Section 1
Introduction

1.1 Background

The Buffalo Lakeside Commerce Park (BCLP) occupies over 200 acres at the southern edge of the City of Buffalo. Approximately 113 acres of the BLCP was formerly referred to as the Hanna Furnace Site (Site #915029). Originally Site #915193A encompassed a 5.5-acre portion (Parcel 4/Lot 9) of BLCP. Characterization samples collected during the summer of 2014 from the proposed laydown/staging area immediately east of Lot 9 indicated the presence of source material outside of the original Site limits. Consequently in March 2015, the New York State Department of Environmental Conservation (NYSDEC) expanded Site #915193A to include an additional 14 acres immediately east of Lot 9. Therefore Site #915193A encompassed Parcel 4/Lots 4, 7, 8, and 9 of the BLCP. Appendix A presents the letter from NYSDEC detailing the decision behind expanding the Site boundary to the 19.665 acres. Herein referred to as "the Site," Site #915193A is the 19.665-acre vacant parcel located on the western edge of the BLCP, in the northwest corner of the former Hanna Furnace parcel. It encompasses the entire New York State Environmental Restoration Program (NYSERP) Site #E915193 by the same name.

The Site is bordered to the west by New York State Route 5 and Fuhrmann Boulevard, and to the south by the remediated NYSERP site Hanna Furnace Subparcel 3 Site #B00164 (now known as the Union Ship Canal Commons public greenspace). The Union Ship Canal, a slip off of the Buffalo Outer Harbor, lies 200 feet south of the Site, and drains directly into Lake Erie. Laborer's Way and an undeveloped property owned by Consolidating Rail Corporation border the Site to the north, and Ship Canal Parkway and Sonwil Distribution Center border the Site to the east. Parcel 4 is currently zoned for light industrial/commercial use. Figure 1-1 presents the Site Vicinity Map and Figure 1-2 presents the Site Location.

Further characterization samples collected during November 2014 through October 2015 indicated the presence of subsurface soil and groundwater contamination throughout Parcel 4/Lot 9 and within a nearly three-quarter portion of Parcel 4/Lot 8. Currently, an Interim Remedial Measure (IRM) is planned for Parcel 4/Lots 8 and 9.

1.1.1 Site Features

In earlier investigations, Parcel 4/Lot 9 was often called the "Filter Cake/Flue Ash" area. Occupying much of Lot 9 is a mound of fill composed of the byproducts from pig iron production: black fine-grained flue ash, collected from the exhaust of the iron blast furnaces; and filter cake, the solids screened from the wet "scrubbers" which separated impurities from the same furnace exhaust before the combustible gases were recycled back to the furnaces. The surface of the Filter Cake/Flue Ash area is "hummocky"; actually best characterized as several smaller, connected mounds with a maximum height of approximately 15 feet. Much of the filter cake/flue ash piles are covered with fill material (clay, crushed stone and concrete), which was reportedly excavated from the construction site of a supermarket in the City of Buffalo.

The remaining portion of Parcel 4, Lots 4, 7 and 8, were also fill areas composed of the byproducts of pig iron production. Lots 4, 7, and 8 were excavated as part of a previous remedial action completed in response to the Record of Decision (ROD) issued for the Site in March 2009. Currently, the area is relatively flat and was backfilled with various building demolition debris, including brick rubble, conduit, and concrete. There is no evidence from the subsurface investigations discussed in this report that Lots 4, 7, and 8 were backfilled with a geotextile membrane demarcation layer and clean fill, as is typical of excavation performed at other remediation sites. The Retention Basin located in the south side of Parcel 4 as well as the network of catch basins leading to the Union Ship Canal were constructed and installed during the previous remedial action.

1.1.2 Historical Use

Parcel 4 was the northern most of four adjoining parcels that comprised the Hanna Furnace iron foundry. The railroad yard that serviced the foundry and the production facilities themselves, were located to the south in Parcels 1 and 2, respectively. Parcel 3 surrounded the eastern end of the Union Ship Canal and is where the foundry's raw materials (ore, coke, and limestone) were delivered and stockpiled.

Hanna Furnace purchased Parcel 4 from the Pennsylvania Railroad in 1960. At that time, a marsh and pond occupied most of the site, with railroad tracks encircling it. Over the ensuing decades, the marsh was backfilled with slag, fly ash, and demolition debris generated by the foundry. Fill material covers the entire Site and is the source of the site contamination.

1.1.3 Previous Investigations

There have been seventeen separate environmental investigations conducted on the former 200 acre Hanna Furnace property. Of these seventeen studies, six investigations included the Parcel 4 area. In 2006 an Environmental Site Investigation was completed by Malcolm Pirnie for the Buffalo Urban Development Corporation (BUDC) under the NYSERP and a Record of Decision (ROD) was issued. The Parcel 4 site remedy required the excavation and off-site disposal of discrete solid waste materials, installation of a cover system over the entire site, and the implementation of a site management plan to ensure long term care of the cover system and compliance with site use restrictions.

Based upon the results from the Remedial Investigation, the primary contaminant of concern in soil is lead. The filter cake/flue ash pile, contained lead at concentrations as high as 11,000 ppm, well above the unrestricted soil cleanup objective (SCO) of 63 ppm. Leachate from one of the five samples of this ash that were tested for the Toxicity Characteristic Leachate Procedure (TCLP) during the 2006 ERP site investigation, contained 11.7 mg/L of lead, exceeding the hazardous waste threshold of 5 mg/L. One of twelve filter cake/flue ash waste samples collected in earlier investigations (1995, 2001, and 2003) contained lead in the leachate at a concentration characteristic of a hazardous waste.

Contaminants found exceeding groundwater standards in previous investigations included: antimony, arsenic, beryllium, copper, cyanide, iron, lead, magnesium, manganese, nickel, selenium, sodium, thallium, acetone, benzene, pentachlorophenol, and phenol. Iron and sodium were found at elevated concentrations in all of the Parcel 4 wells. Two wells initially sampled during the January 2006 event in Parcel 4 had elevated concentrations of total cyanide: MW-406, located near the former Blue Fill Area, had a concentration of 6,390 µg/l and MW-307 had a concentration of 5,710 µg/l. Both wells were resampled in January 2007 for cyanide speciation.

MW-406 had a total cyanide concentration of 5,970 µg/l, 4,100 µg/l free cyanide, and 1,900 µg/l amenable cyanide. The groundwater concentrations in MW-307 were 196 µg/l for total cyanide, all of which was free cyanide. Amenable cyanide was non-detect in MW-307. The pH of the groundwater was as high as 12 SU.

Groundwater was encountered at depths between 1 and 7 feet with the shallowest groundwater found along the northern boundary of Parcel 4 and adjacent to the debris disposal pile, where standing surface water was often found. The groundwater beneath Parcel 4 generally flowed southward except in the raised area of the debris disposal pile where there was a localized radial flow. Between Parcel 4 and Union Ship canal to the south, the groundwater contours plotted during the RI/FS (2006) appeared to be influenced by the canal's north wall and/or by the railroad beds which once bordered the canal. Northwest of the canal, in the vicinity of the filter cake/flue ash area, where the canal wall is largely intact, groundwater flowed parallel to the canal wall eastward to that end of the canal where the wall is weathered and damaged and the canal wall cap is absent. It is not known if the removal of the Debris Disposal pile and re-grading of Parcel 4 has altered the groundwater flow.

1.2 Objectives of Pre-Design Sampling and Analysis

Camp Dresser McKee & Smith (CDM Smith) was retained by NYSDEC to conduct pre-design sampling and characterization to prepare a remedial design for the Site. The major focus of the pre-design investigation and sampling at the Site was to further define the limit and extent of contaminated soils. Specifically, the objectives were:

- Establish the present nature of the Site topography and parcel boundaries.
- Characterize the present nature and extent of soil contamination in Parcel 4/Lots 4, 7, 8, and 9.
- Characterize the stratigraphy present within the filter cake/flue ash piles and subsurface soils in Parcel 4/Lots 4, 7, 8, and 9.
- Evaluate the treatability potential, through a series of bench scale tests, to reduce lead concentrations within the soil at the Site.

The results of the pre-design sampling and analysis will be used in the development of a Basis of Design Report and overall remedial design for the Site based on the remedial objectives outlined in the ROD. Table 1-1 presents a summary of all sampling events, listing out the sampling locations, matrix, and chemical analyses performed.

1.2.1 Site Survey

Prior to commencing field activities a topographic and boundary survey was conducted by Popli Design Group for Parcel 4/Lot 9. Additionally, Popli Design Group surveyed the fence line, the property line boundaries were clearly staked, and pins placed at the corners showing the limits of Parcel 4/Lot 9. This survey was completed on September 27, 2012.

A follow-up survey was performed by McIntosh & McIntosh, P.C. on August 15, 2014. The purpose of this survey was to establish a topographic and boundary survey for Parcel 4/Lots 4, 7, and 8.

The topographic surveys presented in Figure 1-12 provide 1-foot interval contours of the existing property and overlaps into the adjacent properties.

1.2.2 Subsurface Investigations

Since 2012, CDM Smith has conducted six investigations of subsurface conditions at the Site. A brief description of the subsurface sampling events are described below, in chronological order.

1.2.2.1 September 2012

SJB Services Inc. (SJB), with oversight provided by CDM Smith, advanced soil borings at 25 locations using direct push drilling methods to collect soils samples and further delineate soil contamination and characterize the subsurface soil within Parcel 4/Lot 9. The soil boring locations are shown on Figure 1-3 and results are presented in Table 3-1. The borings were analyzed for visual observations of filter cake/flue ash depth and to collect soil samples for laboratory analysis for the Target Analyte List (TAL) Metals. The sampling activities and analysis results will be discussed further in Section 2.1.1.1 and Section 3.1.1, respectively. Concurrent with the September 2012 Geoprobe work, 18 test pits were dug on-site using a rubber tire backhoe. Test pits were advanced within the filter cake/flue ash piles to varying depths to determine the stratigraphy of the subsurface soils and if there were any significant amounts of concrete/debris within the piles. The test pit locations are also shown in Figure 1-3. All test pit logs and a test pit photo log are provided in Appendix B and E, respectively. The sampling activities are discussed further in Section 2.1.1.1 and the results of the test pit investigation will be discussed further Section 3.2.

Two TCLP samples were collected within the fenced area on Lot 9: one soil sample was collected during the test pit investigation at TP-14 (TCLP-1) and one subsurface sample was collected as part of the Geoprobe® investigation (SB-15 0-4 TCLP). The results of these samples are included in Table 3-1.

1.2.2.2 July 2014

In early 2014, an agreement was reached between NYSDEC and the BUDC, that following remedial activities of Parcel 4/Lot 9, NYSDEC will issue an Environmental Easement covering Parcel 4/Lots 4, 7, 8, and 9 (approximately 19.7 acres in total). Consequently a second round of investigative activities was conducted in July 2014 to further delineate soil contamination and characterize the subsurface soil within Parcel 4/Lots 4, 7, and 8. The July 2014 investigation included the collection of 16 subsurface soil samples via direct push methodology. The subsurface soil samples were analyzed for TAL metals, total cyanide, hexavalent chromium, and Semi-Volatile Organic Compounds (SVOCs). Boring locations are show on Figure 1-5 and results are presented in Table 3-2. The sampling activities and analysis results will be discussed further in Section 2.1.1.2 and Section 3.1.1, respectively.

1.2.2.3 November 2014

Following a review of the data collected during the July and August 2014 sampling rounds, additional sampling was proposed to aid in identifying potential sources of cyanide detected in the Retention Basin and catch basin network leading from the basin to the outfall. The third phase of investigation sampling was conducted in November and December 2014 and included collection of 46 subsurface soil samples from ten locations within Lot 9. The samples were collected through direct push methods and analyzed for TAL metals, total cyanide, free cyanide, available cyanide, and SVOCs. Sampling locations are shown on Figure 1-8 and results are presented in Table 3-3. The sampling activities and analysis results will be discussed further in Section 2.1.1.3 and Section 3.1.1, respectively.

1.2.2.4 May 2015

The original boundary of Site #915193A was Parcel 4/Lot 9. Subsequent evaluation of the data collected during 2014 lead to NYSDEC modifying the boundary of Site #915193A to include Parcel 4/Lots 4, 7, and 8. Consequently, additional delineation of contaminated soils was required in the vicinity of wells located in Lots 4, 7, 8 and 9, where groundwater contamination was previously seen. Additionally, characterization of soils north and west of Lots 4, 7, 8 and 9 was conducted. The fourth phase of subsurface soil sampling was conducted in May 2015 and included the collection of 109 subsurface soil samples from twenty-five locations within and around Parcel 4. Subsurface samples were collected via direct push methods and analyzed for percent moisture, TAL metals, total cyanide, free cyanide, available cyanide, and SVOCs. Sampling locations are shown on Figure 1-9 and results are presented in Table 3-4. The sampling activities and analysis results will be discussed further in Section 2.1.1.4 and Section 3.1.1, respectively.

1.2.2.5 August 2015

In early 2015, remediation at the former Republic Steel site, located less than 2 miles from BLCP, found soils with detectable levels of Technologically Enhanced Naturally Occurring Radioactive Material (TENORM) present. The soil had been loaded for offsite disposal at a nearby landfill, but was rejected due to presence of TENORM. Consequently, the excavated soils had to be real-time tested for the presence of TENORM, segregated, and disposed at an alternate facility.

Given the similarity of the site histories and the anticipated similarity of the waste characteristics between the former Republic Steel site and the former Hanna Furnace site (now known as BLCP), it was concluded that TENORM sampling of the subsurface soils was necessary for the BLCP site. The fifth phase of characterization sampling was conducted in August 2015 and included the collection of 25 composite subsurface soil samples from twenty-five locations within Parcel 4/Lots 4, 7, 8, and9. Subsurface samples were collected via split spoon sampling and analyzed for radiochemistry analyses including Radium-226, Gross Alpha and Beta radioactivity and Isotopic Uranium. Sampling locations are shown on Figure 1-10 and results are presented in Table 3-5. The sampling activities and analysis results will be discussed further in Section 2.1.1.5 and Section 3.1.1, respectively.

1.2.2.6 October 2015

To evaluate groundwater north of Lots 4, 7, 8 and 9, three temporary well points were installed on the undeveloped property located north of the Site. In conjunction with the well installation, subsurface soil samples were collected from four foot intervals to a depth of 20 feet bgs at all three locations. Subsurface soil samples were submitted to TestAmerica for analysis of TAL metals, total cyanide, free cyanide, and SVOCs. Sampling locations are shown on Figure 1-11 and sampling results are provided in Table 3-6.

1.2.3 Surface Soil Investigation

Since 2012, CDM Smith has conducted five investigations of surface soil conditions at the Site. A brief description of the subsurface sampling events are described below, in chronological order.

1.2.3.1 September 2012

Two surface soil samples were collected during the initial investigation performed in September 2012 and analyzed for TCLP metals. Sampling locations are shown on Figure 1-3 and presented in Table 3-7. The sampling activities and analysis results will be discussed further in Section 2.1.2.1 and Section 3.1.2, respectively.

1.2.3.2 January 2013

Upon further review of the results from the September 2012 investigation, personnel from NYSDEC requested a second round of surface soil samples be collected for TCLP metals and hexavalent chromium. Eight additional surface soil samples were collected in January 2013. All surface soil sampling locations are shown in Figure 1-4 and the results are shown in Table 3-8. The sampling activities and analysis results will be discussed further in Section 2.1.2.2 and Section 3.1.2, respectively.

1.2.3.3 July 2014

Based on the Environmental Easement agreement reached between NYSDEC and BUDC, a third round of investigative activities was conducted in July 2014 to characterize the surface soil conditions within Parcel 4/Lots 4, 7, and 8. The July 2014 investigation included the collection of 51 surface soil samples collected in a grid pattern across the Lots. The surface soil samples were analyzed for TAL metals, total cyanide, hexavalent chromium, and SVOCs. Sampling locations are shown on Figure 1-5 and presented in Table 3-9. The sampling activities and analysis results will be discussed further in Section 2.1.2.3 and Section 3.1.2, respectively.

1.2.3.4 November 2014

Following a review of the data collected during the July 2014 sampling rounds, additional sampling was proposed to aid in identifying potential sources of cyanide detected in the Retention Basin and catch basin network leading from the basin to the outfall. The fourth phase of investigation sampling was conducted in November 2014 and included collection of ten surface soil samples from locations within Lot 9. The samples were analyzed for TAL metals, total cyanide, free cyanide, available cyanide, and SVOCs. Sampling locations are shown on Figure 1-8 and presented in Table 3-10. The sampling activities and analysis results will be discussed further in Section 2.1.2.4 and Section 3.1.2, respectively.

1.2.3.5 October 2015

CDM Smith collected six surface soil samples on October 13, 2015 to determine a correlation with the high pH observed in surface water samples previously collected from utilities. Four samples were collected from the property located north of Parcel 4 and two were collected near the center of Parcel 4 and upgradient of the Retention Basin. Samples were submitted to TestAmerica for analysis of TAL metals and pH. Sampling locations are shown on Figure 1-11 and results are presented in Table 3-11.

1.2.4 Pre-Design Bench Scale Testing for Lead

The work plan submitted by CDM Smith on August 7, 2012 outlined bench scale treatability tests that would be performed in the event the pre-design investigation showed that the soils at the Site could be characterized as hazardous due to high lead concentrations. CDM Smith collected a 5-gallon bucket of soil from the fenced area that was determined to be characteristically hazardous previously, and submitted it to CDM Smith's Bellevue, Washington laboratory for future testing. That testing was suspended because the results of the first round of pre-design investigation showed that lead levels, while exceeding the Restricted Commercial Use SCO in certain locations, could not be characterized as hazardous based on the TCLP analysis. The second round of surface soil samples also showed lead concentrations below the hazard classification. As a result, the bench scale treatability tests have been cancelled.

1.2.5 Temporary Well Installation and Low-Flow Groundwater Sampling

Since 2014, CDM Smith has conducted five investigations of shallow groundwater conditions at the Site. A brief description of the temporary monitoring well installation and subsequent groundwater sampling events are described below, in chronological order.

1.2.5.1 July 2014

In early 2014, an agreement was reached between NYSDEC and the Buffalo Urban Development Corporation (BUDC), that following remedial activities of Parcel 4/Lot 9, NYSDEC will issue an Environmental Easement covering Parcel 4/Lots 4, 7, 8, and 9 (approximately 19.7 acres in total). Consequently, characterization of the shallow groundwater at the Site was required.

During the July 2014 sampling event, 12 temporary groundwater monitoring well points were installed in Parcel 4/Lots 4, 7, 8, and 9. After development, groundwater samples were collected from the temporary monitoring wells via low-flow sample collection methods. The groundwater samples were analyzed for field parameters, TAL metals, total cyanide, hexavalent chromium, and SVOCs. Sampling locations are shown on Figure 1-5 and presented in Table 3-12. The sampling activities and analysis results will be discussed further in Section 2.4.1 and Section 3.4, respectively.

1.2.5.2 August 2014

Based on the elevated results of TAL metals, total cyanide, hexavalent chromium, and SVOCs detected from the July 2014 sampling activities, a second phase of groundwater sampling was completed in August 2014 to confirm these results. CDM Smith collected groundwater samples from the 12 temporary well points using low-flow sampling techniques. The samples were analyzed for TAL metals, total cyanide, hexavalent chromium, and SVOCs. Sampling locations are shown on Figure 1-6 and presented in Table 3-13. The sampling activities and analysis results will be discussed further in Section 2.4.2 and Section 3.4, respectively.

1.2.5.3 September 2014

A third round of groundwater samples were collected from four well temporary well points that displayed elevated levels of Total Cyanide during the July and August 2014 sampling events. Groundwater samples were again collected using low-flow techniques and samples were analyzed for field parameters, total cyanide, Weak Acid Dissociable (WAD) cyanide, cyanide amenable to chlorination (amenable cyanide), and Physiologically Available Cyanide (PAC). Sampling locations are shown on Figure 1-7 and presented in Table 3-14. The sampling activities and analysis results will be discussed further in Section 2.4.3 and Section 3.4, respectively.

1.2.5.4 November and December 2014

Following a review of the data collected during the July, August, and September 2014 sampling rounds, additional sampling was proposed to aid in identifying potential sources of cyanide detected in the Retention Basin and catch basin network leading from the basin to the outfall. The fourth phase of investigation sampling was conducted in November and December 2014 and included collection of groundwater samples from the 12 temporary well points within Parcel 4/Lots 4, 7, 8, and 9. The samples were collected using low-flow sampling techniques and analyzed for field parameters TAL Metals (filtered and unfiltered), total cyanide (filtered and unfiltered), free cyanide (filtered and unfiltered), available cyanide (filtered and unfiltered), and SVOCs (filtered and unfiltered). Sampling locations are shown on Figure 1-8 and presented in Table 3-15. The sampling activities and analysis results will be discussed further in Section 2.4.4 and Section 3.4, respectively.

1.2.5.5 October 2015

CDM Smith collected an additional round of groundwater samples between October 14 and 22, 2015 from nine of the temporary well points installed in 2014, the three new temporary wells installed in October 2015 (TP-13, TP-14 and TP-15) and three existing monitoring wells (MW-404, MW-405 and MW-UNK). The purpose of the additional groundwater sampling was to determine whether the new temporary wells north of Parcel 4 indicate a potential source of the SVOCs observed in TP-02 through TP-06 and TP-08 through TP-11. Secondly, groundwater samples were collected to characterize the groundwater in the older, existing monitoring wells located on Parcel 4. Filtered and unfiltered samples were submitted to TestAmerica for TAL metals, total cyanide, and SVOCs and to Alloway for analysis of free cyanide. Sample locations are shown on Figure 1-11 and results are presented in Table 3-16.

1.2.6 Surface Water Sampling

During the July and August 2014 sampling rounds, the color of the Retention Basin located in Parcel 4/Lot 7 was observed to be a vibrant blue color, with gray fluffy sediment, and not supporting any forms of life. No insects, amphibians, or even plant life was observed within this water body. Additionally, groundwater seeps were observed through the fluffy sediment.

Since 2014, CDM Smith has conducted four investigations of surface water conditions at the Site. A brief description of the surface water sampling events are described below, in chronological order.

1.2.6.1 September 2014

Given the elevated levels of cyanide observed in the subsurface soils and shallow groundwater from the earlier sampling events, CDM Smith collected surface water samples from the three locations within the Retention Basin (the inlet, middle, and outlet of the Retention Basin), four catch basins outletting from the Retention Basin, and one sample from the Union Ship Canal Outfall. The samples were collected during the September 2014 event using low-flow pumping techniques. The samples were analyzed for TAL metals, total cyanide, WAD cyanide, amenable cyanide, and PAC. Sampling locations are shown on Figure 1-7 and presented in Table 3-17. The sampling activities and analysis results will be discussed further in Section 2.5.1 and Section 3.5, respectively.

1.2.6.2 November 2014

Following a review of the data collected during the September 2014 sampling rounds, additional sampling was proposed to aid in identifying potential sources of cyanide detected in the Retention Basin and catch basin network leading from the basin to the outfall. Therefore, CDM Smith collected surface water samples from 15 catch basins, three locations within the Retention Basin, and the Outfall at the Union Ship Canal. All samples were collected using low-flow sampling techniques and analyzed for field parameters, TAL metals (filtered and unfiltered), total cyanide (filtered and unfiltered), free cyanide (filtered and unfiltered), available cyanide (filtered and unfiltered), and SVOCs (filtered and unfiltered). Sampling locations are shown on Figure 1-8 and presented in Table 3-18. The sampling activities and analysis results will be discussed further in Section 2.5.2 and Section 3.5, respectively.

1.2.6.3 May 2015

Subsequent evaluation of the data collected during the third sampling round lead to further sampling. This was proposed to aid in the delineation of contamination around wells in Lots 4, 7, 8 and 9, where groundwater contamination was previously seen, as well as, the characterization of areas north and west of Lots 4, 7, 8 and 9. The third phase of characterization sampling was conducted in May 2015 and included the collection of 29 surface water samples from catch basins contributing to the Retention Basin. Surface water samples were collected using low-flow sampling techniques and analyzed for field parameters, TAL metals (filtered and unfiltered), total cyanide (filtered and unfiltered), free cyanide (filtered and unfiltered), and SVOCs (filtered and unfiltered). Sampling locations are shown on Figure 1-9 and presented in Table 3-19. The sampling activities and analysis results will be discussed further in Section 2.5.3 and Section 3.5, respectively.

1.2.6.4 October 2015

CDM Smith collected additional surface water samples between October 16 and 22, 2015 from the three Retention Basin locations and from 27 catch basins within and surrounding Parcel 4. Filtered and unfiltered samples were submitted to TestAmerica for TAL metals and SVOCs. Sample locations are shown on Figure 1-11 and results are presented in Table 3-20.

1.2.7 Sediment Sampling

As described in Section 1.2.7, during the July and August 2014 sampling rounds, the color of the Retention Basin located in Parcel 4/Lot 7 was observed to be a vibrant blue color, with gray fluffy sediment, and not supporting any forms of life. No insects, amphibians, or even plant life was observed within this water body. Additionally, groundwater seeps were observed through the fluffy sediment.

Since 2014, CDM Smith has conducted two investigations of catch basin and Retention Basin sediment conditions at the Site. A brief description of the sediment sampling events are described below, in chronological order.

1.2.7.1 September 2014

Given the elevated levels of cyanide observed in the subsurface soils and shallow groundwater from the earlier sampling events, CDM Smith collected sediment samples from the three locations within the Retention Basin (the inlet, middle, and outlet of the Retention Basin), two catch basins outletting from the Retention Basin to the Outfall at the Union Ship Canal, and one sample from the Union Ship Canal Outfall. The samples were collected during the September 2014 event using a scoop on a telescoping wand. The samples were analyzed for percent solids, TAL metals, total cyanide, WAD cyanide, amenable cyanide, and PAC. Sampling locations are shown on Figure 1-7 and presented in Table 3-21. The sampling activities and analysis results will be discussed further in Section 2.6.1 and Section 3.6, respectively.

1.2.7.2 November and December 2014

Following a review of the data collected during the July, August, and September 2014 sampling rounds, additional sampling was proposed to aid in identifying potential sources of cyanide detected in the Retention Basin and catch basin network leading from the basin to the outfall. Therefore, CDM Smith collected sediment samples from the three locations within the Retention Basin, six catch basins, and the Outfall at the Union Ship Canal. The samples were collected using a scoop on a telescoping wand and analyzed for percent solids, TAL metals, total cyanide, available cyanide, amenable cyanide, free cyanide, and SVOCs. Sampling locations are shown on Figure 1-8 and presented in Table 3-22. The sampling activities and analysis results will be discussed further in Section 2.6.2 and Section 3.6, respectively.

Section 2

Pre-Design Field Sampling Activities

Since 2012, CDM Smith has conducted six distinct pre-design sampling events and two surveys at the Site. The focus of the field activities was to further delineate and characterize soil and water conditions, and determine the limits of contamination for development of remedial design documents. This section provides a summary of field activities. Analytical laboratory reports are included in Appendix G and a photo log is presented in Appendix E.

CDM Smith subcontracted SJB Services Inc. (SJB) of Hamburg, New York for direct push sampling, temporary monitoring well installation services, and hollow stem augering services. Popli Design Group of Penfield, NY and McIntosh & McIntosh, P.C. of Lockport, NY were subcontracted for survey services. Spectrum Analytical in North Kingstown, Rhode Island, Alloway in Lima, Ohio, and TestAmerica of St Louis, MO and Amherst, NY were subcontracted for analytical services. Nancy Potak of Greensboro, VT, Data Validation Services of North Creek, NY, and Environmental Data Services of Williamsburg, VA were subcontracted for data validation services. Additionally, NYSDEC directly subcontracted TestAmerica in Amherst, NY for analytical services during the November/December 2014 investigation sampling.

2.1 Subsurface Soil Sampling Investigations

The subsurface soil investigations were comprised of five events: four Geoprobe® investigations, one test pit investigation, and one hollow stem auger investigation. The field activities associated with the subsurface investigations are described below and a copy of the field notes is provided in Appendix D. Analytical results from soil samples collected during these activities are discussed in Section 3.

2.1.1 Subsurface Soil Sampling

2.1.1.1 September 2012

On September 17 through 19, 2012, CDM Smith and a standby Geoprobe® subcontractor SJB Services were onsite performing a Geoprobe® investigation. A total of 25 soil borings locations were advanced across Lot 9 using direct push drilling methods. The borings were analyzed for visual observations of filter cake/flue ash depth and soil samples were collected for laboratory analysis. Figure 1-3 shows the Geoprobe® sample locations, labeled as SB-1 through SB-25. Analytical results are presented in Table 3-1.

Utilizing Geoprobe® macro-core samplers, samples were collected at varying depth between 4 and 19 feet, depending on location, both on- and off-site. The samples were used to both determine the depth of the filter cake/fly ash at each location, as well as to determine the lead concentration at varying depths. Samples were collected from within the filter cake/fly ash area as well as around the perimeter of Lot 9. Soil borings logs were completed for each sample location and can be found in Appendix B.

Material observed within nearly all of the soil borings was the dark fly ash/filter cake material, some fill material ranging from brick to a yellow crushed rock, and a harder slag layer at the bottom of most borings. Composite subsurface soil samples were collected at four foot intervals and analyzed for TAL Metals via United States Environmental Protection Agency (EPA) Method 6010 by Spectrum Analytical, Inc. laboratories. A total of 60 subsurface soil samples and 3 blind duplicate samples were collected and submitted for analysis.

No specific matrix spike/matrix spike duplicate (MS/MSD) samples were collected during this investigation. In analyzing the soil samples Spectrum Analytical, Inc. split the samples into 5 sets (also known as Sample Data Groups (SDGs)). Out of the 5 SDGs, Spectrum Analytical, Inc. ran 3 MS samples, meaning there were 2 SDGs for which no MS/MSD was analyzed.

Concurrent with the September 2012 Geoprobe® investigation, a test pit investigation was conducted by SJB under oversight from CDM Smith. A total of 18 test pits were completed across Lot 9 to varying depths using a rubber tire backhoe to determine the depth of filter cake/fly ash, fill material, and presence of buried concrete and construction/demolition debris (C&D). A test pit photograph log is provided in Appendix E and test pit logs are provided in Appendix B. Figure 1-3 shows the Test Pit locations, labeled as SB-1 through SB-25. The findings of the test pit investigation are discussed in Section 3.2.

Two TCLP samples were collected within the fenced area on Lot 9: one soil sample was collected during the test pit investigation at TP-14 (TCLP-1) and one subsurface sample was collected as part of the Geoprobe® investigation (SB-15 0-4 TCLP). The analytical results for these samples are included in Table 3-1.

2.1.1.2 July 2014

On July 7 and July 8, 2014 SJB Services utilized a Geoprobe® to advance 16 borings (SB-26 through SB-41) to a depth of 10 feet bgs in Parcel 4/Lots 4, 7, and 8. One boring was located in the area identified as the Blue Fill Area, five borings were located in the former Debris Disposal Area, and 10 borings were located over the remaining area of Parcel 4. Borings were classified by CDM Smith using the Unified Soil Classification System (USCS) and screened for VOCs using a photoionization detector (PID). Samples were collected at the location of the highest PID reading, or where visual staining or where soils of concern (fly ash, etc.) were observed. No PID readings above zero parts per million (ppm) were measured, therefore samples were collected at the depth where soils of concern were encountered or at 10 feet bgs. Figure 1-5 shows the Geoprobe® sample locations, labeled as SB-26 through SB-41. Analytical results are presented in Table 3-2.

Subsurface soil samples were submitted to Spectrum Analytical for analysis of hexavalent chromium using United States Environmental Protection Agency (EPA) Method 7196, total cyanide using EPA Method 9012, TAL metals using EPA Method 6010 and SVOCs using EPA Method 8270.

2.1.1.3 November 2014

After results from the July sampling were reviewed, it was determined that cyanide speciation sampling was required. Between November 10 and November 11, 2014 SJB utilized a Geoprobe® to advance an additional 10 borings (SB-42 through SB-51) within Parcel 4/Lot 9. Borings were classified by CDM Smith using the USCS and screened for VOCs using a PID.

Samples were collected from each four foot interval to a depth of 20 feet bgs with the exception of locations SB-44 and SB-45, which were only advanced to depths of 8 and 12 feet bgs, respectively before reaching refusal. Figure 1-8 shows the Geoprobe® sample locations, labeled as SB-1 through SB-25. Analytical results are presented in Table 3-3.

Subsurface soil samples collected in November were submitted to TestAmerica for analysis of total cyanide using EPA Method 9012, available cyanide using EPA Method OIA1677, free cyanide using EPA Method 9016, TAL metals using EPA Method 6010 and SVOCs using EPA Method 8270.

2.1.1.4 May 2015

The original boundary of Site #915193A was Parcel 4/Lot 9. Subsequent evaluation of the data collected during 2014 led to NYSDEC modifying the boundary of Site #915193A to include Parcel 4/Lots 4, 7, and 8. Consequently, additional delineation of contaminated soils was required in the vicinity of wells located in Lots 4, 7, 8 and 9, where groundwater contamination was previously seen. Additionally, characterization of soils north and west of Lots 4, 7, 8 and 9 was conducted. Between May 26 and May 29, 2015 SJB utilized a Geoprobe® to advance an additional 25 borings (SB-52 through SB-73, with three additional relocated borings) within the Site and in the Lots immediately west and north of the Site. Borings were classified by CDM Smith using the USCS and screened for VOCs using a photoionization detector PID.

Samples were collected from each four foot interval to a depth of 20 feet bgs with the exception of the following locations:

- SB-53/-53A (relocated boring) – advanced to only 8 feet bgs before reaching refusal;
- SB-54 – advanced to only 4 feet bgs before reaching refusal;
- SB-55 – advanced to only 12 feet bgs before reaching refusal;
- SB-56 – advanced to only 16 feet bgs before reaching refusal;
- SB-60 – advanced to only 4 feet bgs before reaching refusal;
- SB-61 – advanced to only 7 feet bgs before reaching refusal;
- SB-72 – advanced to only 12 feet bgs before reaching refusal, and;
- SB-73 – advanced to only 12 feet bgs before reaching refusal.

Figure 1-9 shows the Geoprobe® sample locations, labeled as SB-52 through SB-73. Analytical results are presented in Table 3-4. Subsurface soil samples collected in May 2015 were submitted to Spectrum Analytical for analysis of total cyanide using EPA Method 9012, TAL metals using EPA Method 6010 and SVOCs using EPA Method 8270.

2.1.1.5 August 2015

Given the similarity of the site histories and the anticipated similarity of the waste characteristics between the former Republic Steel site and the former Hanna Furnace site (now known as BLCP), it was concluded that TENORM sampling of the subsurface soils was necessary for the BLCP site. A hollow-stem auger was used to advance borings at 25 locations (SB-74 through SB-98) within Parcel 4/ Lots 4, 7, 8, and 9 to depths ranging from 3.6 to 16 feet bgs. Continuous split spoon samples were collected from which a composite sample was recovered for TENORM analysis. Figure 1-10 shows the hollow-stem sample locations and analytical results are presented in Table 3-5.

2.1.1.6 October 2015

In October 2015, SJB utilized a hollow stem auger to install three temporary monitoring wells on the undeveloped property located north of Parcel 4. During the well installation, continuous split spoon samples were collected. Soil samples were collected by CDM Smith from each four foot interval to a depth of 20 feet bgs at each boring location (SB-99 through SB-101). Subsurface soil samples were submitted to TestAmerica for analysis of TAL metals, total cyanide, free cyanide, and SVOCs. Sample locations are shown on Figure 1-11 and analytical results are presented in Table 3-6. The results are discussed in Section 3.

2.1.2 Surface Soil Investigation

Since 2012, CDM Smith has conducted five investigations of surface soil conditions at the Site. A brief description of the subsurface sampling events are described below, in chronological order.

2.1.2.1 September 2012

During the initial pre-design investigation, two surface soil samples were collected along the southern edge of Lot 9 and analyzed for TAL metals via EPA Method 6010 by Spectrum Analytical. The surface soil sample locations are shown on Figure 1-3. A review of all sampling results from the initial pre-design investigation indicated that TCLP metals concentrations were much lower than the results from previous investigations conducted at the site. Also there were a number of locations with elevated Total Chromium concentrations. Analytical results are presented in Table 3-7.

2.1.2.2 January 2013

Due to the elevated total chromium concentrations observed in the September 2012 surface soil samples, NYSDEC requested additional surface soil samples be collected and analyzed for TCLP metals and hexavalent chromium to further support the previous sample results. Eight additional surface soil samples were analyzed for TCLP metals via EPA Method 1311 and hexavalent chromium via EPA Method 7196. The eight additional locations are shown on Figure 1-4, and results are presented in Table 3-8 and discussed in Section 3.

2.1.2.3 July 2014

Between July 9 and July 14, 2014 CDM Smith collected surface soil samples from 51 locations (SS-1 through SS-51) in addition to quality assurance/quality control (QA/QC) samples using a 100 feet by 100 feet grids across the 15.5 acres of Parcel 4/Lots 4, 7, and 8. CDM Smith walked each grid to identify any areas of visual staining or material, which based on historical knowledge of disposal at Parcel 4, could potentially be contaminated. A surface soil sample was collected from one location within each grid using plastic disposable trowels. Each sample location was also screened using a PID. A new trowel was used for each sample. No PID readings above zero ppm were measured.

Surface soil samples were submitted to Spectrum Analytical for analysis of hexavalent chromium using EPA Method 7196, total cyanide using EPA Method 9012, TAL metals using EPA Method 6010 and SVOCs using EPA Method 8270. The 51 locations are shown on Figure 1-5, and results are presented in Table 3-9 and discussed in Section 3.

2.1.2.4 November 2014

On November 13, 2014 CDM Smith, after reviewing the initial surface soil data, collected additional surface soil samples from ten locations within Parcel 4/Lot 9 (SS-52 through SS-61). Samples were collected using a new plastic disposable trowel at each location. These samples were not screened with the PID prior to sample collection.

Surface soil samples collected in November were submitted to TestAmerica for analysis of total cyanide using EPA Method 9012, available cyanide using EPA Method OIA1677, free cyanide using EPA Method 9016, TAL metals using EPA Method 6010 and SVOCs using EPA Method 8270. The 10 additional locations are shown on Figure 1-8, and results are presented in Table 3-10 and discussed in Section 3.

2.1.2.5 October 2015

CDM Smith collected six surface soil samples from locations SS-72 through SS-77 as shown on Figure 1-11. Samples were submitted to TestAmerica for analysis of TAL metals and pH. Analytical results are presented in Table 3-11 and discussed in Section 3.2.2 Bench Scale Testing

During the field program, CDM Smith collected a 5-gallon pale of filter cake/fly ash from the area designated as hazardous inside the fenced area on Site. CDM Smith shipped the sample to our Bellevue Washington testing lab to perform pre-characterization testing (using ICP/MS and electron microprobe) to determine/confirm the forms and amount of lead.

Based on results of the follow-up surface soil sampling, the bench scale testing has been cancelled. Although lead is present within the soils at the Site, often at concentrations exceeding the Restricted Commercial SCO, results of the TCLP analysis indicate that all lead present is at non-hazardous levels.

2.3 Temporary Monitoring Well Installation and Development

Between July 7 and July 8, 2014 SJB installed 12 temporary monitoring wells (TP-01 through TP-12) onsite utilizing a 4-inch hollow stem auger. Three monitoring wells (TP-09, -10 and -11) were located within the fenced area of Lot 9 and nine wells were installed across the remaining portion of Parcel 4. All wells were constructed using one-inch diameter, polyvinyl chloride (PVC) riser with 10 foot PVC screen intervals. Wells were advanced to a depth of 15 feet bgs with the exception of TP-10 which was advanced to 18 feet bgs to extend below the groundwater table.

Well construction logs are included in Appendix C. The wells were developed by CDM Smith on July 9 and July 10, 2014 using a peristaltic pump. A total of three well volumes were purged from each temporary monitoring well.

2.4 Low-Flow Groundwater Sampling

2.4.1 July 2014

After installation and development of the 12 temporary monitoring wells, the wells were left to equilibrate for at least one day prior to being sampled by CDM Smith between July 10 and July 14, 2014.

Monitoring wells were sampled with a peristaltic pump and dedicated tubing using low-flow sampling techniques in accordance with CDM Smith's QAPP. An YSI field meter and a turbidity meter were used to record field parameters during purging. Once stabilization was achieved, the tubing was disconnected from the YSI flow through cell to collect the samples.

All groundwater samples were submitted to Spectrum Analytical for analysis of hexavalent chromium using EPA Method 7196, total cyanide using EPA Method 9012, TAL metals using EPA Method 6010 and SVOCs using EPA Method 8270. The 12 temporary monitoring wells are shown on Figure 1-5, and results are presented in Table 3-12 and discussed in Section 3.

2.4.2 August 2014

Two subsequent low-flow sampling rounds were performed between August 25 and August 27, 2014. Samples were analyzed for hexavalent chromium using EPA Method 7196, total cyanide using EPA Method 9012, TAL metals using EPA Method 6010 and SVOCs using EPA Method 8270. Samples were field filtered for metals analysis; cyanide samples were unfiltered. Samples were field filtered by attaching a dedicated filter to the end of the tubing at each location. The sampling locations are shown on Figure 1-6, and results are presented in Table 3-13 and discussed in Section 3.

2.4.3 September 2014

Sampling was conducted at select temporary well points (TP-06, -08, -10 and -11) on September 18, 2014. For the sampling conducted in September, both filtered and unfiltered samples were submitted to Spectrum Analytical for analysis of total cyanide, WAD cyanide, amenable cyanide, and PAC. Samples were field filtered by attaching a dedicated filter to the end of the tubing at each location. The sampling locations are shown on Figure 1-7, and results are presented in Table 3-14 and discussed in Section 3.

2.4.4 November and December 2014

A fourth round of groundwater samples were collected from all 12 temporary well points on November 17 and between December 8 and December 10, 2014. Both filtered and unfiltered samples were collected; field filtering was performed by attaching a dedicated filter to the end of the tubing at each location.

Groundwater samples collected in November and December 2014 were submitted to TestAmerica for analysis of total cyanide using EPA Method 9012, available cyanide using EPA Method OIA1677, TAL metals using EPA Method 6010 and SVOCs using EPA Method 8270. Samples were submitted to Alloway for analysis of free cyanide using ASTM D7237-10. The sampling locations are shown on Figure 1-8, and results are presented in Table 3-15 and discussed in Section 3.

2.4.5 October 2015

CDM Smith collected an additional round of groundwater samples between October 14 and October 22, 2015 from nine previously installed temporary wells (TP-02 through TP-06 and TP-08 through TP-11), the three temporary wells installed in October 2015 (TP-13, -14 and -15) and three existing permanent monitoring wells (MW-404, MW-405 and MW-UNK). Both filtered and unfiltered samples were collected and submitted to TestAmerica for TAL metals, total cyanide, and SVOCs and to Alloway for analysis of free cyanide. Sample locations are shown on Figure 1-11 and analytical results are presented in Table 3-16 and discussed in Section 3.

2.5 Surface Water Sampling

2.5.1 September 2014

Between September 17 and September 19, 2014, CDM Smith collected water samples from three locations in the Retention Basin located on the southern edge of Parcel 4 as well as four catch basins (CB-01 through CB-04) and the outfall to the Union Ship Canal. Samples were collected utilizing a peristaltic pump and dedicated tubing.

Both filtered and unfiltered samples collected in September were submitted to Spectrum Analytical for analysis of total cyanide, WAD cyanide, amenable cyanide, and PAC and TAL metals. The sampling locations are shown on Figure 1-7, and results are presented in Table 3-17 and discussed in Section 3.

2.5.2 November 2014

Between November 12 and November 17, 2014, CDM Smith collected a second round of surface water samples from the three locations in the Retention Basin, the outfall to the Union Ship Canal and 15 catch basins (CB-01 through CB-12 and CB-14 through CB-16), including the four sampled during the previous sampling round. Both filtered and unfiltered samples were collected at each location utilizing a peristaltic pump and dedicated tubing.

Surface water samples collected in November 2014 were submitted to TestAmerica for analysis of total cyanide using EPA Method 9012, available cyanide using EPA Method OIA1677, TAL metals using EPA Method 6010 and SVOCs using EPA Method 8270. Samples were submitted to Alloway for analysis of free cyanide using ASTM D7237-10. The sampling locations are shown on Figure 1-8, and results are presented in Table 3-18 and discussed in Section 3.

2.5.3 May 2015

Between May 26 and May 29, 2015, CDM Smith collected a third round of surface water samples from 13 sample locations, two swales within Lot 10 (CB-18 and CB-19) and 11 catch basins within and around Parcel 4 (CB-12 and CB-20 through CB-29), including CB-12 that was sampled in the previous round. Both filtered and unfiltered samples were collected at each location utilizing a peristaltic pump and dedicated tubing.

Surface water samples collected in May 2015 were submitted to Spectrum Analytical for analysis of total cyanide using EPA Method 9012, TAL metals using EPA Method 6010, and SVOCs using EPA Method 8270. Samples were submitted to Alloway for analysis of free cyanide using ASTM D7237-10. The sampling locations are shown on Figure 1-9, and results are presented in Table 3-19 and discussed in Section 3.

2.5.4 October 2015

CDM Smith collected an additional round of surface water samples between October 16 and 22, 2015 from the three Retention Basin locations and from 27 catch basins within and surrounding Parcel 4. Both filtered and unfiltered samples were collected at each locations using a peristaltic pump and dedicated tubing and submitted to TestAmerica for analysis of TAL metals and SVOCs. Sample locations are shown on Figure 1-11 and analytical results are presented in Table 3-20 and discussed in Section 3.

2.6 Sediment Sampling

2.6.1 September 2014

Sediment samples were collected by CDM Smith on September 18 and 19, 2014 from the three surface water locations in the Retention Basin, CB-01, CB-02, and the outfall. Samples were collected using an extendable pole with a sampling container attached to the end.

All sediment samples collected in September 2014 were submitted to Spectrum Analytical for analysis of total cyanide, WAD cyanide, amenable cyanide, and PAC and TAL metals. The sampling locations are shown on Figure 1-7, and results are presented in Table 3-21 and discussed in Section 3.

2.6.2 November and December 2014

A second round of sediment samples were collected by CDM Smith between November 11 and November 17 and on December 10, 2014. Samples were collected from the same three locations in the Retention Basin, the outfall to the Union Ship Canal, three catch basins (CB-04, -05, and -15), and from three swales in the parcel north of the Parcel 4 (CB-17,-18 and -19) using an extendable pole with a sampling container attached to the end.

Sediment samples collected in November and December 2014 were submitted to TestAmerica for analysis of total cyanide using EPA Method 9012, amenable cyanide using EPA Method OIA1677, free cyanide using EPA Method 9016, TAL metals using EPA Method 6010 and SVOCs using EPA Method 8270. The sampling locations are shown on Figure 1-8, and results are presented in Table 3-22 and discussed in Section 3.

2.7 Decontamination

All non-dedicated equipment and tools used to collect subsurface soil samples for chemical analysis were decontaminated prior to and between each sample interval using an Alconox and water mix for washing and potable water rinse prior to reuse. Decontamination fluids were collected and containerized in drums.

2.8 Investigation Derived Waste

All soil cuttings generated from subsurface soil borings were containerized in drums for off-site disposal. Groundwater purged during groundwater sampling was also containerized in drums. The drums were securely stored inside the fenced area of Lot 9 prior to offsite disposal.

Section 3

Pre-Design Field Sampling Results

The following sections present the results of the surface and subsurface soil investigations, surface and groundwater investigations, sediment investigations, test pits and bench scale testing conducted as part of the pre-design investigation at the Site. Soil sample results were compared to NYSDEC Restricted Commercial Use SCOs, sediment was compared to NYSDEC Screening and Assessment of Contaminated Sediment for Class A sediments, and groundwater results were compared to NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA groundwater.

3.1 Subsurface and Surface Soil Sample Results

3.1.1 Subsurface Sample Results

The soils observed during the September 2012 Geoprobe® boring program consisted primarily of filter cake/fly ash throughout the center of Lot 9 to an elevation of between 576 and 578 feet above mean sea level (amsl) at most locations. C&D material was observed on the east and north sides from the property line to approximately 75-feet in. This fill material is underlain by a hard slag layer at an elevation of between 575 and 576 feet amsl. This layer was observed consistently across Lot 9. Fill material was observed in the top 2 to 3 feet on the west side of Lot 9 near Fuhrmann Boulevard. The soil boring logs are included in Appendix B and field notes are provided in Appendix D.

A total of 60 soil samples were collected from 25 locations during this phase of the pre-design investigation and analyzed for TAL metals. The results were compared to Part 375 Restricted Commercial Use SCOs. The soil exceedances are summarized in Table 3-1 and shown on Figure 3-1G. In addition, soil profiles have been prepared taking cross-sections at 5 locations through the Site. Figure 3-1A provides the plan view showing the locations of the cross-sections, and Figures 3-1B through 3-1F provides the cross-sections.

Metals exceedances were observed above the Restricted Commercial Use SCOs in 20 of the 25 sample locations.

- *Lead:* detected above the Restricted Commercial Use SCO of 1,000 mg/kg in 15 of the 60 samples collected ranging from 1,060 mg/kg in SB-18 (0-4 feet below ground surface (bgs)) to 9,620 mg/kg in SB-15 (0-4 feet bgs). SB-15 is located within the fenced limits of the highly contaminated area of Lot 9.

- *Arsenic:* detected above the Restricted Commercial Use SCO of 16 mg/kg in 26 out of 60 samples. Arsenic ranged from 16 mg/kg at SB-8 (0 to 4 feet bgs) to 126 mg/kg in SB-11 (4 to 8 feet bgs). SB-11 is located on the western side of the Site, at the northern end of the slope along Fuhrmann Boulevard.

- *Cadmium*: detected above the Restricted Commercial Use SCO of 9.3 mg/kg, with concentrations ranging from 9.4 mg/kg in sample SB-13 (8 to 12 feet bgs) to 31,500 mg/kg in SB-15 (0-4 feet bgs).

- *Nickel:* detected above the Restricted Commercial Use SCO of 310 mg/kg in 1 of 60 samples. The nickel exceedance was detected at SB-25 with a concentration of 336 mg/kg (4 to 8 feet bgs). SB-25 is located at the base of a mound in the northeast corner of Lot 9.

In July 2014, a total of 17 subsurface soil samples and two field duplicates were collected from 16 boring locations in Parcel 4/Lots 4, 7, and 8. A summary of all subsurface soil sampling results is presented in Table 3-2. Boring logs are included in Appendix B. Eight samples contained exceedances for metals and/or SVOC compounds. Hexavalent chromium was not detected in any samples; total cyanide was not detected above the SCO in any samples. Exceedances are shown on Figure 3-1H and all exceedances are summarized below:

- *Arsenic:* detected above the SCO of 16 mg/kg in SB-29 at 10 ft. bgs (21.9 mg/kg) and SB-09 at 4 feet bgs (66 mg/kg).

- *Copper:* detected above the SCO of 270 mg/kg in SB-31 at 10 ft. bgs (378 mg/kg) and SB-35 at 10 feet bgs (495 mg/kg).

- *Manganese:* detected above the SCO of 10,000 mg/kg in SB-34 at 4 feet bgs (19,800 mg/kg) and SB-39 at 10 feet bgs (13,600 mg/kg).

- *Benzo(a)pyrene:* detected above the SCO of 1.0 mg/kg in SB-29 at 10 feet bgs (2.1 mg/kg), SB-33 at 4 feet bgs (1 mg/kg), SB-34 at 4 feet bgs (1.1 mg/kg), SB-36 at 10 feet bgs (12 mg/kg), SB-38 at 8 feet bgs (1.5 mg/kg), SB-39 at 10 feet bgs (1.1 mg/kg) and SB-40 at 8 feet bgs (4.2 mg/kg).

- *Dibenzo(a,h)anthracene:* detected above the SCO of 0.56 mg/kg in SB-36 at 10 feet bgs (2.0 mg/kg) and SB-40 at 8 feet bgs (0.89 mg/kg).

Additionally, the sample collected at location SB-36 at a depth of 10 feet bgs (SB-11-10-070814) contained SVOC detections above the SCO of 5.6 mg/kg for benzo(a)anthracene (17 mg/kg), benzo(b)fluoranthene (15 mg/kg) and indeno(1,2,3-cd)pyrene (6.4 mg/kg).

In November 2014, a total of 46 subsurface soil samples were collected from 10 locations within Parcel 4/Lot 9. A summary of the subsurface sampling results are presented in Table 3-3. Boring logs are included in Appendix B. Exceedances are shown on Figure 3-1I and summarized below:

- *Total Cyanide:* detected above the SCO of 27 mg/kg in SB-44 between 0 and 8 feet bgs (35.3 to 38.8 mg/kg), SB-45 between 0 and 8 feet bgs (27.2 to 72.2 mg/kg), SB-49 from 4 to 8 feet bgs (34.4 mg/kg), SB-50 between 4 and 12 feet bgs (29.9 to 48 mg/kg) and SB-51 between 0 and 12 feet bgs (56.2 to 75.3 mg/kg).

- *Arsenic:* detected above the SCO of 16 mg/kg in SB-42 at 16 to 20 feet bgs (92 mg/kg), SB-43 at 16 to 20 feet bgs (51.9 mg/kg), SB-44 at 0 to 4 feet bgs (17.6 mg/kg), SB-45 between 0 and 12 feet bgs (25.1 to 68.6 mg/kg), SB-46 at 12 to 16 feet bgs (54.5 mg/kg), SB-47 between 8 and 20 feet bgs (24.5 to 57.2 mg/kg), SB-48 between 4 and 16 feet bgs (33.9 to 67 mg/kg), SB-49 between 0 to 20 feet bgs (16.3 to 109 mg/kg), SB-50 between 4 and 16 feet bgs (16.1 to 64.4 mg/kg) and SB-51 between 0 and 16 feet bgs (20.8 to 72.6 mg/kg).

- *Copper:* detected above the SCO of 270 mg/kg in SB-49 at 0 to 4 feet bgs (290 mg/kg) and SB-50 between 4 and 8 feet bgs (283 mg/kg).

- *Cadmium:* detected above the SCO of 9.3 mg/kg in SB-45 between 8 and 12 feet bgs (11.1 mg/kg), SB-49 between 0 and 20 feet bgs (12.9 to 36.9 mg/kg), SB-50 at 4 to 8 feet bgs (41.3 mg/kg) and SB-51 between 0 and 8 feet bgs (10.6 to 21.9 mg/kg).

- *Lead:* detected above the SCO of 1,000 mg/kg in SB-44 at 0 to 4 feet bgs (5,110 mg/kg), SB-45 between 0 and 8 feet bgs (2,180 to 3,220 mg/kg), SB-47 at 0 to 4 feet bgs (1,010 mg/kg), SB-49 between 0 and 12 feet bgs (1,790 to 5,810 mg/kg), SB-50 at 4 to 8 feet bgs (9,450 mg/kg), and SB-51 between 0 and 8 feet bgs (3,320 to 4,450 mg/kg).

- *Manganese:* detected above the SCO of 10,000 mg/kg in SB-42 at 0 to 4 feet bgs (10,300 mg/kg) and SB-45 from 4 to 8 feet bgs (10,400 mg/kg).

- *Zinc:* detected above the SCO of 10,000 mg/kg in SB-50 from 4 to 8 feet bgs (11,200B mg/kg).

- *Benzo(a)anthracene:* detected above the SCO of 5.6 mg/kg in SB-46 between 0 and 8 feet bgs (9.6 to 21 mg/kg), SB-47 at 0 to 4 feet bgs (6.9 mg/kg), SB-49 from 4 to 8 feet bgs (7.3 mg/kg) and SB-50 from 4 to 8 feet bgs (6.9J mg/kg).

- *Benzo(a)pyrene:* detected above the SCO of 1 mg/kg in SB-43 at 8 to 12 feet bgs (1.2J mg/kg), SB-44 between 0 to 8 feet bgs (1.1J to 1.2J mg/kg), SB-45 between 0 and 8 feet bgs (2.9J to 4J mg/kg), SB-46 between 0 and 16 feet bgs (2.4J to 20 mg/kg), SB-47 between 0 and 12 feet bgs (1.5J to 6.4 mg/kg), SB-48 from 4 to 8 feet bgs (1.4J mg/kg), SB-49 at 0 to 4 feet bgs (2.3J mg/kg), SB-50 at 0 to 4 feet bgs (1.9J mg/kg), and SB-51 at 8 to 12 feet bgs (1.6J mg/kg).

- *Benzo(b)fluoranthene:* detected above the SCO of 5.6 mg/kg in SB-46 between 0 and 8 feet bgs (16 to 27 mg/kg) and SB-47 from 0 to 4 feet bgs (7.8 mg/kg).

- *Dibenzo(a,h)anthracene*: detected above the SCO of 0.56 mg/kg in SB-47 at 0 to 4 feet bgs (2 mg/kg).

- *Indeno(1,2,3-cd)pyrene:* detected above the SCO of 5.6 mg/kg in SB-46 between 0 and 8 feet bgs (13 to 16 mg/kg).

The fourth round of sampling was done in May 2015, which consisted of 109 samples from 25 locations in Parcel 4/Lots 4, 7, 8, and 9. A summary of the subsurface sampling results are presented in Table 3-4. Boring logs are included in Appendix B. All exceedances are shown in Figure 3-1J and summarized below:

- *Arsenic:* detected above the SCO of 16 mg/kg in SB-57 at 8 to 12 feet bgs (18.3 mg/kg), SB-57 at 16 to 20 feet bgs (21.8 mg/kg), SB-58 at 8 to 12 feet bgs (28.2 mg/kg), SB-59A at 8 to 12 feet bgs (34 mg/kg), SB-61 at 4 to 7 feet bgs (63.8 mg/kg), SB-61A at 0 to 4 feet bgs (21.4 mg/kg), SB-61A between 8 and 16 feet bgs (40.7 to 71.7 mg/kg), SB-62 at 8 to 12 feet bgs (22.1 mg/kg), SB-62 at 16 to 20 feet bgs (20 mg/kg), SB-63 at 8 to 12 feet bgs (43.7 mg/kg), SB-64A at 0 to 4 feet bgs (22.8 mg/kg), SB-65 at 0 to 4 feet bgs (17.2 mg/kg), SB-67 between 0 and 8 feet bgs (20.8 to 22.9 mg/kg), SB-70 at 4 to 8 feet bgs (16.3 mg/kg), SB-71 between 4 and 12 feet bgs (27.1 to 43.7 mg/kg), and SB-73 at 4 to 8 feet bgs (35.7 mg/kg).
- *Barium:* detected above the SCO of 400 mg/kg in SB-53A at 4 to 8 feet bgs (409 mg/kg).
- *Cadmium:* detected above the SCO of 9.3 mg/kg in SB-53A at 4 to 8 feet bgs (15.1 mg/kg), SB-54 at 0 to 4 feet bgs (11.1 mg/kg), SB-61A at 8 to 12 feet bgs (10.9 mg/kg), SB-67 at 0 to 4 feet bgs (10 mg/kg), and SB-71 at 8 to 12 feet bgs (10 mg/kg).
- *Copper:* detected above the SCO of 270 mg/kg in SB-61A at 8 to 12 feet bgs (549 mg/kg), SB-68 between 4 and 12 feet bgs (461 to 480 mg/kg), and SB-69 at 0 to 4 feet bgs (288 mg/kg).
- *Mercury:* detected above the SCO of 2.8 mg/kg in SB-64A at 0 to 4 feet bgs (17.7 mg/kg).
- *Zinc:* detected above the SCO of 10,000 mg/kg in SB-64A at 4 to 8 feet bgs (18,400 mg/kg).
- *Total Cyanide:* detected above the SCO of 27 mg/kg in SB-64A between 0 and 8 feet bgs (28.6 to 555 mg/kg) and SB-66 at 4 to 8 feet bgs (28.4 mg/kg).
- *Acenapthene:* detected above the SCO of 500 mg/kg in SB-69 at 4 to 8 feet bgs (3000 mg/kg), and SB-72 at 4 to 8 feet bgs (1000 mg/kg).
- *Benzo(a)pyrene:* detected above the SCO of 1 mg/kg in SB-57 at 0 to 4 feet bgs (1.7 mg/kg), SB-61 at 4 to 7 feet bgs (2.9 mg/kg), SB-61A at 0 to 4 feet bgs (1.4 mg/kg), SB-62 between 0 and 8 feet bgs (1.6 to 3.7 mg/kg), SB-63 at 8 to 12 feet bgs (1.2 mg/kg), SB-65 at 0-4 feet bgs (1.5 mg/kg), SB-66 at 0 to 4 feet bgs (1.7 mg/kg), SB-68 between 4 and 12 feet bgs (1 to 1.2 mg/kg), SB-69 at 8 to 12 feet bgs (1.7 mg/kg), SB-70 at 4 to 8 feet bgs (2mg/kg), SB-71 between 0 and 8 feet bgs (1.3 to 2.1 mg/kg), SB-72 at 0 to 4 feet bgs (1.1 mg/kg), SB-72 at 8 to 12 feet bgs (5.2 mg/kg).
- *Dibenzo(a,h)anthracene:* detected above the SCO of 0.56 mg/kg in SB-61 at 4-5 feet bgs (0.63 mg/kg), SB-72 at 8 to 12 feet bgs (1.1 mg/kg)

The fifth round of sampling was conducted in August 2015, which consisted of 25 samples from 25 locations in Parcel 4/Lots 4, 7, 8, and 9. Samples were analyzed for radiochemistry analyses to determine whether TENORM was present at levels that would require soils to be segregated and disposed of at an alternate facility. A summary of the subsurface sampling results are presented in Table 3-5. Boring logs are included in Appendix B. The contaminant concentrations observed during the subsurface soil sampling events indicate relatively low levels of radioactive material are present. Restrictions that apply to accepting TENORM waste vary by disposal facility. Generally, wastes containing less than 3 pCi/g of radium or 3- pCi/g of uranium can be disposed of in an industrial landfill (http://cfpub.epa.gov/safewater/radionuclides/radionuclides). All sample results yielded total radium and uranium concentrations below this criteria, however it will be necessary to confirm with the solid waste facility that will be receiving the excavated soils that the TENORM levels observed are within their acceptable limits.

In October 2015, CDM Smith collected a total of 16 subsurface soil samples at three boring locations where temporary monitoring wells were being installed. Samples were collected from each four foot interval to a depth of 20 feet bgs at all three locations. Analytical results are provided in Table 3-6 and exceedances are shown on Figure 3-1K and summarized below:

- *Arsenic:* detected above the SCO of 16 mg/kg in SB-101 at 0 to 4 feet bgs (18.9 mg/kg).
- *Barium:* detected above the SCO of 400 mg/kg in SB-100 at 12 to 16 feet bgs (412 mg/kg).
    - *Copper:* detected above the SCO of 270 mg/kg in SB-76 at 0 to 4 feet bgs (546 mg/kg).
    - *Benzo(a)pyrene:* detected above the SCO of 1 mg/kg in SB-100 at 0 to 4 feet bgs (1.1 mg/kg) and SB-76 at 0 to 4 feet bgs (2.7 mg/kg).

3.1.2 Surface Soil Sample Results

Two surface soil samples were collected just within the southern property boundary during the initial pre-design investigation in September 2012 and the results are shown in Table 3-7 and on Figure 3-2A. Similar to the observations of the soil boring program, a dark fly ash material was observed in the surface soil samples overlaying a 2 to 3 foot layer of 3-inch minus stone. This layer is described further in Section 3.2 below.

Also similar to the results of the soil boring samples, the surface soil analytical results from the initial pre-design investigation showed exceedances of the Restricted Commercial Use SCOs for lead. Lead concentrations exceeded the SCO of 1,000 ppm, with concentrations ranging from 1,600 to 1,700 mg/kg. All other SCOs were met.

Eight surface soil samples were collected in January 2013 and analyzed for TCLP metals and hexavalent chromium only. Those sample results are discussed in Section 3.1.3.

A total of 51 surface soil samples and six field duplicate samples were collected in July 2014 from Parcel 4/Lot 4, 7 and 8. Fifteen of the 51 sample locations contained exceedances for at least one metal compound. Hexavalent chromium was not detected in any of the surface soil samples. Total cyanide was detected in several samples, however all detections were below the SCO of 27 mg/kg. Exceedances for at least one SVOC compound were found at 42 of the 51 sample locations. All surface soil sampling results from the July 2014 are presented in Table 3-9. Exceedances for metals are shown on Figure 3-2B, SVOC exceedances are shown on Figure 3-2C, and all exceedances are summarized below:

- *Arsenic:* detected above the SCO of 14 mg/kg at locations SS-18 (17.8 mg/kg), SS-20 (20.6 mg/kg), the field duplicate collected at SS-20 (1 6.6 mg/kg), SS-35 (17.2 mg/kg), SS-38 (22.9 mg/kg), and SS-42 (19 mg/kg).
- *Barium:* detected above the SCO of 400 mg/kg at locations SS-20 (559 mg/kg) and the field duplicate collected at SS-20 (513 mg/kg).
- *Cadmium:* detected above the SCO of 9.3 mg/kg at locations SS-13 (10.8 mg/kg), SS-14 (11.6 mg/kg), SS-15 (9.9 mg/kg), SS-16 (11 mg/kg) and SS-18 (14.9 mg/kg).
- *Copper:* detected above the SCO of 270 mg/kg at locations SS-14 (376 mg/kg), SS-23 (274 mg/kg), SS-28 (352 mg/kg), SS-31 (394 mg/kg), SS-32 (415 mg/kg), SS-33 (378 mg/kg) and SS-59 (338 mg/kg).
- *Lead:* detected above the SCO of 1,000 mg/kg at location SS-18 (1,330 mg/kg).
- *Benzo(a)anthracene:* detected above the SCO of 5.6 mg/kg at locations SS-11 (17 mg/kg), SS-20 (8.9 mg/kg), and the field duplicate collected at SS-20 (10 mg/kg).
- *Benzo(b)fluoranthene:* detected above the SCO of 5.6 mg/kg at locations SS-11 (16 mg/kg), SS-20 (10 mg/kg) and the field duplicate collected at SS-20 (13 mg/kg).
- *Dibenzo(a,h)anthracene:* detected above the SCO of 0.56 mg/kg at locations SS-11 (1.9 mg/kg), SS-19 (0.67 mg/kg), SS-20 (1.5 mg/kg), the field duplicate collected at SS-20 (2.2 mg/kg), SS-22 (0.59 mg/kg), SS-26 (0.6 mg/kg), SS-36 (0.73 mg/kg), SS-43 (0.57 mg/kg), SS-44 (0.79 mg/kg) and SS-48 (0.71 mg/kg).
- *Indeno(1,2,3-cd)pyrene:* detected above the SCO of 5.6 mg/kg at locations SS-11 (9.1 mg/kg), SS-20 (6.2 mg/kg) and the field duplicate collected at SS-20 (7.3 mg/kg).

In addition to the exceedances noted above, benzo(a)pyrene was detected above the SCO of 1.0 mg/kg at 42 of the 51 surface soil locations at concentrations ranging from 1.0 mg/kg to 13 mg/kg.

In November 2014, surface soil samples were collected from 10 locations within Parcel 4/Lot 9 only. All surface soil results from the November sampling event are provided in Table 3-10. Exceedances are shown on Figure 3-2D and summarized below:

- *Total Cyanide:* detected above the SCO of 27 mg/kg at SS-65 (35.6 mg/kg).
- *Arsenic:* detected above the SCO of 16 mg/kg at SS-64 (20.6 mg/kg).

- *Cadmium:* detected above the SCO of 9.3 mg/kg at SS-64 (16.2 mg/kg), SS-65 (9.3 mg/kg).
- *Copper:* detected above the SCO of 270 mg/kg at SS-64 (360 mg/kg).
- *Lead:* detected above the SCO of 1,000 mg/kg at SS-63 (1,160 mg/kg), SS-64 (5,570 mg/kg), SS-65 (2,400 mg/kg) and SS-68 (1,970 mg/kg).
- *Benzo(a)pyrene:* detected above the SCO of 1 mg/kg at SS-66 (3.8 mg/kg), SS-67 (4.8 mg/kg), SS-68 (1.3 mg/kg), SS-69 (1 mg/kg), SS-70 (2.3 mg/kg) and SS-71 (1 mg/kg).
- *Benzo(b)fluoranthene;* detected above the SCO of 5.2 mg/kg at SS-67 (6.9 mg/kg).

The contaminant concentrations observed during the surface soil sampling events indicate that the soils excavated during remediation will need to be disposed at a New York State-permitted solid waste facility.

In October 2015, six surface soil samples were collected from four locations north of Parcel 4 and two locations near the center of Parcel 4. Analytical results are presented in Table 3-11 and exceedances are shown on Figure 3-2E and summarized below:

- *Arsenic:* detected above the SCO of 16 mg/kg at SS-72 (16.2 mg/kg) and SS-86 (18.8 mg/kg).
- *Copper:* detected above the SCO of 270 mg/kg at SS-76 (337 mg/kg).
- *Lead:* detected above the SCO of 1,000 mg/kg at SS-76 (1,130 mg/kg).

3.1.3 TCLP Analysis

Two TCLP samples were collected at the Site during the initial pre-design investigation; both were collected from soil within the fenced area of highly contaminated soil. Both samples were collected in 0 to 4 feet bgs and analyzed for TCLP metals, and due to their proximity to each other the results were very similar. Both samples indicated the presence of barium, cadmium, chromium, lead, selenium, and mercury at non-hazardous levels. Results are provided in Table 3-1.

Eight additional TCLP surface soil samples were collected as part of the follow-up sampling conducted in January 2013 and analyzed for TCLP metals and Hexavalent Chromium. All eight samples were collected from the top 6 inches of soil and indicated the presence of barium, cadmium, and lead at non-hazardous levels. Seven of the eight samples also indicated the presence of mercury at non-hazardous levels, and four samples displayed total chromium concentrations at non-hazardous levels. One sample resulted in a non-hazardous concentration of silver. Hexavalent chromium was not detected in any of the surface soil samples collected. This indicates that the elevated total chromium results observed in the subsurface and surface soil samples collected during the initial sampling was not due to elevated levels of hexavalent chromium and therefore these soils can be considered as non-hazardous.

TCLP and hexavalent chromium sampling results are presented in Table 3-8.

3.2 Test Pit Findings

Concurrent with the September 2012 Geoprobe® investigation, a test pit investigation was conducted by SJB under oversight from CDM Smith. A total of 18 test pits were completed across Lot 9 to varying depths using a rubber tire backhoe to determine the depth of filter cake/fly ash, fill material, and presence of any buried concrete and construction debris (C&D). Filter cake/fly ash was observed in all test pits in the interior of the site at varying depths, thicknesses, and hardness. The test pit photo log is photo log is provided in Appendix E and test pit logs are provided in Appendix B. Observations made during the test pit investigation are as follows:

- On the south property line (TP-13), a 2 to 3 foot layer of 3-inch minus stone was observed from the property line to the filter cake/fly ash material approximately 75 feet north to the property line. This area was also covered by the black fly ash/filter cake ranging from a coating near the property line to about 6 inches thick at the northern end of TP-13, near the waste pile.

- C&D debris was encountered along the east and northern edges of Lot 9 from the property line to approximately 75 feet in towards the center of the Lot 9. The C&D material consisted of brick, wood, concrete with rebar, pipe material, fiberglass material and metal. This layer was approximately 3 to 4 feet in thickness before reaching the hard slag area in most locations. A large pile of C&D material is situated at the northeast corner of Lot 9 near TP-12. Soil boring samples from within this layer indicated that this material would be considered hazardous based on the lead concentrations. The large C&D pile would need to be sampled to determine if it could be segregated and disposed of as C&D waste.

- The fill material that was placed over the filter cake/fly ash material on the western side of the Site where the elevation is the highest on-site, varies in thickness from around 2 to 3 feet before hitting the filter cake/fly ash. There was some concrete encountered in these test pits but it appears that the majority of the large concrete is on the surface. The samples collected from within the 0 to 4 foot depth indicated lead concentrations that would deem this material as hazardous. Therefore, this material would not be segregated and disposed of as non-hazardous.

- A petroleum odor was observed while conducting test pits TP-4 and TP-5 at depths of 3 to 5 feet below grade. This odor was also observed in the soil borings conducted in this area.

- One TCLP sample (TCLP-1) was collected during the test pit investigation at TP-14 and one from soil boring SB-15. Both samples indicated the presence of non-hazardous levels of barium, cadmium, chromium, lead, selenium, and mercury. This is also the area where CDM Smith collected a sample for treatability testing.

3.3 Bench Scale Test Results

CDM Smith has cancelled the bench scale treatability tests, due to results from the follow-up soil sampling indicating that the metals concentrations present are considered non-hazardous.

3.4 Summary of Low-Flow Groundwater Sampling Results

A total of eleven groundwater samples were collected in addition to two field duplicate samples from the temporary monitoring well points in the initial July 2014 sampling event. Temporary monitoring well TP-04 was inadvertently not sampled. Groundwater sampling results from the July 2014 sampling round are presented in Table 3-12. All groundwater samples contained exceedances for certain metal compounds. Hexavalent chromium was not detected above the groundwater standard in any samples. Total cyanide was detected above groundwater standards in four of the eleven monitoring wells sampled; TP-06 located in the southeast corner of Lot 4, TP-08 located in the vicinity of the former Blue Fill Area, and TP-10 and TP-11 both located on Lot 9. SVOC exceedances were found in three samples only; TP-09, TP-10, and TP-11 located on Lot 9, and TP-06 located in the southeast corner of Lot 4. Exceedances for arsenic, cyanide, lead, copper and phenols from the July 2014 sampling round are plotted on Figure 3-3A. Figure 3-3A also displays the groundwater sampling results obtained by Malcolm Pirnie in 2006 for comparison. Significant exceedances from the July 2014 sampling round are summarized below:

- *Total Cyanide:* detected above the standard of 200 µg/L in TP-06 (1,840 µg/L), TP-08 (4,010 µg/L), the field duplicate collected from TP-08 (3,510 µg/L), TP-10 (10,900 µg/L) and TP-11 (252 µg/L).
- *Lead:* detected above the standard of 25 µg/L in TP-06 (107 µg/L), TP-08 (61,000 µg/L), the field duplicate collected from TP-08 (61,600 µg/L), TP-09 (38.4 µg/L) and the field duplicate collected from TP-09 (34 µg/L).
- *Arsenic:* detected above the standard of 25 µg/L in TP-10 (85 µg/L).
- *Antimony:* detected above the standard of 3 µg/L in TP-08 (117,000 µg/L) and in the field duplicate collected from TP-08 (116,000 µg/L).
- *Beryllium:* detected above the standard of 3 µg/L in the field duplicate collected at TP-08 (22 µg/L).
- *Total Chromium:* detected above the standard of 50 µg/L in TP-08 (2,700 µg/L).
- *Cadmium:* detected above the standard of 5 µg/L in the field duplicate collected at TP-08 (262 µg/L).
- *Copper:* detected above the standard of 200 µg/L in TP-08 (318,000 µg/L).
- *Thallium:* detected above the standard of 0.5 µg/L in TP-06 (17.7 µg/L), TP-09 (12.9 µg/L), the field duplicate collected from TP-09 (17 µg/L), TP-10 (15.7 µg/L), TP-11 (22.2 µg/L) and TP-12 (17.5 µg/L).
- *Phenol:* detected above the standard of 1.0 µg/L in TP-06 (22 µg/L), TP-09 (5.6 µg/L), the field duplicate collected at TP-09 (5.3 µg/L), TP-10 (33 µg/L) and TP-11 (9.6 µg/L).
- *Pentachlorophenol:* detected above the standard of 1.0 µg/L in TP-10 (7.6 µg/L).

Based on these results, a second round of groundwater samples were collected between August 25 and August 27, 2014. A total of 12 samples and one field duplicate were collected via low flow methodology from each of the temporary monitoring wells. Samples were field filtered for TAL metals analysis; cyanide was unfiltered. Sample results from the August event are presented in Table 3-13. All samples contained exceedances for some metals with the exception of TP-05 and TP-06. Similar to the first round, hexavalent chromium was not detected above the groundwater standard in any samples. Total cyanide was detected above groundwater standards in three of the twelve monitoring wells sampled; TP-08, TP-10 and TP-11. The total cyanide exceedances in TP-08, TP-10, and TP-11 were similar level of magnitude as observed in July 2014. Exceedances for arsenic, cyanide, lead, copper, and phenols from the August 2014 sampling round are shown on Figure 3-3B and significant exceedances are summarized below:

- *Total Cyanide:* detected above the standard of 200 µg/L in TP-08 (2,720 µg/L), the field duplicate from TP-08 (3,230 µg/L), TP-10 (17,100 µg/L) and TP-11 (259 µg/L).
- *Arsenic:* detected above the standard of 25 µg/L in TP-09 (80.8 µg/L) and TP-10 (94.3 µg/L).
- *Manganese:* detected above the standard of 300 µg/L in TP-02 (1,310 µg/L) and TP-04 (449 µg/L).
- *Selenium:* detected above the standard of 10 µg/L in TP-10 (22.7 µg/L).
- *Thallium*: detected above the standard of 0.5 µg/L in TP-11 (7.7 µg/L).
- *Pentachlorophenol:* detected above the standard of 1.0 µg/L in TP-08 (8.4 µg/L), the field duplicate from TP-08 (5.8 µg/L), and TP-10 (9.5 µg/L).
- *Phenol:* detected above the standard of 1 µg/L in TP-03 (1.5 µg/L) and TP-09 (13 µg/L).

A third round of groundwater samples was collected on September 18, 2014 from wells that displayed elevated concentrations of total cyanide: TP-06, -08, -10 and -11. Filtered and unfiltered samples were analyzed for total cyanide, WAD cyanide, menable cyanide, and PAC. Sampling results are presented in Table 3-14 and on Figure 3-3C. Total cyanide was detected above the standard of 200 µg/L in all samples:

- *Total Cyanide:* detected above the standard of 200 µg/L in TP-06 Unfiltered (2,400 µg/L), TP-06 Filtered (2,350 µg/L), TP-08 Unfiltered (7,530 µg/L), TP-08 Filtered (7,310 µg/L), TP-10 Unfiltered (17,600 µg/L), TP-10 Filtered (13,900 µg/L), TP-11 Unfiltered (828 µg/L), and TP-11 Filtered (720 µg/L).

General observations from the cyanide speciation in the September 2014 round follow:

- In TP-06, total cyanide concentrations were significantly higher, by an order of magnitude for the other cyanide species, indicating that the major component of cyanide in this well is the heavier, more stable form.
- A similar observation was made for TP-08, total cyanide concentrations were nearly double as compared to the next closest cyanide species concentrations (amenable cyanide). This

indicates again that the major component of cyanide in TP-08 is the heavier, more stable form.

- Similar to TP-08, total cyanide concentrations in TP-10 were nearly double as compared to the next closest cyanide species concentrations (amenable cyanide). This indicates again that the major component of cyanide in TP-10 is the heavier, more stable form.
- In TP-11, total cyanide concentrations were significantly higher, by nearly double the other cyanide species, indicating that the major component of cyanide in this well is the heavier, more stable form.

A fourth round of groundwater samples were collected from each of the 12 temporary well points between November and December 2014. Both filtered and unfiltered samples were collected for total cyanide, amenable cyanide, free cyanide, metals, and PAHs. Total cyanide was detected above the standard of 200 µg/L in 5 of the 12 temporary wells. Additionally, exceedances for at least one or more metal compound were found in all locations. Sampling results from the November and December 2014 round are shown on Table 3-15. Exceedances are included on Figure 3-3D and significant exceedances are summarized below:

- *Total Cyanide:* detected above the standard of 200 µg/L in TP-02 (240 µg/L unfiltered), TP-06 (630 µg/L unfiltered, 590 µg/L filtered), TP-07 (350 µg/L unfiltered, 330 µg/L filtered), TP-08 (8,000 µg/L unfiltered, 6900 µg/L filtered), and TP-10 (7,300 µg/L unfiltered, 8,400 µg/L filtered).
- *Free Cyanide:* detected above the fish propagation standard for fresh waters of 5.2 µg/L in TP-08 (9 µg/L unfiltered and 212 µg/L filtered), and TP-10 (8 µg/L unfiltered and 13 µg/L filtered).
- *Arsenic:* detected above the standard of 25 µg/L in TP-02 (47 µg/L unfiltered), TP-09 (96 µg/L unfiltered, 200 µg/L filtered), TP-10 (110 µg/L unfiltered, 100 µg/L filtered), and TP-11 (33 µg/L unfiltered).
- *Lead:* detected above the standard of 25 µg/L in TP-01 (28 µg/L unfiltered), TP-02 (740 µg/L unfiltered), and TP-10 (25 µg/L unfiltered).
- *Benzo(b)fluoranthene:* detected above the standard of 0.002 µg/L in TP-02 (1 µg/L unfiltered), and TP-05 (0.48 µg/L unfiltered).
- *Pentachlorophenol:* detected above the standard of 1 µg/L in TP-08 (8.7 µg/L unfiltered, 9.5 µg/L filtered).
- *Phenol:* detected above the standard of 1 µg/L in TP-03 (7.7 µg/L unfiltered, 8.6 µg/L filtered), TP-06 (6.5 µg/L unfiltered, 8.1 µg/L filtered), TP-09 (55 µg/L unfiltered, 57 µg/L filtered), TP-10 (100 µg/L unfiltered and filtered) and TP-11 (13 µg/L unfiltered).
- *pH:* detected at or above the standard of 12 SU in TP-09 (12 SU), and TP-10 (12.09 SU).

General observations from the cyanide speciation in the November and December 2014 round follow:

- Overall, total cyanide concentrations were significantly higher as compared to the other cyanide species, indicating that the major component of cyanide in the groundwater is the heavier, more stable form.

- Free cyanide was detected in both the unfiltered and filtered samples collected from TP-08 and TP-10. TP-08 is located near the former Blue Fill Area and TP-10 is located within Lot 9.

In October 2015, a fifth round of groundwater samples were collected from nine temporary wells previously sampled. Additionally, three new temporary wells installed on the property north of Parcel 4 in October 2015 and three existing permanent wells located on Parcel 4 were sampled. All analytical results are provided in Table 3-16 and exceedances are shown on Figure 3-3E. Significant exceedances are summarized below:

- *Total Cyanide:* detected above the standard of 200 µg/L in TP-06 (420 µg/L unfiltered, 480 µg/L filtered), TP-08 (380 µg/L unfiltered, 570 µg/L filtered), TP-10 (5,500 µg/L unfiltered, 5,400 µg/L filtered) and MW-UNK (270 µg/L unfiltered, 270 µg/L filtered).

- *Free Cyanide:* detected above the fish propagation standard for fresh waters of 5.2 µg/L in TP-03 (10 µg/L filtered), TP-06 (72 µg/L unfiltered and 21 µg/L filtered), TP-08 (30 µg/L unfiltered and 23 µg/L filtered), TP-10 (8 µg/L unfiltered and 6µg/L filtered), MW-404 (6 µg/L unfiltered) and MW-UNK (85 µg/L unfiltered and 78 µg/L filtered).

- *Arsenic:* detected above the standard of 25 µg/L in TP-09 (35 µg/L unfiltered, 29 µg/L filtered), TP-10 (52 µg/L unfiltered, 70 µg/L filtered), TP-13 (27 µg/L unfiltered) and MW-405 (25 µg/L unfiltered).

- *Benzo(b)fluoranthene:* detected above the standard of 0.002 µg/L in TP-02 (0.34J µg/L unfiltered).

- *Pentachlorophenol:* detected above the standard of 1.0 µg/L in TP-08 (6.2J µg/L unfiltered), TP-09 (2.5J µg/L unfiltered), TP-10 (11J µg/L unfiltered, 12J µg/L filtered), and TP-15 (2.8J µg/L unfiltered).

- *Phenol:* detected above the standard of 1.0 µg/L in TP-06 (14 µg/L filtered), TP-09 (23J µg/L unfiltered, 26 µg/L filtered), TP-10 (28 µg/L unfiltered, 31 µg/L filtered), TP-11 (19 µg/L unfiltered, 27 µg/L filtered), MW-405 (58 µg/L unfiltered, 57 µg/L filtered), and MW-UNK (1.1J µg/L filtered).

- *pH:* detected at or above the standard of 12 SU in TP-10 (12.59 SU), TP-15 (12.13 SU), MW-405 (12.02 SU).

3.5 Summary of Surface Water Sampling

In September 2014, CDM Smith collected filtered and unfiltered samples from three locations within the Retention Basin (Basin-1, -2 and -3), four catch basins (CB-01 through CB-04) and the outfall to the Union Ship Canal for analysis of cyanide speciation and metals. Analytical results for surface water sampling are shown on Table 3-17.

Total Cyanide concentrations were below the standard of 200 µg/L in all of the samples collected from the stormwater basin. WAD Cyanide, the form of cyanide which can be used to estimate concentrations of Free Cyanide (the most toxic form of cyanide), was detected in Basin-1 only, the location just north of the basin outlet. All other metals were detected below standards with the exception of iron in the unfiltered sample collected from Basin-3 and sodium in all samples.

In the catch basin and outfall samples, total cyanide concentrations again were higher in the filtered versus unfiltered samples in all locations with the exception of CB-01. Total (soluble) Cyanide concentrations in the filtered samples ranged from 6.5 µg/l (CB-02) to 46.7 (CB-03), below the 200 µg/L standard. Amenable Cyanide was detected in the filtered sample from CB-03 and from both the filtered and unfiltered samples collected at the outfall. WAD Cyanide was detected in the unfiltered sample from CB-04 and was a significant portion of the Total Cyanide concentration from that catch basin. WAD Cyanide was not detected at the outfall.

All other metals were detected below standards with the exception of iron in the unfiltered sample collected at the Outfall and sodium in all samples.

Results are summarized in Table 3-17 and exceedances are included on Figure 3-4A. Significant exceedances are summarized below:

- Iron: detected above the standard of 300 µg/L in Basin-3 (576 µg/L unfiltered) and in the duplicate sample collected at Basin-3 (2,840 µg/L unfiltered), and at the Outfall at the Union Ship Canal (312 µg/L unfiltered).
- Sodium: detected above the standard of 20,000 µg/L in all locations for unfiltered and filtered samples (Basin-1, Basin-2, Basin-3, CB-01, CB-02, CB-03, CB-04, and the Outfall at the Union Ship Canal).

In November 2014, a second round of surface water samples, both filtered and unfiltered, were collected from the same three locations within the stormwater basin, 15 catch basins, and the Outfall to the Union Ship Canal. Samples were analyzed for total cyanide, free cyanide, amenable cyanide, TAL metals, and SVOCs. All analytical results from the November 2014 sampling round are included on Table 3-18 and on Figure 3-4B.

Total cyanide was detected during this round at only three locations; all detections were below the standard of 200 µg/L. Total (soluble) cyanide concentrations in filtered samples were detected in CB-07 (18 µg/L) and CB-14 (6.4 µg/L); total cyanide was detected in the unfiltered sample only at CB-08 (45 µg/L). Free cyanide was detected in the unfiltered and filtered samples collected from location Basin-1 at 3 µg/L and 4 µg/L, respectively; all detections were below the standard of 5.2 µg/L. Total cyanide was non-detect in these samples, however it should be noted that free cyanide was analyzed by Alloway while total cyanide analysis was performed by TestAmerica. One exceedance for manganese and thallium were found in CB-12 and CB-01, respectively. Additional metal exceedances included iron and sodium, similar to the previous sampling round. Exceedances for four SVOC compounds, (bis(2-ethylhexyl)Phthalate, nitrobenzene, pentachlorophenol and phenol) were detected in some samples, as indicated in Table 3-18. The bis(2-ethylhexyl)Phthalate results were qualified as non-detections following data validation.

- Iron: detected above the standard of 300 µg/L in CB-01 (930 µg/L unfiltered), CB-05 (330 µg/L unfiltered), CB-06 (580 µg/L unfiltered), CB-07 (470 µg/L unfiltered) and the field duplicate collected from CB-07 (490 µg/L unfiltered), CB-11 (450 µg/L unfiltered), CB-12 (1,800 µg/L unfiltered, 680 µg/L filtered), CB-14 (390 µg/L unfiltered), and the Outfall (312 µg/L unfiltered).
- Manganese: detected above the standard of 300 µg/L in CB-12 (320 µg/L unfiltered, 300 µg/L filtered).
- Sodium: detected above the standard of 20,000 µg/L in the following locations for unfiltered and filtered samples: Basin-1, Basin-2, Basin-3, CB-01, CB-02, CB-03, CB-04, CB-07, CB-08, CB-09, CB-10, CB-12, CB-14, CB-15, CB-16, and the Outfall at the Union Ship Canal.
- Nitrobenzene: detected above the standard of 0.4 µg/L in CB-09 (0.47 µg/L unfiltered).
- Pentachlorophenol: detected above the standard of 1 µg/L in CB-08 (4.5 µg/L unfiltered, 3.5 µg/L filtered).
- Phenol: detected above the standard of 1 µg/L in CB-08 (4.6 µg/L unfiltered, 4.8 µg/L filtered), and CB-12 (4.7 µg/L filtered).
- pH: detected at or above the standard of 12 SU in Basin-1 (12.32 SU), Basin-2 (12.46 SU), Basin-3 (12.36 SU), CB-01 (12.35 SU), CB-02 (12.4 SU), CB-03 (12.35 SU), CB-04 (12.21 SU), CB-15 (12.16 SU), and CB-16 (12.25 SU).

In May 2015, a third round of surface water samples, both filtered and unfiltered were collected from two swales and 11 catch basins. Samples were analyzed for total cyanide, free cyanide, TAL metals, and SVOCs. All analytical results from the May 2015 sampling round are include on Table 3-19 and on Figure 3-4C.

Total cyanide was detected at all locations during this round; all detections were below the standard of 200 µg/L. In the catch basin samples, total cyanide concentrations were higher in filtered versus unfiltered samples in four locations (CB-20, CB-23, CB-26, and CB-28) out of thirteen detections. Total (soluble) cyanide concentrations on the filtered samples ranged from 4.76 µg/L (CB-29) to 181 µg/L (CB-23), below the 200 µg/L standard. Free cyanide was not detected in any of the samples, at all locations.

- *Arsenic:* detected above the standard of 25 µg/L in CB-21 (32.5 µg/L filtered).
- *Iron:* detected above the standard of 300 µg/L in CB-12 (1,750 µg/L unfiltered), CB-20 (1,080 µg/L unfiltered), CB-21 (7,990 µg/L unfiltered, 1,310 µg/L filtered), CB-22 (1,190 unfiltered), CB-23 (361 µg/L unfiltered), CB-27 (2,150 µg/L unfiltered), and CB-28 (766 µg/L unfiltered).
- *Lead:* detected above the standard of 25 µg/L in CB-21 (26 µg/L unfiltered).
- *Manganese:* detected above standard of 300 µg/L in CB-21 (511 µg/L unfiltered, 381 µg/L filtered)

- *Selenium:* detected above the standard of 10 µg/L in CB-18 (12 µg/L unfiltered), CB-19 (17.5 µg/L filtered), CB-21 (16 µg/L unfiltered), CB-23 (17.2 µg/L unfiltered; 15.4 µg/L filtered), CB-25 (14.4 µg/L filtered), CB-26 (19.4 µg/L unfiltered), and CB-27 (16.9 µg/L unfiltered, 16.6 µg/L filtered).
- *Sodium:* detected above the standard of 20,000 µg/L in the following locations for unfiltered and filtered samples: CB-12, CB-18, CB-19, CB-20 (only filtered), CB-21, CB-22, CB-23, CB-24, CB-25, CB-26, CB-27, CB-28, and CB-29.
- *Phenol:* detected above the standard of 1 µg/L in CB-18 (2 µg/L filtered), CB-21 (7.7 µg/L unfiltered), CB-21 (10 µg/L filtered), and CB-23 (3.6 µg/L filtered).
- *pH:* detected at or above the standard of 12 SU in CB-18 (12.94 SU), CB-19 (13.07 SU), CB-23 (12.82 SU), CB-24 (13.01 SU), CB-25 (13.03 SU), CB-26 (12.66 SU), and CB-27 (12.6 SU).
- In October 2015, a fourth round of surface water samples, both unfiltered and filtered, were collected from a total of 30 locations within and around Parcel 4. Samples were analyzed for TAL metals and SVOCs. Analytical results are provided in Table 3-20 and exceedances are shown on Figure 3-4D.The objective of this additional sampling round was to identify a potential source of the high pH observed in surface water samples collected in May 2015. The pH exceeded the standard of 12 SU in CB-26 (12.22 SU) and CB-27 (12.03 SU) only, however several locations had a pH greater than 10 SU.
- Sodium and iron were detected above their respective water quality standards of 20,000 µg/L and 300 µg/L, respectively in the majority of samples. The following is a summary of other significant exceedances observed in surface water samples collected in October 2015:
- *Magnesium:* detected above the standard of 35,000 µg/L in CB-08 (43,800 µg/L unfiltered, 42,400 µg/L filtered).
- *Manganese:* detected above the standard of 300 µg/L in CB-12 (330 µg/L unfiltered).
- *Pentachlorophenol:* detected above the standard of 1 µg/L in CB-09 (2.5J µg/L unfiltered), CB-16 (2.7J µg/L unfiltered), CB-19 (2.2J µg/L unfiltered), CB-24 (2.3J µg/L unfiltered) and CB-30 (2.6 µg/L unfiltered).
- Phenol: detected above the standard of 1 µg/L in CB-01 (1.3J µg/L unfiltered), CB-23 (35 µg/L unfiltered, 34 µg/L filtered), and CB-27 (1 µg/L unfiltered).

3.6 Summary of Sediment Sampling

In September 2014, CDM Smith collected sediment samples from the three locations in the stormwater Retention Basin (Basin-1, -2, and -3), CB-01, CB-02 and the Outfall. CB-03 was not sampled because it did not contain a sufficient volume of sediment. CB-04 could not be sampled because the cover was unable to be removed. All sediment sample results are provided in Table 3-21. Cyanide results as well as arsenic, copper and nickel concentrations are shown on Figure 3-5A.

Total cyanide concentrations ranged from 10.6 to 18.8 mg/kg in the Retention Basin. Total cyanide was considerably lower in the sample collected from CB-01 (0.965 mg/kg) and the Outfall (1.83 mg/kg); the sample from CB-02 was non-detect. WAD cyanide and PAC were detected in all three of the Retention Basin samples, with the highest concentrations found in the more western, upstream locations Basin-2 and Basin-3. The WAD and PAC detections in the catch basin and Outfall samples were qualified as estimated as they were above the method detection limits, but below the method reporting limits.

When comparing to freshwater sediment guidance values found in NYSDEC's Division of Fish, Wildlife and Marine Resources *Screening and Assessment of Contaminated Sediment* document (June 2014), chromium and zinc concentrations in the sample collected from Basin-1 fall into the Class B classification, meaning they are considered slightly to moderately contaminated and further evaluation is required to evaluate potential risks to aquatic life.

Between November and December 2014, CDM Smith collected a second round of sediment samples from the three locations within the Retention Basin, the Outfall to the Union Ship Canal and six catch basins. Samples were analyzed for total cyanide, amenable cyanide, free cyanide, TAL metals, and SVOCs. All sediment sampling results from the second round are included on Table 3-22; cyanide, arsenic, copper and nickel concentrations are shown on Figure 3-5B.

Total cyanide concentrations ranged from 1.1 mg/kg in CB-05 to 19.6 mg/kg in location Basin-2. Free cyanide was detected in 9 of 10 locations, ranging from 0.3J mg/kg in CB-19 to 8.9 mg/kg in Basin-2. Additionally, samples that fall into the Class B classification when compared to freshwater sediment guidance values (GV) are summarized below:

- *Arsenic:* detected above the Class A GV of 10 mg/kg in Basin-1 (13 mg/kg), Basin-2 (14.8J mg/kg), Basin-3 (11.2 mg/kg).
- *Cadmium:* detected at the Class A GV of 1 mg/kg in CB-17.
- *Copper:* detected above the Class A GV of 32 mg/kg in CB-15 (39.2 mg/kg) and CB-17 (49.6 mg/kg).
- *Lead:* detected above the Class A GV of 36 mg/kg in Basin-1 (69.3 mg/kg), Basin-3 (52.9 mg/kg), CB-04 (46 mg/kg), CB-15 (74.3 mg/kg) and CB-19 (36.1 mg/kg).
- *Nickel:* detected above the Class A GV of 23 mg/kg in CB-17 (27.1 mg/kg).
- *Zinc:* detected above the Class A GV of 120 mg/kg in Basin-1 (197 mg/kg), Basin-3 (192 mg/kg), CB-04 (152 mg/kg), CB-15 (171 mg/kg), CB-17 (280 mg/kg).

Additionally, the sediment sample collected from CB-17 had a lead concentration that exceeded the Class B GV of 130 mg/kg at 170 mg/kg, meaning it is considered highly contaminated and likely poses a risk to aquatic life.

3.7 Data Usability

CDM Smith submitted the laboratory analysis reports from September 2012 and January 2013 to Nancy Potak, to complete a data validation report for the analysis performed by Spectrum. The results of that report noted minor issues with the matrix spike, matrix duplicate and serial dilution. Percent recoveries for matrix spikes were within the QC limits with the following exceptions: DUP 1 (L1966-20AMS), Spike sample recovery is below criteria for Antimony at 39% with criteria of (75-125).

Serial Dilution analyses were performed on sample DUP 1 (L1966-20ASD). Percent differences were within the QC limits with the exception of the following: DUP 1 (L1966-20ASD).The serial dilution analysis was not within control limit for Cobalt (16%), Nickel (10%) and Zinc (13%).The data for these compounds were flagged with the J qualifier and are estimated values. The data for antimony were flagged with the "J" qualifier and are estimated values.

All field sample analytical results from July 2014 – May 2015, and October 2015were validated by Data Validation Services, an independent, qualified data validator in accordance with NYSDEC Data Usability Summary Report (DUSR) guidance. In general, data was usable as provided by the laboratory with only minor qualifications.

The analytical results from the August 2015 TENORM were validated by Environmental Data Service, an independent, qualified data validator in accordance with NYSDEC Data Usability Summary Report (DUSR) guidance. All data from this sampling event were considered usable as reported by the laboratory or with minor qualification; the DUSR is included in Appendix H.

Copies of all available DUSR reports are provided in Appendix H.

Section 4
Conclusions and Recommendations

4.1 Conclusions

The results of the characterization sampling indicate the presence of significant contamination in surface and subsurface soils throughout the Site. Based on the surface subsurface soils sampling results, contaminants of concern above the NYSDEC Restricted Commercial Use SCOs for metals and SVOCs are not limited to certain areas, but rather are observed across the entire area.

The results of both the surface and subsurface soil sampling results collected within Parcel 4/Lot 9 indicate the presence of cyanide and other metals, including arsenic, lead, and copper at concentrations that exceed their respective Restricted Commercial Use SCOs. The soil contamination is not limited to a specific area, but rather is present throughout Parcel 4/Lot 9. Lot 9 is the westernmost lot of the Site and given the close proximity to Lake Erie, predominant wind direction is easterly. Contaminated surface soils from the unremediated Lot 9 could easily deposit in Lots 4, 7 and 8, explaining the surface soil contamination observed in these more easterly lots. The results of the characterization sampling indicate the presence of significant contamination in subsurface soils throughout Parcel 4/Lots 4, 7 and 8. Based on the sampling results, contaminants of concern above the NYSDEC Restricted Commercial Use SCOs for metals and SVOCs are present at 4-10 feet bgs across the entire area.

Groundwater results from Parcel 4/Lot 9 continued to show the presence of residual contamination throughout the area due to observed exceedances of TOGs 1.1.1 guidance values for metals, SVOCs, total cyanide, and free cyanide. Total cyanide and free cyanide were detected above their respective guidance values in TP-10, located on the western edge of Parcel 4/Lot 9. Additionally, pH measurements were extremely high in TP-10 (in excess of 12 SU). The general groundwater flow patterns indicate that the unremediated Lot 9 is upgradient of Lots 4, 7, and 8, which is likely also acting as a source for the groundwater exceedances observed in the Lots 4, 7 and 8 groundwater monitoring wells.

Groundwater results from Parcel 4/Lots 4, 7 and 8 indicate the presence of residual contamination throughout the area due to observed exceedances of TOGs 1.1.1 guidance values for metals, SVOCs, total cyanide, and free cyanide. Total cyanide and free cyanide were detected above their respective guidance values in TP-08, located in the vicinity of the former Blue Fill Area just east and downgradient of Parcel 4/Lot 9. The Blue Fill Area was a disposal area for spent "Blue Billy," the byproduct of a historical manufactured gas plant operation. It is likely there is a continuing source of contamination upgradient of TP-08, and planned excavation activities in Parcel 4/Lot 9 (discussed in Section 4.2) will remove that source.

Surface water results collected from catch basins in the vicinity of Parcel 4/Lot 9 did not show signs of significant contamination. This indicates that the catch basin network is not directly influenced by the soil and groundwater contamination at Lot 9.

The results of three rounds of surface water and two rounds of sediment sampling results in the Retention Basin, catch basins, and Outfall indicate the presence of cyanide. Although total cyanide concentrations were detected below the applicable standards, the results suggest that cyanide may be breaking down to less stable forms in the Retention Basin, as indicated by surface water and sediment results from Basin-1 (located on the east end of the Retention Basin near the outlet), catch basins downgradient of the Retention Basin, and at the Outfall to the Union Ship Canal. A summary of results is presented below:

- During the September 2014 sampling round WAD cyanide, which can be used to estimate free cyanide concentrations, was detected in surface water from the Basin-1 and CB-04 locations.
- Also during September 2014, WAD cyanide was detected in sediment samples collected throughout the Retention Basin, CB-01, CB-02, and the Outfall.
- In the November 2014 round of sampling, free cyanide was detected in the surface water sample collected from Basin 1, again pointing to the potential degradation of total cyanide by exposure to high pH and ultraviolet light. Total cyanide was non-detect in the basin as well as the downstream catch basins leading to the outfall.
- pH measurements were collected during the November 2014 sampling event. pH was measured in excess of 12 SU throughout the Retention Basin and in the downgradient catch basins (CB-01, CB-02, CB-03, and CB-04). Additionally, there were high pH readings in CB-15, located northeast of Parcel 4 and in CB-16, immediately upgradient of the Retention Basin. The pH at the Outfall was acceptable, at 10.34 SU, likely due to mixing with Union Ship Canal waters.
- In the November 2014 round of sediment sampling, the highest concentrations of both total and free cyanide were detected in the stormwater basin location Basin-2.

In addition to cyanide, metals were detected at high levels in the surface water and sediments throughout the Retention Basin. Arsenic, zinc, and lead were found in sediment samples, and elevated concentrations of sodium were found in surface water samples collected from the Retention Basin.

During sampling activities, groundwater seeps were observed in the Retention Basin sediment. In reviewing the Site Plan drawings created by C&S Companies for the Parcel 4/Lot 4, 7, and 8 remedial action, the Retention Basin was installed below the groundwater table and it appears that a liner was not installed when the Retention Basin was constructed. Therefore, CDM Smith has concluded that groundwater is also contributing a small component of the contamination observed within the Retention Basin, downstream catch basins, and the Outfall to Union Ship Canal.

Outside of the Retention Basin, metal compounds at concentrations that fall into Class B category, including: cadmium, copper, lead, nickel and zinc were found in catch basins CB-15, CB-17 and CB-19 which are all located in the parcel north of the site. CB-15 is located northeast of Parcel 4, while CB-17 and CB-19 are the bottom of swales in the Parcel 4/Lots 6, 10 and 11; north of Parcel 4/Lots 4, 7 and 8. Based on piping diagrams of the stormwater network, these locations drain into the Parcel 4 Lots 4, 7 and 8 catch basin network, through the Retention Basin and ultimately drain into the Union Ship Canal. With only limited sampling results, it is speculated that these areas could continue to be a source of elevated metals contamination to the Retention Basin and possibly Union Ship Canal.

The most recent sampling activities in October 2015 were performed based on results of the previous investigations. The primary objectives of this recent sampling were the following:

- Identify whether SVOCs detected in groundwater samples are migrating from a potential source north of Parcel 4.
- Collection of surface soil samples to determine whether the high pH detected in surface water samples is a result of runoff.
- Identify whether there are groundwater exceedances in close proximity to locations where subsurface soil sample exceedances are observed.
- Characterize the groundwater in existing monitoring wells MW-404 and MW-405 located on Lot 9 and in MW-UNK located on Lot 8.

The three temporary well points located north of Parcel 4 (TP-13, TP-14 and TP-15) were installed and sampled in October 2015. Pentachlorophenol was detected above the standard of 1µg/L at 2.8 µg/L in TP-15; there were no other SVOC exceedances. TP-15 is located the farthest west of the three new wells, immediately north of Lot 9. Additionally, subsurface soil samples collected during well installation yielded exceedances in the 0 to 4 feet bgs interval for benzo(a)pyrene only at TP-14 (SB-100) and TP-15 (SB-101).

The pH in the six surface soil samples collected in October 2015 ranged from 8.71 to 8.88 SU. From the limited sampling locations and data, there is no clear indication that the high pH observed in utilities is a result of runoff. There is an apparent correlation between high pH in surface water samples and elevated calcium concentrations, however this correlation is not present in groundwater samples.

The location of groundwater exceedances were evaluated to determine if they coincide with subsurface soil exceedances. Any observations that soil contaminants are affecting groundwater quality may dictate that deeper excavation be performed in these areas. Total cyanide concentrations in groundwater and subsurface soil samples exceeded the TOGS 1.1.1 guidance value and Commercial SCO, respectively, in the southern portion of Lot 8 near the Blue Fill Area. Total cyanide exceedances were observed in groundwater samples collected from TP-08 and MW-UNK and in two nearby subsurface soil samples at a depth of zero to eight feet bgs. Similarly, arsenic exceedances in both groundwater and subsurface soil samples exist in the northern portion of Lot 8. Exceedances have been observed in groundwater collected from TP-02 and MW-402 and in subsurface soil samples at four locations between the two groundwater wells. Arsenic contamination above the SCO was primarily observed at depths of 8 feet bgs to as deep as 20 feet bgs.

Existing monitoring wells MW-404, MW-405, and MW-UNK were sampled for total cyanide, free cyanide, TAL metals, and SVOCs. MW-404 contained exceedances for free cyanide and some metals compounds. Pentachlorophenol was detected in MW-405 at 58 µg/L, compared to the standard of 1 µg/L. This well is screened from 15 to 25 feet bgs indicating that some phenol contamination is present at a deeper interval than what has been sampled at the temporary well points. MW-UNK, as mentioned above, contained exceedances for both total and free cyanide.

4.2 Recommendations

Based on the analytical results presented in Section 3 and discussed above, CDM Smith recommends the following:

- The elevated levels of metals at almost all locations and at varying depths will limit segregation of excavated materials during the remedial construction. With the exception of large amounts of concrete on the surface and any other C&D material such as roofing shingles as well as tires, across the site; all excavated material can be disposed of as non-hazardous. The results of the TENORM sampling performed in August 2015 indicate low levels of radioactive material are present. It will be necessary to verify the acceptable radiochemistry limits of the receiving disposal facility.

- CDM Smith estimates between 70,000 and 75,000 tons of contaminated material will be excavated to an elevation of 577 feet amsl in Lot 9, based on the cross-sections provided in Section 3.

- Although many of the subsurface sample results showed metals concentrations exceeding the Restricted Commercial Use SCO, there were no exceedances of TCLP standards in any of the soil samples collected at the Site. Since the TCLP standards were not exceeded, the soils are not classified as hazardous and therefore, are not required to be disposed of in a RCRA-regulated facility (e.g., Chemical Waste Management Model City, NY landfill). However, due to the elevated levels of metals present, the Site soils will need to be disposed of in a NYSDEC Part 360-regulated facility (e.g., Seneca Meadows Landfill, or equivalent).

- As a result of surface soil contamination observed in Lots 4, 7 and 8, and because there is a high likelihood of cross-contamination during remedial activities, CDM Smith recommends a

surface scrape of Lots 4, 7 and 8. The surface scrape will need to be completed prior to using the area as a laydown area during remediation activities of Lot 9. The surface scrape will involve a 1-foot scrape of all surficial soils in Parcel 4/Lots 4, 7, and 8, installation of a non-woven geotextile fabric demarcation layer, and 1 foot of screened common fill.

- Additional excavation beyond a surface scrape is recommended in a 0.7-acre portion of Lot 8 where both groundwater and soil contamination are observed. It is recommended that excavation proceed to 8 feet bgs in the area near the former Blue Fill Area where total cyanide exceedances have been observed. CDM Smith estimates approximately 8,500 tons of contaminated material will be excavated from this area. Further excavation is not recommended in the area near TP-02 as contamination is present at depths that do not pose a risk from anthropogenic activities.

- Surface water and sediment sampling from the Retention Basin and catch basin network throughout Lots 4, 7, 8, and 9 indicate the presence of contamination.

- Additionally, field observations indicate groundwater is seeping into the Retention Basin. Therefore, it is recommended that the water and sediment from the Retention Basin and downstream catch basins be removed via a vacuum truck. Water will be transported offsite for treatment; sediment will be staged in the laydown area east of Lot 9 for drying. After the water and sediments are removed, CDM Smith recommends that a new Basin with a liner system be designed and constructed above the groundwater table.

- Due to the elevated pH observed in surface water samples collected from the catch basin network and the Retention Basin, CDM Smith recommends that a pH treatment system be considered at the new Retention Basin to lower pH prior to discharge at the Union Ship Canal outfall.

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

March 6, 2015

Buffalo Lakeside Commerce Park 1, LLC
Attn: Peter M. Cammarata
President, Buffalo Urban Development Corp.
95 Perry Street, Suite 404
Buffalo, NY 14203

Dear Mr. Cammarata:

As mandated by Section 27-1305 of the Environmental Conservation Law (ECL), the New York State Department of Environmental Conservation (DEC) must maintain a registry of all inactive disposal sites suspected or known to contain hazardous wastes. The ECL also mandates that DEC notify, by certified mail, the owner of all or any part of each site or area included on the Registry of Inactive Hazardous Waste Disposal Sites in New York State (Registry) as to changes in site classification and/or boundary modifications. DEC previously notified you of the listing of this site on the Registry.

Our records indicate that you are still the owner or part owner of the site listed below. Therefore, this letter constitutes notification of the boundary modification for this site increasing the site size from 5.5 acres to 19.665 acres. As previously indicated, once listed on the Registry, the site becomes subject to certain restrictions prescribed by provisions of 6 NYCRR Part 375. These regulations may be found at the following DEC website address: http://www.dec.ny.gov/regs/4373.html.

DEC Site No.: 915193A
Site Name: Buffalo Lakeside Commerce Park - Parcel 4
Site Address: 1714 Fuhrmann Blvd., Buffalo NY 14203
Site Classification: Class 2

The reason for the boundary modification is as follows:

The Buffalo Lakeside Commerce Park Parcel 4 site is currently the western lot (Lot 9) of Parcel 4. Lot 9 was separated from the original Environmental Restoration Program (ERP) site to allow expeditious removal of the lead contaminated ash pile. The remaining remedial activities required on the ERP site have yet to be completed. Due to the size constraints of Lot 9, the NYSDEC requested and was granted access to Lots 8 and 9 for use as a construction laydown and staging area.

As part of the remedial design, baseline samples of the laydown and staging area and samples needed to complete the site management plan and easement for the entire parcel were collected. Groundwater samples were also collected to assess groundwater conditions for construction and well abandonment needs. Analysis of the data indicates that source material outside of Lot 9 may remain on Parcel 4. To address the source material, the incorporation of the remainder of Parcel 4 into the current inactive hazardous waste site would allow for the expeditious removal of source material during the remediation work that will be performed on Parcel 4.

Enclosed is a copy of DEC's Inactive Hazardous Waste Disposal Site Report form as it will appear on the Registry. An explanation of the site classification is available at http://www.dec.ny.gov/chemical/8663.html.

For additional information, please contact Heidi-Marie Dudek, the Project Manager, at 518-402-9813.

Sincerely,

Kelly A. Lewandowski

Kelly A. Lewandowski, P.E.

Site Type		**Disposal Area**	Dump		

Site Description

Location
The Buffalo Lakeside Commerce Park (BCLP) occupies over 200 acres at the southern edge of the City of Buffalo. Approximately 113 acres of the BLCP was formerly referred to as the Hanna Furnace Site (Site #915029). The Parcel 4 site is a 20 acre, vacant parcel located on the western edge of the BLCP, in the northwest corner of the former Hanna Furnace parcel and now matches the boundary of the ERP site #E915193 by the same name.

The site is bordered to the west by New York State Route 5 and Fuhrmann Boulevard, and to the south by the remediated ERP site Hanna Furnace Subparcel 3 Site #B00164 (now known as the Union Ship Canal Commons public greenspace). The Union Ship Canal, a slip off of the Buffalo Outer Harbor, lies 200 feet south of the site.

Current Zoning/Uses
Buffalo Urban Development Corporation (BUDC), owner of the BLCP, intends to redevelop the land, including this site, consistent with the light industrial/commercial redevelopment that has taken place in Parcels 1 and 2. Two remediated and redeveloped BCP sites (BLCP-Krog, Site #C915185 and Cobey-BLCP, Site #C915202) are located in Parcels 1 and 2 of the BLCP. Parcel 4 is currently zoned for light industrial/commercial use.

Site Features
In earlier investigations, the site was often called the "Filter Cake/Flue Ash" area. Occupying much of the site is a mound of fill composed of the byproducts from the pig iron production: black fine-grained flue ash, collected from the exhaust of the iron blast furnaces; and filter cake, the solids screened from the wet "scrubbers" which separated impurities from the same furnace exhaust before the combustible gases were recycled back to the furnaces. The surface of the Filter Cake/Flue Ash area is "hummocky"; actually best characterized as several smaller, connected mounds with a maximum height of approximately 15 feet. Much of the filter cake/flue ash piles are covered with fill material (clay, crushed stone and concrete), which was reportedly excavated from the construction site of a supermarket in the City of Buffalo.

Historical Uses
Parcel 4 was the northern most of four adjoining parcels that comprised the Hanna Furnace iron foundry. The railroad yard that serviced the foundry and the production facilities themselves and were located to the south in Parcels 1 and 2 respectively. Parcel 3 surrounded the eastern end of the Union Ship Canal and is where the foundry's raw materials (ore, coke and limestone) were delivered and stockpiled.

Hanna Furnace purchased Parcel 4 from the Pennsylvania Railroad in 1960. At that time, a marsh and pond occupied most of the site, with railroad tracks encircling it. Over the ensuing decades, the marsh was backfilled with slag, ash, and demolition debris generated by the foundry. Fill material covers the entire site and is the source of the site contamination.

There have been sixteen separate environmental investigations conducted on the former 200 acre Hanna Furnace property. Of these sixteen studies, six investigations included the Parcel 4 area.

In 2006 an Environmental Site Investigation was completed by Malcolm Pirnie for BUDC under the NYS Environmental Restoration Program and a Record of Decision (ROD) was issued. The Parcel 4 site remedy required the excavation and off-site disposal of discrete solid waste materials, installation of a cover system over the entire site and the implementation of a site management plan to ensure long term care of the cover system and compliance with site use restrictions. The remediation of Parcel 4 (E915193) was not completed though discrete solid waste materials (i.e. the Debris Disposal pile) were removed for off –site disposal from the eastern two thirds of the parcel; the Filter Cake/Flue Ash area was left undisturbed.

Site Geology and Hydrogeology

The site geology can be characterized as a 25 to 30 foot-thick cover of natural and man-made overburden materials over a relatively flat shale bedrock surface. Natural overburden materials encountered include, in ascending order, glacial deposits (till), clay and peat. The fill material encountered varied from disturbed, natural soil materials from clay to boulders, dredged sediments and broken shale rock as well as the raw materials and byproducts of iron and steel manufacturing including: filter cake/flue ash, slag, iron ore, limestone, coke and construction and demolition debris. Fill material was encountered at every soil boring location on site and ranged in thickness from 10 to 25 feet.

The bedrock at the site is the Levanna Shale Member of the Middle Devonian Age Skaneateles Formation. The Levanna shale is described as a fissile shale, dark gray or black near the bottom and lighter gray in color near the top. Some calcareous (limey) beds and some pyrite concretions are present within this shale member. The Levanna is reportedly 45 feet thick and typically produces low quantitities of groundwater in the range of 10 to 15 gallons per minute. Being located near the shore of Lake Erie, surface water is the source of water for all uses in the area.

Contaminants of Concern (Including Materials Disposed) — Quantity

OU 01
LEAD

Analytical Data Available for : Groundwater, Soil

Applicable Standards Exceeded for: Groundwater, Soil

Site Environmental Assessment

Based upon the investigations conducted to date, the primary contaminant of concern is lead. The Filter Cake/Flue Ash pile, contained lead at concentrations as high as 11,000 ppm, well above the unrestricted soil cleanup objective of 63 ppm. Leachate from one of the five samples of this ash that were tested for the Toxicity Characteristic Leachate Procedure during the 2006 ERP site investigation, contained 11.7 mg/L of lead, exceeding the hazardous waste threshold of 5 mg/L. One of twelve filter cake/flue ash waste samples collected in earlier investigations (1995, 2001 and 2003) contained lead in the leachate at a concentration characteristic of a hazardous waste.

Contaminants found exceeding groundwater standards included: antimony, arsenic, beryllium, copper, iron, lead, magnesium, manganese, nickel, selenium, sodium, thallium, acetone, benzene, pentachlorophenol and phenol. Iron and sodium were found at elevated concentrations in all of the Parcel 4 wells. The pH of the groundwater was as high as 12.

Groundwater was encountered at depths between 1 and 7 feet with the most shallow groundwater found along the northern boundary of Parcel 4 and adjacent to the Debris Disposal pile, where standing surface water was often found. The groundwater beneath Parcel 4 generally flowed southward except in the raised area of the Debris Disposal pile where there was a localized radial flow. Between Parcel 4 and Union Ship canal to the south, the groundwater appeared to be influenced by the canal's north wall and/or by the railroad beds which once bordered the canal. Northwest of the canal, in the vicinity of the Filter Cake/Flue Ash area, where the canal wall is largely intact, groundwater flowed parallel to the canal wall eastward to that end of the canal where the wall is weathered and damaged and the canal wall cap is absent.

It is not known if the removal of the Debris Disposal pile and re-grading of Parcel 4 has altered the groundwater flow.The discharge of groundwater contaminants to the Union Ship Canal is however considered a minor contributor to the potential environmental risks to aquatic receptors. The greater environmental threat is associated with the current and potential impact on terrestrial vegetation and wildlife receptors from direct contact with the exposed soil/fill, in particular the filter cake/flue ash waste.

Site Health Assessment

The site is not fenced and persons who enter the site could contact contaminants in the soil by walking on the soil, digging, or otherwise disturbing the soil. People are not expected to come into direct contact with contaminated groundwater unless they dig below the ground surface.

Test Pit No.: TP-13
Surface Elevation: 581 ft (MSL)

Depth		Elevation		Material Description			Water Depth/Date
From	To	From	To	C = Coarse	M = Medium	F = Fine	
0.0 ft	1.5 ft	581	579.5	3"-minus Stone changing over to Dark Fly Ash moving south to Parcel Boundary.			
1.5 ft	3.0 ft	579.5	578	Gray Crushed Stone			
3.0 ft	4.0 ft	578	577	Gray Clay			

Test Pit Log

Client: NYSDEC
Project: Buffalo Lakeside Commerce Park
Date: September 17-18, 2012

Project No: 0897-91667
Test Pit No.: TP-14
Surface Elevation: 586 ft (MSL)

Depth		Elevation		Material Description			Water Depth/Date
From	To	From	To	C = Coarse	M = Medium	F = Fine	
0.0 ft	2.0 ft	586	584	Brown Fly Ash. Dense.			

Test Pit Log

Client: NYSDEC
Project: Buffalo Lakeside Commerce Park
Date: September 17-18, 2012

Project No: 0897-91667
Test Pit No.: TP-15
Surface Elevation: 581.5 ft (MSL)

Depth		Elevation		Material Description			Water Depth/Date
From	To	From	To	C = Coarse	M = Medium	F = Fine	
0.0 ft	4.0 ft	581.5	577.5	C&D Debris consisting of brick and concrete changing over to Dark Fly Ash moving west to Hazardous Area (fenced).			
4.0 ft	6.0 ft	577.5	575.5	Gray Rock Slag. Dense.			

Test Pit Log

Client: NYSDEC
Project: Buffalo Lakeside Commerce Park
Date: September 17-18, 2012

Project No: 0897-91667
Test Pit No.: TP-16
Surface Elevation: 582 ft (MSL)

Depth		Elevation		Material Description			Water Depth/Date
From	To	From	To	C = Coarse	M = Medium	F = Fine	
0.0 ft	6.0 ft	582	576	C&D Debris consisting of brick, concrete, pipe, and fiberglass.			
6.0 ft	7.0 ft	576	575	Gray Rock Slag.			

Test Pit Log

Client: NYSDEC
Project: Buffalo Lakeside Commerce Park
Date: September 17-18, 2012

Project No: 0897-91667
Test Pit No.: TP-17
Surface Elevation: 582.5 ft (MSL)

Depth		Elevation		Material Description			Water Depth/Date
From	To	From	To	C = Coarse	M = Medium	F = Fine	
0.0 ft	6.0 ft	582.5	576.5	C&D Debris consisting of brick and fiberglass, mixed in with Dark Fly Ash. Changes over Black Fly Ash only farther west.			

Test Pit Log

Client: NYSDEC
Project: Buffalo Lakeside Commerce Park
Date: September 17-18, 2012

Project No: 0897-91667
Test Pit No.: TP-18
Surface Elevation: 583 ft (MSL)

Depth		Elevation		Material Description			Water Depth/Date
From	To	From	To	C = Coarse	M = Medium	F = Fine	
0.0 ft	1.0 ft	583	582	Dark Fly Ash.			
1.0 ft	5.0 ft	582	578	Dark Fly Ash mixed in with C&D Debris consisting of brick and metal.			
5.0 ft	6.0 ft	578	577	Gray Rock Slag.

Location BUFFALO, NY Date 7/7/2014

Project / Client BUFFALO LAKESIDE COMMERCE PARK/NYSDEC

0852 K. REEPMEYER (CDM SMITH) ARRIVED ON SITE.
709F; LIGHT RAIN
WIND SSW @ 16 MPH
HUMIDITY 84%

0920 2 CREWS FROM SJB ARRIVED ON SITE.
PREMIER ON-SITE TO COMPLETE NATIONAL GRID ELECTRIC MARKOUTS.
K.R. OPENED THE SOUTH AND EAST FENCES - COULD NOT UNLOCK THE NORTH FENCE.

0945 HEALTH AND SAFETY MEETING. ALL ON SITE SIGNED IT.

0950 KR WALKED THE NORTHERN AND WESTERN PERIMETER OF THE SITE WITH PREMIER TO INDICATE BORING AND MONITORING WELL LOCATIONS (PER FIGURE 2 SITE PLAN).
DRILL RIG MOBILIZED TO MW-01.
GEOPROBE SET UP TO COMPLETE

Location BUFFALO, NY Date 7/7/14

Project / Client BUFFALO LAKESIDE COMMERCE PARK / NYSDEC

A TEST BORING ON THE NORTH END OF THE SITE, APPROXIMATELY 100 FEET EAST OF THE LOT 9 FENCE.

1005 JEREMY FROM NATIONAL FUEL (GAS) ARRIVED ON SITE. HE VERIFIED THAT THE ONLY GAS ON SITE IS IDENTIFIED BY THE MARKERS. HIS CONTACT INFO. IS 716-913-9279.

1010 PREMIER SAID THE NORTHEAST CORNER OF THE SITE HAS ELECTRIC THAT IS NOT CHARGED (FOR FUTURE USE) SO HE CANNOT SPECIFICALLY INDICATE ITS LOCATION. HE SAID IT IS ON THE OUTSIDE OF THE GAS MARKERS.

1028 THE GEOPROBE TEST BORING HAD GOOD RECOVERY - 3 TO 3.5 FEET IN 4-FOOT ACETATE LINERS. ENCOUNTERED WATER AT APPROXIMATELY 6 FEET BELOW GROUND SURFACE (BGS).

1030 GEOPROBE CREW OFF SITE TO DROP OFF TRAILER AND GET LUNCH.

1031 MW-01 INSTALLED. 15 FEET DEEP. 5 FEET OF SCREEN. 10' RISER. BACKFILLED

Location BUFFALO, NY Date 7/7/14

Project / Client BUFFALO LAKESIDE COMMERCE PARK / NYSDEC

WITH CUTTINGS. 1-INCH DIAMETER PVC.

~~WATER AT~~ 5R 5-FEET OF WATER.

1115 MW-02 INSTALLED. 1" PVC. 10' SCREEN. 5' RISER. 10 FEET OF FILL (TOP 10'), THEN NATURAL CLAY WAS ENCOUNTERED.

1210 MW-03 INSTALLED. 1" DIAMETER PVC. 10' SCREEN, 5' RISER (15' DEEP).

1220 A. RIELLY AND L. ESTRADA (COM SMITH) ON SITE. THEY SIGNED THE HASP. THEY WILL BE COLLECTING THE SOIL SAMPLES FROM GEOPROBE OPERATIONS. ALL SOIL BORING DATA WILL BE IN THAT FIELD BOOK.

1235 MOBILIZED TO MW-04.

1300 MW-04 INSTALLED. 1" DIA. PVC. 10' SCREEN, 5' RISER (15' DEEP).

1340 MW-05 INSTALLED. 1" DIA. PVC. 15' DEEP - 10' SCREEN,

Location BUFFALO, NY Date 7/7/14

Project / Client BUFFALO LAKESIDE COMMERCE PARK / NYSDEC

	5' RISER.
1415	MW-06 INSTALLED. 1" DIA. PVC. 15' DEEP - 10' SCREEN, 5' RISER.
1420	SJB SET UP DECON SPACE IN FENCE ON LOT 9. DECON'ED THE EQUIPMENT (AUGERS) USED TODAY.
1547	SJB MOBILIZED TO MW-07.
1615	MW-07 INSTALLED. 1" DIA. PVC. 15' DEEP - 10' SCREEN, 5' RISER.
1620	MOB. TO MW-08.
1638	SOIL DRUM WAS STARTED. SET UP INSIDE FENCE ON LOT 9. AGREED TO MEET ON SITE AT 0730 TOMORROW (T, 7/8/14).
1650	MW-08 INSTALLED. 1" DIA. PVC. 15' DEEP 10' SCREEN, 5' RISER. COORDINATES TO BE COLLECTED ONCE ALL TEMPORARY WELLS ARE INSTALLED
1700	SJB AND COM SMITH OFF SITE.

K. Reppmeyer

Location BUFFALO, NY Date 7/8/14

Project / Client BUFFALO LAKESIDE COMMERCE PARK / NYSDEC

0714	COM SMITH ON SITE. ONE SJB CREW ALREADY ON SITE. 72°F; CLOUDY; WIND SSW @ 10MPH. HUMIDITY 87%.
0720	SJB CREW 2 ON SITE.
0725	SJB BEGINS DRILL RIG DECON FROM INSTALLATION OF MW-07 AND MW-08. (COMPLETED M, 7/7/14).
0730	HELD TAILGATE SAFETY MEETING.
0800	MOBILIZED TO MW-09.
0835	MW-09 INSTALLED. 1" DIA. PVC. 15' DEEP - 10' SCREEN, 5' RISER.
0845	MOB. TO MW-10.
0930	MW-10 INSTALLED. 18' DEEP. 10' SCREEN, 8' RISER. HIT BEDROCK AT 18' - 2' OFF NATURAL, SOFT CLAY ABOVE IT. ADVANCED PAST 15' FOR WATER.
0942	MOB. TO MW-11.
1005	MW-11 INSTALLED. 15' DEEP - 10' SCREEN, 5' RISER. 1" DIA. PVC.
1017	MOB. TO MW-12.
1045	MW-12 INSTALLED. 15' DEEP - 10' SCREEN,

Location BUFFALO, NY Date 7/8/14

Project / Client BUFFALO LAKESIDE COMMERCE PARK NYSDEC

5' RISER. 1" DIA. PVC.

1147 SJB STOPPED DECON. FOR LUNCH.

1300 SJB COMPLETED DECON. PACKED UP DRILL RIG.

1315 K. REEPMEYER OFF SITE TO SHIP 2 COOLERS AND RENT WEED WACKER.

K. Reepmeyer

Location BUFFALO, NY Date 7/9/14

Project / Client BUFFALO LAKESIDE COMMERCE PARK NYSDEC

0715 COM SMITH ON SITE.
A. RIELLY BEGINS MARKING OUT GRID. L. ESTRADA AND K. REEPMEYER BEGIN DEVELOPING WELLS.
66°F; MOSTLY CLOUDY
WIND WSW @ 6 MPH
HUMIDITY 75%.

0750 MOB. TO MW-01
DTW: 7.45 FT TIC
DTB: 15 FT TIC
TIC IS ~14" ABOVE GROUND SURFACE
~~15 - 7.45 = 7.55'~~
~~7.55' x $(\frac{1}{2})^2 \pi$ = 5.93 ft^3~~
$5.93 ft^3 \times \frac{7.48 \text{ gal}}{ft^3} =$

VOLUME = $\pi r^2 h$
$= \pi (\frac{5}{12})^2 (15 - 7.45) \times 7.48$

Location _____ Date 7/7/14

Project / Client NYSDEC Buffalo Lakeside Commerce Park

7/7/14 12:00 A. Reilly and L. Estrada on site, K. Keepmeyer and SJB already onsite

Weather: overcast, 75°F

Already installed three temp wells

1245 Begin geoprobe SB-01

0-4 ft: 0-1 topsoil, fill material recovery 4ft 1-2 brown, fill material some concrete chunks, gravel

2-3 dark brown fill material some ash, brick

3-4 dark soil, fill, some brick pieces, ash

4-8' recovery 4 ft

4-5 hard packed, black silty material, some brown clay

5-6 dark silty material, some rock

6-7 black silty material, moist

7-8 wet, black silty material

8-10 recovery 2 feet.

8-9 black on outside, brown silty sand inside

9-10 wet, black silty material

Location _____ Date _____

Project / Client _____

13:05 Collect SB-01-10-070714.
PID is reading 21.0 ppm for ambient air, no change when screening SB-01 from 0-10 feet
13:15 Setup at SB-02
PID ambient air 17.6 ppm
0-4' recovery 4.0 ft
0-1 top soil, brown
1-2 brown fill material, chunks of concrete
2-3 brown fill, some wood
3-4 brown fill, chunks of concrete. blueish rock
4-8 recovery 4 ft
4-5' brown fill soil, some spots of blue fill material, chunks
5-6 brown soil, hard brown clay
6-7 brown fill, some black silty material, moist
7-8 brown fill, some brown clay wood chunks
8-10 wet, black silty material some brownish material inside
13:35 Collect SB-02-10-070714

Location _____ Date _____

Project / Client _____

K. Reepmeyer spoke with A. Picunas said not to collect hex chromium sample bc method not approved. - PID did not change while screening SB-02, stayed ~ 17 ppm
13:40 Setup at SB-03
0-4' recovery 4 feet
0-2 brown fill, some concrete chunks
2-3 brown fill material some brown clay
3-3.5 brown fill, broken up concrete
3.5-4.0 brown fill, brick fragments
4-8' recovery 3'
4-5 dark brown clay and fill material w/ wood fibers
5-6 brown soil with gray ash, some loose, some hardened
6-7 brown silty material, moist, large chunks concrete and rocks
8-10 wet, soupy brown silty material 8-9', bottom foot is

Location _____ Date _____

Project / Client _____

blacker material, very wet, chunks of black rock, gravelly

1345 Collect SB-03-10-070714

1347 setup at SB-04, PID ambient 22.4 ppm

0-4', recovery 3.0 ft

1-2' brown fill, brick pieces

2-3 brown fill, brick pieces, blueish colored ash material, purple colored chunk of hard material, rock pit at ~ 3', PID 38.0 ppm

3-3.5 brown fill, dry, some concrete chunks

3.5-4 dry, brownish red gravelly silty material, some dark gray hard chunks of material (concrete

4-8 recovery 4.0 feet

4-5 dark brown silty clay with some wood fiber, wet at 5'

5-6 brown, silty clay, little gravel

6-7 dryer, brown silty material, some gravel, small pieces of gray concrete, brick dust

7-8 dark brown gravelly, silty chunks of gray ashy material

Location _____ Date _____

Project / Client _____

8-10 recovery 2.0 feet

8-9 brown silty clay, moist

9-10 brown silty, some clay, area of gray concrete chunks and broken up concrete dust

bottom 0.5 feet is primarily brownish silty clay, moist, some gravel

1400 Collect SB-04-10-070714

1410 set up at SB-05

0-4 feet, recovery 3.5 feet

0.5-1.0 brown fill, root material

1-2 brown fill, small pieces of orangish concrete/granular material

2-3 brown fill, rocks

3-4: 3 inch layer of purple sandy material, moist brown fill material, some brown clay, rocks, concrete chunks

4-8 recovery 3.0 feet

4-5 very wet, brown outside, gray gravelly silty clay inside

5-6 brown/gray silty clay

Location _____ Date _____

Project / Client _____

6-7 moist black, gravelly silty material, brick pieces, bottom 0.5 feet primarily larger chunks of gray rock with silty brown/black material

8-10 recovery 1.0'
Very wet, soupy, dark brown/black gravelly silt

14:20 Collect SB-05-10-070714

14:25 Set up at SB-06

0-4 feet recovery 4.0 feet
0-1 brown fill, some blue colored rock, wood fibers
1-2 brown fill inside, black ashy material outside, some chunks of white rock material
2-3 black silty, gravel material some rock
3-4 dark black, silty, gravelly material w/ large pieces of wood

4-8 recovery 4.0 feet
4-5 dark brown silty with some wood fibers, concrete dust

Location _____ Date _____

Project / Client _____

5-6 dark silty material, gravel

6-8 dark silty with gravel, wet

8-10 wet, soupy, dark brown silty, some gravel

14:35 Collect SB-06-10-070714 + duplicate FB-01-070714

PID ambient reading 14.8 ppm

14:50 Set up at SB-07 (blue fill area) had trouble advancing geoprobe, then difficulty getting rod out moved geoprobe twice to advance pulled 0-2 feet, went down again to get separate 2-4' sample
0-2 recovery 2'
0-1 brown fill, some gravel, large pieces of concrete
1-2 brown granular fill, gravel some brick dust, wood fiber; darker gray in color

2-4 recovery 2 feet
2-3' 0.5 feet of dark, granular fill 0.5 feet blue and white granular fill material / chalky

Location _____ Date _____

Project / Client _____

3-4' black and brown granular fill material, some brick dust/pieces, concrete

1555 collected SB-007-03-070714, area of blue/white dusty material

4-6' separate sample

4-4.5' gray ashy material, wet

4.5-5.0' brick layer above moist, black granular fill material

5.0-5.5' - orange colored silty material, moist

5.5-6.0' - sawdust/wood material outside, black granular fill inside

6-8' separate sample -

black, granular silty material, ~~wet~~ some rocks, moist

8-10' black granular, some gravel, wet, some wood fibers

16:10 Collect SB-07-10-070714

16:15 Set up at SB-08

0-4' recovery 3'

1-2' brown fill, some gravel, moist

2-4 brown fill, some gravel, silty

4-8 recovery 4

4-5 brown silty, some brown clay

Location _____ Date _____

Project / Client _____

5-6' brown granular fill, some concrete pieces

6-7 concrete pieces 0.5 foot of ~~bluish~~ gray hard material, looks ~~porous~~ (took pic) bluish streaks on outside. 0.5 feet white dusty material, looks similar to sample taken at SB-07 at ~3 ft

7-8 wet, gray concrete chunks slag.

16:30 collected sample SB-08-34-070714 because rest of boring was very granular, consisted of large, hard pieces of material, slag?

16:35 SJB disposed of soil cuttings and drummed

16:45 K. Reepmeyer and A. Rielly replaced locks around site.

17:00 CDM Smith and SJB off-site

7/11/14

Location _____ Date 7/8/14

Project / Client _____

Weather: partly sunny 70°F

7:15 K. Reepmeyer, A. Reilly, L. Estrada and JJB (4 personnel) onsite

7:30 Safety tool box mtg

7:40 Calibrated PIDs, now reading 0.0 ppm

Plan to continue soil borings beginning at SB-09, K. Reepmeyer overseeing temp MW install and develop wells

8:00 Set up at SB-09

0-4' recovery 3 ft

0-1 topsoil, brown PID 0.0

1-2 topsoil, brown PID 0.0

2-3 hard packed, brown topsoil, some brown clay, concrete pieces

4-8' recovery 3'

5-6 brown fill, lots of wood fibers, some brick pieces PID 0.0

6-8 brown fill, moist, lots of wood pieces, brick chunks

8-10 recovery 1 foot

gravel with silt, wet, brick pieces wood fibers PID 0.0 ppm

8:10 Collect SB-09-04-070814A clay/soil mix, rest of boring was primarily gravelly wood, brick pieces

Location _____ Date 7/8/14

Project / Client _____

8:15 Set up at SB-10

0-4' recovery 3 ft

0-1 ft. brown soil, wood chunks

1-2 ft brown fill, some gravel black chunks (charcoal like)

2-3 brown fill, some concrete chunks, rock

4-8 recovery 4.0 ft

4-5 brown fill, gravel, large pieces of concrete / brick, wood

5-8', wet, brown, silty, some small gravel PID 0.0 ppm

8-10' recovery 1.5 feet

wet, silty with gravel, dark brown

8:25 Collect SB-10-10-070814A + MS/MSD

8:30 Set up at SB-11

0-4 ft recovery 4.0 ft PID 0.0 ppm

0-1' brown silt with brick pieces, some light brown sand, brown clay

1-3' moist, brown sand, brick pieces outside PID 0.0

2-3 dark brown fill/soil with some concrete pieces

3-4 brown sand, brick dust/pieces hard gray clay bottom 4 inches

Location _____ Date _____

Project / Client _____

4-8 recovery 3 feet PID 0.0
4-5 orange brick pieces, dust
5-6 concrete chunks, wet, black silty with wood fibers, some gravel
6-7 silty gravel, wet, gray
8-10 recovery 2 feet
8-9 loose, wet gravel
9-10 wet, gravel, blackie gray
8:40 Collect SB-11-10-070814 A + FD-02-070814 A
8:55 SB-12 setup
0-4' recovery 3 ft PID 0.0
0-1 topsoil, grass, some brown clay
1-2 brown fill, some gravel
2-3 brown fill, some gravel bottom 6 inches is light brown sand
4-8' recovery 3 feet,
0-1 brown fill, some gravel, dry
1-2 wet, dark brown silty, lots of wood chunks, large rocks
2-3' wet, gravelly silty, dark brown bottom 3 inches gray concrete dust

Location _____ Date _____

Project / Client _____

8-10 recovery 2.0 feet PID 0.0
wet, silty gravel, dark brown some concrete chunks at bottom 2".
9:00 Collect SB-12-10-070814 + hex chro
9:00 talked to Amy Piccinas. Need to go back and collect hex chromium samples from previous locations. Told her we are seeing a lot of gravelly material, C&D fill.
9:10 Set up at SB-13
0-4 ft recover 3 ft PID 0.0 ppm
0-1 brown fill, some bluish concrete chunks, took pic
1-2 brown granular fill, some gravel
2-3 harder packed brown fill some charcoal at bottom 2"
4-8 ft, recovery 3 ft PID: 0.0 ppm
0-1: brown fill, loose, some gravel
1-2: blue/gray concrete chunks slag, some brick dust
2-3: moist, brown gravelly some gray concrete chunks
8-10 recovery 1.0 feet
Wet, dark brown gravelly with

Location _____ Date 7/8/14

Project / Client _____

Some silty, large rocks

9:20 Collect SB-13-08-070814

bottom 8-10' interval too gravelly to collect sample

9:25 Set up at SB-14

0-4 ft, recovery 3 feet, PID 0.0 ppm

0-1 moist, brown fill, some large rock, gravel

1-2 dark brown topsoil / fill, loose

2-3 dark brown fill, some lighter orange sand, little gravel, loose

4-8, recovery 1.0 foot

moist, dark brown fill / topsoil

Some concrete chunks, wood pieces

8-10' recovery 2.0 feet

Soupy, wet, brown silty material

Some large concrete, gravel

9:35 collect SB-14-10-070814

9:42 Set up at SB-15

0-4' recovery 3.5 feet PID 0.0 ppm

0-2: brown fill/soil, some gravel

2-3: brown fill, sawdust

3-3.5': brown, silty with brown clay, moist

Location _____ Date 7/8/14

Project / Client _____

4-8 ft recovery 4.0 ft PID 0.0

4-5: brown silty with some wood chips

5-6 blackish brown, moist, silty with some small gravel

6-7 moist, black/dark gray silty material some gravel

7-8 wet, dark gray, silty, some concrete chunks

8-10 recovery 1.0 ft PID 0.0 ppm

wet, dark gray, silty, little gravel

9:50 Collect SB-15-08-070814

10:00 Setup at SB-16

0-4 feet recovery 4.0 ft PID 0.0

0-1 brown soil fill, wood particles

1-2 brown soil fill, some sawdust a little blue & purple rock & dust (took pic)

2-4 dark brown silty with some gravel, loose

4-8' recovery 4.0 feet PID 0.0

4-5 loose, dry dark brown silty soil, some specks of blue rock

5-6 wet, brown silty with gravel, wood chunks

Location [illegible] Date 7/8/14

Project / Client

6-7' wet, lots of wood fibers, dark gray silty granular material some white colored concrete fragments

7-8 wet, dark gray/black silty with large chunks of both silvery & light brown.

8-10' recovery 2.0 ft
8-9 dark gray, black silty with small gravel, wet
9-10 dark gray silty, some gray clay, wet

10:15 collect SB-16-10-070814

10:35 Going back to boring locations collected 7/7/14 to collect hex chromium

10:40 Set up at SB-01, hole offset ~3 ft from original to north

10:45 Collect SB-01-070814 for hex chrom at 10 ft

10:50 Set up at SB-02, hole offset ~2 ft from original to south

11:00 Collect SB-02-10 for hex chrom black silty wet

11:05 Set up at SB-03, hole ~2 ft from original to south

Location Date 7/8/14

Project / Client

11:15 Collect SB-03-10 for hex chromium

11:18 Set up at SB-04, new hole offset ~3 ft south of original
8-10 ft recovery 2 ft
8-9 broken up concrete
9-10 dark brown, moist, silty with some gravel

11:25 Collect SB-04-10 for hex chrom

11:30 Set up at SB-05, new hole offset ~2 ft east of original
* took 2 pics of orange granular material at ~2 ft bgs, broken up and chunks

11:45 Collect SB-05-10 for hex chrome wet, black gravelly silt with some clay

12:00 break, SJB back to office to pick up trailer

12:00 - 12:30 labeled samples and filled out COCs, Katelyn to drop off samples collected so far at FedEx

For samples collected in morning on 7/8/14 w/o hex chrom, labeled them as A, ie SB-09-10-070814A

Location _____ Date 7/8/14

Project / Client _____

12:40 Set up at SB-06, hole located ~2 ft west of original.

12:45 Collect SB-06-10-070814 & FD-07-070814 for hex chromium

12:55 Set up at SB-07

13:00 Collect RB-01-070814

13:05 Collect SB-07-03-070814 hex chrom

13:10 Collect SB-07-10-070814 hex chrom

13:15 Lightning spotted, stop work

13:35 Resumed work
Set up at SB-08

13:40 Collect SB-08-04-070814 hex chrom

13:45 Set up SB-09

13:50 Collect SB-09-04-070814 B hex

13:55 Set up at SB-11

1405 Collect SB-11-10-070814 B and FD-02-070814 B hex chromium

1 pic of SB-11-0-4 with concrete/brick layers had to take sample composite from ~7'-10' bgs to get sample w/o gravel, rock or debris, included some red brick dust, light orange dust material

1410 Set up at SB-10 ~2 feet north of original hole

Location _____ Date 7/8/14

Project / Client _____

14:20 Collect SB-10-10-070814B + MS/MSD for hex chromium

14:30 STB demobing

14:45 STB offsite

14:45 A. Reilly & L. Estrada packaging/labeling samples

15:00 Offsite to FedEx & get ice

15:30 meet K. Reepmeyer at FedEx heavy rain and potential for more t-storms. K. Reepmeyer to check on getting a wet vacuum for tomorrow. Tomorrow's plan is to develop wells and mark out grid.

7/8/14

Location _____ Date 7/9/14

Project / Client _____

7:15 A. Zielly, K. Reepmeyer, L. Estrada onsite

Weather 68°F, sunny

Katelyn & Lia begin developing wells, Alison R. marking out grid

10:20 Complete marking out grid

10:20 A. Zielly offsite to get gas and water

10:45 A. Zielly & L. Estrada GPS boring & mw locations

Buffalo Lakeside Commerce Park, TP-12

TP-12; C&D pile in Northeast corner

Buffalo Lakeside Commerce Park, TP-12

TP-12; C&D pile ~ 7' high

CDM Smith

Buffalo Lakeside Commerce Park, TP-12

TP-12; Pipe material and brick

CDM Smith

Buffalo Lakeside Commerce Park, TP-12

TP-12; Pipe, brick and concrete

CDM Smith

Buffalo Lakeside Commerce Park, TP-12

TP-12; Conduit, pipe, brick C&D

CDM Smith

Buffalo Lakeside Commerce Park, TP-12

TP-12; Large concrete with rebar

CDM Smith

Buffalo Lakeside Commerce Park, TP-12

TP-12; C&D with fly ash mixed in

CDM Smith

Buffalo Lakeside Commerce Park, TP-12

TP-12; Slag layer reached ~4' below grade

CDM Smith

Buffalo Lakeside Commerce Park, TP-12

TP-12

CDM Smith

Buffalo Lakeside Commerce Park, TP-13

TP-13 at South PL to slope of ash ~70' long

CDM Smith

Buffalo Lakeside Commerce Park, TP-13

TP-13; 3"minus stone from 0-1.5'

CDM Smith

Buffalo Lakeside Commerce Park, TP-13

TP-13; 3"minus then gray crushed stone then clay

CDM Smith

Buffalo Lakeside Commerce Park, TP-13

TP-13; Sidewall

CDM Smith

Buffalo Lakeside Commerce Park, TP-13

TP-13; Running north towards fly ash

CDM Smith

Buffalo Lakeside Commerce Park, TP-13

TP-13; Black fly ash top layer gets thicker towards pile

CDM Smith

Buffalo Lakeside Commerce Park, TP-13

TP-13; 3" minus ends about 70' from PL then black/brown ash 1.5'

Buffalo Lakeside Commerce Park, TP-14

TP-14; Hazardous area within fence

Buffalo Lakeside Commerce Park, TP-14

TP-14; Brown fly ash – 0-2'; dense

Buffalo Lakeside Commerce Park, TP-15

TP-15; 75' from East PL 0-1' black fly ash

Buffalo Lakeside Commerce Park, TP-15

TP-15; 1-3.5' C&D material

CDM Smith

Buffalo Lakeside Commerce Park, TP-15

TP-15; C&D to ~4 feet then gray hard slag

CDM Smith

Buffalo Lakeside Commerce Park, TP-15

TP-15; Extend towards hazardous area extent of C&D

Buffalo Lakeside Commerce Park, TP-15

TP-15; C&D Stops near gate to hazardous area

Buffalo Lakeside Commerce Park, TP-16

TP-16; 25' from East PL

Buffalo Lakeside Commerce Park, TP-16

TP-16; C&D material to 6'

Buffalo Lakeside Commerce Park, TP-16

TP-16; C&D brick, pipe material

CDM Smith

Buffalo Lakeside Commerce Park, TP-16

TP-16; Fiberglass material

CDM Smith

Buffalo Lakeside Commerce Park, TP-16

TP-16; Fiberglass removed from TP

Buffalo Lakeside Commerce Park, TP-16

TP-16; C&D material to 6' then slag layer

Buffalo Lakeside Commerce Park, TP-17

TP-17; Start near PL then move west

Buffalo Lakeside Commerce Park, TP-17

TP-17; Looking East

Buffalo Lakeside Commerce Park, TP-17

TP-17; Limit of C&D meets black ash

Buffalo Lakeside Commerce Park, TP-18

TP-18; Near NE corner ~ 60' from North PL

Buffalo Lakeside Commerce Park, TP-18

TP-18; Looking North; ash 0-1'

Buffalo Lakeside Commerce Park, TP-18

TP-18; C&D to ~5' then slag layer

Buffalo Lakeside Commerce Park, SB-29

7/7/2014, 3' bgs, Example of purple material

Buffalo Lakeside Commerce Park, SB-30

7/7/2014, 2' bgs, Orange concrete/brick dust

Buffalo Lakeside Commerce Park, SB-33

7/7/2014, 6-7' bgs, Porous gray slag

CDM Smith

Buffalo Lakeside Commerce Park, SB-38

7/8/2014, 0-1' bgs, Blue concrete and slag chunks

CDM Smith

Buffalo Lakeside Commerce Park, SB-41

7/8/2014, 1-2' bgs, Example of blue color on rock surface

Buffalo Lakeside Commerce Park, Parcel 4 Site

7/8/2014, Surface debris

Buffalo Lakeside Commerce Park, TP-10

7/14/2014, Example of groundwater color

Buffalo Lakeside Commerce Park, TP-11

8/26/2014, Brown-orange groundwater sample color

Buffalo Lakeside Commerce Park, TP-11

8/26/2014, Example of groundwater color in sampling bottle

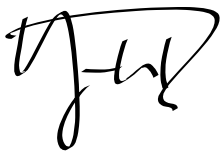
I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirments have been meet.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.



Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: BLCP Buffalo

Laboratory Workorder / SDG #: L1966

SW846 6010C

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 6010C.

IV. PREPARATION

Soil Samples were prepared following procedures in laboratory test code: SW3050B.

V. INSTRUMENTATION

The following instrumentation was used:

Instrument Code: OPTIMA3
Instrument Type: ICP
Description: Optima ICP-OES
Manufacturer: Perkin-Elmer
Model: 4300 DV

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for laboratory control samples were within the QC limits.

2. Matrix spike (MS):

Matrix spikes were performed on sample: DUP 1 (L1966-20AMS).

Percent recoveries were within the QC limits with the following exceptions:

DUP 1 (L1966-20AMS), Spike sample recovery is below criteria for Antimony at 39% with criteria of (75-125).

D. Post Digestion Spike (PDS):

Post-digestion spike analysis was performed on sample: DUP 1 (L1966-20APDS).

DUP 1 (L1966-20APDS) for Antimony due to recovery of this element outside of QC limits in the matrix spike.

E. Duplicate sample:

Duplicate analyses were performed on sample: DUP 1 (L1966-20ADUP).

Relative percent differences were within the QC limits with the following exceptions:

DUP 1 (L1966-20ADUP), Duplicate analysis not within control limit for Aluminum, Barium, Beryllium, Cadmium, Calcium, Cobalt, Lead, Magnesium, Manganese, Nickel, Potassium, Selenium, Sodium, Thallium, Vanadium and Zinc.

F. Serial Dilution (SD):

Serial Dilution analyses were performed on sample: DUP 1 (L1966-20ASD).

Percent differences were within the QC limits with the exception of the following:

DUP 1 (L1966-20ASD), Serial Dilution analysis not within control limit for Cobalt, Nickel and Zinc.

G. Samples:

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed: 

Date: 10/11/12

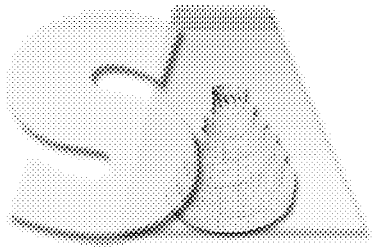
Data Flag/Qualifiers:

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis



E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates an interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as aldol condensation byproducts.

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

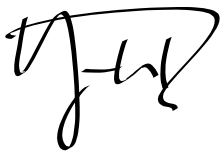
I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirments have been meet.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.



Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: BLCP Buffalo

Laboratory Workorder / SDG #: L1967

SW846 6010C

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 6010C.

IV. PREPARATION

Soil Samples were prepared following procedures in laboratory test code: SW3050B.

V. INSTRUMENTATION

The following instrumentation was used:

Instrument Code: OPTIMA3
Instrument Type: ICP
Description: Optima ICP-OES
Manufacturer: Perkin-Elmer
Model: 4300 DV

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for laboratory control samples were within the QC limits.

2. Matrix spike (MS):

Matrix spikes were performed on sample: SB-16 0-4 (L1967-20AMS).

Percent recoveries were within the QC limits with the following exceptions:

SB-16 0-4 (L1967-20AMS), Spike sample recovery is below criteria for Antimony at 38% with criteria of (75-125), Nickel at 73% with criteria of (75-125), Selenium at 0% with criteria of (75-125) and Thallium at 22% with criteria of (75-125).

D. Post Digestion Spike (PDS):

Post-digestion spike analysis was performed on sample: SB-16 0-4 (L1967-20APDS).

SB-16 0-4 (L1967-20APDS) for Antimony, Nickel, Selenium and Thallium due to recoveries of these elements outside of QC limits in the matrix spike.

E. Duplicate sample:

Duplicate analyses were performed on sample: SB-16 0-4 (L1967-20ADUP).

Relative percent differences were within the QC limits with the following exceptions:

SB-16 0-4 (L1967-20ADUP), Duplicate analysis not within control limit for Antimony and Copper.

F. Serial Dilution (SD):

Serial Dilution analyses were performed on sample: SB-16 0-4 (L1967-20ASD).

Percent differences were within the QC limits with the exception of the following:

SB-16 0-4 (L1967-20ASD), Serial Dilution analysis not within control limit for Arsenic, Cadmium, Cobalt, Lead, Magnesium, Nickel and Vanadium.

G. Samples:

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed: 

Date: 10/11/12

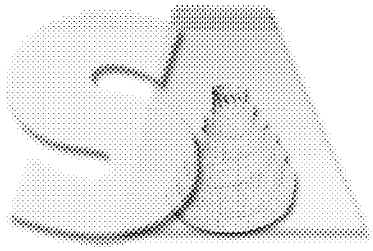
Data Flag/Qualifiers:

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis



E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates an interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as aldol condensation byproducts.

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirments have been meet.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: BLCP Buffalo

Laboratory Workorder / SDG #: L1968

SW846 6010C

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 6010C.

IV. PREPARATION

Soil Samples were prepared following procedures in laboratory test code: SW3050B.

V. INSTRUMENTATION

The following instrumentation was used:

Instrument Code: OPTIMA3
Instrument Type: ICP
Description: Optima ICP-OES
Manufacturer: Perkin-Elmer
Model: 4300 DV

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for laboratory control samples were within the QC limits.

2. Matrix spike (MS):

Matrix spikes were performed on sample: SB-25 4-8 (L1968-20AMS).

Percent recoveries were within the QC limits with the following exceptions:

SB-25 4-8 (L1968-20AMS), Spike sample recovery is above criteria for Nickel at 705% with criteria of (75-125), Spike sample recovery is below criteria for Antimony at 46% with criteria of (75-125), Arsenic at 56% with criteria of (75-125), Selenium at 0% with criteria of (75-125), Thallium at 0% with criteria of (75-125) and Zinc at 37% with criteria of (75-125).

D. Post Digestion Spike (PDS):

Post-digestion spike analysis was performed on sample: SB-25 4-8 (L1968-20APDS).

SB-25 4-8 (L1968-20APDS) for Antimony, Arsenic, Selenium,

Thallium and Zinc due to recoveries of these elements outside of QC limits in the matrix spike. Selenium and Thallium were not recovered in the PDS as well as the MS. No problems were seen with these elements in the SD or DUP.

E. **Duplicate sample:**

Duplicate analyses were performed on sample: SB-25 4-8 (L1968-20ADUP).

Relative percent differences were within the QC limits with the following exceptions:

SB-25 4-8 (L1968-20ADUP), Duplicate analysis not within control limit for Aluminum, Barium, Chromium, Lead, Nickel, Potassium, Sodium, Vanadium and Zinc.

F. **Serial Dilution (SD):**

Serial Dilution analyses were performed on sample: SB-25 4-8 (L1968-20ASD).

Percent differences were within the QC limits with the exception of the following:

SB-25 4-8 (L1968-20ASD), Serial Dilution analysis not within control limit for Arsenic, Beryllium, Cadmium, Cobalt, Lead, Magnesium, Nickel, Potassium, Sodium, Vanadium and Zinc.

G. **Samples:**

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed: 

Date: 10/11/12

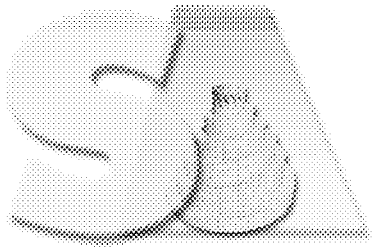
Data Flag/Qualifiers:

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis



E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates an interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as aldol condensation byproducts.

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

HANIBAL TECHNOLOGY

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirments have been meet.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: BLCP Buffalo

Laboratory Workorder / SDG #: L1969

SW846 6010C

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 6010C.

IV. PREPARATION

Soil Samples were prepared following procedures in laboratory test code: SW3050B.

V. INSTRUMENTATION

The following instrumentation was used:

Instrument Code: OPTIMA3
Instrument Type: ICP
Description: Optima ICP-OES
Manufacturer: Perkin-Elmer
Model: 4300 DV

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for laboratory control samples were within the QC limits.

2. Matrix spike (MS):

A matrix spike was not performed on any sample in this SDG.

D. Post Digestion Spike (PDS):

A post-digestion spike was not performed on any sample in this SDG.

E. Duplicate sample:

A duplicate analysis was not performed on any sample in this SDG.

F. Serial Dilution (SD):

A serial dilution was not performed on any sample in this SDG.

G. Samples:

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed: 

Date: 10/11/12

Data Flag/Qualifiers:

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates an interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as aldol condensation byproducts.

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

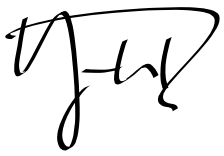
L1970-02	SB-15 0-4	Soil	18-Sep-12 11:50	20-Sep-12 08:40

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirments have been meet.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.



Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: BLCP Buffalo

Laboratory Workorder / SDG #: L1970

SW846 6010C, SW846 7470A

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 6010C, SW846 7470A

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3005A
Aqueous Samples were prepared following procedures in laboratory test code: SW7470A

V. INSTRUMENTATION

The following instrumentation was used to perform analysis:

Instrument Code: FIMS2
Instrument Type: CVAA
Description: FIMS
Manufacturer: Perkin-Elmer
Model: FIMS100

Instrument Code: OPTIMA3
Instrument Type: ICP
Description: Optima ICP-OES
Manufacturer: Perkin-Elmer
Model: 4300 DV

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for laboratory control samples were within the QC limits.

2. Matrix spike (MS):

A matrix spike was not performed on any sample in this SDG.

D. Post Digestion Spike (PDS):

A post-digestion spike was not performed on any sample in this SDG.

E. Duplicate sample:

A duplicate analysis was not performed on any sample in this SDG.

F. Serial Dilution (SD):

A serial dilution was not performed on any sample in this SDG.

G. Samples:

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed: 

Date: 10/10/12

Data Flag/Qualifiers:

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates an interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as aldol condensation byproducts.

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirments have been meet.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: BLCP Buffalo

Laboratory Workorder / SDG #: M0080

SW846 1311, SW846 6010C, SW846 7470A

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 6010C, SW846 7470A.

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3005A, SW7470A
Soil Samples were prepared following procedures in laboratory test code: SW1311.

V. INSTRUMENTATION

The following instrumentation was used:

Instrument Code: FIMS2
Instrument Type: CVAA
Description: FIMS
Manufacturer: Perkin-Elmer
Model: FIMS100

Instrument Code: OPTIMA3
Instrument Type: ICP
Description: Optima ICP-OES
Manufacturer: Perkin-Elmer
Model: 4300 DV

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS/LCSD):

Percent recoveries for laboratory control samples were within the QC limits.

2. Matrix spike (MS):

A matrix spike was not performed on any sample in this SDG.

D. Post Digestion Spike (PDS):

A post-digestion spike was not performed on any sample in this SDG.

E. Duplicate sample:

A duplicate analysis was not performed on any sample in this SDG.

F. Serial Dilution (SD):

A serial dilution was not performed on any sample in this SDG.

G. Samples:

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed: 

Date: 02/05/13

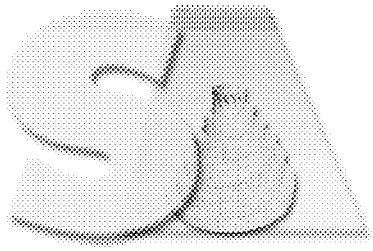
Data Flag/Qualifiers:

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis



E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates an interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as aldol condensation byproducts.

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: BLCP Buffalo

Laboratory Workorder / SDG #: M0080

SW846 7196A

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 7196A

IV. PREPARATION

Soil Samples were prepared following procedures in laboratory test code: SW846 3060A

V. INSTRUMENTATION

The following instrumentation was used to perform analysis:

Instrument Code: SPEC2
Instrument Type: SP
Description: Spectronic 20 Genesys
Manufacturer: Spectronic Instruments
Model: 4004-000

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: FD-01_01/21/2013 (M0080-09AMS), FD-01_01/21/2013 (M0080-09AMSD) and FD-01_01/21/2013 (M0080-09AMSI).

Percent recoveries were within the QC limits with the following exceptions:

FD-01_01/21/2013 (M0080-09AMS) recovery is below criteria for Chromium, Hexavalent at 23% with criteria of (75-125).

FD-01_01/21/2013 (M0080-09AMSD) recovery is below criteria for Chromium, Hexavalent at 0% with criteria of (75-125).

3. Post Digestion Spike (PDS)

Post Digestion spikes were performed on samples: FD-01_01/21/2013 (M0080-09APDS).

Percent recoveries were within the QC limits with the following exceptions:

FD-01_01/21/2013 (M0080-09APDS) recovery is below criteria for Chromium, Hexavalent at 63% with criteria of (85-115).

Another aliquot of the sample was added1N NaOH to a final pH of 8.14 (required range is 8.0-8.5), re-spiked and reanalyzed. The result was under detection limit.

D. Duplicate sample:

Relative percent differences were within the QC limits.

E. Dilutions:

The following samples were analyzed at dilution:

FD-01_01/21/2013 (M0080-09AMSI), dilution factor: 20 for Chromium, Hexavalent

F. Samples:

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed: 

Date: 02/07/13

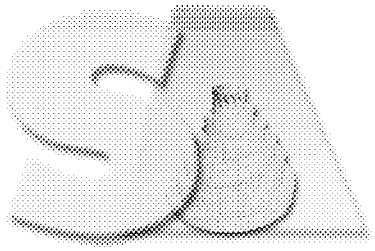
Data Flag/Qualifiers:

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis



E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates an interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as aldol condensation byproducts.

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

PHOENIX
Environmental Laboratories, Inc.

Friday, July 18, 2014

Attn: Agnes Huntley
Spectrum Analytical
Rhode Island Division
646 Camp Avenue
North Kingstown, RI 02852

Project ID: BUFFALO LAKESIDE
Sample ID#s: BG73940 - BG73962

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller

Laboratory Director

Comments:

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

Hexavalent Chromium:
This sample is in an oxidizing state.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

Laboratory Data

SDG ID: GBG73940
Phoenix ID: BG73949

Project ID: BUFFALO LAKESIDE
Client ID: SS-20-071014

Parameter	Result	RL/ PQL	Units	Date/Time	By	Reference
Percent Solid	86		%	07/14/14	I	E160.3
Chromium, Hexavalent	< 0.47	0.47	mg/Kg	07/17/14 12:12	CL	SW3060/7196
pH - Soil	8.62	0.10	pH Units	07/14/14 20:00	O/EG	4500-H B/9045
Redox Potential	400	1.0	mV	07/14/14	O/EG	SM2580B

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level

Comments:

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

Hexavalent Chromium:
This sample is in an oxidizing state.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

Comments:

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

Hexavalent Chromium:
This sample is in an oxidizing state.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

Sample Criteria Exceedences Report

GBG73940 - SPECTRUM-RI

Criteria: None

State: RI

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: Buffalo Lakeside

Laboratory Workorder / SDG #: N1176

SW846 8270D, SVOA by GC-MS

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 8270D

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C
Soil Samples were prepared following procedures in laboratory test code: SW3550B

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: S6
Instrument Type: GCMS-Semi
Description: HP7890A
Manufacturer: Agilent
Model: 7890A/5973
GC Column used: 30 m X 0.25 mm ID [0.25 um thickness] Rxi-5sil MS capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: SB-10-10-070814A (N1176-21AMS) and SB-10-10-070814A (N1176-21AMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

The following samples were analyzed at dilution:

SB-11-10-070814A (N1176-22ADL) : Dilution Factor: 10

FD-02-070814A (N1176-23ADL) : Dilution Factor: 2

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

· M1 peak tailing or fronting
· M2 peak co-elution
· M3 rising or falling baseline
· M4 retention time shift
· M5 miscellaneous - under this category, the justification is explained
· M6 software did not integrate peak
· M7 partial peak integration

Manual integrations were performed on the following:

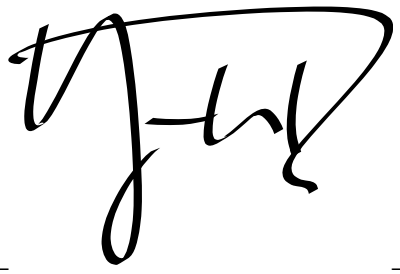
SB-01-10-070714 (N1176-01A) Benzo(k)fluoranthene due to M6

SB-04-10-070714 (N1176-04A) Dibenzo(a,h)anthracene due to M6

SB-07-10-070714 (N1176-09A) Dibenzo(a,h)anthracene , Indeno(1,2,3-cd)pyrene due to M6

SB-08-04-070714 (N1176-10A) Dibenzo(a,h)anthracene due to M6

SB-09-04-070814A (N1176-11A) Dibenzo(a,h)anthracene due to M6



SB-12-10-070814 (N1176-12A) Dibenzo(a,h)anthracene due to M6

SB-13-08-070814 (N1176-13A) Dibenzo(a,h)anthracene due to M6

FD-02-070814A (N1176-23ADL) Dibenzo(a,h)anthracene due to M6

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and

for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed:_____ _____

Date:_____7/21/2014_____

Data Flag/Qualifiers (Page 1 of 2):

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Data Flag/Qualifiers (Page 2 of 2):

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: Buffalo Lakeside

Laboratory Workorder / SDG #: N1176

SW846 6010C, SW846 9012B

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 6010C, SW846 9012B

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3005A
Aqueous Samples were prepared following procedures in laboratory test code: SW9012B
Soil Samples were prepared following procedures in laboratory test code: SW3050B
Soil Samples were prepared following procedures in laboratory test code: SW9012B

V. INSTRUMENTATION

The following instrumentation was used:

Instrument Code: LACHAT1
Instrument Type: WC
Description: Flow Injection Analyzer
Manufacturer: Zellweger Analytics
Model: Quik-Chem 8000

Instrument Code: OPTIMA3
Instrument Type: ICP
Description: Optima ICP-OES
Manufacturer: Perkin-Elmer
Model: 4300 DV

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for laboratory control samples were within the QC limits.

2. Matrix spike (MS):

Matrix spikes were performed on samples: SB-06-10-070714 (N1176-06AMS), SB-10-10-070814A (N1176-21AMS) and SB-12-10-070814 (N1176-12AMS).

Percent recoveries were within the QC limits with the following exceptions:

SB-06-10-070714 (N1176-06AMS), recovery is below criteria for Cyanide at 72% with criteria of (75-125).

SB-12-10-070814 (N1176-12AMS), recovery is above criteria for Copper at 161% with criteria of (80-120), Zinc at 157% with criteria

of (80-120), recovery is below criteria for Antimony at 39% with criteria of (80-120), Cadmium at 68% with criteria of (80-120) and Chromium at 73% with criteria of (80-120).

SB-10-10-070814A (N1176-21AMS), recovery is above criteria for Chromium at 322% with criteria of (80-120), recovery is below criteria for Antimony at 50% with criteria of (80-120), Cyanide at 0% with criteria of (75-125), Nickel at 73% with criteria of (80-120), Selenium at 0% with criteria of (80-120) and Thallium at 0% with criteria of (80-120). Thallium and Selenium are negative due to the high levels of Calcium, Iron and Manganese in the native sample.

Laboratory Control Samples were within recovery limits for these elements. Sample matrix is likely to be the reason for outlier recoveries.

D. **Post Digestion Spike (PDS):**

Post-digestion spike analysis was performed on samples: SB-06-10-070714 (N1176-06APDS), SB-10-10-070814A (N1176-21APDS) and SB-12-10-070814 (N1176-12APDS).

SB-06-10-070714 (N1176-06APDS) for Cyanide due to recovery of this element outside of QC limits in the matrix spike. Recovery is below the advisory limits.

SB-10-10-070814A (N1176-21APDS) for Cyanide, Antimony, Chromium, Nickel, Selenium and Thallium due to recoveries of these elements outside of QC limits in the matrix spike. Low recoveries or non-detects of these elements were indicative of matrix issues. Again, Thallium and Selenium are negative due to the high levels of Calcium, Iron and Manganese in the native sample.

SB-12-10-070814 (N1176-12APDS) for Antimony, Cadmium, Chromium, Copper, Thallium and Zinc due to recoveries of these elements outside of QC limits in the matrix spike. PDS recoveries are within advisory limits.

E. **Duplicate sample:**

Duplicate analyses were performed on samples: SB-06-10-070714 (N1176-06ADUP), SB-10-10-070814A (N1176-21ADUP) and SB-12-10-070814 (N1176-12ADUP).

Relative percent differences were within the QC limits with the following exceptions:

SB-06-10-070714 (N1176-06ADUP), Duplicate analysis not within control limit for Cyanide.

SB-12-10-070814 (N1176-12ADUP), Duplicate analysis not within control limit for Aluminum, Arsenic, Barium, Beryllium, Cadmium, Iron, Lead and Potassium.

SB-10-10-070814A (N1176-21ADUP), Duplicate analysis not within control limit for Aluminum, Antimony, Barium, Beryllium, Cadmium, Calcium, Chromium, Cyanide, Iron, Magnesium, Manganese and Nickel.

F. Serial Dilution (SD):

Serial Dilution analyses were performed on samples: SB-10-10-070814A (N1176-21ASD) and SB-12-10-070814 (N1176-12ASD).

Percent differences were within the QC limits with the exception of the following:

SB-12-10-070814 (N1176-12ASD), Serial Dilution analysis not within control limit for Beryllium, Cadmium, Cobalt, Lead, Magnesium, Nickel, Vanadium and Zinc.

SB-10-10-070814A (N1176-21ASD), Serial Dilution analysis not within control limit for Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Lead, Magnesium, Nickel, Vanadium and Zinc.

G. Samples:

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed: 

Date: 07/21/2014

Data Flag/Qualifiers (Page 1 of 2):

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Data Flag/Qualifiers (Page 2 of 2):

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: Buffalo Lakeside

Laboratory Workorder / SDG #: N1176

SM 3500D

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SM 3500D

IV. PREPARATION

Samples were prepared following procedures in laboratory test code: SM 3500D

V. INSTRUMENTATION

The following instrumentation was used:

Instrument Code: SPEC2
Instrument Type: SP
Description: Spectronic 20 Genesys
Manufacturer: Spectronic Instruments
Model: 4004-000

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

No client-requested MS/MSD analyses were included in this SDG.

D. Duplicate sample:

No client-requested laboratory duplicate analyses were included in this SDG.

E. Dilutions:

No sample required dilution in this SDG.

F. Samples:

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed: 

Date: 07/14/2014

Data Flag/Qualifiers (Page 1 of 2):

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Data Flag/Qualifiers (Page 2 of 2):

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

Comments:

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

Hexavalent Chromium:
This sample is in an oxidizing state.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

Hexavalent Chromium:
This sample is in a reducing state.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirments have been meet.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: Buffalo Lakeside

Laboratory Workorder / SDG #: N1181

SW846 8270D, SVOA by GC-MS

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 8270D

IV. PREPARATION

Soil Samples were prepared following procedures in laboratory test code: SW3550B

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: S6
Instrument Type: GCMS-Semi

Description: HP7890A
Manufacturer: Agilent
Model: 7890A/5973
GC Column used: 30 m X 0.25 mm ID [0.25 um thickness] Rxi-5sil MS capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

No client-requested MS/MSD analyses were included in this SDG.

E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

The following samples were analyzed at dilution:

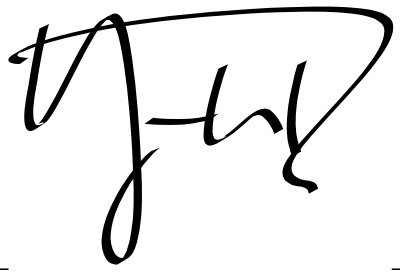
SS-01-070914 (N1181-01ADL) : Dilution Factor: 10
SS-02-070914 (N1181-02ADL) : Dilution Factor: 2
SS-10-070914 (N1181-11ADL) : Dilution Factor: 5
SS-FD-02-070914 (N1181-12ADL) : Dilution Factor: 5

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:



· M1 peak tailing or fronting
· M2 peak co-elution
· M3 rising or falling baseline
· M4 retention time shift
· M5 miscellaneous - under this category, the justification is explained
· M6 software did not integrate peak
· M7 partial peak integration

Manual integrations were performed on the following:

SS-01-070914 (N1181-01A) Indeno(1,2,3-cd)pyrene due to M6

SS-10-070914 (N1181-11A) Indeno(1,2,3-cd)pyrene due to M6

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed:_____ _____

Date:_____7/22/2014_____

Data Flag/Qualifiers (Page 1 of 2):

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Data Flag/Qualifiers (Page 2 of 2):

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: Buffalo Lakeside

Laboratory Workorder / SDG #: N1181

SW846 6010C, SW846 9012B

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test codes: SW846 6010C, SW846 9012B

IV. PREPARATION

Soil Samples were prepared following procedures in laboratory test code: SW3050B
Soil Samples were prepared following procedures in laboratory test code: SW9012B

V. INSTRUMENTATION

The following instrumentation was used:

Instrument Code: LACHAT1
Instrument Type: WC
Description: Flow Injection Analyzer
Manufacturer: Zellweger Analytics
Model: Quik-Chem 8000

Instrument Code: OPTIMA3
Instrument Type: ICP
Description: Optima ICP-OES
Manufacturer: Perkin-Elmer
Model: 4300 DV

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for laboratory control samples were within the QC limits.

2. Matrix spike (MS):

Matrix spikes were performed on sample: SS-FD-02-070914 (N1181-12AMS) for Cyanide only.

Percent recoveries were within the QC limits with the following exceptions:

SS-FD-02-070914 (N1181-12AMS), recovery is above criteria for Cyanide at 151% with criteria of (75-125).

D. Post Digestion Spike (PDS):

Post-digestion spike analysis was performed on sample: SS-FD-02-070914 (N1181-12APDS) for Cyanide only.

SS-FD-02-070914 (N1181-12APDS) for Cyanide due to recovery of this element outside of QC limits in the matrix spike.

E. Duplicate sample:

Duplicate analyses were performed on sample: SS-FD-02-070914 (N1181-12ADUP) for Cyanide only.

Relative percent differences were within the QC limits.

F. Serial Dilution (SD):

A serial dilution was not performed on any sample in this SDG.

G. Samples:

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed: 

Date: 07/22/2014

Data Flag/Qualifiers (Page 1 of 2):

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Data Flag/Qualifiers (Page 2 of 2):

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

Comments:

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

Hexavalent Chromium:
This sample is neither in a reducing or an oxidizing state.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

Project ID: BUFFALO LAKESIDE
Client ID: SS-09-070914

Parameter	Result	RL/ PQL	Units	Date/Time	By	Reference
Percent Solid	85		%	07/11/14	I	E160.3
Chromium, Hexavalent	< 0.45	0.45	mg/Kg	07/15/14 15:55	CL	SW3060/7196
pH - Soil	8.67	0.10	pH Units	07/11/14 21:00	O/EG	4500-H B/9045
Redox Potential	366	1.0	mV	07/11/14	O/EG	SM2580B

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level

Comments:

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

Hexavalent Chromium:
This sample is in an oxidizing state.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirments have been meet.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : CDM-Smith, Inc.

Project: Buffalo Lakeside

Laboratory Workorder / SDG #: N1194

SW846 8270D, SVOA by GC-MS

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 8270D

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C
Soil Samples were prepared following procedures in laboratory test code: SW3550B

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: S6
Instrument Type: GCMS-Semi
Description: HP7890A
Manufacturer: Agilent
Model: 7890A/5973
GC Column used: 30 m X 0.25 mm ID [0.25 um thickness] Rxi-5sil MS capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits with the following exceptions. Please note that the acceptance criteria allow one surrogate recovery outside of the QC limits per fraction.

FB-01-071014 (N1194-27A), recovery is above criteria for Nitrobenzene-d5 at 111% with criteria of (40-110).

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: SS-11-071014 (N1194-01AMS), SS-11-071014 (N1194-01AMSD), SS-23-071014 (N1194-14AMS) and SS-23-071014 (N1194-14AMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

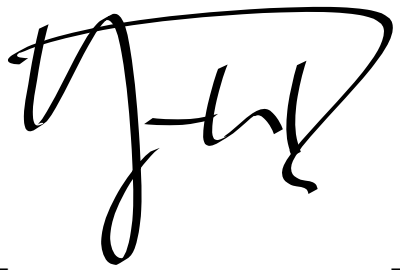
Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

· M1 peak tailing or fronting
· M2 peak co-elution
· M3 rising or falling baseline
· M4 retention time shift
· M5 miscellaneous - under this category, the justification is explained
· M6 software did not integrate peak
· M7 partial peak integration

Manual integrations were performed on the following:

SS-14-071014 (N1194-04A) Dibenzo(a,h)anthracene due to M6

SS-15-071014 (N1194-05A) Dibenzo(a,h)anthracene due to M6



SS-17-071014 (N1194-07A) Dibenzo(a,h)anthracene due to M6

SS-20-071014 (N1194-10A) Dibenzo(a,h)anthracene due to M6

SS-FD-03-071014 (N1194-16A) Dibenzo(a,h)anthracene due to M6

SS-27-071014 (N1194-19A) Dibenzo(a,h)anthracene due to M6

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed:_____ _____

Date:_____7/22/2014_____

Data Flag/Qualifiers (Page 1 of 2):

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Data Flag/Qualifiers (Page 2 of 2):

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

T - Target compound detected outside RT window.
A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.

QC Flag Legend

T - Target compound detected outside RT window.
a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
H - Operator selected an alternate compound hit.
