Re: Mr. C's Dry Cleaners Site, Contract # D003493-27.5, Site # 9-15-157
July 2005 Operations, Maintenance, and Monitoring Report

Dear Mr. Chiusano:

Ecology and Environment Engineering, P.C. (EEEPC) is pleased to provide this July 2005 Operation, Maintenance, and Monitoring (OM&M) Report for the Mr. C's Dry Cleaners Site, NYSDEC Site # 9-15-157, located in East Aurora, New York. Copies of weekly inspection reports from EEEPC's subcontractor O&M Enterprises, Inc. (OMEI) are provided as Attachment A. Selected pages from the individual analytical data packages prepared by Severn - Trent Laboratories (STL) are provided as Attachments B. All analytical results for the report were analyzed at the lowest detection limits in accordance with the method standard. Remedial treatment system utility costs are provided as Attachment C.

In review of the on-site treatment system operations, monitoring and maintenance for July 2005, EEEPC offers the following comments and highlights:

Operational Summary

- The treatment system was operational for approximately 97% of the period between 7/6/05 and 8/01/05. Table 1 is provided to indicate the monthly operational time of the treatment equipment from the time of system startup.
- The effluent totalizer readings for the month of July 2005 indicate that approximately 1,283,302 gallons of groundwater were processed through the treatment system from 7/6/05 through 8/01/05. Table 2 provides a summary of groundwater volume treated since system start-up. Historical volumes are based on totalizer readings provided by the O&M subcontractor's weekly inspection forms.
- Increased filter change out frequency recommended in July 2005 Operational Summary was implemented. Filters in the influent bag filter unit were replaced during weekly inspections on 7/11/05, 7/18/05, 7/25/05 and 8/01/05.

Mr. Dave Chiusano, Project Manager

August 5, 2005

Page 2 of 3

- Checklists for weekly system inspections from OMEI are provided as Attachment A for 7/6/05, 7/11/05, 7/18/05, 7/25/05 and 8/01/05. Weekly system checks indicated that the air stripper differential pressure was between 17 and 22 inches of water during the month of July 2005. Maintaining the differential pressure of the stripper trays between 17 and 30 inches of water is critical for treated effluent to be in compliance with the discharge criteria.
- OMEI continues the process of optimizing a feed rate for the new sequestering agent. An initial feed rate of 5mg/L during the period of 7/6/05 to 7/18/05 was decreased to 2mg/L by 7/25/05. The last recorded feed rate was 2mg/L on 8/01/05.
- Results of waste rydlime sample for pH was 1.21 and is presented in Analytical Data page 14 of 29. Waste will be sent off site for disposal once Clean Harbors approves the waste profile for disposal.
- The fresh air ductwork to the air stripper collapse as noted in July 6, 2005 Weekly Summary Report was due to high indoor temperatures (>120 deg F.) and the blower ductwork being unsupported. The system was restored and operational the same day after switching to Blower #2. All piping repairs and new supports were completed by 7/11/05.
- Effluent water meter temporarily out of service due to scale build up was cleaned and restored to service. High/low temperature alarms for building have been installed and are now functional discrete components of the Autodialer. The unit was reconfigured to directly indicate which active alarm initiates a call.
- Original pump and controller in RW-1 and controller remain in place. A larger pump controller needs to be installed to handle a higher horsepower pump. System is remains operational. Change out to a larger (higher amperage) pump will occur at an O&M visit in August.
- Creek discharge sampling data for Tannery Brook is included in the report for the first time. The results of 3.3 $\mu\text{g}/\text{L}$ are below the compliance levels of 10 $\mu\text{g}/\text{L}$. Analytical results are included in Appendix B.
- A copy of the site utility costs from EEEPC operations from October 2004 to date is provided as Attachment C.

Analytical Summary - Groundwater

- EEEPC and OMEI personnel collected samples of influent and effluent groundwater for the reporting period 7/6/05 to 8/1/05 on July 6, 2005 as part of the normal O&M services. At the request of the Department the lowest possible method detection limits were used for the analysis. The analytical results for the July 2005 sampling events are presented in Table 3.
- The July 2005 analytical results indicate that the treated groundwater effluent was below the site specific Effluent Discharge Limitation Requirements for all compounds including PCE. A comparison between the July 2005 analytical results and the Effluent Discharge Limitation Requirements for the site are provided in Table 4.

Mr. Dave Chiusano, Project Manager

August 5, 2005

Page 3 of 3

- Approximately 16.7 pounds of VOCs were removed from the influent groundwater based on calculations using the effluent discharge analytical results during the reporting period. A summary of the calculated lbs of volatile organic compounds by month and by date are located in Table 5. These values are calculated based on effluent totalizer readings and assumes that non-detect values given in the analytical data package = 0 µg/L and that the monthly samples are indicative of the influent characteristics and system performance for the entire reporting period.
- The Agway/Matrix system remains in operation since start up in April 2005. OMEI continues to review the system operations on a weekly basis. All air sparge points continue to be functional except for one point in the north area of the field.
- EEEPC plans to purge and sample the onsite wells on the Agway property in September 2005 to evaluate the specific remedial cleanup.

If you have any questions regarding the July 2005 O&M report summary submitted, please call me at 716-684-8060.

Very Truly Yours,

Michael G. Steffan
Project Manager
Ecology and Environment Engineering, P. C.

Table 3
Mr. C's Dry Cleaners Site Remediation
NYSDEC Site #9-15-157
July 2005 VOC Analytical Summary

Compound	July 6, 2005		
	Influent Concentration ($\mu\text{g/L}$)	Effluent Concentration ($\mu\text{g/L}$)	Cleanup Efficiency (%)
Acetone	ND (<250)	4.6	NA
2-Butanone	ND (<250)	ND	NA
Methylene chloride	37 J	ND	NA
Methyl tert-butyl ether	ND (<50)	ND	NA
Tetrachloroethene	1500	0.91 J	99.94%
Toluene	ND (<50)	ND	NA
Trichloroethene	38 J	0 J	100.00%
Total Xylenes	ND (<150)	ND J	NA

July TOTAL (in $\mu\text{g/L}$) = 1575.0 5.51

Notes:

1. "NA" = Not applicable
2. "ND" = Non-detect and lists the detection limit in parentheses
3. "J" indicates an estimated value below the practical quantitation limit but above the method detection limit.
4. Non-detect values are assumed to be equal to zero for calculation of monthly average

o-Xylene ³	5	µg/L	NA
m, p-Xylene ³	10	µg/L	NA
Total Xylenes	NA	ug/L	NA
Iron, total	600	µg/L	NA
Aluminum	4,000	µg/L	NA
Copper	48	µg/L	NA
Lead	11	µg/L	NA
Manganese	2,000	µg/L	NA
Silver	100	µg/L	NA
Vanadium	28	µg/L	NA
Zinc	230	µg/L	NA
Total Dissolved Solids	850	mg/L	NA
Total Suspended Solids	20	mg/L	NA
Hardness	N/A	mg/l	463
Cyanide, Free	10	µg/L	NA

NOTES:

1. "Daily Maximum" excerpted from Attachment E of Addendum 1 to the Construction Contract Documents.
2. Analytical report did not differentiate between o-Xylene and m, p-Xylene. Total Xylene value reported is given in each line.
3. Shaded cells indicate that analytical value exceeds the "Daily Maximum"
4. "ND" indicates that the compound was not detected and lists the practical quantitation limit in parentheses.
5. "NA" indicates that analyses were not performed and data is unavailable.
6. Average flows based on effluent readings taken July 6, 2005 through August 1, 2005. Total gallons 1,283,302 divided by 26 operating days.
7. "J" indicates an estimated value.
8. "B" indicates analyte found in the associated blank.

 Indicates non-compliance with the effluent discharge requirements

June 2005 ⁹	6/6/05 - 7/6/05	1126	12	8.16
July 2005 ⁹	7/6/05 - 8/1/05	1575	5.90	16.80
Total pounds of VOCs removed from inception =				912.34

NOTES:

1. Calculations are based on monthly water samples and assumes samples are representative of the entire reporting period.
2. Calculations assume that non-detect values = 0 $\mu\text{g/L}$.
3. Total VOCs summations include estimated "J" values.
4. Calculations are based on effluent totalizer readings.
5. "Influent VOCs" and "Effluent VOCs" values given above is the summation of values for individual compounds given in monthly analytical reports.
6. No samples were collected in September 2003. August 2003 values are used.
7. Treatment system operated by Tyree Organization, Ltd. from 9/02 to 9/03.
8. Treatment system operated by O&M Enterprises from 10/03 to present.
9. Average influent and effluent concentrations used for December 2004.

CONVERSIONS:

1 pound = 453.5924 grams

1 gallon = 3.785 liters

Pounds of VOCs removed calculated by the following formula:

$$(1575 \mu\text{g/L} - 5.90 \mu\text{g/L}) * (1 \text{ g}/10^6 \mu\text{g}) * (1 \text{ lb}/453.5924 \text{ g}) * 1,283,302 \text{ gallons} * (3.785 \text{ L/gallon}) \sim 16.8 \text{ lbs}$$

where 1,283,302 gallons is the monthly process water volume.

Other observations:

Upon arriving at the treatment plant yesterday morning (7/5/05) I found the plant to be extremely hot, the 16 inch air duct from the blower to the stripper tray had melted and collapsed under it own weight. There wasn't much I felt I could do without new duct work so I preceeded to change out the pump in RW-1. After installing the new pump in RW-1 (which is one size larger than the pump that has been in the well) I realized that a larger controller was also needed. M. Steffan returned my calls to him around 12:00 so I informed him of the problems. Reinstalled the old pump in RW-1. Removed the motor from the compressor in the Agway system (it had failed sometime in the last week also. Called to order a new drum of Redux 380 as there is appr. 15 gallons left. Removed the melted duct work from blower 1 and decided that I may be able to start the system using blower 2, made the necessary adjustments and started the system. The first time the influent pump turned on the duct work on the downstream side of the stripper tray blew off and soapy foam(???) came out. I shut down the system then opened a viewing port on the stripper tray and turned on the influent pump to see what was happening inside the stripper tray. The water was foaming up on the top tray and after a very short period of time the blower would start blowing the foam out of the exhaust of the stripper. The foam I would assume is because of a high doseage of Redux 380. Left site off for the night. (7/5/05)

Describe any other system maintenance performed

7/6/05 Started the system leaving the sequestering pump off, filled the influent tank to dilute the Redux 380 as much as possible then turned on the influent pump. This worked as the system was back operational by appr. 10:30. Did waterlevel measurement then took the monthly samples, also sampled the leftover Rdylime for pH and per Mike Steffan took effluent samples at the outfall also. Changed filters.

Other observations: _____
Found effluent water meter not functioning , removed meter from water line and
cleaned it , there was some scale which had been pumped from the stripper tray
jamming up the impeller of the water meter. Operating as designed now.

Checked the three manholes on the effluent water line running north from the site
along Whaley Avenue, found all of them to be full of water, no scheen or odor.

Describe any other system maintenance performed

Changed filter.

NON-CONFORMANCE SUMMARY

Job#: A05-6985

STL Project#: NY5A9393.3

Site Name: Ecology and Environment NYSDEC Standby

General Comments

The enclosed data have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A05-6985

Sample Cooler(s) were received at the following temperature(s); 6.0 °C
All samples were received in good condition.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Date: 07/28/2005

Dilution Code Definition:

- 002 - sample matrix effects
- 003 - excessive foaming
- 004 - high levels of non-target compounds
- 005 - sample matrix resulted in method non-compliance for an Internal standard
- 006 - sample matrix resulted in method non-compliance for Surrogate
- 007 - nature of the TCLP matrix
- 008 - high concentration of target analyte(s)
- 009 - sample turbidity
- 010 - sample color
- 011 - insufficient volume for lower dilution
- 012 - sample viscosity
- 013 - other

DATA COMMENT PAGE

ORGANIC DATA QUALIFIERS

- ND or U Indicates compound was analyzed for, but not detected at or above the reporting limit.
- J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
- C This flag applies to pesticide results where the identification has been confirmed by GC/MS.
- B This flag is used when the analyte is found in the associated blank, as well as in the sample.
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- D This flag identifies all compounds identified in an analysis at the secondary dilution factor.
- N Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
- P This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on the data page and flagged with a "P".
- A This flag indicates that a TIC is a suspected aldol-condensation product.
- 1 Indicates coelution.
- * Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

- ND or U Indicates element was analyzed for, but not detected at or above the reporting limit.
- J or B Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
- N Indicates spike sample recovery is not within the quality control limits.
- K Indicates the post digestion spike recovery is not within the quality control limits.
- S Indicates value determined by the Method of Standard Addition.
- M Indicates duplicate injection results exceeded quality control limits.
- W Post digestion spike for Furnace AA analysis is out of quality control limits (85-115%) while sample absorbance is less than 50% of spike absorbance.
- E Indicates a value estimated or not reported due to the presence of interferences.
- H Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
- * Indicates analysis is not within the quality control limits.
- + Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.
