Re: Mr. C's Dry Cleaners Site, Contract # D004180, Site # 9-15-157  
November 2004 O&M Report

Dear Mr. Chiusano:

Ecology and Environment Engineering, P.C. (EEEPC) is pleased to provide this November 2004 Operation and Maintenance (O&M) Report for the Mr. C's Dry Cleaners Site, Site # 9-15-157, located in East Aurora, New York. Copies of weekly inspection reports from EEEPC's subcontractor O&M Enterprises, Inc. (OMEI) are provided as Attachment A. Selected pages from the analytical data package from EEEPC's Analytical Services Center (ASC) dated December 2, 2004 are provided as Attachment B. All analytical results for the report were analyzed at the lowest detection limits in accordance with the method standard. Remedial treatment system utility costs are provided as Attachment C.

In review of the on-site treatment system operation, EEEPC offers the following comments and highlights:

### Operational Summary

- The system was operational for approximately 92% of the period between 10/25/04 and 11/23/04. The system was down for approximately 54.5 hours from Sunday, 10/30/04, to Tuesday, 11/1/04, due to a low air pressure alarm in the air stripper. The system was fully operational otherwise. Table 1 is provided to indicate the monthly operational time of the treatment equipment from the time of system startup.
- The effluent totalizer readings for the month of November 2004 indicate that approximately 1,098,158 gallons of groundwater were processed through the treatment system from 10/25/04 through 11/23/04. Table 2 provides a summary of groundwater volume treated during the November 2004 monitoring period. Historical volumes are based on totalizer readings provided by the contractor's weekly inspection forms.
- Piezometer measurements were collected on 11/9/04 at the time of compliance sampling. These readings are provided in the weekly inspection reports provided in Attachment A.

- Checklists for weekly system inspections from OMEI are provided as Attachment A for 11/1/04, 11/9/04, 11/15/04 and 11/23/04. Weekly system checks indicate that all operating equipment appear to be operating within normal ranges with any exceptions noted above.
- Clean Harbors was onsite 11/15/04 to remove 1 drum of spent filters.
- A copy of the site utility costs from EEEPC operations starting October 2003 to date is provided as Attachment C.
- Based on the analytical results of the samples collected 11/9/04, the concentration of PCE in the treated effluent exceeded the discharge limitations. A corrective action plan will be developed and submitted to NYSDEC Division of Water, Mr. Richard Rink by December 7, 2004.

### **Analytical Summary - Groundwater**

- EEEPC and OMEI personnel sampled influent and effluent groundwater on Tuesday, November 9, 2004. The groundwater samples were analyzed for volatile organic compounds (VOCs), metals, total suspended solids (TSS), total dissolved solids (TDS), and hardness. At the request of the Department the lowest possible method detection limits were used for the analysis. The results are discussed below.
- The VOCs detected in the influent groundwater during the November 2004 sampling event were:
  - cis-1,2-Dichloroethene – 5.40 ug/L (estimated "J" value)
  - Methyl tert-butyl ether (MTBE) – 11.1 ug/L (estimated "J" value)
  - Tetrachloroethene (PCE) – 1430 ug/L
  - Trichloroethene – 33.5 ug/L (estimated "J" value)
- VOCs in the effluent groundwater at the November 2004 sampling event were:
  - cis-1,2-Dichloroethene – not detected (100% removal)
  - 4-Methyl-2-pentanone - 0.525 ug/L (estimated "J" value)
  - Acetone - 5.87 ug/L
  - Methyl tert-butyl ether (MTBE) – 1.75 ug/L (84% removal)
  - Tetrachloroethene (PCE) - 24.8 ug/L (98% removal)
  - Toluene - 0.158 (estimated "J" value)
  - Trichloroethene - 3.32 ug/L (90% removal).

The concentrations of all of these compounds are below the detection limits of the influent sample, which ranged from 50.0 to 250 ug/L.

- The concentration of PCE in the effluent groundwater is above the Daily Maximum Effluent Discharge Compliance Concentration of 10.0 ug/L listed on Table 3. As a result, a corrective action plan is being prepared for submission to NYSDEC DOW on December 7, 2004.
- The November analytical results indicate that the treated groundwater effluent was in compliance with the Effluent Limitation Requirements for metals with the exception of iron. The November 2004 analytical results indicate 709 ug/L iron, which is above the Effluent Limitation Requirements of 600 ug/L. Total Dissolved Solids (TDS) were detected at the compliance concentration of 850

mg/L for the month of November 2004. A comparison between the November 2004 analytical results and the Effluent Limitation Requirements for the site are provided in Table 3.

- Approximately 13.2 pounds of VOCs were removed from the influent groundwater based on calculations using the November 9, 2004 effluent discharge results. The calculated removal volumes are located in Table 4. These values are calculated based on effluent totalizer readings and assumes that non-detect values given in the analytical data package = 0 µg/L and that the monthly samples are indicative of the influent characteristics and system performance for the entire reporting period. These calculations indicate that approximately 771 pounds of VOCs have been removed from the groundwater since system start-up in September 2002.

### **Analytical Summary - Air**

- EEEPC and OMEI personnel sampled the air stripper exhaust before and after the granular activated carbon (GAC) vessels on November 9, 2004. Air samples were collected using pre-evacuated and cleaned SUMMA canisters calibrated to continuously collect a one-hour sample. Samples were analyzed for VOCs by method TO-14A.
- The sample analyzed as "GAC INFLUENT" had total VOC concentrations significantly lower than the "GAC EFFLUENT" sample or sample collected after the carbon treatment. It apparently became mislabeled somewhere in the sample custody. Therefore, for discussion purposes the "GAC EFFLUENT" sample is assumed to be the sample collected before carbon treatment and vice-versa.
- The only VOCs detected in the influent air samples were:
  - 1,1,1-Trichloroethane - 0.580 ppbv (estimated "J" value)
  - 1,2,4-Trimethylbenzene - 0.731 ppbv (estimated "J" value)
  - Benzene - 0.606 ppbv (estimated "J" value)
  - cis-1,2-Dichloroethene - 6.62 ppbv
  - m,p-Xylene - 4.47 ppbv
  - Methyl tert-butyl ether - 15.0 ppbv
  - O-Xylene - 0.970 ppbv (estimated "J" value)
  - Styrene - 1.27 ppbv (estimated "J" value)
  - Tetrachloroethene (PCE) - 967 ppbv
  - Toluene - 7.13 ppbv
  - Trans-1,2-Dichloroethene - 0.846 (estimated "J" value)
  - Trichloroethene - 37.1 ppbv
- VOCs detected in the effluent air samples after GAC treatment were:
  - 1,2,4-Trimethylbenzene - 0.589 ppbv (estimated "J" value, 19% removal)
  - Chloromethane - 0.703 ppbv (estimated "J" value)
  - cis-1,2-Dichloroethene - 4.59 ppbv (31% removal)
  - Methylene chloride - 0.595 ppbv (estimated "J" value)
  - Tetrachloroethene (PCE) - 5.76 ppbv (99% removal)

Mr. David Chiusano, Project Manager

December 7, 2004

Page 4 of 4

- Trans-1,2-Dichloroethene - 0.441 (estimated "J" value, 48% removal)
  
- Assuming that the system is treating groundwater 50% of the total operational time during this reporting period, this efficiency calculates to approximately 3.30 lbs of VOCs were removed by the GAC during the November 2004 reporting period. These values are calculated based on the November 2004 analytical data and average of calculated air flow rates and assumes that non-detect values given in the analytical data package = 0 ppbv and that the monthly samples are indicative of the influent characteristics and system performance for the entire reporting period. A calculation table is provided as Table 5.

If you have any questions regarding the November 2004 O&M report summary submitted, please call me a 716-684-8060.

Very Truly Yours,

Michael G. Steffan

Project Manager

| Cyanide, Free            | 10                               | ug/L           | <10   |

**NOTES:**

1. "Daily Maximum" excerpted from Attachment E of Addendum 1 to the Construction Contract Documents.
2. Values based on effluent discharge sample collected 11/9/04.
3. Analytical report did not differentiate between o-Xylene and m, p-Xylene. Total Xylene value reported is given in each line.
4. Shaded cells indicate that November 2004 analytical value exceeds "Daily Maximum"

| <b>Total pounds of VOCs removed from inception =</b> |                       |                         |                         | <b>796.1</b>           |

NOTES:

- Calculations are based on monthly water samples and assumes samples are representative of the entire period.
- Calculations assume that non-detect values = 0 ug/L.
- Calculations are based on influent totalizer readings.
- "Influent VOCs" and "Effluent VOCs" values given above is the summation of values for individual compounds given in monthly analytical reports.
- No samples were collected in September 2003. August 2003 values are used.
- Treatment system operated by Tyree Organization, Ltd. from 9/02 to 9/03.
- Treatment system operated by O&M Enterprises from 10/03 to present.

CONVERSIONS:

1 pound = 453.5924 grams  
1 gallon = 3.785 liters

Pounds of VOCs removed calculated by the following formula:

$$(1480 \text{ ug/L} - 14.3 \text{ ug/L}) * (1 \text{ g} / 10^6 \text{ ug}) * (1 \text{ lb} / 453.5924 \text{ g}) * 1,098,158 \text{ gallons} * (3.785 \text{ L/gallon}) \sim 13.2 \text{ lbs}$$

where 1,098,158 gallons is the monthly process water volume.

**TOTAL = 3.30**

Average Monthly Flowrate = 284.5092192 scfm = 8.06 m<sup>3</sup>/min = 483.44 m<sup>3</sup>/hour  
 Monthly hours of operation = 320.75 hours<sup>(7)</sup>  
 Pressure = 1 atm = 101300 Pa = 1013 millibars  
 Assumed stack temp = 68 F = 20 C = 293 K  
 Gas Constant, R = 0.08314 mb\*m<sup>3</sup>/K\*mol

**Notes**

- "J" values are included in above calculations.
- "J" values are an estimated value indicating that the compound was detected by the laboratory below the practical quantitation limit, but above the method detection limit.
- ND = Non-detect
- Above calculations assume that non-detect values (<) = 0 ug/m<sup>3</sup>
- NA = Not Applicable
- PPM to ug/m<sup>3</sup> conversion based on the equation below.
- System is a batch operation process. Calculations assume that system is actually treating groundwater 50% of operational time during reporting period.
- System efficiency calculations conservatively assume higher pre-GAC detection limits did not detect lower contaminant concentrations on post-GAC results. Assume post contaminant results the same for all contaminant below post-GAC detection limits. Efficiency is then calculated on the summation of the assumed pre-GAC results subtracting the post-GAC results then dividing by the pre-GAC total.

concentration in  $\frac{\mu\text{g}}{\text{m}^3} = \frac{pM}{RT}$  \* concentration in ppm

Where,  
 T is temperature in degrees Kelvin  
 p is pressure in millibars  
 R is the gas constant  
 M is the molecular weight

**Conversions**

- 1 cubic foot = 0.02832 cubic meters
- 1 g = 1,000,000 ug
- 1 lb = 453.5924 grams
- degrees C = (degrees F - 32)/1.8
- degrees K = degrees C + 273.16
- 1 atm = 101,300 Pascals
- ppbv = ppmv \* 10<sup>-3</sup>

Describe any other system maintenance performed  
Visually checked the filter, it looked pretty good so considering that the filter pressure was 0 I felt thar it could be used another week. Maybe we have the proper size (micron) filter now with 150 micron. I could not find a reason for the alarm I received on Saturday morning, after resetting the alarm everything operated properly. I opened several of the cleaning ports on the stripper and it looked as good as it did after cleaning several weeks ago.

System Inspection Form**

Other observations:

RW-1 tripped off due to filter back pressure after changing the filter pump restarted and operated as designed. The light bulb for the "on" indicator on the motor control panel for RW-1 is blown, will get a replacement and install.

Describe any other system maintenance performed

Changed the filter (150 micron) it was extremely caked with white pastey material, this filter had been in two weeks and apparently two weeks is to long. In my opinion the filter will need changing every week..

368 Pleasant View Dr.  
Lancaster, NY 14086

RE: Mr. Cs Dry Cleaners  
CostPoint ID: 000699.NY06.05..

Work Order No.: 0411153

Dear Mr. Mike Steffan,

Analytical Services Center received 4 samples on Tuesday, November 09, 2004 for the analyses presented in the following report.

The ASC certifies that the test results in this report meet all requirements of NELAC for which it holds certification except as noted in this narrative and/or as flagged in the report.

The ASC is accredited in the Fields of Testing Potable water (SDWA), Solid and Chemical Materials (Solid Hazardous Wastes, RCRA), Water (CWA and other non-potable water) and Air and Emissions. Its primary accrediting authorities are New York State Department of Health and Florida Department of Health. The particular analytes/methods certified may be ascertained by requesting the laboratory's current certificates from your laboratory Project Manager .

E & E will retain the samples addressed in this report for 30 days, unless otherwise instructed by the client. If additional storage is requested, the storage fee is \$1.00 per sample container per month, to accrue until the client authorizes sample destruction.

This report is not to be reproduced, except in full, without the written approval of the laboratory.

Sincerely,

Barbara Krajewski  
Project Manager

### CASE NARRATIVE

#### GCMS VOLATILES - WATER ANALYSIS

A DB624 column from J&W that is 30-m long, 0.53 mm wide, and has a 3-um film thickness was used for the volatile analyses. A 30-cm TEKMAR #5 Trap was used for the volatile analyses consisting of approximately 1 cm of OV-1 packing, 8 cm of Tenax, 8 cm of silica gel, and 8 cm of activated charcoal.

#### Sample Analysis

Volatile samples were determined to be at a pH of 7.

Samples were analyzed within hold time.

Sample AS INFLUENT required analysis at a fifty-fold dilution due to the high concentration of tetrachloroethene present.

#### Calibration and Tunes

Initial and continuing calibrations were acceptable.

No manual peak integration was required.

#### QC

Surrogate recoveries were within acceptable limits.

Method blank analysis was acceptable.

Laboratory control sample (LCS) recoveries were acceptable.

Internal standard area responses were acceptable.

#### GC/MS VOLATILES - AIR ANALYSIS

A DB 624 column and a trap packed with carbosieve S and carbopack B was used for the volatile analysis.

#### Sample Analysis

Samples were analyzed within hold time.

The level of tetrachloroethene detected in the initial analysis of samples GAC EFFLUENT exceeded the instrument's calibration range. This sample was reanalyzed at twenty-five fold dilution. Results of both analyses are included in this report.

Tentatively identified compounds (TICs) reported were generated directly by the GC/MS computer without additional interpretation

#### Calibration and Tunes

Initial and continuing calibrations were acceptable.

No manual peak integration was required.

#### QC

Surrogate recoveries were within acceptable limits.

Method blank analyses were acceptable.

---

**Client:** E AND E BUFFALO  
**Project:** Mr. Cs Dry Cleaners  
**Lab Order:** 0411153

---

## CASE NARRATIVE

Sample duplicate (DUP) RPD values were acceptable.  
Internal standard area responses were acceptable.

### METALS

#### Sample Analysis

The samples were digested and analyzed within hold time.

#### Calibrations

Calibration of the ICP utilizes a zero and one non-zero standard to determine the linear equation for quantitation. A low concentration standard (PQL) is analyzed at the reporting level.

The initial and continuing calibrations were acceptable.

### QC

The calibration and preparation blank analyses were acceptable.

Batch matrix spike/spike duplicate (MS/MSD) recoveries were within the control limits except for Copper, Aluminum, Calcium, Magnesium, Potassium and Sodium. All except for Copper were significantly greater than the spike. The RPD values were within the control limits.

The laboratory control sample (LCS) recoveries were within the control limits.

The serial dilution %D values were within the control limits.

### GENERAL CHEMISTRY

#### Sample Analysis

Samples were analyzed within method hold time. Cyanide samples were analyzed outside of NYSDEC ASP contractual hold time.

#### Calibrations

Initial and continuing calibration standards were acceptable.

### QC

Calibration and method blank analyses were acceptable.

Batch cyanide MS/MSD recoveries were low at 56.53% and 0% due to the matrix of the native sample. The acceptable range is between 82- 122 %.

Laboratory control sample (LCS) recoveries were acceptable except for low cyanide recovery at 89%. The acceptable range is 90- 110%.

### Definitions:

\* - Recovery outside QC limits

DF - Dilution Factor

H - Value Exceeds Maximum Contaminant Level

N - Single Column Analysis

NP - Petroleum Pattern is not present

B - Analyte found in Method blank

DNI - Did not Ignite

J - Estimated value

NC - Not Calculated

P - Post Spike Recovery outside limits

D - Diluted due to matrix or extended target compounds

E - Result above quantitation limit (high standard or ICP linear range).

M - Matrix Spike Recovery outside limits

ND - Not Detected at the Reporting Limit

R - RPD outside recovery limits

### Definitions:

\* - Recovery outside QC limits  
 DF - Dilution Factor  
 H - Value Exceeds Maximum Contaminant Level  
 N - Single Column Analysis  
 NP - Petroleum Pattern is not present

B - Analyte found in Method blank  
 DNI - Did not Ignite  
 J - Estimated value  
 NC - Not Calculated  
 P - Post Spike Recovery outside limits

D - Diluted due to maxtrix or extended target compounds  
 E - Result above quantitation limit (high standard or ICP linear range).  
 M - Matrix Spike Recovery outside limits  
 ND - Not Detected at the Reporting Limit  
 R - RPD outside recovery limits

### Definitions:

\* - Recovery outside QC limits

DF - Dilution Factor

K - Value Exceeds Maximum Contaminant Level

N - Single Column Analysis

NP - Petroleum Pattern is not present

B - Analyte found in Method blank

DNI - Did not Ignite

J - Estimated value

NC - Not Calculated

P - Post Spike Recovery outside limits

D - Diluted due to matrix or extended target compounds

E - Result above quantitation limit (high standard or ICP linear range).

M - Matrix Spike Recovery outside limits

ND - Not Detected at the Reporting Limit

R - RPD outside recovery limits

# Laboratory Results

NYS ELAP ID#: 10486

Phone: (716) 685-8080

Client: E and E Buffalo Office

Client Sample ID: AS INFLUENT

Lab Order: 0411153

Alt. Client ID:

Project: Mr. Cs Dry Cleaners

Collection Date: 11/9/2004 12:00:00 P % Moist:

Lab ID: 0411153-01C

Sample Type: SAMP

Matrix: Groundwater

Test Code: 1\_9012A\_CN\_W

CYANIDE, TOTAL BY METHOD 9012A

Method: SW9012A

Prep Method: NA

| Analyte | Result | Q | RL   | Units | DF | Date Analyzed         | Run Batch ID      | Analyst |
|---------|--------|---|------|-------|----|-----------------------|-------------------|---------|
| Cyanide | ND     |   | 0.01 | mg/L  | 1  | 11/23/2004 6:09:23 PM | LACHAT_CN_041123A | RLG     |

### Definitions:

\* - Recovery outside QC limits

DF - Dilution Factor

H - Value Exceeds Maximum Contaminant Level

N - Single Column Analysis

NP - Petroleum Pattern is not present

B - Analyte found in Method blank

DNI - Did not Ignite

J - Estimated value

NC - Not Calculated

P - Post Spike Recovery outside limits

D - Diluted due to matrix or extended target compounds

E - Result above quantitation limit (high standard or ICP linear range).

M - Matrix Spike Recovery outside limits

ND - Not Detected at the Reporting Limit

R - RPD outside recovery limits

| November-04    | 696               | 641.5           | 92.17%          | 37%               |  |
| Totals to Date | <b>9696</b>       | <b>9366.5</b>   | <b>96.60%</b>   |                   |  |

\* Percent Capacity is based on initial operating groundwater flows from the eight installed pumps from 9/02. Evaluated on total gallons discharged for monthly operating time. Maximum pump discharges calculated as an average of 78 gpm as the total for all 8 pumps at the site if all pumps operate 100%.

**Projected Utility Costs for the O&M year (10/03 to 11/04)**

|           | Ave./Month  | 13 months          |
|-----------|-------------|--------------------|
| Electric  | \$ 1,681.85 |                    |
| Gas       | \$ 47.88    |                    |
| Telephone | \$ 38.12    |                    |
|           |             | <b>\$22,981.97</b> |
