## 1. INTRODUCTION

This report is an addendum to the draft Remedial Investigation - Volume II, Site Characterization Report (RI) for Tennessee Gas Pipeline Company Compressor Station 229 in Eden, New York (Ecology and Environment, Inc. [E & E] 1991) submitted to the New York State Department of Environmental Conservation (NYSDEC) on August 2, 1991. It details a supplemental sampling activity (Phase IIC) conducted in order to determine or better define the presence of polychlorinated biphenyls (PCBs) and other substances in soils and sediments at specified locations on and near the site.

This addendum includes site characterization activities that are consistent with the Work Plan for the Remedial Investigation/Feasibility Study at Compressor Station 229, Eden, New York (Environ 1990) and the Site Characterization (SCP) Plan for Compressor Stations in New York (E & E 1990).

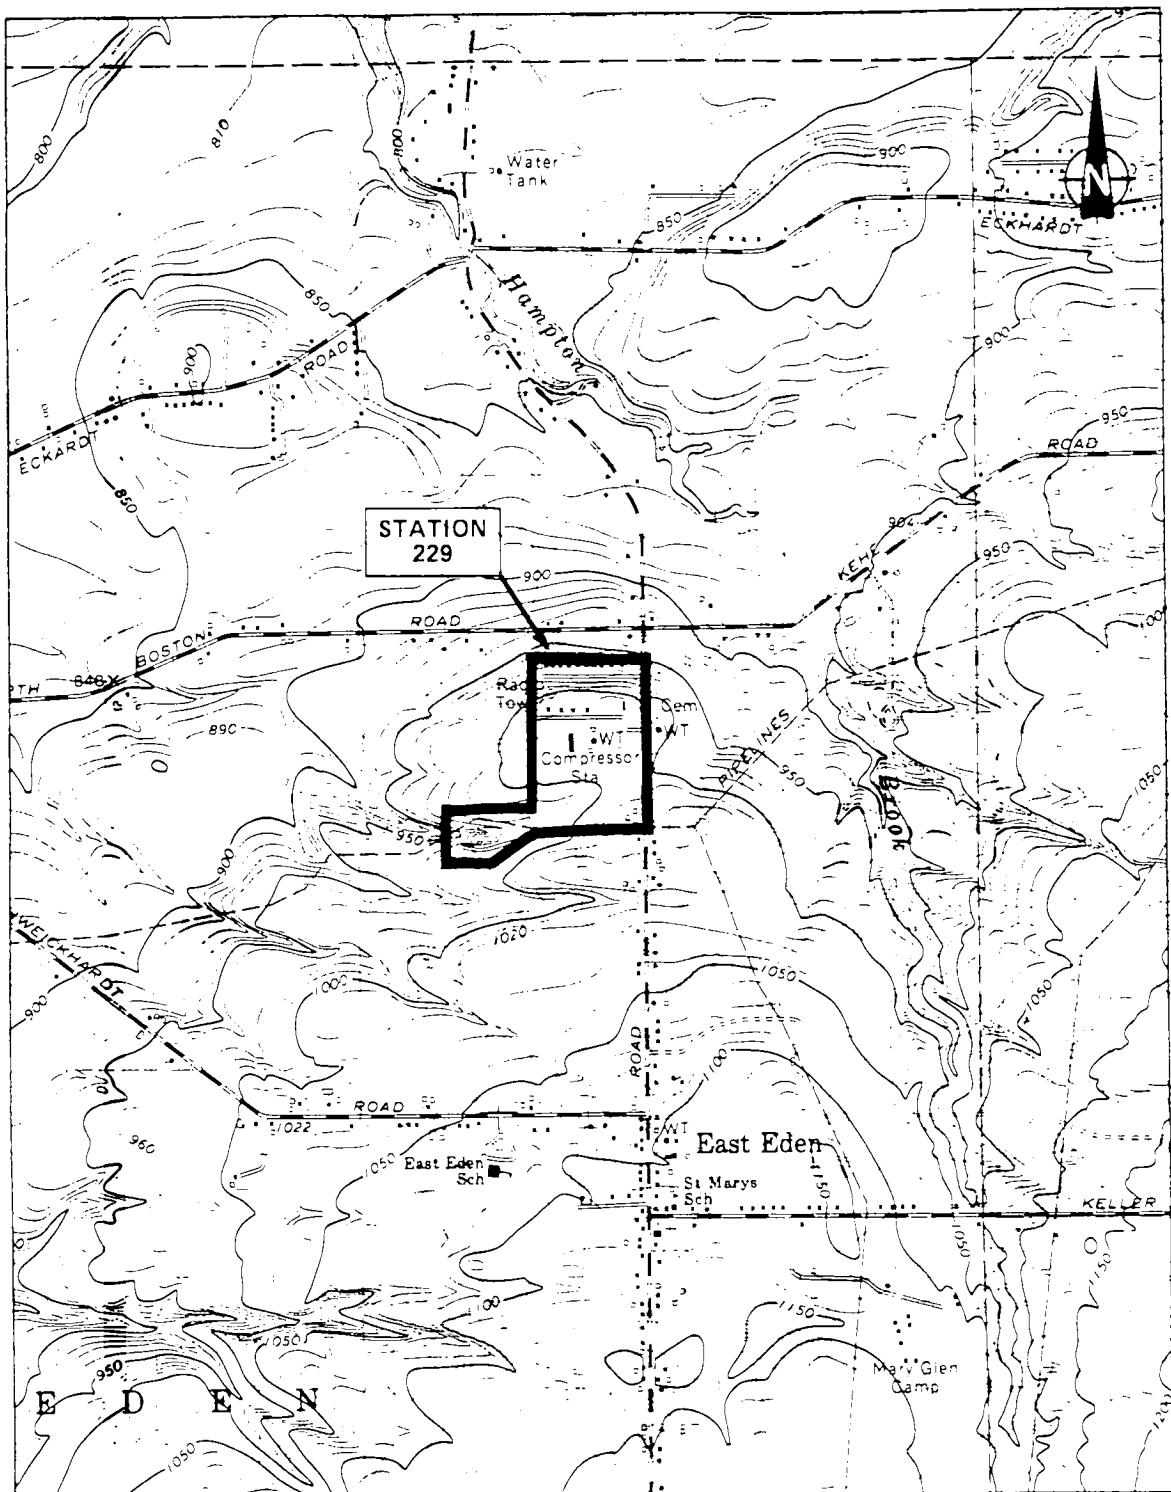

Phase IIC sampling consisted of the collection of 32 surface soils, 13 subsurface soils, and eight sediment samples for PCB-only analysis. Twenty-eight soil samples were collected from boreholes and analyzed for base/neutral and acid extractable (BNA) compounds, total petroleum hydrocarbons (TPHs), and benzene, toluene, ethylbenzene, and xylenes (BTEX) compounds. All samples were analyzed in accordance with the protocols contained in the Quality Assurance Project Plan (QAPP) (E & E 1990). In accordance with the QAPP, analytical procedures for PCB-only analysis of soil samples were modified to be consistent with the data quality objectives.

Selected information presented in the RI report is repeated in this addendum as an aid to assess the sampling effort. For a more complete discussion, the RI report should be reviewed.

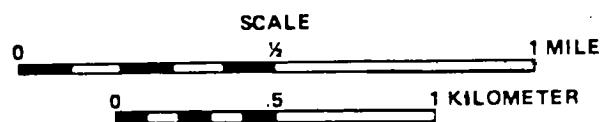

To avoid confusion, oversized drawings (provided separately) are numbered consistent with those of the RI report.

## 2. STATION LOCATION AND LAYOUT

Tennessee's Station 229 is located in Erie County south of the village of Hamburg, New York (see Figure 2-1). The station occupies approximately 50.5 acres along East Eden Road in the town of Eden. The primary operations portion of the station consists of one compressor building that houses six natural gas compressor engines, one auxiliary building that houses the air compressors, and one area that contains air receiver tanks (ARTs) and associated piping (see Figure 2-2). In addition to these operational facilities, the compressor station includes several other buildings used to support the gas compression operation including a pipeline warehouse, shop, equipment garage, office, and three meter station facilities.

### **3. FIELD INVESTIGATION**

#### **3.1 WORK PLAN SUMMARY**

E & E developed two field manuals in October 1991 for the activities required at Compressor Station 229. The scope of work identified in the manuals included the collection of soil-boring samples near Drainage Ditch B, and the sampling of areas recommended by NYSDEC following submittal of the draft RI report.

Due to shallow bedrock formations, split-spoon refusal was encountered at five of the eight borehole locations. The scope of work was subsequently modified for the soil borings collected near Drainage Ditch B. As a result, less samples were taken than were originally planned.

#### **3.2 FIELD WORK SUMMARY**

Phase IIC field work activities involved sampling near the fenceline, in the pipe racks area, along and near Drainage Ditch B, the off-site pond, Tributary Area, and areas previously characterized during the grid sampling effort. Borehole samples from Drainage Ditch B were collected on October 16, 1991. Soil and sediment sampling was conducted on November 8, 14, and 15, 1991.

All sampling was performed in accordance to the SCP and shipped to E & E's Analytical Services Center. Duplicate samples were collected and submitted for PCB analysis for the purpose of QA/QC review of the data set.

##### **3.2.1 Fenceline**

Sampling of the fenceline consisted of the collection of 10 soil samples which were submitted for PCB analysis. All samples were

collected from ten nodes located in an area along the western fenceline. Samples from nodes E13 through E22 were collected from the 0- to 6-inch depth interval. In addition to the 10 samples, one duplicate sample was collected and submitted for PCB analysis for the purpose of QA/QC review of the data set.

Fenceline nodes and their corresponding sample numbers and depths are identified in Section 4.

### **3.2.2 Pipe Racks Area**

Sampling of the Pipe Racks Area consisted of the collection of six soil samples which were submitted for PCB analysis. All samples were collected from six nodes located in grassy portions of the Pipe Racks Area. Samples from nodes 01 through 06 were collected from the 0- to 6-inch depth interval. Pipe Racks Area nodes and their corresponding sample numbers and depths are identified in Section 4.

### **3.2.3 Drainage Ditch B**

Sampling of Drainage Ditch B consisted of the collection of five soil samples which were submitted for PCB analysis. All samples were collected from five nodes located along Drainage Ditch B near the separator pond. Samples from nodes G13 through G16 were collected from the 0- to 6-inch depth interval; the sample from node G10 was collected from the 6- to 12-inch depth interval. In addition to the five samples, one duplicate sample was collected and submitted for PCB analysis for the purpose of QA/QC review of the data set.

Drainage Ditch B nodes and their corresponding sample numbers and depths are identified in Section 4.

### **3.2.4 Off-Site Pond**

Sampling of the off-site pond consisted of the collection of five sediment samples which were submitted for PCB analysis. All samples were collected from five nodes located along the centerline of the pond. Samples from nodes 19 through 23 were collected from the 0- to 6-inch depth interval.

Off-site pond nodes and their corresponding sample numbers and depths are identified in Section 4.

### **3.2.5 Tributary Area**

Sampling of the Tributary Area consisted of the collection of 22 soil and three sediment samples which were submitted for PCB analysis. All samples were collected from 18 nodes located along the Tributary of Eighteen Mile Creek. Samples from nodes 121 through 133 were collected from the 0- to 6-inch depth interval; samples from nodes 108, 109, 113, 114, and 121 through 126 from the 6- to 12-inch depth interval; and samples from nodes 108, 110, and 113 from the 12- to 24-inch depth interval. In addition to the 25 samples, three duplicate samples were collected and submitted for PCB analysis for the purpose of QA/QC review of the data set.

Tributary Area nodes and their corresponding sample numbers and depths are identified in Section 4.

### **3.2.6 Grid Sampling**

Grid sampling consisted of the collection of two soil samples which were submitted for PCB analysis. Both samples were collected from nodes located west of the station lake. The samples from nodes Q22 and R22 were collected from the 0- to 6-inch depth interval. In addition to the two samples, one duplicate sample was collected and submitted for PCB analysis for the purpose of QA/QC review of the data set.

Grid sampling nodes and their corresponding sample numbers and depths are identified in Section 4.

### **3.2.7 Drainage Ditch B Boreholes**

Additional borehole sampling was conducted as part of the soil investigation and included the drilling of eight boreholes in the area along Drainage Ditch B. A total of 28 samples was collected from the boreholes at 2-foot intervals where possible. These borehole samples were analyzed for BNAs, TPHs, and BTEX compounds.

In addition to the 28 samples, three duplicate samples were collected and submitted for BNA, TPH, and TPH analyses for the purpose of QA/QC review of the data set.

Drainage Ditch B borehole locations and their corresponding sample numbers and depths are identified in Section 4.

#### 4. RESULTS OF THE SAMPLING PROGRAM

This section presents the analytical results for the Phase IIC soil samples, borehole samples, and sediment samples collected from the tributary and off-site pond. For the purposes of this report, detection limits for PCBs using the procedures listed in 40 CFR 136, Appendix B are set at 1 mg/kg for soil and 0.1 mg/kg for sediments. PCBs not present above detection limits in the samples are shown in the data summary tables as ND. All results are presented in the data summary tables at the end of this section.

All results in the data summary tables are reported and qualified with a "B" if the compound was also present in the laboratory method blank. The results are further qualified and discussed in Section 5.

##### 4.1 FENCELINE

Ten soil samples were analyzed for PCBs. PCBs were present in eight of the 10 samples at concentrations ranging from 1.3 mg/kg to 450 mg/kg of Aroclor 1254.

Table 4-1 summarizes the PCB analytical results for samples taken from the fenceline. Figure 3-2 (separate, oversized) shows the locations of the Phase IIC fenceline samples.

##### 4.2 PIPE RACKS AREA

Six soil samples were analyzed for PCBs. PCBs were present in four of the six samples at concentrations ranging from 1.8 mg/kg to 13 mg/kg of Aroclor 1254.

Table 4-2 summarizes the PCB analytical results for samples taken from the Pipe Racks Area. Figure 3-2 (separate, oversized) shows the locations of the Phase IIC Pipe Racks Area samples.

#### **4.3 DRAINAGE DITCH B**

Five soil samples were analyzed for PCBs. PCBs were present in two of the five samples at concentrations of 3.4 mg/kg and 16 mg/kg of Aroclor 1254.

Table 4-3 summarizes the PCB analytical results for samples taken from Drainage Ditch B. Figure 3-2 (separate, oversized) shows the locations of the Phase IIC Drainage Ditch B samples.

#### **4.4 OFF-SITE POND**

Five sediment samples were analyzed for PCBs. PCBs were present in all five samples at concentrations ranging from 0.44 mg/kg to 0.71 mg/kg of Aroclor 1254.

Table 4-4 summarizes the PCB analytical results for samples taken from the off-site pond. Figure 3-4 (separate, oversized) shows the locations of the Phase IIC off-site pond samples.

#### **4.5 TRIBUTARY AREA**

Twenty-two soil samples and three sediment samples were analyzed for PCBs. PCBs were present in 13 soil samples at concentrations ranging from 3.4 mg/kg to 290 mg/kg of Aroclor 1254. The sample from node 110 contained 180 mg/kg of Aroclor 1248. PCBs were also present in one sediment sample at a concentration of 0.22 mg/kg of Aroclor 1254.

Table 4-5 summarizes the PCB analytical results for samples taken from the Tributary Area. Figure 3-4 (separate, oversized) shows the locations of the Phase IIC Tributary Area samples.

#### **4.6 GRID SAMPLING**

Two soil samples were analyzed for PCBs. PCBs were not present above detection limits in either sample.

Table 4-6 summarizes the PCB analytical results for Phase IIC grid samples. Figure 3-1A (separate, oversized) shows the locations of the Phase IIC grid samples.

#### 4.7 DRAINAGE DITCH B BOREHOLES

Drainage Ditch B borehole sampling consisted of the collection of 28 samples which were submitted for BNA, volatiles, and TPH analysis. All samples were collected from eight boreholes located along Drainage Ditch B. BNA analysis indicated the presence of polynuclear aromatic hydrocarbons (PAHs) above detection limits in two samples from BH06 and BH07. Both samples were collected from the 0- to 24-inch depth interval. Sample C006 contained a total PAH concentration of 79,740 µg/kg; sample C009 contained a total PAH concentration of 18,970 µg/kg.

Eleven of the 28 samples were found to contain total petroleum hydrocarbons (TPHs) at levels above detection limits. Concentrations ranged from 6,200 µg/kg to 110,000 µg/kg.

Volatile analysis included testing for the presence of BTEX compounds. Benzene was present above detection limits in three of the 28 samples. Concentrations ranged from 0.28 µg/kg to 5.3 µg/kg in samples from BH06 and BH07.

Toluene was present above detection limits in four of the 28 samples. Concentrations ranged from 0.15 µg/kg to 6.3 µg/kg in samples from BH06, BH07, and BH08.

Ethylbenzene was present above detection limits in three of the 28 samples. Concentrations ranged from 0.69 µg/kg to 9.3 µg/kg in samples from BH06 and BH07.

Total xylenes were present above detection limits in three of the 28 samples. Concentrations ranged from 1.5 µg/kg to 41 µg/kg in samples from BH06 and BH07.

Tables 4-7 through 4-9 summarize the analytical results for samples taken from the Drainage Ditch B boreholes. Figure 3-2 (separate, oversized) shows the locations of the borehole samples.

## 5. QUALITY ASSURANCE/QUALITY CONTROL (QA/QC)

### 5.1 INTRODUCTION

This section summarizes the results of the review process used to evaluate laboratory and field data quality, reliability, and validity for Station 229 Phase IIC samples. Data review was performed by E & E quality assurance chemists utilizing Functional Guidelines for Evaluating Organic/Inorganic Analyses (EPA 1988). Compliance to the QA/QC criteria specified in the QAPP was also evaluated.

### 5.2 LABORATORY QUALITY CONTROL

#### 5.2.1 PCB-Only Analysis

All samples upon which this report is based were analyzed within the appropriate holding times. No laboratory contamination was detected in any of the method blanks associated with these samples. All surrogate spike recoveries were within acceptable limits. All matrix spike and matrix spike duplicates were within acceptable limits.

#### 5.2.2 BTEX, BNA, and TPH Analysis

All samples upon which this report is based were analyzed within the appropriate holding times. No laboratory contamination was detected in any of the method blanks associated with these samples. All surrogate spike recoveries were within acceptable limits. All matrix spike and matrix spike duplicates were within acceptable limits.

Laboratory precision was evaluated based on the replicate TPH analysis of sample C023. The first analysis of C023 yielded a result of ND, whereas the second yielded a result of 19,000 µg/kg. Due to this inconsistency, the TPH results for the borehole samples are qualified as

estimated and flagged with a J. A result of ND is flagged with UJ indicating that the detection limit is an estimated quantity.

During the analysis of sample C012, a matrix interference obscured the raw data preventing an accurate calculation of the toluene, ethylbenzene, and total xylene concentrations. The results for these analytes in sample C012 have been qualified as estimated and flagged with a J.

### 5.3 FIELD QUALITY CONTROL

#### 5.3.1 PCB-Only Samples

Three soil sample rinsate blanks were prepared and analyzed for PCBs. The results are presented in Table 5-1. No PCBs were detected in any of the rinsate blanks.

Six soil sample duplicate pairs were collected and analyzed for PCBs. The results for these field duplicates are presented in Table 5-3. Aroclor 1254 was detected in sample C086 and its duplicate C087. Aroclor 1254 was detected in duplicate sample C076; however, it was not detected in the original sample C075. The RPD value of 120% is greater than the 35% maximum stated in the QAPP. In this particular case, Aroclor 1254 was present in both the original sample and its duplicate. The presence of Aroclor 1254 is, therefore, certain. However, the numerical value of 45 mg/kg for sample C086 is quantitatively questionable and should be used as an approximate value.

Based on an assessment of field quality control parameters, decontamination procedures were effective, and proper sampling techniques were consistently employed.

#### 5.3.2 BTEX, BNA, and TPH Samples

Two soil sample rinsate blanks were prepared and analyzed for BNA compounds. The results are presented in Table 5-2. No organic compounds were present above detection limits in either of the blanks, indicating that no cross-contamination occurred between sampling events.

One trip blank (C038) was prepared and analyzed for BTEX and BNA compounds. The results for this sample are presented in Tables 5-4 and 5-5. None of these analytes were detected in trip blank C038, indicating that no contamination of the samples occurred during transport.

Four soil sample duplicate pairs were collected and analyzed for TPHs, BTEX compounds, and BNAs. These results are presented in Tables 5-6 through 5-8. TPHs were detected in the duplicate samples (C011 and C021), but were not detected in the original samples (C010 and C020). As discussed in Section 5.2.2, all of the TPH results have been qualified as estimated due to the replicate analysis results. This may be one explanation for the difference between the TPH results for the field duplicate pairs. Investigation of the borings collected indicate another possible explanation. Since the soils collected consisted of fragmented shale and clay, it was difficult to homogenize the samples (see Appendix A). In light of this, it should be assumed that TPHs are present and that concentrations can only be estimated.

Based on an assessment of field quality control parameters, decontamination procedures were effective, and proper sampling techniques were consistently employed.

## DRILLING LOG of BORING No. BH05

Page 1 of 1

State	NEW YORK	Start Date	10/16/91
Location	EDEN	Completion Date	10/16/91
Drilling Firm	E & E DRILLING	Ground Elevation	1001.54
Type of Drill	DIEDRICH D-50	Total Depth of Boring	9.0'
Driller	PAUL BARTH		
Geologist	JOHN DOERR		

Elev.	Depth	Description	Lithology	Sample No. and Symbol	Blow Count	Remarks
1001.54		Ground Surface				
	0.0'-0.4'	SILTY LOAM (OL): dark brown, moist, organic debris (roots, grass), minor pebbles		C001		Auger Run 1: 0.0'-5.0' 4.5' recovery. OVA: 7.0 ppm.
	0.4'-1.0'	SILTY CLAY (CL): light gray, moist, minor rock fragments, horizontal shearing		C002		Sample from 0.0'-2.0': TG-C001-0229-0080
	1.0'-1.1'	FILL: moist, bedded gravel-shale		C003		Sample from 2.0'-4.0': TG-C002-0229-0080
	1.1'-5.0'	SILTY CLAY (CL): red-brown, moist, minor pebbles, vertical fracturing		C003		Auger Run 2: 5.0'-9.0' 3.3' recovery. Refusal at 9.0'.
	5.0'-5.1'	SILTY CLAY (CL): as above, wet		C004		Sample from 4.0'-6.0': TG-C003-0229-0080
995	5.1'-7.0'	FILL: brown, wet, finely shattered shale, sand, clay		C004		Sample from 5.0'-8.0': TG-C004-0229-0080
	7.0'-9.0'	SILTY CLAY (CL): brown grading down to gray, wet, plastic		C005		Sample from 8.0'-9.0': TG-C005-0229-0080
	9					All samples analyzed for BTEX/BNA/TPH.

Key:

\*Sample description is divided into four columns:

Column 1: Type

C = Composite  
D = Discrete

Column 2: QA/QC

D = Duplicate  
F = Field Blank  
N = Not a QA/QC Sample

Column 3: Lab

E = E & E ASC  
S = Subcontractor Lab

Column 4: Analysis

PCB = Polychlorinated biphenyls  
TCL = Target Compound List.  
TPH = Total petroleum hydrocarbons.

Source: Ecology and Environment, Inc. 1992.

QUALITY CONTROL FOR ACCURACY AND PRECISION:  
PERCENT RECOVERY AND RELATIVE PERCENT DIFFERENCE (RPD)  
OF SEDIMENT MATRIX SPIKE (MS) AND MATRIX SPIKE DUPLICATE (MSD)  
(Sample # 26565)

9102.765

(mg/kg)

Parameter	Original Result	Amount Added		Amount Determined		Percent Recovery		
		MS	MSD	MS	MSD	MS	MSD	RPD
PCB-1248	ND	1.7	1.7	1.5	1.5	88	88	0

ND = NOT DETECTED

C-210

QUALITY CONTROL FOR ACCURACY: PERCENT RECOVERY  
FOR SPIKED SEDIMENT SAMPLES

9102.765

(mg/kg)

E & E  
Laboratory

Parameter	No. 91- Spiked Blank	Original	Amount	Amount	Percent
		Value	Added	Determined	Recovery
PCB-1248	ND	1.7	1.4	82	

ND = NOT DETECTED

C-211

QUALITY CONTROL FOR ACCURACY: PERCENT RECOVERY  
OF HEXABROMOBENZENE SURROGATE SPIKES

9102.765

(mg/kg)

E & E Laboratory No. 91-	Amount Added	Amount Determined	Percent Recovery
26560	0.83	0.51	61
26561	0.83	0.52	63
26562	0.83	0.44	53
26563	0.83	0.52	63
26564	0.83	0.65	78
26565	0.83	0.64	77

These recoveries are within E & E quality control limits (37-138%).
