270 Michigan Avenue
Buffalo, NY 14203-2999

**Re: Quarterly Progress Report, January through March 2014
NYSDEC Site 9-15-066, Cheektowaga, New York**

Dear Mr. Loey:

On behalf of CBS Corporation (CBS) and the Niagara Frontier Transportation Authority (NFTA), CBS submits this progress report on activities undertaken in during the first quarter of 2015 at New York State Department of Environmental Conservation (NYSDEC) Site No. 9-15-066 in Cheektowaga, New York (the Site) pursuant to the Order on Consent and Settlement Agreement, Index No. B9-0381-91-8, entered with NYSDEC (the Order). Under agreements among the Respondents to the Order, CBS is managing the Remedial Program, including the closure and post-closure monitoring related to the Operable Unit 2 (OU2) groundwater collection and treatment system. This progress report also provides the results from the second round of post-closure groundwater and surface water (storm sewer) monitoring.

1. Site Activities and Status

- A. On January 15, 2015, CBS submitted to NYSDEC a monthly report on the status of activities at the Site in December 2014.¹
- B. On January 28, 2015, CBS submitted to NYSDEC the final closure report for the Operable Unit 2 collection and treatment system. This report documents

¹ Via email dated January 15, 2015, NYSDEC agreed that the frequency of progress reporting could be reduced from monthly to quarterly.

the activities conducted between July and November 2014 to close the collection system and dismantle and remove the treatment plant.

- C. On April 1, 2015, Conestoga-Rovers & Associates (CRA) conducted the second round of quarterly post-closure groundwater and surface water (storm sewer) sampling.²
- D. TestAmerica Laboratories, Inc. (TestAmerica) completed the analyses of the groundwater and surface water (storm sewer) samples that were collected on April 1, 2015. CRA conducted data validation and usability evaluations.

2. Sampling Results and Other Site Data

- A. Table 1 presents the results of the April 2015 groundwater sampling, as well as the results from the prior round of post-closure sampling (*i.e.*, November and December 2014). As shown in this table, none of the monitored constituents was detected at concentrations above their respective remedial action objectives, except for vinyl chloride at well MW-32 located in the northern portion of the Site.
- B. Tables 2 through 4 present the results of the April 2015 surface water (storm sewer) sampling, as well as the results from the prior round of post-closure sampling (*i.e.*, November 2014) and from the baseline sampling (*i.e.*, July 2014). Sampling locations are shown in Figure 1. As indicated in these tables, low constituent concentrations are evident in the area of the 001 segment of the former collection system and the western portion of the 003 segment (*i.e.*, Manholes MH-3B and MH-3C). Higher (and variable) constituent concentrations are present in the area of the 002 segment and the eastern portion of the 003 segment (*i.e.*, Manhole MH-3A). Additional rounds of data are needed to assess trends in post-closure constituent concentrations in surface water.
- C. Attachments A and B provide the analytical laboratory reports for the groundwater and surface water samples collected in April 2015, respectively.
- D. Attachment C provides the data validation and usability evaluation for the samples collected in April 2015.

² Because of adverse winter weather conditions and accumulated snow, the first quarter 2015 groundwater and storm sewer sampling could not be conducted April 1, 2015.

Mr. David P. Locey

May 10, 2015

Page 3

3. Upcoming Activities

- A. CBS will continue the quarterly OU2 post-closure groundwater and surface water monitoring.
- B. As analytical data are developed and evaluated, CRA will submit electronic data deliverables (EDDs) for incorporation of Site data into the NYSDEC EQuIS database.³

4. Technical and Schedule Issues

- A. There are no unresolved technical or operational issues affecting the OU2 post-closure groundwater and storm sewer monitoring.

We trust this submittal satisfies your requirements at this time. If you have questions regarding this status report or other project matters, please do not hesitate to contact me.

Respectfully submitted,

Leo M. Brausch
Consultant/Project Engineer
Environmental Remediation

Narrative

Job Narrative 180-42633-1

Receipt

The samples were received on 4/2/2015 10:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.6° C.

GC/MS VOA

Surrogate recovery for the following samples was outside the upper control limit: WG-18036-040115-SG-001 (180-42633-1), WG-18036-040115-DJT-004 (180-42633-4), WG-18036-040115-SG-005 (180-42633-5), WG-18036-040115-DJT-006 (180-42633-6), WG-18036-040115-SG-009 (180-42633-9) and WG-18036-040115-SG-011 (180-42633-11). As the recoveries were high and the samples were non-detect, all results were reported.

Metals

Due to sample matrix effect on the internal standard (ISTD), a dilution was required for the following sample: WG-18036-040115-SG-011 (180-42633-11). The reporting limits have been adjusted accordingly.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery exceeds the control limits

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

D	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Method Summary

Client: Leo Brausch Consulting
Project/Site: Buffalo Airport

TestAmerica Job ID: 180-42633-1

Method	Method Description	Protocol	Laboratory
624	Volatile Organic Compounds (GC/MS)	40CFR136A	TAL PIT
200.7 Rev 4.4	Metals (ICP)	EPA	TAL PIT

Protocol References:

40CFR136A = "Methods for Organic Chemical Analysis of Municipal Industrial Wastewater", 40CFR, Part 136, Appendix A, October 26, 1984 and subsequent revisions.
EPA = US Environmental Protection Agency

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative 180-42657-1

Receipt

The samples were received on 4/2/2015 10:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.4° C and 3.4° C.

GC/MS VOA

Due to the concentration of target compounds detected, several samples were analyzed at a dilution. Elevated reporting limits (RLs) are provided.

Internal standard (ISTD) response for TBA-d9 for the following sample was outside acceptance criteria: TB-18036-040115-001 (180-42657-12). This ISTD does not correspond to any of the requested target compounds; therefore, the results have been reported.

Metals

Due to sample matrix effect on the internal standard (ISTD), several samples were analyzed at a dilution. Elevated reporting limits (RLs) are provided.

The laboratory control sample (LCS) for batch 180-137705 recovered high and outside the control limits for the following analytes: cadmium. This analyte was biased high in the LCS and any sample that was non-detect or had cadmium detected between the MDL and the RL was reported. The samples that had cadmium detected above the RL were re-analyzed along with the LCS.

General Chemistry

The relative percent difference between the TSS results for sample WS-18036-040115-011 (180-42657-11) and the duplicate of this sample was outside of the control limits.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
E	Result exceeded calibration range.
F1	MS and/or MSD Recovery exceeds the control limits

Metals

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits
F1	MS and/or MSD Recovery exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.
F3	Duplicate RPD exceeds the control limit
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: Leo Brausch Consulting
Project/Site: Buffalo Airport

TestAmerica Job ID: 180-42657-1

Laboratory: TestAmerica Pittsburgh

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Authority	Program	EPA Region	Certification ID	Expiration Date

MEMORANDUM

To: Leo Brausch [lbrausch@consolidated.net], Jim Kay REF. No.: 018036

FROM: Paul McMahon/adh/1 fm DATE: April 22, 2015

**RE: Analytical Results and Reduced Validation
Surface Water and Groundwater Sampling
CBS Corporation Airport Site – Cheektowaga, New York
April 2015**

1.0 Introduction

The following document details a reduced validation of analytical results for surface water and groundwater samples collected at the Cheektowaga, New York Site on April 1, 2015. Samples were submitted to TestAmerica (TA), located in Pittsburgh, Pennsylvania. A sample collection and analysis summary is presented in Table 1. A summary of the analytical methodology is presented in Table 2.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, duplicate data, recovery data from surrogate spikes, laboratory control samples (LCS), matrix spikes (MS), and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and applicable guidance from the documents entitled:

- i) "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review", United States Environmental Protection Agency (USEPA) 540 R 10 011, January 2010
- ii) "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review", USEPA 540 R 08 01, June 2008
- iii) "Groundwater and Surface Water Monitoring Program Quality Assurance Project Plan", September 2014

Items i) and ii) will subsequently be referred to as the "Guidelines" in this Memorandum.

2.0 Sample Holding Time and Preservation

The sample holding time criteria for the analyses are summarized in Table 2. Sample chain of custody documents and the analytical report were used to determine sample holding times. All samples were analyzed within the required holding times except pH. pH is a field parameter, and the associated laboratory results were qualified as estimated (see Table 3).

All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

3.0 Laboratory Method Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

Most method blank results were non-detect, indicating that laboratory contamination was not a factor for this investigation. Methylene chloride and lead were in the method blanks; all associated sample results with similar detections were qualified as non-detect (see Table 4).

4.0 Surrogate Spike Recoveries - Volatile Organic Compound Analyses

In accordance with the method employed, all samples, blanks, and QC samples analyzed for organics are spiked with surrogate compounds prior to sample analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for volatile organic compound (VOC) determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis.

Surrogate recoveries were assessed against laboratory control limits. Most surrogate recoveries met the criteria, demonstrating acceptable analytical accuracy. Several high 1,2-dichloroethane-d4 recoveries were reported for the groundwater analyses. All associated sample results were non-detect and were not impacted by the indicated high bias.

5.0 Laboratory Control Sample Analyses

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCSs were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

VOC Analyses

The LCS contained all compounds of interest. All LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

Inorganic Analyses

The LCS contained all analytes of interest. LCS recoveries were assessed per the "Guidelines". All LCS recoveries were within the control limits, demonstrating acceptable analytical accuracy.

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analyses

To evaluate the effects of sample matrices on the measurement procedures and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision. If the original sample concentration is significantly greater than the spike concentration, the recovery is not assessed.

MS/MSD analyses were performed as specified in Table 1. The laboratory performed additional MS/MSD analyses internally.

VOC Analyses

The MS/MSD samples were spiked with all compounds of interest. All MS/MSD recoveries and RPDs were within the laboratory control limits, demonstrating acceptable analytical accuracy and precision with the exception of the sample results presented with qualifiers in Table 5.

Metals Analyses

The MS/MSD samples were spiked with all analytes of interest. MS/MSD recoveries and RPD recoveries were assessed per the "Guidelines". All MS/MSD recoveries and RPDs demonstrated acceptable analytical accuracy and precision with the exception of the sample results presented with qualifiers in Table 5.

7.0 Duplicate Sample Analyses – Inorganic Analyses

Analytical precision is evaluated based on the analysis of laboratory duplicate samples. For this study, duplicate samples were prepared and analyzed by the laboratory as specified in Table 1 and internally. The duplicate results were evaluated per the "Guidelines". Most duplicate analyses performed were

acceptable, demonstrating acceptable analytical precision. One total suspended solids (TSS) analysis did indicate some variability, and the associated sample result was qualified as estimated (see Table 6).

8.0 Field QA/QC Samples

The field QA/QC consisted of two trip blank samples and two field duplicate sample sets.

Trip Blank Sample Analysis

To evaluate contamination from sample collection, transportation, storage, and analytical activities, two trip blanks were submitted to the laboratory for VOC analysis. All results were non-detect for the compounds of interest.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, two field duplicate sample sets were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the practical quantitation limit (PQL), the evaluation criterion is one time the PQL value.

Most field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision. The TSS analysis did indicate some variability, and the associated sample results were qualified as estimated (see Table 7).

9.0 Analyte Reporting

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the PQL but greater than the MDL were qualified as estimated (J) unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL.

10.0 Conclusion

Based on the assessment detailed in the foregoing, the data are acceptable with the noted qualifications. These qualifications have been applied to the electronic files provided by the laboratory.

TABLE 2

**SAMPLE HOLDING TIMES CRITERIA AND ANALYTICAL METHODS SUMMARY
GROUNDWATER AND SURFACE WATER MONITORING PROGRAM
CBS CORPORATION AIRPORT SITE
CHEEKTOWAGA, NEW YORK
APRIL 2015**

<i>Parameter</i>	<i>Matrix</i>	<i>Analytical Method</i>	<i>Collection to Analysis</i>
Total Metals	Water	200.7 ⁽¹⁾	180 Days
Volatile Organic Compounds	Water	624 ⁽²⁾	14 Days
pH	Water	SM 4500 H+ B ⁽³⁾	Immediate
Total Suspended Solids	Water	SM 2540D ⁽³⁾	7 Days
