**TO:** Kelly Lewandowski, Chief, Site Control Section, Bureau of Technical Support

**FROM:** George Harris, Section Chief/RHWRE *2/10/09*  
David Chiusano, Project Manager *2/10/09*

**THRU:** Robert Knizek, Director, BURE *2-10-09*

**SUBJECT:** Proposed Site Classification Change

Site Name Mr. C's Dry Cleaners

Site Code 915157

City East Aurora

County Erie

Current Classification 02

Proposed Classification 04

**DATE:** 2/10/2009

---

We propose that the classification of this site be changed as indicated above. Please initiate the review and concurrence process for this proposed change. Attached is a Site Classification Form that provides information regarding the site and the basis for the proposed change. Also attached is the support document (in PDF format) that provides a site map, the classification worksheet, and other supporting information.

<b>Priority ranking Score</b>	60	<b>Project Manager</b>	David Chiusano

### Site Description

The site is located at 584 and 586 Main Street within a light industrial and residential area in the Village of East Aurora. The property includes an active dry cleaning business (Mr. C's Dry Cleaners) within a one floor building on a concrete slab foundation and an adjacent paved parking lot. Odors detected in a nearby church daycare center were determined to be tetrachloroethylene (PCE) traced back to Mr. C's where still bottoms from the operation were disposed of into a dumpster in the parking lot prior to 1985. Condensate from the steam flushing and vacuuming process were disposed of in the sanitary sewers. The NYSDEC completed a Preliminary Site Assessment in July 1992 which confirmed groundwater and sanitary sewer contamination. Levels of groundwater contamination exceeding Class GA Groundwater Standards were found in a well closest to Mr. C's Dry Cleaners. A Remedial Investigation Feasibility Study (RI/FS) was completed in 1996 under State Superfund. A Record of Decision (ROD) was issued in March 1997 which required that in-situ air stripping wells be used to treat contaminated groundwater. An Explanation of Significant Differences (ESD) was issued in April 2000 which changed the selected site remedy to a typical groundwater extraction treatment system, in lieu of the originally proposed in-situ air stripping technology. In October 2000 the remedial design was completed in accordance with the selected ROD remedy and as modified in the ESD. Remedial construction was completed in August 2002. The treatment facility is currently being operated and monitored by the NYSDEC per the approved January 2008 Site Management Plan. The area adjacent to site is currently being evaluated for economic development. Officials from the Village of Aurora are working with the NYSDEC during development of building plans for the area.

Contaminants of Concern (Including Materials Disposed)	Quantity Disposed
--	-------------------

**OU 01**

TETRACHLOROETHYLENE (F001 WASTE)

UNKNOWN

**Analytical Data Available for :** Air, Groundwater

**Applicable Standards Exceeded for:** Groundwater

### Site Environmental Assessment

PCE and breakdown products originating from past disposal practices of a dry cleaning operation have contaminated groundwater at the site. Groundwater contamination is currently being treated in accordance with the selected remedy and the approved Site Management Plan (SMP) by pump and treat technology under NYSDEC management. Treated water is being sampled, monitored and discharged through a dedicated discharge line along Whaley Avenue to Tannery Brook off Ridge Road and in accordance with discharge limits established by the NYSDEC's Division of Water. Treated air is also being sampled, monitored and discharged in accordance with NYS guidelines. The treatment system has been determined to be satisfactorily

NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION  
DIVISION OF ENVIRONMENTAL REMEDIATION  
**Site Classification Form**

3/23/2009

**Site Code** 915157

**Site Name** Mr. C's Dry Cleaners

removing PCE and breakdown products from the groundwater and containing the contaminant plume as designed. To date, approximately 100 million gallons of groundwater have been removed and treated, which has resulted in approximately 1350 pounds of contaminants removed. Based on long-term groundwater monitoring program reporting, PCE and breakdown compound concentrations are declining. At treatment system startup contaminant concentrations averaged approximately 2000 UG/L. Most recently the average contaminant concentrations is averaging approximately 1400 UG/L (~ 30% decline). In 2004 the NYSDEC completed a soil vapor intrusion study within the downgradient residential area. Elevated levels of PCE were found in soil gas and indoor air at various locations within the groundwater plume. Mitigation of two structures, through the installation of sub-slab depressurization (SSD) systems, was completed in 2004 and 2005. Monitoring of the SSD systems is ongoing. This site no longer presents a significant threat to public health and/or the environment. All requirements of the original ROD and ESD have been met. The SMP was approved by the NYSDEC in January 2008.

---

### Site Health Assessment

Subslab depressurization systems in one home and a church reduce exposure to contamination from soil vapor intrusion. Although, contaminated groundwater has impacted private wells these few wells are used for watering lawns, washing cars, and other non-potable purposes. Exposures via drinking water is not expected because the community is served by a public water supply and NYSDOH advised residents not to consume water from these wells.

---

### Remedy Description and Cost

---

#### Remedy Description for Operable Unit 01

The Record of Decision for this project was signed 3/27/97. The selected remedy consisted of in-situ air stripping for the treatment of contaminated groundwater within the source plume. An Explanantion of Significant Difference (ESD) was issued in April 2000, which informed the public that the remedy now designed utilizes conventional pump and treat technology in lieu of in-situ air stripping.

**Total Cost** \$1,251,675

---

#### Remedy Description for Operable Unit 01A

Portable room air cleaners equipped with carbon filtration systems were installed in the basements to remove the PCE, as well as any other VOCs such as the potential PCE break down products, from the air in the basement. Since the basement is the point of entry for the contaminated air, these units were considered to be effective at eliminating the exposure pathway throughout the homes.

Periodic monitoring of the indoor air continued until the start of the remedial action, and the air cleaners remained in place until another SVI investigation was completed. One system has since been replaced by a SSDS and the other has been removed by the home owner. That home owner has since refused indoor air sampling and possible SSDS installation as well.

**Site Code** 915157

**Site Name** Mr. C's Dry Cleaners

**Total Cost** \$800

---

**Remedy Description for Operable Unit 01B**

A SVI study has been implemented and completed at the subject legacy site in accordance with DER-13 and DOH Guidance. Representatives from DOH have been involved with the implementation of the SVI including, but not limited to, review and approval of associated workplans and reports.

Specifically, the following tasks have been completed: 1) March 2003 and Sept 03 - Indoor air sampling at First Presbyterian Church, 2) Jan 04 - Two air filtration systems installed in Church, 3) May 04 - Soil gas survey, groundwater sampling, and indoor air sampling of structures in vicinity of the site, 4) July 04 - Second round of soil gas sampling in vicinity of the site, 5) Sept 04 - SSDS installed in Church, and 6) Jan 05 - SSDS installed within 27 Whaley Street (residential structure). The existing SSDSs within the First Presbyterian Church and 27 Whaley Avenue are currently under site management.

**Site Code** 915157

**Site Name** Mr. C's Dry Cleaners

---

**Basis for Classification Change**

Remedial construction of the groundwater (GW) pump and treat system was completed in 2002. GW treatment system is currently being operated, monitored and maintained by the NYSDEC per the approved January 2008 Site Management Plan (SMP). The GW treatment system will be operated until GW contaminant concentrations have reached unchanged levels for a sustained period of time and until such time that continued operation would not result in further significant contaminant removal. The site management plan includes a long term groundwater plan, soils management plan, and vapor mitigation plan. The NYSDEC has completed a soil vapor intrusion study within the downgradient residential area. As a result, mitigation of two structures, through the installation of sub-slab depressurization (SSD) systems, was completed in 2004-2005. Monitoring of the SSD systems is ongoing per the approved January 2008 SMP.

This site has been remediated in accordance with the selected ROD remedy and as modified in the April 2004 ESD. The remedial activities at this site have removed the significant threat. The site management plan will provide periodic verification.

The additional supporting information (ROD, ESD, Final Construction Report, SVI Report, Site Management Plan) can be found in the following edocs folder:

## APPENDIX 2-1: SSF SITE CLASSIFICATION WORKSHEET

Site Name: Mr. C's Dry CleanersSite ID No. 9-15-157City/Town: Village of East AuroraCounty: Erie

1. Has remediation been completed in accordance with a ROD including properly addressing institutional controls (ICs)?	<input checked="" type="checkbox"/> Yes (go to 7)	<input type="checkbox"/> No (go to 2)	
2. Has hazardous waste as defined in ECL §27-1301.1 been disposed at the Site?	<input type="checkbox"/> Yes (go to 3)	<input type="checkbox"/> No (stop)	<input type="checkbox"/> Unsure (go to 11)
3. Does the Site present a current or reasonably foreseeable significant threat to public health or the environment (complete Significant Threat Determination Worksheet)?	<input type="checkbox"/> Yes (go to 4)	<input type="checkbox"/> No (go to 6)	<input type="checkbox"/> Unsure (go to 11)
4. Is the significant threat causing or presenting an imminent danger of causing irreversible or irreparable damage to public health or the environment?	<input type="checkbox"/> Yes (Class 1)	<input type="checkbox"/> No (go to 5)	<input type="checkbox"/> Unsure (stop)
5. Is the Site presenting a significant but not imminent threat to public health or the environment?	<input type="checkbox"/> Yes (Class 2)	<input type="checkbox"/> No (reevaluate)	
6. Has hazardous waste been disposed but it does not present a significant threat to public health or the environment and the site is suitable for placement on the Registry?	<input type="checkbox"/> Yes (Class 3)	<input type="checkbox"/> No (go to 10)	
7. Is the site properly remediated but still requires continued active site management to maintain/achieve protectiveness?	<input checked="" type="checkbox"/> Yes (Class 4)	<input type="checkbox"/> No (go to 8)	<input type="checkbox"/> Unsure (stop)
8. Is the site properly remediated, does not require continued active site management, but is not suitable for delisting or a required IC is not yet in place?	<input type="checkbox"/> Yes (Class 5)	<input type="checkbox"/> No (go to 9)	<input type="checkbox"/> Unsure (stop)
9. Is the site properly remediated, required ICs are in place, the site does not require continued active site management, and is suitable for delisting?	<input type="checkbox"/> Yes (Class: C)	<input type="checkbox"/> No (go to 10)	<input type="checkbox"/> Unsure (stop)
10. Based upon investigation, is the degree of contamination such that the Site does not qualify to be placed on the Registry and that additional remedial work is not anticipated at this time?	<input type="checkbox"/> Yes (Class: N)	<input type="checkbox"/> No (reevaluate)	<input type="checkbox"/> Unsure (stop)
11. Does insufficient information exist to properly classify the site?	<input type="checkbox"/> Yes (Class P)	<input type="checkbox"/> No (reevaluate)	<input type="checkbox"/> Unsure (stop)

Current Classification: 2Proposed Classification: 4

**Summary of Main Factors Contributing to this Determination:** This site has been remediated in accordance with the selected ROD remedy and as modified in the April 2004 Explanation of Significant Differences (ESD). The remedial activities at this site have removed the significant threat. The approved January 2008 Site Management Plan (SMP) will provide periodic verification.

Continued site management per the ESD and SMP is required. The groundwater treatment system is currently managed by the NYSDEC. The NYSDEC has completed a soil vapor intrusion study within the downgradient residential area. Mitigation of two structures, through the installation of sub-slab depressurization (SSD) systems, was completed in 2004-2005. Monitoring of the SSD systems is ongoing per the approved January 2008 SMP.

## APPENDIX 2-2: SIGNIFICANT THREAT DETERMINATION WORKSHEET

☒ State Superfund Program  
6 NYCRR 375-2.7

☐ Brownfield Cleanup Program  
ECL 27-1411.1(c)

Site Name: Mr. C's Dry Cleaners

Site ID No. 9-15-157

City/Town: Village of East Aurora

County: Erie

1. Has all available and relevant evidence regarding the Site been reviewed and the factors in 375-2.7(a)(3) considered?	<input checked="" type="checkbox"/> Yes (go to 2)	<input type="checkbox"/> No (stop)	<input type="checkbox"/> Unsure (stop)
2. Does Site contamination result in significant adverse impacts (375-2.7(a)(1)) to:			
a. species that are endangered, threatened, or of concern?	<input type="checkbox"/> Yes (go to b)	<input checked="" type="checkbox"/> No (go to b)	<input type="checkbox"/> Unsure (go to b)
b. protected streams, tidal/freshwater wetlands, or significant fish and wildlife habitat?	<input type="checkbox"/> Yes (go to c)	<input checked="" type="checkbox"/> No (go to c)	<input type="checkbox"/> Unsure (go to c)
c. flora or fauna from bioaccumulation or leads to a recommendation to limit consumption?	<input type="checkbox"/> Yes (go to d)	<input checked="" type="checkbox"/> No (go to d)	<input type="checkbox"/> Unsure (go to d)
d. fish, shellfish, crustacea, or wildlife from concentrations that cause adverse/chronic effects?	<input type="checkbox"/> Yes (go to e)	<input checked="" type="checkbox"/> No (go to e)	<input type="checkbox"/> Unsure (go to e)
e. the environment due to a fire, spill, explosion, or reaction that generates toxic gases, vapors, fumes, mists or dusts?	<input type="checkbox"/> Yes (go to f)	<input checked="" type="checkbox"/> No (go to f)	<input type="checkbox"/> Unsure (go to f)
f. areas where individuals or water supplies may be present and NYSDOH has determined there to be a significantly increased risk to public health (including from soil vapor)?	<input type="checkbox"/> Yes (go to 3)	<input checked="" type="checkbox"/> No (go to 3)	<input type="checkbox"/> Unsure (go to 3)
3. Does Site contamination result in significant environmental damage (375-2.7(a)(2))?	<input type="checkbox"/> Yes (go to 4)	<input checked="" type="checkbox"/> No (go to 4)	<input type="checkbox"/> Unsure (stop)
4. If any box in items 2 or 3 have been checked "Yes," the site presents a significant threat to public health or the environment; check here.	Significant threat to: <input type="checkbox"/> Public Health <input type="checkbox"/> Environment		
5. If no boxes in items 2 or 3 have been checked "Yes," the site does not present a significant threat to public health or the environment; check here.	<input checked="" type="checkbox"/> Not a Significant Threat (Class 4)		

**Summary of Main Factors Contributing to this Determination:** Remedial construction of the groundwater (GW) pump and treat system was completed in 2002. GW treatment system is currently being operated, monitored and maintained by the NYSDEC per the approved January 2008 Site Management Plan (SMP). The GW treatment system will be operated until GW contaminant concentrations have reached unchanged levels for a sustained period of time and until such time that continued operation would not result in further significant contaminant removal. The site management plan includes a long term groundwater plan, soils management plan, and vapor mitigation plan. The NYSDEC has completed a soil vapor intrusion study within the downgradient residential area. As a result, mitigation of two structures, through the installation of sub-slab depressurization (SSD) systems, was completed in 2004-2005. Monitoring of the SSD systems is ongoing per the approved January 2008 SMP.

This site has been remediated in accordance with the selected ROD remedy and as modified in the April 2004 ESD. The remedial activities at this site have removed the significant threat. The site management plan will provide periodic verification.

Re: Classification Package  
Mr. C's Dry Cleaners  
Site #915157  
East Aurora (V), Erie County

Dear Ms Lewandowski:

My staff reviewed the February 2009 Classification Package for the Mr C's Dry Cleaners site. Investigations at this site documented contamination of groundwater with tetrachloroethene due to past dry cleaning operations. In addition soil vapor intrusion impacted an area church and a residential home. To address this contamination, groundwater extraction and treatment system was selected as the preferred remedial alternative. Remedial construction was completed in August 2002. In addition, soil vapor depressurization systems were installed in the impacted church and the private home in 2004 and 2005 respectively. The groundwater extraction and treatment system is currently being operated and monitored as required. Post remedial sampling has shown that the remedial actions are effectively reducing contamination in the groundwater and indoor air.

Since the remedial actions taken at the site are achieving remedial goals and are protective of public health, I concur with the proposed change from a Class 2 to a Class 4. The signed Decision Form is enclosed.

If you have any questions, please call Richard Fedigan at (518) 402-7860.

March 27, 2009

EA 400 Main Street, LLC  
c/o Damon & Morey, LLP  
298 Main Street  
Buffalo, NY 14202-4096

Dear Sir or Madame:

As mandated by Section 27-1305 of the Environmental Conservation Law (ECL), the New York State Department of Environmental Conservation (Department) must maintain a Registry of all inactive disposal sites suspected or known to contain hazardous waste. The ECL also mandates that this Department notify the owner of all or any part of each site or area included in the Registry of Inactive Hazardous Waste Disposal Sites as to changes in site classification.

Our records indicate that you are the owner or part owner of the site listed below. Therefore, this letter constitutes notification of change in the classification of such site in the Registry of Inactive Hazardous Waste Disposal Sites in New York State.

DEC Site No.: 915157  
Site Name: Mr. C's Dry Cleaners  
Site Address: 586 Main St., East Aurora, NY 14052

Classification change from 2 to 4.

The reason for the change is as follows:

Investigations at this site documented contamination of groundwater with tetrachloroethene due to past dry cleaning operations. In addition, soil vapor intrusion impacted an area church and a residential home. To address this contamination, a groundwater extraction and treatment system was selected as the preferred remedial alternative. Remedial construction was completed in August 2002. In addition, soil vapor depressurization systems were installed in the impacted church and the private home in 2004 and 2005, respectively. The groundwater extraction and treatment system is currently being operated and monitored as required. Post remedial sampling has shown

that the remedial actions are effectively reducing contamination in the groundwater and indoor air. The remedial actions taken at the site are achieving remedial goals and are protective of public health and the environment.

Enclosed is a copy of the Department's Inactive Hazardous Waste Disposal Site Report form as it will appear in the Registry. An explanation of the site classifications is available at <http://www.dec.ny.gov/chemical/8663.html>. The Law allows the owner and/or operator of a site listed in the Registry to petition the Commissioner of the New York State Department of Environmental Conservation for deletion of such site, modification of site classification, or modification of any information regarding such site, by submitting a written statement setting forth the grounds of the petition.

Such petition may be addressed to:

Alexander B. Grannis  
Commissioner  
New York State Department of Environmental Conservation  
625 Broadway  
Albany, New York 12233-1010

For additional information, please contact me at (518) 402-9553.

Sincerely,

Kelly A. Lewandowski, P.E.  
Chief  
Site Control Section

Inactive Hazardous Waste Disposal Report**

<b>Site Code</b>	915157		
<b>Site Name</b>	Mr. C's Dry Cleaners	<b>Address</b>	586 Main Street
<b>Classification</b>	04	<b>City</b>	East Aurora <b>Zip</b> 14052
<b>Region</b>	9	<b>County</b>	Erie <b>Town</b> Aurora
<b>Latitude</b>	42 degrees, 46 minutes, 5.37 seconds		<b>Estimated Size</b> 1.0000
<b>Longitude</b>	-78 degrees, 36 minutes, 46.98 seconds		
<b>Site Type</b>	Dry Cleaner	<b>Structure</b>	

### Site Description

The site is located at 584 and 586 Main Street within a light industrial and residential area in the Village of East Aurora. The property includes an active dry cleaning business (Mr. C's Dry Cleaners) within a one floor building on a concrete slab foundation and an adjacent paved parking lot.

Odors detected in a nearby church daycare center were determined to be tetrachloroethylene (PCE) traced back to Mr. C's where still bottoms from the operation were disposed of into a dumpster in the parking lot prior to 1985. Condensate from the steam flushing and vacuuming process were disposed of in the sanitary sewers.

The NYSDEC completed a Preliminary Site Assessment in July 1992 which confirmed groundwater and sanitary sewer contamination. Levels of groundwater contamination exceeding Class GA Groundwater Standards were found in a well closest to Mr. C's Dry Cleaners. A Remedial Investigation Feasibility Study (RI/FS) was completed in 1996 under State Superfund. A Record of Decision (ROD) was issued in March 1997 which required that in-situ air stripping wells be used to treat contaminated groundwater. An Explanation of Significant Differences (ESD) was issued in April 2000 which changed the selected site remedy to a typical groundwater extraction treatment system, in lieu of the originally proposed in-situ air stripping technology. In October 2000 the remedial design was completed in accordance with the selected ROD remedy and as modified in the ESD. Remedial construction was completed in August 2002.

The treatment facility is currently being operated and monitored by the NYSDEC per the approved January 2008 Site Management Plan. The area adjacent to site is currently being evaluated for economic development. Officials from the Village of Aurora are working with the NYSDEC during development of building plans for the area.

<b>Contaminants of Concern (Including Materials Disposed)</b>	<b>Quantity</b>

**Analytical Data Available for :**      Air, Groundwater

**Applicable Standards Exceeded for:**      Groundwater

### Site Environmental Assessment

PCE and breakdown products originating from past disposal practices of a dry cleaning operation have contaminated groundwater at the site. Groundwater contamination is currently being treated in accordance with the selected remedy and the approved Site Management Plan (SMP) by pump and treat technology under NYSDEC management. Treated water is being sampled, monitored and discharged through a dedicated discharge line along Whaley Avenue to Tannery Brook off Ridge Road and in accordance with discharge limits established by the NYSDEC's Division of Water. Treated air is also being sampled, monitored and discharged in accordance with NYS guidelines.

The treatment system has been determined to be satisfactorily removing PCE and breakdown products from the groundwater and containing the contaminant plume as designed. To date, approximately 100 million gallons of groundwater have been removed and treated, which has resulted in approximately 1350 pounds of contaminants removed. Based on long-term groundwater monitoring program reporting, PCE and breakdown compound concentrations are declining. At treatment system startup contaminant concentrations averaged approximately 2000 UG/L. Most recently the average contaminant concentrations is averaging approximately

3/27/2009

1400 UG/L (~ 30% decline).

In 2004 the NYSDEC completed a soil vapor intrusion study within the downgradient residential area. Elevated levels of PCE were found in soil gas and indoor air at various locations within the groundwater plume. Mitigation of two structures, through the installation of sub-slab depressurization (SSD) systems, was completed in 2004 and 2005. Monitoring of the SSD systems is ongoing.

This site no longer presents a significant threat to public health and/or the environment. All requirements of the original ROD and ESD have been met. The SMP was approved by the NYSDEC in January 2008.

---

## Site Health Assessment

Subslab depressurization systems in one home and a church reduce exposure to contamination from soil vapor intrusion. Although, contaminated groundwater has impacted private wells these few wells are used for watering lawns, washing cars, and other non-potable purposes. Exposures via drinking water is not expected because the community is served by a public water supply and NYSDOH advised residents not to consume water from these wells.

**Site No.** 915157      **Tax Map Nos.** 164.20-7-23; 164.20-7-24

**Site Location:** 586 Main Street, East Aurora, NY 14052, Erie County

### Inactive Hazardous Waste Disposal Site Classification Notice

The Inactive Hazardous Waste Disposal Site Program (the State Superfund Program) is the State's program for identifying, investigating, and cleaning up sites where the disposal of hazardous waste may present a threat to public health and/or the environment. The New York State Department of Environmental Conservation (Department) maintains a list of these sites in the Registry of Inactive Hazardous Waste Disposal Sites (the "Registry"). The site identified above was recently reclassified on the Registry as a site that no longer presents a significant threat to public health and/or the environment (Class 4 - Site properly closed, requires continued management). See map on other side for the location of the site.

Investigations at this site documented contamination of groundwater with tetrachloroethene due to past dry cleaning operations. In addition, soil vapor intrusion impacted an area church and a residential home. To address this contamination, a groundwater extraction and treatment system was selected as the preferred remedial alternative. Remedial construction was completed in August 2002. In addition, soil vapor depressurization systems were installed in the impacted church and the private home in 2004 and 2005, respectively. The groundwater extraction and treatment system is currently being operated and monitored as required. Post remedial sampling has shown that the remedial actions are effectively reducing contamination in the groundwater and indoor air.

The remedial actions taken at the site are achieving remedial goals and are protective of public health and the environment.

**If you own property adjacent to this site and are renting or leasing your property to someone else, please share this information with them. If you no longer wish to be on the contact list for this site or otherwise need to correct our records, please contact the Department's Project Manager listed below.**
