RE: **Addendum to: Remedial Action Implementation Report, Ernst Steel Site, 1728 and 1746 Walden Avenue, Cheektowaga, New York (NYSDEC Site Number 915022)**

Ladies and Gentlemen:

Barron & Associates, P.C. (B&A) is pleased to submit two (2) copies of an addendum to the above referenced document. Concurrent with the preparation and submittal of the referenced document, a previous document prepared by Blasland, Bouck & Lee, Inc. (BB&L) for Commercial Carrier, Inc. was being obtained by 1746 Walden Inc. The BB&L document was prepared to present the results of a test pit, soil sampling and analytical program conducted in the northeast corner of the Commercial Carrier, Inc. site at 1728 Walden Avenue, Cheektowaga, New York.

At the time of the submittal of the referenced document, the BB&L document was not available for submittal as an appendix to the "*Remedial Action Implementation Report, Ernst Steel Site, 1728 and 1746 Walden Avenue, Cheektowaga, New York (NYSDEC Site Number 915022)*." The absence of the availability of this BB&L document at the time of the Remedial Action Implementation Report submittal was addressed in Part II, Section 1.0 - Introduction.

Subsequent to the submittal of the Remedial Action Implementation Report, 1746 Walden Inc. acquired a copy of the BB&L report/documentation associated with the test pit, soil sampling and analytical program conducted in the northeast corner of 1728 Walden Avenue; therefore, this BB&L document is being submitted as an addendum to the Remedial Action Implementation Report under this cover.

Should any questions arise concerning this submittal, please do not hesitate to contact James S. Barron, P.E. or the undersigned at your convenience.

Yours truly,
BARRON & ASSOCIATES, P.C.

Re: Commercial Carriers, Inc.
Phase II, Cheektowaga, New York

File: 0923-923.86 #2

Transmitted Via: Fax and U.S. Mail

Pages Sent: 3

Dear Gentlemen:

As you are aware, Blasland, Bouck & Lee, Inc. (BB&L), on behalf of Commercial Carriers, Inc. (CCI), as part of a subsurface soil investigation, excavated 15 test pits at the CCI property located at 1728 Walden Avenue in Cheektowaga, New York, on Thursday, August 10, 1995.

A soil sample was composited from each of these 15 test pits and submitted to General Testing Corporation (GTC) of Rochester, New York for the following analyses under 91 Analytical Services Protocol (ASP):

- Toxic characteristic leachate process (TCLP) analysis for lead, chromium, and barium; and
- Total lead and total chromium.

The approximate locations of these test pits, along with the results of these analyses, are presented on the attached figure. The three samples that were

8

Martin L. Doster, P.E.
August 18, 1995
Page 2

split with the New York State Department of Environmental Conservation (NYSDEC) were obtained from test pits 1C, 1D, and 2B.

Based on these results, CCI proposes to excavate 12 additional test pits, identified on the attached figure, and obtain composite soil samples from the each of these test pits in an attempt to delineate the portions of the site that are impacted. The eight proposed test pits depicted, as shaded squares on the attached figure, will be excavated with a backhoe approximately 10 to 15 feet in length and approximately two feet wide. Due to site constraints and the existence of railroad tracks on the northeast corner of the property, the four test pits located on the figure as black circles will be excavated via hand shoveling. These test pits will be approximately one foot square.

The soil samples obtained will be submitted to GTC for total chromium and total lead analyses (via ASP protocol) on August 19, 1995. Upon our receipt, the sample results will be forwarded to NYSDEC for their review.

If you have any questions, please contact Mr. David Ax of CCI at (810) 952-2169 or Mr. Charles P. Cercone of Buchanan Ingersoll at (716) 854-4100.

Very truly yours,

BLASLAND, BOUCK & LEE, INC.

THE FOLLOWING HAS BEEN SENT TO THE ATTACHED LIST

Langdon Marsh
Acting Commissioner

Dear:

The New York State Department of Environmental Conservation (DEC) maintains a Registry of sites where hazardous waste disposal has occurred. Property located at 1722 & 1728 Walden Ave., Cheektowaga, Erie Co. was listed in the Registry because there was some concern that hazardous waste was deposited there. The DEC is proposing to delist this site from the Registry. The reason for proposing the removal of this site from the Registry is as follows:

Hazardous wastes disposed at this site (paint and solvent wastes disposed on the ground outside the Delavan Industries buildings) have been removed. Contaminated soils have been removed to concentrations below the recommended clean-up levels or to background levels.

Public comments about delisting this site are being received before the decision to remove this site from the Registry is finalized. If you would like to provide us with your written comments, please send them to: Dennis Farrar, Project Manager, NYSDEC, Room 220, 50 Wolf Road, Albany, NY 12233-7010. The public comment period will end 6/27/94. A summary of any comments we receive will be made available at our Region 9 Office at 270 Michigan Ave., Buffalo, NY 14203-2999.

If we do not receive any new or additional information during this public comment period that changes our proposal, we will delist the identified site on or after 7/27/94. The name and site I.D. number of this property as listed in the Registry is Delavan Industries, Site No. 915138.

We are sending this letter to you and others who own property near the site listed above as well as the county and town clerks. We are notifying you about these activities at this site because we believe it is important to keep you informed.

If you have questions or need additional information, the Department of Environmental Conservation maintains a hazardous waste site toll-free number: 1(800)342-9296. The Department of Health maintains a Health Liaison Program (HeLP) toll-free number: 1(800)458-1158 Ext. 402.

If you currently are renting or leasing your property to someone else, please share this information with them. If you no longer own the property to which this letter was sent, please provide this information to the new owner and provide this office with the name and address of the new owner so that we can correct our records.

Sincerely,

Robert L. Marino

Submission #9508000309
SDG # TP14

Dear Mr. Meuse:

Enclosed is an analytical data report for the above referenced facility. A total of twelve soil samples were received by our laboratory on August 19, 1995. Analytical data was provided to you per a Facsimile transmittal on 08/21/95.

Any problems encountered with this project are addressed in a case narrative section which is presented later in this report.

This report consists of two (2) packages: the sample data summary package and the sample data package. All data presented in these packages has been reviewed prior to report submission. If you should have any questions or concerns, please contact me at (716) 454-3760.

Thank you for your continued use of our services.

Sincerely,

A handwritten signature in cursive script, reading "Janice M. Jaeger".

INORGANIC QUALIFIERS - 1991

C (Concentration) qualifier - Enter "B" if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but was greater than or equal to the Instrument Detection Limit (IDL). If the analyte was analyzed for, but not detected, a "U" must be entered. .

Q qualifier - Specified entries and their meanings are as follows:

- E - The reported value is estimated because of the presence of interference.
- M - Duplicate injection precision not met.
- N - Spiked sample recovery not within control limits.
- S - The reported value was determined by the Method of Standard Additions (MSA).
- W - Post-digestion spike for Furnace AA Analysis is out of control limits (85-115%), while sample absorbance is less than 50% of spike absorbance.
- * - Duplicate analysis not within control limits.
- + - Correlation coefficient for the MSA is less than 0.995.

M (Method) qualifier - Enter:

- "P" for ICP
- "A" for Flame AA
- "F" for Furnace AA
- "PM" for ICP when Microwave Digestion is used
- "AM" for Flame AA when Microwave Digestion is used
- "FM" for Furnace M when Microwave Digestion is used
- "CV" for Manual Cold Vapor AA
- "AV" for Automated Cold Vapor AA
- "CA" for Spectrophotometric Midi-Distillation
- "AS" for Semi-Automated Spectrophotometric
- "C" for Spectrophotometric Manual
- "T" for Titrimetric
- " " where no data has been entered
- "NR" if the analyte is not required to be analyzed.

CASE NARRATIVE

COMPANY: Blasland Bouck Engineers, P.C.
Commercial Carriers
SUBMISSION #: 9508000309
SDG#: TP14

BBE soil samples were collected on 8/19/95 and received at GTC on 8/19/95 in good condition.

METALS ANALYSIS

Twelve BBE soil sample were analyzed for total Lead and Chromium using NYSDEC ASP 12/91 protocol.

The Chromium results were flagged with an "" indicating that the % RPD (29 %) from the duplicate ICP analysis was outside of ASP QC limits and a "N" indicating that the matrix spike recovery (137 %) was also outside of ASP QC limits.

The variation in the distribution of the analytes within the soil and the difficulty in obtaining a consistent representative sample were probably the causes for the QC problems. According to EPA validation criteria all data is compliant and useable but would be flagged as esimated since the matrix spike recovery is 126 - 200 % recovery. The % RPD would make no difference since it is less than 100 %.

No other analytical or QC problems were encountered.

A Full Service Environmental Laboratory

August 24, 1995

Mr. Derek Meuse
Blasland Bouck Engineers P.C.
30 Corporate Woods Suite 160
Rochester, NY 14623

Re: Commercial Carriers
Submission #9508000208
SDG # 1CP2

Dear Mr. Meuse:

Enclosed is an analytical data report for the above referenced facility. A total of sixteen soil samples were received by our laboratory on August 11, 1995. Analytical data was provided to you per a Facsimile transmittal on 08/16/95.

Any problems encountered with this project are addressed in a case narrative section which is presented later in this report.

This report consists of two (2) packages: the sample data summary package and the sample data package. All data presented in these packages has been reviewed prior to report submission. If you should have any questions or concerns, please contact me at (716) 454-3760.

Thank you for your continued use of our services.

Sincerely,

A handwritten signature in cursive script, appearing to read "Janice M. Jaeger".

Janice M. Jaeger
Customer Service Representative

INORGANIC QUALIFIERS - 1991

C (Concentration) qualifier - Enter "B" if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but was greater than or equal to the Instrument Detection Limit (IDL). If the analyte was analyzed for, but not detected, a "U" must be entered.

Q qualifier - Specified entries and their meanings are as follows:

- E - The reported value is estimated because of the presence of interference.
- M - Duplicate injection precision not met.
- N - Spiked sample recovery not within control limits.
- S - The reported value was determined by the Method of Standard Additions (MSA).
- W - Post-digestion spike for Furnace AA Analysis is out of control limits (85-115%), while sample absorbance is less than 50% of spike absorbance.
- * - Duplicate analysis not within control limits.
- + - Correlation coefficient for the MSA is less than 0.995.

M (Method) qualifier - Enter:

- "P" for ICP
- "A" for Flame AA
- "F" for Furnace AA
- "PM" for ICP when Microwave Digestion is used
- "AM" for Flame AA when Microwave Digestion is used
- "FM" for Furnace M when Microwave Digestion is used
- "CV" for Manual Cold Vapor AA
- "AV" for Automated Cold Vapor AA
- "CA" for Spectrophotometric Midi-Distillation
- "AS" for Semi-Automated Spectrophotometric
- "C" for Spectrophotometric Manual
- "T" for Titrimetric
- " " where no data has been entered
- "NR" if the analyte is not required to be analyzed.

CASE NARRATIVE

COMPANY: Blasland Bouck Engineers, P.C.
Commercial Carriers
SUBMISSION #: 9508000208
SDG#: 1CP2

BBE soil samples were collected on 8/10/95 and received at GTC on 8/11/95 in good condition.

METALS ANALYSIS

Sixteen BBE soil samples were analyzed for total Lead and Chromium using NYSDEC ASP 12/91 protocol.

The Lead and Chromium results were flagged with an "***" indicating that the % RPD (88 % for Pb and 43 % for Cr) from the duplicate ICP analysis were outside of ASP limits.

The variation in the distribution of the analytes within the soil and the difficulty in obtaining a consistent representative sample were probably the causes for the QC problems. According to EPA validation criteria all data is compliant and useable since the % RPD is < 100 %. Note: if it was > 100 % but less than 200 % the results would be flagged with a "J" as being estimated.

The Prep Blank read above the CRDL for Lead, however, no data was affected since all results were greater than 10X the Prep Blank value.

No other analytical or QC problems were encountered.

A Full Service Environmental Laboratory

August 24, 1995

Mr. Derek Meuse
Blasland Bouck Engineers P.C.
30 Corporate Woods Suite 160
Rochester, NY 14623

Re: Commercial Carriers
Submission #9508000309
SDG # TP14

Dear Mr. Meuse:

Enclosed is an analytical data report for the above referenced facility. A total of twelve soil samples were received by our laboratory on August 19, 1995. Analytical data was provided to you per a Facsimile transmittal on 08/21/95.

Any problems encountered with this project are addressed in a case narrative section which is presented later in this report.

This report consists of two (2) packages: the sample data summary package and the sample data package. All data presented in these packages has been reviewed prior to report submission. If you should have any questions or concerns, please contact me at (716) 454-3760.

Thank you for your continued use of our services.

Sincerely,

A handwritten signature in cursive script, appearing to read 'Janice M. Jaeger', with a long, sweeping horizontal line extending to the right.

CASE NARRATIVE

COMPANY: Blasland Bouck Engineers, P.C.
Commercial Carriers

SUBMISSION #: 9508000309

SDG#: TP14

BBE soil samples were collected on 8/19/95 and received at GTC on 8/19/95 in good condition.

METALS ANALYSIS

Twelve BBE soil sample were analyzed for total Lead and Chromium using NYSDEC ASP 12/91 protocol.

The Chromium results were flagged with an "" indicating that the % RPD (29 %) from the duplicate ICP analysis was outside of ASP QC limits and a "N" indicating that the matrix spike recovery (137 %) was also outside of ASP QC limits.

The variation in the distribution of the analytes within the soil and the difficulty in obtaining a consistent representative sample were probably the causes for the QC problems. According to EPA validation criteria all data is compliant and useable but would be flagged as esimated since the matrix spike recovery is 126 - 200 % recovery. The % RPD would make no difference since it is less than 100 %.

No other analytical or QC problems were encountered.

A Full Service Environmental Laboratory

August 24, 1995

Mr. Derek Meuse
Blasland Bouck Engineers P.C.
30 Corporate Woods Suite 160
Rochester, NY 14623

Re: Commercial Carriers
Submission #9508000208
SDG # 1CP2

Dear Mr. Meuse:

Enclosed is an analytical data report for the above referenced facility. A total of sixteen soil samples were received by our laboratory on August 11, 1995. Analytical data was provided to you per a Facsimile transmittal on 08/16/95.

Any problems encountered with this project are addressed in a case narrative section which is presented later in this report.

This report consists of two (2) packages: the sample data summary package and the sample data package. All data presented in these packages has been reviewed prior to report submission. If you should have any questions or concerns, please contact me at (716) 454-3760.

Thank you for your continued use of our services.

Sincerely,

A handwritten signature in cursive script, appearing to read "Janice M. Jaeger".

CASE NARRATIVE

COMPANY: Blasland Bouck Engineers, P.C.
Commercial Carriers
SUBMISSION #: 9508000208
SDG#: 1CP2

BBE soil samples were collected on 8/10/95 and received at GTC on 8/11/95 in good condition.

METALS ANALYSIS

Sixteen BBE soil sample were analyzed for total Lead and Chromium using NYSDEC ASP 12/91 protocol.

The Lead and Chromium results were flagged with an "*" indicating that the % RPD (88 % for Pb and 43 % for Cr) from the duplicate ICP analysis were outside of ASP limits.

The variation in the distribution of the analytes within the soil and the difficulty in obtaining a consistent representative sample were probably the causes for the QC problems. According to EPA validation criteria all data is compliant and useable since the % RPD is < 100 %. Note: if it was > 100 % but less than 200 % the results would be flagged with a "J" as being estimated.

The Prep Blank read above the CRDL for Lead, however, no data was affected since all results were greater than 10X the Prep Blank value.

No other analytical or QC problems were encountered.

A Full Service Environmental Laboratory

August 24, 1995

Mr. Derek Meuse
Blasland Bouck Engineers P.C.
30 Corporate Woods Suite 160
Rochester, NY 14623

Re: Commercial Carriers
Submission #9508000203
SDG # 1CP1

Dear Mr. Meuse:

Enclosed is an analytical data report for the above referenced facility. A total of sixteen soil samples were received by our laboratory on August 11, 1995. Analytical data was provided to you per a Facsimile transmittal on 08/16/95.

Any problems encountered with this project are addressed in a case narrative section which is presented later in this report.

This report consists of two (2) packages: the sample data summary package and the sample data package. All data presented in these packages has been reviewed prior to report submission. If you should have any questions or concerns, please contact me at (716) 454-3760.

Thank you for your continued use of our services.

Sincerely,

A handwritten signature in cursive script, reading 'Janice M. Jaeger', with a checkmark at the end.

CASE NARRATIVE

COMPANY: Blasland Bouck Engineers, P.C.
Commercial Carriers
SUBMISSION #: 9508000203
SDG#: 1CP1

BBE soil samples were collected on 8/10/95 and received at GTC on 8/11/95 in good condition.

METALS ANALYSIS

Sixteen BBE soil sample was analyzed for Lead, Chromium and Barium using NYSDEC ASP 12/91 protocol after the TCLP extraction procedure 1311 from SW-846.

The CRDL's for TCLP analysis were used instead of the normal ASP CRDL's.

No analytical or QC problems were encountered.

A Full Service Environmental Laboratory

August 24, 1995

Mr. Derek Meuse
Blasland Bouck Engineers P.C.
30 Corporate Woods Suite 160
Rochester, NY 14623

Re: Commercial Carriers
Submission #9508000203
SDG # 1CP1

Dear Mr. Meuse:

Enclosed is an analytical data report for the above referenced facility. A total of sixteen soil samples were received by our laboratory on August 11, 1995. Analytical data was provided to you per a Facsimile transmittal on 08/16/95.

Any problems encountered with this project are addressed in a case narrative section which is presented later in this report.

This report consists of two (2) packages: the sample data summary package and the sample data package. All data presented in these packages has been reviewed prior to report submission. If you should have any questions or concerns, please contact me at (716) 454-3760.

Thank you for your continued use of our services.

Sincerely,

A handwritten signature in cursive script, reading 'Janice M. Jaeger', followed by a checkmark.

Janice M. Jaeger
Customer Service Representative

INORGANIC QUALIFIERS - 1991

C (Concentration) qualifier - Enter "B" if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but was greater than or equal to the Instrument Detection Limit (IDL). If the analyte was analyzed for, but not detected, a "U" must be entered.

Q qualifier - Specified entries and their meanings are as follows:

- E - The reported value is estimated because of the presence of interference.
- M - Duplicate injection precision not met.
- N - Spiked sample recovery not within control limits.
- S - The reported value was determined by the Method of Standard Additions (MSA).
- W - Post-digestion spike for Furnace AA Analysis is out of control limits (85-115%), while sample absorbance is less than 50% of spike absorbance.
- * - Duplicate analysis not within control limits.
- + - Correlation coefficient for the MSA is less than 0.995.

M (Method) qualifier - Enter:

- "P" for ICP
- "A" for Flame AA
- "F" for Furnace AA
- "PM" for ICP when Microwave Digestion is used
- "AM" for Flame AA when Microwave Digestion is used
- "FM" for Furnace M when Microwave Digestion is used
- "CV" for Manual Cold Vapor AA
- "AV" for Automated Cold Vapor AA
- "CA" for Spectrophotometric Midi-Distillation
- "AS" for Semi-Automated Spectrophotometric
- "C" for Spectrophotometric Manual
- "T" for Titrimetric
- " " where no data has been entered
- "NR" if the analyte is not required to be analyzed.

CASE NARRATIVE

COMPANY: Blasland Bouck Engineers, P.C.
Commercial Carriers
SUBMISSION #: 9508000203
SDG#: 1CP1

BBE soil samples were collected on 8/10/95 and received at GTC on 8/11/95 in good condition.

METALS ANALYSIS

Sixteen BBE soil sample was analyzed for Lead, Chromium and Barium using NYSDEC ASP 12/91 protocol after the TCLP extraction procedure 1311 from SW-846.

The CRDL's for TCLP analysis were used instead of the normal ASP CRDL's.

No analytical or QC problems were encountered.

Dear Mr. Walia:

This will confirm the meeting among NYSDEC, Commercial Carriers, Inc., Blasland Bouck & Lee and myself on August 30, 1995 at 1:30 p.m. at NYSDEC's Buffalo offices. The purpose of the meeting is to discuss the situation at CCI's Walden Avenue site.

Please feel free to call me if you have any questions or concerns.

Very truly yours,

Charles P. Cercone

Dear Gentlemen:

As a follow-up to Blasland, Bouck & Lee's (BB&L's) correspondence to you dated August 18, 1995, and for your review prior to our meeting tomorrow, please find enclosed a table and figure which summarize the analytical data recently obtained at the Commercial Carriers, Inc. facility in Cheektowaga, New York.

If you have any questions, please contact me at (716) 292-6740.

Very truly yours,

BLASLAND, BOUCK & LEE, INC.

Re: Delavan Industries, Site No. 915138

Dear Ms. Gallego:

As indicated at our meeting with Department representatives on September 16, 1992, Delavan Industries believes that the recently completed remediation effort along its western property line provides an adequate basis for the Department to remove the Delavan "site" (as defined in the consent Order and Registry listing) from the State Inactive Hazardous Waste Site Registry. However, Department personnel suggested at our meeting that additional sampling in an area at the rear of Delavan's Walden Avenue property would facilitate removal of the site from the Registry.

This work has been performed, and the enclosed report details the additional soil investigation and laboratory analysis for the unpaved portion at the rear of the Delavan property, as agreed upon in the September 16, 1992 meeting. Please review this report and call me at 215/431-8731.

We believe these results, together with the results of the confirmatory sampling performed during the remedial effort at the site and the presence of the clay layer underlying the property, demonstrate that the Delavan property poses no risk to human health or environment. Accordingly, we look forward to the Department's favorable action in delisting the site.

Sincerely,

Steven D. Glazier, P.E.
Project Manager

Re: Comments on the Ecology &
Environment (E & E) Work Plan
Commercial Carriers, Inc.- Mfg.
Cheektowaga, New York

File: 923-923.86 #2

Dear Mr. Ax:

As you requested, this correspondence presents Blasland, Bouck & Lee's (BBL's) comments on the "Proposed Work Plan for Sampling of the Delevan Site" (Ecology & Environment, Inc., November 2, 1995). The comments are as follows:

- The Work Plan should include a schedule for the overall field investigation program, and a discussion of the sequence of the investigation activities (e.g., Northern portion, Group A, B...);
- The Health and Safety Plan should be provided to Commercial Carriers, Inc.- Mfg.;
- Equipment decontamination procedures, the location of the decontamination pad, and the management of decontamination liquids and solids by Benderson should be described in the Work Plan;
- The Work Plan should be revised to state that Benderson will be responsible for subsurface utility clearance;
- The Work Plan should state that BBL will have the opportunity to collect split samples of all of the samples collected by E&E;
- Sample collection and chain-of-custody procedures should be described in the Work Plan;
- The QA/QC samples and their frequency (e.g., 1 in 20) should be described in the Work Plan;

Mr. David C. Ax
November 8, 1995
Page 2

- The Work Plan should state the New York State Department of Environmental Conservation (NYSDEC)-approved laboratory that will perform the analyses, and list the NYSDEC certifications held by the laboratory;
- The laboratory methods to be used for the analyses should be listed in the Work Plan;
- Please explain in the Work Plan the rationale for analyzing the Group D samples for the RCRA hazardous characteristics;
- Due to the anticipated shallow depth to clay at the site, consideration should be given to only driving split spoon samplers at the sampling locations (thus precluding the use of augers which generate more soil cuttings);
- The Work Plan should state that upon completion of each borehole (particularly those boreholes located in asphalt or concrete areas), the location will be restored to its original condition;
- The general depth of the hand auger holes, boreholes, and excavations in the north portion of the site should be presented in the Work Plan;
- For the Group B borings, the Work Plan should state whether grab or composite samples will be collected;
- For sample Groups C and D, the anticipated depth of the boreholes and how far the boreholes are to be advanced into the underlying clay should be stated in the Work Plan;
- At the plant floor coring locations, the Work Plan should be revised to clarify whether chips of the floor or soils underlying the floor will be sampled. If soil samples are to be collected, the Work Plan should state the depth that the samples will be collected. At each coring location, it is imperative that the floor be carefully restored to its original condition;
- The management by Benderson of excess soil/fill material, if any, generated during the sampling program which cannot be backfilled into the boreholes should be discussed in the Work Plan, and;
- The Work Plan should reference that all work will be performed in a manner which minimizes disruption of the operations conducted at the site.
