Re: Mr. C's Dry Cleaners Site, Contract # D004442.DC13, Site # 9-15-157
June 2007 Operations, Maintenance, and Monitoring Report

Dear Mr. Welling:

Ecology and Environment Engineering, P.C. (EEEPC) is pleased to provide the June 2007 Operation, Maintenance, and Monitoring (OM&M) Report for the Mr. C's Dry Cleaners Site, NYSDEC Site # 9-15-157, located in East Aurora, New York. Copies of weekly inspection reports provided from EEEPC's subcontractor O&M Enterprises, Inc. (OMEI) are provided in Attachment A. Selected pages from the individual analytical data package prepared by Severn - Trent Laboratories (STL) is provided as Attachment B. The full analytical report along with QA/QC information will be retained by EEEPC. All analytical results for the report were analyzed at the lowest detection limits in accordance with the standard method. Remedial treatment system utility costs for the Mr. C's and Agway sites are provided as Attachment C.

In review of the on-site treatment system operations, monitoring and maintenance for June 2007, EEEPC offers the following comments and highlights:

Operational Summary

Mr. C's Site – Remedial Operations Information

- The treatment system was operational for 99.2% of the period between 5/29/07 and 6/25/07. Table 1 is provided to indicate the monthly operational time of the treatment equipment from the time of system startup.
- The effluent totalizer readings for the month of June 2007 indicate that approximately 755,060 gallons of groundwater were processed through the treatment system for the period 5/29/07 and 6/25/07. Table 2 provides a summary of groundwater volume treated since system start-up. Historical volumes are based on totalizer readings provided by the O&M subcontractor's weekly inspection forms.
- Filters in the influent bag filter unit were replaced during weekly inspections on 5/29/07, 6/4/07, 6/18/07 and 6/25/07.

Mr. William Welling PE, Project Manager

June 28, 2007

Page 2 of 3

- Checklists for weekly system inspections from OMEI are provided as Attachment A for 5/29/07, 6/4/07, 6/11/07, 6/18/07 and 6/25/07. Weekly system checks indicated that the air stripper differential pressure remained between 2.5 and 3.0 inches of water with air stripper pressure at 18 inches of water during the month of June 2007.
- The feed rate for the sequestering agent remained at 3.0 ml/min, based on previous inflow requirements to the system and visual observation of mineral deposits on the stripping trays.
- The analytical results from compliance sampling performed on June 4, 2007 (Attachment B) were received by EEEPC on June 25, 2007. A review of the data revealed a PCE effluent level of 3.5 ppb which is well below the discharge limit of 10 ppb for the site. All other contaminants detected were either below the level of detection or not detected. EEEPC and OMEI continue to monitor the status of the effluent PCE levels closely and respond with corrective action by OMEI and STL as required to resolve non-compliance issues.
- An electrical storm caused a power outage to the treatment process at approximately 4:00 PM on the afternoon of June 19, 2007. Power had been restored and the system was functioning normally by 8:00 PM after OMEI personnel immediately responded to the alarm. EEEPC and OMEI personnel continue to monitor the autodialer unit over the next two week period for any storm related issues.
- The air stripper trays were pressure washed on June 25, 2007.
- All pumps and motors were greased on June 4, 2007.
- The air stripper discharge duct was securely attached to the ceiling flange with lag bolting on June 11, 2007.
- Bender Plumbing (Agents for Erie County Water Department) was on site to inspect and test the system backflow prevention unit attached to the eye wash unit on June 11, 2007. The backflow prevention unit was certified as having met the device operations and differential pressure requirements set by Erie County (Attachment D).
- Level Transducers for PW-3 and PW-8 were discovered inoperable after the June 19, 2007 lightning storm. Upon further inspection by OMEI personnel, both transducers were found to be damaged. The transducer in Pumping Well PW-3 was replaced on June 25, 2007. A spare probe has been ordered through the equipment manufacturer – Esterline, Hampton, Virginia. The probe is expected to be delivered July 6, 2007 and installed on or before July 10, 2007.
- The Work Assignment (D004442-13) was recently approved by NYSDEC on May 23, 2007. EEEPC will be transitioning O&M services to Iyer Environmental Group LLC, Orchard Park NY and Analytical Services to Mitkem Corporation, Warwick, RI shortly. While subcontracts have been issued to these two subcontractors, transition of services will not take place until signed subcontract agreements are executed and in place with EEEPC.

Mr. William Welling PE, Project Manager
June 28, 2007
Page 3 of 3

Agway Site Remedial Information

- OMEI continues to review the system operations on a weekly basis at the Agway site. All systems continue to be operational at the site.

Mr. C's and Agway Energy Usage information

- A copy of the site utility costs from the Mr. C's and Agway remedial operations for June 2007 and year to date are provided as Attachment C.

Analytical Summary – Groundwater

- EEEPC and OMEI personnel collected samples of influent and effluent groundwater for the reporting period 5/29/07 to 6/25/07 on June 4, 2007. Overall cleanup efficiency for the June 2007 reporting period was 98.95% based on the June 4, 2007 analytical results. The summary of analytical results for the June 4, 2007 sampling events are presented in Table 3.

The June 2007 monthly analytical results indicate that the treated groundwater effluent is below the site specific Effluent Discharge Limitation Requirements (SPDES Equivalency Permit) for all compounds. The summary of Effluent Discharge Criteria & Analytical Compliance Results are presented in Table 4.

- Approximately 9.21 pounds of chlorinated volatile organic compounds (cVOCs) were removed from the influent groundwater based on calculations using the effluent discharge analytical results during the reporting period. A summary of the calculated pounds of cVOC's by month and by date are located in Table 5. These values are calculated based on effluent totalizer readings and assumes that non-detect values given in the analytical data package = 0 µg/L and that the monthly samples are indicative of the influent characteristics and system performance for the entire reporting period.

If you have questions regarding the June 2007 O&M report summary submitted, please call me at 716-684-8060.

Very Truly Yours,
Ecology and Environment Engineering, P. C.

May 2007	5/1/07 - 5/29/07	1666	0.76	11.86
June 2007	5/29/07 - 6/25/07	1478	15.50	9.21
Total pounds of VOCs removed since inception =				1199.79

NOTES:

1. Calculations are based on monthly water samples and assumes samples are representative of the entire reporting period.
2. Calculations assume that non-detect values = 0 $\mu\text{g}/\text{L}$.
3. Total VOCs summations include estimated "J" values.
4. Calculations are based on effluent totalizer readings.
5. "Influent VOCs" and "Effluent VOCs" values given above is the summation of values for individual compounds given in monthly analytical reports.
6. No samples were collected in September 2003. August 2003 values are used.
7. Treatment system operated by Tyree Organization, Ltd. from 9/02 to 9/03.
8. Treatment system operated by O&M Enterprises from 10/03 to present.

CONVERSIONS:

- 1 pound = 453.5924 grams
 1 gallon = 3.785 liters

Based on the Analytical Results from June 4, 2007:

Pounds of VOCs removed calculated by the following formula:

$$1478 \text{ ug/L} - 15.5 \text{ ug/L} * (.8 \text{ g}/10^6 \text{ ug}) * (1 \text{ lb}/453.5924 \text{ g}) * 755,060 \text{ gallons} * (3.785 \text{ L/gallon}) \sim 9.21 \text{ lbs}$$

where 755,060 gallons is the monthly process water volume.

Describe any other system maintenance performed

Attached the discharge air duct to the plant ceiling using 1 lag bolts and wire, a more permanent attachment would only cause problems when you needed to pull the stripper tray apart. Mr. Mark Fraunfelder from Aaron Bender Plumbing representing Erie county was on site to inspect the backflow preventer, he said it was OK.

SDG NARRATIVE

Job#: A07-6073

STL Project#: NY5A9393.3Site Name: Ecology and Environment NYSDEC StandbyGeneral Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A07-6073

Sample Cooler(s) were received at the following temperature(s); 2.2 °C
All samples were received in good condition.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Date: 06/22/2007
Time: 08:30:31

Dilution Log w/Code Information

Rept: AN1266R

<u>Client Sample ID</u>	<u>Lab Sample ID</u>	<u>Parameter (Inorganic)/Method (Organic)</u>	<u>Dilution</u>	<u>Code</u>
Effluent	A7607301	Total Hardness	5.00	008
Influent	A7607302	8260	20.00	008
Influent	A7607302	Total Hardness	5.00	008

Dilution Code Definition:

- 002 - sample matrix effects
- 003 - excessive foaming
- 004 - high levels of non-target compounds
- 005 - sample matrix resulted in method non-compliance for an Internal Standard
- 006 - sample matrix resulted in method non-compliance for Surrogate
- 007 - nature of the TCLP matrix
- 008 - high concentration of target analyte(s)
- 009 - sample turbidity
- 010 - sample color
- 011 - insufficient volume for lower dilution
- 012 - sample viscosity
- 013 - other

STL

DATA QUALIFIER PAGE

These definitions are provided in the event the data in this report requires the use of one or more of the qualifiers. Not all qualifiers defined below are necessarily used in the accompanying data package.

ORGANIC DATA QUALIFIERS

- ND or U Indicates compound was analyzed for, but not detected.
- J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
- C This flag applies to pesticide results where the identification has been confirmed by GC/MS.
- B This flag is used when the analyte is found in the associated blank, as well as in the sample.
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- D This flag identifies all compounds identified in an analysis at the secondary dilution factor.
- N Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
- P This flag is used for CLP methodology only. For Pesticide/Aroclor target analytes, when a difference for detected concentrations between the two GC columns is greater than 25%, the lower of the two values is reported on the data page and flagged with a "P".
- A This flag indicates that a TIC is a suspected aldol-condensation product.
- 1 Indicates coelution.
- * Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

- ND or U Indicates element was analyzed for, but not detected. Report with the detection limit value.
- J or B Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
- N Indicates spike sample recovery is not within the quality control limits.
- S Indicates value determined by the Method of Standard Addition.
- E Indicates a value estimated or not reported due to the presence of interferences.
- H Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
- G Indicates a value greater than or equal to the project reporting limit but less than the laboratory quantitation limit
- * Indicates the spike or duplicate analysis is not within the quality control limits.
- + Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

September-06	840	834	99.29%	28.2%	Stripper cleaning performed	
October-06	628	609	96.91%	27.0%	power outage from severe winter storm 10/12-10/14	
November-06	672	672	100.00%	28.7%		
December-06	720	706	98.06%	28.6%		
January-07	984	983	99.90%	26.7%	Cold month.	
February-07	480	480	100.00%	40.7%	Extra Cold month.	
March-07	672	672	100.00%	28.1%		
April-07	888	888	100.00%	27.1%		
May-07	696	696	100.00%	26.2%	Dry month	
June-07	648	644	99.38%	25.1%		
Totals to Date	32500	31757	97.71%		Based on OM services provided by EEEPC/OMEI since 9/03.	

* Percent Capacity is based on initial operating groundwater flows from the eight installed pumps from 9/02. Evaluated on total gallons discharge for monthly operating time.

Maximum pump discharges calculated as an average of 78 gpm as the total for all 8 pumps at the site if all pumps operate 100%. With the exception of groundwater pump RW-1, all others run on a batch basis.

The system is a batch process and is dependent on the level of groundwater to the level controls of each groundwater pump.
