GREAT LAKES ENVIRONMENTAL & SAFETY CONSULTANTS

### *Introduction*

## 1.0 INTRODUCTION

### 1.1 General

This tank removal summary report has been prepared by Great Lakes Environmental & Safety Consultants, Inc. (Great Lakes) on behalf of Hodgson Russ LLP as outside counsel to Tonawanda Coke Corporation (TCC) in connection with its facility located at 3785 River Road in Tonawanda, New York (Figure 1 – Appendix A). This report documents the activities performed at TCC's facility including tank removal, material/equipment decontamination, excavation, and material management. The removal activities commenced on August 9, 2010 and the project was completed on May 31, 2012. All activities were conducted in accordance with the Consent Agreement and Final Order Docket No. RCRA-02-2012-7104, between the United States Environmental Protection Agency (USEPA) and TCC.

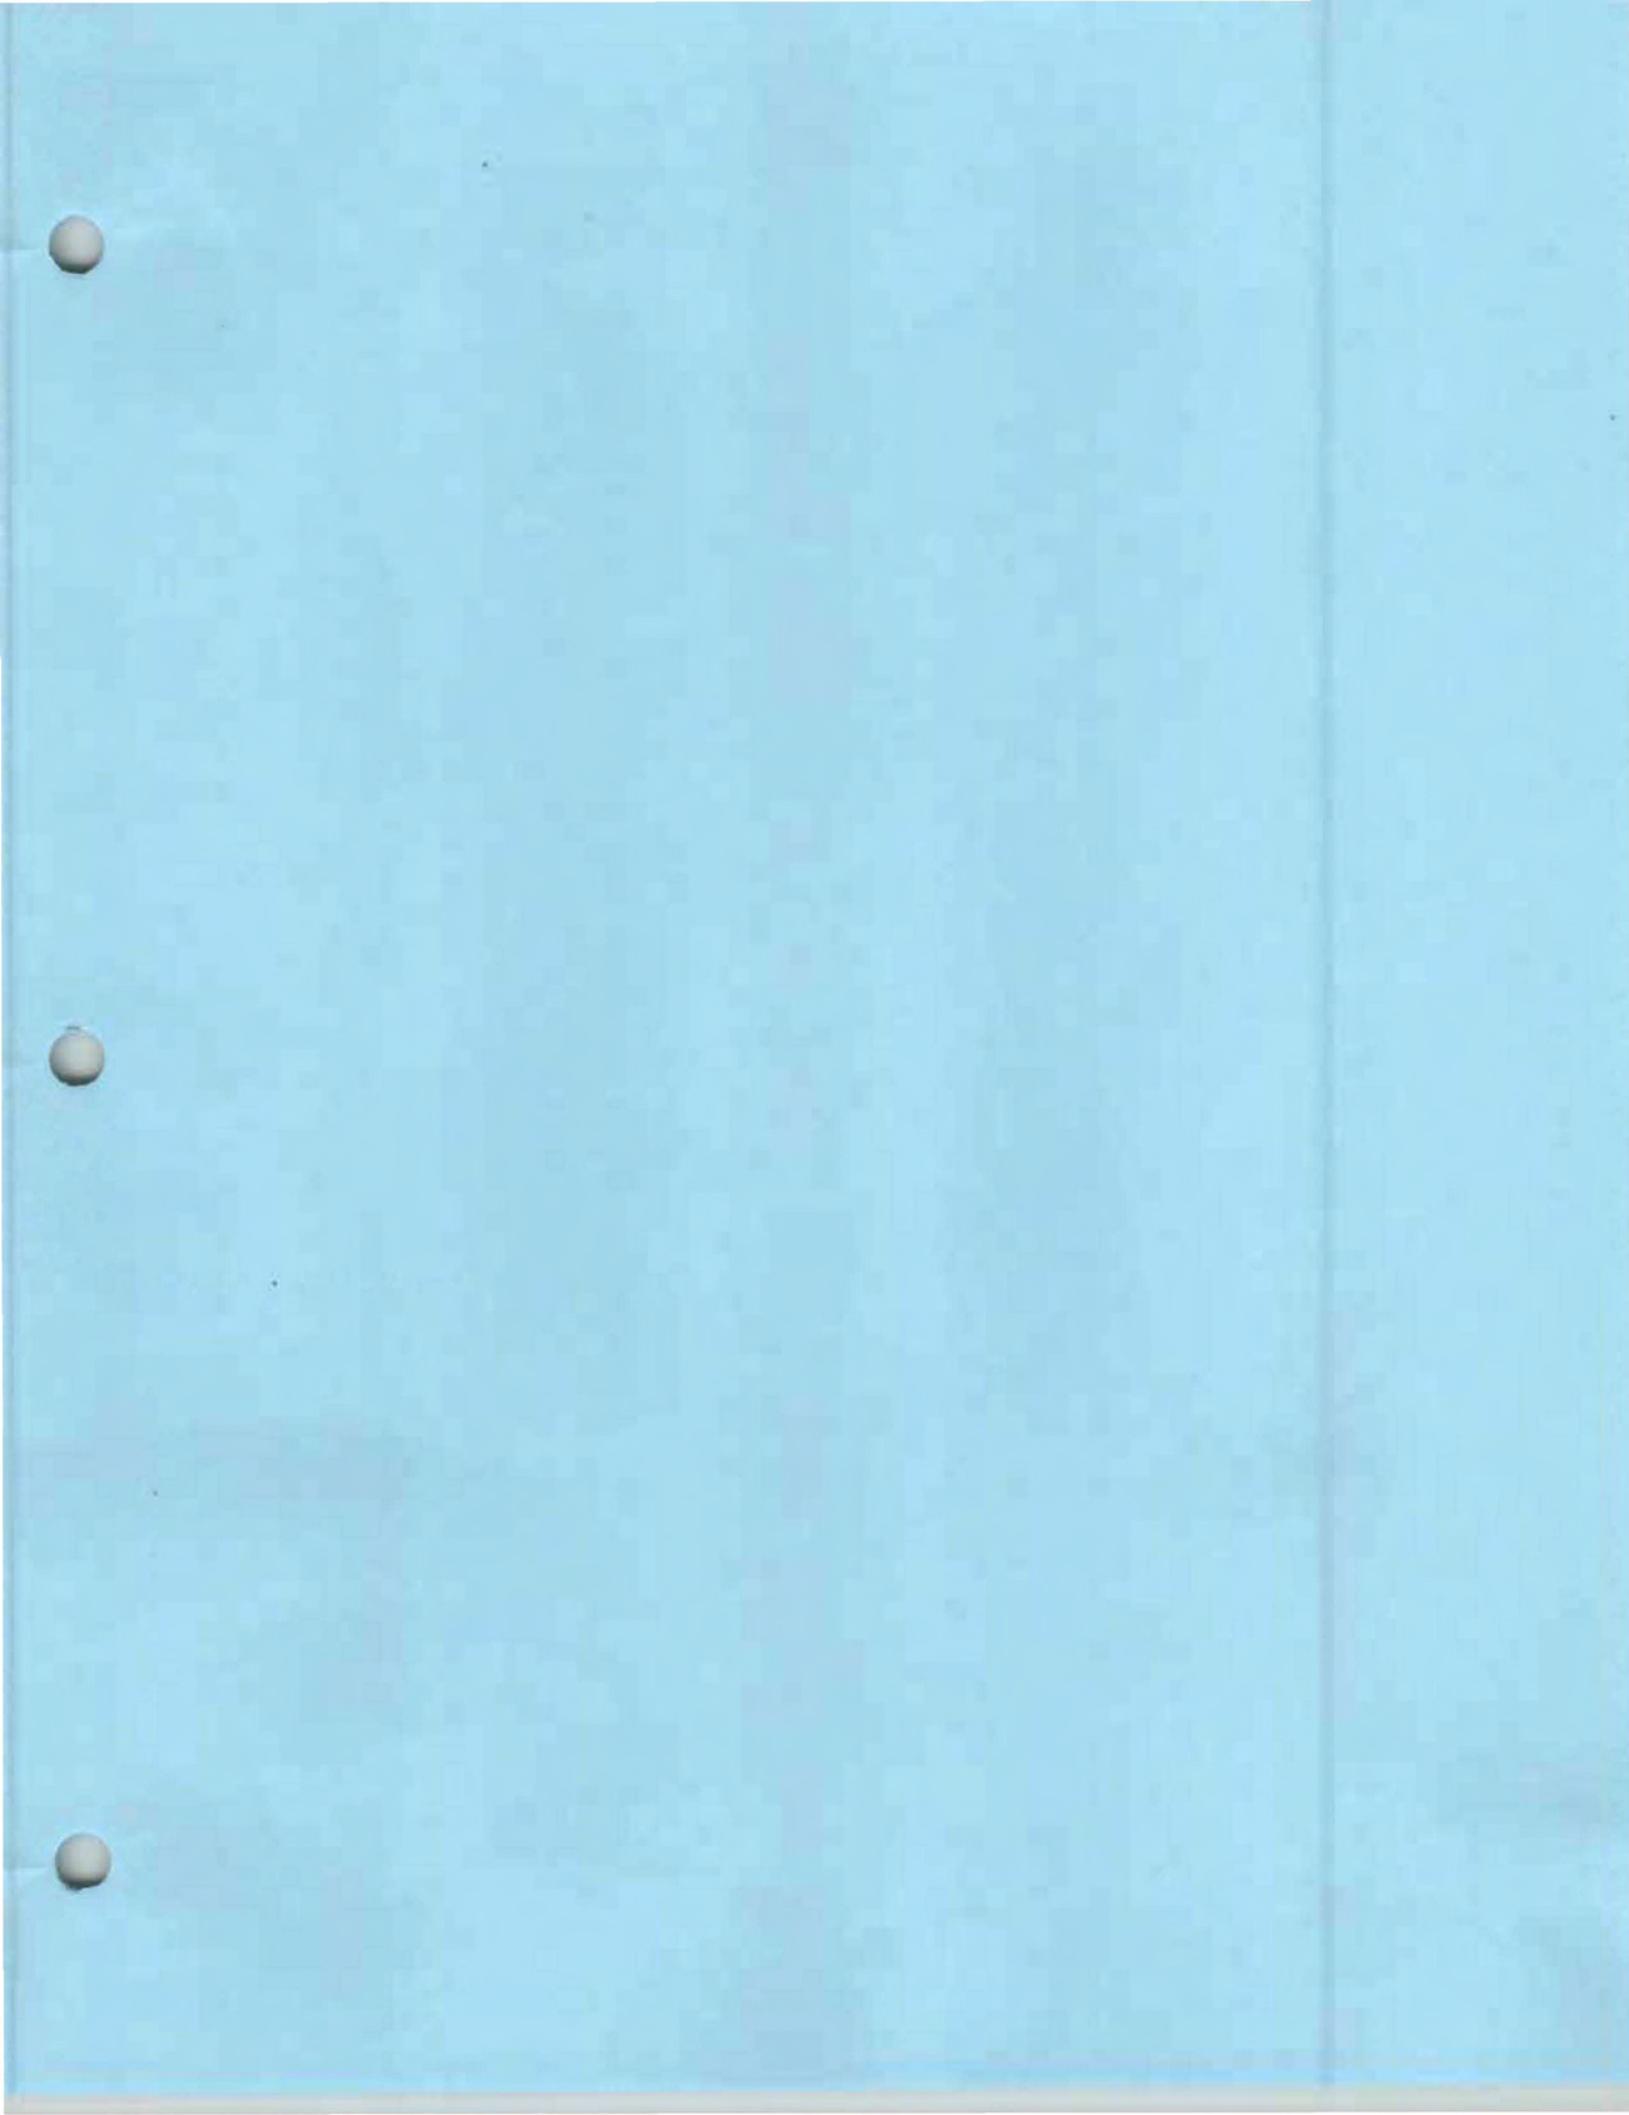

All work activities were conducted in accordance with the procedures presented in the approved project specific work plan which included the following:

1. Container Management
  - a. All containers used were labeled in accordance with 40 CFR 262.34(a)(2) and 40 CFR 262.34(a)(3).
  - b. All containers were inspected in accordance with 40 CFR 265.174.
2. Accumulation Time Limit (40 CFR 262.34)
  - a. Materials generated as part of the project that were not re-used or recycled were not accumulated (stored following characterizations) on-site for more than 90 days.
3. Contingency Plan (40 CFR 265 Subpart D)
  - a. To ensure compliance with 40 CFR 265, a contingency plan was developed and adhered to for the project. The contingency plan was designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water.
4. Personnel Training (40 CFR 265.16)
  - a. All personnel associated with this project successfully completed a program of classroom instruction or on-the-job training that instructed them to perform their duties in a way that ensures the facility's compliance with the requirements of 40 CFR 265.

## 1.2 Purpose and Organization of Report

This report presents the activities that were conducted to complete the tank removals and the remedial activities in the area of concern, and has been organized into the following sections:

- Section 1 – Introduction
- Section 2 – Tank Removal & Remediation Activities
- Section 3 – Material Management

PREPARED AT THE REQUEST  
OF LEGAL COUNSEL

## ***Section 2***

GREAT LAKES ENVIRONMENTAL & SAFETY CONSULTANTS

### ***Tank Removal & Remedial Activities***

## **2.0 TANK REMOVAL & REMEDIATION**

### **2.1 General**

This section presents a description of the tank removal and remediation activities that were performed as part of this project. This section summarizes activities performed including tank removal, material/equipment decontamination and excavation.

### **2.2 Mobilization & Site Control**

Prior to mobilization on-site, the project area was made secure from unhindered and unlimited access by unauthorized personnel. This was accomplished by the installation of barrier tape, rope, and fencing. All personnel on-site were documented in the project field logs. Only authorized vehicles were allowed in the project area.

Excavation equipment and materials (including loaders, excavators, dump trucks, etc.) required for project activities were mobilized and staged at the site in the vicinity of the project area. Additionally, a decontamination facility and material storage area was constructed prior to the start of project activities.

### **2.3 Storage Tank(s) Cleaning and Removal**

Prior to removal of the tank systems, all piping and ancillary equipment associated with the tanks were removed. Piping and ancillary equipment with the presence of contamination was wrapped in plastic and transported to the decontamination area for staging prior to appropriate off-site disposal. Any piping or ancillary equipment that could be successfully cleaned, was decontaminated and transported off-site for salvage.

Prior to removal of the tanks, the tanks were emptied of residual tar-like material. Materials removed from Tanks 3 and 4 were transported to the existing on-site mixing pad for reprocessing within the Tonawanda Coke system. Material from within Tanks 1 and 2 was heated to facilitate removal and pumped to an approved on-site rail tank car for direct feed into the facility coke process. All material was recycled under the approval of the New York State Department of Environmental Conservation (NYSDEC) and USEPA.

Following removal of the materials from within the tank systems, the tanks were disassembled (i.e., cut) into manageable size pieces and transported to the decontamination facility for appropriate cleaning and/or offsite disposal. Any tank section that could not be effectively cleaned, was staged in the material storage area for appropriate off-site disposal.

Following removal of the tank, the concrete tank foundations were broken up, placed in the material staging area, and transported off-site for appropriate disposal.

## 2.4 Excavation of Residual Tar-like Materials

Following removal of the tank systems as presented above, residual tar-like materials were excavated; this was originally planned for an area identified in the Work Plan that was approximately 1,000 cubic yards, and then was extended, at the request of NYSDEC and USEPA, to an area approximately 18,000 cubic yards.

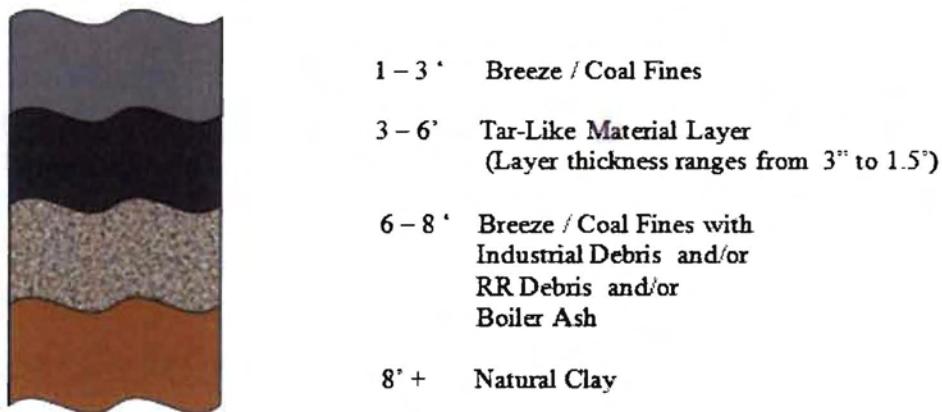

The depth and limits of excavation was determined in the field by a Great Lakes Environmental Professional and/or as directed by the NYSDEC on-site monitor. Confirmation of successful removal of the residual material was accomplished by visual examination and confirmation/approval by the NYSDEC on-site monitor. The areal extent of excavation activities is presented in Figure 2 (Appendix A).

Dedicated equipment was used for the excavation activities. The excavation and loading of excavated materials utilized “clean loading” procedures (i.e., controlled loading of the excavated material, minimized transport routes, etc.) to minimize contact/impact with other areas. These procedures ensured that the excavated materials were not spread to other areas including adjacent properties and roadways.

An excavator was used for the removal of residual tar-like materials from the project area. Excavated materials were loaded into a loader bucket for transport to the coal mixing pad for future re-use in the coke process. Prior to exiting the project area, the equipment wheels and undercarriage were inspected for the presence of coal tar. If necessary, the equipment was decontaminated to prevent the spreading of excavated materials to other areas of the site.

The typical site profile of the excavation area is presented below.

Typical Site Profile

## 2.5 Decontamination Procedures

As previously presented, an equipment/personnel decontamination facility was constructed at the site in the vicinity of the project area. The decontamination facility was used for the removal of residual materials from large equipment (i.e., excavator, loader) at the end of excavation activities upon leaving the project area. In addition, the facility was used to decontaminate materials (i.e., tank pieces, piping, etc.) prior to off-site management (i.e., salvage, re-use).

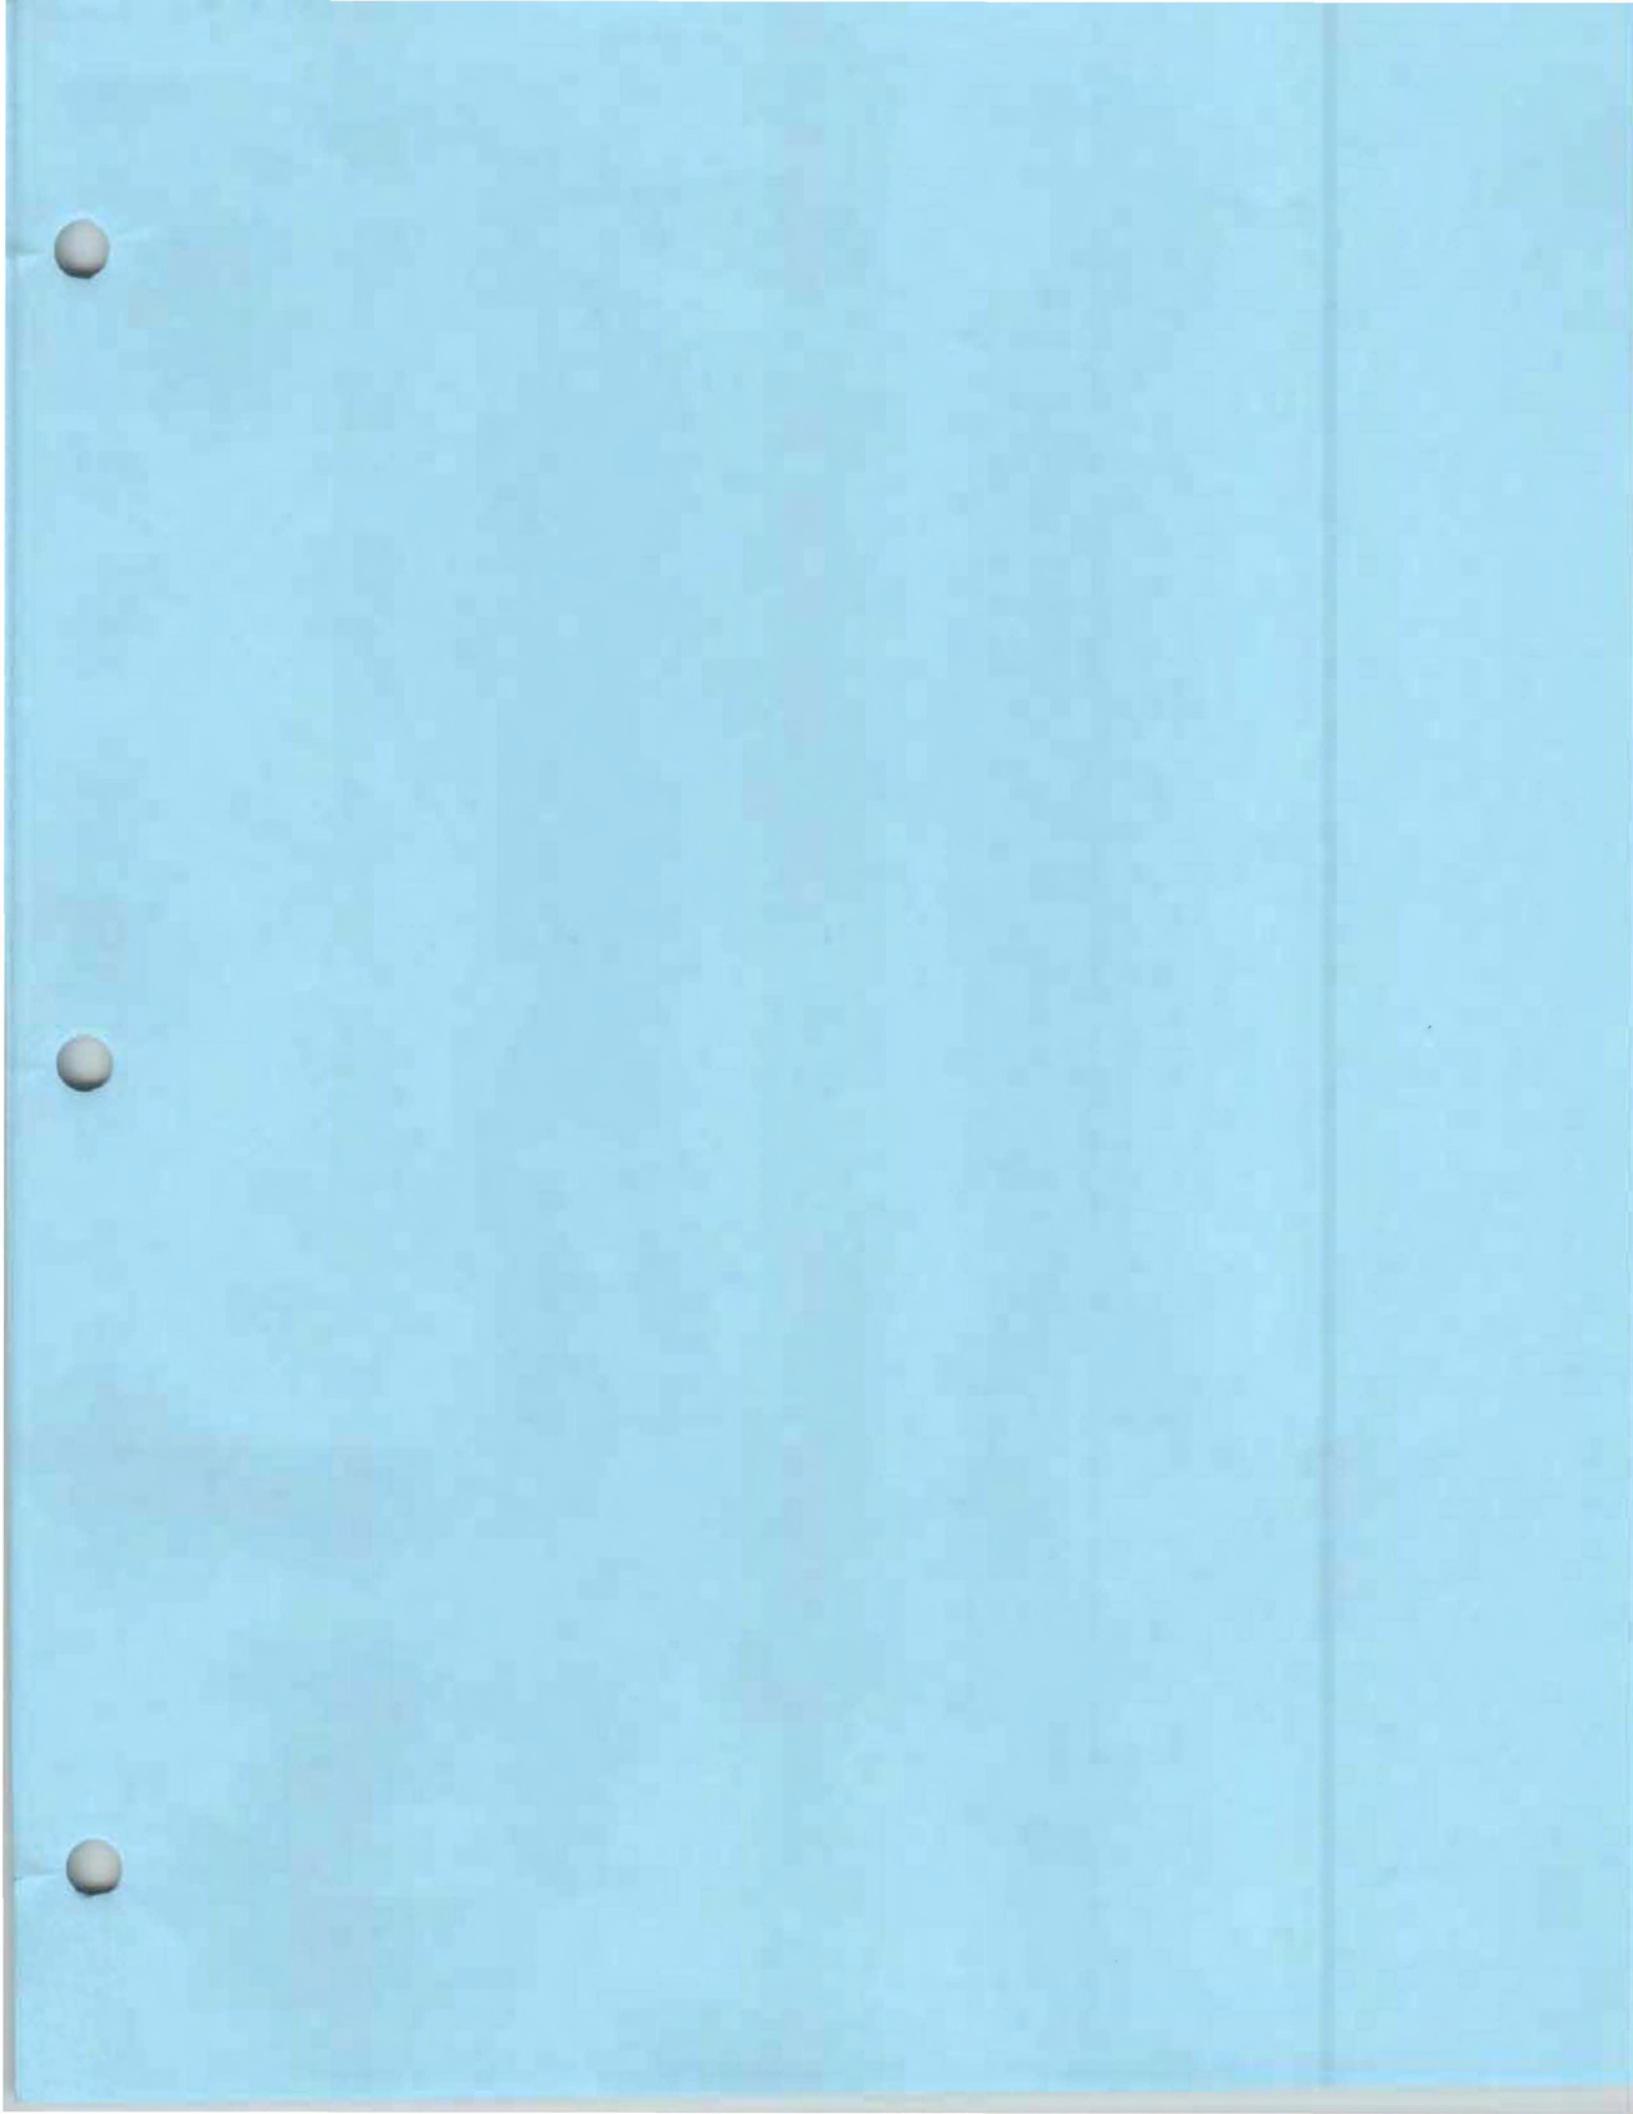

The decontamination facility was constructed of an impervious lined floor (i.e., HDPE liner) and walls (i.e., plywood walls covered with 6 mil. polyethylene sheeting) to provide appropriate secondary containment of generated materials and wash waters. The facility was equipped with a pressure washer, sump and storage containers for wastewater. Wash waters were collected in a sump area within the facility and transferred (i.e., pumped) to containers for appropriate characterization and off-site disposal.

## 2.7 Field Documentation

All project activities (i.e., tank cleaning, tank removal, residual material excavation, material staging, stock-piling and management, visual observations, waste disposal, etc.) were documented by a Great Lakes Environmental Professional in field logbooks. At a minimum, the following information was included in the field logbook:

- Project personnel;
- Date;
- Visual observations;
- Material management;
- Material/Waste Transported offsite;
- Issues/Concerns.

The field logbooks provide a detailed summary of the daily activities conducted as part of the project. Field log books are available for review upon request.

## *Section 3*

GREAT LAKES ENVIRONEMTAL & SAFETY CONSULTANTS

## *Material Management*

## 3.0 MATERIAL MANAGEMENT

### 3.1 General

This section summarizes the procedures used for the management of materials generated during the project. All generated materials were properly managed to minimize environmental impacts and to comply with all applicable federal, state and local laws and regulations. The specific methods utilized for the management of all materials was approved by NYSDEC and USEPA.

### 3.2 Tank Contents and Excavated Materials

All tank contents and excavated residual materials generated from this project and deemed suitable for re-use in the coke process were either transported directly to the coke process for re-use (Tank 1 and 2 contents) or transported to the coal mixing pad for stockpiling and re-use in the coke process. Any liquid (i.e., precipitation) removed from the excavation area to facilitate project activities was pumped into a vacuum truck for transport to the TCC wastewater treatment system for appropriate treatment prior to discharge to the local Town of Tonawanda sanitary sewer system. Approximately 113,177 gallons of excavation water was removed from the excavation (87,500 gallons were processed through the TCC wastewater treatment system and 25,677 gallons were transported off-site for disposal) as part of this project. In addition, approximately 18,242 cubic yards of excavated tar-like material was transported to the mixing pad for processing within the existing coke process.

Excavation activities concluded at the TCC facility during the month of February 2012. Recycling of all remaining tar-like material was complete as of May 31, 2012. Please see Appendix C for photographic evidence of the clean mixing pad at the TCC facility.

### 3.3 Materials Segregation

All materials (debris, soil, concrete, metal) other than the tank contents and excavated materials were transported to the material storage area for appropriate off-site management. In the material storage area, all generated materials were segregated based on its physical characteristics and anticipated final disposition (i.e., uncontaminated scrap, contaminated scrap, contaminated debris, etc.). All contaminated materials were immediately containerized if possible.

All material containers were managed in a manner to ensure compliance with 40 CFR Part 262 for off-site management of materials. This included marking containers in accordance with 40 CFR 262.34(a)(2) and 40CFR 262.34(a)(3). Materials generated as part of this project that were not re-used were accumulated and stored on-site for less than 90 days.

All containers were covered by the end of the work day, or covered immediately with waterproof tarpaulins if there was precipitation. Tarpaulins were secured by strapping to prevent tearing or removal by climatic conditions. Containers were inspected daily for integrity. When damage to container or tarpaulins were observed a replacement was ordered immediately.

### 3.4 Off-Site Material Management

All solid and liquid waste generated as part of this project (other than tank contents and excavated residual material) was transported off-site by an approved and permitted hauler, in accordance with the Department of Transportation (DOT) guidelines, as outlined in 49 CFR Parts 171 through 179, 6 NYCRR Part 364, and all other applicable state and local regulations. Each shipment of solid or liquid waste generated from this project was properly characterized, containerized and manifested prior to exiting the site.

A non-hazardous bill of landing or hazardous manifest was prepared and completed for each shipment of solid or liquid waste prior to exiting the site. The transporter possessed the signed non-hazardous bill of landing or hazardous manifest when transporting the waste material to the waste disposal facility. In addition, the transporter had the proper labels and placards on the waste containers when transporting the waste materials off site.

Any materials managed off-site as hazardous waste (i.e., EPA Waste Code K142 Material) was managed in compliance with the Land Disposal Restrictions found in 40 CFR Part 268. Specifically, the treatment facility verified that all residues from treatment of materials met all applicable treatment standards, as provided in 40 CFR 268.48 and 40 CFR 268.49, prior to land disposal. Any material shipped off-site was accompanied by documentation notifying the receiving facility of all applicable standards associated with the materials being managed as hazardous waste.

4,667,034 pounds of material (i.e., water, soil, metal, concrete, debris) was transported off-site for appropriate disposal as a hazardous waste (EPA Waste Code K142 Material) at one of two facilities: E.I. DuPont de Nemours & Company's Deepwater, NJ facility and the Michigan Disposal Waste Treatment Plant located in Belleville, MI.

Applicable documentation related to the off-site material management (i.e., disposal) is presented in Appendix B.

### TANK REMOVAL SUMMARY REPORT

TONAWANDA COKE CORPORATION  
3875 RIVER ROAD, TONAWANDA, NEW YORK 14150

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.
