Re: Mr. C's Dry Cleaners Site, Contract # D004180, Site # 9-15-157
May 2004 O&M Report

Dear Mr. Chiusano:

Ecology and Environment Engineering, P.C. (E&E) is pleased to provide this May 2004 Operation and Maintenance (O&M) Report for the Mr. C's Dry Cleaners Site, Site # 9-15-157, located in East Aurora, New York. Copies of weekly inspection reports from E&E's subcontractor O&M Enterprises (OME) are provided as Attachment A. The analytical data package from E&E's Analytical Services Center from May 3, 2004 and May 17, 2004 are provided as Attachments B and C. All analytical results for the report were analyzed at the lowest detection limits.

In review of the on-site treatment system operation, E&E offers the following comments and highlights:

Operational Summary

- One system shutdown occurred on Thursday, 5/17/04 at approximately 5:30 PM, caused by low airflow in the air stripper. Since the auto dialer was being repaired offsite, the shutdown was not relayed to the E & E office personnel responsible for relaying the message to the appropriate E & E technical staff. No periodic checks were performed during this shutdown until O & M provided services on Monday, May 24, 2004. No groundwater pumping or treatment occurred during this period.
- O & M representative Rick Becken re-installed the repaired auto dialer on 5/24/04. During O & M services, Rick Becken soaked up condensation water collected in a drip tray located underneath the filter units.
- The system was operational for 73.7% of the period between 04/26/04 and 05/24/04. Table 1 is provided to indicate the monthly operational time of the treatment equipment from the time of system startup.
- The monthly May 2004 influent totalizer indicates that approximately 1,408,095 gallons of groundwater were processed through the treatment system from 04/26/04 to 05/24/04. Table 2 provides a summary of groundwater volume treated to date. Historical volumes are based on influent totalizer readings provided by the previous contractor's weekly inspection forms.

Table 1
Mr. C's Dry Cleaners Site, Site # 9-15-157
Monthly Operational Uptime of the Treatment Equipment

Month (reporting hours)	Operational Up-time (%) ¹
September 2002 (576)	100%
October 2002 (744)	99.33%
November 2002 (720)	93.41%
December 2002 (744)	80.65%
January 2003 (744)	59.15%
February 2003 (672)	63.39%
March 2003 (744)	82.39%
April 2003 (720)	100%
May 2003 (744)	100%
June 2003 (720)	90.0%
July 2003 (744)	100%
August 2003 (744)	100%
September 1-4, 2003 (96)	100%
October 22 -29, 2003 (168)	100%
October 29 - November 25, 2003 (648)	99%
November 25 - December 29, 2003 (816)	100%
December 29, 2003 – January 26, 2004 (672)	100%
January 26, 2004 – February 24, 2004 (696)	100%
February 24, 2004 – March 29, 2004 (816)	99.97%
March 29, 2004 – April 26, 2004 (672)	99.70%
April 26, 2004 – May 24, 2004 (696)	73.7%

¹ Based on total hours for the month in the reporting period.

Treatment system operated by the Tyree Organization Ltd. From 9/02 - 9/03.

Treatment system operated by O&M Enterprises from 10/03 - present.

- Piezometer measurements were collected on 05/03/04 at the time of compliance sampling. These readings are provided in the weekly inspection reports provided in Attachment A. Due to the presence of a car parked above the well cap, a measurement was not collected at piezometer PZ-1C. Due to unforeseen circumstances, a measurement was also not collected at piezometer PZ-1D. The result of all piezometers measured indicate that a cone of depression still exists around all of the groundwater pumping wells that were able to be measured.
- Filters in the bag filter unit were replaced on 05/03/04, 05/10/04, 05/17/04 and 05/24/04 with 100-micron and 50-micron filters in series. Flow rate dramatically increased as a result. The sequestering agent metering pump was turned off on 1/19/04 to help determine if it is contributing to the binding of the filters and has been off since that time. System evaluation is still being performed. Report of results to be submitted with the June 2004 report.
- The GFCI duplex outlet was replaced due to its sub par performance from standard testing.

- The auto dialer was removed May 17, 2004 and shipped back to the manufacturer for repairs. The unit was covered under warranty.
- The words 'sanitary sewer' were ground off the pumping well manhole covers at five locations.
- Checklists for weekly system inspections are provided as Attachment A for 05/03/04, 05/10/04, 05/17/04, and 05/24/04. Weekly system checks indicate that all operating equipment appear to be operating within normal ranges.
- A copy of the site utility costs from E & E operations starting October 2003 to date has been provided as Attachment D.

Analytical Summary - Groundwater

- E&E and OME personnel sampled influent and effluent groundwater on Monday, May 3, 2004. The groundwater samples were analyzed for volatile organic compounds (VOCs), metals, total suspended solids (TSS), total dissolved solids (TDS), and hardness. At the request of the Department the lowest possible detection limits were used for the analysis. The air samples were analyzed for VOCs only. The results are discussed below.
- Methyl tert-butyl ether (MTBE) (32.6 µg/L), cis-1,2-Dichloroethene (8.20 µg/L) and Tetrachloroethene (2600 µg/L) were the only VOCs detected in the influent groundwater during the May 3, 2004 sampling event. During the May 3, 2004 sampling event, Methyl tert-butyl ether (MTBE) (3.00 µg/L) and Tetrachloroethene (10.3 µg/L) were the only VOCs detected in the effluent groundwater samples. The concentration of Tetrachloroethene in the effluent groundwater (10.3 µg/L) exceeded the Daily Maximum Effluent Discharge Compliance Concentration of 10.0 µg/L listed on Table 3. As discussed with Rick Becken, he recommended decreasing the influent groundwater flow to allow the air stripper to work more efficiently with a smaller volume of water, since the blower speed cannot be adjusted and the damper is open full. He also mentioned the idea of sampling the groundwater roughly an hour after restarting the system after changing out filters to see if this affects the results in a positive way. Although the May 3, 2004 analytical results indicate that the concentrations of VOCs in the groundwater have risen since the April 12, 2004 sampling event, historical analytical data from previous months indicate that the VOC concentrations in the groundwater have improved overall.
- A comparison between the May 3, 2004 analytical values and the Effluent Limitation Requirements are set forth in Table 3.
- Approximately 30.9 pounds of VOCs were collected in the influent groundwater, as calculated in Table 4. These values are calculated based on influent totalizer readings and assumes that non-detect values given in the analytical data package = 0 µg/L and that the monthly samples are indicative of the influent characteristics and system performance for the entire month of May 2004.
- The treated groundwater effluent results for metals were all in compliance with the Effluent Limitation Requirements, with the exception of total iron, which appeared in the effluent groundwater in a concentration of 910 µg/L, which exceeds the Daily Maximum Effluent Discharge Compliance concentration of 600 µg/L. TSS was in compliance while TDS returned above the compliance concentration of 850 mg/L with an actual concentration of

Mr. David Chiusano, Project Manager

June 10, 2004

Page 4 of 4

1400 mg/L during the month of May 2004. E&E continues to believe that the elevated levels of TDS stem from the high metals concentrations in the groundwater, which are not currently being removed by the treatment system.

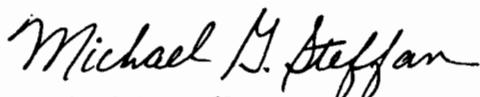

- Mid-month compliance sampling was performed on May 17, 2004 on the effluent discharge as a result of previous non-compliance excursions of PCE in January and February 2004. These samples were analyzed for the normal list of contaminants including VOC's, TSS, TDS, and hardness. Results of this analysis are compared to the Effluent Limitations Requirements as provided in Table 3.

Analytical Summary - Air

- E&E and OME personnel sampled the air stripper exhaust before and after the granular activated carbon (GAC) vessels on May 3, 2004. Air samples were collected using pre-evacuated SUMMA canisters calibrated to continuously collect a one-hour sample.
- The only VOC detected in the influent air samples was Tetrachloroethene (681 ppbv), whereas no VOCs were detected in the effluent air samples. The results stated above and in Table 5 indicate approximately 100% VOC adsorption in the GAC vessels. Assuming that the blowers are only operational 50% of the total reporting period time, this efficiency calculates to approximately 1.88 lbs of VOCs removed during the May 2004 reporting period. All other VOCs were below the detection limit.
- Evaluation of the usefulness of the GAC vessels will be performed after the June 2004 Analytical Results are reviewed.

If you have any questions regarding the O&M report summary submitted, please call me a 716-684-8060

Very Truly Yours,

Michael G. Steffan
Project Manager

August 2003 ⁶	7/29/03 - 8/25/03	1263	3	21.5
September 2003 ⁶	8/25/03 - 10/22/03	1263	3	3.9
October 2003 ⁷	10/22/03 - 10/29/03	1693.69	1.47	1.0
November 2003 ⁷	10/29/03 - 11/25/03	2510.83	4.4	4.7
December 2003 ⁷	11/25/03 - 12/29/03	503.3	10.5	6.2
January 2004 ⁷	12/29/03 - 01/26/04	3667	15.8	21.0
February 2004 ⁷	01/26/04 - 02/24/04	3348.6	26.7	20.4
March 2004 ⁷	02/24/04 - 03/29/04	1939.3	4.96	34.9
April 2004 ^{7,8}	03/29/04 - 04/26/04	2255	0.0	32.8
May 2004 ^{7,8}	4/26/2004 - 5/24/2004	2641	13.3	30.9
Total pounds of VOCs removed from inception =				689.2

NOTES:

1. Calculations are based on monthly water samples and assumes samples are representative of the entire period.
2. Calculations assume that non-detect values = 0 ug/L.
3. Calculations are based on influent totalizer readings.
4. "Influent VOCs" and "Effluent VOCs" values given above is the summation of values for individual compounds given in monthly analytical reports.
5. No samples were collected in September 2003. August 2003 values are used.
6. Treatment system operated by Tyree Organization, Ltd. from 9/02 to 9/03.
7. Treatment system operated by O&M Enterprises from 10/03 to present.
8. Based on the May 3, 2004 analytical results.

CONVERSIONS:

1 pound = 453.5924 grams

1 gallon = 3.785 liters

concentration (ug/L)*(1g/106ug)*(1 lb/453.5924 g)*monthly volume (gallons)*(3.785 L/gallon)~lbs

Pounds of VOCs removed calculated by the following formula:

$$2641 \text{ ug/L} * (1g/10^6 \text{ ug}) * (1 \text{ lb}/453.5924 \text{ g}) * 1,408,095 \text{ gallons} * (3.785 \text{ L/gallon}) \sim 30.9 \text{ lbs}$$

where, 2641 ug/L is the summation of VOC's detected on the influent groundwater and 1,408,095 gallons is the monthly process water volume.

trans-1,2-Dichloroethene	96.94	<100	<5.00	NA	0.0	0	0.00	0	0.00	0.00
trans-1,3-Dichloropropene	110.97	<100	<5.00	NA	0.0	0	0.00	0	0.00	0.00

TOTAL = 1.88

Flowrate = 318.1966062 scfm = 9.011327888 m^3/min = 540.6796733 m^3/hour
 Monthly hours of operation = 336 hours (arbitrary value used for comparison purposes)^(*)
 Pressure = 1 atm = 101300 Pa = 1013 millibars
 Assumed stack temp = 68 F = 20 C = 293 K
 Gas Constant, R = 0.08314 $\text{mb}\cdot\text{m}^3/\text{K}\cdot\text{mol}$

- Notes
1. "J" values are included in above calculations
 2. "J" values are an estimated value indicating that the compound was detected by the laboratory below the practical quantitation limit, but above the method detection limit.
 3. Less than values (<) list the practical quantitation limit and indicate that the compound was not detected.
 4. Above calculations assume that non-detect values (<) = 0 $\mu\text{g}/\text{m}^3$
 5. All other compounds were non-detect.
 6. 500 SCFM is the assumed average influent flowrate, based on weekly manometer readings
 7. NA = Not Applicable
 8. Revised calculation based on the following equation:
 9. Assuming that blowers are only operating 50% of the total monthly reporting period time.

$$\text{concentration in } \frac{\mu\text{g}}{\text{m}^3} = \frac{pM}{RT} * \text{concentration in ppm}$$

Where,
 T is temperature in degrees Kelvin
 p is pressure in millibars
 R is the gas constant
 M is the molecular weight

Conversions
 1 cubic foot = 0.02832 cubic meters
 1 g = 1,000,000 μg
 1 lb = 453.5924 grams
 degrees C = (degrees F - 32)/1.8
 degrees K = degrees C + 273.16
 1 atm = 101,300 Pascals

System Inspection Form**

Describe any other system maintenance performed

Changed filters, after filter change the influent flow rate increased to 109.5 gpm.

Emptied condensation water from spill tray under the filter units, approximately 2 gallons of water was soaked up and dumped into the sump.

Checked the electrical boxes found them all in good shape and dry.

System Inspection Form**

Other observations:

According to the control panel the system shutdown on Monday 5/17/04 at appr. 5:30 pm due to a low air flow in the stripper, because the autodailer was in for repairs nobody knew about the shutdown. Total influent flows do not indicate shutdown for what is essentially the entire week as totalizer readings are only appr. 150,000 gallons less than the previous week.

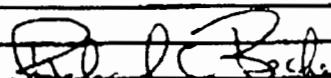

Describe any other system maintenance performed

Changed filters, flow increased to 100.63 gpm. Reinstalled the repaired autodailer.

Soaked up condensation water from drip tray under the filter units.

Purchased filters.

RE: Mr. C's Dry Cleaners
CostPoint ID: **000699.NY06.04..**

Work Order No.: **0405005**

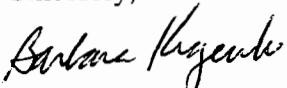

Dear Mr. Mike Steffan,

Analytical Services Center received 4 samples on Monday, May 03, 2004 for the analyses presented in the following report.

E & E will retain the samples addressed in this report for 30 days, unless otherwise instructed by the client. If additional storage is requested, the storage fee is \$1.00 per sample container per month, to accrue until the client authorizes sample destruction.

This report is not to be reproduced, except in full, without the written approval of the laboratory.

Sincerely,

Barbara Krajewski
Project Manager

Client: E AND E BUFFALO
Project: Mr. C's Dry Cleaners
Lab Order: 0405005

CASE NARRATIVE

GCMS VOLATILES

A DB624 column from J&W that is 30-m long, 0.53 mm wide, and has a 3-um film thickness was used for the volatile analyses. A 30-cm TEKMAR #5 Trap was used for the volatile analyses consisting of approximately 1 cm of OV-1 packing, approximately 8 cm of Tenax, approximately 8 cm of silica gel, and approximately 8 cm of activated charcoal.

Sample analysis

Aqueous volatile samples were determined to be at a pH of 7.

Samples were analyzed within hold time.

Sample AS INFLUENT required reanalysis at a 100-fold dilutions due to the level of tetrachloroethene present. Results reported for this sample are from the analysis within calibrated range.

Dilution factors applied to air samples indicate reduced sample volume was used for analysis. Sample GAC INFLUENT was reanalyzed using lesser volumes due to the levels of target compounds detected. All results from both analysis of sample GAC INFLUENT are reported in order to provide RPD results for their laboratory duplicate analysis.

Calibration and Tunes

Initial and continuing calibrations are acceptable.

QC

Surrogate recoveries are within acceptable limits.

Method blank analyses were acceptable. Trichlorofluoromethane was detected in the air method blank at concentrations between the method detection limit and reporting limit. No corrective action was required.

Laboratory control sample (LCS) recoveries are acceptable.

Air sample duplicate (DUP) RPD values are acceptable.

Internal standard area responses are acceptable.

METALS

Sample Analysis

The samples were digested and analyzed within hold time.

Calibrations

Calibration of the ICP utilizes a zero and one non-zero standard to determine the linear equation for quantitation. A low concentration standard (PQL) is analyzed at the reporting level.

The initial and continuing calibrations are acceptable.

QC

Client: E AND E BUFFALO
Project: Mr. C's Dry Cleaners
Lab Order: 0405005

CASE NARRATIVE

The calibration and preparation blank analyses are acceptable.

The matrix spike/spike duplicate (MS/MSD) recoveries and RPD values are within the control limits.

The laboratory control sample (LCS) recoveries are within the control limits.

MERCURY

Sample Analysis

The samples were digested and analyzed within hold time.

Calibrations

The initial and continuing calibrations were acceptable.

QC

The calibration and preparation blank analyses are acceptable. The preparation blank contains mercury at a level between the method detection limit and the reporting limit.

The matrix spike/spike duplicate (MS/MSD) recoveries and RPD value are within the control limits.

The laboratory control sample (LCS) recovery are within the control limits.

GENERAL ANALYTICAL CHEMISTRY

Sample Analysis

Samples were analyzed for cyanide one day after hold time expired. Initial attempts to analyze within hold time were unsuccessful due to poor control sample recoveries.

Analysis for other parameters was completed within hold time.

Calibrations

Initial and continuing calibration standards are acceptable.

QC

Calibration and method blank analyses are acceptable.

Matrix duplicate, matrix spike, and matrix spike duplicate results are acceptable except for a high TSS duplicate RPD value and low cyanide spike recoveries. The CN MS and MSD are both low at 13 and 60%. The acceptable range is 82-122%.

Laboratory control sample (LCS) recoveries are acceptable except the low concentration cyanide LCS is high at 114%. The acceptable range is 90-110%.

HT From: C-Collection / R- Receipt(VTSR) / P-Prep / T-TCLP Prep

* "Analyzed" reflects the analysis date and time or injection time for analytical tests. For preparation tests "Analyzed" reflects the start of the preparation except when "AFCEE criteria used"; flag indicates date and time of completion of the preparation.
For TCLP/SPLP Extractions and subsequent preparation tests... "Analyzed" reflects the date of TCLP/SPLP Extraction/preparation. For Re-extracted (RE) samples: Preparation tests completed dates reflects the extraction from the original sample leachate unless an "RE" Sample exists for the extraction (tumble) test.

RE: Mr. C's Dry Cleaners
CostPoint ID: **000699.NY06.05..**

Work Order No.: **0405192**

Dear Mr. Mike Steffan,

analytical Services Center received 1 sample on Monday, May 17, 2004 for the analyses presented in the following report.

E & E will retain the samples addressed in this report for 30 days, unless otherwise instructed by the client. If additional storage is requested, the storage fee is \$1.00 per sample container per month, to accrue until the client authorizes sample destruction.

This report is not to be reproduced, except in full, without the written approval of the laboratory.

Sincerely,

Barbara Krajewski

Barbara Krajewski

Project Manager

Laboratory Results

NYS ELAP ID#: 10486

Phone: (716) 685-8080

Client: E AND E BUFFALO

Project: Mr. C's Dry Cleaners

Lab Order: 0405192

CASE NARRATIVE

GCMS VOLATILES

A DB 624 column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

Sample analysis

The volatile sample were determined to be at a pH of 7.

The sample was analyzed within hold time.

Calibration and Tunes

Initial and continuing calibrations are acceptable.

No manual integrations were required.

QC

Surrogate recoveries are within acceptable limits.

Method blank analysis is acceptable. Acetone was detected in the method blank at a concentration between the method detection limit and the reporting limit.

Matrix spike/spike duplicate (MS/MSD) recoveries and RPD values are acceptable.

Laboratory control sample (LCS) recoveries are acceptable.

Internal standard area responses are acceptable.

METALS

Sample Analysis

The sample was digested and analyzed within hold time.

Calibrations

Calibration of the ICP utilizes a zero and one non-zero standard to determine the linear equation for quantitation. A low concentration standard (PQL) is analyzed at the reporting level.

The initial and continuing calibrations are acceptable.

QC

The calibration and preparation blank analyses are acceptable. The preparation blank contains zinc at a level between the method detection limit and the reporting limit.

The matrix spike/spike duplicate (MS/MSD) recoveries and RPD values are within the control limits.

The laboratory control sample (LCS) recoveries are within the control limits.

MERCURY

Sample Analysis

LIMS Version #:

3.1.11.14 - 6/2/2004 5:30:00 PM

Batch #: JUN 04, 2004 to 50-47 (PM)

Client: E AND E BUFFALO
Project: Mr. C's Dry Cleaners
Lab Order: 0405192

CASE NARRATIVE

The sample was digested and analyzed within hold time.

Calibrations

The initial and continuing calibrations are acceptable.

QC

The calibration and preparation blank analyses are acceptable.

The matrix spike/spike duplicate (MS/MSD) recoveries and RPD value are within the control limits.

The laboratory control sample (LCS) recovery is within the control limits.

GENERAL ANALYTICAL CHEMISTRY

Sample Analysis

Samples were analyzed within hold time.

Calibrations

Initial and continuing calibration standards are acceptable.

QC

Calibration and method blank analyses were acceptable.

Matrix duplicate, matrix spike, and matrix spike duplicate results are acceptable.

Laboratory control sample (LCS) recoveries are acceptable.

Client:	MN. C'S		

A. Preliminary Examination and Receipt Phase				Circle One
1. Did coolers come with airbill or packing slip?	Circle carrier here and print airbill number below: Fed Ex Airborne Client Other <i>E+E</i>			Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA
Shipped as high hazard or dangerous goods?				Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA
2. Did cooler(s) have custody seals?	AC 5-17-04			Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA
3. Were custody seals unbroken and intact on receipt?				Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA
4. Were custody seals dated and signed?				Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA
5. How was package secured? Not secured	Fiberglass Tape			Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA

B. Unpacking Phase					
6. Date cooler(s) opened:	5-17-04	Cooler(s) opened by:	<i>Scratch Clean</i> (Signature)	SC	5-17-04
7. Was a temperature blank vial included inside cooler(s)?				Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA	
Please Record Temperature Vial or Cooler Temperature for Each Cooler, Range (2° - 6°C)*					
Airbill No.	Temp. °C	Airbill No.	Temp. °C	Airbill No.	Temp. °C
	2.0				
Thermometer No.: 129	Correction Factor: 0.0	*If temperature is outside of acceptable range, prepare a PM Notification form indicating affected containers.			
8. Were the C-O-C forms received?				Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA	
C-O-C forms numbers if present:					
9. Was enough packing material used in cooler(s)?				Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA	
Type of material: <input type="checkbox"/> Vermiculite <input type="checkbox"/> Bubble Wrap <input type="checkbox"/> Other				Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA	
10. If cooling was required, what was the means (type ice) of cooling used: <input checked="" type="checkbox"/> Wet <input type="checkbox"/> Dry <input type="checkbox"/> Blue <input type="checkbox"/> Other				Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA	
11. Were all containers sealed in separate plastic bags?				Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA	
12. Did all containers arrive unbroken and in good condition?				Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA	
13. Interim storage area if not logged:					
In: Date _____	Time _____	Signature _____			
Out: Date _____	Time _____	Signature _____			

C. Login Phase			
Samples Logged in By Signature: <i>MM</i>	Date: 5/17/04		
14. Were all container labels complete (e.g. date, time preserved)?	Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA		
15. Were all C-O-C forms filled out properly in black ink and signed?	Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA		
16. Did the C-O-C form agree with containers received?	Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA		
17. Were the correct containers used for the tests requested?	Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA		
18. Were the correct preservatives listed on the sample labels?	Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA		
19. Was a sufficient sample volume sent for the tests requested?	Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA		
20. Were all volatile samples received without headspace?	Yes <input checked="" type="checkbox"/> No <input checked="" type="checkbox"/> NA

"Analyzed" reflects the analysis date and time or injection time for analytical tests. For preparation tests "Analyzed" reflects the start of the preparation except when "AFCEE criteria used"; flag indicates late and time of completion of the preparation.
For TCLP/SPLP Extractions and subsequent preparation tests... "Analyzed" reflects the date of TCLP/SPLP Extraction/preparation. For Re-extracted (RE) samples: Preparation tests completed dates reflects the extraction from the original sample leachate unless an "RE" Sample exists for the extraction (tumble) test.

QC SUMMARY REPORT

Laboratory Control Spike

	DL_No:	DF:	Prep Date:	Units: µg/l
	1			

D - Diluted due to matrix or extended target compounds
 H - Value Exceeds Maximum Contaminant Level
 NC - Not Calculated
 R - RPD outside recovery limits

B - Analyte found in Method blank
 E - Result exceeds Highest Calibration Standard
 N - Single Column Analysis
 P - Post Spike Recovery outside limits

DF - Dilution Factor
 J - Estimated value
 ND - Not Detected at the Reporting Limit

M - Matrix Spike Recovery outside limits
 NP - Petroleum Pattern is not present
 RL - Reporting Limit

Definitions:

* - Recovery outside QC limits
 DNL - Did not get
 M - Matrix Spike Recovery outside limits
 NP - Petroleum Pattern is not present
 RL - Reporting Limit

F - Spike & Recovery for NYS Ventilation
 G - Spike & Recovery for NYS Ventilation

		Total:	-\$1,957.30
O&M Months Remaining: 5			

Monthly Treatment System Operational Time by O&M Services

Month	Possible OP Hours	Actual OP Hours	Up-Time Percent	Percent Capacity*	General Operation Comments
September-03	96	96	100.00%	58%	Shutdown by Tyree after Separable Part B inspection
October-03	168	168	100.00%	6%	Official Startup by O&M on 10/22/03
November-03	720	720	100.00%	5%	
December-03	744	744	100.00%	28%	
January-04	672	672	100.00%	16%	
February-04	696	696	100.00%	21%	
March-04	816	815	99.88%	51%	
April-04	672	670	99.70%	50%	
May-04	696	513	73.71%	43%	Equipment shutdown- low flow of water to air stripper - 5/17-24/04
June-04					
July-04					
August-04					
September-04					
October-04					
Totals to Date	5280	5094	96.48%		

* Percent Capacity is based on initial operating groundwater flows from the eight installed pumps from 9/02.

Evaluated on total gallons discharged for monthly operating time

Maximum pump discharges calculated as an average of 78 gpm as the total for all 8 pumps at the site

Projected Utility Costs for the O&M year (10/03 to 10/04)

	Ave/Month
Electric	\$ 2,012.62
Gas	\$ 100.26
Telephone	\$ 61.95
	\$ 2,174.82
times	12 months
	\$26,097.88
