined as H(t)/Ho, where H(t) is the displacement measured at time t and Ho is the initial displacement at time t=0.

-While the geometric mean for both the falling and rising head tests are given, it is understood that the rising head tests more accurately describe the overall hydraulic characteristics of the aquifer.
(See attached reference, *The Bouwer and Rice Slug Test - An Update*)

-Falling head test data collected at MW-02D indicated that hydraulic head increased during the duration of the test. It is believed that hydraulic head at this monitoring well was still recovering from purge and sampling activities completed between April 29 and 30, 2024.

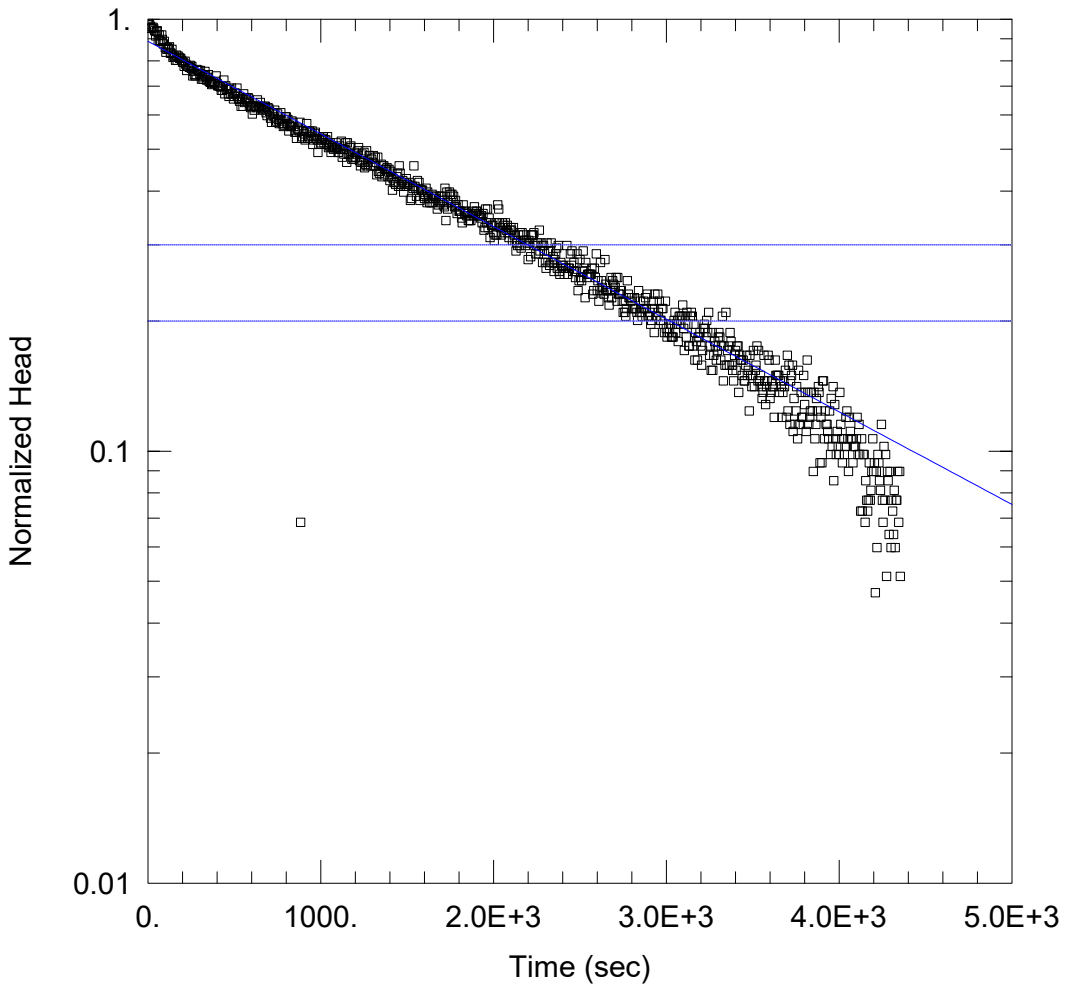
-Due to extremely low rates of hydraulic head recovery, only one (1) falling head test was completed at monitoring well MW-03 and MW-04S.

Tank 75 Site - Slug Tests
Useability of Data

Well ID	Remarks	
	FH1	RH1
MW-02S	OK	OK
MW-02D	INVALID[1]	-
MW-03	OK[2]	-
MW-04S	OK[2]	-

1. Falling head test data collected at MW-02D indicated that hydraulic head increased during the duration of the test. It is believed that hydraulic head at this monitoring well was still recovering from purge and sampling activities completed between April 29 and 30, 2024.

2. Due to exremely low rates of hydraulic head recovery, only one (1) falling head test was completed at the monitoring well.



WELL TEST ANALYSIS

Data Set: D:\Tank75SlugTests\MW02S-In.aqt

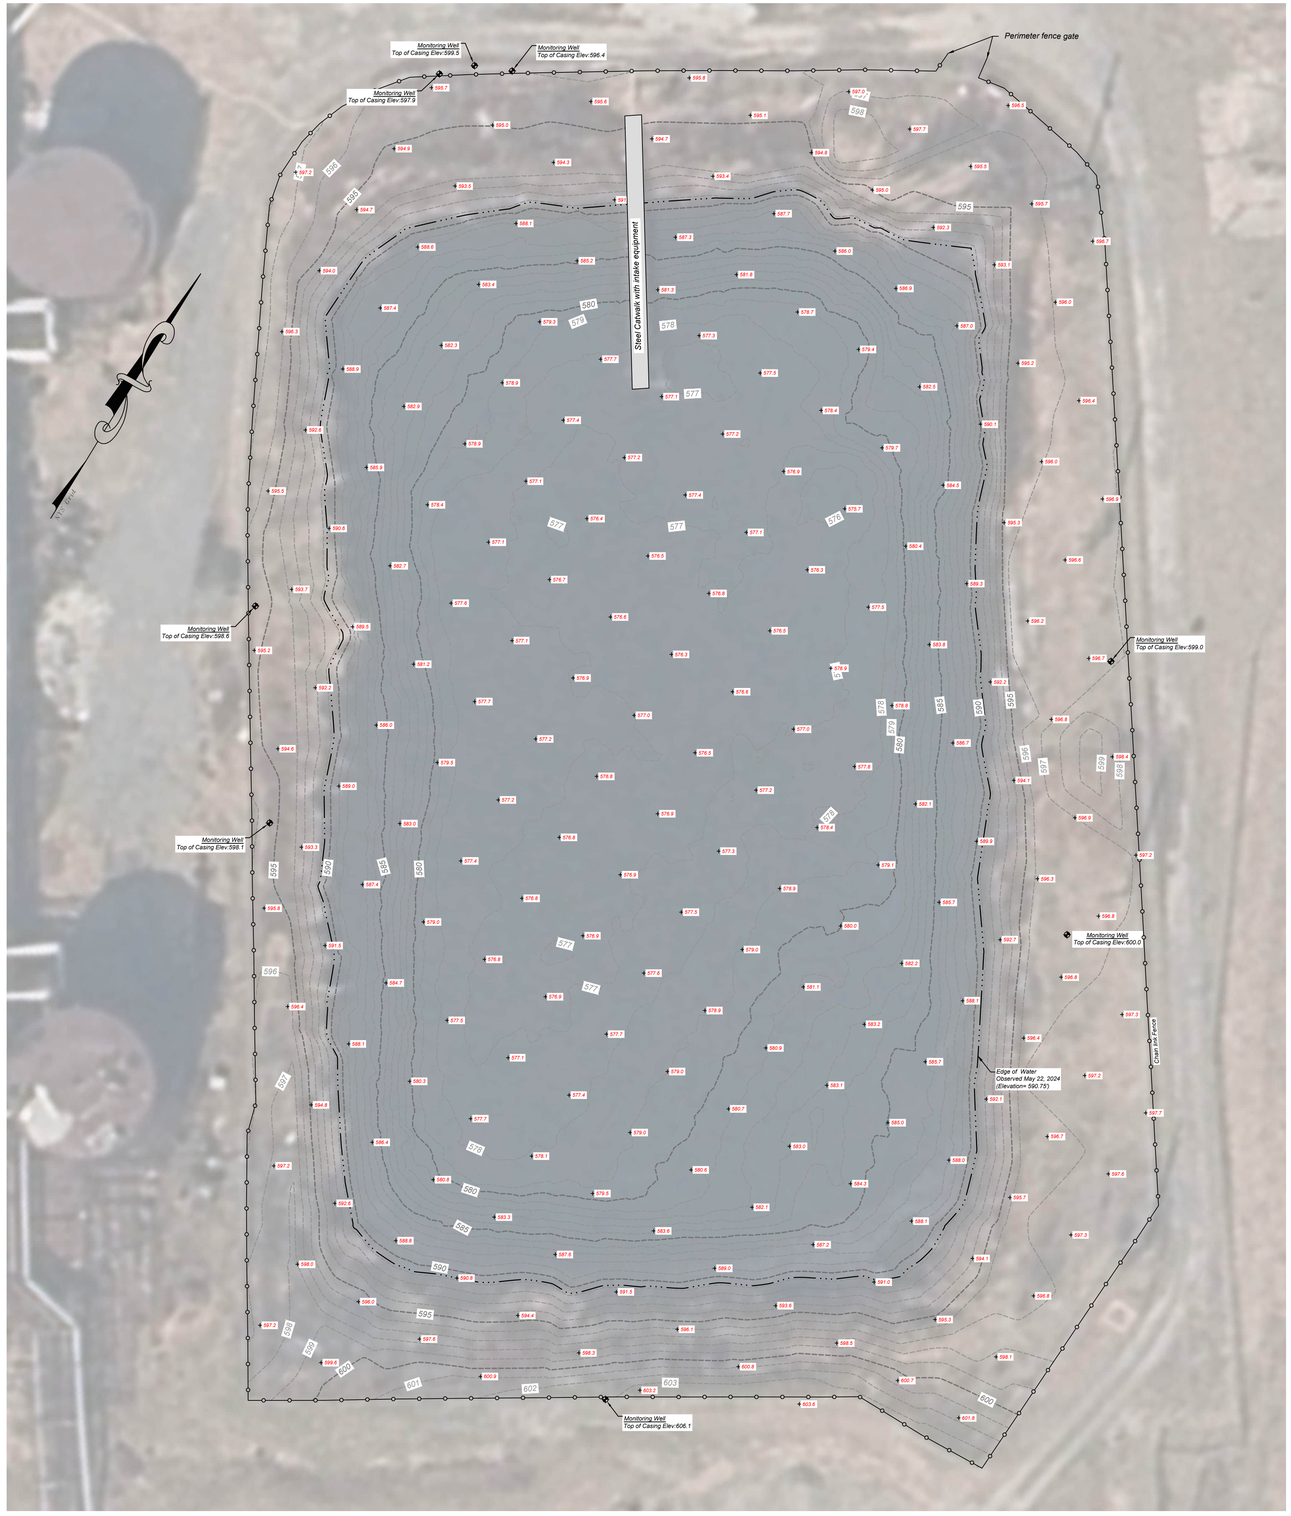
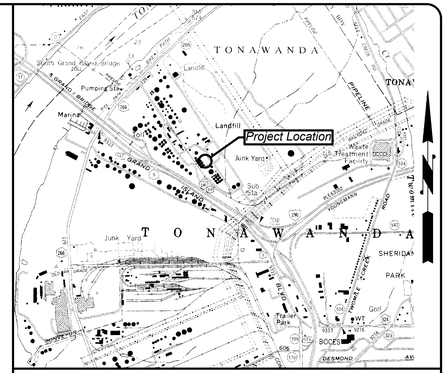
Appendix E Bathymetric Survey





U.S.G.S. Quadrangle
Buffalo Northwest, New York
1" = 2000' +/-

Plan Legend:

- *Major Contour Line*
- *Minor Contour Line*
- *Chain Link Fence*
- *Observed Water Surface Elevation*
- *Spot Elevation and Location*
- *Steel Catwalk*
- *Monitor Well*

General Notes:

1. *The survey on which this map is based is referenced horizontally to the North American Datum of 1983, 2011 adjustment (NAD83/2011), projected on the New York State Plane Coordinate System (West Zone), and vertically to the North American Vertical Datum of 1988 (NAVD88).*
2. *North arrow as shown indicates Grid North referenced to (NAD83/2011), projected on the New York State Plane Coordinate System (West Zone).*
3. *The reference horizontal and vertical control station is a GPS Continuously Operating Reference Station (CORS) designated as "Lockport CORS ARP" (NYLP). NYLP is a Control Station established by The New York State Department of Transportation and last adjusted by National Geodetic Survey (NGS) in April 2022. Elevation 545.60 feet*
4. *RTK GNSS surveying techniques were utilized to determine the coordinates and elevations of the on-site horizontal and vertical control points.*
5. *Contours and elevations shown hereon are referenced to the North American Vertical Datum of 1988 (NAVD88).*
6. *Contours shown hereon were generated from a Digital Terrain Model utilizing Autodesk Civil 3D Surveying and Engineering software.*
7. *The topographic information shown hereon is based on an instrument survey completed on May 22, 2024.*
8. *The lagoon bottom bathymetric information shown hereon was collected utilizing multi-beam acoustic surveying techniques on May 22, 2024. Soundings meet accuracy standards for New Work as specified in Table 3-1 of the United States Army Corps of Engineers Hydrographic Surveying Manual (EM 1110-2-1003: November 30, 2013).*
9. *The water surface elevation at the time of the bathymetric survey was 590.75 feet.*
10. *The multi-beam acoustic data was thinned by selecting the median sounding in 3-foot square cells.*

NOTICE TO RECIPROCITY APPLICANTS

Pursuant to Industrial Code Rule 38 (12 NYCRR Part 38), Section 38.15, the New York State Department of Health will grant reciprocity to licensees of other Agreement States or the United States Nuclear Regulatory Commission authorizing the use of radioactive materials in New York State for a period of 30 days in a calendar year. While working under reciprocity in New York State, a licensee shall comply with all relevant provisions of 12 NYCRR Part 38 and shall insure that all radioactive sources brought into this state remain under the constant supervision of the licensee's authorized personnel and are secured against unauthorized removal from transport vehicles or temporary storage facilities.

Licensees wishing to use radioactive materials in this state for longer than 30 days must apply for a Department of Health radioactive materials license. Once a complete application has been submitted, along with the required licensing fee, the 30-day time limit will be waived pending completion of the application review process.

Companies that exceed the 30-day limit without submitting such an application may not be considered eligible for reciprocity in the future, and their licensing agency will be so notified.

Initial requests for reciprocity must be accompanied by a copy of the license (with all current amendments) under which work is to be performed. Also, unless specifically named on the license, any staff that will be using sources in New York State must carry evidence of training and/or authorization to use radiation sources under the license.

A Notice of Intent should be filed at least seven days prior to each entry into the state. In lieu of this filing requirement, oral notification or notification less than seven days in advance may be accepted in emergency situations at the discretion of the Department. In no event shall a licensee enter the state to perform activities with radioactive materials without prior notice to the Department. Also, the Department should be notified immediately of any subsequent changes (including cancellation) to a Notice of Intent filed with this office.

Requests for reciprocity and Notices of Intent should be directed to our Albany office at:

NYS Department of Health
Bureau of Environmental Radiation Protection
Radioactive Material Section
ESP – Corning Towers Room 1245
Albany, New York 12237
Office (518) 402-7590
Fax (518) 402-7585

Remember that you must call to confirm receipt of mailed or faxed requests, and confirm that they have been approved.

Commissioner

Sue Kelly
Executive Deputy Commissioner

NOTICE TO RECIPROCITY APPLICANTS

Pursuant to Industrial Code Rule 38 (12 NYCRR Part 38), Section 38.15, the New York State Department of Health will grant reciprocity to licensees of other Agreement States or the United States Nuclear Regulatory Commission authorizing the use of radioactive materials in New York State for a period of 30 days in a calendar year. While working under reciprocity in New York State, a licensee shall comply with all relevant provisions of 12 NYCRR Part 38 and shall insure that all radioactive sources brought into this state remain under the constant supervision of the licensee's authorized personnel and are secured against unauthorized removal from transport vehicles or temporary storage facilities.

Licensees wishing to use radioactive materials in this state for longer than 30 days must apply for a Department of Health radioactive materials license. Once a complete application has been submitted, along with the required licensing fee, the 30-day time limit will be waived pending completion of the application review process.

Companies that exceed the 30-day limit without submitting such an application may not be considered eligible for reciprocity in the future, and their licensing agency will be so notified.

Initial requests for reciprocity must be accompanied by a copy of the license (with all current amendments) under which work is to be performed. Also, unless specifically named on the license, any staff that will be using sources in New York State must carry evidence of training and/or authorization to use radiation sources under the license.

A Notice of Intent should be filed at least seven days prior to each entry into the state. In lieu of this filing requirement, oral notification or notification less than seven days in advance may be accepted in emergency situations at the discretion of the Department. In no event shall a licensee enter the state to perform activities with radioactive materials without prior notice to the Department. Also, the Department should be notified immediately of any subsequent changes (including cancellation) to a Notice of Intent filed with this office.

Requests for reciprocity and Notices of Intent should be directed to our Albany office at:

NYS Department of Health
Bureau of Environmental Radiation Protection
Radioactive Material Section
ESP – Corning Towers Room 1245
Albany, New York 12237
Office (518) 402-7590
Fax (518) 402-7585

Remember that you must call to confirm receipt of mailed or faxed requests, and confirm that they have been approved.

x 1	100	100	cpm	100	cpm			cpm

Note:In case of repair, "As Found Reading" contains the pre-repair measurements and the "Meter Reading" contains the post-repair measurements.

Notes: Multimeter uncertainty within 1.1% of reading (volts, amps). Count rate uncertainty is within 3% of reading. Measurement results represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2. The calibration results presented on this ERG Calibration Certificate relate only to the items calibrated by ERG. ERG certifies that the above instrument has been calibrated by standards traceable to the National Institute of Standards and Technology (NIST) or to the calibration facilities of other International Standards Organization members, or have been derived from accepted values of natural physical constants or have been derived by the ratio type of calibration techniques. The calibration system conforms to the requirements of ANSI N323A-1997 and ISO/IEC 17025:2017.
DECISION RULE: Measurements from the meter, adjusted for the measurement uncertainty, must be within tolerance limits as stated in the Comments or Compliance Statement section. Otherwise the calibration is rejected.

NOTE: The total efficiency provided is calculated per ISO-7503/NUREG 1575 (MARSSIM): Total Efficiency = Instrument Efficiency × Source Efficiency; where Instrument Efficiency is calculated as net counts ÷ source 2π emission rate. The 4π efficiency is calculated as net counts ÷ source 4π activity. The provided efficiencies are radionuclide specific and are calculated using source counts and background counts at the recommended operating HV. The provided efficiencies are for general information purposes only and are not intended to replace user efficiency calculation method or results.

Ludlum Measurements, Inc. certifies that the above instrument has been calibrated by standards traceable to the National Institute of Standards and Technology.
The pass/fail tolerance of 10% (unless otherwise noted) is based on the manufacturer's specifications without considering uncertainty factors.
Measurement results represent expanded uncertainties expressed at approximately the 95% level of confidence, using a coverage factor of k=2.
Measurement Uncertainties: Voltage measurements 1.2%, Gamma Exposure/Dose 5.6%, Neutron Dose 7.0%, Count rate 5.2%.
The calibration system conforms to the requirements of ANSI/NCSL Z540-1-1994 and ANSI N323AB-2013

Job Number	
PO Number	60730037-05
GPRS Project Manager:	William McCowan

Thank you for using GPRS on your project. We appreciate the opportunity to work with you. If you have questions regarding the results of this scanning, please contact the lead GPRS project manager on this project.

EQUIPMENT USED

The following equipment was used on this project:

- **Underground GPR Antenna:** This GPR Antenna uses frequencies ranging from 250 MHz to 450 MHz and is mounted in a stroller frame that rolls over the surface. Data is displayed on a screen and marked in the field in real time. The surface needs to be reasonably smooth and unobstructed to obtain readable scans. Obstructions such as curbs, landscaping, and vegetation will limit the efficacy of GPR. The total effective scan depth can be as much as 8’ or more with this antenna but can vary widely depending on the soil conditions and composition. Some soil types, such as clay, may limit maximum depths to 3’ or less. As depth increases, targets must be larger to be detected, and non-metallic targets can be challenging to locate. The depths provided should always be treated as estimates as their accuracy can be affected by multiple factors. For more information, please visit: Link
- **EM Pipe Locator:** Electromagnetic Pipe and Cable Locator. Detects electromagnetic fields. Used to actively trace conductive pipes and tracer wires, or passively detect power and radio signals traveling along conductive pipes and utilities. For more information, please visit: Link
- **GPS:** This handheld unit offers accuracy down to 4 inches; however, the accuracy achieved will depend on the satellite environment at the time of collection and is not considered survey-grade. Features can be collected as points, lines, or areas and then exported as a KML/KMZ or overlaid on a CAD drawing. For more information, please visit: Link

JOB SUMMARY REPORT

WORK PERFORMED

UNDERGROUND UTILITY	
Client Provided Drawings	Yes
Client completed 811 locate request	No
Scope of Work	Utility locate areas for 10 soil borings
Soil Borings (qty)	10
Approximate GPR Effective Depth (ft)	3
Utilities Located	- Unknown
Limitations Encountered	- Surface too rough - Overgrown vegetation
Marking Medium	- Spray Paint
Results Notes	Areas have been cleared. Recommend field verification for all markings. Recommend staying at least one foot from all markings.

JOB SUMMARY REPORT

DISCLAIMERS

1. THIS PDF IS AN AUTOMATED OUTPUT CREATED DIRECTLY FROM DATA COLLECTED IN THE FIELD. IT IS INTENDED TO DOCUMENT MARKINGS AND COMMENTS COLLECTED BY GPRS, LLC. THE FIELD FINDINGS MAY BE CORRECTED AND/OR ADDITIONAL DELIVERABLES CREATED AFTER THE DATA IS FURTHER REVIEWED.
2. AERIAL IMAGERY IS SOMETIMES SHIFTED, OUTDATED, OR INACCURATE WHILE THE LINE AND POINT DATA REMAIN AS COLLECTED IN THE FIELD. IN THE EVENT THE AERIAL IMAGE LOCATION NEEDS CORRECTION, ADDITIONAL CAD SERVICES CAN BE ORDERED.
3. GPRS CANNOT GUARANTEE THAT ALL UTILITIES OR OTHER SUBSURFACE FEATURES ON SITE WERE ABLE TO BE LOCATED. ALL FINDINGS ARE SUBJECT TO THE TERMS AND CONDITIONS THAT CAN BE VIEWED AT THIS LINK: https://gp-radar.com/terms-conditions
4. GPRS DOES NOT PROVIDE GEOPHYSICAL, GEOLOGICAL, LAND SURVEYING, OR ENGINEERING SERVICES. GPRS IS NOT A LICENSED LAND SURVEYOR. THIS PDF IS NOT A LAND SURVEY AND MAY NOT BE RELIED ON OR USED FOR ANY PURPOSES EXCEPT AS EXPRESSLY STATED HEREIN.
5. FOR ADDITIONAL INFORMATION REGARDING FINDINGS AND EQUIPMENT USED, SEE THE "JOB SUMMARY REPORT" AS WELL AS OTHER SUBMITTALS INCLUDED IN THE SUBMITTAL LETTER SENT VIA EMAIL FOLLOWING COMPLETION OF FIELD WORK.
6. PRIVATE UTILITY LOCATING IS NEVER A REPLACEMENT FOR ONE CALL/811 SERVICES. STATE LAW REQUIRES 811 TO BE CALLED PRIOR TO ANY AND ALL EXCAVATION ACTIVITIES.

Ludlum Measurments, Inc. certifies that the above instrument has been calibrated by standards traceable to the National Institute of Standards and Technology, or to the calibration facilities of other International Standards Organization members, or have been derived from accepted values of natural physical constants or have been derived by the ratio type of calibration techniques.
All pass/fail determinations are based on the manufacturer's specifications without considering uncertainty factors.
Measurement results represent expanded uncertainties expressed at approximately the 95% Level of confidence, using a coverage factor of k=2. ISO/IEC 17025: 2017 (E)
The calibration system conforms to the requirements of ANSI/NCSL Z540-1-1994 and ANSI N323AB-2013 State of Texas Calibration License No. LO-1963

Note:In case of repair, "As Found Reading" contains the pre-repair measurements and the "Meter Reading" contains the post-repair measurements.

Notes: Multimeter uncertainty within 1.1% of reading (volts, amps). Count rate uncertainty is within 3% of reading. Measurement results represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2. The calibration results presented on this ERG Calibration Certificate relate only to the items calibrated by ERG. ERG certifies that the above instrument has been calibrated by standards traceable to the National Institute of Standards and Technology (NIST) or to the calibration facilities of other International Standards Organization members, or have been derived from accepted values of natural physical constants or have been derived by the ratio type of calibration techniques. The calibration system conforms to the requirements of ANSI N323A-1997 and ISO/IEC 17025:2017.
DECISION RULE: Measurements from the meter, adjusted for the measurement uncertainty, must be within tolerance limits as stated in the Comments or Compliance Statement section. Otherwise the calibration is rejected.

	Gross Counts	Net Counts	Total Efficiency	4π Efficiency
Source 1 Tc-99 sn:U9-060 16,817dpm/9,250cpm (4/11/22) 47 mm disk	1902	1835	0.050	0.109
Source 2			n/a	n/a

NOTE: The total efficiency provided is calculated per ISO-7503/NUREG 1575 (MARSSIM): Total Efficiency = Instrument Efficiency × Source Efficiency; where Instrument Efficiency is calculated as net counts + source 2π emission rate. The 4π efficiency is calculated as net counts + source 4π activity. The provided efficiencies are radionuclide specific and are calculated using source counts and background counts at the recommended operating HV. The provided efficiencies are for general information purposes only and are not intended to replace user efficiency calculation method or results.

Note:In case of repair, "As Found Reading" contains the pre-repair measurements and the "Meter Reading" contains the post-repair measurements.

Notes: Multimeter uncertainty within 1.1% of reading (volts, amps). Count rate uncertainty is within 3% of reading. Measurement results represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2. The calibration results presented on this ERG Calibration Certificate relate only to the items calibrated by ERG. ERG certifies that the above instrument has been calibrated by standards traceable to the National Institute of Standards and Technology (NIST) or to the calibration facilities of other International Standards Organization members, or have been derived from accepted values of natural physical constants or have been derived by the ratio type of calibration techniques. The calibration system conforms to the requirements of ANSI N323A-1997 and ISO/IEC 17025:2017.
DECISION RULE: Measurements from the meter, adjusted for the measurement uncertainty, must be within tolerance limits as stated in the Comments or Compliance Statement section. Otherwise the calibration is rejected.

Other Source: Total Efficiency: n/a 4π Efficiency: n/a

NOTE: The total efficiency provided is calculated per ISO-7503/NUREG 1575 (MARSSIM): Total Efficiency = Instrument Efficiency × Source Efficiency; where Instrument Efficiency is calculated as net counts + source 2π emission rate. The 4π efficiency is calculated as net counts + source 4π activity. The provided efficiencies are radionuclide specific and are calculated using source counts and background counts at the recommended operating HV. The provided efficiencies are for general information purposes only and are not intended to replace user efficiency calculation method or results.

CERTIFICATE OF CALIBRATION

Electroplated Beta Standard

S.O.# 7197
P.O.# N/A

Description of Standard:

Model No. DNS-14 Serial No. 5443-05 Isotope SrY-90

Electroplated on polished Ni disc, 0.79 mm thick.

Total diameter of 4.77 cm and an active diameter of 4.45 cm.

The radioactive material is permanently fixed to the disc by heat treatment without any covering over the active surface.

Measurement Method:

The 2pi beta emission rate was measured using an internal gas flow proportional chamber. Absolute counting of beta particles emitted in the hemisphere above the active surface was verified by counting above, below, and at the operative voltage. The calibration is traceable to NIST by reference to an NIST calibrated beta source S/N 75323-201.

Measurement Result:

The observed beta count rate from the surface of the disc per minute (cpm) on the calibration date was:

2,410 ± 120

The total disintegration rate (dpm) assuming 40 % backscatter of beta particles from the surface of the disc, was:

3,450 ± 172 (0.00155 μCi)

The uncertainty of the measurement is 5 %, which is the sum of random counting error at the 99% confidence level, and the estimated upper limit of systematic error in this measurement.

CERTIFICATE OF CALIBRATION

Electroplated Beta Standard

S.O.# 7197
P.O.# N/A

Description of Standard:

Model No. DNS-14 Serial No. 5443-05 Isotope SrY-90

Electroplated on polished Ni disc, 0.79 mm thick.

Total diameter of 4.77 cm and an active diameter of 4.45 cm.

The radioactive material is permanently fixed to the disc by heat treatment without any covering over the active surface.

Measurement Method:

The 2pi beta emission rate was measured using an internal gas flow proportional chamber. Absolute counting of beta particles emitted in the hemisphere above the active surface was verified by counting above, below, and at the operative voltage. The calibration is traceable to NIST by reference to an NIST calibrated beta source S/N 75323-201.

Measurement Result:

The observed beta count rate from the surface of the disc per minute (cpm) on the calibration date was:

2,410 ± 120

The total disintegration rate (dpm) assuming 40 % backscatter of beta particles from the surface of the disc, was:

3,450 ± 172 (0.00155 μCi)

The uncertainty of the measurement is 5 %, which is the sum of random counting error at the 99% confidence level, and the estimated upper limit of systematic error in this measurement.

x 1	100	100	cpm	100	cpm		100	cpm

Note:In case of repair, "As Found Reading" contains the pre-repair measurements and the "Meter Reading" contains the post-repair measurements.

Notes: Multimeter uncertainty within 1.1% of reading (volts, amps). Count rate uncertainty is within 3% of reading. Measurement results represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2. The calibration results presented on this ERG Calibration Certificate relate only to the items calibrated by ERG. ERG certifies that the above instrument has been calibrated by standards traceable to the National Institute of Standards and Technology (NIST) or to the calibration facilities of other International Standards Organization members, or have been derived from accepted values of natural physical constants or have been derived by the ratio type of calibration techniques. The calibration system conforms to the requirements of ANSI N323A-1997 and ISO/IEC 17025:2017.
DECISION RULE: Measurements from the meter, adjusted for the measurement uncertainty, must be within tolerance limits as stated in the Comments or Compliance Statement section. Otherwise the calibration is rejected.

Source Distance: ☑ Contact ☐ 6 inches ☐ Other:

Source Geometry: ☐ Side ☑ Below ☐ Other:

Count Time (min): 1.0

Background Counts 51

	Gross Counts	Net Counts	Total Efficiency	4π Efficiency
Source 1 Tc-99 sn:U9-060 16,817dpm/9,250cpm (4/11/22) 47 mm disk	1849	1798	0.049	0.107
Source 2			n/a	n/a

NOTE: The total efficiency provided is calculated per ISO-7503/NUREG 1575 (MARSSIM): Total Efficiency = Instrument Efficiency × Source Efficiency; where Instrument Efficiency is calculated as net counts ÷ source 2π emission rate. The 4π efficiency is calculated as net counts ÷ source 4π activity. The provided efficiencies are radionuclide specific and are calculated using source counts and background counts at the recommended operating HV. The provided efficiencies are for general information purposes only and are not intended to replace user efficiency calculation method or results.

WEEKLY CAMP REPORT

Project Construction Week: 06/03/24 – 06/07/24	Report Date: 07/29/2024

NYSDEC	Ashland Tank 75 Site, Tonawanda, New York	NYSDEC Site No. 915008B

Weather

Monday 06/03/2024: AM: Cloudy, 63º, Wind SSE 3 mph; PM: Clear, 74º, Wind NW 3 mph

Tuesday 06/04/2024: AM: Partly cloudy, 63º, Wind SSE 3 mph; PM: Mostly cloudy, 82º, Wind SSW 8 mph

Wednesday 06/05/2024: No surface water/sediment investigation work performed on-site.

Thursday 06/06/2024: No surface water/sediment investigation work performed on-site.

Friday 06/07/2024: No surface water/sediment investigation work performed on-site.

Air Monitoring Levels within limits: Yes

Comments/Responses: Upwind and downwind conditions monitored by hand with one of two PIDs at 15-minute intervals. Although work zone data is not available, no exceeding values were noted during investigation activities. Particulate monitoring was not required for this scope of work (surface water and sediment sampling).

Equipment	ID	Station	Last Calibration
MiniRAE 3000	592-602185	Upwind/Downwind	05/30/2024
MiniRAE 3000	592-918799	Upwind/Downwind	05/30/2024

Consultant's Verification: On behalf of the Consultant, I certify this report is complete and correct, and all materials and equipment used, and work performed during this reporting period are in compliance with the contract plans and specifications, to the best of my knowledge, except as may be noted above.

Comments - 2 drums added to staging area 08-08-24 - PPE + Plastic Sheeting + Liners (No gross contamination noted. Staged proximate purge water & 08-09-24 - Gross contaminated soils and plastic from SB-07-0-5 ft below surface staged proximate hazardous waste material
- No additional drums / changes since previous inspection outside of drums noted above (6 drums on hazardous waste staging plastic, 7 drums non-haz / no gross contamination IDW)

* See note on storage timeframe from 07-26-24 inspection log

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

Site: Ashland Tank 75 4625 River Rd, Tonawanda, NY
Date: 8/16/2024 Time: 0830
Inspector Name: EDYTA CHOROSTKOWSKA

Requirements	Meets Requirements (Yes or No)	Changes Needed	Date Corrected
Each container (as applicable) labeled with words "Hazardous Waste."	YES		
Each container (as applicable) has "Accumulation Start Date."	YES		
Each container has applicable waste code and waste characteristic. (Toxic, Flammable, Corrosive, and Reactive)	YES		
Container/stockpile labels legible.	YES		
Containers/stockpile tightly closed/covered.	YES		
No evidence of rust, dents, etc. on drums.	YES		
No containers leaking.	YES		
Aisle space is open and free of obstructions.	YES		
Storage is less than ~~90~~ 180 days (LQG).	YES		
Waste (hazardous and non-hazardous) is segregated properly.	YES		
Spill kit and materials are present and in good condition.	YES		
No strange smells are noted.	YES		
Communication or warning devices are present and working properly.	YES		

Comments 6 HAZ + 7 NON-HAZ DRUMS

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

Site: Ashland Tank 75 4625 River Rd, Tonawanda, NY
Date: 8/23/2024 Time: 0835
Inspector Name: EDYTA CHOROSTKOWSKA

Requirements	Meets Requirements (Yes or No)	Changes Needed	Date Corrected
Each container (as applicable) labeled with words "Hazardous Waste."	YES		
Each container (as applicable) has "Accumulation Start Date."	YES		
Each container has applicable waste code and waste characteristic. (Toxic, Flammable, Corrosive, and Reactive)	YES		
Container/stockpile labels legible.	YES		
Containers/stockpile tightly closed/covered.	YES		
No evidence of rust, dents, etc. on drums.	YES		
No containers leaking.	YES		
Aisle space is open and free of obstructions.	YES		
Storage is less than ~~90~~ 180 days (LQG).	YES		
Waste (hazardous and non-hazardous) is segregated properly.	YES		
Spill kit and materials are present and in good condition.	YES		
No strange smells are noted.	YES		
Communication or warning devices are present and working properly.	YES		

Comments 6 HAZ + 7 NON HAZ DRUMS

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

Site: Ashland Tank 75 — 4625 River Rd, Tonawanda, NY
Date: 8/30/2024 Time: 0830
Inspector Name: Ethan Smith - Geologist II

Requirements	Meets Requirements (Yes or No)	Changes Needed	Date Corrected
Each container (as applicable) labeled with words "Hazardous Waste."	Yes		
Each container (as applicable) has "Accumulation Start Date."	Yes		
Each container has applicable waste code and waste characteristic. (Toxic, Flammable, Corrosive, and Reactive)	Yes		
Container/stockpile labels legible.	Yes		
Containers/stockpile tightly closed/covered.	Yes		
No evidence of rust, dents, etc. on drums.	Yes		
No containers leaking.	Yes		
Aisle space is open and free of obstructions.	Yes		
Storage is less than 90 days (LQG).	Yes		
Waste (hazardous and non-hazardous) is segregated properly.	Yes		
Spill kit and materials are present and in good condition.	Yes		
No strange smells are noted.	Yes		
Communication or warning devices are present and working properly.	Yes		

Comments 6 Haz + 7 Non-haz drums. Currently at 100 days since storage of first drum dated 05-22-24 (PPE + Plastic sheeting from badly melting survey)

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

Site: Ashland Tank 75 4625 River Rd, Tonawanda, NY
Date: 09 - 06 - 2024 Time: 0830
Inspector Name: Ethan Smith - Geologist II

Requirements	Meets Requirements (Yes or No)	Changes Needed	Date Corrected
Each container (as applicable) labeled with words "Hazardous Waste."	Yes		
Each container (as applicable) has "Accumulation Start Date."	Yes		
Each container has applicable waste code and waste characteristic. (Toxic, Flammable, Corrosive, and Reactive)	Yes		
Container/stockpile labels legible.	Yes		
Containers/stockpile tightly closed/covered.	Yes		
No evidence of rust, dents, etc. on drums.	Yes		
No containers leaking.	Yes		
Aisle space is open and free of obstructions.	Yes		
Storage is less than ~~90 days (LQG).~~ 180 - days	Yes		
Waste (hazardous and non-hazardous) is segregated properly.	Yes		
Spill kit and materials are present and in good condition.	Yes		
No strange smells are noted.	Yes		
Communication or warning devices are present and working properly.	Yes		

Comments Same drum count as previous inspection. E. Smith adjusted poly sheeting to better cover staged drums. Currently 107 days since oldest accumulation start date (05-22-24)

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

Site: Ashland Tank 75 4625 River Rd, Tonawanda, NY
Date: 09-13-2024 Time: 0830
Inspector Name: Ethan Smith - Geologist II

Requirements	Meets Requirements (Yes or No)	Changes Needed	Date Corrected
Each container (as applicable) labeled with words "Hazardous Waste."	Yes		
Each container (as applicable) has "Accumulation Start Date."	Yes		
Each container has applicable waste code and waste characteristic. (Toxic, Flammable, Corrosive, and Reactive)	Yes		
Container/stockpile labels legible.	No - Labels/paint pen slightly faded	Labels rewritten on various drums where faded	09-13-24
Containers/stockpile tightly closed/covered.	Yes		
No evidence of rust, dents, etc. on drums.	Yes		
No containers leaking.	Yes		
Aisle space is open and free of obstructions.	Yes		
Storage is less than ~~90 days (LQG)~~. 180 days storage	Yes		
Waste (hazardous and non-hazardous) is segregated properly.	Yes		
Spill kit and materials are present and in good condition.	Yes		
No strange smells are noted.	Yes		
Communication or warning devices are present and working properly.	Yes		

Comments Same drums as previous inspection (13 total). Rewrote faded labels on various drums (Noted above). Currently 114 days since oldest accumulation start date (05-22-24)

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

Site: Ashland Tank 75 — 4625 River Rd, Tonawanda, NY
Date: 09-20-2024 Time: 0830
Inspector Name: Ethan Smith - Geologist II

Requirements	Meets Requirements (Yes or No)	Changes Needed	Date Corrected
Each container (as applicable) labeled with words "Hazardous Waste."	Yes		
Each container (as applicable) has "Accumulation Start Date."	Yes		
Each container has applicable waste code and waste characteristic. (Toxic, Flammable, Corrosive, and Reactive)	Yes		
Container/stockpile labels legible.	Yes		
Containers/stockpile tightly closed/covered.	Yes		
No evidence of rust, dents, etc. on drums.	Yes		
No containers leaking.	Yes		
Aisle space is open and free of obstructions.	Yes		
Storage is less than ~~90~~ 180 days (LQG).	Yes		
Waste (hazardous and non-hazardous) is segregated properly.	Yes		
Spill kit and materials are present and in good condition.	Yes		
No strange smells are noted.	Yes		
Communication or warning devices are present and working properly.	Yes		

Comments: Same drums as previous inspection (13 total). Currently 121 days since oldest accumulation start date (05-22-24).

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

Site: Ashland Tank 75 4625 River Rd, Tonawanda, NY
Date: 09-27-2024 Time: 0830
Inspector Name: Ethan D. Smith - Geologist II

Requirements	Meets Requirements (Yes or No)	Changes Needed	Date Corrected
Each container (as applicable) labeled with words "Hazardous Waste."	Yes		
Each container (as applicable) has "Accumulation Start Date."	Yes		
Each container has applicable waste code and waste characteristic. (Toxic, Flammable, Corrosive, and Reactive)	Yes		
Container/stockpile labels legible.	Yes		
Containers/stockpile tightly closed/covered.	Yes		
No evidence of rust, dents, etc. on drums.	Yes		
No containers leaking.	Yes		
Aisle space is open and free of obstructions.	Yes		
Storage is less than ~~90 days (LQG)~~. 180 - days	Yes		
Waste (hazardous and non-hazardous) is segregated properly.	Yes		
Spill kit and materials are present and in good condition.	Yes		
No strange smells are noted.	Yes		
Communication or warning devices are present and working properly.			

Comments Same drums as previous inspection. Currently 128 days since oldest accumulation start date (05-22-24).

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

Site: Ashland Tank 75 — 4625 River Rd, Tonawanda, NY
Date: 10-04-2024 Time: 0830
Inspector Name: Ethan D. Smith - Geologist II

Requirements	Meets Requirements (Yes or No)	Changes Needed	Date Corrected
Each container (as applicable) labeled with words "Hazardous Waste."	Yes		
Each container (as applicable) has "Accumulation Start Date."	Yes		
Each container has applicable waste code and waste characteristic. (Toxic, Flammable, Corrosive, and Reactive)	Yes		
Container/stockpile labels legible.	Yes		
Containers/stockpile tightly closed/covered.	Yes		
No evidence of rust, dents, etc. on drums.	Yes		
No containers leaking.	Yes		
Aisle space is open and free of obstructions.	Yes		
Storage is less than 90 days (LQG).	Yes		
Waste (hazardous and non-hazardous) is segregated properly.	Yes		
Spill kit and materials are present and in good condition.	Yes		
No strange smells are noted.	Yes		
Communication or warning devices are present and working properly.	Yes		

Comments Same drums as previous inspection. Currently 135 days since oldest accumulation start date.

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

Site: Ashland Tank 75 4625 River Rd, Tonawanda, NY
Date: 10 - 11 - 2024 Time: 0830
Inspector Name: Ethan D. Smith - Geologist II

Requirements	Meets Requirements (Yes or No)	Changes Needed	Date Corrected
Each container (as applicable) labeled with words "Hazardous Waste."	Yes		
Each container (as applicable) has "Accumulation Start Date."	Yes		
Each container has applicable waste code and waste characteristic. (Toxic, Flammable, Corrosive, and Reactive)	Yes		
Container/stockpile labels legible.	Yes		
Containers/stockpile tightly closed/covered.	Yes		
No evidence of rust, dents, etc. on drums.	Yes		
No containers leaking.	Yes		
Aisle space is open and free of obstructions.	Yes		
Storage is less than ~~90 days (LQG)~~ 180 days	Yes		
Waste (hazardous and non-hazardous) is segregated properly.	Yes		
Spill kit and materials are present and in good condition.	Yes		
No strange smells are noted.	Yes		
Communication or warning devices are present and working properly.	Yes		

Comments Adjusted poly sheeting to fully cover drums. Same drums as previous inspection.
Currently 142 days since ~~previous~~ oldest accumulation start date.

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

Site: Ashland Tank 75 4625 River Rd, Tonawanda, NY
Date: 10 / 18 / 2024 Time: 0830
Inspector Name: Ethan D. Smith

Requirements	Meets Requirements (Yes or No)	Changes Needed	Date Corrected
Each container (as applicable) labeled with words "Hazardous Waste."	Yes		
Each container (as applicable) has "Accumulation Start Date."	Yes		
Each container has applicable waste code and waste characteristic. (Toxic, Flammable, Corrosive, and Reactive)	Yes		
Container/stockpile labels legible.	Yes		
Containers/stockpile tightly closed/covered.	Yes		
No evidence of rust, dents, etc. on drums.	Yes		
No containers leaking.	Yes		
Aisle space is open and free of obstructions.	Yes		
Storage is less than ~~90-days (LQG)~~ 180 days (SQG)	Yes		
Waste (hazardous and non-hazardous) is segregated properly.	Yes		
Spill kit and materials are present and in good condition.	Yes		
No strange smells are noted.	Yes		
Communication or warning devices are present and working properly.	Yes		

Comments Adjusted poly sheeting to fully cover 4 duraderk mats stored on decon pad. Drums from previous (now 2024) investigations all confirmed empty outside of 1 drum w/ ~ 10 gallons of water inside. No changes to number of drums on-site. Currently 149 days since oldest accumulation start date.

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

Site: Ashland Tank 75 4625 River Rd, Tonawanda, NY
Date: 10-25-24 Time: 0830
Inspector Name: Ethan Smith

Requirements	Meets Requirements (Yes or No)	Changes Needed	Date Corrected
Each container (as applicable) labeled with words "Hazardous Waste."	Yes		
Each container (as applicable) has "Accumulation Start Date."	Yes		
Each container has applicable waste code and waste characteristic. (Toxic, Flammable, Corrosive, and Reactive)	Yes		
Container/stockpile labels legible.	Yes		
Containers/stockpile tightly closed/covered.	Yes		
No evidence of rust, dents, etc. on drums.	Yes		
No containers leaking.	Yes		
Aisle space is open and free of obstructions.	Yes		
Storage is less than ~~90 days (LQG)~~: 180 days (SQG)	Yes		
Waste (hazardous and non-hazardous) is segregated properly.	Yes		
Spill kit and materials are present and in good condition.	Yes		
No strange smells are noted.	Yes		
Communication or warning devices are present and working properly.	Yes		

Comments Same drums as previous inspection. Currently 156 days since oldest accumulation start date

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

Site: Ashland Tank 75 — 4625 River Rd, Tonawanda, NY
Date: 11/1/2024 Time: 0845
Inspector Name: Chris Finn

Requirements	Meets Requirements (Yes or No)	Changes Needed	Date Corrected
Each container (as applicable) labeled with words "Hazardous Waste."	Yes		
Each container (as applicable) has "Accumulation Start Date."	Yes		
Each container has applicable waste code and waste characteristic. (Toxic, Flammable, Corrosive, and Reactive)	Yes		
Container/stockpile labels legible.	Yes		
Containers/stockpile tightly closed/covered.	Yes		
No evidence of rust, dents, etc. on drums.	Yes		
No containers leaking.	Yes		
Aisle space is open and free of obstructions.	Yes		
Storage is less than ~~90 days (LQG)~~. 180 days (SQG)	Yes		
Waste (hazardous and non-hazardous) is segregated properly.	Yes		
Spill kit and materials are present and in good condition.	Yes		
No strange smells are noted.	Yes		
Communication or warning devices are present and working properly.	Yes		

Comments: Same drums as previous inspection. Currently 163 days since oldest accumulation start date.
* Add rocks to help hold down plastic cover in strong winds *

90-Day – Accumulation Area Inspection Log
(Completed weekly when Hazardous Waste exists in 90-Day Storage Pad)

CONTENTS

I. INTRODUCTION

This Data Usability Summary Report (DUSR) has been prepared following the guidelines provided in New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation *DER-10, Technical Guidance for Site Investigation and Remediation, Appendix 2B - Guidance for Data Deliverables and the Development of Data Usability Summary Reports*, May 2010. Discussed in this DUSR are the analytical data for 9 groundwater samples, 1 matrix spike/matrix spike duplicate (MS/MSD) pair, 1 groundwater field duplicate (FD), 1 rinse blank (RB), and 2 trip blanks collected on April 29-30, 2024.

The samples were collected at the Ashland Tank 75 site located in Tonawanda, NY and sent to Eurofins [Amherst, NY and Barberton, OH] for analysis. Eurofins is a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory.

II. ANALYTICAL METHODOLOGIES AND DATA VALIDATION PROCEDURES

The samples were analyzed for the following parameters (not all samples were analyzed for all parameters):

Parameter	Method
Volatile Organic Compounds (VOCs)	SW8260C
Semi-Volatile Organic Compounds (SVOCs)	SW8270D
1,4-Dioxane	SW8270D Selective Ion Monitoring (SIM)
Pesticides	SW8081B
PCBs (Polychlorinated Biphenyls)	SW8082A
PFAS (Per- and Polyfluoroalkyl Substances)	EPA Draft Method 1633
Total/Dissolved Metals/Mercury	SW6010D/7470A
Total/Dissolved Cyanide	SW9012

A limited data validation was performed following the guidelines in the following USEPA Region II documents:

- *Validating Volatile Organic Compounds by Gas Chromatography/Mass Spectrometry, SW-846 Method 8260B & 8260C, SOP HW-24, Rev. 4,* October 2014;
- *Validating Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry,*

SW-846 Method 8270D, SOP HW-22, Rev. 5, December 2010;

- *Polychlorinated Biphenyl (PCB) Aroclor Data Validation, SOP HW-37A, Rev. 0*, February 2018;
- *Validating Pesticide Compounds Organochlorine Pesticides by Gas Chromatography, SW-846, Method 8081B, SOP HW-44, Rev. 3.1*, December 2010;
- *Sampling, Analysis, and Assessment of Per- and Perfluoroalkyl Substances under NYSDEC Part 375 Remedial Programs, Appendix H*, April 2023;
- *ICP-AES Data Validation, SOP HW-3a, Rev. 1*, September 2016; and
- *Mercury and Cyanide Data Validation, SOP HW-3c, Rev. 1*, September 2016.

The limited validation included a review of: completeness of all required deliverables; holding times; quality control (QC) results [blanks, instrument tunings, calibration standards, duplicate analyses, MS/MSD recoveries, surrogate/internal standard recoveries, and laboratory control sample (LCS) recoveries] to determine if the data are within the protocol-required limits and specifications; a determination that all samples were analyzed using established and agreed upon analytical protocols; an evaluation of the raw data to confirm the results provided in the data summary sheets; and laboratory data qualifiers.

Definitions of USEPA data qualifiers are presented at the end of this text. A summary of data qualifications has been presented in Table 1. Validated Form 1s have been presented in Attachment A. Documentation supporting the qualification of data is presented in Attachment B. Only analytical deviations affecting data usability are discussed in this report.

III. DATA DELIVERABLE COMPLETENESS

Full deliverable data packages (i.e., NYSDEC ASP Category B or equivalent) were provided by the laboratory and included all reporting forms and raw data necessary to fully evaluate and verify the reported analytical results.

IV. SAMPLE RECEIPT/PRESERVATION/HOLDING TIMES

All samples were received by the laboratory intact, properly preserved and under proper chain-of-custody (COC). All samples were analyzed within the required holding times (HT).

V. NON-CONFORMANCES

- **Calibration**

The percent difference (%D) between the initial calibration (ICAL) and the continuing calibration (CCAL) relative response factors (RRFs) exceeded 20% and showed a low bias for the following VOC compounds: methyl isobutyl ketone (4-methyl-2-pentanone) and/or vinyl chloride (VC). The results for these compounds in the associated samples listed on Table 1 have been qualified 'J' or 'UJ'.

The %D between the ICAL and the CCAL exceeded 20% and showed a low bias for the following SVOC compounds: 2,4-dinitrophenol and/or pentachlorophenol. The relative response factor (RRF) for pentachlorophenol was also slightly below the QC limit. The results for these compounds in the samples listed on Table 1 have been qualified 'UJ'.

- **Laboratory Control Sample (LCS)**

The VOC LCS associated with the samples listed on Table 1 showed the %R of dichlorodifluoromethane as being below the QC limits. The results for this compound has been qualified 'UJ' in the samples listed on Table 1.

- **Matrix Spike/Matrix Spike Duplicate**

The SVOC MS/MSD performed on sample MW05-04-042924-20240429 showed the %Rs of 3,3'-dichlorobenzidine as being below the QC limits. The %R of this compound was acceptable in the LCS. The results for 3,3'-dichlorobenzidine has been qualified 'UJ' in this sample.

The wet chemistry MS/MSD performed on sample MW05-04-042924-20240429 had %Rs less than the QC limit for total cyanide (Cn). The result for Cn in this sample has been qualified 'UJ.'

- **Method Blanks/Laboratory Blanks/Rinse Blanks**

The method blanks and/or continuing calibration blanks (CCBs) were detected for total and dissolved vanadium (V) and dissolved cyanide (Cn) at concentrations greater than the method detection limit (MDL) but less than the reporting limit (RL). The method blank/CCBs were detected for total Cn at a concentration greater than the RL. Those samples that were less than the RL have been qualified 'U' at the RL as listed on Table 1. Those total Cn samples greater than the RL but less than 10x the blank result have been qualified 'J+'.

The RB was detected for total sodium at a concentration greater than the RL. Those samples greater than the RL but less than 10x the RB result have been qualified 'J+'.

VI. SAMPLE RESULTS AND REPORTING

All sample results were reported in accordance with method requirements and were adjusted for sample volume. Results reported below the RL, but greater than the MDL, are qualified 'J' by the laboratory.

A field duplicate was collected at location MW-02S-042924-20240429. The samples exhibited good analytical/field precision (i.e., relative percent difference (RPD) between results < 50% if results > RL).

Several samples for VOCs were diluted due to foaming and/or sample matrix. The non-detect results represent the lowest achievable at the dilution.

The laboratory performed a TBA (tetrabutylammonium sulfite) cleanup due to the presence of sulfur for the pesticide analysis of samples MW-02S-042924-FD-20240429 and MW05-01-042924-20240429. The results for endrin aldehyde in these samples were reported from an extract that did not undergo the cleanup since it is believed the cleanup might affect the endrin aldehyde concentration.

The mass ion ratio of perfluoropentanoic acid (PFPeA) in sample MW05-01-042924-20240429 was outside of the QC limits for identification. Using analyst judgement this compound was reported as a hit and qualified 'I' by the laboratory. The 'I' qualifier has been changed to 'JN'. The result reported represents the estimated maximum possible concentration of this compound.

VII. SUMMARY

All sample analyses were found to be compliant with the method criteria, except where previously noted. Those results qualified 'J,' 'J+,' 'JN,' and 'UJ,' are considered conditionally usable. Those results qualified 'U' are considered non-detect. All other sample results are usable as reported. AECOM does not recommend the recollection of any samples at this time.

DEFINITIONS OF USEPA REGION II DATA QUALIFIERS

U – The analyte was analyzed for but was not detected above the reported sample quantitation limit.

J – The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ – The result is an estimated quantity, but the result may be biased high.

J- – The result is an estimated quantity, but the result may be biased low.

UJ – The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

JN - The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

R – The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

480-219333 Chain of Custody

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☒ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ Return to Client ☒ Disposal by Lab ☐ Archive for _____ Months

Special Instructions/QC Requirements & Comments:

CAT B + EQUIS

Note: Since laboratory accreditations are subject to change Eurofins Environment Testing Northeast LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Job Narrative
480-219333-1

Receipt
The samples were received on 4/29/2024 5:15 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 2.5º C, 2.7º C, 2.8º C, 2.9º C and 3.0º C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-710160 recovered above the upper control limit for 1,1-Dichloroethene, 1,1,2-Trichloro-1,2,2-trifluoroethane, Trichlorofluoromethane and Vinyl chloride. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW-03-042924 (480-219333-1), MW05-04-042924 (480-219333-2), MW-02S-042924 (480-219333-3), MW-02S-042924-FD (480-219333-4), MW05-01-042924 (480-219333-5), MW05-03-042924 (480-219333-6) and TB-042924 (480-219333-7).

Method 8260C: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: MW-03-042924 (480-219333-1), MW05-04-042924 (480-219333-2), MW05-04-042924-MS (480-219333-2[MS]), MW05-04-042924-MSD (480-219333-2[MSD]) and MW05-01-042924 (480-219333-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The continuing calibration verification (CCV) associated with batch 480-710333 recovered above the upper control limit for Benzo(g,h,i)perylene and Indeno(1,2,3-cd)pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW-03-042924 (480-219333-1), MW05-04-042924 (480-219333-2), MW-02S-042924 (480-219333-3), MW-02S-042924-FD (480-219333-4), MW05-01-042924 (480-219333-5) and MW05-03-042924 (480-219333-6).

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-710333 recovered outside acceptance criteria, low biased, for 2,4-Dinitrophenol and Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270D: The minimum response factor (RF) criteria for the continuing calibration verification (CCV) analyzed in batch 480-710333 was outside criteria for the following analyte(s): Pentachlorophenol. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered estimated.

Method 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-710141 and analytical batch 480-710333 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: Sulfur was present in this sample, creating an interference detecting some of the pesticide compounds. TBA was used to remove the sulfur interference. Since the recovery of Endrin Aldehyde is drastically reduced when using TBA cleanup, this compound has to be reported from a diluted run of the extract that has not been subject to the TBA cleanup. The sample, method blank, and LCS that have been TBA cleaned have been qualified with a RA identifier: MW-02S-042924-FD (480-219333-4), MW05-01-042924 (480-219333-5), (LCS 240-611588/2-A) and (MB 240-611588/1-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS

Method 1633: Isotope Dilution Analyte (IDA) recovery for the Low Continuing Calibration Verification (CCV Low) is above the method recommended limit for the following analytes: 13C8 FOSA . Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries, the following affected samples are non detect for associated target analytes. MW05-04-042924 (480-219333-2), MW-02S-042924 (480-219333-3), MW-02S-042924-FD (480-219333-4) and MW05-01-042924 (480-219333-5)

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: MW05-04-042924 (480-219333-2) for M2-4:2 FTS . Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries, samples are non detect for associated target analytes.

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: MW05-01-042924 (480-219333-5) for M2-4:2 FTS and M2-8:2 FTS . Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries, samples are non detect for associated target analytes.

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: MW05-01-042924 (480-219333-5) for M2-6:2 FTS . Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries, samples were not ran at a dilution because diluting the sample to remove matrix affect on M2-6:2 FTS will dilute out the IDA's native compound, therefore the data is valid.

Method 1633: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 240-611570 and analytical batch 240-611678 was outside control limits. Sample matrix interference is suspected. The following compounds were affected: 3-Perfluoropropylpropanoic acid (3:3 FTCA), 3-Perfluoropentylpropanoic acid (5:3 FTCA) and 3-Perfluoroheptylpropanoic acid (7:3 FTCA)

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for 13C6 PFDA in the CCV Low associated with the following sample: (480-219368-M-6-A). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries. The concentration for the associated native compound is within acceptance limits and data is reported with no corrective action.

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for 13C6 PFDA in the CCV Low associated with the following samples: MW05-04-042924 (480-219333-2), MW05-04-042924-MS (480-219333-2[MS]) and MW05-04-042924-MSD (480-219333-2[MSD]). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries. The concentration for the associated native compound is within acceptance limits and data is reported with no corrective action.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Methods 9012B: The initial calibration verification (ICV) result for batch 480-710579 was above the upper control limit. The affected analytes are: Cyanide, Total. Sample results were non-detects, and have been reported as qualified data. MW-03-042924 (480-219333-1), MW-02S-042924 (480-219333-3), MW-02S-042924-FD (480-219333-4), MW05-01-042924 (480-219333-5), MW05-03-042924 (480-219333-6), (ICV 480-710579/15), (480-219368-K-6), (480-219368-L-6) and (480-219368-L-6 DU)

Methods 9012B: The continuing calibration verification (CCV) associated with batch 480-710579 recovered above the upper control limit for Cyanide, Total. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW-03-042924 (480-219333-1), MW-02S-042924 (480-219333-3) and (CCV 480-710579/19).

Methods 9012B: The continuing calibration blank (CCB) and method blank (MB) for analytical batch 480-710579 contained Cyanide, Total above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

Methods 9012B: The method blank for preparation batch 480-710579 contained Cyanide, Total above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

Methods 9012B: The continuing calibration blank (CCB) for analytical batch 480-710579 contained Cyanide, Total above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

480-219368 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other _____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☒ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ Return to Client ☒ Disposal by Lab ☐ Archive for _____ Months

Special Instructions/QC Requirements & Comments:

CAT B + EQUIS

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Job Narrative
480-219368-1

Receipt
The samples were received on 4/30/2024 3:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.5º C, 2.8º C and 3.0º C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-710397 recovered outside acceptance criteria, low biased, for Chloromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported. The associated samples are impacted: MW-02D-043024 (480-219368-5) and RB-043024 (480-219368-6).

Method 8260C: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 480-710397 recovered outside control limits for the following analyte(s): Dichlorodifluoromethane. Dichlorodifluoromethane has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. The associated samples are impacted: MW-02D-043024 (480-219368-5) and RB-043024 (480-219368-6).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-710397 recovered above the upper control limit for Carbon tetrachloride . The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW-02D-043024 (480-219368-5) and RB-043024 (480-219368-6).

Method 8260C: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 480-710309 recovered outside control limits for the following analytes: 1,2-Dichloroethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. The associated samples are impacted: TB-043024 (480-219368-3) and MW-04D-043024 (480-219368-4).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-710309 recovered outside acceptance criteria, low biased, for 4-Methyl-2-pentanone. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported. The associated samples are impacted: TB-043024 (480-219368-3) and MW-04D-043024 (480-219368-4).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-710309 recovered above the upper control limit for Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: TB-043024 (480-219368-3) and MW-04D-043024 (480-219368-4).

Method 8260C: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 480-710309 recovered outside control limits for the following analytes: Bromomethane and Chloroethane. The associated samples are impacted: TB-043024 (480-219368-3) and MW-04D-043024 (480-219368-4).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-710791 recovered above the upper control limit for 1,1,2-Trichloro-1,2,2-trifluoroethane, 1,1-Dichloroethene, Carbon disulfide, Methylene Chloride, Trichlorofluoromethane and Vinyl chloride. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW05-02-043024 (480-219368-1) and MW-04S-043024 (480-219368-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The continuing calibration verification (CCV) associated with batch 480-710494 recovered outside acceptance criteria, low biased, for 2,4-Dinitrophenol. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-710494 recovered above the upper control limit for Benzo(g,h,i)perylene, Hexachlorocyclopentadiene and Indeno(1,2,3-cd)pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW05-02-043024 (480-219368-1), MW-04S-043024 (480-219368-2), MW-04D-043024 (480-219368-4), MW-02D-043024 (480-219368-5) and RB-043024 (480-219368-6).

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: MW-04D-043024 (480-219368-4) and MW-02D-043024 (480-219368-5). These results have been reported and qualified.

Method 8270D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 480-710433 and analytical batch 480-710494 recovered outside control limits for multiple analytes.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-711112 recovered outside acceptance criteria, low biased, for 2,4-Dinitrophenol and Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: MW-02D-043024 (480-219368-5). These results have been reported and qualified.

Method 8270D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 480-710923 and analytical batch 480-711112 recovered outside control limits for the following analytes: Bis(2-chloroethoxy)methane and Carbazole. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 6010D: The continuing calibration verification (CCV) associated with batch 240-612073 recovered above the upper control limit for selenium. The samples associated with this CCV were on-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW05-02-043024 (480-219368-1), MW-04S-043024 (480-219368-2), MW-04D-043024 (480-219368-4), MW-02D-043024 (480-219368-5) and RB-043024 (480-219368-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS
Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for 13C6 PFDA in the CCV Low associated with the following samples: MW-02D-043024 (480-219368-5) and RB-043024 (480-219368-6). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries. The concentration for the associated native compound is within acceptance limits and data is reported with no corrective action.

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for 13C6 PFDA in the CCV Low associated with the following sample: (480-219368-O-6-A DU). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries. The concentration for the associated native compound is within acceptance limits and data is reported with no corrective action.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Methods 9012B: The initial calibration verification (ICV) result for batch 480-710579 was above the upper control limit. The affected analytes are: Cyanide, Total. Sample results were non-detects, and have been reported as qualified data. MW05-02-043024 (480-219368-1), MW-04S-043024 (480-219368-2), MW-04D-043024 (480-219368-4), MW-02D-043024 (480-219368-5), RB-043024 (480-219368-6), (ICV 480-710579/15), (480-219368-L-6 DU), (480-219368-K-6 MS) and (480-219368-L-6 MS)

Methods 9012B: The continuing calibration verification (CCV) associated with batch 480-710579 recovered above the upper control limit for Cyanide, Total. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCV 480-710579/19).

Methods 9012B: The continuing calibration blank (CCB) and method blank (MB) for analytical batch 480-710579 contained Cyanide, Total above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

Methods 9012B: The method blank for preparation batch 480-710579 contained Cyanide, Total above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

Methods 9012B: The continuing calibration blank (CCB) for analytical batch 480-710579 contained Cyanide, Total above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 480-710206.

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 480-710433.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

JULY 2024

CONTENTS

I. INTRODUCTION

This Data Usability Summary Report (DUSR) has been prepared following the guidelines provided in New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation *DER-10, Technical Guidance for Site Investigation and Remediation, Appendix 2B - Guidance for Data Deliverables and the Development of Data Usability Summary Reports*, May 2010. Discussed in this DUSR are the analytical data for 3 surface water (SW) samples, 1 SW matrix spike/matrix spike duplicate (MS/MSD) pair, 1 SW field duplicate (FD), 3 aqueous waste samples, five solid waste samples, 25 sediment (SED) samples, 2 SED FDs, 1 SED MS/MSD, 2 (SW/SED) rinse blanks (RB), and 2 trip blanks collected on June 3-4, 2024.

The samples were collected at the Ashland Tank 75 site located in Tonawanda, NY and sent to Eurofins [Amherst, NY, Barberton, OH, Savannaha, GA, and Pensacola, FL] for analysis. Eurofins is a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory.

II. ANALYTICAL METHODOLOGIES AND DATA VALIDATION PROCEDURES

The samples were analyzed for the following parameters (not all samples were analyzed for all parameters):

Parameter	Method
Volatile Organic Compounds (VOCs)	SW8260C
Semi-Volatile Organic Compounds (SVOCs)	SW8270D
1,4-Dioxane	SW8270D Selective Ion Monitoring (SIM)
Pesticides	SW8081B
PCBs (Polychlorinated Biphenyls)	SW8082A
PFAS (Per- and Polyfluoroalkyl Substances)	EPA Draft Method 1633
Ethylene Glycol	SW8015D
Total/Dissolved Metals/Mercury	SW6010D/7470A/7471A
Total/Dissolved Cyanide (CN)	SW9012B
Reactive Cyanide/Sulfide	SW9012/SW9034
Flashpoint	SW1010A
pH/Temperature	SW9045D
BTU	ASTMD240-87

Parameter	Method
Oil and Grease	SW1664A
Total Organic Carbon (TOC)	SW9060A

A limited data validation was performed following the guidelines in the following USEPA Region II documents:

- *Validating Volatile Organic Compounds by Gas Chromatography/Mass Spectrometry, SW-846 Method 8260B & 8260C, SOP HW-24, Rev. 4,* October 2014;
- *Validating Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry, SW-846 Method 8270D, SOP HW-22, Rev. 5*, December 2010;
- *Polychlorinated Biphenyl (PCB) Aroclor Data Validation, SOP HW-37A, Rev. 0*, February 2018;
- *Validating Pesticide Compounds Organochlorine Pesticides by Gas Chromatography, SW-846, Method 8081B, SOP HW-44, Rev. 3.1*, December 2010;
- *Sampling, Analysis, and Assessment of Per- and Perfluoroalkyl Substances under NYSDEC Part 375 Remedial Programs, Appendix H*, April 2023;
- *ICP-AES Data Validation, SOP HW-3a, Rev. 1*, September 2016; and
- *Mercury and Cyanide Data Validation, SOP HW-3c, Rev. 1*, September 2016.

The limited validation included a review of: completeness of all required deliverables; holding times; quality control (QC) results [blanks, instrument tunings, calibration standards, duplicate analyses, MS/MSD recoveries, surrogate/internal standard recoveries, and laboratory control sample (LCS) recoveries] to determine if the data are within the protocol-required limits and specifications; a determination that all samples were analyzed using established and agreed upon analytical protocols; an evaluation of the raw data to confirm the results provided in the data summary sheets; and laboratory data qualifiers.

Definitions of USEPA data qualifiers are presented at the end of this text. A summary of data qualifications has been presented in Table 1. Validated Form 1s have been presented in Attachment A. Documentation supporting the qualification of data is presented in Attachment B. Only analytical deviations affecting data usability are discussed in this report.

III. DATA DELIVERABLE COMPLETENESS

Full deliverable data packages (i.e., NYSDEC ASP Category B or equivalent) were provided by the laboratory and included all reporting forms and raw data necessary to fully evaluate and verify the reported analytical results.

IV. SAMPLE RECEIPT/PRESERVATION/HOLDING TIMES

All samples were received by the laboratory intact, properly preserved and under proper chain-of-custody (COC) with the following exception.

- Two extra containers were received for sample SED-06-20240604.
- The time of collection of the samples in SDG J220474 was not listed on the COC.

All samples were analyzed within the required holding times (HT) with the following exception.

- Sample SED-04-WC was sampled on 6/3/24 and analyzed for ethylene glycol on 7/9/24 which is over 2x the HT. The sample was originally dropped off at the Eurofins Buffalo location along with samples SED-01 thru SED-05 (SDG J220421). Due to a laboratory error all samples except SED-04 were sent to the Florida lab for ethylene glycol analysis. Sample SED-04-WC was listed on the COC but was not included in the shipment. The sample was sent to that laboratory at a much later date when the error was discovered. The result for ethylene glycol in that sample has been qualified 'R' due to the gross exceedance of the holding time and the uncertainty of the location of the sample during storage.

V. NON-CONFORMANCES

- **Calibration**

  The percent difference (%D) between the initial calibration (ICAL) and the continuing calibration (CCAL) relative response factors (RRFs) associated with the SW samples exceeded 20% and showed a low bias for the following VOC compound: chloromethane. The results for this compound in the associated samples listed on Table 1 have been qualified 'UJ'.

  The %D between the ICAL and the CCAL RRFs associated with the SED samples exceeded 20% and showed a low bias for the following VOC compounds: 1,2,4-trichlorobenzene, chloromethane, and/or cyclohexane. The results for these compounds in the associated samples listed on Table 1 have been qualified 'J' or 'UJ'.

The %D between the ICAL and the CCAL RRF associated with the SW samples exceeded 20% and showed a low bias for the following SVOC compounds: 3-nitroanaline and/or pentachlorophenol. The minimum RRF for pentachlorophenol was also slightly below the QC limit (0.050). The results for these compounds in the samples listed on Table 1 have been qualified 'UJ'.

The %D between the ICAL and the CCAL RRF associated with the SED samples exceeded 20% and showed a low bias for the following SVOC compounds: bis(2-chloroisopropyl) ether and/or hexachlorocyclopentadiene. The results for these compounds in the samples listed on Table 1 have been qualified 'UJ'.

- **Matrix Spike/Matrix Spike Duplicate**

The VOC MS/MSD performed on sample SED-06 showed the %Rs of isopropylbenzene (cumene) and methylcyclohexane as being above the QC limits. The %Rs of these compounds were acceptable in the LCS. The detected results for these compounds have been qualified 'J' in this sample.

The SVOC MS/MSD performed on sample SW-01-2-20240603 showed the %Rs of 3,3'-dichlorobenzidine as being below the QC limits. The %R of this compound was acceptable in the laboratory control sample (LCS). The result for 3,3'-dichlorobenzidine has been qualified 'UJ' in this sample and its field duplicate.

The SVOC MS/MSD performed on sample SED-04 showed the %Rs of 2,4-dimethylphenol, 2,4-dinitrotoluene, 2-methylnaphthalene, 2-nitroaniline, benzo(a)anthracene, bis(2-ethylhexyl) phthalate, chrysene, fluorene, hexachlorocyclopentadiene, phenanthrene, and pyrene as being below the QC limits. The %Rs of these compounds were acceptable in the LCS. The results for these compounds have been qualified 'J' or 'UJ' in this sample.

The metals MS/MSD performed on sample SED-06 showed the %Rs of antimony (Sb), barium (Ba), copper (Cu), manganese (Mn), and/or nickel (Ni) as being outside of the QC limits. The post-digestion spike %Rs were acceptable. The results for these metals have been qualified 'J' or 'UJ' in this sample.

The metals MS/MSD performed on sample SED-01 showed the %Rs of Sb, beryllium (Be), lead (Pb), selenium (Se), silver (Ag), vanadium (V), and/or zinc (Zn) as being outside of the QC limits. The post-digestion spike %R for Be was acceptable, the remaining metals were outside of the QC

limits. The results for these metals have been qualified 'J,' 'J+,' or 'UJ' in this sample as noted on Table 1 below.

The wet chemistry MS performed on samples SED-06 and SED-11 had %Rs less than the QC limit for total CN. The result for CN in these sample has been qualified 'J.'

The wet chemistry MS/MSD performed on sample SED-06 had %Rs outside (low/high) the QC limit for TOC. The laboratory re-exracted the batch of samples however the re-extraction occurred outside of the HT. The initial results have been reported and the result for TOC in sample SED-06 was qualified 'J.'

- **Method Blanks/Laboratory Blanks/Rinse Blanks**

The method blanks and/or SW/SED rinse blank were detected for carbon disulfide, methylene chloride, 2,4-dichlorophenol, alpha-BHC, gamma-BHC, Ba, dissolved Ba, Ca, dissolve Ca, Pb, and dissolved Pb, K, Na, dissolved Na, at concentrations greater than the method detection limit (MDL) but less than the reporting limit (RL). Those samples that were less than the RL have been qualified 'U' at the RL as listed on Table 1.

- **Serial Dilution**

The metals serial dilution performed on sample SED-01 had the percent difference (%D) of metals aluminum (Al), arsenic (As), Ba, calcium (Ca), chromium (Cr), iron (Fe), Pb, magnesium (Mg), Mn, Ni, and V as being greater than the QC limit. The results for these metals in this sample have been qualified J, unless previously qualified for the MS/MSD outlier.

VI. SAMPLE RESULTS AND REPORTING

All sample results were reported in accordance with method requirements and were adjusted for sample volume. Results reported below the RL, but greater than the MDL, are qualified 'J' by the laboratory.

A SW field duplicate was collected at location SW-01-2-20240603. The samples exhibited good analytical/field precision (i.e., RPD between results < 20% if both results > RL). A sediment FD was collected at location SED-08-20240604. The samples exhibited good analytical/field precision (i.e., relative percent difference (RPD) between results < 50% if both results > RL). If one result was >RL and the other non-detect, the results were qualified 'J'/"UJ' if the difference between the results and RL was greater than the RL. Any exceptions are listed in Table 1.

Several samples were diluted due to foaming, elevated levels of target/non-target compounds, and/or sample matrix. The sediment samples were collected from a disposal pit and were oily with strong odors. They required dilutions for several analyses. The non-detect results represent the lowest achievable at the dilution.

A florisil cleanup was performed on the pesticide extracts for sediment samples SED-01, SED-02, SED-03, SED-04, SED-05, SED-06, SED-07, SED-08, SED-08-FD, SED-09, SED-10, SED-11, SED-11-FD, SED-12, SED-13, SED-14, and SED-15. These samples were dark, oily, and had a foul odor. These samples were also analyzed at higher dilutions (i.e, 10X, 20X, 50X)which caused the surrogates to be diluted out, thus the surrogate recoveries were not evaluated

The mass ion ratios of several PFAS were outside of the QC limits for identification. The affected samples/compounds have been listed on Table 1. Using analyst judgement, the compounds were reported as detections and qualified 'I' by the laboratory. The 'I' qualifier has been changed to 'JN.' The results reported represent the estimated maximum possible concentration (EMPC) of the compounds.

The RPD between the pesticide columns was evaluated and the samples in Table 1 qualified in accordance with the following table:

%RPD between Column	Qualification
26-70%	J

VII. SUMMARY

All sample analyses were found to be compliant with the method criteria, except where previously noted. Those results qualified 'J,' 'J+,' 'J-', 'JN,' and 'UJ,' are considered conditionally usable. Those results qualified 'U' are considered non-detect. All other sample results are usable as reported. AECOM does not recommend the recollection of any samples at this time.

DEFINITIONS OF USEPA REGION II DATA QUALIFIERS

U – The analyte was analyzed for but was not detected above the reported sample quantitation limit.

J – The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ – The result is an estimated quantity, but the result may be biased high.

J- – The result is an estimated quantity, but the result may be biased low.

UJ – The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

JN - The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

R – The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Job Narrative
480-220420-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/3/2024 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.7°C.

GC Semi VOA
Method 8015D_DAI_G: The method blank for preparation batch 480-714430 and analytical batch 480-714437 contained Ethylene glycol above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 1664B: Analysis for Hexane Extractable Material (HEM) was performed for the following samples: SW-01-3-WC (480-220420-2) and SW-01-1-WC (480-220420-3). Since the HEM result(s) was below the reporting limit (RL), the result(s) for Silica Gel Treated - Hexane Extractable Material (SGT-HEM) was reported as a non-detect. All HEM quality control criteria were met.

Method 9040C: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: SW-01-2-WC (480-220420-1), SW-01-3-WC (480-220420-2) and SW-01-1-WC (480-220420-3).

Method D240_87: When prepped for Heat of Combustion/BTU analysis, the following samples did not combust: SW-01-2-WC (480-220420-1), SW-01-3-WC (480-220420-2) and SW-01-1-WC (480-220420-3). The sample(s) was run in duplicate to confirm. The result(s) has been reported as "Did Not Fire" (DNF).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Possible Hazard Identification *Unconfirmed*	***Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*** ☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* _____ *Months*

Job Narrative
480-220470-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/4/2024 4:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 3.0°C, 3.6°C, 3.7°C, 3.9°C, 5.2°C and 5.4°C.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 9045D: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: SED-06 (480-220470-1), SED-07 (480-220470-2), SED-08 (480-220470-3), SED-09 (480-220470-4), SED-10 (480-220470-5), SED-11 (480-220470-6), SED-12 (480-220470-7), SED-13 (480-220470-8), SED-14 (480-220470-9) and SED-15 (480-220470-10).

Method D240_87: When prepped for Heat of Combustion/BTU analysis, the following sample did not combust: SED-13 (480-220470-8). The sample(s) was run in duplicate to confirm. The result(s) has been reported as "Did Not Fire" (DNF).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
480-220474-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/4/2024 4:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 3.0°C, 3.6°C, 3.7°C, 3.9°C, 5.2°C and 5.4°C.

Receipt Exceptions
Times of collection not listed on coc, time of 00:00 was used for sample login.
SED-06 (480-220474-1), SED-06 (480-220474-1[MS]), SED-06 (480-220474-1[MSD]), SED-07 (480-220474-2), SED-08 (480-220474-3), SED-08-FD (480-220474-4), SED-09 (480-220474-5), SED-10 (480-220474-6), SED-11 (480-220474-7), SED-11-FD (480-220474-8), SED-12 (480-220474-9), SED-13 (480-220474-10), SED-14 (480-220474-11), SED-15 (480-220474-12), SED-06 (480-220474-13), SED-06 (480-220474-13[MS]), SED-06 (480-220474-13[MSD]), SED-07 (480-220474-14), SED-08 (480-220474-15), SED-08-FD (480-220474-16), SED-09 (480-220474-17), SED-10 (480-220474-18), SED-11 (480-220474-19), SED-11-FD (480-220474-20), SED-12 (480-220474-21), SED-13 (480-220474-22), SED-14 (480-220474-23) and SED-15 (480-220474-24)

GC/MS VOA
Method 8260C: The following samples were analyzed using medium level soil analysis and diluted to bring the concentration of target analytes within the calibration range: SED-06 (480-220474-1), SED-06 (480-220474-1[MS]), SED-06 (480-220474-1[MSD]), SED-07 (480-220474-2), SED-08 (480-220474-3), SED-08-FD (480-220474-4), SED-10 (480-220474-6), SED-11 (480-220474-7), SED-11-FD (480-220474-8), SED-12 (480-220474-9), SED-13 (480-220474-10), SED-14 (480-220474-11) and SED-15 (480-220474-12). Elevated reporting limits (RLs) are provided.

Method 8260C: The following sample was analyzed using medium level soil analysis and diluted due to the abundance of non-target analytes: SED-09 (480-220474-5). Elevated reporting limits (RLs) are provided.

Method 8260C: The following samples were diluted due to the nature of the sample matrix: SED-06 (480-220474-1[MS]) and SED-06 (480-220474-1[MSD]). Because of this dilution, the matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8260C: The continuing calibration verification (CCV) analyzed in batch 480-714630 was outside the method criteria for the following analyte: Cyclohexane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated. The associated samples are impacted: SED-06 (480-220474-1), SED-07 (480-220474-2), SED-08 (480-220474-3), SED-08-FD (480-220474-4), SED-09 (480-220474-5), SED-11 (480-220474-7), SED-11-FD (480-220474-8), SED-12 (480-220474-9), SED-14 (480-220474-11) and SED-15 (480-220474-12).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-714630 recovered outside acceptance criteria, low biased, for 1,2,4-Trichlorobenzene, Chloromethane, and Methyl tert-butyl ether. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analytes, the data are reported. The associated samples are impacted: SED-06 (480-220474-1), SED-07 (480-220474-2), SED-08 (480-220474-3), SED-08-FD (480-220474-4), SED-09 (480-220474-5), SED-10 (480-220474-6), SED-11 (480-220474-7), SED-11-FD (480-220474-8), SED-12 (480-220474-9), SED-13 (480-220474-10), SED-14 (480-220474-11) and SED-15 (480-220474-12).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-714630 recovered outside

acceptance criteria, low biased, for Cyclohexane. A reporting limit (RL) standard was analyzed, and the target analytes are detected above the reporting limit (RL). Since the associated samples were non-detect for the analyte(s), the data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270D: The continuing calibration verification (CCV) associated with batch 480-715000 recovered above the upper control limit for Benzo[g,h,i]perylene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SED-06 (480-220474-13), SED-07 (480-220474-14), SED-09 (480-220474-17), SED-11-FD (480-220474-20), SED-12 (480-220474-21) and SED-15 (480-220474-24).

Method 8270D: The following samples were diluted due to color, appearance, and viscosity: SED-06 (480-220474-13), SED-06 (480-220474-13[MS]), SED-06 (480-220474-13[MSD]), SED-07 (480-220474-14), SED-09 (480-220474-17) and SED-11-FD (480-220474-20). Elevated reporting limits (RL) are provided.

Method 8270D: The following samples were diluted due to color, appearance and viscosity: SED-08-FD (480-220474-16), SED-11 (480-220474-19), SED-13 (480-220474-22) and SED-14 (480-220474-23). Elevated reporting limits (RL) are provided.

Method 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-714779 and analytical batch 480-715000 were diluted below the method detection limit (MDL) for 2,4-Dinitrophenol; therefore, percent recovery and RPD could not be calculated. The associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8270D: The following compound has been spiked at a level above the upper range of the initial calibration: 3,3-Dichlorobenzidine. The laboratory control sample (LCS) associated with preparation batch 480-714779 and analytical batch 480-715466 recovered within acceptable limits for this analyte and has been qualified with an "E" flag.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-715000 recovered outside acceptance criteria, low biased, for Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs
Method 8082A: For method 8082, the recovery of the one surrogate in samples SED-09 (480-220474-17), SED-10 (480-220474-18), SED-11-FD (480-220474-20), SED-13 (480-220474-22) and SED-15 (480-220474-24) exceeds quality control limits due to the sample matrix. The recovery of the secondary surrogate is within quality control criteria; no corrective action is required.

Method 8082A: The following samples were diluted due to the nature of the sample matrix: SED-06 (480-220474-13), SED-06 (480-220474-13[MS]), SED-06 (480-220474-13[MSD]), SED-07 (480-220474-14), SED-08-FD (480-220474-16), SED-11 (480-220474-19), SED-11-FD (480-220474-20), SED-13 (480-220474-22) and SED-14 (480-220474-23). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides
Method 8081B: The following samples required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: SED-06 (480-220474-13), SED-06 (480-220474-13[MS]), SED-06 (480-220474-13[MSD]), SED-07 (480-220474-14), SED-08 (480-220474-15), SED-08-FD (480-220474-16), SED-09 (480-220474-17), SED-10 (480-220474-18), SED-11 (480-220474-19), SED-11-FD (480-220474-20), SED-12 (480-220474-21), SED-13 (480-220474-22), SED-14 (480-220474-23) and SED-15 (480-220474-24).

Method 8081B: The sample were dark with foul other and oily and in insoluble in solvent property which before concentration filtered.

SED-06 (480-220474-13), SED-06 (480-220474-13[MS]), SED-06 (480-220474-13[MSD]), SED-07 (480-220474-14), SED-08 (480-220474-15), SED-08-FD (480-220474-16), SED-09 (480-220474-17), SED-10 (480-220474-18), SED-11 (480-220474-19), SED-11-FD (480-220474-20), SED-12 (480-220474-21), SED-13 (480-220474-22), SED-14 (480-220474-23) and SED-15 (480-220474-24)

Method 8081B: The following samples were diluted due to the nature of the sample matrix: SED-06 (480-220474-13), SED-07 (480-220474-14), SED-08 (480-220474-15), SED-08-FD (480-220474-16), SED-09 (480-220474-17), SED-10 (480-220474-18), SED-11 (480-220474-19), SED-11-FD (480-220474-20), SED-12 (480-220474-21), SED-13 (480-220474-22), SED-14 (480-220474-23) and SED-15 (480-220474-24). As such, surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The following samples were diluted due to the nature of the sample matrix: SED-06 (480-220474-13[MS]) and SED-06 (480-220474-13[MSD]). As such, spike and surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PFAS
Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following samples: SED-08 (480-220474-3), SED-08-FD (480-220474-4) and SED-10 (480-220474-6) for M2-4:2 FTS, M2-6:2 FTS and M2-8:2 FTS . Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries, samples are non detect for associated target analytes.

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: SED-12 (480-220474-9) for M2-4:2 FTS and M2-8:2 FTS . Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries, samples are non detect for associated target analytes.

Method 1633: The low level laboratory control sample (LLCS) for preparation batch 240-615785 and analytical batch 240-616342 recovered outside control limits for the following analytes: N-ethylperfluorooctanesulfonamidoacetic acid (NEtFOSAA). These analytes were biased high in the LLCS and were not detected in the associated samples; therefore, the data have been reported.

Method 1633: Isotope Dilution Analyte (IDA) recovery was outside the method recommended limit for the following sample: SED-06 (480-220474-1). Since this was likely due to matrix effects, samples were analyzed at a dilution and may have elevated RLs.

Method 1633: The Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit: SED-06 (480-220474-1). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample(s).

Method 1633: The low level laboratory control sample (LLCS) for preparation batch 240-616481 and analytical batch 240-616627 recovered outside control limits for the following analytes: d5-NEtFOSAA. However, the native compounds were in spec, therefore the data has been reported

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 9012B: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 480-714887 and analytical batch 480-714906 was outside control limits. Sample non-homogeneity is suspected.

Method 9012B: The matrix spike (MS) recovery for preparation batch 480-715215 and analytical batch 480-715244 was outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method Lloyd_Kahn_Mod: Please note that the reporting limit for Lloyd Kahn TOC analysis is a nominal value and does not reflect adjustments in sample mass processed on an individual basis

SED-06 (480-220474-1), SED-06 (480-220474-1[MS]), SED-06 (480-220474-1[MSD]), SED-07 (480-220474-2), SED-08 (480-220474-3) and SED-08-FD (480-220474-4)

Method Lloyd_Kahn_Mod: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 180-471505 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method Lloyd_Kahn_Mod: Reanalysis of the following sample(s) was performed outside of the analytical holding time due to a 2 day power outage at the laboratory. Both sets of results are reported. : SED-06 (480-220474-1), SED-06 (480-220474-1[MS]), SED-06 (480-220474-1[MSD]), SED-07 (480-220474-2), SED-08 (480-220474-3), SED-08-FD (480-220474-4), SED-09 (480-220474-5), SED-10 (480-220474-6), SED-11 (480-220474-7), SED-11-FD (480-220474-8), SED-12 (480-220474-9), SED-13 (480-220474-10), SED-14 (480-220474-11) and SED-15 (480-220474-12).

Method Lloyd_Kahn_Mod: Please note that the reporting limit for Lloyd Kahn TOC analysis is a nominal value and does not reflect adjustments in sample mass processed on an individual basis.

SED-06 (480-220474-1), SED-06 (480-220474-1[MS]), SED-06 (480-220474-1[MSD]), SED-07 (480-220474-2), SED-08 (480-220474-3), SED-08-FD (480-220474-4), SED-09 (480-220474-5), SED-10 (480-220474-6), SED-11 (480-220474-7), SED-11-FD (480-220474-8), SED-12 (480-220474-9), SED-13 (480-220474-10), SED-14 (480-220474-11) and SED-15 (480-220474-12)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

480-220423 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other _____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☒ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ Return to Client ☒ Disposal by Lab ☐ Archive for _____ Months

Special Instructions/QC Requirements & Comments:
Add ethan.smith@aecom.com and edyta.chorostkowska@aecom.com

Job Narrative
480-220423-1

Receipt
The samples were received on 6/3/2024 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.2° C and 3.9° C.

GC/MS VOA
Method 8260C: The following samples were analyzed using medium level soil analysis and diluted to bring the concentration of target analytes within the calibration range: SED-01 (480-220423-1), SED-02 (480-220423-2), SED-03 (480-220423-3), SED-04 (480-220423-4) and SED-05 (480-220423-5). Elevated reporting limits (RLs) are provided.

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-714450 recovered above the upper control limit for cis-1,3-Dichloropropene, trans-1,3-Dichloropropene, and 2-Butanone (MEK). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SED-01 (480-220423-1), SED-02 (480-220423-2), SED-03 (480-220423-3), SED-04 (480-220423-4) and SED-05 (480-220423-5).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-714450 recovered outside acceptance criteria, low biased, for Chloromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260C: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 480-714478 and analytical batch 480-714450 recovered outside control limits for the following analytes: cis-1,3-Dichloropropene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The following samples were diluted due to the nature of the sample matrix: SED-01 (480-220423-1) and SED-02 (480-220423-2)

Method 8270D: The following samples required a dilution due to the nature of the sample matrix: SED-03 (480-220423-3) and SED-04 (480-220423-4). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270D: Surrogate recovery for the following sample was outside control limits: SED-05 (480-220423-5). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-714483 recovered above the upper control limit for Atrazine. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SED-01 (480-220423-1), SED-02 (480-220423-2), SED-03 (480-220423-3), SED-04 (480-220423-4) and SED-05 (480-220423-5).

Method 8270D: The following sample was diluted due to color, appearance and viscosity: SED-05 (480-220423-5). Elevated reporting limits (RL) are provided.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-714483 recovered outside acceptance criteria, low biased, for 2,2-oxybis[1-chloropropane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method Lloyd Kahn: Please note that the reporting limit for Lloyd Kahn TOC analysis is a nominal value and does not reflect adjustments in sample mass processed on an individual basis

SED-01 (480-220423-1), SED-02 (480-220423-2), SED-03 (480-220423-3), SED-04 (480-220423-4), SED-05 (480-220423-5), (480-220474-B-1), (480-220474-B-1 MS) and (480-220474-B-1 MSD)

Method Lloyd Kahn: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 180-471505 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method Lloyd Kahn: The native sample, matrix spike, and matrix spike duplicate (MS/MSD) associated with analytical batch 180-471505 were performed at the same dilution. Due to the additional level of analyte present in the spiked samples, the concentration of Total Organic Carbon in the MS/MSD was above the instrument calibration range. The data have been reported and qualified.

Method Lloyd Kahn: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 180-471677 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method Lloyd Kahn: Please note that the reporting limit for Lloyd Kahn TOC analysis is a nominal value and does not reflect adjustments in sample mass processed on an individual basis

SED-01 (480-220423-1), SED-02 (480-220423-2), (180-174986-O-24), (180-174986-O-24 MS) and (180-174986-O-24 MSD)

Method Lloyd Kahn: Reanalysis of the following sample(s) was performed outside of the analytical holding time due to a 2 day power outage at the laboratory. Both sets of results are reported. : SED-04 (480-220423-4) and SED-05 (480-220423-5).

Method Lloyd Kahn: Please note that the reporting limit for Lloyd Kahn TOC analysis is a nominal value and does not reflect adjustments in sample mass processed on an individual basis.

SED-04 (480-220423-4), SED-05 (480-220423-5), (480-220474-B-1), (480-220474-B-1 MS) and (480-220474-B-1 MSD)

Method 8082A: The following sample was diluted due to the nature of the sample matrix: SED-03 (480-220423-3). Elevated reporting limits (RLs) are provided.

Method 8082A: For method 8082, the recovery of the one surrogate in samples SED-03 (480-220423-3) exceeds quality control limits due to the sample matrix. The recovery of the secondary surrogate is within quality control criteria; no corrective action is required.

Method 8081B: The following samples were diluted due to the nature of the sample matrix: SED-01 (480-220423-1), SED-02 (480-220423-2), SED-03 (480-220423-3), SED-04 (480-220423-4) and SED-05 (480-220423-5). As such, surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 480-714592 and analytical batch 480-714611 recovered outside control limits for the following analytes: cis-Chlordane and Endrin ketone.

Method 8082A: The following samples were diluted due to the nature of the sample matrix: SED-01 (480-220423-1), SED-02 (480-220423-2), SED-04 (480-220423-4) and SED-05 (480-220423-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6010C: The laboratory control sample (LCS) for preparation batch 480-714327 and analytical batch 480-714510 recovered outside control limits for the following analytes: Cadmium. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 240-617699 recovered above the upper control limit for Perfluorohexanesulfonic acid (PFHxS). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 1633: The method blank for preparation batch 240-617589 and analytical batch 240-617699 contained Perfluorooctanesulfonic acid (PFOS) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method 9012B: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 480-714887 and analytical batch 480-714906 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3550C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: SED-01 (480-220423-1), SED-02 (480-220423-2), SED-03 (480-220423-3), SED-04 (480-220423-4) and SED-05 (480-220423-5). The reporting limits (RLs) have been adjusted proportionately.

Method 3550C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: SED-01 (480-220423-1), SED-02 (480-220423-2), SED-03 (480-220423-3), SED-04 (480-220423-4) and SED-05 (480-220423-5). The reporting limits (RLs) have been adjusted proportionately.

Method 3550C: Due to the matrix, the following samples could not be concentrated to the final method required volume: SED-01 (480-220423-1) and SED-05 (480-220423-5). The reporting limits (RLs) are elevated proportionately.

Method 3550C: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: SED-01 (480-220423-1), SED-02 (480-220423-2), SED-03 (480-220423-3), SED-04 (480-220423-4) and SED-05 (480-220423-5). The reporting limits (RLs) have been adjusted proportionately.

Method 3550C: The following samples required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: SED-01 (480-220423-1), SED-02 (480-220423-2), SED-03 (480-220423-3), SED-04 (480-220423-4) and SED-05 (480-220423-5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Job Narrative
480-220419-1

Receipt
The samples were received on 6/3/2024 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.9º C, 3.1º C and 3.5º C.

GC/MS VOA
Method 8260C: The laboratory control sample (LCS) for analytical batch 480-714447 recovered outside control limits for the following analyte: 1,2-Dichloroethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported. The associated samples are impacted: SW-01-2 (480-220419-1), SW-01-2-FD (480-220419-2), SW-01-3 (480-220419-3), SW-01-1 (480-220419-4) and TB-060324 (480-220419-5).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-714447 recovered above the upper control limit for 1,2-Dichloroethane and trans-1,3-Dichloropropene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SW-01-2 (480-220419-1), SW-01-2-FD (480-220419-2), SW-01-3 (480-220419-3), SW-01-1 (480-220419-4) and TB-060324 (480-220419-5).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-714447 recovered outside acceptance criteria, low biased, for Chloromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported. The associated samples are impacted: SW-01-2 (480-220419-1), SW-01-2-FD (480-220419-2), SW-01-3 (480-220419-3), SW-01-1 (480-220419-4) and TB-060324 (480-220419-5).

Method 8260C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 480-714447 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. The associated samples are impacted: SW-01-2 (480-220419-1[MS]) and SW-01-2 (480-220419-1[MSD]).

Method 8260C: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for analytical batch 480-714447 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits. The associated sample is impacted: SW-01-2 (480-220419-1[MSD]).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The following samples were diluted due to color, appearance, and viscosity: SW-01-2 (480-220419-1), SW-01-2 (480-220419-1[MS]), SW-01-2 (480-220419-1[MSD]), SW-01-2-FD (480-220419-2), SW-01-3 (480-220419-3) and SW-01-1 (480-220419-4). Elevated reporting limits (RL) are provided.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-714464 recovered outside acceptance criteria, low biased, for 2,4-Dinitrophenol and Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-714808 recovered above the upper control limit for bis (2-chloroisopropyl) ether and Bis(2-chloroethyl)ether. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SW-01-2 (480-220419-1), SW-01-2-FD (480-220419-2), SW-01-3 (480-220419-3) and SW-01-1 (480-220419-4).

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-714808 recovered outside acceptance criteria, low biased, for 2,4-Dinitrophenol and Pentachlorophenol. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270D: The minimum response factor (RF) criteria for the continuing calibration verification (CCV) analyzed in batch 480-714808 was outside criteria for the following analyte(s): Pentachlorophenol. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is

considered estimated.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-715009 recovered outside acceptance criteria, low biased, for 3-Nitroaniline. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-714822 and analytical batch 480-715009 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: For method 8081, the recovery of the one surrogate in samples SW-01-2 (480-220419-1), SW-01-2 (480-220419-1[MSD]), SW-01-2-FD (480-220419-2) and SW-01-3 (480-220419-3) exceeds quality control limits. The recovery of the secondary surrogate is within quality control criteria; no corrective action is required.

Method 8081B: The method blank for preparation batch 480-714469 and analytical batch 480-714613 contained alpha-BHC and gamma-BHC (Lindane) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8081B: The %RPD between the primary and confirmation column exceeded 40% for Methoxychlor for the following sample: SW-01-2 (480-220419-1). The lower value(s) has been reported and qualified in accordance with the laboratory's SOP.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS
Method 1633: The continuing calibration verification (CCV) associated with batch 240-615825 recovered above the upper control limit for Nonafluoro-3,6-dioxaheptanoic acid (NFDHA). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following sample: SW-01-2-FD (480-220419-2) for M2-4:2 FTS and M2-6:2 FTS . Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries, samples are non detect for associated target analytes.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 3510C: The following sample required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: SW-01-3 (480-220419-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Note. Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Job Narrative
480-220421-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/3/2024 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.2º C and 3.9º C.

GC Semi VOA
Method 8015D: The following sample was received outside of holding time: SED-04-WC (480-220421-4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method 9045D: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: SED-01-WC (480-220421-1), SED-02-WC (480-220421-2), SED-03-WC (480-220421-3), SED-04-WC (480-220421-4) and SED-05-WC (480-220421-5).

Method D240-87: When prepped for Heat of Combustion/BTU analysis, the following samples did not combust: SED-03-WC (480-220421-3) and SED-05-WC (480-220421-5). The sample(s) was run in duplicate to confirm. The result(s) has been reported as "Did Not Fire" (DNF).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Kropovitch, Ann

Subject: FW: 480-221432 Tank 75 Analysis HT Question

From: John Beninati <John.Beninati@et.eurofinsus.com>
Sent: Friday, July 12, 2024 11:16 AM
To: Kropovitch, Ann <ann.marie.kropovitch@aecom.com>
Subject: RE: 480-221432 Tank 75 Analysis HT Question

Good morning Ann,

This was a lab shipping error as sample 4 volume was sent to the Pensacola lab separately after it was determined they were missing sample volume. Pensacola provided the following response:

- Although it was listed on the WS-COC, the sample was not received in Pensacola with the rest of the job/samples. Sample 4 was rec'd on 7/6.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/4/2024 4:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 3.0°C, 3.6°C, 3.7°C, 3.9°C, 5.2°C and 5.4°C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-714555 recovered outside acceptance criteria, low biased, for Chloromethane and 1,2,4-Trichlorobenzene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260C: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 480-714555 recovered outside control limits for the following analytes: cis-1,3-Dichloropropene and trans-1,3-Dichloropropene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260C: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 480-714691 recovered outside control limits for the following analytes: 1,2-Dichloroethane, 1,1,1-Trichloroethane and Acetone. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. The associated samples are impacted: SED-RB-060424 (480-220471-1) and SW-RB-06424 (480-220471-2).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-714691 recovered above the upper control limit for 1,1,1-Trichloroethane, 1,2-Dichloroethane, Chlorodibromomethane, Carbon tetrachloride, Tetrachloroethene and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SED-RB-060424 (480-220471-1) and SW-RB-06424 (480-220471-2).

Method 8260C: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 480-714691 recovered outside control limits for the following analytes: Acetone, Chloromethane, Vinyl chloride, trans-1,3-Dichloropropene, Bromoform and Bromomethane. The associated samples are impacted: SED-RB-060424 (480-220471-1) and SW-RB-06424 (480-220471-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270D: The continuing calibration verification (CCV) associated with batch 480-715312 recovered above the upper control limit for 4-Nitrophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SED-RB-060424 (480-220471-1) and SW-RB-06424 (480-220471-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

I. INTRODUCTION

This Data Usability Summary Report (DUSR) has been prepared following the guidelines provided in New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation *DER-10, Technical Guidance for Site Investigation and Remediation, Appendix 2B - Guidance for Data Deliverables and the Development of Data Usability Summary Reports*, May 2010. Discussed in this DUSR are the analytical data for 37 soil samples, 5 field duplicates (FDs), 3 soil matrix spike/matrix spike duplicate (MS/MSD) pairs, and 2 rinse blanks (RB) collected on July 7 – August 9, 2024.

The samples were collected at the Ashland Tank 75 site located in Tonawanda, NY and sent to Eurofins [Amherst, NY, Barberton, OH] for analysis. Eurofins is a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory.

II. ANALYTICAL METHODOLOGIES AND DATA VALIDATION PROCEDURES

The samples were analyzed for the following parameters (not all samples were analyzed for all parameters):

Parameter	Method
Volatile Organic Compounds (VOCs)	SW8260C
Semi-Volatile Organic Compounds (SVOCs)	SW8270D
1,4-Dioxane	SW8270D Selective Ion Monitoring (SIM)
Pesticides	SW8081B
PCBs (Polychlorinated Biphenyls)	SW8082A
PFAS (Per- and Polyfluoroalkyl Substances)	EPA Method 1633
Total Metals/Mercury	SW6010D/7470A/7471B
Total Cyanide (CN)	SW9012B

A limited data validation was performed following the guidelines in the following USEPA Region II documents:

- *Validating Volatile Organic Compounds by Gas Chromatography/Mass Spectrometry, SW-846 Method 8260B & 8260C, SOP HW-24, Rev. 4,* October 2014;
- *Validating Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry, SW-846 Method 8270D, SOP HW-22, Rev. 5*, December 2010;
- *Polychlorinated Biphenyl (PCB) Aroclor Data Validation, SOP HW-37A, Rev. 0*, February 2018;
- *Validating Pesticide Compounds Organochlorine Pesticides by Gas Chromatography, SW-846, Method 8081B, SOP HW-44, Rev. 3.1*, December 2010;
- *Sampling, Analysis, and Assessment of Per- and Perfluoroalkyl Substances under NYSDEC Part 375 Remedial Programs, Appendix H*, April 2023;
- *ICP-AES Data Validation, SOP HW-3a, Rev. 1*, September 2016; and

- *Mercury and Cyanide Data Validation, SOP HW-3c, Rev. 1*, September 2016.

The limited validation included a review of: completeness of all required deliverables; holding times; quality control (QC) results [blanks, instrument tunings, calibration standards, duplicate analyses, MS/MSD recoveries, surrogate/internal standard recoveries, and laboratory control sample (LCS) recoveries] to determine if the data are within the protocol-required limits and specifications; a determination that all samples were analyzed using established and agreed upon analytical protocols; an evaluation of the raw data to confirm the results provided in the data summary sheets; and laboratory data qualifiers.

Definitions of USEPA data qualifiers are presented at the end of this text. A summary of data qualifications has been presented in Table 1. Validated Form 1s have been presented in Attachment A. Documentation supporting the qualification of data is presented in Attachment B. Only analytical deviations affecting data usability are discussed in this report.

III. DATA DELIVERABLE COMPLETENESS

Full deliverable data packages (i.e., NYSDEC ASP Category B or equivalent) were provided by the laboratory and included all reporting forms and raw data necessary to fully evaluate and verify the reported analytical results.

IV. SAMPLE RECEIPT/PRESERVATION/HOLDING TIMES

All samples were received by the laboratory intact, properly preserved and under proper chain-of-custody (COC) with the following exception.

- Samples RB-07112024 and RB-07122024 were correctly in improper container for PFAS. All results for PFAS in these samples have been qualified ‘J’ or ‘UJ.’

All samples were analyzed within the required holding times (HT).

V. NON-CONFORMANCES

- **Calibration**

  The percent difference (%D) between the initial calibration (ICAL) and the continuing calibration (CCAL) relative response factors (RRFs) samples exceeded 20% and showed a low bias for the following VOC compound: 1,1,2,2-tetrachloroethane. The results for this compound in the associated samples listed on Table 1 have been qualified ‘UJ’.

The %D between the ICAL and the CCAL RRF exceeded 20% and showed a low bias for the following SVOC compound: 3-nitroaniline. The results for this compound in the samples listed on Table 1 have been qualified 'UJ'.

The low level metals CCVs were above the QC limits for aluminum (Al), copper (Cu), iron (Fe), potassium (K), lead (Pb), and zinc (Zn). Please note the associated samples were over 10x the RL, no qualification was necessary.

- **Matrix Spike/Matrix Spike Duplicate**

The VOC MS/MSD performed on sample HA-01-2.5-3.5 showed the %Rs of 1,1,2,2-tetrachloroethane, 1,1,2-trichloro-1,2,2-trifluoroethane, 1,1,2-trichloroethane, 1,2,4-trichlorobenzene, 1,2-dibromo-3-chloropropane, 1,2-dibromoethane (ethylene dibromide), 1,2-dichorobemzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, acetone, benzene, bromodichloromethane, bromoform, carbon tetrachloride, chlorobenzene, cis-1,3-dichloropropene, cyclohexane, ethylbenzene, isopropylbenzene (cumene), methyl acetate, methyl ethyl ketone (2-butanone), methylcyclohexane, styrene, tetrachloroethylene (PCE), toluene, trichloroethylene (TCE), and xylenes as being below the QC limits. The %Rs of these compounds were acceptable in the LCS. The results for these compounds have been qualified 'J' or 'UJ' in this sample.

The VOC MS/MSD performed on sample HA-05-3.0-4.0 showed the %Rs of 1,1,2,2-tetrachloroethane, 1,1,2-trichloroethane, 1,2,4-trichlorobenzene, 1,2-dibromo-3-chloropropane, 1,2-dibromoethane (ethylene dibromomide), 1,2-dichorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 2-hexanone, acetone, chlorobenzene, cis-1,3-dichloropropene, cyclohexane, ethylbenzene, isopropylbenzene (cumene), methyl ethyl ketone (2-butanone), methyl isobutyl ketone (4-methyl-2-pentanone), methylcyclohexane, styrene, PCE, toluene, and t-1,2-dichloroethene as being below the QC limits. The %Rs of these compounds were acceptable in the LCS. The results for these compounds have been qualified 'UJ' in this sample.

The pesticide MS/MSD performed on sample HA-01-2.5-3.5 showed the %Rs of alpha chlordane, beta endosulfan, dieldrin, endrin, endrin aldehyde, gamma BHC (lindane), heptachlor, and heptachlor epoxide as being below the QC limits. The %Rs of these compounds were acceptable in the LCS. The results for these compounds have been qualified 'UJ' in this sample.

The SVOC MS/MSD performed on sample SB-10-0-0.2 showed the %Rs of hexachlorocyclopentadiene as being below the QC limits. The %Rs of this compound were acceptable in the LCS. The result for this compound has been qualified 'UJ' in this sample.

The metals MS/MSD performed on sample SB-10-0-0.2 showed the %Rs of antimony (Sb) and selenium (Se) as being below the QC limits. The post-digestion spike %Rs were acceptable. The results for these metals have been qualified 'J' in this sample.

The metals MS/MSD performed on sample HA-01-2.5-3.5 showed the %Rs of Sb and Se as being below the QC limits. The post-digestion spike %Rs were acceptable for Sb but low for Se. The results for these metals have been qualified 'UJ' in this sample.

The metals MS/MSD performed on sample HA-05-3.0-4.0 showed the %Rs of Sb, arsenic (As), manganese (Mn), and Se as being below the QC limits. The post-digestion spikes were below the QC limits. The results for these metals have been qualified 'J-' or 'UJ' in this sample as noted on Table 1 below.

The metals MS/MSD performed on sample SB-05-0.0-0.2 showed the %Rs of Sb, Pb, and zinc (Zn) as being outside the QC limits. No post digestion spike was performed. The results for these metals have been qualified 'J-,' or 'J+' in this sample as noted on Table 1.

The metals MS/MSD performed on sample SB-07-1.0-2.0 showed the %Rs of Sb, As, barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), copper (Cu), nickel (Ni), Se, silver (Ag), vanadium (V), and Zn as being below the lower QC limits. The post digestion spike %Rs were also below the QC limit. The results for these metals have been qualified 'R', 'J-', or 'UJ' in this sample.

The metals MS/MSD performed on sample SB-02-0.0-0.2 showed the %Rs of Sb, Pb, V, and Zn as being outside the QC limits. The post digestion spike was acceptable with the exception of Pb. The results for these metals have been qualified 'J' or 'J-' in this sample.

The wet chemistry MS/MSDs performed on samples HA-01-2.5-3.5 and SB-05-0.0-0.2 had %Rs less than the QC limit for cyanide (CN). The result for CN in these sample have been qualified 'J' or 'UJ.'

The wet chemistry MS/MSDs performed on samples SB-02-0.0-0.2, SB-09-0.0-0.2, and SB-09-4.0-5.0 had %Rs less than the QC limit for cyanide (CN). The %Rs were less than 30% and no post digestion spike was performed. The results for CN in these samples have been qualified 'R' or 'J-'.

- **Method Blanks/Laboratory Blanks/Rinse Blanks**

The method blanks, continuing calibration blanks (CCBs), and/or rinse blanks were detected for alpha-BHC, gamma-BHC, 4,4-DDE, Ba, calcium (Ca), Cd, Cu, iron (Fe), Pb, manganese (Mn), potassium (K), Zn, perfluorobutyric acide (PFBA), and perfluorooctanesulfonic acid at concentrations greater than the method detection limit (MDL) but less than the reporting limit (RL). The rinse blanks was detected for Ba and Na at a concentration greater than the RL. Those samples that were less than the RL have been qualified 'U' at the RL as listed on Table 1.

The method blank was detected for Fe at concentrations greater than the RL. Since the associated samples were greater than 10x the blank result no qualification was necessary. The 'B' qualifier applied by the lab has been removed.

- **Serial Dilution**

The metals serial dilution performed on sample SB-10-0-0.2 had the percent difference (%D) of metals Ca, Fe, Mn, Ni, and Zn being greater than the QC limit. The results for these metals in this sample have been qualified J.

The metals serial dilution performed on sample HA-01-2.5-3.5 had the %D of metals Ca, Cr, Fe, Mn, Ni, and Zn being greater than the QC limit. The results for these metals in this sample have been qualified J.

The metals serial dilution performed on sample HA-05-3.0-4.0 had the %D of metals aluminum (Al), Be, Ca, Cr, Fe, Mg. K, V, and Zn being greater than the QC limit. The results for these metals in this sample have been qualified J.

The metals serial dilution performed on sample SB-07-1.0-2.0 had the %D of metals Al, Ba, Be, Ca, Fe, Mg, and Mn being greater than the QC limit. The results for Ba and Be were previously qualified for an MS/MSD outlier. The remaining metals have been qualified J.

The metals serial dilution performed on sample SB-02-0.0-0.2 had the %D of metal Fe being greater than the QC limit. The result for Fe in this sample have been qualified J.

VI. SAMPLE RESULTS AND REPORTING

All sample results were reported in accordance with method requirements and were adjusted for sample volume and percent solids, where applicable. Results reported below the RL, but greater than the MDL, are qualified 'J' by the laboratory.

Field duplicates were collected at locations SB-02-0.0-0.2, SB-04-0.5-2.0, HA-02-3.0-4.0, HA-04-0.0-0.2, and HA-06-3.0-4.0. The samples exhibited good analytical/field precision (i.e., relative percent difference (RPD) between results < 50% if both results > RL). If one result was >RL and the other non-detect, the results were qualified 'J'/"UJ' if the difference between the results and RL was greater than the RL.

Several samples were analyzed at dilutions for SVOCs and pesticides due to elevated levels of target/non-target compounds, and/or sample matrix. A florisil cleanup was performed on the pesticide extracts for several samples due to matrix effects. The non-detect results represent the lowest achievable at the dilutions. Due to the dilutions the surrogate recoveries were not evaluated

The mass ion ratios of some PFAS were outside of the QC limits for identification. The affected samples/compounds have been listed on Table 1. Using analyst judgement, the compounds were reported as detections and qualified 'I' by the laboratory. The 'I' qualifier has been changed to 'JN.' The results reported represent the estimated maximum possible concentration (EMPC) of the compounds.

The RPD between the pesticide columns was evaluated and the samples in Table 1 qualified in accordance with the following table:

%RPD between Column	Qualification
26-70%	J
%D>50 %, hit < RL	U

VII. SUMMARY

All sample analyses were found to be compliant with the method criteria, except where previously noted. Those results qualified 'R' are unusable. Those results qualified 'J,' 'J+,' 'J-', 'JN,' and 'UJ,' are considered conditionally usable. Those results qualified 'U' are considered non-detect. All other sample results are usable as reported. AECOM does not recommend the recollection of any samples at this time.

DEFINITIONS OF USEPA REGION II DATA QUALIFIERS

U – The analyte was analyzed for but was not detected above the reported sample quantitation limit.

J – The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ – The result is an estimated quantity, but the result may be biased high.

J- – The result is an estimated quantity, but the result may be biased low.

UJ – The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

JN - The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

R – The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
