Re: Phase II Environmental Site Assessment  
537 East Delavan Avenue  
Buffalo, New York

Dear Mr. Cammarata:

535 Washington Street  
11<sup>th</sup> Floor  
Buffalo, New York  
14203  
716-685-2300  
Fax: 716-685-3629  
[www.gza.com](http://www.gza.com)

GZA GeoEnvironmental of New York (GZA) has prepared this report describing the results of the Phase II Environmental Site Assessment (ESA) at the above referenced Site. GZA developed a scope of work to assess some of the data gaps identified as part of the Environmental Condition Analysis completed for Buffalo Urban Development Corporation (BUDC) by GZA earlier this year (report dated May 2014). At the direction of NorDel I, GZA prepared the scope of this Phase II ESA in consultation with BUDC and members of the New York State Department of Environmental Conservation (NYSDEC) Region 9 Division of Remediation. Specifically, soil probes were conducted in overburden soils in "dark" areas of the Site where little or no environmental data has been previously collected.

The results of the Phase II ESA helped to further characterize the hydrogeological conditions of the Site. The Phase II supplements previous investigations by providing physical and chemical data collected from areas of the Site which previously had limited or no such data. A specific area of known contamination (Area 4- former degreaser storage area) was further explored and no new sources of significant soil contamination were revealed.

We trust this report satisfies your present needs. Should you have any questions or require additional information following your review, please do not hesitate to contact Jim Richert at 716-844-7048.

Sincerely,

GZA GEOENVIRONMENTAL OF NEW YORK

## **1.00 INTRODUCTION**

In accordance with our October 3, 2014 proposal, GZA GeoEnvironmental of New York (GZA) performed a Phase II Environmental Site Assessment (ESA) at 537 East Delavan Avenue in Buffalo, New York (Site) for NorDel I, LLC (Client). A Locus Plan is attached as Figure 1 and a Soil Probe Location Plan as Figure 2.

### **BACKGROUND**

GZA previously completed a report entitled, “Environmental Condition Analysis, 537 East Delavan Ave., Buffalo, New York” dated May 2, 2014. GZA’s Environmental Condition Analysis (ECA) consisted of a document collection and review, interviews, a Site reconnaissance, an information analysis, and report preparation. The ECA was performed in accordance with the scope of work in the contract with Buffalo Urban Development Corp. (BUDC) and was not intended to be in conformance with any ASTM standard.

The ECA identified several environmental investigations and remedial activities performed at the Site beginning in 1994 including impacted soil removals and remediation, UST and AST removals, groundwater monitoring, and solid waste removals (asbestos, polychlorinated biphenyl (PCB) light ballasts, drums of liquid chemicals, waste paints, oils sludges, contaminated wooden floor blocks, mercury containing equipment, and tires).

GZA concluded that:

- Environmental contamination and other potential environmental concerns remained on the Site; including impacts to groundwater, indoor air, soil, and solid waste.
- A significant volume of hazardous and non-hazardous solid waste material and other potential sources of contamination have been removed or remediated. However, analytical results of post remedial samples confirmed that contaminants of concern remained in the on-Site soil and groundwater at concentrations above applicable regulatory standards and criteria.
- If not remediated, on-Site contaminant may pose potential health risks to current or future Site users and there was the potential for future contaminant migration to off-site properties.
- Further remediation of soil and/or groundwater along with Site use restrictions would likely be required as part of a future Site-wide development plan.
- The source(s) of contamination to on-Site soil and groundwater had not yet been clearly identified and delineated.

- Prior to implementation of corrective measures, additional on-Site characterization of the hydrogeologic conditions and the nature and extent of contamination would be necessary.
- Such additional characterization will be impeded by the presence of the on-Site structures.

Subsequent to completion of the ECA, GZA completed a Phase I Environmental Site Assessment<sup>1</sup> at the Site for NorDel I. The Phase I identified the following recognized environmental conditions (RECs).

- The Site is a brownfield site, considered to be a potential anchor property within the City of Buffalo's proposed East Delavan-Grider Brownfield Opportunity Area (BOA). Additionally, the Site is listed as a Class 4 Inactive Hazardous Waste Site on the New York State Department of Environmental Conservation (NYSDEC) registry. Class 4 Sites are defined by NYSDEC as, "...a site that has been properly closed by that requires continued site management consisting of operation, maintenance and/or monitoring." NYSDEC continues, "Class 4 is appropriate for a site where remedial construction actions have been completed for all operable units, but the site has not necessarily been brought into compliance with standards, criteria, or guidance."

Environmental contamination and other potential environmental concerns remain on the Site; including impacts to groundwater, indoor air, soil, and solid waste. GZA recognizes that a significant volume of hazardous and non-hazardous solid waste material and other potential sources of contamination have been removed or remediated. However, analytical results of post remedial samples confirm that contaminants of concern remain in the on-Site soil and groundwater at concentrations above applicable regulatory standards and criteria. If not remediated, on-Site contaminants may pose potential health risks to current or future Site users and there is the potential for future contaminant migration to off-site properties.

- The area surrounding the subject Site has been historically used for industrial purposes for over 100 years. Potential releases from the surrounding area may have impacted the Site soil and/or groundwater.

It was GZA's opinion that a subsurface investigation to include soil, groundwater, and soil vapor sampling and analyses would be necessary to evaluate the presence or absence of contaminated materials in the environment associated with the identified Recognized Environmental Conditions. Remediation of soil and/or groundwater along with Site use restrictions would likely be required as part of a future Site-wide development plan. The source(s) of contamination to on-Site soil and groundwater has not yet been clearly identified and delineated. Prior to implementation of corrective measures, additional on-

---

<sup>1</sup> "Phase I Environmental Site Assessment, 537 East Delavan Avenue, Buffalo, New York" completed for NorDel I, LLC by GZA dated September 2014.

## 2.00 PURPOSE AND SCOPE OF WORK

Site characterization of the hydrogeologic conditions and the nature and extent of contamination may be necessary. The presence of buildings over much of the Site will pose a challenge during additional characterization activities, limiting access to drilling rigs and other heavy equipment.

The purpose of this Phase II ESA was to further assist NorDel I with due diligence efforts related to possible purchase of the property. At the direction of NorDel I, the focus of this Phase II was to assess overburden soils in “dark” areas of the Site where little or no environmental data has been previously collected.

To accomplish this, GZA developed a scope of work for the investigation to evaluate the Site based upon generally accepted engineering standard of care and practices. The following activities were completed as part of the Phase II:

- Observed the completion of 34 soil probes performed by GZA’s subcontractor, TREC Environmental Inc. (TREC) on October 15, 16, and 17, 2014.
- Collected subsurface soil samples continuously in 4-foot sample intervals from ground surface to refusal. Total probe depths ranged from 1.5 to 11 feet below ground surface (bgs). Soil samples were collected using a macro-core sampler at each probe location.
- Field screened soil samples recovered using an organic vapor meter (OVM) equipped with a photoionization detector (PID) with an 11.7 electron volt (eV) ultraviolet lamp.
- Selected 20 soil samples for chemical analysis, which included volatile organic compounds (VOCs) via EPA Method 8260B - Target Compound List (TCL), diesel range organics (DRO), and gasoline range organics (GRO) via EPA Method 8015.
- Summarized/tabularized/presented the results of concurrent NYSDEC sampling and analysis of existing accessible groundwater monitoring wells and building sumps. NYSDEC selected 15 groundwater and sump water samples for chemical analysis (VOCs via EPA Method 8260) and three sump sediment samples for VOCs via EPA Method 8260, semi-volatile organic compounds (SVOCs) via EPA Method 8270, polychlorinated biphenyls (PCBs) via EPA Method 8280, and metals via EPA Methods 6010/7471.
- Prepared this report, which summarizes the data collected during this Phase II ESA.

This report presents GZA’s field observations, results, and opinions and is subject to the limitations presented in Appendix A, and modifications if subsequent information is developed by GZA or any other party.

## **3.00 FIELD STUDIES**

This section describes the field studies completed as part of GZA's subsurface investigation.

### **3.10 SOIL PROBE INSTALLATIONS**

Thirty-four soil probes (seven exterior and 27 interior), designated as SP-1 through SP-34, were completed on-Site on October 15, 16, and 17, 2014 (see Figure 2).

The soil probes were completed in readily accessible areas using a Geoprobe® 54 LT track-mounted rig and a Geoprobe® 540DT truck-mounted rig. A 2-inch diameter by 48-inch long macro-core sampler was driven continuously at 48-inch intervals to retrieve the soil samples. Dedicated and disposable acetate sampler liners were used inside of the macro-core sampler between sample intervals. Representative portions of the recovered soils were placed in zip-lock bags for further classification and headspace analysis. Upon probe completion, the soil probes were backfilled with the soil cuttings.

At the direction of NorDel I, GZA prepared the scope of this Phase II ESA in consultation with BUDCs council as well as members of the NYSDEC Region 9 Division of Remediation. Specifically, soil probes were conducted in overburden soils in “dark” areas of the Site where little or no environmental data had been previously collected. The rationale for the soil probe locations is as follows (see Figure 2).

- Area 1 (SP-12 and SP-13) is located on the southwestern portion of the Site and was formerly occupied by Buffalo Powder Coatings. Soil probes were limited to the northern portion of this space due to the presence of a basement at the southern portion.
- Areas 2 and 3 (SP-1 through SP-11 and SP-31 through SP-34) consist of the western and central portions of the main Site building. Soil probes were not feasible on the westernmost and southern portions of the main Site building due to the presence of basements in these areas.
- Area 4 (SP-18 through SP-20 and SP-27 through SP-30) is located in and adjacent to the eastern portion of the Site building. One empty 3,000-gallon fuel oil aboveground storage tank (AST), a former degreaser storage area, and an associated sump are located in this portion of the Site building. Three 10,000-gallon diesel fuel underground storage tanks (USTs) and one 10,000-gallon degreaser UST were formerly located exterior and south of this eastern portion of the Site building. A historical Sanborn map dated 1986 indicated these USTs were 11,000-gallons and contained paint thinners. These USTs were reportedly removed from the Site in May 1986.
- Area 5 (SP-21 through SP-26) is located in the northeastern portion of the Site building. The current Site owner has used this space for the staging of miscellaneous debris including roofing materials, wood, cabinets, appliances, metal and tires.

- Area 6 (SP-16 and SP-17) is located on the exterior southeastern portion of the Site and provides general Site coverage.
- Area 7 (SP-14) and Area 8 (SP-15) are located on the exterior northern portions of the Site and provide general Site coverage.

GZA prepared soil probe logs summarizing the general subsurface conditions that were observed at each probe location. These logs provide a summary description of the soils based on visual observations of the recovered soil's color and composition. Soil probe logs are included as Appendix B. The thirty-four completed soil probes are summarized below.

Study Area	Soil Probe	Date Installed	Probe Depth (feet below ground surface)	Sample Depth (feet below ground surface)	PID Screening (location maximum, ppm)	Comments*
Area 1	SP-12	10/16/2014	6.8	NA	0	
	SP-13	10/16/2014	7.1	7	0	
Area 2	SP-1	10/15/2014	5.1	NA	0	
	SP-2	10/15/2014	4.6	NA	0	
	SP-3	10/15/2014	11.0	NA	0	
	SP-4	10/15/2014	8.4	8	2.0	BS/PO
	SP-5	10/15/2014	8.7	4	33.7	GS
	SP-6	10/15/2014	6.0	6	5.3	
	SP-7	10/15/2014	3.6	3	4.7	
	SP-8	10/15/2014	9.0	8	0.8	GS
Area 3	SP-9	10/15/2014	6.2	NA	0	No native soil encountered
	SP-10	10/15/2014	7.1	4	0.7	GS
	SP-11	10/15/2014	5.7	NA	1.6	SO
	SP-31	10/17/2014	4.8	1	1.7	
	SP-32	10/17/2014	2.0	2	0	
	SP-33	10/17/2014	2.4	NA	0	No native soil encountered
	SP-34	10/17/2014	2.0	2	1.5	
Area 4	SP-18	10/16/2014	4.1	NA	0	
	SP-19	10/16/2014	9.8	9	2.5	GS/PO Former location of USTs
	SP-20	10/16/2014	4	NA	0	
	SP-27	10/17/2014	4.7	2	4.6	Near sump in former degreaser still room
	SP-28	10/17/2014	4.7	2	31.5	Near suspect former drain near AST
	SP-29	10/17/2014	4.7	4	7.5	North of AST
	SP-30	10/17/2014	5.0	4	2.5	West of former degreaser still room
Area 5	SP-21	10/16/2014	6.0	NA	0	No native soil encountered
	SP-22	10/16/2014	1.5	NA	0	
	SP-23	10/16/2014	4.5	NA	0	
	SP-24	10/16/2014	3.5	3	185	BS/PO
	SP-25	10/16/2014	2.0	NA	0	

Study Area	Soil Probe	Date Installed	Probe Depth (feet below ground surface)	Sample Depth (feet below ground surface)	PID Screening (location maximum, ppm)	Comments*
	SP-26	10/16/2014	5.2	4	1.7	No native soil encountered
Area 6	SP-16	10/16/2014	6.1	6	0	
	SP-17	10/16/2014	5.5	NA	0	
Area 7	SP-14	10/16/2014	4.0	4	0	
Area 8	SP-15	10/16/2014	5.1	5	0	No native soil encountered

\* BS – Black staining observed   PO – Petroleum odor observed  
GS – Gray staining observed   SO – Septic odor observed

### 3.20 HEADSPACE SCREENING PROCEDURE

A representative portion of each two foot vertical section of soil sample was placed in a zip-lock bag to be headspace screened after the initial field screening after the acetate liner was opened. The headspace in the zip-lock bag of each collected soil sample was screened for total organic vapors using an OVM equipped with a PID with an 11.7 eV ultraviolet lamp. The OVM used was a MiniRae 3000 and was calibrated in accordance with manufacturer's recommendations. A gas standard of isobutylene at a concentration of 100 parts per million (ppm) was used for calibration. Ambient air at the Site was used to establish background organic vapor concentrations.

Total organic vapors were detected in the soil samples collected, at concentrations ranging from non-detect to 185 ppm (SP-24). Headspace results were recorded on the probe logs included in Appendix B.

### 3.30 GROUNDWATER, SUMP WATER, AND SUMP SEDIMENT COLLECTION

NYSDEC was on-Site on October 15 and 16, 2014 to collect groundwater samples from the existing and accessible groundwater wells. NYSDEC also collected water and sediment samples from four sumps and a flooded former transformer room located in the Site building. NYSDEC was observed to obtain the groundwater samples via hand bailers (groundwater wells) and dip-cup samplers (sump water and sediment). NYSDEC sampling locations are shown on Figure 3.

## **4.00 ANALYTICAL LABORATORY TESTING**

Twenty subsurface soil samples were selected based on physical characteristics and headspace screening results and submitted for analytical testing. The selected samples were packed in an ice-filled cooler and sent via courier to Alpha Analytical, Inc. (Alpha) located in Westborough, Massachusetts. Typical chain-of-custody procedures were followed. Table 1 provides a summary of the analytical samples collected and the analyses completed.

NYSDEC selected 15 groundwater and sump water samples and three sump sediment samples and submitted them for analytical testing. The samples were placed in an ice-filled cooler and sent via courier to TestAmerica, Inc. Laboratory (TestAmerica) located in Amherst, New York. Typical chain-of-custody procedures were followed. Table 1 provides a summary of the analytical samples collected and the analyses completed.

## **5.00 SUBSURFACE CONDITIONS**

### **5.10 SOILS**

Exterior and interior surfaces generally consisted of asphalt and/or concrete material with thicknesses ranging from approximately 2 inches (several locations) to 12 inches (SP-25). Fill soils were observed below the asphalt and/or concrete materials at soil probe locations SP-4 through SP-11, SP-19, SP-21, SP-26 through SP-31, SP-33, and SP-34. Fill soils were also encountered at exterior location SP-15, which was overlain by topsoil. Fill soils generally consisted of fine to coarse-grained sand with varying lesser amounts of gravel, brick fragments, glass, and slag.

Gray fine to coarse gravel with fine to coarse sand (crusher-run limestone) backfill was observed at SP-19 to a depth of 8.5 feet bgs. Three 10,000-gallon diesel fuel USTs and one 10,000-gallon degreaser UST were reportedly formerly located in this area (removed May 1986). The presence of backfill materials at this probe location supports reports of these USTs being removed.

Native silty clay soil was observed below fill materials at the majority of soil probe locations. Depth to native soils ranged from 4-inches bgs (SP-6 and SP-7) to 5.1 feet bgs (SP-15). Native soils were not encountered at probes SP-9, SP-15, SP-21, SP-26, and SP-33. Geoprobe® macro-core refusal (presumed top of bedrock) was encountered at all 34 probe locations with depths ranging from 1.5 feet (SP-22) to 11 feet (SP-3) bgs.

### **5.20 GROUNDWATER**

Saturated soil conditions were not encountered at any of the 34 soil probe locations.

NYSDEC conducted groundwater sampling of the following existing accessible/locatable groundwater monitoring wells: MW 1-10, MW 2-10, MW 3-10, MW 4-10, MW 5-10, MW 7-03, MW 11-03, MW 14-03, MW-1, MW-2, MW-7, and MW-8 (See Figure 3).

## **6.00 ANALYTICAL TEST RESULTS**

Findings of the laboratory testing of the soil samples analyzed are presented below. The analytical laboratory report is provided in Appendix C. The analytical results for the soil samples are summarized on Table 2. The analytical results for the NYSDEC groundwater

and sump water samples are summarized on Table 3. The analytical results for the NYSDEC sump sediment samples are summarized on Table 4.

The analytical test results for the subsurface soil samples were compared to:

- NYSDEC Part 375 Unrestricted and Restricted Use Soil Cleanup Objectives; and
- NYSDEC Final Commissioner's Policy, CP-51, Supplemental Soil Cleanup Objectives (SSCOs) dated October 21, 2010 (NYSDEC CP-51 SCGs).

The Unrestricted Soil Cleanup Objectives (USCOs) represent concentrations of contaminants in soil that require no use restrictions for the protection of public health, groundwater and ecological resources. These are considered to be "pre-release" conditions by NYSDEC.

The Restricted Use Soil Cleanup Objectives are applicable for the protection of public health in residential, commercial, and industrial scenarios where contamination has been identified in soil above the USCOs. The Commercial Soil Cleanup Objectives (CSCOs) and Industrial Soil Cleanup Objectives (ISCOs) were considered when evaluating the soil analytical results from the Site; however, analytical results did not exceed the Residential Soil Cleanup Objectives (RSCOs).

NYSDEC issued the CP-51/Soil Cleanup Guidance document in October 2010, which replaced the former Technical Administrative Guidance Memorandum (TAGM) 4046: Determination of Soil Cleanup Objectives and Cleanup Level, dated January 1994. The CP-51/Soil Cleanup Guidance document applies to each of the remedial programs administered by NYSDEC's Division of Environmental Remediation, which includes the Spill Response Program. CP-51 supplements the regulatory soil cleanup objectives (SCOs) for those compounds for which Recommended Soil Cleanup Objectives had been established under TAGM, but were excluded from NYSDEC Part 375 regulations.

The sump sediment sampled and analyzed by NYSDEC do not have applicable regulatory guidelines, as they are not soil and they are not sediment from a natural environment (i.e. sediment from a surficial water body). For reference and comparative purposes the NYSDEC derived sump sediment samples were compared to the NYSDEC Part 375 Unrestricted and Restricted Use Soil Cleanup Objectives; and NYSDEC Final Commissioner's Policy, CP-51, Supplemental Soil Cleanup Objectives (SSCOs) dated October 21, 2010 (NYSDEC CP-51 SCGs). However, GZA notes that these SCOs do not apply to sump sediment samples.

The analytical test results for the NYSDEC derived groundwater samples were compared to:

- NYSDEC Groundwater criteria presented in the Division of Water Technical and Operational Guidance Series (TOGS 1.1.), dated October 1993, revised June 1998, errata January 1999 and amended April 2000 (Class GA).

## 6.10 SOIL

Twenty subsurface soil samples were selected and submitted for analytical testing by GZA. In general, no new suspect sources of contamination and no free product were identified in the overburden soils. VOCs were detected in all 20 samples submitted for analytical testing. Some concentrations exceeded the USCOs; however, no concentrations exceeded the RSCOs. Diesel Range Organics (DROs), expressed as total petroleum hydrocarbons (TPHs) were detected in all of the samples submitted for analysis, at concentrations ranging from 5,630 parts per billion (ppb) (SP-14) to 7,910,000 ppb (SP-24). Gasoline Range Organics (GROs) were detected in 10 of the 20 soil samples submitted for analysis, at concentrations ranging from 2,000 ppb (SP-34) to 420,000 ppb (SP-24). DROs and GROs are total concentrations of petroleum compounds and do not have applicable regulatory criteria. An analytical summary by area of investigation is provided below.

### Area 1

One soil sample (SP-13) was submitted for analysis from Area 1. One VOC, acetone, was detected above method detection limits (MDLs), but below its respective USCO. DROs were detected at 11,800 ppb (estimated concentration).

### Area 2

Five soil samples (SP-4 through SP-8) were submitted for analysis from Area 2. Eleven VOCs were detected above MDLs. Two VOCs, acetone (at SP-4 and SP-5) and vinyl chloride (at SP-5), were detected at concentrations exceeding their respective USCOs but below their RSCOs. Chlorinated solvents, their associated daughter break-down compounds, and petroleum compounds were detected above MDLs but below their respective USCOs in the remaining soil samples submitted for analysis from Area 2.

### Area 3

Four soil samples (SP-10, SP-31, SP-32, and SP-34) were submitted for analysis from Area 3. Thirteen VOCs were detected above MDLs. Two VOCs, acetone (at SP-10) and trichloroethene (TCE) (at SP-31), were detected at concentrations exceeding their respective USCOs but below their RSCOs. Chlorinated solvents, their associated daughter break-down compounds, and petroleum compounds were detected above MDLs but below their respective USCOs in the remaining soil samples submitted for analysis from Area 3.

### Area 4

Area 4 is located in and adjacent to the eastern portion of the Site building. Five soil samples (SP-19 and SP-27 through SP-30) were submitted for analysis from Area 4. Eleven VOCs were detected above MDLs. Two VOCs, acetone (at SP-19) and TCE (at SP-28), were detected at concentrations exceeding their respective USCOs but below their RSCOs. Chlorinated solvents, their associated daughter break-down compounds, and petroleum compounds were detected above MDLs but below their respective USCOs in the remaining soil samples submitted for analysis from Area 4. One empty 3,000-gallon

fuel oil AST, a former degreaser storage area, and an associated sump are located in this portion of the Site building. Three 10,000-gallon diesel fuel USTs and one 10,000-gallon degreaser UST were formerly located exterior and south of this eastern portion of the Site building. These soil probes have further delineated and defined this area of known impact.

#### Area 5

Two soil samples (SP-24 and SP-26) were submitted for analysis from Area 5. Eleven VOCs were detected above MDLs. One VOC, acetone (at SP-24) was detected at concentrations exceeding its respective USCOs but below its RSCOs. Chlorinated solvents, their associated daughter break-down compounds, and petroleum compounds were detected above MDLs but below their respective USCOs in the remaining soil samples submitted for analysis from Area 5.

#### Areas 6, 7, and 8

Three soil samples were submitted for analysis from Area 6 (SP-16), Area 7 (SP-14), and Area 8 (SP-15). Two VOCs were detected above MDLs. One VOC, acetone (at SP-14) was detected at concentrations exceeding its respective USCO but below its RSCO. These soil probes were conducted on the perimeter exterior portions of the Site for general coverage. No evidence of significant impact was observed at these three locations.

### 6.20 GROUNDWATER AND SUMP WATER

#### Groundwater

Twelve groundwater samples were collected and submitted for analytical testing by NYSDEC. Table 1 provides a summary of analytical tests performed on these 12 groundwater samples. Volatile organic compounds were detected in 10 of the 12 groundwater samples submitted for VOC analytical testing. Two groundwater samples (MW-1 and MW-8) had no VOCs detected. Several groundwater samples (MW 1-10, MW 2-10, MW 3-10, MW 4-10, MW-7-03) had VOC concentrations slightly below to slightly exceeding their respective groundwater criteria. The remaining samples had significantly elevated VOC concentrations as discussed below.

- MW 5-10 – Twelve VOCs were detected above method detection limits; eight of which exceeded their groundwater criteria as follows.

VOC	NYSDEC Groundwater Criteria (ug/L)	Detected Concentration (ug/L)
1,1,1-Trichloroethane	5	14,000
1,1,2-Trichloroethane	1	4.7
1,1-Dichloroethene	5	230
1,1-Dichloroethane	5	2,100
1,2-Dichloroethane	0.6	3.7
cis-1,2-Dichloroethene	5	69

VOC	NYSDEC Groundwater Criteria (ug/L)	Detected Concentration (ug/L)
Trichloroethene	5	40
Vinyl Chloride	2	2.1

- MW 11-03 – Eight VOCs were detected above method detection limits; four of which exceeded their groundwater criteria as follows.

VOC	NYSDEC Groundwater Criteria (ug/L)	Detected Concentration (ug/L)
1,1,1-Trichloroethane	5	15
1,1-Dichloroethane	5	78
Benzene	1	14
Chloroethane	5	150

- MW 14-03 – Two VOCs were detected above method detection limits; both of which exceeded their groundwater criteria as follows.

VOC	NYSDEC Groundwater Criteria (ug/L)	Detected Concentration (ug/L)
1,1-Dichloroethane	5	9.5
cis-1,2-Dichloroethene	5	26

- MW-2 – Five VOCs were detected above method detection limits; all of which exceeded their groundwater criteria as follows.

VOC	NYSDEC Groundwater Criteria (ug/L)	Detected Concentration (ug/L)
1,2-Dichloroethane	0.6	6.5
Chloroethane	5	22
cis-1,2-Dichloroethene	5	12
Trichloroethene	5	6.4
Vinyl Chloride	2	3.6

- MW-7 – Eight VOCs were detected above method detection limits; seven of which exceeded their groundwater criteria as follows.

VOC	NYSDEC Groundwater Criteria (ug/L)	Detected Concentration (ug/L)
1,1,1-Trichloroethane	5	1,300
1,1-Dichloroethene	5	13
1,1-Dichloroethane	5	230
Benzene	1	3.4
Chloroethane	5	18
cis-1,2-Dichloroethene	5	9.6

VOC	NYSDEC Groundwater Criteria (ug/L)	Detected Concentration (ug/L)
Trichloroethene	5	14

### Sump Water

Three sump water samples were collected and submitted for analytical testing by NYSDEC. Table 1 provides a summary of analytical tests performed on these three sump water samples. It is unknown if the sums are contained or open to the Site soil and/or groundwater. Volatile organic compound analytical results for the sump water samples Degreaser Sump and Deep Sump were below method detection limits. Sump water Transformer Room was not analyzed for VOCs. Analytical sample results for the Degreaser Sump, Deep Sump, and Transformer Room were below method detection limits for PCBs.

### 6.30 SUMP SEDIMENT

Three sump sediment samples were collected and submitted for analytical testing by NYSDEC. Sample locations are shown on Figure 3. The sump sediments sampled and analyzed by NYSDEC do not have applicable regulatory guidelines, as they are not soil and they are not sediment from a natural environment (i.e. sediment from a surficial water body). For reference and comparative purposes the NYSDEC derived sump sediment samples were compared to the NYSDEC SCOS; however, GZA notes that these SCOS do not have regulatory significance for these sump sediment samples.

### Volatile Organic Compounds

Methylene chloride was detected in the three sump sediment samples submitted for analysis (Degreaser Sump, Southwest Sump, West Sump) at concentrations ranging from 510 ppb to 1,700 ppb. These exceed methylene chloride's USCO of 50 ppb but are below its RSCO of 51,000 ppb. This compound was also detected in the blank sample and is often attributed to laboratory contamination when present at low concentrations.

Cis-1,2-dichloroethene was detected at Southwest Sump at 390 ppb, which exceeds its USCO of 250 ppb but is below its RSCO of 10,000 ppb. Trichloroethene was detected at Southwest Sump at 320 ppb, which is below its USCO of 470 ppb.

### Semi-Volatile Organic Compounds

- Degreaser Sump – SVOCs were not detected above method detection limits.
- Southwest Sump – ten SVOCs (mostly polycyclic aromatic hydrocarbons (PAHs)) were detected above method detection limits; three of which exceeded their respective RSCOs, one which exceeded its respective CSCO, and five of which exceeded their respective ISCOs. See Table 4 for compound listings, concentrations, and comparison criteria.

- West Sump – ten SVOCs (mostly PAHs) were detected above method detection limits; three of which exceeded their respective RSCOs, one which exceeded its respective CSCOs, and four of which exceeded their respective ISCOs. See Table 4 for compound listings, concentrations, and comparison criteria.

### Polychlorinated Biphenyls

- Southwest Sump – Two PCBs were detected above method detection limits: PCB-1254 (12 ppm) and PCB-1262 (7.1 ppm). This total concentration (19.1 ppm) is below its USCO of 100 ppm total PCBs.
- Degreaser Sump and West Sump – PCBs were not detected above method detection limits.

### Metals

Twenty-two metals were detected above method detection limits in the three sump sediment samples analyzed. Several concentrations exceeded their respective USCOs, RSCOs, CSCOs, and ISCOs. See Table 4 for analyte listings, concentrations, and comparison criteria.

## **7.00 CONCLUSIONS AND RECOMMENDATIONS**

GZA performed a Phase II Environmental Site Assessment (Phase II ESA) at 537 East Delavan Avenue in Buffalo, New York to assess overburden soils in “dark” areas of the Site where little or no environmental data had been previously collected.

The scope of work included completion of 34 soil probes, headspace screening of soil samples taken from a macro-core sampler at the soil probe locations, and the collection and analysis of 20 subsurface soil samples. GZA also summarized the concurrent NYSDEC groundwater, sump water, and sump sediment analytical results in context of the scope of work.

A summary of findings and opinions based upon the work conducted as part of this study follows.

- Exterior and interior surfaces generally consisted of asphalt and/or concrete material with thicknesses ranging from approximately 2 inches (several locations) to 12 inches (SP-25). Fill soils were observed below the asphalt and/or concrete materials at soil probe locations SP-4 through SP-11, SP-19, SP-21, SP-26 through SP-31, SP-33, and SP-34. Fill soils were also encountered at exterior location SP-15, which was overlain by topsoil. Fill soils generally consisted of fine to coarse-grained sand with varying lesser amounts of gravel, brick fragments, glass, and slag.

Gray fine to coarse gravel with fine to coarse sand (crusher-run limestone) backfill was observed at SP-19 to a depth of 8.5 feet bgs. Records indicate that three 10,000-gallon diesel fuel USTs and one 10,000-gallon degreaser UST were formerly located in this area (removed May 1986) which is consistent with the backfill encountered.

Native silty clay soil was observed at the majority of soil probes below the sandy fill material at depths ranging from approximately 4-inches bgs (SP-6 and SP-7) to 5.1 feet bgs (SP-15). Native soils were not encountered at SP-9, SP-15, SP-21, SP-26, and SP-33 which ranged in depth from 2.4 to 6.2 feet below ground surface. At these locations exclusively soil/fill material was encountered above the bedrock. Geoprobe® macro-core refusal (presumed top of bedrock) was encountered at all 34 probe locations at depths ranging from 1.5 feet (SP-22) to 11 feet (SP-3) bgs.

- Apparent saturated soil conditions were not encountered at the 34 completed soil probes.
- Twenty subsurface soil samples were selected and submitted for analytical testing by GZA. In general, no new sources of the contamination were encountered in the overburden soils. VOCs were detected in all 20 samples submitted for analytical testing. Concentrations of certain contaminants exceeded the USCOs; however, no concentrations exceeded the RSCOs. Diesel range organics (DROs), expressed as total petroleum hydrocarbons (TPHs) were detected in all of the samples submitted for analysis, at concentrations ranging from 5,630 parts per billion (ppb) (SP-14) to 7,910,000 ppb (SP-24). Gasoline range organics (GROs) were detected in 10 of the 20 soil samples submitted for analysis, at concentrations ranging from 2,000 ppb (SP-34) to 420,000 ppb (SP-24). DROs and GROs are total concentrations of petroleum compounds and do not have applicable regulatory criteria.
- Twelve groundwater samples were selected and submitted for analytical testing by NYSDEC. VOCs were detected in 10 of the 12 samples submitted for VOC analytical testing. Several samples had VOC concentrations ranging from slightly below to slightly exceeding their respective groundwater criteria. The remaining samples had VOC concentrations significantly exceeding their respective groundwater criteria.

GZA compared the NYSDEC derived groundwater analytical data from this sampling event to available most recent historical groundwater analytical data from 2006, 2009, and 2010. GZA notes that not all Site wells were accessible and/or locatable by NYSDEC during the 2014 sampling event. Comparative analysis reveals that measured concentrations of detected compounds and concentrations during the 2014 sampling event were either consistent with or less than the most recent previous sampling events; with exception of wells MW 5-10 and MW-7. Total VOC concentrations, consisting mostly of chlorinated solvents and their associated breakdown products, were significantly greater in the samples collected in 2014 at these locations from the most recent historical sampling events as shown below.

#### Total VOC Concentrations at MW 5-10

July 2010	December 2010	October 2014
6,036.5 ug/L	8,067.5 ug/L	16,456.1 ug/L

#### Total VOC Concentrations at MW-7

October 1994	1997-2002	October 2003	April 2006	June 2009	October 2014
0 ug/L	0 ug/L	Not sampled	5.89 ug/L	11.5 ug/L	1,589.24 ug/L

Note that well MW-7 is located near the Site perimeter; reportedly in the downgradient groundwater flow direction of the Site.

Copies of the historical groundwater analytical data prepared by others are included in Appendix D.

- Three sump sediment samples were selected and submitted for analytical testing by NYSDEC. It is unknown if the sums are contained or open to the Site soil and/or groundwater. For reference and comparative purposes only, the NYSDEC derived sump sediment samples were compared to the NYSDEC SCOS. Volatile organic compound, SVOC, and metals are present in the analyzed sump sediment samples exceeding USCOs, RSCOs, CSCOs, and ISCOs.
- Volatile organic compound concentrations at the westernmost well (MW-8) were below method detection limits. Volatile organic compound concentrations at MW-7, (located on the southwestern portion of the Site) have increased as summarized above.

## Notes:

1. Compounds detected in one or more samples are presented on this table. Refer to Appendix C for list of all compounds included in analysis.
2. Analytical testing completed by TestAmerica Laboratories in Amherst, New York.
3. New York State Department of Environmental Conservation Class GA criteria obtained from Division of Water Technical and Operational Guidance Series (TOGS 1.1.1) dated October 1993, revised June 1998, January 1999 errata sheet and April 2000 addendum.
4. B = Compound was detected in the method blank. H = sample was analyzed beyond the specified holding time. J = estimated concentration. ^ = Instrument related quality control exceeded the control limits. DL = indicates a dilution, re-analysis, re-extraction, or additional metals/anions analysis of the sample.
5. ug/L = part per billion (ppb).
6. Shading indicates values exceeding NYSDEC Class GA groundwater criteria.
7. < indicates compound not detected above method detection limits. NT = Not tested. NV = No value.

Notes:

1. Compounds detected in one or more samples are presented on this table. Refer to Appendix D for list of all compounds included in analysis.
2. Analytical testing completed by TestAmerica Laboratories in Amherst, New York.
3. ug/kg = part per billion, mg/kg = part per million.
4. NV = no value.
5. *Italics* indicates value exceeds Unrestricted Use Soil Cleanup Objectives.
6. **Bold** indicates value exceeds Restricted Use (Residential) Soil Cleanup Objectives.
7. Shaded indicates value exceeds Commercial or Industrial Use Soil Cleanup Objectives.
8. Soil cleanup objectives (SCOs) are from NYSDEC Part 375, Subpart 375-6: Unrestricted Use, Restricted Use (Residential) and Commercial Soil Cleanup Objectives.
9. Soil cleanup objectives (SCOs) are for reference and comparative purposes, and do not apply to sump sediment samples.
10. < indicates compound not detected above method detection limits.
11. B = Compound was detected in the method blank. ^ = Instrument related quality control exceeded control limits. J = estimated concentration.

**APPENDIX A**  
**LIMITATIONS**

## GEOHYDROLOGICAL LIMITATIONS

### Use of Report

1. GZA GeoEnvironmental, Inc. (GZA) prepared this report on behalf of, and for the exclusive use of our Client for the stated purpose(s) and location(s) identified in the Proposal for Services and/or Report. Use of this report, in whole or in part, at other locations, or for other purposes, may lead to inappropriate conclusions; and we do not accept any responsibility for the consequences of such use(s). Further, reliance by any party not expressly identified in the agreement, for any use, without our prior written permission, shall be at that party's sole risk, and without any liability to GZA.

### Standard of Care

2. GZA's findings and conclusions are based on the work conducted as part of the Scope of Services set forth in the Proposal for Services and/or Report and reflect our professional judgment. These findings and conclusions must be considered not as scientific or engineering certainties, but rather as our professional opinions concerning the limited data gathered during the course of our work. Conditions other than described in this report may be found at the subject location(s).
3. GZA's services were performed using the degree of skill and care ordinarily exercised by qualified professionals performing the same type of services, at the same time, under similar conditions, at the same or a similar property. No warranty, expressed or implied, is made. Specifically, GZA does not and cannot represent that the Site contains no hazardous material, oil, or other latent condition beyond that observed by GZA during its study. Additionally, GZA makes no warranty that any response action or recommended action will achieve all of its objectives or that the findings of this study will be upheld by a local, state or federal agency.
4. In conducting our work, GZA relied upon certain information made available by public agencies, Client and/or others. GZA did not attempt to independently verify the accuracy or completeness of that information. Inconsistencies in this information which we have noted, if any, are discussed in the Report.

### Subsurface Conditions

5. The generalized soil profile(s) provided in our Report are based on widely-spaced subsurface explorations and are intended only to convey trends in subsurface conditions. The boundaries between strata are approximate and idealized, and were based on our assessment of subsurface conditions. The composition of strata, and the transitions between strata, may be more variable and more complex than indicated. For more specific information on soil conditions at a specific location refer to the exploration logs.

6. Water level readings have been made in test holes (as described in the Report) and monitoring wells at the specified times and under the stated conditions. These data have been reviewed and interpretations have been made in this report. Fluctuations in the level of the groundwater however occur due to temporal or spatial variations in areal recharge rates, soil heterogeneities, the presence of subsurface utilities, and/or natural or artificially induced perturbations. The observed water table may be other than indicated in the Report.

#### Compliance with Codes and Regulations

7. We used reasonable care in identifying and interpreting applicable codes and regulations necessary to execute our scope of work. These codes and regulations are subject to various, and possibly contradictory, interpretations. Interpretations and compliance with codes and regulations by other parties is beyond our control.

#### Screening and Analytical Testing

8. GZA collected environmental samples at the locations identified in the Report. These samples were analyzed for the specific parameters identified in the report. Additional constituents, for which analyses were not conducted, may be present in soil, groundwater, surface water, sediment and/or air. Future Site activities and uses may result in a requirement for additional testing.
9. Our interpretation of field screening and laboratory data is presented in the Report. Unless otherwise noted, we relied upon the laboratory's QA/QC program to validate these data.
10. Variations in the types and concentrations of contaminants observed at a given location or time may occur due to release mechanisms, disposal practices, changes in flow paths, and/or the influence of various physical, chemical, biological or radiological processes. Subsequently observed concentrations may be other than indicated in the Report.

#### Interpretation of Data

11. Our opinions are based on available information as described in the Report, and on our professional judgment. Additional observations made over time, and/or space, may not support the opinions provided in the Report.

#### Additional Information

12. In the event that the Client or others authorized to use this report obtain information on environmental or hazardous waste issues at the Site not contained in this report, such information shall be brought to GZA's attention forthwith. GZA will evaluate such information and, on the basis of this evaluation, may modify the conclusions stated in this report.

#### Additional Services

13. GZA recommends that we be retained to provide services during any future investigations, design, implementation activities, construction, and/or property development/ redevelopment at the Site. This will allow us the opportunity to: i) observe conditions and compliance with our design concepts and opinions; ii) allow for changes in the event that conditions are other than anticipated; iii) provide modifications to our design; and iv) assess the consequences of changes in technologies and/or regulations.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Project Name:** FORMER HOUDAILLE/VIBRATECH  
**Project Number:** 31.0180045.10

**Lab Number:** L1424863  
**Report Date:** 10/27/14

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Volatile Organics

L1424863-01, -11, -12, -13, and -20 have elevated detection limits due to the dilutions required by the elevated concentrations of non-target compounds in the samples.

#### Petroleum Hydrocarbon Quantitation

L1424863-12: The surrogate recovery is below the acceptance criteria for o-terphenyl (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

The WG733262-3 Laboratory Duplicate RPD (59%), performed on L1424863-20, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

#### Gasoline Range Organics

The surrogate recoveries for L1424863-12 and -18 are outside the acceptance criteria for 4-bromofluorobenzene (66% and 203%); however, the samples were not re-analyzed due to coelution with obvious interferences. Copies of the chromatograms are included as an attachment to this report.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### **Acronyms**

- EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
- EPA - Environmental Protection Agency.
- LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
- LCSD - Laboratory Control Sample Duplicate: Refer to LCS.
- LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
- MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
- MSD - Matrix Spike Sample Duplicate: Refer to MS.
- NA - Not Applicable.
- NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
- NI - Not Ignitable.
- RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
- SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

### **Footnotes**

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### **Terms**

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

### **Data Qualifiers**

- A - Spectra identified as "Aldol Condensation Product".
- B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** FORMER HOUDAILLE/VIBRATECH  
**Project Number:** 31.0180045.10

**Lab Number:** L1424863  
**Report Date:** 10/27/14

**Data Qualifiers**

- G** - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedances are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

Last revised April 15, 2014

---

### **The following analytes are not included in our NELAP Scope of Accreditation:**

#### **Westborough Facility**

**EPA 524.2:** Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

**EPA 8260C:** 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

**EPA 8330A/B:** PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.

**EPA 8270D:** 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

**EPA 625:** 4-Chloroaniline, 4-Methylphenol.

**SM4500:** Soil: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**EPA 9071:** Total Petroleum Hydrocarbons, Oil & Grease.

#### **Mansfield Facility**

**EPA 8270D:** Biphenyl.

**EPA 2540D:** TSS

**EPA TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

---

### **The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:**

#### **Drinking Water**

**EPA 200.8:** Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

**EPA 300.0:** Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

**EPA 332:** Perchlorate.

**Microbiology:** **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

#### **Non-Potable Water**

**EPA 200.8:** Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

**EPA 200.7:** Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

**EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC,**

**SM426C, SM4500NH3-BH, EPA 350.1:** Ammonia-N, LACHAT 10-107-06-1-B: Ammonia-N, **SM4500NO3-F,**

**EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4,**

**SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

**EPA 624:** Volatile Halocarbons & Aromatics,

**EPA 608:** Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

**EPA 625:** SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

**Microbiology:** **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD exceeds the control limits
B	Compound was found in the blank and sample.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.

### GC/MS Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits
*	LCS or LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.

## Glossary

### Abbreviation

**These commonly used abbreviations may or may not be present in this report.**

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

## Case Narrative

Client: New York State D.E.C.

Project/Site: NYSDEC- Vibratech :Site# 915165

TestAmerica Job ID: 480-69465-1

### Job ID: 480-69465-1

#### Laboratory: TestAmerica Buffalo

##### Narrative

##### Job Narrative 480-69465-1

##### Receipt

The samples were received on 10/16/2014 5:08 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.4° C.

##### GC/MS VOA

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 210858 recovered above the upper control limit for Carbon Tetrachloride, Chlorodibromomethane, Dichlorodifluoromethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCVIS 480-210858/9).

Method(s) 8260C: The laboratory control sample (LCS) for batch 210858 recovered outside control limits for the following analyte: Dichlorodifluoromethane. This was not a requested spike compounds; therefore, the data have been qualified and reported.

Method(s) 8260C: The following volatiles sample(s) was diluted due to foaming at the time of purging during the original sample analysis: DEEP SUMP (480-69465-16), DEGREASER SUMP (480-69465-13), MW14-03 (480-69465-8), MW-2 (480-69465-9), MW3-10 (480-69465-3), MW4-10 (480-69465-4), MW-8 (480-69465-11). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The following sample(s) was analyzed outside of analytical holding time due to laboratory's oversight: MW1-10 (480-69465-1), MW14-03 (480-69465-8), MW2-10 (480-69465-2), MW3-10 (480-69465-3), MW4-10 (480-69465-4), MW5-10 (480-69465-5).

Method(s) 8260C: The following sample(s) was diluted due to the nature of the sample matrix: DEGREASER SUMP (480-69465-14), WEST SUMP (480-69465-18). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 211006 recovered above the upper control limit for carbon tetrachloride, Dichlorobromomethane and Chlorodibromomethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCVIS 480-211006/3).

Method(s) 8260C: The laboratory control sample (LCS) for batch 211006 recovered outside control limits for the following analytes: Chlorodibromomethane and /or 2-Chloroethyl Vinyl Ether. These were not requested spike compounds; therefore, the data have been qualified and reported.

Method(s) 8260C: The following sample(s) was diluted to bring the concentration of target analytes within the calibration range: MW5-10 (480-69465-5), MW-7 (480-69465-10). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The following volatiles sample(s) was diluted due to foaming at the time of purging during the original sample analysis: MW11-03 (480-69465-7), MW11-03 (480-69465-7 MS), MW11-03 (480-69465-7 MSD). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 211391 recovered above the upper control limit for Carbon Tetrachloride, cis-1,3-Dichloropropene, Chlorodibromomethane, Ethylene Dibromide, and Trichlorofluoromethane.. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCVIS 480-211391/2).

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 211391 was outside the method criteria for the following analyte(s): 1,1,1-Trichloroethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8260C: The laboratory control sample (LCS) for batch 211391 recovered outside control limits for the following analytes: Carbon Tetrachloride and Chlorodibromomethane. These were not requested spike compounds; therefore, the data have been qualified and reported. (LCS 480-211391/4)

Method(s) 8260C: The following sample(s) was diluted to bring the concentration of target analytes within the calibration range:

## Case Narrative

Client: New York State D.E.C.  
Project/Site: NYSDEC- Vibratech :Site# 915165

TestAmerica Job ID: 480-69465-1

### Job ID: 480-69465-1 (Continued)

#### Laboratory: TestAmerica Buffalo (Continued)

(480-69465-5 MS), (480-69465-5 MSD), MW5-10 (480-69465-5). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The following sample(s) was analyzed outside of analytical holding time due to laboratory's oversight: MW11-03 (480-69465-7), MW11-03 (480-69465-7 MS), MW11-03 (480-69465-7 MSD), MW7-03 (480-69465-6).

Method(s) 8260C: The following sample(s) was analyzed outside of analytical holding time due to laboratory's oversigt: MW5-10 (480-69465-5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method(s) 8270D: The following samples were diluted due to the nature of the sample matrix : DEGREASER SUMP (480-69465-14), SOUTHWEST SUMP (480-69465-15), WEST SUMP (480-69465-18). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method(s) 8270D: The following analyte have been identified, in the reference method and/or via historical data, to be poor and/or erratic performers: Benzaldehyde. This analyte may have a %D >60% if the average %D of all the analytes in the continuing calibration verification (CCV) is 30%.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 210397 recovered above the upper control limit for Caprolactam. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCVIS 480-210397/3).

Method(s) 8270D: The laboratory control sample (LCS) for batch 208998 recovered outside control limits for the following analyte: Caprolactam. This analyte was biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC Semi VOA

Method(s) 8082A: The following samples required a dilution due to the matrix effects and are reported as elevated non-detections for all target analytes (Aroclors) : DEGREASER SUMP (480-69465-14). The reported values represent the lowest limit that can be ascertained given the sample composition.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Metals

Method(s) 6010C: The low level continuing calibration verification (CCVL 480-209508/17) for analytical batch 480-209508 contained total zinc above the upper quality control limit. All reported samples associated with this CCVL were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of sample SOUTHWEST SUMP (480-69465-15) was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

Method(s) 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with batch 208570.

Method(s) 3550C: The following samples: DEGREASER SUMP (480-69465-14), SOUTHWEST SUMP (480-69465-15), WEST SUMP (480-69465-18) were decanted prior to preparation.

Method(s) 3550C: Due to the matrix, the following samples could not be concentrated to the final method required volume: DEGREASER SUMP (480-69465-14), SOUTHWEST SUMP (480-69465-15), WEST SUMP (480-69465-18). The reporting limits (RLs) are elevated proportionately.

## Case Narrative

## Certification Summary

Client: New York State D.E.C.

TestAmerica Job ID: 480-69465-1

Project/Site: NYSDEC- Vibratech :Site# 915165

### Laboratory: TestAmerica Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
New York	NELAP	2	10026	03-31-15

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

## Method Summary

Client: New York State D.E.C.

Project/Site: NYSDEC- Vibratech :Site# 915165

TestAmerica Job ID: 480-69465-1

Method	Method Description	Protocol	Laboratory
8260C	Volatile Organic Compounds by GC/MS	SW846	TAL BUF
8270D	Semivolatile Organic Compounds (GC/MS)	SW846	TAL BUF
8082A	Polychlorinated Biphenyls (PCBs) by Gas Chromatography	SW846	TAL BUF
6010C	Metals (ICP)	SW846	TAL BUF
7471B	Mercury in Solid or Semisolid Waste (Manual Cold Vapor Technique)	SW846	TAL BUF
Moisture	Percent Moisture	EPA	TAL BUF

**DISTRIBUTION:** WHITE - Returned to Client with Report; CANARY - Stays with the Sample; PINK - Field Copy

## Login Sample Receipt Checklist

Client: New York State D.E.C.

Job Number: 480-69465-1

**Login Number: 69465**

**List Source: TestAmerica Buffalo**

**List Number: 1**

**Creator: Robison, Zachary J**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	NYS DEC
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

\*Table only includes compounds that were detected.

\*\* MW 1-10 was resampled on July 27th because plastic tie locking well was noted to be cut from well during July 27 resampling of MW-5.

\*\* MW 5-10 was resampled on July 27 to verify July 12 results.

\*\* MW 1-10 was resampled on December 10th due to varying results btw previous sampling events.
