Re: Response to July 12, 2018 Comment Letter
Tecumseh Redevelopment Inc., Lackawanna, NY Site
ATP SWMU Group ECM
Annual Monitoring & Maintenance Summary Report
Reporting Period January 1-December 31, 2017

Dear Mr. Zwack:

On behalf of our client, Tecumseh Redevelopment Inc. (Tecumseh), TurnKey Environmental Restoration, LLC (TurnKey) has prepared the following responses to the Department's July 12, 2018 comments concerning the above-referenced report:

Comment 1. Cover System Monitoring: A completed Post-Closure Field Inspection Report (Appendix A of the ATP ECM Operation, Maintenance, & Monitoring Plan) should be included in the annual report submittal with a summary of the inspection findings in the main text.

Response: A Post-Closure Field Inspection Report reflecting current site conditions has been included with the revised report and will be completed for subsequent annual reports.

Comment 2. Groundwater Quality Monitoring: A more detailed discussion of benzene and cyanide concentrations, ranges, and trends should be included in this section. Wells 18A, 18C, 19A, and 19B appear to be representative of the groundwater discharging to Smokes Creek from the area north of the ATP confinement unit. The radiuses of influence for PW-2 and PW-3 do not appear to be identifying groundwater capture between the two wells.

Response: Table 5 (groundwater analytical summary) and associated trend charts and text have been updated to reflect the April 2018 groundwater sampling data, which were not available at the time of the original submittal. As discussed in the revised report, these data show significant and reductions in VOC concentrations at MW-18A, 18C, 19A and 19B located directly north of and downgradient of the ATP confinement unit. Cyanide levels dropped at these locations as well.

Absent an elevation monitoring point between adjacent exterior pumping wells PW-2 and PW-3, the area of influence between these two wells located just 167 feet apart is conservatively portrayed on the isopotential maps as relatively confined to the area surrounding the pumping wells. As there is limited surface infiltration and also very limited potential for lateral recharge in the very small area bounded by the pumping wells on the west and east, and the containment cell to the south, it is realistic

to expect groundwater capture between PW2 and PW3 to be similar to that between the other exterior adjacent pumping well pairs (i.e., PW1 and PW2, PW3 and PW4) with similar distance separation and operational set points.

The current pumping elevations avoid excessive drawdown and influence from Smokes Creek that might overload the pretreatment system, and more importantly mitigate exacerbating the natural steep hydraulic gradient between the containment cell and downgradient groundwater which would conflict with the goal of maintaining inward gradient toward the cell. Also note that the hydraulic gradients toward these pumping wells are quite steep (i.e., approx. 0.06 ft./ft.). There may also be some seasonal/temporary groundwater mounding between PW-2 and PW-3 due to infiltration from the storm water infiltration basin, particularly during the spring time. This is desirable, as the infiltration source is clean storm water from the vegetated cap that help flush the vadose zone contaminants to groundwater and toward the pumping wells.

Moreover, the approved January 2015 Engineering Report identifies the primary means for evaluating the efficacy of the ATP ECM as concentration reductions over time in the exterior monitoring wells MWS-18A & C and 19A & B. Based upon the recent favorable data for these monitoring locations we do not propose a change in exterior pumping operations at this time.

Comment 3. Conclusion and Recommendations: EW-3R is the only well identified as having the pump "on" and "off" settings altered during 2017. Note 3 in Table 1 indicates that the elevations for the extraction wells are the average of the on/off pump elevation settings. The elevations listed in Table 1 for EW-1, PW-2, PW-3, and PW-4 change throughout the year. These additional apparent pump setpoint adjustments should also be discussed in the report text (or the varying elevations in Table 1 should be corrected).

Response: Acknowledged, the set points for each of the extraction and pumping wells were adjusted in April 2017 with PW-1 also adjusted in September 2017. We have added a summary of the pump set point changes to Table 2 and revised the conclusion and recommendations section accordingly.

Comment 4. Table 1: Note 3 indicates that the average of the pump "on" and "off" setpoint elevations are listed for the extraction wells, however: the first two quarterly values for EW-1 (573.5) are above the "on" setpoint (573.0) indicated in the text; the first two quarterly values listed for EW-3R (574.0) are above either of the "on" setpoints (573.0 and 572.0) indicated in the text, although 571.5 is the elevation indicated for EW-3R on Figure 2; and the pump setpoints for wells PW-1 through PW-4 are not indicated in the text. Also see Comment 3 above. If any values in Table 1 are incorrect, please make any necessary revisions to Figures 2 through 5.

The Lake Erie water elevation values for 3 of the 4 quarterly monitoring periods are ~1.5 to 6 feet higher than the Smokes Creek water elevations at SG-02 (this also is exhibited on CMS Groundwater Assessment Plate 1), implying that there may be a problem with the SG-02 staff gauge. Resurveying the elevation on SG-02 may be warranted. Installing a staff gauge on the sheet piles near the mouth of Smokes Creek might also be useful to verify the NOAA lake level data and as a check on the SG-02 readings.

Response: The set point elevations listed in the Groundwater Capture section of the report refer to the set points at the time of the report (March 30, 2018). Nevertheless, as discussed above, certain extraction well and pumping well elevations were incorrectly listed based upon actual pump on/off settings on the reported dates. The elevations have been modified on the groundwater elevation table and Figures 2 through 5 in the revised report.

SG-02 is a surveyed reference point at the top of a steel sheet pile wall along the creek bank. The reference point elevation has been confirmed, but we have determined that in some instances field staff collected measurements from an incorrect reference point location. Corrected elevations are presented on Table 1 and Figures 2 through 5 in the revised report.

Comment 5. Figure 2: The EW-3R elevation is marked as 571.5 on the figure, however, Table 1 lists the elevation for EW-3R as 574.0. The value for SG-02 (566.68) is not shown on the figure. Is the elevation value for EW-1 correct?

Response: See response to Comment 4.

Comment 6. Figure 3: Is the elevation shown for EW-3R (574.0) correct? The water levels for several wells (e.g., MWS-18C, MWS19B, MWS-20B) are not indicated on the figure.

Response: The elevation shown for EW-3R (574.0) on Figure 3 is correct. In general, groundwater elevation differences between paired wells are minor and only one of the paired datapoints are used to generate the isopotential maps. The exception is data for the MW-23 pair, where apparent mounding within the fill at MW-23A biases the groundwater elevation by several feet. Data for MW-23B, which is screened within the sand unit, are consistent with surrounding data and have been employed in the isopotential maps.

Please contact us if you have questions or require additional information.

Sincerely,
TurnKey Environmental Restoration, LLC

Re: Tecumseh Redevelopment Inc., Lackawanna, NY Site
ATP SWMU Group ECM
Revised Annual Monitoring & Maintenance Summary Report
Reporting Period January 1- December 31, 2017

Dear Mr. Radon:

On behalf of Tecumseh Redevelopment Inc., TurnKey Environmental Restoration, LLC is herein providing a revised Annual Monitoring and Maintenance Summary Report for the Acid Tar Pits (ATP) Solid Waste Management Unit (SWMU) Group Expedited Corrective Measure (ECM). This summary report has been prepared in general accordance with the monitoring requirements presented in the updated (May 2017) Operation, Maintenance, and Monitoring (OM&M) Plan for the period of January 1, 2017 through December 31, 2017 and has been modified to address NYSDEC's July 12, 2018 comments on the prior March 2018 report.

BACKGROUND

The ATP-ECM is comprised of a three-phase constructed remedial measure: a soil-bentonite slurry wall keyed into native confining soils (Phase I); a cover system (Phase II); and a groundwater collection and pretreatment system (Phase III). The approximately 40-foot deep soil-bentonite slurry wall (referred to as the containment cell), was completed in the fall of 2011 and surrounds SWMUs S-11 and S-22 (see Figure 1).

Waste from SWMU S-24 was excavated, transported, and consolidated within the containment cell, and partially covered with a low-permeability multi-layer geosynthetic and interim soil cover in 2012. The interim cover, completed in the fall of 2012, was designed to allow for consolidation of additional wastes and final cover placement at a later date. The design incorporated a berm around the cell to prevent run-off of storm water in contact with consolidated wastes until the final cover was constructed. Groundwater/leachate extraction wells EW-1 and EW-2, installed within the containment cell, were activated on December

21, 2012. Groundwater/leachate is extracted from these wells via submersible pumps and conveyed to an onsite pretreatment system incorporating oil/water separation, filtration, pH adjustment and air stripping unit processes. The pretreated water is discharged to the plant sanitary sewer and ultimately the publicly operated sewerage system under a discharge permit with Erie County Sewer District No. 6. A third extraction well (EW-3) originally installed within the containment cell was not used due to water corrosivity (low pH) issues.

EW-1 and EW-2 maintained sufficient drawdown within the containment cell to maintain inward gradient across the southern and central portion of the cell, but groundwater levels within the northern portion of the cell remained elevated relative to those between the cell and Smokes Creek. The Department issued comments on the 2014 Annual Monitoring & Maintenance Summary Report requiring corrective measures to achieve an inward gradient across the entire cell. In response, Tecumseh installed a replacement well, deemed "EW-3R," in the northwestern portion of the cell near piezometer P-62D (see Figure 1). EW-3R construction was completed in June of 2015. Pump installation as well as force main and electrical connections were subsequently completed, and the extraction well was activated and fully operational by August 14, 2015. Foaming issues were originally encountered which necessitated slowly reducing the pump on and off levels in EW-3R to their present set points (see below).

Final waste consolidation and cover system construction was completed in late 2015. This work, deemed Operable Unit (OU) 2 and 3, respectively, is detailed in the January 2016 Construction Completion Report (CCR) prepared by Benchmark Environmental Engineering & Science, PLLC in association with TurnKey.

DOWNGRADIENT PUMPING WELL INSTALLATION

The results of the RCRA Corrective Measures Study (CMS) indicated that prior to the construction of the ATP-ECM containment cell, contamination from the Acid Tar Pits area had migrated northerly towards Smokes Creek. Although significant improvement in groundwater quality was observed following containment cell construction, downgradient concentrations remained in groundwater outside the ATP containment cell at levels above NY Groundwater Quality Standards. TurnKey prepared a conceptual remedial approach for this groundwater in a report titled "Engineering Report for Acid Tar Pit (ATP) SWMU Group Operable Unit OU-2[1] - External Groundwater Corrective Measure" dated April 2014 which was approved for implementation by the NYSDEC.

The remedy called for installation of four groundwater pumping wells (PW-1 through PW-4) between the containment cell and Smokes Creek, with discharge from the wells directed to a new force main leading to the ATP pretreatment system. The new wells were installed and

[1] OU-2 was re-designated by the NYSDEC to OU-3 in April 2015.

placed into service in Fall of 2015. Details of the pumping well and force main construction were provided to the Department in an April 2016 amendment to the February 2013 ATP SWMU Group Phase III Construction Completion Report. The well pumps and elevations are controlled from the pretreatment building and are intended to maintain a slight drawdown from static conditions to avoid competing with the inward gradient that is required across the containment cell.

GROUNDWATER CAPTURE

Prior to construction of the soil-bentonite slurry wall, a significant groundwater mound was present in the vicinity of the ATPs. According to the RCRA Facility Investigation (RFI), the groundwater mound was attributed to surface grading and multiple "perched" water zones within the ATPs resulting from layers of waste, slag, and other fill with varying hydraulic conductivities of waste material that retarded the vertical and horizontal flow of groundwater to the surrounding slag/fill and deeper native sand unit. During the interim period following construction of the soil-bentonite slurry wall (November 2011) and subsequent extraction well installation (December 2011) and activation (December 2012), groundwater mounding was observed within interior monitoring wells due to expected entrapment of groundwater and precipitation infiltration, as well as the slurry wall performing as designed to significantly retard groundwater flow.

Groundwater extraction wells EW-1 and EW-2 were activated on December 21, 2012 following completion of the ATP pretreatment system. EW-1 and EW-2 are currently set to energize at elevation 573 FMSL and de-energize 572 FMSL. In accordance with the March 31, 2017 Annual Monitoring & Maintenance Summary Report, the EW-3R pumping interval was dropped in spring of 2017 to a pump on elevation of 572 FMSL and a pump off elevation of 571 FMSL. However, incoming water exhibited whitish discoloration/foaming which inhibited pretreatment operations. Accordingly, the EW-3R pump settings were adjusted upward slightly (but still well below prior settings) and are currently set to energize at elevation 573 FMSL and de-energize at elevation 572 FMSL. A summary of pump set points with adjustment dates is provided on Table 1.

During 2017 the groundwater elevations in the network of wells and piezometers within and surrounding the ATP containment cell was monitored on a minimum quarterly/seasonal basis per the OM&M Plan. Table 2 presents groundwater elevation data obtained on February 21, April 10, July 6, and November 6, 2017. Isopotential maps corresponding to each of these events are presented as Figures 2 through 5. As shown, the inward gradient across the slurry wall was maintained, as it has been in prior years, across the southern area and central areas of the cell throughout 2017. In addition, pronounced influence toward the pumping wells is evident within the containment cell interior. Along the northern side of the cell, the gradient across the slurry wall was inward or relatively flat during the first, second and fourth quarters. During the July event the groundwater elevations at interior monitoring points on the northern side of the cell measured approximately 0.7 to 0.9 feet higher than the interpolated exterior elevation, likely due to the lowered exterior

groundwater elevations as drier weather conditions set in across western NY. This is reflected by the groundwater elevation data in Table 2, which indicate fairly consistent interior elevations along the northern side of the cell but lower levels exterior elevations in the monitoring wells between the creek and the slurry wall during the July event.

GROUNDWATER PRETREATMENT SYSTEM OPERATION AND MAINTENANCE

The groundwater treatment system was generally operated within design parameters during the current monitoring period with the exception of short-duration shutdowns related to routine maintenance (e.g., cleaning of the air stripper, changing out bag filters, etc.). Major routine and non-routine maintenance events as well as alarm conditions/corrective actions taken during the reporting period are listed on Table 1.

In June of 2016 a new panel was installed with cycle counters and hour meters for each of the internal extraction wells and external pumping wells. This work was completed by Tecumseh on a voluntary basis to improve monitoring of the system and aid in decisions concerning adjustment of on/off set-points. The recorded hours of operation and cycle counts since the panel was installed are presented for each of the extraction and pumping wells on Table 3.

The pretreatment system process flow rate and total gallons treated are monitored on the process discharge line via a flow sensor and transmitter, which are calibrated annually in accordance with ECSD Discharge Permit requirements. Table 4 provides a summary of the pretreatment system flow readings in terms of monthly totals and average daily flows. The total flow through the pretreatment system during the period January 1 through December 31, 2017 was approximately 1,616,120 gallons.

PW-1 through PW-4 pumps are not separately metered. However, the total flows from the pumping wells can be determined by subtracting the total metered flows from the extraction wells from the total flow processed through the pretreatment system. In 2017 the total volume of flow from the extraction wells was approximately 360,674 gallons. Thus it is estimated that the external pumping wells (PW-1 through PW-4) generated a total volume of approximately 1,255,446 gallons in 2017. A chart showing the relationship between the weekly totalizer flow and the estimated flow for extraction wells (EW's) and pumping wells (PW's) is located in Attachment 1.

GROUNDWATER QUALITY MONITORING

In accordance with the approved OM&M Plan, monitoring wells MWS-02, MWS-18A, MWS-18C, MWS-19A, MWS-19B, MWS-20A, and MWS-20B located downgradient of the containment cell are sampled annually in April for analysis of Target Compound List (TCL) volatile organic compounds (VOCs), TCL semi-volatile organic compounds (SVOCs), arsenic, barium, chromium, lead, and cyanide. Metals analyses are also repeated for the filtered (soluble) fraction if the samples exhibit elevated turbidity.

Recent sampling results, including the April 2018 data, are summarized on Table 5 along with historical data from prior sampling events. Time versus concentration plots for total benzene, ethylbenzene toluene, and xylene (BETX) and cyanide are in Attachment 1.

The April 2018 data show a significant reduction in BTEX at all the monitored locations relative to the prior event with the exception of MWS-20A and 20B, which have historically yielded trace detections below groundwater quality standards and continue to exhibit non-detect or trace levels of petroleum VOCs. Total BTEX concentrations and in particular benzene, which represents the majority of the BTEX impact, have declined by an order of magnitude or more from historic high levels and reflect significant improvement in groundwater quality in Groundwater Discharge Sub-Area 2B downgradient of the ATP-ECM following completion of the slurry wall containment system in October 2011. Except for MWS-18A all BTEX levels are now well below 1 part per million. SVOC impacts, while historically not as pronounced as VOC impacts, have also declined with only MWS-19A exhibiting levels of certain SVOC parameters above groundwater quality standards. Similarly, cyanide levels dropped at each of the locations except MWS-02, which is well outside the capture area of the exterior pumping wells.

GROUNDWATER PRETREATMENT SYSTEM EFFLUENT MONITORING

Attachment 2 includes the April 2017 and October 2017 Semi-Annual Reports submitted to Erie County Sewer District No. 6. As presented in these reports, the pretreatment system effluent flow, pH, and regulated parameter concentrations were conformant with the permitted discharge limits on both events.

COVER SYSTEM MONITORING

A completed Post-Closure Field Inspection Report is included in Attachment 3. As presented in Attachment 3, the cover system, stormwater pond, and conveyance piping are in good condition and no corrective actions are required at this time.

CONCLUSIONS AND RECOMMENDATIONS

The groundwater pretreatment system is functioning as intended and in compliance with discharge permit limits.

Inward gradient was maintained during the across the containment cell throughout the year in the southern and central areas of the cell. Along the northern side of the cell, the gradient across the slurry wall was inward or relatively flat during the first, second and fourth quarters. The apparent higher interior groundwater/leachate levels along the northern side of the cell or portions thereof during the July event as compared to exterior groundwater elevations are believed to be attributable to the natural steep hydraulic gradient between the collection cell and Smokes Creek, which was exacerbated by the lower elevations measured in nearby monitoring well levels as drier conditions prevailed in July. Competing effects of

groundwater collection from the exterior groundwater pumping wells may also contribute but do not appear to have the same degree of influence as natural conditions and seasonal effects.

EW-3R pumping set-points were lowered in spring of 2017 following submittal of the 2016 annual report. Some foaming and odor issues were encountered, necessitating increasing the set points by a foot in August 2017. It is recommended that the current external pumping elevations be maintained, as further reductions in elevation may compromise the extraction well screen integrity and/or significantly reduce incoming groundwater/leachate quality to the point that pretreatment efficiency is impaired. Quarterly isopotential maps will continue to be developed to evaluate the effects of continued containment cell dewatering, which are expected to improve inward gradient. Nevertheless, it may not be feasible to overcome the natural steep hydraulic gradient during low water table conditions outside of the cell. All other routine operation, maintenance and monitoring will continue per the 2017 OM&M Plan.

Please contact us if you have any questions or require additional information.

Sincerely,
TurnKey Environmental Restoration, LLC

Lake Erie	--	572.1	572.9	573.5	572.4

Notes:

1. Elevation is measured in feet; distance above mean sea level (fmsl).
2. Groundwater elevation corrected based on the presence of free product (i.e., LNAPL), if applicable.
3. Groundwater elevations for extraction wells EW-1, EW-2, EW-3R, PW-1, PW-2, PW-3, and PW-4 presented in the table are reflective of the average of "pump on" and "pump off" elevations.
4. Groundwater elevations for extraction well EW-3 are measured from the top of riser, located in EW-3 manhole.
5. Lake Erie Elevation is taking from NOAA's Buffalo NY station 9063020.

Definitions:

fbTOR = feet below top of riser or reference elevation.
fmsl = feet above mean sea level.
Hydrogeologic Unit = as identified in the RFI & CMS
NM = not measured
NP = no product was observed
NA = not applicable

2017 REPORTS TO ERIE COUNTY SEWER DISTRICT NO. 6

TURNKEY

Strong Advocates, Effective Solutions, Integrated Implementation

April 24, 2017

Ms. Laura Surdej
Erie County Sewer/Southtown's Sewage Treatment Plant
2060 Lehigh St
Lackawanna, NY 14218

Re: ECSD No.6 Discharge Permit LA-03 –Semi-Annual Report (October 2016 – April 2017)
Lackawanna, New York

Dear Ms. Surdej:

TurnKey Environmental Restoration, LLC (TurnKey) has prepared this correspondence on behalf of our client, Tecumseh Redevelopment Inc., in accordance with Erie County Sewer District No. 6 (ECSD No. 6), Permit No. LA-03 (Rev. June 2015). As required by the permit, this semi-annual report summarizes flow, pH and compliance sample results for the report period from October 31, 2016 through April 2017.

Turnkey personnel recorded totalizer (total gallons) and pH readings weekly during the reporting period. Table 1 summarizes the total volume (gallons), calculated daily flow (gallons per day) and pH readings.

On April 3, 2017 TurnKey personnel collected an effluent (outfall) water sample and submitted the sample under chain-of-custody command to Alpha Analytical for laboratory analysis in accordance with the discharge permit. Table 2 summarizes the analytical results; Attachment 1 contains the Laboratory Analytical Report.

As of April 7, 2017 a total of 7,085,111 gallons of water has been pre-treated and discharged to the ECSD No.6 collection and conveyance system. The calculated daily flow for the report period has ranged between 3,474 and 8,781 GPD, well below permitted flows of up to 45,000 GPD. The pH readings have been between 5.35 and 6.55 standard units, with a permitted operating range of 5 and 12 standard units. Please note that the flow meter was subjected to annual calibration in September 2016 by a third party. The calibration certificate is presented as Attachment 2.

Please contact us if you have any questions or require additional information.

Sincerely,
TurnKey Environmental Restoration, LLC

Thomas H. Forbes, P.E.
Principal Engineer

2. Per the June 2015 Erie County Sewer District No. 6 Discharge Permit LA-03 (Revised)
3. Metals include Ag, As, Ba, Be, Cd, Cr, Cu, Hg, Ni, Pb, Sb, Se, Ti, and Zn
4. TTO is determined by totaling the reported compound concentrations detected via EPA Methods 624.

Definitions:

J = Estimated value; result is less than the sample quantitation limit but greater than zero.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

This report replaces the report issued April 10, 2017, and includes the results of the Chromium analysis performed on L1710124-01.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics by Method 624

L1710124-01: The sample has elevated detection limits due to the dilution required by the sample matrix. Sample is cloudy

The WG990606-9 LCS recoveries for 1,1,1-trichloroethane (110%), ethylbenzene (125%), vinyl chloride (120%), 1,2-dichlorobenzene (140%), 1,3-dichlorobenzene (135%) and 1,4-dichlorobenzene (135%), associated with L1710124-01, are outside Alpha's acceptance criteria, but within the acceptance criteria specified in the method.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Michelle M. Morris

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

Report Format: DU Report with 'J' Qualifiers

Project Name:	ATP PRE-TREATMENT SYS-EFFLUENT	**Lab Number:**	L1710124
Project Number:	0071-016-222	**Report Date:**	04/13/17

Data Qualifiers

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Cold Spring Environmental

3248 Buffalo Rd., Varysburg, N.Y. 14167
Ph: 716-863-7052

September 23, 2016

Ref: Flow Meter Calibration

Dear Mr. Dubisz

Calibration Date: September 23, 2016
Site location: Pretreatment Building
Equipment Model:Signet GF 8550
Equipment type: Closed Pipe impellor
Equipment S/N: 61009161010
Measuring device: 2 inch pipe
Output type: none
Totalizer multiplier: 1 gallon

Displayed level/flow rate: 0 GPM
Measured Level/flow rate: 0 GPM
Displayed level/flow rate: 39 GPM
Measured Level/flow rate: 39 GPM
Percent Difference: 0%
Adjustment: no
Note: cleaned the impellor, measured the totalizer at 39 GPM and found it to be correct

Please contact me with any questions.

Sincerely, *Jon Wolak*

Lackawanna, NY 14218

Re: ECSD No.6 Discharge Permit LA-03 –Semi-Annual Report (May 2017 – October 2017)
Lackawanna, New York

Dear Ms. Surdej:

TurnKey Environmental Restoration, LLC (TurnKey) has prepared this correspondence on behalf of our client, Tecumseh Redevelopment Inc., in accordance with Erie County Sewer District No. 6 (ECSD No. 6), Permit No. LA-03 (Rev. June 2015). As required by the permit, this semi-annual report summarizes flow, pH and compliance sample results for the report period from May 1, 2017 through October 2017.

Turnkey personnel recorded totalizer (total gallons) and pH readings weekly during the reporting period. Table 1 summarizes the total volume (gallons), calculated daily flow (gallons per day) and pH readings.

On October 23, 2017 TurnKey personnel collected an effluent (outfall) water sample and submitted the sample under chain-of-custody command to Alpha Analytical for laboratory analysis in accordance with the discharge permit. Table 2 summarizes the analytical results; Attachment 1 contains the Laboratory Analytical Report. All parameters meet corresponding permitted discharge limits.

As of October 23, 2017 a total of 7,861,610 gallons of water has been pre-treated and discharged to the ECSD No.6 collection and conveyance system. The calculated daily flow for the subject reporting period has ranged between 1429 and 9,361 GPD, well below permitted flows of up to 45,000 GPD. The pH readings have been between 5.74 and 6.55 standard units, with a permitted operating range of 5 and 12 standard units. Please note that the flow meter was subjected to annual calibration in July 2017 by a third party. The calibration certificate is presented as Attachment 2.

Please contact us if you have any questions or require additional information.

Sincerely,
TurnKey Environmental Restoration, LLC

Thomas H. Forbes, P.E.
Principal Engineer

Oil & Grease	ND<5.2	**Monitor**
pH	5.9	**5-12**
Total Toxic Organic Pollutants (TTO) [4]	0.11	**2.13**

Notes:

1. Only those parameters detected are presented in this table; all others were reported as non-detect.
2. Per the June 2015 Erie County Sewer District No. 6 Discharge Permit LA-03 (Revised)
3. Metals include Ag, As, Ba, Be, Cd, Cr, Cu, Hg, Ni, Pb, Sb, Se, Ti, and Zn
4. TTO is determined by totaling the reported compound concentrations detected via EPA Methods 608, 624, & 625.

Definitions:

J = Estimated value; result is less than the sample quantitation limit but greater than zero.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The element list for metals analysis was specified by the client.

A Trip Blank was received in the laboratory, but not listed on the Chain of Custody, and was not analyzed.

Volatile Organics by Method 624

The WG1055168-9 LCS recoveries for chloroform (115%), 1,1,1-trichloroethane (120%), trans-1,3-dichloropropene (110%) and vinyl chloride (125%), associated with L1738414-01, are outside Alpha's acceptance criteria, but within the acceptance criteria specified in the method.

The WG1055168-9 LCS recovery, associated with L1738414-01, is above the acceptance criteria for acrolein (162%); however, the associated sample is non-detect to the RL for this target analyte. The results of the original analysis are reported.

PCBs

WG1056035: A Matrix Spike and Laboratory Duplicate were prepared with the sample batch, however, the native sample was not available for reporting; therefore, the Matrix Spike and Laboratory Duplicate results could not be reported.

Total Metals

The WG1056013-3 MS recovery for iron (0%), performed on L1738414-01, does not apply because the sample concentration is greater than four times the spike amount added.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name:	ATP PRE-TREATMENT OM&M	**Lab Number:**	L1738414
Project Number:	T0071-017-222	**Report Date:**	10/30/17

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS
EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Flow Meter Calibration Certificate

Cold Spring Environmental

3248 Buffalo Rd., Varysburg, N.Y. 14167
Ph: 716-863-7052

July 16, 2017

Ref: Flow Meter Calibration

Dear Mr. Dubisz

Calibration Date: July 12, 2017
Site location: Pretreatment Building
Equipment Model:Signet GF 8550
Equipment type: Closed Pipe impellor
Equipment S/N: 61009161010
Measuring device: 2 inch pipe
Output type: none
Totalizer multiplier: 1 gallon

Displayed level/flow rate: 0 GPM
Measured Level/flow rate: 0 GPM
Displayed level/flow rate: 32-33 GPM
Measured Level/flow rate: 32-33 GPM
Percent Difference: 0%
Adjustment: no
Note: cleaned the impellor, measured the totalizer at 33 GPM and found it to be correct

Please contact me with any questions.

Sincerely, *Jon Wolak*

Jon Wolak

POST-CLOSURE FIELD INSPECTION REPORT

BENCHMARK ENVIRONMENTAL ENGINEERING & SCIENCE, PLLC

Field Inspection Report
Post-Remedial Operation, Maintenance & Monitoring Plan

Property Name: ATP SWMU Group ECM Project No.: T0071-017-222

Client: Tecumseh Redevelopment, Inc.

Property Address: 1951 Hamburg Turnpike City, State: Lackawanna, NY Zip Code: 14218

Preparer's Name: Brock Greene Date/Time: 8-6-18 / 09:30

CERTIFICATION

The results of this inspection were discussed with the Site Manager. Any corrective actions required have been identified and noted in this report, and a supplemental Corrective Action Form has been completed. Proper implementation of these corrective actions have been discussed with the Site Manager, agreed upon, and scheduled.

Preparer / Inspector: Brock Greene **Date:** 8-6-18

Signature:

Next Scheduled Inspection Date: April 2019

ATP Containment Cell and Pretreatment Building Access

1. Is the access road in need of repair?	☐ yes	☑ no	☐ N/A
2. Sufficient signage posted (No Trespassing)?	☑ yes	☐ no	☐ N/A
3. Has there been any noted or reported trespassing?	☐ yes	☑ no	☐ N/A

Please note any irregularities/ changes in site access and security: None

Final Surface Cover / Vegetation

The integrity of the vegetative soil cover or other surface coverage (e.g., slag) over the entire Site must be maintained. The following documents the condition of the above.

1. Final Cover is in Place and in good condition?	☑ yes	☐ no	☐ N/A
Cover consists of (mainly): Grass			
2. Evidence of erosion?	☐ yes	☑ no	☐ N/A
3. Cracks visible in slag perimeter road?	☐ yes	☑ no	☐ N/A
4. Evidence of distressed vegetation/turf?	☐ yes	☑ no	☐ N/A
5. Evidence of unintended traffic and/or rutting?	☐ yes	☑ no	☐ N/A
6. Evidence of uneven settlement and/or ponding?	☐ yes	☑ no	☐ N/A

BENCHMARK ENVIRONMENTAL ENGINEERING & SCIENCE, PLLC

Field Inspection Report
Post-Remedial Operation, Maintenance & Monitoring Plan

Final Surface Cover / Vegetation

7. Damage to any surface coverage?	☐ yes	☑ no	☐ N/A
8. Extraction Well access roads (3) in stable condition?	☑ yes	☐ no	☐ N/A

Please provide more information below.

Cover is in good condition

Storm Water Pond

1. Is there water accumulation in the pond?	☐ yes	☑ no	☐ N/A
2. Is there sign of erosion or loss of oversized slag on sideslopes of pond?	☐ yes	☑ no	☐ N/A
3. Are the inlet or outlet structures/pipes clogged with debris?	☐ yes	☑ no	☐ N/A
4. Is there sign of erosion on the emergency spillway and the down chute to Smokes Creek?	☐ yes	☑ no	☐ N/A

If yes to any questions 2 through 4 above, please provide more information below.

Gas Vent Monitoring and Maintenance

Are there signs of stressed vegetation around gas vents?	☐ yes	☑ no	☐ N/A
Is gas vent currently intact and operational?	☑ yes	☐ no	☐ N/A
Has regular maintenance and monitoring been documented and enclosed or referenced?	☒ yes	☐ no	☐ N/A

No maintenance has been required; vent remains intact & free of blockage

Field Inspection Report
Post-Remedial Operation, Maintenance & Monitoring Plan

Conveyance Piping Leak Detection

Are there signs of a groundwater/leachate leak in the cleanout manholes?	☐ yes	☑ no	☐ N/A
Is there evidence of a leak having occurred before this inspection date?	☐ yes	☑ no	☐ N/A
