EXPLANATION OF REPORT ELEMENTS

03/09/94

Agency Information Consultants, Inc.(AIC) is pleased to present the GRID RADIUS report that you have requested. In order to facilitate your use of this report, please review the following features:

SUMMARY OF FINDINGS: An overview of the information found for the area of review.

This includes a list of the requested databases and summary information such as: the requested radius or search method, the date the information was received from the agency, the actual search method, and the number of sites found segmented by distance from the subject site.

The 'Actual Search Method' identifies the way in which the data is provided. For example: 'County/HardCopy' means that the data is being provided for the entire county and is a copy of a printout acquired directly from the state or federal agency. 'Zip/City' means that all the data was provided for the selected zip code(s), and all records that have no zip code are provided for the city of the subject site. AIC searches the requested radius for any adjacent zip codes, cities, and/or counties.

GRID RADIUS: A computer generated report produced with the aid of coordinates assigned via Zip + 4 Centroids and GIS maps. AIC utilizes a fully automated search technique to produce this report.

Presented in the report are the facilities found within the requested radius. Each record found within the radii is presented in the Executive Summary and the detailed database reports.

EXECUTIVE SUMMARY(Facilities Geocoded Within The Radius): A list of all facilities found within the radius grouped by the radii requested.

This list is grouped by radii requested as well as street address and includes information such as: Facility name, address and zip code, facility identification number, type of facility, and a 'Flag' field. The 'Flag' field indicates the accuracy of the geocode as detailed below.

Four types of locational accuracy indicators will appear in this field:

- (1) When the facility address matches an address on the U.S. Census Bureau's TIGER Files, the 'Flag' field will be blank. These facilities are considered to be 'Geocoded by GIS'. Over 90% of these records will geocode within 200 feet of the correct location.
- (2) When the facility address does not match the TIGER Files, a secondary level of geocoding at a lower accuracy is conducted. These records will have a 'Z' in the 'Flag' field and are considered to be 'Geocoded by Zip + 4 Centroid'. Over eighty percent of the records geocoded by Zip + 4 Centroid will be mapped within 750 feet of the actual location by latitude and longitude.
- (3) When AIC has previously verified the facility location through map and/or phone research, the record will have a 'V' in the 'Flag' field. AIC has used various resources to determine the correct physical location based on the facility's name and address. Ninety-eight percent of these records will be placed within a block of their actual physical location.
- (4) Those facilities whose physical location could not be determined through AIC's previous map and phone research. These facilities are designated with a '?' in the 'MAP ID' field.

EXPLANATION OF REPORT ELEMENTS

03/09/94

APPENDIX: In the Appendix, each record is sorted alphabetically by the street name and number.

The street sort enables our clients to quickly find all the facilities located on a single street. The Appendix is a source for quickly identifying those facilities near the subject site that cannot be located via automated geocoding methods.

Two types of facilities will be presented on this list for the requested zip code(s) or city(s):

- (1) Those facilities that could not be located or mapped using GIS or Zip+4 Centroid geocoding methods will have a blank in the 'Flag' field.
- (2) Those facilities that geocoded by Zip+4 Centroid that were plotted outside of the specified radius based on an accuracy of 750 feet for eighty percent of the records. These records will have a 'Z' in the 'Flag' field.

TIPS: Both of these types of facilities should be reviewed to determine if any of the addresses are near the subject site. The records with a 'Z' in the 'Flag' field are provided because they geocoded by Zip+4 Centroid outside of the selected radius but may actually be located within the radius based on the inaccuracy inherent in the Zip+4 Centroid. The records with a blank in the 'Flag' field did not geocode because the address didn't match the GIS map or the Zip+4 Centroid and therefore may be located within the selected radius.

When the Zip Code column contains letters instead of a zip code, the letters represent the first five letters of the city or county name and designate that the record does not have a zip code. AIC provides this information to reduce the possibility of omitting facilities with zip codes that are: Blank, 99999, or 00000.

AIC provides the Appendix to further protect our clients' liability. This enables clients to:

- (1) Locate non-geocoded facilities that may have the potential to affect the subject site.
- (2) Locate facilities, that geocoded outside the radius based on Zip+4 Centroid, that may have the ability to negatively affect the subject site.
- (3) Provide proof of due diligence. AIC has provided all reasonably available information that has the potential to impact the subject site.

DETAILED DATABASE REPORTS: Various reports detailing database information on each of the facilities found.

Each report is preceded by a cover sheet which includes a description of the database as well as citation information such as: Agency, Subdivision of the Agency, AIC's standard name for the database, and the Agency's name for the database in quotes.

When the message "No Facilities Geocoded Within the Radius" appears at the bottom of the cover sheet, it means that no facilities automatically geocoded for the requested radius or search method. Following the cover sheet are the Report Element Dictionaries which describe each field of information provided in the database reports.

Should you need assistance interpreting your report, please do not hesitate to contact AIC's Customer Service Department or your Account Manager at (512) 478-8991.

DISCLAIMER

03/09/94

Scope. The following conditions apply to the services that Agency Information Consultants(AIC) provide to a purchaser. By placing an order with AIC, the purchaser agrees to the following:

AIC Services. AIC provides reports from various state and federal files and records regarding real property and facilities. AIC will utilize its resources, consistent with the level of care expected in standard business practice, to provide quality information services, to consistently maintain and update its databases and to deliver reports in a timely manner. AIC, however, is not responsible for any delays, inaccuracies, costs or damages due to software or equipment malfunction, errors, or incorrect data received from the original source.

Limitation of Liability. The liability, if any, of AIC for direct damages, whether arising from AIC's negligence, strict liability or other tort, or otherwise with respect to services, or other items, is limited to an amount which shall not exceed the price of the particular services or items giving rise to the liability. In no event shall AIC be liable for any incidental, consequential, or special damages, including without limitation, lost revenue or lost profits, even if AIC has been advised of the possibility that lost revenues or lost profits may occur.

Limitations and Acknowledgements. The purchaser should be aware that government information sources and/or AIC may not include information on all environmental hazards, or on all sites which include environmental hazards, and that government sources may be inaccurate or incomplete. These government sources include both the base map and the environmental databases. AIC researches and corrects both sources listed above in order to provide an improved product but in so doing, AIC is not liable for any errors, omissions, or damages incurred. Purchaser also recognizes that AIC's services are not a substitute for a thorough environmental risk audit performed by a qualified environmental professional.

All data obtained from AIC shall be furnished for the exclusive use of the original purchaser in investigating the subject company and/or property as identified in the inquiry or order form. Purchaser may deliver an AIC report to an additional user who is identified as a client of the purchaser it being agreed, however, that:

- (i) Only the complete AIC report may be so delivered to the additional user;
- (ii) The use of said AIC report by the additional user shall constitute this purchaser's agreement to all conditions contained herein;
- (iii) Every copy of an AIC report shall contain notice of AIC's copyright as follows:
(c) Copyright Agency Information Consultants, Inc. 1992. All Rights Reserved; and
- (iv) Every copy of an AIC report shall include the Disclaimer of Warranty and Limitation of Liability statements printed or transmitted with the original report. Any other resale, publication, copying or use for other than assessing environmental risks is strictly prohibited without prior written consent of AIC.
- (v) All copyright rights are reserved to AIC.
- (vi) The use of the AIC report and the information contained within is restricted to a one-time use for the project specified on the order form; any unauthorized secondary use is strictly prohibited without prior written consent of AIC.

GRID RADIUS

Production of this report utilizes a fully automated search technique. AIC does not conduct map or phone research to locate those facilities which cannot be located using either of the following geocoding techniques:

- (1) **GIS Geocoding** - The digital base maps used by the GIS software were created by the U.S. Census Bureau and are known as the TIGER/Line Files (Topologically Integrated Geographic Encoding and Referencing system). The address ranges plotted by the Census Bureau have not been site verified or physically inspected. Unavoidable inaccuracies may result in addresses being placed one or several blocks from their actual physical location.
- (2) **Zip + 4 Centroid** - This system of geocoding yields higher total geocoding rates with a lower accuracy. Eighty percent of the records geocoded by this method are placed within 750 feet of their actual location by latitude and longitude. The remaining twenty percent can be up to 5300 feet from their actual location.

The accuracy of the resulting plots depends on the quality of information derived from our sources. Therefore, AIC cannot re-plot sites after a corrected location is determined by our clients' actual site visits.

U.S. ENVIRONMENTAL PROTECTION AGENCY

CERCLIS Facilities

The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) is a compilation of records regarding those facilities which the EPA has identified as having actual or suspected uncontrolled releases of hazardous substances, contaminants, or pollutants as reported by states, municipalities, private companies, and private citizens. Each incident undergoes a series of events that determine the severity of the contamination from discovery and preliminary assessment to site inspection and possibly the hazard ranking system which will determine whether or not the site will be considered for inclusion on the NPL (National Priorities List).

CERCLIS

REPORT ELEMENT DICTIONARY

NOTE: Blank fields may be interpreted in three different ways.

1. No information is available
2. The field has no application to the particular site
3. No definite attribute has been determined to date

DESCRIPTION

A **textual** description of the site or incident characteristics not captured in other data elements.

PHYSICAL CLASSIFICATION

Also known as the site incident category. The overall physical classification of the site or incident.

' '	= Blank	'L'	= Landfill
'A'	= Abandoned	'M'	= Manufacturing Plant
'B'	= Chemical Plant	'N'	= Military Related
'C'	= City Contamination	'O'	= Other
'D'	= Dioxin	'P'	= Pure Lagoons
'F'	= Federal Facility	'R'	= Radioactive Site
'G'	= Groundwater	'T'	= Mines/Tailings
'H'	= Housing Area/Farm	'V'	= Waterways/Creeks/Rivers
'I'	= Industrial Waste Treatment	'W'	= Wells
'J'	= Inorganic Waste		

FEDERAL FACILITY DOCKET INDICATOR

A **flag** that indicates whether or not the facility is one of the 836 sites that were contained on the original "Federal Facilities Hazardous Waste Compliance Docket".

T	=	This facility is on the Federal Facilities Docket
F	=	This facility is not on the Federal Facilities Docket

This field used to be called the "Further Action Flag", but has been changed by the EPA since the information would show that there was no further action at the facility when this had not been determined yet, it was just inactive. This was confusing and misleading causing incorrect decisions to be made.

NATIONAL PRIORITIES LIST INDICATOR

Code which categorizes a site's NPL status for statistical analysis and reporting purposes.

' '	= Blank	'D'	= Deleted from the final NPL.
'F'	= Currently on the Final NPL.	'N'	= Not on the NPL.
'O'	= Not a valid site or incident.	'P'	= Proposed from proposed NPL.
'R'	= Removed from the proposed NPL.		
'S'	= Pre-proposal site(has scap plan remedial activities).		

INCIDENT TYPE

The classification of an incident (not previously identified as a CERCLIS site) requiring a removal action as either an oil spill or non-oil spill.

CERCLIS

REPORT ELEMENT DICTIONARY

RCRA FACILITY FLAG

Designates whether a site or incident is associated with a RCRA facility.

- Y = Yes this is a RCRA facility as well as a CERCLIS facility.
E = This facility is undergoing an assessment through the Environmental Priority Initiative. This process is for closing or closed facilities that require an assessment under RCRA regulations but to be funded under Superfund.

EVENT TYPE

A code for a specific response, non-response, or support event within the pre-remedial, remedial, removal, or community relations components of the Superfund program.

- DS The process by which a potential hazardous waste site is brought to the attention of the EPA. The process can occur through the use of several mechanisms such as a phone call or referral by another government agency. Date the region is notified of a potential hazardous waste release/site.
- PA The process of collecting and documenting diverse existing information about the source and nature of the site hazard.
- SI The process of collecting site data and samples to characterize the severity of the hazard for the hazard ranking score and/or enforcement support.
- IR An emergency response required within hours or days to address acute situations involving actual or potential significant threat to human health, the environment, or real or personal property due to the release or potential release of a hazardous substance. Characterization of a removal as 'immediate' was discontinued at the end of FY86.
- RV Response action that requires expeditious attention to reduce imminent and substantial dangers to human health, welfare, or the environment or an emergency response required within hours or days to address acute situations involving actual or potential threat to human health, the environment, or real or personal property due to the release of a hazardous substance. Characterization of a removal action as 'removal', not 'immediate' or 'planned', started at the beginning of FY87.
- HR A numeric estimate of the relative severity of a hazardous substance release or potential release based on: (1) The relative potential of substances to cause hazardous situations; (2) The likelihood and rate at which the substances may affect human and environment and environmental receptors; and (3) The severity and magnitude of potential effects. The score is computed using the hazard ranking system.
- ES Functions performed to collect additional data, beyond that required for hazard ranking system scoring, in order to expedite the RI/FS project planning phase for NPL sites. The present site inspection focus on pathways and receptors has been expanded to include site and source characterization. The information facilitates the development of RI/FS workplan and sampling and analysis plan.

STATUS

Indication of the resulting action priority level arising from an event.

- NFA No further remedial action planned.

Hazardous Waste Disposed (confirmed): 1) Coal Tar, Fly Ash And Cinders (4680 Tons/year); 2) Scrap

Chlorinated And Non-chlorinated Polyethylene (25 To 50 Tons/year)

Estimated Size: 1 < Acres

Owner(s) During Use...: Allied Chemical - Somet Solvay Div.

Period Associated With Hazardous Waste: From 1930 To 1978

Site Description:

Site Was Jointly Used By Allied Chemical - Spec. Chem. Div. And Tonawanda Coke Corporation (formerly Known As Somet Solvay). Tonawanda Coke Disposed Of Coal Tar, Fly Ash And Cinders. Waste From Allied Chemical Consisted Of Scrap Chlorinated Polyethylene, Scrap Polyethylene And Used Ceramic Saddle Packing. An Investigation Of The Site Was Conducted By U.s.g.s. In July Of 1982 And It Was Resampled In May Of 1983. Samples Were Analyzed For Cyanide, Iron And The Organics. Eight Priority Pollutant Organics Were Found At Levels Below 100 Ppb. A Phase II Investigation Of This Site Has Been Scheduled.

Soil Type: Clay With Some Sand

Groundwater Depth: 16.50 Feet

Assessment Of Environmental Problems:

Both Groundwater And Surface Water Samples Are In Contravention Of Standards For Iron. Groundwater Exceeded The Standards For Cyanide. Further Investigation Of This Site Is Necessary.

Source Database: INACTIVE HAZARDOUS WASTE DISPOSAL SITES REGISTRY

Owner Name: Allied Chemical-fibers And Plastics

City, State, Zip: Hopewell, VA

Address: Po Box 831

Contact Phone:

Contaminants:

Contaminated Media: GROUNDWATER, SURFACE WATER

Source of Contamination:

Hazardous Waste Disposed (suspected): 1) Scrap Chlorinated Polyethylene, Scrap (unknown); 2) Polyethylene, Spent Catalyst (magnesium Chroma And Dichromate Impregnated On Potassium Aluminum Silicate). (te)

Estimated Size: 1 Acres

Owner(s) During Use...: Allied Chemical - Spec. Chem. Div.

Operator During Use...: Allied Chemical Spec. Chemical Div.

Operator Address.....: P.O. Box 88, Tonawanda, Ny

Period Associated With Hazardous Waste: From 1958 To 1962

Site Description:

Spent Catalyst Containing Chromium Compounds, Polyethylene, And Chlorinated Polyethylene Were Disposed In A Pit On Site. This Site Was Sampled By The U.S.g.s In July Of 1982 And In May Of 1983 Under The Niagara River Toxics Investigation. Chromium And Lead Exceeded Concentrations In Samples Taken From Undisturbed Soils In The Tonawanda Area. 21 Organic Priority Pollutants Were Detected In The Soil Samples. All Concentrations Were Below 10 Ppb. A Phase I Investigation Was Completed In 1983. An Investigation Was Carried Out At The End Of 1988 (report Finalized In 1990). Soil Samples Were Taken Inside The Pit Which Showed High Levels Of Chromium And Elevated Levels Of Lead. Also, Sediment From An On-site Catch Basin Showed Elevated Metals Concentra- Tions. Off-site Sewer Samples Showed No Migration From This Source. Both The Blow-down Pit And The Catch Basin Were Remediated In 1991. Investigation Is On-going To Determine The Source Of Organics Causing Contamination Of The Upgradient Monitoring Wells. Sampling And Analysis Of Five Monitoring Wells On-site Over A One Year Period Has Been Completed. Groundwater Standards Have Been Exceeded For Cyanide, Benzene, Ethylbenzene, Toluene, Xylene, And Numerous Pah Compounds. Additional Investigation Is Needed To Determine The Source Of Contamination.

Soil Type: Fill Overlying Silty Clay

Groundwater Depth: 6 Feet

Assessment Of Environmental Problems:

An Investigation Was Carried Out As Detailed In The 1990 Report. A Source Area Was Identified And Removed. Determination On The Source Of Upgradient Contamination Has Not Yet Been Made.

Assessment Of Health Problems:

The Most Likely Route Of Exposure Is Direct Contact With Contaminated Soil Or Exposed Waste Materials. Access To The Site Is Secured By A Fence. The Area Is Served By Public Water.

Hazardous Waste Disposed (confirmed): 1) Coal Tar (unknown)

Estimated Size: 1 < Acres

Owner(s) During Use...: Allied Chemical - Spec. Chem. Div.

Period Associated With Hazardous Waste: From 1950 To 1960 +

Site Description:

Site Consisted Of Coal Tar Pools Produced From Spillage During Transfer Operations At The Site. In Summer Of 1981, The Site Was Excavated And Coal Tars And Contaminated Soils Were Removed. Waste Material Was Incinerated In Tonawanda Coke Facility (used In Coal Tar Ovens). Phase I Was Conducted From 5/83 Until 9/83. Doh Inspection Was Conducted In 6/85.

Soil Type: Clay

Groundwater Depth: Unknown

Assessment Of Environmental Problems:

Analysis Of The Soil Samples Collected From The Site Does Not Indicate Presence Of Organic Residues In Significant Quantities. Site Has Been Properly Remediated.

Contaminants:

Contaminated Media:

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Uranium Ore Tailings (.54 Percent Uranium) (8,000 Tons.)

Estimated Size: 10 Acres

Period Associated With Hazardous Waste: From 1944 To 1948

Site Description:

This Site, Also Known As The "haist Property," Received Low Level Radioactive Material Produced During 1944-48. About 8,000 Tons Were Spread Over The Site. In 1979, Possibly 30-40% Of The Residue Was Removed And Taken To The Adjacent Seaway Industrial Park. An E.r.d.a. Survey In 1976 Indicated Low Levels Of Radiation In Soils Due To Past Storage Of Uranium Ore Tailings. E.r.d.a. Indicated That The Site In Its Present Setting Poses No Hazard. D.o.e. Estimated That 48,000 Cubic Yards Of Soil May Require Further Disposal, However. In June 1981, Erie County D.e.p. Sampled Surface Drainage Downstream Of The Site. Samples Were Analyzed For Metals, Organic Parameters And Radiation.

Soil Type: Silty Clay

Groundwater Depth: Unknown

Assessment Of Environmental Problems:

The Erda Investigation Found Low Level Radiation Leaving The Site In The Drainage Flow. The Dep Sampling Confirmed This Finding. No Imminent Hazard To The Environment, But Further Assessment May Be Necessary.

Superfund Report

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Pit Sludge (unknown); 2) Cutting Oils (unknown); 3) Grinding Waste (unknown); 4) Pcb's (unknown)

Estimated Size: 55 Acres

Owner(s) During Use...: Colorado Fuel And Iron

Operator During Use...: Ins Equipment

Operator Address...: River Road, Tonawanda, Ny

Period Associated With Hazardous Waste: From 1960's To 1978

Site Description:

The Site Is Located North Of The Former Wickwire Steel Plant Between The Niagara River And River Rd. In Tonawanda. In August Of 1982, 10 Subsurface Soil Samples Were Collected By U.s.g.s. And Samples Were Analyzed For Cd, Cr, Fe, Pb, And Organic Compounds Using A Gc/ms Acid-base Neutral Scan. Aerial Photographs Indicate That The Site Was In Operation During The 1960's And 1970's. Concentrations Of Cd, Cr, And Pb Exceed The Concentrations Of Samples Taken From Undisturbed Soils In The Tonawanda Area. 19 Organic Priority Pollutants Were Found, Most Of Them Above 10 Ppm. A Phase I Investigation Was Completed In September Of 1983. A Phase II Investigation Was Completed In 1987. A Supplemental Phase II Investigation Was Performed In Late 1988. A Remedial Investigation/feasibility Study (ri/fs) Under The State Superfund Program Was Initiated In November, 1991, And Field Work Was Completed In December, 1992.

Soil Type: Urban Soil Non-homogeneous

Groundwater Depth: 15-20 Ft. Below Surface

Assessment Of Environmental Problems:

Concentrations Of Heavy Metals Were Found In Excess Of Background Levels. Soil Samples Indicated The Presence Of Organics In The Soil.

Assessment Of Health Problems:

The Site Was Used To Landfill Foundry Sand, Sludge And Cutting Oils. The Remedial Investigation Documented The Presence Of Heavy Metals And Organic Chemicals Including Benzene, Toluene, Xylene In On-site Soils. The Most Likely Route Of Exposure Is Direct Contact With Contaminated Soil. The Site Is Unfenced But Access Is Limited Since The Site Is Located Along The Niagara River In An Industrial Part Of The Town Of Tonawanda. Although Groundwater Contamination Has Been Reported The Area Is Served By A Public Water Supply System. Since The Niagara River Is Used For Drinking Water Supplies, Recreation And Also Supports A Variety Of Aquatic Wildlife A Concern Exists Over The Potential Migration Of These Contaminants Into The Adjacent Niagara River. Further Investigation Is Needed For A Full Health Assessment To Be Completed.

Contaminants:
Contaminated Media: GROUNDWATER, SURFACE WATER
Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Phenol (3000 Lbs.); 2) Xylene (7900 Gals.); 3) Solvent Mixture Including Xylene, Toluene, Mib (k 1500 Gals.); 4) Isobutylene (unknown); 5) Aroclor-1260 (unknown)

Estimated Size: 6.7 Acres

Owner(s) During Use...: Polymer Applications

Operator During Use...: Polymer Applications

Operator Address.....: 3445 River Rd., Tonawanda, Ny

Period Associated With Hazardous Waste: From Unknown To Present

Site Description:

The Site Has Been Used For The Storage Of Solvents, Phenols, Resin Sludges And Other Toxic Chemicals. The Wastes Have Been And Are Still Being Stored In Drums, And Previously In An Underground Tank. 500 Drums Were Removed By 1982 For Off-site Disposal. A Dec Order On Consent Executed In June 1981 Indicates That Phenol Was Leaching From The Site Into The Niagara River And Possibly Into The Groundwater. Polymer Applications Completed The Construction Necessary To Reduce Releases To The Niagara River. A Disasterous Fire On July 4-5, 1988 Created The Potential For Extensive Contamination. The Fire Caused Spillage Of Raw Organic Chemicals From Above Ground Tanks. The Spillage Caused Groundwater And Surface Water Contamination. Contravention Of Groundwater Standards By Aroclor-1260: 6.9 Ppb, Total Xylenes: 4300 Ppb, Phenol: 290,000 Ppb, And Methylene Chloride: 38,000 Ppb Surface Water Standards Contravened By Methylene Chloride: 21,000 Ppb, Aroclor-1260: 1500 Ppb, Total Xylenes: 48,000 Ppb, Ethylbenzene: 5400 Ppb And Phenol: 120,000 Ppb. A Phase II Investigation Report Completed In 1991 Recommended An Remedial Investigation / Feasibility Study (ri/fs). A Referral For A State Funded Ri/fs Was Received From The Division Of Environmental Enforcement (dee) On 3/29/93.

Soil Type: Sandy Fill Over Clay And Silt

Groundwater Depth: 4 Feet

Assessment Of Environmental Problems:

Leaching Of Phenol From This Site To The Niagara River And Possibly To Groundwater Was The Main Environmental Problem. Groundwater Contamination From The July, 1988 Fire Has Been Confirmed. Continued Monitoring Of The Initial Remediation Of This Site Should Be Assessed To Determine Its Effectiveness.

Assessment Of Health Problems:

The Most Significant Routes Of Exposure Include Inhalation Of Contaminated Dust And Vapors, And Direct Contact With Phenol Laden Soil And Contaminated Surface Water. Target Populations Are Users

Of The Adjacent Buildings. The Area Is Supplied With Public Water. Private Industrial Wells Are
Prevalent In The Area, But The Water Is Not Used For Drinking.

Contaminants:

Contaminated Media: GROUNDWATER

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Coal Tar Wastes including Pah's, (unknown); 2) Organic Solvents (""); 3) Cyanide (""); 4) Heavy Metals (""); 5) Phenols (""); 6) Benzene ("")

Estimated Size: 160 Acres

Owner(s) During Use....: Allied Chemical Corporation

Operator During Use....: Allied Chemical-emet Solvay Div.

Operator Address.....: Solvay, Ny

Period Associated With Hazardous Waste: From 1930 To 1979

Site Description:

This Site Consists Of The Entire Tonawanda Coke Plant Area. Three Landfills On The Site Were Used For General Landfilling With Flyash Cinders And Coal Tar Sludges (site 108), Bricks, Rubble, Sand, Demolition Material (site 109), And Wood Shavings Impregnated With Iron Oxide And Coal Tar Sludges (site 110). During 1981, Dec Collected Sediment And Surface Water Samples From The Tonawanda Coke Drainage Basin. Pah's Were Detected In Both The Sediment And Water Samples. In 1982 And 1983, The Ugs Collected Soil, Groundwater, And Surface Water Samples From This Site. Groundwater Exceeded Standards For Iron And Cyanide With The Effluent Standard Exceeded For Lead, Iron, And Chromium In Surface Water. Organic Priority Pollutants Were Detected At All Three Land- Filled Areas, Most Of Which Were Below 100 Ppb. A Phase II Investigation Has Been Completed By The Responsible Party. This Investigation Indicates Contamination Of Groundwater With Cyanide, Phenols, Benzene, Benzo(a)pyrene, And Other Organics. Groundwater Standards Were Exceeded For Cyanide And Phenols. Guidance Values For Several Organics Were Exceeded. Negative Impacts On An Adjacent Wetland Were Indicated By Contamination With Benzene, Phenol, Napthalene, And Benzo(a)pyrene. Analytical Results From Other Locations Indicate The Presence Of Widespread Contamination On The Site And The Necessity Of An Expanded Remedial Investigation / Feasibility Study (ri/fs). A Supplemental Site Investigation By The Prp Revealed The Presence Of Contamination By Several Organics Including Cyanide, Benzene, 1,1,1-trichloro- Ethane, Ethylbenzene, Toluene, Xylenes, And Pah Compounds In Soil, Sediment, Groundwater And Surface Water. In 1992 The Prp Submitted A Report Describing Investigation Completed During 1991 And 1992. Analytical Results Are Consistent With Previous Investigations.

Soil Type: Fill Overlaying Silty Clay

Groundwater Depth: 2-3 Feet.

Assessment Of Environmental Problems:

Contamination Of Soils, Sediment, Surface Water And Groundwater Have Been Documented At This Site.

This Contamination May Be Affecting The Adjacent Niagara River. Investigation Into The Extent Of Contamination Across This Entire Site Is Needed.

Assessment Of Health Problems:

The Site Was Used As A General Landfill For The Disposal Of Tar Sludge, Fly Ash, Cinders, Demolition Debris, Iron Oxide And Chlorinated Polyethylene Scrap From The Allied Chemical Site Id 915003. Sampling Of On-site Monitoring Wells Has Shown Groundwater Contamination In Excess Of The Nys Groundwater Standards. The Groundwater From This Site Discharges Into The Niagara River And Is One Of Many Hazardous Waste Registry Sites Contributing To The Contamination Of The River Sediments. Direct Contact With Contaminated Soil And Inhalation Of Dust From The Site Are Possible Route Of Exposure. Private Wells Are Used For Industrial Purposes And Prevalent In The Area. The Site Is Secured.

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Spent Pickle Liquor, (1-2 Million Gallons); 2) Halogenated And Non-halogenated Solvents. F002, F003, F004 Wastes. (> 68,000 Gallons)

Estimated Size: 62 Acres

Owner(s) During Use...: Roblin Steel

Operator During Use...: Roblin Steel

Operator Address.....: 4000 River Road, Tonawanda, Ny

Period Associated With Hazardous Waste: From 1967 To 1989

Site Description:

A Phase I Investigation Has Been Conducted At This Site. Roblin Steel Disposed Of An Estimated 1 To 2 Million Gallons Of Spent Pickle Liquor At This Property During 1969-70. The Company Has Indicated That The Wickwire Steel Plant Used The Site For The Disposal Of Excess Slag, A By-product Of The Steel Manufacturing Process. In August, 1982 A Groundwater Sample Was Collected By The U.s.g.s. And Analyzed For Heavy Metals. Groundwater Standards Were Exceeded For Several Metals. A Phase II Investigation Was Completed In 1989 And Documented Contravention Of Groundwater Standards For Tetrachloroethylene (pce) As Well As Numerous Other Environmental Concerns. Envirotek Limited, Inc. (who Leased A Portion Of The Site) Had Their Permit To Operate As A Hazardous Waste Tsd Facility Revoked After Being Evicted In June, 1989 By The New Property Owners. Envirotek Limited Was Allegedly Disposing Waste Solvents Illegally At Several Locations On-site. In 1989 A Cleanup Of Wastes Was Begun By Envirotek Pps Under A Consent Order With The Usaepa. The Initial Cleanup Of Envirotek Wastes Was Completed In 1991. The Pp's Have Agreed To Undertake An Interim Remedial Program In Which Soils Exhibiting Volatile Organic Concentrations Over 1,000 Ppm Will Be Excavated. Further Evaluation Of Additional Areas On Site Need To Be Completed By Nysdec.

Soil Type: River Deposits Of Sand And Gravel

Groundwater Depth: 5 Feet

Assessment Of Environmental Problems:

Gross Contamination Of The Shallow Groundwater With Chlorinated Solvents Has Been Documented In The Envirotek Leased Area Of The Site. Significant Groundwater Contamination In Other Areas Of The Site Is Documented As Well.

Assessment Of Health Problems:

The Previous Disposal Of Spent Pickle Liquor Directly To The Ground Surface May Pose The Potential For Contamination Of Near Surface Fill Material And The Underlying Groundwater. The Close Proximity Of This Site To The Niagara River Could Result In Contaminants Entering The River Through Groundwater. Public Water Supply Intakes In The East Branch Of The Niagara River Are Located A Few

Miles Downstream Of The Site But Are Not Likely To Be Impacted By Contamination Associated With Roblin Steel. There Is Some Potential For Impacts On Recreational Uses Of The Niagara River In The Immediate Vicinity Of The Site. The Entire Area Is Serviced By Municipal Drinking Water Supply. In 1989 Drums Of Wastes Were Found On-site In A Leased Warehouse And Which Pose A Potential Exposure Concern To On-site Workers Or Trespassers. The Usepa Has Completed The Removal Of Drums Under Superfund Powers.

Owner(s) During Use...: Ashland Petroleum Co.

Operator During Use...: Ashland Petroleum Co.

Operator Address.....: 4545 River Rd., Tonawanda, Ny

Period Associated With Hazardous Waste: From 1957 To June, 1982

Site Description:

Area For Disposal Of Lime, Phosphoric Acid Polymerization Catalyst Sludge And Demolition Material. Refinery Is Not Currently Operating. This Landfill Is Presently Closed. A Phase I Investigation Was Conducted In 1985. A Phase II Investigation Was Completed In October, 1989. This Site Has Been Identified As Having Received Radioactive Waste From The Manhattan Engineer District (med) Project. Because Of This, The Property Is Listed Under FUSRAP (formerly Utilized Site Remedial Action Program). The FUSRAP Listing Is The Result Of Contaminated Ore Tailings Left Over From Processing Of Radioactive Ores From The Med Project Having Been Landfilled On This Property During World War II. This Falls Under The Remedial Action Authority Of The United States Department Of Energy (doe). Other Portions Of This Site Require Investigation Under Nysdec Division Of Hazardous Waste Remediation.

Soil Type: Clay

Groundwater Depth: 15+ Ft.

Assessment Of Environmental Problems:

Inadequate Data To Assess Environmental Problems.

Assessment Of Health Problems:

The Site Is Fenced And Capped, There Is No Public Access. The Site Has Been Proposed For Delisting. Doh Opposed Delisting Until Assurance Is Obtained The Site Will Come Under The Control Of The Proper Governmental Entities Having Jurisdiction Over Radioactive Releases.

 Contaminated Media: GROUNDWATER, SURFACE WATER
 Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Pcb Waste (unknown)
 Estimated Size: 50 + Acres
 Owner(s) During Use...: C.f.&i. Steel, Pueblo, Co.
 Period Associated With Hazardous Waste: From 1950's To 1970's

Site Description:

A Phase I Investigation Has Been Conducted At This Site. Foundry Sand And Slag From Chevrolet Foundry Sand Operation And Liquid Boiler Cleaning Wastes From Dow Chemical Company Were Allegedly Disposed Here. Cf&i Disposed Of Steel Slag From Its Operation. In March 1981, Water Samples Were Collected From Drainage Ditches Around The Site. Extensive Subsurface Soil Sampling Was Performed By Usgs In August 1982 And In May 1983. There Were 22 Organic Priority Pollutants Found, Some As High As 199 Ppm Concentration. A Phase II Investigation For This Site Was Completed By The Responsible Party In 1987. A Consent Order For An RI/FS Has Been Signed And The Prp Has Completed The Field Work For This Investigation. A Freshwater Wetland Regulated Under Article 24 Of The Environmental Conservation Law Is Located On The Site. The RI/FS Has Been Completed And Accepted. The RI/FS Confirmed The Presence Of Foundry Sand And Slag And Two Former Waste Water Discharge Lagoons. The Prp Has Conducted An Aquifer Pump Test And Submitted A Draft Scope Of Work For The Remedial Design. The Record Of Decision (rod) Was Signed February 15, 1991. Negotiation Of The Consent Order For Completion Of Remedial Design And Action Are On-going. A Scope Of Work (sow) For Remedial Design / Remedial Action (rd/ra) Was Submitted By The Responsible Party In January 1993.

Soil Type: Fill Material Followed By Fine Sand

Groundwater Depth: Approx. 20 Feet

Assessment Of Environmental Problems:

Soil Data Indicates Concentrations In Excess Of Background Levels For Some Of The Heavy Metals. Surface Water Analysis Indicated Presence Of Chlorinated Organics And Heavy Metals In The Samples. Pcb's Were Detected In Subsurface Soils, Sediments, And Groundwater.

Assessment Of Health Problems:

The Most Likely Route Of Exposure Is Direct Contact With Contaminated Soil And Surface Water. Although A Fence Has Been Installed Around The Site, The Integrity Has Been Compromised In Some Locations. Groundwater From This Site Contributes To The Contamination Of The Niagara River In Two Possible Ways: (1) Groundwater Flows Directly Into The River And (2) Leachate From The Site Flows Directly Into The River. The Area Is Provided With Public Water, While There Are Many Private Industrial Wells In The Area. The Site Is To Be Re-covered And The Side Wall Grades Modified. Extraction Wells Installed Along River Edge, Groundwater Extracted, Treated Then Discharged.

FACILITY INFORMATION

EPA ID: NYD980534770

Site ID: NY915025

Agency: STATE

HRS Score:

Location:

Site Name:

FMC CORP - CHEMICAL DIVISION

Address:

34 SAWYER AVE

City, State, Zip:

TONAWANDA, NY 14150-7717

County, Region:

ERIE

Type of Facility: Open Dump

Status: Remedial Action: (none); Legal Action: None

Source Database: INACTIVE HAZARDOUS WASTE DISPOSAL SITES REGISTRY

Years Operated:

Project Manager:

Owner Name: Fmc Corp.-peroxygen Chemicals Div.

Address: 34 Sawyer Ave.

City, State, Zip: Tonawanda, NY

Contact Phone:

Contaminants:

Contaminated Media:

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Persulfates, Perborates, Sodium Carbonate Ammonia Compounds, Hydrogen Peroxide, Calcium Peroxide, Magnesium Urea, Pyrophosphate (100 Tons Total)

Estimated Size: 1 Acres

Owner(s) During Use....: Fmc Corporation

Operator During Use....: Fmc Corporation

Operator Address.....: 34 Sawyer Avenue, Tonawanda, Ny

Period Associated With Hazardous Waste: From 1964 To 1976

Site Description:

Two And Possibly Four Waste Disposal Pits Were Utilized By The Firm For A Period Of Twelve Years. The Pits Have Been Covered And Graded. Possibly Two Of The Pits Are On Land Transferred To The Niagara Mohawk Corporation And May Have Been Buried Under A Railroad Roadbed. The Size Of Each Pit Was Estimated To Be 20 Ft. X 20 Ft. X 10 Ft. In July Of 1982 The U.s.g.s. Collected 4 Subsurface Soil Samples. Samples Were Analyzed For Iron And Zinc. Resampling Of The Site By The U.s.g.s. Took Place In May Of 1983. Organic Compounds Were Detected, But Not Quantified Due To Exceeded Holding Times. A Phase I Investigation Report Was Completed In 1990. A Preliminary Site Assessment (psa) Is Planned For 1993.

Soil Type: Silty Clay

Groundwater Depth: Unknown

Assessment Of Environmental Problems:

Waste Disposal Pits Have Been Properly Closed And The Analysis Of The Soil Samples Collected By U.s.g.s. Did Not Show Significant Concentrations Of Iron And Zinc. However, Organic Data Indicates That The Site Is Contaminated And There Is Potential For Contaminant Migration From The Site.

03/09/94

U.S. ENVIRONMENTAL PROTECTION AGENCY

National Priority List

The NPL, or Federal Superfund as it is commonly known, is composed of the nation's most hazardous sites which require remediation. This list is created from the CERCLIS database and lists over 1150 sites nationwide. After a facility has been identified as a CERCLIS site, the EPA conducts an assessment of the property. The degree of contamination found determines whether the site is placed on the NPL or is referred to the state for further action under state programs (see State Superfund).

U.S. ENVIRONMENTAL PROTECTION AGENCY

RCRIS Facilities

The Resource Conservation Recovery Information System(RCRIS) is a nationwide database created to maintain and regulate facilities that handle hazardous waste. The RCRIS database replaced the HWDMS (Hazardous Waste Data Management System) in September of 1992 as the major system supporting the implementation of RCRA(Resource Conservation and Recovery Act)

ACTIVITY**SQG - Small Quantity Generator**

Handlers which generate more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulate less than 6000 kg of hazardous waste at any time; or generate less than 100 kg of hazardous waste during any calendar month and accumulate more than 1000 kg of hazardous waste at any one time.

LQG - Large Quantity Generator

Handlers which generate 1000 kg or more of hazardous waste during any calendar month; or generate more than 1 kg of acutely hazardous waste during any calendar month.

Exempt SQG - Conditionally Exempt Small Quantity Generator

Handlers which generate 100 kg or less of hazardous waste per calendar month and accumulate less than 1000 kg of hazardous waste at any time.

Transporter

Indicates the facility engages in off-site transportation of hazardous waste by air, rail, highway, and/or water.

TSD - Treatment/Storage/Disposal Facility

Indicates the facility engages in the treatment, storage, and/or disposal of hazardous waste.

UIC - Underground Injection Control Facility

Indicates the facility generates and/or treats, stores, or disposes of hazardous waste as well as having an injection well located at the installation.

BBL - Burner/Blender Facility

Indicates the handler is engaged in the burning and/or blending of hazardous waste.

STATUS

Indicates whether a Generator, Transporter, TSD, and/or a Burner/Blender is regulated under the authority of the federal RCRA program. Options include: Fully Regulated, Pending, Not Regulated, and Under Other ID.

EXEMPT STATUS

Indicates the reason a Generator, Transporter, TSD and/or Burner/Blender is not subject to the controls of the federal RCRA program or is subject to such controls on a periodic basis.

SOURCE

Indicates the source of information regarding activity and status.

DATE

Date that the notification form, inspection, or report was secured by the appropriate authority.

OFF-SITE WASTE RECEIPT

Indicates whether or not the handler currently accepts hazardous waste from another site.

SIC CODE(S)

A four digit number which identifies the general classification of the activities at a facility.

TYPE OF LAND

Indicates current ownership status of the land on which the facility is located.

WASTE INFORMATION

Indicates whether or not information on wastes handled by the facility are available. See Wastes Report where noted.

WASTES**SOURCE**

Indicates the source of the wastes information.

STREAM AMOUNT

An estimated amount of waste in a specific waste stream handled annually by the facility.

Measurement units are as follows when available: K - Kilotons; T - Tons; P - Pounds; M - Metric Tons

WASTE DESCRIPTION

Term provided by the EPA to describe the combination of wastes in the stream.

PROCESS(ES) ON STREAM

The type of process(es) used on a specific waste stream. For example: Container, Tank, Waste Pile, Surface Impoundment, Drip Pad, Injection Well, Landfill, Ocean Disposal, Land Treatment, Incinerator

WASTES IN STREAM

List of each individual hazardous waste in the stream translated from the Hazardous Waste Codes outlined in 40CFR, Part 261, Subpart D.

EVALUATIONS

TYPE OF EVALUATION

Compliance Evaluation Inspection (CEI) Primarily an on-site evaluation of the compliance status of the handler with regard to all applicable RCRA regulations and permits.

Compliance Evaluation Inspection Without Sampling (CES) Indicates the CEI was conducted without sampling.

Compliance (Groundwater) Monitoring Evaluation (CME) A detailed evaluation of the adequacy of the design and operation of a facility's groundwater monitoring system as per EPA's Final RCRA compliance Groundwater Monitoring Evaluation Guidance Document.

Compliance (Groundwater) Monitoring Evaluation Without Sampling (CMS) The CMS indicates the CME was conducted without a substantial amount of sampling.

Financial Record Review (FRR) An extensive review of a handler's compliance with financial responsibility requirements.

Non-financial Record Review (NRR) An evaluation conducted in the Agency office involving a detailed review of non-financial records.

Operation and Maintenance Inspection (OAMI) A periodic inspection of the functioning of the groundwater monitoring system. The inspection focuses on the condition of wells and sampling devices.

Compliance Schedule Evaluation (CSE) An on-site inspection or re-evaluation conducted to verify compliance with enforcement actions resulting from a previous evaluation or to review deficiencies noted in previous inspections.

Case Development Inspection (CDI) An intensive investigation intended to gather sufficient information to support an enforcement action.

Sampling Inspection (SPI) An evaluation during which samples are collected for laboratory analysis. This inspection is frequently conducted in conjunction with the CES or CMS but occurs at a different time or is performed by different personnel.

Land-Ban Inspection (LBN) An inspection of land disposal restriction requirements.

Corrective Action On-Site An on-site inspection of Corrective Action activities.

Other Evaluation (OTH) Any type of evaluation other than those listed above.

AREA OF EVALUATION

Indicates the specific area of the RCRA portions of the Federal Code of Regulations covered by the evaluation.

For Example: Generator-All Requirements, Transporter - Manifest/Record Keeping, TSD - Contingency Plan Requirements

EVALUATING AGENCY

Agency responsible for conducting the evaluation identified by the Evaluation Control Number. Options include: EPA Personnel, EPA Contractor, State, State Contractor, Oversight by EPA

VIOLATIONS

AREA OF VIOLATION

Indicates the specific monitoring requirements area which is found to be in violation with RCRA regulations/statutes.

SCHEDULED RESPONSE DATE

Date by which the handler is to submit to the agency its documentation that the violation has been brought into compliance.

ACTUAL DATE RESOLVED

The date the agency determines that the handler demonstrated physical compliance.

PRIORITY INDICATOR

An indicator of the relative priority assigned to a violation or pending violation.

ENFORCEMENTS

TYPE OF ENFORCEMENT ACTION

Identifies the type of action being taken against a handler. For Example: 3008(s) Compliance Order, Verbal Informal, Written Informal, Imminent Hazard Order, Series Informal Administrative Actions

DATE OF ACTION

The date a RCRA related enforcement action was initiated against a facility.

PENALTY ASSESSED

Dollar amount of any penalty assessed against the handler in a RCRA enforcement action by EPA or a state equivalent formal enforcement action.

PAYMENT AMOUNT

The dollar amount of any settlement agreed to between the responsible agency and the hazardous waste handler.

NOTE: Blank fields may be interpreted in one of three ways.

1. No information is available.
2. The field has no application to the particular site.
3. No definite attribute has been determined to date.

NEW YORK
Department of Environmental Conservation
Spill Prevention and Response
Bulk Storage Data Section

Registered Storage Tanks

"Chemical Bulk Storage,
Petroleum Bulk Storage, and
Major Oil Storage Facilities Databases"

REGISTERED STORAGE TANKS

REPORT ELEMENT DICTIONARY

Registered Storage Tank (RST) databases vary considerably in content from state to state. In approximately one-fourth of the RST databases, no tank detail information (as listed below) is provided by the state agencies. Therefore, if the message "NO TANK INFORMATION" is displayed on the print-out, the information is not available in the state agency's database. Blank fields of information also indicate that the data is not available in the state agency's database.

TANK NUMBER

Each tank's specific identification number. (In a few states, no tank number is assigned, but the total number of tanks at the facility is provided. In these cases, AIC provides the total number of tanks at the facility in this field.)

INSTALL DATE

Date the tank was installed.

AGE

Number of years the tank has been in use.

CLOSE DATE

Date the tank was removed from use.

STATUS

Indicator of the current operational status of the facility. This can vary from "In Use" to "Permanently Out-of-Use".

CONTENTS

Type of substance stored within a tank. (Examples are: Diesel, Leaded Gasoline, Kerosene, Fuel Oil #1,2 or 4)

CAPACITY

Amount a tank will hold. (Unit indicators vary.)

MATERIAL OF CONSTRUCTION

Material used to construct the tank. (Examples are: Steel, FRP = Fiberglass, Concrete)

LOCATION

Location of the registered tank. (Examples are: Underground, 10% underground, resting on the ground, or aboveground)

NOTE: Information provided by a state agency is not always entirely accurate. For example, when a RST is found, its corresponding LRST (if there is one) may not be found or may have a different address and/or identification number.

Leaking Registered Storage Tanks

NEW YORK LRST DATABASE EXPLANATION

The New York Leaking Registered Storage Tank list was created from a database that includes both leaking tanks as well as spill incidents. The following criteria were used to separate the leaking tanks from the spills:

- (1) Tank Failure
- (2) Tank Test Failure
- (3) Tank Overfill
- (4) Gas Station

These types of occurrences were separated because spill incidents are generally difficult to pinpoint on a map based on the fact that they can occur anywhere and no workable physical address is available.

LEAKING REGISTERED STORAGE TANKS

REPORT ELEMENT DICTIONARY

The Leaking Registered Storage Tank (LRST) databases vary considerably in content from state to state. Very often, a state will provide only the name and location of the facility; others will provide information for each of the fields below. Blank fields of information indicate that the data is not available in that state agency's database.

PRP (POTENTIALLY RESPONSIBLE PARTY) INFORMATION

Name, address, contact, and phone number of the party responsible.

DISCOVERY DATE

Date the leak was found or reported.

SCORE

Number assigned to the leak that classifies it according to degree of contamination.

RANK

Number assigned to the leak that ranks it among all other leaks in the state based on the degree of contamination.

STATUS

Current status of remediation; describes processes completed or scheduled to be completed.

PRIORITY

Extent of contamination; outlines media affected and required remedial procedure.

CAUSE

Reason for leakage.

AMOUNT

Leakage amount in gallons.

MATERIAL

Type of substance that leaked from the tank.

REMARKS

Varying information depending on state database used.

COMMON ACRONYMS

CAD	Corrective Action Directive
RAP	Remedial Action Plan
PRP	Potentially Responsible Party

NOTE: Not every LRST has an associated RST. Following are explanations of this inconsistency in the state data: 1) the RST may have been registered under a different name, address, city, county, or zip code; 2) the RST may not exist in the database, and/or 3) the RST may not have been registered.

Emergency Response Notification System

The Emergency Response Notification System(ERNS) is a national computer database and retrieval system used to store information on accidental releases of oil and hazardous substances. The information stored in this database is acquired through the National Response Center that tracks over 35,000 incidents per year. A form is filled out for each incident that requires information such as: discharger name, date of release, amount released and type of substance released. The information in this database is available from 1987.

U.S. ENVIRONMENTAL PROTECTION AGENCY
Site Enforcement Tracking System

When expending Superfund monies at a CERCLA (Comprehensive Environmental Response, Compensation and Liability Act) site, EPA must conduct a search to identify parties with potential financial responsibility for remediation of uncontrolled hazardous substance sites. SETS was created by EPA to track PRP identification at both NPL(National Priority List) and non-NPL sites. These lists represent the EPA's preliminary findings on the identities of PRPs. Inclusion on these lists does not constitute a final determination concerning the liability of any party for the hazard or contamination at any CERCLA site.

Summary of Findings

AIC

AGENCY INFORMATION CONSULTANTS, INC.

Agency Information Consultants, Inc.(AIC) is pleased to present the GRID Report that you have requested. In order to facilitate your use of this report, please review the following features:

SUMMARY OF FINDINGS: An overview of the information found.

This includes a list of the requested databases and summary information, such as: the requested radius or search method, the date the information was received from the agency, the actual search method, and the number of sites found.

The 'Actual Search Method' identifies the way in which the data is provided. For example: 'County/HardCopy' means that the data is being provided for the entire county and is a copy of a printout acquired directly from the state or federal agency. 'Zip/City' means that all the data was provided for the selected zip code(s), and all records that have no zip code are provided for the city of the subject site.

APPENDIX(Facilities Located Outside the Radius But Within the Selected Zip Code(s) and/or City): A list of facilities which AIC has eliminated from the specified search radii through map and phone research.

In the Appendix, facilities for each database are sorted alphabetically by the street name within each zip code. This allows our clients to quickly find all the facilities that are located on a single street. This document includes information such as: facility name, address and zip code, facility identification number, and type of database.

When the Zip Code column contains letters instead of a zip code, this is generally the first five letters of the city or county name and designates that the record does not contain a zip code.

DATABASE REPORTS: Various reports detailing database information on each of the facilities found.

Each report is preceded by a cover sheet which includes a description of the database as well as citation information such as: Agency, Subdivision of the Agency, AIC's standard name for the database, and the Agency's name for the database in quotes.

When the message "No Facilities Found Within the Radius" appears at the bottom of the cover sheet, it means that no facilities were found for the requested search method.

Following the cover sheet are the Report Element Dictionaries which are documents that describe each field of information provided in the database reports.

Should you need assistance interpreting your report, please do not hesitate to contact AIC's Customer Service Department or your Account Manager at (512) 478-8991.

DISCLAIMER

Scope. The following conditions apply to the services that Agency Information Consultants provide to a purchaser. By placing an order with AIC, the purchaser agrees to the following:

AIC Services. AIC provides reports of various state and federal files and records regarding real property and facilities. AIC will utilize its resources, consistent with the level of care expected in standard business practice, to provide quality information services, to consistently maintain and update its databases and to deliver reports in a timely manner. AIC, however, is not responsible for any delays, inaccuracies, costs or damages due to software or equipment malfunction, errors, or incorrect data received from the original source.

Limitation of Liability. The liability, if any, of AIC for direct damages, whether arising from AIC's negligence, strict liability or other tort, or otherwise with respect to services, or other items, is limited to an amount which shall not exceed the price of the particular services or items giving rise to the liability. In no event shall AIC be liable for any incidental, consequential, or special damages, including without limitation, lost revenue or lost profits, even if AIC has been advised of the possibility that lost revenues or lost profits may occur.

Limitations and Acknowledgements. The purchaser should be aware that government information sources and/or AIC may not include information on all environmental hazards, or on all sites which include environmental hazards, and that government sources may be inaccurate or incomplete. These government sources include both the base map and the environmental databases. AIC researches and corrects both sources listed above in order to provide an improved product but in so doing, AIC is not liable for any errors, omissions, or damages incurred. Purchaser also recognizes that AIC's services are not a substitute for a thorough environmental risk audit performed by a qualified environmental professional.

All data obtained from AIC shall be furnished for the exclusive use of the original purchaser in investigating the subject company and/or property as identified in the inquiry or order form. Purchaser may deliver an AIC report to an additional user who is identified as a client of the purchaser it being agreed, however, that:

- (i) Only the complete AIC report may be so delivered to the additional user;
- (ii) The use of said AIC report by the additional user shall constitute this user's agreement to all conditions contained herein;
- (iii) Every copy of an AIC report shall contain notice of AIC's copyright as follows:
(c) Copyright Agency Information Consultants, Inc. 1992. All Rights Reserved; and
- (iv) Every copy of an AIC report shall include the Disclaimer of Warranty and Limitation of Liability statements printed or transmitted with the original report. Any other resale, publication, copying or use for other than assessing environmental risks is strictly prohibited without prior written consent of AIC.
- (v) All copyright rights are reserved to AIC.
- (vi) The use of the AIC report and the information contained within is restricted to a one-time use for the project specified on the order form; any unauthorized secondary use is strictly prohibited without prior written consent of AIC.

State Superfund

"Status Report of Inactive Hazardous Waste Disposal Sites"

FACILITY INFORMATION

EPA ID: NYD002114728
Site ID: NY915018
Agency: STATE
HRS Score:
Location:

Site Name: COLUMBUS MCKINNON
Address: 1 FREMONT ST
City, State, Zip: TONAWANDA, NY 14150-2300
County, Region: ERIE

Type of Facility: Open Dump
Source Database: Inactive Hazardous Waste Dispo
Sal Sites Registry

Years Operated:
Project Manager:

Status: Remedial Action: In Progress (ri-fs In Progress And Irm Completed.); Legal Action: State Cons. Ord.
Irm, ri-fs, Order Signed

Owner Name: Columbus Mckinnon Corp.
Address: 1 Fremont St.

City, State, Zip: Tonawanda , NY
Contact Phone:

Contaminants:

Contaminated Media: Groundwater

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Water Soluble Cutting Oils Contaminated With Pcb's And Solvents. (27,000 Gallons)
Estimated Size: 1 Acres

Owner(s) During Use...: Columbus Mckinnon Corp.

Operator During Use...: Columbus Mckinnon Corp.

Operator Address.....: 1 Freemont Street, Tonawanda, Ny

Period Associated With Hazardous Waste: From 1930 To 1965

Site Description:

An Open Pit Of Less Than 1 Acre In Size Was Utilized To Dispose Of Waste Oils Produced In The Plant. The Area Has Since Been Covered With Soil And Graded. During The Period Of 1979-83, Columbus Mckinnon Corp. Conducted An Investigation At This Site Which Confirmed The Presence Of Elevated Levels Of Pcb's In Soils And In Sediments From The Adjacent Ellicott Creek. Elevated Levels Of Organics Were Also Detected In The Groundwater. The Soil Was Found To Have Elevated Levels Of Heavy Metals In Addition To Pcb's. After Negotiations With The Company, A Consent Order Requiring An Ri/fs And Interim Remedial Measure (irm) Was Signed In October 1989. The Irm Required The Installation Of A 165 Ft., Long Shore Protection Works Along The Creek Bank To Preclude Erosion Of Contaminated Soil Into The Creek. The Irm Was Completed In November 1990. The Remedial Investigation Was Started During The Summer Of 1990 And The Field Work Was Completed In October 1990. The Remedial Investigation Report Was Approved By The Dec In 1991. The Feasibility Study Report Was Approved In May 1992. The Record Of Decision (rod) Was Signed In October 1992. The Rod Requires Removal Of All Contaminated Soil At Or Above 10 Ppm And At 1 Ppm For The Top One Foot Depth From Grade. The Rod Also Requires The Removal Of All Contaminated Sediment From The Bed And Slope Of Ellicott Creek. A Consent Order Is Currently Being Being Negotiated With Columbus Mckinnon For The Design And Implementation Of The Remedial Field Work Which Is Expected To Start In Late 1993.

Soil Type: Fill Underlain By Silt

Groundwater Depth: About 5 Feet

Assessment Of Environmental Problems:

There Are Elevated Levels Of Pcb's In The On-site Soils, In An Area Of The Adjacent Conrail Property And Also In A Limited Area Of The Adjacent Ellicott Creek. Heavy Metals Are Present In Soils On This Site.

Assessment Of Health Problems:

The Proposed Remedial Action Plan For The Site Which Includes Installation Of Sheet Piling At The Top Of Ellicott Creek, Removal Of All Pcb Contaminated Soil (surface Soil Containing Greater Than 1 Ppm Pcb Will Be Removed To A Minimum Depth Of One Foot And All Other Soil Will Be Cleaned Up To A Level Of 10 Ppm) The Replacement Of Surface Soils (1 Foot) With Clean Top Soil Will Meet The Remedial Objectives For The Site. The Remedial Program Is Protective Of The Public Health Provided The Site Is Not Disturbed After Remediation Is Completed.

FACILITY INFORMATION

EPA ID: NYD980641567
Site ID: NY915010
Agency: STATE
HRS Score:
Location:

Site Name: BISONITE PAINT CO
Address: 2250 MILITARY RD
City, State, Zip: TONAWANDA, NY 14150-6002
County, Region: ERIE

Type of Facility: Lagoon
Source Database: Inactive Hazardous Waste Dispo
Sal Sites Registry

Years Operated:
Project Manager:

Status: No Status Information Available

Owner Name: Bisonite Paint Co.

City, State, Zip: Tonawanda, NY

Address: 2250 Military Rd.

Contact Phone:

Contaminants:

Contaminated Media: Surface Water

Source of Contamination:

Hazardous Waste Disposed (suspected): 1) Solvent (prior To 1980) (1800 Gal/yr.); 2) Metal Paint Pigments (prior To 1980) (unknown); 3) Water Based Paint By-products (prior To 1980) Solvent Based Paint By-products (unknown)

Estimated Size: 1 Acres

Owner(s) During Use...: Bisonite, Inc.

Operator During Use...: Bisonite Paint Company

Operator Address.....: 2250 Military Road, Tonawanda, Ny

Period Associated With Hazardous Waste: From Unknown To 1980

Site Description:

One Lagoon Containing Unusable Spent By-products And Washings From The Manufacture Of Both Water And Solvent Based Paints. Land Spreading Of Unknown Solvents And Paint Pigments Also Took Place On The Plant Site. Lagoon Usage And Land Spreading Disposal Methods Stopped In September Of 1978. After 1978, Disposed Solvents And Sludges Were Stored In Drums On Site. Numerous Spills And Leaks Were Reported. The Drums Were Disposed Of In 1982. All Wastes Are Now Sent To A Hazardous Waste Disposal Facility. Two Water Samples Of The Lagoon Were Collected In 1978. Phenols, Copper, Hexavalent Chromium, Manganese, Barium, Mercury, And Zinc Met Or Exceeded Effluent Standards. A Phase I Investigation Was Completed In 1987. A Preliminary Site Assessment (psa) Is Ongoing. The Facility No Longer Manufactures Paints. Drum Storage On Site Continued Until The Plant Closed. Spills And Leaks Occurred Until The Plant Closed. The Division Of Hazardous Substances Regulation Has Coordinated Cleanup Of Drums And The Drum Storage Area, Transformers With Pcb Oil, And Tanks. This Work, Completed Under Consent Order, Does Not Address The Lagoon Or Landspreeding.

Soil Type: Silty Clay

Groundwater Depth: Unknown

Assessment Of Environmental Problems:

Lagoon Water Samples Met Or Exceeded Effluent Standards For Phenols, Copper, Hexavalent Chromium, Manganese, Barium, Mercury And Zinc. Additional Data Is Needed To Determine The Extent Of Possible Contamination Of This Site. Exposure By Direct Contact Is Possible, Because Of Unrestricted Access With The Contaminated Soil.

Assessment Of Health Problems:

This Site Is An Active Manufacturing Facility That Had Previously Land Spread Solvent And Paint Pigments Over A 1 Acre Portion Of Its Property. In Addition, Until 1980 The Company Operated A Waste Lagoon That Received Water And Solvent Base Paint Solids, And Metal Pigments. The Lagoon Was Partially Filled And Improperly Covered. Leachate Has Been Observed In Soils Surrounding The Lagoon. The Potential Exists For Workers At The Plant To Come In Direct Contact With Contaminated Soils, Leachate And Surface Water Contaminated Through Runoff. Additional Investigation Is Needed To Better Evaluate These Routes Of Exposure. The Area Is Served By Public Water And Access To The Plant Site Is Controlled By Plant Security.

FACILITY INFORMATION

EPA ID: NYD000514018
Site ID: NY915023
Agency: STATE
HRS Score:
Location:

Site Name: EXOLON CORP
Address: E NIAGARA ST
City, State, Zip: TONAWANDA, NY 14150-2343
County, Region: ERIE

Type of Facility: Open Dump
Source Database: Inactive Hazardous Waste Disposal Sites Registry
Status: Remedial Action: (none); Legal Action: None
Owner Name: Exolon Esk Co.
Address: 1000 E. Niagara St.

Years Operated:
Project Manager:

City, State, Zip: Tonawanda, NY
Contact Phone:

Contaminants:

Contaminated Media:

Source of Contamination:

Hazardous Waste Disposed (suspected): 1) Iron Oxide, Refractory Brick, Cinders (unknown)

Estimated Size: 1.5 Acres

Owner(s) During Use...: Exolon Corporation

Operator During Use...: Exolon Corporation

Operator Address.....: 1000 E. Niagara Street, Tonawanda, Ny

Period Associated With Hazardous Waste: From 1949 To 1953

Site Description:

Low Areas Along The Northern Portion Of This Site Were Used By The Exolon Corp. To Dispose Refractory Brick, Iron Oxide And Coal Cinders. The Area Is Now Covered With Soil And Seeded. Erie County Submitted A Profile Report For This Disposal Area In 1982. The Report Indicates That There Is No Evidence That Hazardous Wastes Were Disposed In This Area. A Phase I Investigation Report Has Been Completed. This Report Indicates That Additional Wastes, Possibly Phenolics, Were Disposed At Other Areas Of This Site. Soil Samples Were Collected By Dec In 1989. A Preliminary Site Assessment (psa) Has Been Initiated. Field Work For This Additional Investigation Was Completed In Late 1992.

Soil Type: Sandy Loam Over Clay

Groundwater Depth: 4 Feet

Assessment Of Environmental Problems:

Review Of Current Data Is Needed To Assess The Possible Environmental Problems.

Assessment Of Health Problems:

The Potential For Groundwater Migration Into The Erie Canal Which Subsequently Empties Into The Niagara River Exists. The Canal Is Used For Fishing And Recreational Purposes. The River Is Used For Fishing And Recreation And Is The Main Source Of Drinking Water For The Niagara Frontier. The Area Is Serviced By Public Water However, There Are Many Private Industrial Wells In The Area. The Potential For On-site Exposure To Contaminated Soils Is Minimized As The Site Is Partially Covered And Vegetated.

Contact Phone:

Contaminants:

Contaminated Media: Groundwater, Surface Water

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Phenol (3000 Lbs.); 2) Xylene (7900 Gals.); 3) Solvent Mixture Including Xylene, Toluene, Mib (k 1500 Gals.); 4) Isobutylene (unknown); 5) Aroclor-1260 (unknown)

Estimated Size: 6.7 Acres

Owner(s) During Use...: Polymer Applications

Operator During Use...: Polymer Applications

Operator Address.....: 3445 River Rd., Tonawanda, Ny

Period Associated With Hazardous Waste: From Unknown To Present

Site Description:

The Site Has Been Used For The Storage Of Solvents, Phenols, Resin Sludges And Other Toxic Chemicals. The Wastes Have Been And Are Still Being Stored In Drums, And Previously In An Underground Tank. 500 Drums Were Removed By 1982 For Off-site Disposal. A Dec Order On Consent Executed In June 1981 Indicates That Phenol Was Leaching From The Site Into The Niagara River And Possibly Into The Groundwater. Polymer Applications Completed The Construction Necessary To Reduce Releases To The Niagara River. A Disasterous Fire On July 4-5, 1988 Created The Potential For Extensive Contamination. The Fire Caused Spillage Of Raw Organic Chemicals From Above Ground Tanks. The Spillage Caused Groundwater And Surface Water Contamination. Contravention Of Groundwater Standards By Aroclor-1260: 6.9 Ppb, Total Xylenes: 4300 Ppb, Phenol: 290,000 Ppb, And Methylene Chloride: 38,000 Ppb Surface Water Standards Contravened By Methylene Chloride: 21,000 Ppb, Aroclor-1260: 1500 Ppb, Total Xylenes: 48,000 Ppb, Ethylbenzene: 5400 Ppb And Phenol: 120,000 Ppb. A Phase II Investigation Report Completed In 1991 Recommended An Remedial Investigation / Feasibility Study (rl/fs). A Referral For A State Funded Rl/fs Was Received From The Division Of Environmental Enforcement (dee) On 3/29/93.

Soil Type: Sandy Fill Over Clay And Silt

Groundwater Depth: 4 Feet

Assessment Of Environmental Problems:

FACILITY INFORMATION

Site ID: NY915044 (...Continued)

Leaching Of Phenol From This Site To The Niagara River And Possibly To Groundwater Was The Main Environmental Problem. Groundwater Contamination From The July, 1988 Fire Has Been Confirmed. Continued Monitoring Of The Initial Remediation Of This Site Should Be Assessed To Determine Its Effectiveness.

Assessment Of Health Problems:

The Most Significant Routes Of Exposure Include Inhalation Of Contaminated Dust And Vapors, And Direct Contact With Phenol Laden Soil And Contaminated Surface Water. Target Populations Are Users Of The Adjacent Buildings. The Area Is Supplied With Public Water. Private Industrial Wells Are Prevalent In The Area, But The Water Is Not Used For Drinking.

Contaminants:

Contaminated Media: Groundwater, Surface Water

Source of Contamination:

Hazardous Waste Disposed (suspected): 1) Scrap Chlorinated Polyethylene, Scrap (unknown); 2) Polyethylene, Spent Catalyst (magnesium Chroma And Dichromate Impregnated On Potassium Aluminum Silicate). (te)

Estimated Size: 1 Acres

Owner(s) During Use...: Allied Chemical - Spec. Chem. Div.

Operator During Use...: Allied Chemical Spec. Chemical Div.

Operator Address.....: P.o. Box 88, Tonawanda, Ny

Period Associated With Hazardous Waste: From 1958 To 1962

Site Description:

Spent Catalyst Containing Chromium Compounds, Polyethylene, And Chlorinated Polyethylene Were Disposed In A Pit On Site. This Site Was Sampled By The U.s.g.s In July Of 1982 And In May Of 1983 Under The Niagara River Toxics Investigation. Chromium And Lead Exceeded Concentrations In Samples Taken From Undisturbed Soils In The Tonawanda Area. 21 Organic Priority Pollutants Were Detected In The Soil Samples. All Concentrations Were Below 10 Ppb. A Phase I Investigation Was Completed In 1983. An Investigation Was Carried Out At The End Of 1988 (report Finalized In 1990). Soil Samples Were Taken Inside The Pit Which Showed High Levels Of Chromium And Elevated Levels Of Lead. Also, Sediment From An On-site Catch Basin Showed Elevated Metals Concentra- Tions. Off-site Sewer Samples Showed No Migration From This Source. Both The Blow-down Pit And The Catch Basin Were Remediated In 1991. Investigation Is On-going To Determine The Source Of Organics Causing Contamination Of The Upgradient Monitoring Wells. Sampling And Analysis Of Five Monitoring Wells On-site Over A One Year Period Has Been Completed. Groundwater Standards Have Been Exceeded For Cyanide, Benzene, Ethylbenzene, Toluene, Xylene, And Numerous Pah Compounds. Additional Investigation Is Needed To Determine The Source Of Contamination.

Soil Type: Fill Overlying Silty Clay

Groundwater Depth: 6 Feet

Assessment Of Environmental Problems:

An Investigation Was Carried Out As Detailed In The 1990 Report. A Source Area Was Identified And Removed. Determination On

FACILITY INFORMATION

Site ID: NY915003B (...Continued)

The Source Of Upgradient Contamination Has Not Yet Been Made.

Assessment Of Health Problems:

The Most Likely Route Of Exposure Is Direct Contact With Contaminated Soil Or Exposed Waste Materials. Access To The Site Is Secured By A Fence. The Area Is Served By Public Water.

Contaminants:

Contaminated Media:

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Coal Tar (unknown)

Estimated Size: 1 < Acres

Owner(s) During Use...: Allied Chemical - Spec. Chem. Div.

Period Associated With Hazardous Waste: From 1950 To 1960+

Site Description:

Site Consisted Of Coal Tar Pools Produced From Spillage During Transfer Operations At The Site. In Summer Of 1981, The Site Was Excavated And Coal Tars And Contaminated Soils Were Removed. Waste Material Was Incinerated In Tonawanda Coke Facility (used In Coal Tar Ovens). Phase I Was Conducted From 5/83 Until 9/83. Doh Inspection Was Conducted In 6/85.

Soil Type: Clay

Groundwater Depth: Unknown

Assessment Of Environmental Problems:

Analysis Of The Soil Samples Collected From The Site Does Not Indicate Presence Of Organic Residues In Significant Quantities. Site Has Been Properly Remediated.

Contaminants:

Contaminated Media: Groundwater, Surface Water

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Coal Tar, Fly Ash And Cinders (4680 Tons/year); 2) Scrap Chlorinated And Non-chlorinated Polyethylene (25 To 50 Tons/year)
Estimated Size: 1 < Acres

Owner(s) During Use...: Allied Chemical - Semet Solvay Div.
Period Associated With Hazardous Waste: From 1930 To 1978

Site Description:

Site Was Jointly Used By Allied Chemical - Spec. Chem. Div. And Tonawanda Coke Corporation (formerly Known As Semet Solvay).
Tonawanda Coke Disposed Of Coal Tar, Fly Ash And Cinders. Waste From Allied Chemical Consisted Of Scrap Chlorinated Polyethylene, Scrap Polyethylene And Used Ceramic Saddle Packing. An Investigation Of The Site Was Conducted By U.s.g.s. In July Of 1982 And It Was Resampled In May Of 1983. Samples Were Analyzed For Cyanide, Iron And The Organics. Eight Priority Pollutant Organics Were Found At Levels Below 100 Ppb. A Phase II Investigation Of This Site Has Been Scheduled.

Soil Type: Clay With Some Sand

Groundwater Depth: 16.50 Feet

Assessment Of Environmental Problems:

Both Groundwater And Surface Water Samples Are In Contravention Of Standards For Iron. Groundwater Exceeded The Standards For Cyanide. Further Investigation Of This Site Is Necessary.

4) Heavy Metals ("); 5) Phenols ("); 6) Benzene (")

Estimated Size: 160 Acres

Owner(s) During Use...: Allied Chemical Corporation

Operator During Use...: Allied Chemical-remet Solvay Div.

Operator Address.....: Solvay, Ny

Period Associated With Hazardous Waste: From 1930 To 1979

Site Description:

This Site Consists Of The Entire Tonawanda Coke Plant Area. Three Landfills On The Site Were Used For General Landfilling With Flyash Cinders And Coal Tar Sludges (site 108), Bricks, Rubble, Sand, Demolition Material (site 109), And Wood Shavings Impregnated With Iron Oxide And Coal Tar Sludges (site 110). During 1981, Dec Collected Sediment And Surface Water Samples From The Tonawanda Coke Drainage Basin. Pah's Were Detected In Both The Sediment And Water Samples. In 1982 And 1983, The Usgs Collected Soil, Groundwater, And Surface Water Samples From This Site. Groundwater Exceeded Standards For Iron And Cyanide With The Effluent Standard Exceeded For Lead, Iron, And Chromium In Surface Water. Organic Priority Pollutants Were Detected At All Three Land- Filled Areas, Most Of Which Were Below 100 Ppb. A Phase II Investigation Has Been Completed By The Responsible Party. This Investigation Indicates Contamination Of Groundwater With Cyanide, Phenols, Benzene, Benzo(a)pyrene, And Other Organics. Groundwater Standards Were Exceeded For Cyanide And Phenols. Guidance Values For Several Organics Were Exceeded. Negative Impacts On An Adjacent Wetland Were Indicated By Contamination With Benzene, Phenol, Naphthalene, And Benzo(a)pyrene. Analytical Results From Other Locations Indicate The Presence Of Widespread Contamination On The Site And The Necessity Of An Expanded Remedial Investigation / Feasibility Study (ri/fs). A Supplemental Site Investigation By The Prp Revealed The Presence Of Contamination By Several Organics Including Cyanide, Benzene, 1,1,1-trichloro- Ethane, Ethylbenzene, Toluene, Xylenes, And Pah Compounds In Soil, Sediment, Groundwater And Surface Water. In 1992 The Prp Submitted A Report Describing Investigation Completed During 1991 And 1992. Analytical Results Are Consistent With Previous Investigations.

Soil Type: Fill Overlying Silty Clay

Groundwater Depth: 2-3 Feet.

Assessment Of Environmental Problems:

Contamination Of Soils, Sediment, Surface Water And Groundwater Have Been Documented At This Site. This Contamination May Be Affecting The Adjacent Niagara River. Investigation Into The Extent Of Contamination Across This Entire Site Is Needed.

Assessment Of Health Problems:

The Site Was Used As A General Landfill For The Disposal Of Tar Sludge, Fly Ash, Cinders, Demolition Debris, Iron Oxide And Chlorinated Polyethylene Scrap From The Allied Chemical Site Id 915003. Sampling Of On-site Monitoring Wells Has Shown Groundwater Contamination In Excess Of The Nys Groundwater Standards. The Groundwater From This Site Discharges Into The Niagara River And Is One Of Many Hazardous Waste Registry Sites Contributing To The Contamination Of The River Sediments. Direct Contact With Contaminated Soil And Inhalation Of Dust From The Site Are Possible Route Of Exposure. Private Wells Are Used For Industrial Purposes And Prevalent In The Area. The Site Is Secured.

Contaminated Media: Groundwater

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Pit Sludge (unknown); 2) Cutting Oils (unknown); 3) Grinding Waste (unknown); 4) Pcb's (unknown)

Estimated Size: 55 Acres

Owner(s) During Use...: Colorado Fuel And Iron

Operator During Use...: Ins Equipment

Operator Address.....: River Road, Tonawanda, Ny

Period Associated With Hazardous Waste: From 1960's To 1978

Site Description:

The Site Is Located North Of The Former Wickwire Steel Plant Between The Niagara River And River Rd. In Tonawanda. In August Of 1982, 10 Subsurface Soil Samples Were Collected By U.s.g.s. And Samples Were Analyzed For Cd, Cr, Fe, Pb, And Organic Compounds Using A Gc/ms Acid-base Neutral Scan. Aerial Photographs Indicate That The Site Was In Operation During The 1960's And 1970's. Concentrations Of Cd, Cr, And Pb Exceed The Concentrations Of Samples Taken From Undisturbed Soils In The Tonawanda Area. 19 Organic Priority Pollutants Were Found, Most Of Them Above 10 Ppm. A Phase I Investigation Was Completed In September Of 1983. A Phase II Investigation Was Completed In 1987. A Supplemental Phase II Investigation Was Performed In Late 1988. A Remedial Investigation/feasibility Study (ri/fs) Under The State Superfund Program Was Initiated In November, 1991, And Field Work Was Completed In December, 1992.

Soil Type: Urban Soil Non-homogeneous

Groundwater, Depth: 15-20 Ft. Below Surface

Assessment Of Environmental Problems:

Concentrations Of Heavy Metals Were Found In Excess Of Background Levels. Soil Samples Indicated The Presence Of Organics In The Soil.

Assessment Of Health Problems:

The Site Was Used To Landfill Foundry Sand, Sludge And Cutting Oils. The Remedial Investigation Documented The Presence Of Heavy Metals And Organic Chemicals Including Benzene, Toluene, Xylene In On-site Soils. The Most Likely Route Of Exposure Is Direct Contact With Contaminated Soil. The Site Is Unfenced But Access Is Limited Since The Site Is Located Along The Niagara River In An Industrial Part Of The Town Of Tonawanda. Although Groundwater Contamination Has Been Reported The Area Is Served By A Public Water Supply System. Since The Niagara River Is Used For Drinking Water Supplies, Recreation And Also Supports A Variety Of Aquatic Wildlife A Concern Exists Over The Potential Migration Of These Contaminants Into The Adjacent Niagara

Contaminants:

Contaminated Media: Groundwater

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Spent Pickle Liquor, (1-2 Million Gallons); 2) Halogenated And Non-halogenated Solvents, F002, F003, F004 Wastes. (> 68,000 Gallons)

Estimated Size: 62 Acres

Owner(s) During Use...: Roblin Steel

Operator During Use...: Roblin Steel

Operator Address.....: 4000 River Road, Tonawanda, Ny

Period Associated With Hazardous Waste: From 1967 To 1989

Site Description:

A Phase I Investigation Has Been Conducted At This Site. Roblin Steel Disposed Of An Estimated 1 To 2 Million Gallons Of Spent Pickle Liquor At This Property During 1969-70. The Company Has Indicated That The Wickwire Steel Plant Used The Site For The Disposal Of Excess Slag, A By-product Of The Steel Manufacturing Process. In August, 1982 A Groundwater Sample Was Collected By The U.s.g.s. And Analyzed For Heavy Metals. Groundwater Standards Were Exceeded For Several Metals. A Phase II Investigation Was Completed In 1989 And Documented Contravention Of Groundwater Standards For Tetrachloroethylene (pce) As Well As Numerous Other Environmental Concerns. Envirotek Limited, Inc. (who Leased A Portion Of The Site) Had Their Permit To Operate As A Hazardous Waste Tsd Facility Revoked After Being Evicted In June, 1989 By The New Property Owners. Envirotek Limited Was Allegedly Disposing Waste Solvents Illegally At Several Locations On-site. In 1989 A Cleanup Of Wastes Was Begun By Envirotek Prps Under A Consent Order With The Usepa. The Initial Cleanup Of Envirotek Wastes Was Completed In 1991. The Prp's Have Agreed To Undertake An Interim Remedial Program In Which Soils Exhibiting Volatile Organic Concentrations Over 1,000 Ppm Will Be Excavated. Further Evaluation Of Additional Areas On Site Need To Be Completed By Nysdec.

Soil Type: River Deposits Of Sand And Gravel

Groundwater Depth: 5 Feet

Assessment Of Environmental Problems:

Gross Contamination Of The Shallow Groundwater With Chlorinated Solvents Has Been Documented In The Envirotek Leased Area Of The Site. Significant Groundwater Contamination In Other Areas Of The Site Is Documented As Well.

Assessment Of Health Problems:

The Previous Disposal Of Spent Pickle Liquor Directly To The Ground Surface May Pose The Potential For Contamination Of Near Surface Fill Material And The Underlying Groundwater. The Close Proximity Of This Site To The Niagara River Could Result In Contaminants Entering The River Through Groundwater. Public Water Supply Intakes In The East Branch Of The Niagara River Are Located A Few Miles Downstream Of The Site But Are Not Likely To Be Impacted By Contamination Associated With Roblin Steel.

FACILITY INFORMATION

Site ID: NY915056 (...Continued)

There Is Some Potential For Impacts On Recreational Uses Of The Niagara River In The Immediate Vicinity Of The Site. The Entire Area Is Served By Municipal Drinking Water Supply. In 1989 Drums Of Wastes Were Found On-site In A Leased Warehouse And Which Pose A Potential Exposure Concern To On-site Workers Or Trespassers. The Usepa Has Completed The Removal Of Drums Under Superfund Powers.

FACILITY INFORMATION

Site ID: NY915008C (...Continued)

Estimated Size: 10 Acres

Period Associated With Hazardous Waste: From 1944 To 1946

Site Description:

This Site, Also Known As The "haist Property," Received Low Level Radioactive Material Produced During 1944-46. About 8,000 Tons Were Spread Over The Site. In 1979, Possibly 30-40% Of The Residue Was Removed And Taken To The Adjacent Seaway Industrial Park. An E.r.d.a. Survey In 1976 Indicated Low Levels Of Radiation In Soils Due To Past Storage Of Uranium Ore Tailings. E.r.d.a. Indicated That The Site In Its Present Setting Poses No Hazard. D.o.e. Estimated That 48,000 Cubic Yards Of Soil May Require Further Disposal, However. In June 1981, Erie County D.e.p. Sampled Surface Drainage Downstream Of The Site. Samples Were Analyzed For Metals, Organic Parameters And Radiation.

Soil Type: Silty Clay

Groundwater Depth: Unknown

Assessment Of Environmental Problems:

The Erda Investigation Found Low Level Radiation Leaving The Site In The Drainage Flow. The Dep Sampling Confirmed This Finding. No Imminent Hazard To The Environment, But Further Assessment May Be Necessary.

Owner(s) During Use...: Ashland Petroleum Co.

Operator During Use...: Ashland Petroleum Co.

Operator Address.....: 4545 River Rd., Tonawanda, Ny

Period Associated With Hazardous Waste: From 1957 To June, 1982

Site Description:

Area For Disposal Of Lime, Phosphoric Acid Polymerization Catalyst Sludge And Demolition Material. Refinery Is Not Currently Operating. This Landfill Is Presently Closed. A Phase I Investigation Was Conducted In 1985. A Phase II Investigation Was Completed In October, 1989. This Site Has Been Identified As Having Received Radioactive Waste From The Manhattan Engineer District (med) Project. Because Of This, The Property Is Listed Under Fuserap (formerly Utilized Site Remedial Action Program). The Fuserap Listing Is The Result Of Contaminated Ore Tailings Left Over From Processing Of Radioactive Ores From The Med Project Having Been Landfilled On This Property During World War II. This Falls Under The Remedial Action Authority Of The United States Department Of Energy (doe). Other Portions Of This Site Require Investigation Under Nysdec Division Of Hazardous Waste Remediation.

FACILITY INFORMATION

Hazardous Waste Disposed (confirmed): 1) Pcb Waste (unknown)

Estimated Size: 50 + Acres

Owner(s) During Use...: C.f.&J. Steel, Pueblo, Co.

Period Associated With Hazardous Waste: From 1950's To 1970's

Site Description:

A Phase I Investigation Has Been Conducted At This Site. Foundry Sand And Slag From Chevrolet Foundry Sand Operation And Liquid Boiler Cleaning Wastes From Dow Chemical Company Were Allegedly Disposed Here. Cf&J Disposed Of Steel Slag From Its Operation. In March 1981, Water Samples Were Collected From Drainage Ditches Around The Site. Extensive Subsurface Soil Sampling Was Performed By Usgs In August 1982 And In May 1983. There Were 22 Organic Priority Pollutants Found, Some As High As 199 Ppm Concentration. A Phase II Investigation For This Site Was Completed By The Responsible Party In 1987. A Consent Order For An RI/FS Has Been Signed And The Prp Has Completed The Field Work For This Investigation. A Freshwater Wetland Regulated Under Article 24 Of The Environmental Conservation Law Is Located On The Site. The RI/FS Has Been Completed And Accepted. The RI/FS Confirmed The Presence Of Foundry Sand And Slag And Two Former Waste Water Discharge Lagoons. The Prp Has Conducted An Aquifer Pump Test And Submitted A Draft Scope Of Work For The Remedial Design. The Record Of Decision (rod) Was Signed February 15, 1991. Negotiation Of The Consent Order For Completion Of Remedial Design And Action Are On-going. A Scope Of Work (sow) For Remedial Design / Remedial Action (rd/ra) Was Submitted By The Responsible Party In January 1993.

Soil Type: Fill Material Followed By Fine Sand

Groundwater Depth: Approx. 20 Feet

Assessment Of Environmental Problems:

Soil Data Indicates Concentrations In Excess Of Background Levels For Some Of The Heavy Metals. Surface Water Analysis

Indicated Presence Of Chlorinated Organics And Heavy Metals In The Samples. Pcb's Were Detected In Subsurface Soils, Sediments, And Groundwater.

FACILITY INFORMATION

Site ID: NY915063

(...Continued)

Assessment Of Health Problems:

The Most Likely Route Of Exposure Is Direct Contact With Contaminated Soil And Surface Water. Although A Fence Has Been Installed Around The Site, The Integrity Has Been Compromised In Some Locations. Groundwater From This Site Contributes To The Contamination Of The Niagara River In Two Possible Ways: (1) Groundwater Flows Directly Into The River And (2) Leachate From The Site Flows Directly Into The River. The Area Is Provided With Public Water, While There Are Many Private Industrial Wells In The Area. The Site Is To Be Re-covered And The Side Wall Grades Modified. Extraction Wells Installed Along River Edge, Groundwater Extracted, Treat Then Discharged.

FACILITY INFORMATION

Site ID: NY915042 (...Continued)

Soil Type: Clay

Groundwater Depth: > 30'

Assessment Of Environmental Problems:

Site Was Not Found To Contain Any Hazardous Wastes.

EPA ID: NYD980507412

Site ID: NY915148

Agency: STATE

HRS Score:

Location:

Site Name: O-CEL-O SPONGE PLANT

Address: 305 SAWYER AVE

City, State, Zip: TONAWANDA, NY 14150-7718

County, Region: ERIE

Type of Facility: Open Dump

Source Database: Inactive Hazardous Waste Disposal Sites Registry

Status: Remedial Action: Proposed

Owner Name: O-cel-o Sponge Co., div. of Gen. Mills

Address: 305 Sawyer Ave

Years Operated:

Project Manager:

City, State, Zip: Tonawanda , NY

Contact Phone:

Contaminants:

Contaminated Media:

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Carbon Disulfide (f005) (unknown)

Estimated Size: <1 Acres

Owner(s) During Use...: Same As Above

Operator During Use...: O-cel-o Sponge Co., div. of Gen. Mills

Operator Address...: 305 Sawyer Ave., Tonawanda, Ny

Period Associated With Hazardous Waste: From 1950's To Present

Site Description:

For At Least 30 Years, During Routine Transfers From Railroad Tank Cars To A 16,000 Gallon Above Ground Storage Tank, Carbon Disulfide Has Spilled And Has Leached Into The Surrounding Soils And Into A Drainage Swale. The Tank Had Been Installed Over 30 Years Ago And Includes A Protective Concrete Dyke With Water Blanket Overflow Weir. Over The Past 30 Years, Carbon Disulfide Apparently Has Been Washed Out Over The Weir And Has Leached Into The Surrounding Soil And Drainage Swale For Some 400 Feet. Carbon Disulfide In These Soils Was First Observed In The Fall Of 1988 During The Repair Of The Concrete Dyke. These Repairs Involved Chipping Spalled Concrete With Pneumatic Jackhammers To Establish Sound Areas Where New Cement Grout Could Be Placed. During This Jackhammering, Ignition Of The Carbon Disulfide Materials Was Noted. An Remedial Investigation Has Been Completed. In 1991 And 1992 The Soils Contaminated With Carbon Disulfide Were Excavated. The Excavation Area Includes The Drainage Swales From The Dyke Area. The Extent Of Carbon Disulfide Contamination Was Found To Be Larger Than Anticipated. Consequently This Excavation Removal Action Was Terminated And A Comprehensive Remediation Design Is Being Developed By The Prp.

Assessment Of Environmental Problems:

Potential Contamination Of Groundwater From Leaching Of Carbon Disulfide Impregnated Soils And Potential For Wetland Contamination.

Assessment Of Health Problems:

Previous Remedial Activities Have Removed Carbon Disulfide Contaminated Soils To A Level Of 1 Ppm To A Depth Of 4 To 5 Feet. Additional Remedial Measures Are Proposed That Will Prevent Exposure To Remaining Carbon Disulfide Residues. The Installation Of Additional Monitoring Wells In A Downgradient Position Will Be Necessary To Ensure That Contaminated Groundwater Does Not Migrate Off-site.

Contaminants:

Contaminated Media:

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Persulfates, Perborates, Sodium Carbonate Ammonia Compounds, Hydrogen Peroxide, Calcium Peroxide, Magnesium Urea, Pyrophosphate (100 Tons Total)

Estimated Size: 1 Acres

Owner(s) During Use...: Fmc Corporation

Operator During Use...: Fmc Corporation

Operator Address...: 34 Sawyer Avenue, Tonawanda, Ny

Period Associated With Hazardous Waste: From 1964 To 1976

Site Description:

Two And Possibly Four Waste Disposal Pits Were Utilized By The Firm For A Period Of Twelve Years. The Pits Have Been Covered And Graded. Possibly Two Of The Pits Are On Land Transferred To The Niagara Mohawk Corporation And May Have Been Buried Under A Railroad Roadbed. The Size Of Each Pit Was Estimated To Be 20 Ft. X 20 Ft. X 10 Ft. In July Of 1982 The U.s.g.s. Collected 4 Subsurface Soil Samples. Samples Were Analyzed For Iron And Zinc. Resampling Of The Site By The U.s.g.s. Took Place In May Of 1983. Organic Compounds Were Detected, But Not Quantified Due To Exceeded Holding Times. A Phase I Investigation Report Was Completed In 1990. A Preliminary Site Assessment (psa) Is Planned For 1993.

Soil Type: Silty Clay

Groundwater Depth: Unknown

Assessment Of Environmental Problems:

Waste Disposal Pits Have Been Properly Closed And The Analysis Of The Soil Samples Collected By U.s.g.s. Did Not Show Significant Concentrations Of Iron And Zinc. However, Organic Data Indicates That The Site Is Contaminated And There Is Potential For Contaminant Migration From The Site.

Address: 2716 Kenmore Ave.

City, State, Zip: Tonawanda, NY
Contact Phone:

Contaminants:

Contaminated Media:

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Phenols, Phenolic Resins (85 Tons/yr); 2) Polymerizers (unknown); 3) Carboic Acids (unknown); 4) Drummed Chemical Wastes (40 Drums, Drums Buried)

Estimated Size: 2 Acres

Owner(s) During Use...: Shanco Plastics & Chemicals

Operator During Use...: Shanco Plastics & Chemicals

Operator Address.....: 2716 Kenmore Avenue, Tonawanda, Ny

Period Associated With Hazardous Waste: From Unknown To Unknown

Site Description:

Waste Phenolic Resins Were Reportedly Buried On Site Prior To Shanco Plastics Closing In 1976. An Erie County Site Profile Report Of September 1981 Indicates That Much Of The Disposed Material Was Excavated And Removed For Off-site Disposal In 1976 And The Drummed Waste Material Which Remained Exposed, Was Disposed At The Cecos Facility In 1980. The Site Was Sampled By The U.s.g.s. In May Of 1983. One Substrate Sample Indicated 170 Ppm Phenol. A Phase I Investigation For This Site Has Been Completed. A Preliminary Site Assessment (psa) Is Underway With Additional Investigations To Be Conducted In 1993.

Soil Type: Not Known

Groundwater Depth: Not Known

Assessment Of Environmental Problems:

From The Data Available, There Seems To Be No Immediate Threat To The Environment. However, Results From The U.s.g.s. Soil Sampling Effort Indicated That Further Investigation Was Needed.

Assessment Of Health Problems:

The Site Is Located In A Mostly Commercial And Industrial Area. Wastes Buried On-site Include Drums That Were Left At The Site When Shanco Closed Its Plant In 1976. These Wastes Have Subsequently Been Removed From The Site For Proper Disposal. There Are Limited Data Available To Indicate Whether There Is Any Soil Or Groundwater Contamination At The Site. A Fence Surrounds The Site To Provide Some Access Restriction To Trespassers. The Area Is Serviced By Public Drinking Water Supply. There Are No Data Available To Indicate The Extent Of Environmental Contamination, If Any, At This Site. There Does Not Appear To Be Significant Human Exposure Pathways From This Site. Additional Sampling Of Surface Soil And Sediment Has Been Recommended To The Psa Consultant.

Estimated Size: Acres

Owner(s) During Use...: Spaulding Fibre Company

Operator During Use...: Spaulding Fibre Company

Operator Address.....: 310 Wheeler St., Tonawanda, Ny

Period Associated With Hazardous Waste: From 1930 To 1972

Site Description:

Several Lagoons Were Used To Collect Grinding Wastes Containing Phenol And Zinc Chloride. The Sludges Collected Have Reportedly Been Excavated And The Lagoons Filled With Clean Material. The U.s.g.s. Took Soil Samples In 1982 And The Analysis Shows The Presence Of Iron And Zinc Below Background Levels. No Phenols Were Found. A Phase I Investigation Was Completed In 1983. These Lagoons Will Be Investigated Further As A Rcra Facility Assessment Under Oversight By The Division Of Hazardous Substance Regulations.

Soil Type: Fill Over Dense Silty Clay, Reddish

Groundwater Depth: Unknown

Assessment Of Environmental Problems:

The Sludges Have Reportedly Been Removed And The U.s.g.s. Sampling Revealed No Contaminants Above Background Levels. Additional Investigation Will Be Conducted As A Rcra Facility Assessment Under The Division Of Hazardous Substances Regulations.

Assessment Of Health Problems:

Since The 1981 Closure The Site Has Shown No Indication Of Any Immediate Health Threat.

Contaminants:

Contaminated Media: Groundwater

Source of Contamination:

Hazardous Waste Disposed (confirmed): 1) Phenol And Solvents Containing Phenol, Formaldehyde, Dibutyl Phthalate, Aniline Oil, Toluol, Methanol, Ethyl Alcohol, Butyl Octyl Phthalate And Toluene (750 Drums)

Estimated Size: 1 Acres

Owner(s) During Use...: Spaulding Fibre Company

Operator During Use...: Spaulding Fibre Company

Operator Address.....: 310 Wheeler St., Tonawanda, Ny

Period Associated With Hazardous Waste: From 1977 To 1978

Site Description:

Spaulding Fibre Company Operated This Landfill On Their Plant Property For The Disposal Of Drummed Liquid Wastes Containing Phenolic Resins And Solvents. The Plant Property Is Bounded On Three Sides By Private Residences. Two Monitoring Wells Are In Place And Have Been Found To Contain Phenol In Excess Of Groundwater Standards. A State Superfund Phase I Investigation Was Completed In 1983. Sampling And Analysis Of Groundwater From The Monitoring Wells Will Be Continued By Spaulding Fibre And The Results Submitted To The Department For Further Evaluation And Determination For The Need Of Additional Investigation. Spaulding Is Planning To Conduct A Remedial Investigation / Feasibility Study (ri/fs) At This Site. The Study Will Include Evaluation Of The Drums, Sampling And Analysis Of Drum Contents, Soil Sampling, And The Installation And Sampling Of Overburden And Bedrock Monitoring Wells.

Soil Type: Fill Over Dense Silty Clay, Reddish

Groundwater Depth: 10 Feet

Assessment Of Environmental Problems:

Results Of The Recent Groundwater Sampling And Analysis Indicates A Concentration Of Phenol Above Groundwater Standards. More Data Based On Additional Investigation Is Necessary To Assess The Environmental Problems.

Assessment Of Health Problems:

Phenol Levels In Groundwater From On-site Monitoring Wells Exceed Nys Groundwater Standards. The Area Is Served By Public Water Supply.

FACILITY INFORMATION

City, State, Zip: Tonawanda, NY
Contact Phone:

Contaminants:

Contaminated Media:

Source of Contamination:

Hazardous Waste Disposed (suspected): 1) Grinding Wastes Containing Phenol, Zinc Chloride And Asbestos (20 Tons)

Estimated Size: 1 Acres

Owner(s) During Use...: Spaulding Fibre Company

Operator During Use...: Spaulding Fibre Company

Operator Address.....: 310 Wheeler St., Tonawanda, Ny

Period Associated With Hazardous Waste: From 1977 To 1978

Site Description:

Between 1977 And 1978 The Spaulding Fibre Company Operated This Landfill On Their Plant Property For Disposing Bagged Solid Wastes Containing Grinding Waste With Phenol, Asbestos, Glass And Zinc Chloride. This Material Has Been Double Bagged/polyethylene And Buried In Clay Pits To A Depth Of 15 Feet. The Landfill Area Is Reported To Have Been Covered Recently With An Additional Six (6) Inch Clay Cap. No Analytical Test Data Is Available Specifically For This Landfill. Samples Of Groundwater From Adjacent Monitoring Wells (for Liquid Drummed Landfill) Have Indicated Concentrations Of Phenol Higher Than Groundwater Standards. Additional investigation is Being Recommended To Address The Adequacy Of The Clay Cap As A Remedial Measure For This Site. This Site Will Be Investigated Further As A RCRA Facility Assessment Under The Division Of Hazardous Substances Regulations.

Soil Type: Fill Over Dense Silty Clay, Reddish

Groundwater Depth: 10 Feet

Assessment Of Environmental Problems:

No Analytical Data Is Available For This Site. Investigation Is Required To Evaluate The Potential Environmental Problems Associated With This Site. Investigation Will Be Conducted As A RCRA Facility Assessment Under The Division Of Hazardous Substances Regulations.

Assessment Of Health Problems:

The Buried Bags Containing Grinding Dust Lack A Route Of Exposure. However, During Remediation The Landfill Is Breached And The Plastic Bags May Rupture Resulting In Inhalation Exposure To Workers And Adjacent Community. Rupturing Of Drums Could Result In The Same Inhalation Exposure To The Workers And Adjacent Community. This Possibility Is Addressed In The Worker And Community Health And Safety Plan.

Hazardous Waste Disposed (suspected): Known
Estimated Size: 37 + Acres
Owner(s) During Use...: City Of Tonawanda
Operator During Use...: City Of Tonawanda
Operator Address.....: 150 Fillmore Ave., Tonawanda, Ny
Site Description:

A Landfill For City Refuse Which Had A Permit Issued For It On April 2, 1982. It Is Presently Only Accepting Construction And Demolition Materials. Phase I And Phase II Investigations Of This Site Have Been Completed. An Additional Field Investigation Consisting Of Sixteen Test Trenches Was Completed In 1991. Primarily Municipal Household Wastes And Construction And Demolition Debris Were Found. Closure Program For This Landfill Is Being Developed For Approval By The Dec Division Of Solid Waste.

Soil Type: Clay

Groundwater Depth: Not Known

Assessment Of Environmental Problems:

Inadequate Data To Assess Environmental Problems.

Assessment Of Health Problems:

Site Access Is Restricted By A Gate At The Entrance Road From Wales Ave. Although The Site Is Located In A Mainly Commercial/Industrial Area, There Is The Potential For Human Exposure Via Direct Contact With Waste Materials Or Contaminated Leachate, Soils And Surface Water. Off-site Exposure Could Occur Along Surface Water Drainage Ways Which May Be Impacted By Leachate Runoff. Surface Waters From The Site Are Believed To Ultimately Drain Into Ellicott Creek. Wells In The Vicinity Of The Site Are Not Used For Drinking Water Supply; The Area Is Served By A Public Water Supply.

U.S. ENVIRONMENTAL PROTECTION AGENCY

National Priority List

The NPL, or Federal Superfund as it is commonly known, is composed of the nation's most hazardous sites which require remediation. This list is created from the CERCLIS database and lists over 1150 sites nationwide. After a facility has been identified as a CERCLIS site, the EPA conducts an assessment of the property. The degree of contamination found determines whether the site is placed on the NPL or is referred to the state for further action under state programs (see State Superfund).
