**Re: Monthly Operation and Maintenance Report  
NYSDEC Site 9-15-066, Cheektowaga, New York**

Dear Mr. Loey:

On behalf of the Respondents to the Order on Consent and Settlement Agreement, Index No. B9-0381-91-8 (the “Order”), CBS Corporation (CBS) submits this monthly status report for operation and maintenance (O&M) activities at New York State Department of Environmental Conservation (NYSDEC) Site No. 9-15-066 in Cheektowaga, New York (the “Site”). Under an agreement among the Respondents, CBS is managing the Remedial Program pursuant to the Order. This report covers activities in March 2012 and transmits the discharge monitoring report for this reporting period.

**1. Site Activities and Status**

- A. On March 20, 2012, CBS submitted to NYSDEC the monthly report on the status of O&M activities at the Site for the February 2012 operating period. That status report also transmitted the discharge monitoring data for February 2012.
- B. The recovery and treatment system operated throughout March 2012.
- C. Conestoga-Rovers & Associates (CRA) conducted routine and non-routine O&M on behalf of CBS, and TestAmerica Laboratories, Inc. (TestAmerica) provided required analytical laboratory services.

- D. On March 29, 2012, on behalf of CBS, CRA submitted electronic data deliverables to NYSDEC for the Site sampling conducted in February and March 2012.

**2. Sampling Results and Other Site Data**

- A. In March 2012, the groundwater system recovered and treated an estimated 146,000 gallons.<sup>1</sup>
- B. Attachment A provides the discharge monitoring report for March 2012 based on the effluent sample collected on March 14, 2012. Attachment B includes the analytical laboratory report for this effluent sample.
- C. In reviewing the treatment system effluent monitoring information, please note the following:
- The flow data are provided via periodic on-site readings. The monthly total and maximum daily flows are calculated from these data.
  - The pH data are provided via periodic on-site readings. Effluent pH data are reported only for measurements taken while the treatment pump is operating and the system is actively discharging.
  - The reported daily maximum values (pounds per day) are calculated using the maximum (interpolated) daily flow and the results of the monthly effluent monitoring, irrespective of whether the actual maximum daily flow occurred on the day of sampling.
- D. For the March 2012 reporting period, the effluent sampling results complied with all discharge limitations.
- E. Table 1 presents the results of influent sampling, including the data from the most-recent influent sample collected on March 14, 2012. No flow was observed from Sump 001 at the time of sampling, and this latest influent sample is a composite of the influent from the 002 and 003 portions of the system only. Attachment B includes the analytical laboratory report for this influent sample.
- F. Table 2 presents the results of quarterly monitoring of well MW-32 located in Area P at the northern portion of the Site, including the most-recent sample collected on March 13, 2012. Attachment C includes the analytical laboratory report for this monitoring well sample.

---

<sup>1</sup> Based on additional information and recalculation, the estimated total discharge for February 2012 has been revised to 100,000 gallons from the 93,000 gallons indicated in the March 2012 monthly status report.

- G. Figure 1 shows target volatile organic compound (VOC) concentrations over time at well MW-32. As shown in Figure 1, total target VOC concentrations have decreased significantly at well MW-32 following the *in situ* chemical oxidation treatment that was conducted after the source removal specified in the March 1995 Record of Decision failed to result in low residual VOC concentrations at this well.

### **3. Upcoming Activities**

- A. CBS will continue required O&M activities.
- B. Following review by the Niagara Frontier Transportation Authority (NFTA), CBS will submit for NYSDEC approval a revised plan for the partial closure of the 002 system.
- C. After the partial closure of the 002 system, CRA will conduct additional water level measurements, surface water monitoring, and groundwater monitoring per the *Revised Work Plan* (Rev. 1, November 7, 2008).

### **4. Operational Problems**

- A. Previously reported operational problems associated with elevated pH, pH control, and hardness continue. These operational problems are expected to be largely resolved with the phased shutdown of the collection system and limitation of inflows to those associated with Sump 003.
- B. Previously reported operational problems associated system inflows have been lessened with the minimal flows associated with Sump 001 now that the 001 portion of the groundwater collection system has been partially closed.
- C. The post-closure monitoring data indicate that the Phase 1 closure of the 001 groundwater collection system addressed the previously observed high water levels at Sump 001, which had led to periodic overtopping of that manhole. The ongoing periodic overtopping at Sump 002 will be addressed through the partial closure of that portion of the groundwater collection system.
- D. The Phase 1 closure of the 002 system is expected to reduce the conveyance of groundwater containing VOCs via underdrains and storm sewers installed by the NFTA as part of airport development.
- E. Other operational issues are being addressed in the course of O&M activities.

Mr. David P. Locey

## Case Narrative

Client: Leo Brausch Consulting  
Project/Site: Buffalo Airport

TestAmerica Job ID: 180-9033-1

### Job ID: 180-9033-1

Laboratory: TestAmerica Pittsburgh

#### Narrative

Job Narrative  
180-9033-1

#### Receipt

All samples were received in good condition within temperature requirements.

#### GC/MS VOA

Due to the concentration of target compounds detected, sample INFLUENT (180-9033-2) was analyzed at a dilution. Elevated reporting limits (RLs) are provided.

#### Metals

No analytical or quality issues were noted.

#### General Chemistry

Due to insufficient sample volume the laboratory was unable to analyze sample EFFLUENT for laboratory pH.

## Definitions/Glossary

Client: Leo Brausch Consulting  
Project/Site: Buffalo Airport

TestAmerica Job ID: 180-9033-1

### Qualifiers

#### GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

#### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

#### General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
HF	Field parameter with a holding time of 15 minutes

### Glossary

#### Abbreviation

**These commonly used abbreviations may or may not be present in this report.**

✉	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

## Certification Summary

## Login Sample Receipt Checklist

Client: Leo Brausch Consulting

Job Number: 180-9033-1

**Login Number: 9033**

**List Source: TestAmerica Pittsburgh**

**List Number: 1**

**Creator: O'Donnell, Brandon R**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

## Case Narrative

Client: Leo Brausch Consulting  
Project/Site: Buffalo Airport

TestAmerica Job ID: 180-9004-1

### Job ID: 180-9004-1

Laboratory: TestAmerica Pittsburgh

#### Narrative

Job Narrative  
180-9004-1

#### Receipt

All samples were received in good condition within temperature requirements.

#### GC/MS VOA

Due to the concentration of target compounds detected, sample WG-18036-031312-001 (180-9004-1) was analyzed at a dilution.  
Elevated reporting limits (RLs) are provided.

#### Metals

No analytical or quality issues were noted.

## Definitions/Glossary

Client: Leo Brausch Consulting  
Project/Site: Buffalo Airport

TestAmerica Job ID: 180-9004-1

### Qualifiers

#### GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
E	Result exceeded calibration range.

#### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

### Glossary

#### Abbreviation

**These commonly used abbreviations may or may not be present in this report.**

☒	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

## Certification Summary

**7**

Notes/ Special Requirements:

All Samples in Cooler must be on COC

TAT Required in business days (use separate COCs for different TATs):

 1 Day  2 Days  3 Days  1 Week  2 Week  Other: 1 Day  2 Days  3 Days  1 Week  2

## Login Sample Receipt Checklist

Client: Leo Brausch Consulting

Job Number: 180-9004-1

**Login Number: 9004**

**List Source: TestAmerica Pittsburgh**

**List Number: 1**

**Creator: Gamber, Tom**

Question	Answer	Comment	
Radioactivity either was not measured or, if measured, is at or below background	N/A		1
The cooler's custody seal, if present, is intact.	True		2
The cooler or samples do not appear to have been compromised or tampered with.	True		3
Samples were received on ice.	True		4
Cooler Temperature is acceptable.	True		5
Cooler Temperature is recorded.	True		6
COC is present.	True		7
COC is filled out in ink and legible.	True		8
COC is filled out with all pertinent information.	True		9
Is the Field Sampler's name present on COC?	True		10
There are no discrepancies between the sample IDs on the containers and the COC.	True		11
Samples are received within Holding Time.	True		12
Sample containers have legible labels.	True		
Containers are not broken or leaking.	True		
Sample collection date/times are provided.	True		
Appropriate sample containers are used.	True		
Sample bottles are completely filled.	True		
Sample Preservation Verified.	True		
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True		
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True		
Multiphasic samples are not present.	True		
Samples do not require splitting or compositing.	True		
Residual Chlorine Checked.	N/A
