CASE NARRATIVE

Spectrum Analytical, Inc. Lab Reference No. SC08357

Client: Spectrum Analytical, Inc. - North Kingstown, RI

Project: Buffalo Lakeside / P0990

SDG #: 08357

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception or a communication form is included in the addendum with this package.

II. HOLDING TIMES

All samples were prepared and analyzed within the method-specific holding time.

III. METHODS

Analyses were performed according to SW846 9012B.

IV. PREPARATION

Soil/Sediment samples were prepared according to General Preparation.

V. INSTRUMENTATION

The following equipment was used to analyze SW846 9012B:

Lachat2 details: Lachat Quikchem 8000

VI. ANALYSIS

A. Calibration:

All quality control samples were within the acceptance criteria.

B. Blanks:

All blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Samples (LCS):

All method criteria were met.

2. Matrix Spike / Matrix Spike Duplicate Samples (MS/MSD):

A matrix spike and a matrix spike duplicate were analyzed:

In batch 1511336 from source sample SB-68-4-8-052815 (SC08357-10).

In batch 1511406 from source sample SB-67-8-12-052815 (SC08357-25).

In batch 1511455 from source sample SB-63-16-20-052815 (SC08357-39).

In batch 1511509 from source sample SB-71-16-20-052915 (SC08357-51).

In batch 1511554 from source sample SB-73-0-4-052915 (SC08357-55).

All method criteria were met with the following exceptions:

Cyanide (total) in batch 1511336, lab sample 1511336-MS1 from source sample SB-68-4-8-052815 (SC08357-10): The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.

All method criteria were met.

3. Reference:

All method criteria were met.

D. Duplicates:

A duplicate was analyzed.

In batch 1511336 from source sample SB-68-4-8-052815 (SC08357-10).

In batch 1511406 from source sample SB-67-8-12-052815 (SC08357-25).

In batch 1511455 from source sample SB-63-16-20-052815 (SC08357-39).

In batch 1511509 from source sample SB-71-16-20-052915 (SC08357-51).

In batch 1511554 from source sample SB-73-0-4-052915 (SC08357-55).

All method criteria were met.

E. Samples:

All method criteria were met.

III. METHODS

Analyses were performed according to SW846 Ch 7.3.

IV. PREPARATION

Soil/Sediment samples were prepared according to General Preparation.

V. INSTRUMENTATION

The following equipment was used to analyze SW846 Ch 7.3:

Inst details:

VI. ANALYSIS

A. Calibration:

All quality control samples were within the acceptance criteria.

B. Blanks:

All blanks were within the acceptance criteria with the following exceptions:

Reactive Cyanide in batch 1511233, sample 1511233-BLK1: See Narrative

Reactive Cyanide in batch 1511234, sample 1511234-BLK1: See Narrative

Reactive Cyanide in batch 1511327, sample 1511327-BLK1: See Narrative

Reactive Cyanide in batch 1511328, sample 1511328-BLK1: See Narrative

C. Spikes:

1. Laboratory Control Samples (LCS):

All method criteria were met.

2. Matrix Spike / Matrix Spike Duplicate Samples (MS/MSD):

No matrix spike or matrix spike duplicates were analyzed.

3. Reference:

All method criteria were met with the following exceptions:

Reactive Cyanide in batch 1511233: See Narrative

Reactive Cyanide in batch 1511234: See Narrative

Reactive Cyanide in batch 1511327: See Narrative

Reactive Cyanide in batch 1511328: See Narrative

D. Duplicates:

A duplicate was analyzed.

In batch 1511234 from source sample SB-65-4-8-052815 (SC08357-19).

In batch 1511327 from source sample SB-67-8-12-052815 (SC08357-25).

In batch 1511328 from source sample SB-73-8-12-052915 (SC08357-57).

All method criteria were met with the following exceptions:

Reactive Cyanide in batch 1511234, sample 1511234-DUP1 from source sample SB-65-4-8-052815 (SC08357-19): See Narrative

Reactive Cyanide in batch 1511327, sample 1511327-DUP1 from source sample SB-67-8-12-052815 (SC08357-25): See Narrative

Reactive Cyanide in batch 1511328, sample 1511328-DUP1 from source sample SB-73-8-12-052915 (SC08357-57): See Narrative

E. Samples:

All method criteria were met with the following exceptions:

Reactive Cyanide in batch 1511233, samples DUP-05-052815 (SC08357-05), SB-68-12-16-052815 (SC08357-08), SB-68-16-20-052815 (SC08357-07), SB-68-4-8-052815 (SC08357-10), SB-68-8-12-052815 (SC08357-09), SB-69-0-4-052815 (SC08357-01), SB-69-12-16-052815 (SC08357-04), SB-69-16-20-052815 (SC08357-06), SB-69-4-8-052815 (SC08357-02), SB-69-8-12-052815 (SC08357-03): See Narrative

Reactivity (40 CFR 261.23) Case Narrative:

These samples do not exhibit the characteristics of reactivity as defined in 40 CFR 261.23, sections (1), (2) and (4); however, Spectrum Analytical, Inc. does not test for detonation, explosive reaction or potential, or forbidden explosives as defined in 40 CFR 261.23, sections (3), (6), (7) and (8).

Reactive sulfide and cyanide are tested at a pH of 2 and not tested at all conditions between pH 2 and12.5 as stated in 40 CFR 261.23, section (5); thus reactive cyanide and sulfide results as reported in this document can not be used to support the nonreactive properties of these samples.

The responsibility falls on the generator to use knowledge of the waste to determine if the waste meets or does not meet the descriptive, prose definition of reactivity.

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirments have been meet.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

REPORT NARRATIVE

Spectrum Analytical, Inc. RI Division.

Client : CDM-Smith, Inc.

Project: Buffalo Lakeside

Laboratory Workorder / SDG #: P0991

SW846 8270D, SVOA by GC-MS

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code: SW846 8270D

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: S3
Instrument Type: GCMS-SEMI

Description: HP6890 / HP5973
Manufacturer: Hewlett-Packard
Model: 6890 / 5973
GC Column used: 30 m X 0.25 mm ID [0.25 um thickness] ZB-Semi capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits with the following exceptions. Please note that the acceptance criteria allow one surrogate recovery outside of the QC limits per fraction.

CB-20-F-052815 (P0991-02C-DISS), recovery is below criteria for Terphenyl-d14 at 32% with criteria of (50-135).

CB-21-052815 (P0991-03C), recovery is below criteria for Terphenyl-d14 at 37% with criteria of (50-135).

CB-21-052815 (P0991-03CDL) Surrogate outside of QC limit due to dilution, recovery is below criteria for Terphenyl-d14 at 40% with criteria of (50-135).

CB-21-F-052815 (P0991-04C-DISS), recovery is below criteria for Terphenyl-d14 at 30% with criteria of (50-135).

CB-21-F-052815 (P0991-04CDL-DISS) Surrogate outside of QC limit due to dilution, recovery is below criteria for Terphenyl-d14 at 33% with criteria of (50-135).

CB-22-052815 (P0991-05C), recovery is below criteria for Terphenyl-d14 at 36% with criteria of (50-135).

CB-22-F-052815 (P0991-06C-DISS), recovery is below criteria for Terphenyl-d14 at 35% with criteria of (50-135).

CB-23-052815 (P0991-07C), recovery is below criteria for Terphenyl-d14 at 31% with criteria of (50-135).

CB-23-F-052815 (P0991-08C-DISS), recovery is below criteria for 2-Fluorophenol at 14% with criteria of (20-110) and Terphenyl-d14 at 29% with criteria of (50-135).

CB-18-052815 (P0991-09C), recovery is below criteria for 2-Fluorophenol at 19% with criteria of (20-110) and Phenol-d5 at 9% with criteria of (10-115).

CB-18-F-052815 (P0991-10C-DISS), recovery is below criteria for 2,4,6-Tribromophenol at 37% with criteria of (40-125), 2-Fluorophenol at 9% with criteria of (20-110), Phenol-d5 at 6% with criteria of (10-115) and Terphenyl-d14 at 30% with criteria of (50-135).

CB-24-052815 (P0991-11C), recovery is below criteria for Terphenyl-d14 at 47% with criteria of (50-135).

CB-12-052815 (P0991-17C), recovery is below criteria for Terphenyl-d14 at 30% with criteria of (50-135).

CB-DUP-01-052815 (P0991-18C), recovery is below criteria for Terphenyl-d14 at 36% with criteria of (50-135).

CB-12-F-052815 (P0991-19C-DISS), recovery is below criteria for 2,4,6-Tribromophenol at 31% with criteria of (40-125), 2-Fluorophenol at 12% with criteria of (20-110), Phenol-d5 at 8% with criteria of (10-115) and Terphenyl-d14 at 45% with criteria of (50-135).

CB-26-052915 (P0991-20CMS), recovery is below criteria for 2-Fluorophenol at 16% with criteria of (20-110).

CB-29-052915 (P0991-28C), recovery is below criteria for 2,4,6-Tribromophenol at 29% with criteria of (40-125), 2-Fluorobiphenyl at 26% with criteria of (50-110), 2-Fluorophenol at 9% with criteria of (20-110), Nitrobenzene-d5 at 24% with criteria of (40-110), Phenol-d5 at 5% with criteria of (10-115) and Terphenyl-d14 at 22% with criteria of (50-135).

Due to limited sample volume re-extraction could not be performed for samples with more than one surrogate out per fraction.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: CB-26-052915 (P0991-20CMS), CB-26-052915 (P0991-20CMSD), CB-29-F-052915 (P0991-29CMS) and CB-29-F-052915 (P0991-29CMSD).

Percent recoveries were within the QC limits with the following exceptions:

CB-26-052915 (P0991-20CMS), recovery is below criteria for 2-Methylphenol at 31% with criteria of (40-110) and 4-Methylphenol at 29% with criteria of (30-110).

CB-29-F-052915 (P0991-29CMSD-DISS), recovery is below criteria for 2-Methylphenol at 39% with criteria of (40-110).

Replicate RPDs were within the advisory QC limits.

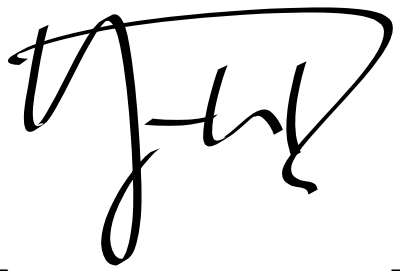
E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

The following samples were analyzed at dilution:

CB-21-052815 (P0991-03CDL) : Dilution Factor: 5
CB-21-F-052815 (P0991-04CDL-DISS) : Dilution Factor: 5



G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

No manual integrations were performed on any sample or standard.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed:_____ _____

Date:_____6/16/2015_____

Data Flag/Qualifiers (Page 1 of 2):

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Data Flag/Qualifiers (Page 2 of 2):

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. RI Division.

Client : CDM-Smith, Inc.

Project: Buffalo Lakeside

Laboratory Workorder / SDG #: P0991

SW846 6010C, SW846 7470A

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test codes: SW846 6010C, SW846 7470A

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3005A
Aqueous Samples were prepared following procedures in laboratory test code: SW7470A

V. INSTRUMENTATION

The following instrumentation was used:

Instrument Code: FIMS2
Instrument Type: CVAA
Description: FIMS
Manufacturer: Perkin-Elmer
Model: FIMS100

Instrument Code: OPTIMA3
Instrument Type: ICP
Description: Optima ICP-OES
Manufacturer: Perkin-Elmer
Model: 4300 DV

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for laboratory control samples were within the QC limits.

2. Matrix spike (MS):

Matrix spikes were performed on samples: CB-26-052915 (P0991-20BMS) and CB-29-F-052915 (P0991-29BMS).

Percent recoveries were within the QC limits with the following exceptions:

CB-26-052915 (P0991-20BMS), recovery is above criteria for Mercury at 144% with criteria of (80-120).

D. Post Digestion Spike (PDS):

A post-digestion spike was not performed on any sample in this SDG.

E. Duplicate sample:

Duplicate analyses were performed on samples: CB-26-052915

(P0991-20BDUP) and CB-29-F-052915 (P0991-29BDUP).

Relative percent differences were within the QC limits.

F. Serial Dilution (SD):

Serial Dilution analyses were performed on samples: CB-26-052915 (P0991-20BSD) and CB-29-F-052915 (P0991-29BSD).

Percent differences were within the QC limits with the exception of the following:

CB-26-052915 (P0991-20BSD), Serial Dilution analysis not within control limit for Potassium.

CB-29-F-052915 (P0991-29BSD-DISS), Serial Dilution analysis not within control limit for Potassium.

G. Samples:

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Signed: 

Date: 06/15/2015

Data Flag/Qualifiers (Page 1 of 2):

U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).

J This flag indicates an estimated value due to either

- the compound was detected below the reporting limit, or
- estimated concentration for Tentatively Identified Compound

B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.

D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis

E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.

P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.

A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Data Flag/Qualifiers (Page 2 of 2):

N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

* For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Sample ID Suffixes

DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution

RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.

RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.

RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.

MS Matrix Spike.

MSD Matrix Spike Duplicate

DUP Duplicate analysis

SD Serial Dilution

PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

CASE NARRATIVE

Spectrum Analytical, Inc. Lab Reference No. SC08327

Client: Spectrum Analytical, Inc. - North Kingstown, RI

Project: Buffalo Lakeside / P0991

SDG #: 08327

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception or a communication form is included in the addendum with this package.

II. HOLDING TIMES

All samples were prepared and analyzed within the method-specific holding time.

III. METHODS

Analyses were performed according to EPA 335.4.

IV. PREPARATION

Aqueous samples were prepared according to General Preparation.

V. INSTRUMENTATION

The following equipment was used to analyze EPA 335.4:

Lachat2 details: Lachat Quikchem 8000

VI. ANALYSIS

A. Calibration:

All quality control samples were within the acceptance criteria.

B. Blanks:

All blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Samples (LCS):

All method criteria were met.

2. Matrix Spike / Matrix Spike Duplicate Samples (MS/MSD):

A matrix spike and a matrix spike duplicate were analyzed:

In batch 1511569 from source sample CB-22-F-052815 (SC08327-06).

In batch 1511570 from source sample CB-25-F-052815 (SC08327-16).

In batch 1511574 from source sample CB-29-F-052915 (SC08327-29).

All method criteria were met.

3. Reference:

All method criteria were met.

D. Duplicates:

A duplicate was analyzed.

In batch 1511569 from source sample CB-22-F-052815 (SC08327-06).

In batch 1511570 from source sample CB-25-F-052815 (SC08327-16).

In batch 1511574 from source sample CB-29-F-052915 (SC08327-29).

All method criteria were met.

E. Samples:

All method criteria were met.

CASE NARRATIVE

Spectrum Analytical, Inc. Lab Reference No. SC08327

Client: Spectrum Analytical, Inc. - North Kingstown, RI

Project: Buffalo Lakeside / P0991

SDG #: 08327

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception or a communication form is included in the addendum with this package.

II. HOLDING TIMES

All samples were prepared and analyzed within the method-specific holding time.

III. METHODS

Analyses were performed according to EPA 335.4 / SW846 9012B.

IV. PREPARATION

Aqueous samples were prepared according to General Preparation.

V. INSTRUMENTATION

The following equipment was used to analyze EPA 335.4 / SW846 9012B:

Lachat2 details: Lachat Quikchem 8000

VI. ANALYSIS

A. Calibration:

All quality control samples were within the acceptance criteria.

B. Blanks:

All blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Samples (LCS):

All method criteria were met.

2. Matrix Spike / Matrix Spike Duplicate Samples (MS/MSD):

A matrix spike and a matrix spike duplicate were analyzed:

In batch 1511126 from source sample CB-22-F-052815 (SC08327-06).

In batch 1511256 from source sample CB-25-F-052815 (SC08327-16).

In batch 1511283 from source sample CB-26-052915 (SC08327-20).

All method criteria were met with the following exceptions:

Cyanide (total) in batch 1511283, lab sample 1511283-MSD1 from source sample CB-26-052915 (SC08327-20): The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.

3. Reference:

All method criteria were met.

D. Duplicates:

A duplicate was analyzed.

In batch 1511126 from source sample CB-22-F-052815 (SC08327-06).

In batch 1511256 from source sample CB-25-F-052815 (SC08327-16).

In batch 1511283 from source sample CB-26-052915 (SC08327-20).

All method criteria were met.

E. Samples:

All method criteria were met.

Narrative

CASE NARRATIVE

Client: CDM Smith, Inc.

Project: BLCP Sampling - Radioactivity

Report Number: 160-13546-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica St. Louis attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results for Chemistry analyses are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header. All soil/sediment sample results for radiochemistry analyses are based upon sample as dried and disaggregated with the exception of tritium, carbon-14, and iodine-129 by gamma spectroscopy unless requested as wet weight by the client.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/26/2015; the samples arrived in good condition, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.7º C and 3.5º C.

Receipt Exceptions

There was sampled time listed on the chain of custody or the sample containers for the following sample: SB-DUP1-20150825 (160-13546-10).

METALS (ICP/MS)

Samples SB-80-0-3.6-20150824 (160-13546-1), SB-75-0-3.5-20150824 (160-13546-2), SB-77-0-9-20150824 (160-13546-3), SB-74-0-14-20150824 (160-13546-4), SB-82-0-16-20150824 (160-13546-5), SB-79-0-8-20150825 (160-13546-6), SB-76-0-8-20150825 (160-13546-7), SB-81-0-6-20150825 (160-13546-8), SB-78-0-14-20150825 (160-13546-9) and SB-DUP1-20150825 (160-13546-10) were analyzed for Metals (ICP/MS) in accordance with EPA SW-846 Method 6020A. The samples were leached on 08/26/2015, prepared on 09/03/2015 and analyzed on 09/14/2015 and 09/15/2015.

Job ID: 160-13546-1 (Continued)

Laboratory: TestAmerica St. Louis (Continued)

Preparation batch 160-208005 and 160-209333 and analytical batch 160-211073
The following samples were diluted due to the nature of the sample matrix. The samples were high in salts, which cause internal standard and QC failures when the samples are run at a lesser dilution: SB-80-0-3.6-20150824 (160-13546-1), SB-75-0-3.5-20150824 (160-13546-2), SB-77-0-9-20150824 (160-13546-3), SB-74-0-14-20150824 (160-13546-4), SB-82-0-16-20150824 (160-13546-5), SB-79-0-8-20150825 (160-13546-6), SB-76-0-8-20150825 (160-13546-7), SB-81-0-6-20150825 (160-13546-8), SB-78-0-14-20150825 (160-13546-9), SB-DUP1-20150825 (160-13546-10), (160-13546-A-1-I MS), (160-13546-A-1-J MSD) and (160-13546-A-1-H SD). Elevated reporting limits (RLs) are provided.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

RADIUM-226 BY GAMMA SPEC (21 DAY INGROWTH)
Samples SB-80-0-3.6-20150824 (160-13546-1), SB-75-0-3.5-20150824 (160-13546-2), SB-77-0-9-20150824 (160-13546-3), SB-74-0-14-20150824 (160-13546-4), SB-82-0-16-20150824 (160-13546-5), SB-79-0-8-20150825 (160-13546-6), SB-76-0-8-20150825 (160-13546-7), SB-81-0-6-20150825 (160-13546-8), SB-78-0-14-20150825 (160-13546-9) and SB-DUP1-20150825 (160-13546-10) were analyzed for Radium-226 by gamma spec (21 day ingrowth) in accordance with EPA 901.1. The samples were leached on 08/26/2015, prepared on 08/28/2015 and analyzed on 09/18/2015.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GROSS ALPHA AND GROSS BETA RADIOACTIVITY
Samples SB-80-0-3.6-20150824 (160-13546-1), SB-75-0-3.5-20150824 (160-13546-2), SB-77-0-9-20150824 (160-13546-3), SB-74-0-14-20150824 (160-13546-4), SB-82-0-16-20150824 (160-13546-5), SB-79-0-8-20150825 (160-13546-6), SB-76-0-8-20150825 (160-13546-7), SB-81-0-6-20150825 (160-13546-8), SB-78-0-14-20150825 (160-13546-9) and SB-DUP1-20150825 (160-13546-10) were analyzed for Gross Alpha and Gross Beta Radioactivity in accordance with SW-846 Method 9310. The samples were leached on 08/26/2015, prepared on 09/01/2015 and analyzed on 09/01/2015 and 09/02/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

ISOTOPIC URANIUM (ALPHA SPECTROMETRY)
Samples SB-80-0-3.6-20150824 (160-13546-1), SB-75-0-3.5-20150824 (160-13546-2), SB-77-0-9-20150824 (160-13546-3), SB-74-0-14-20150824 (160-13546-4), SB-82-0-16-20150824 (160-13546-5), SB-79-0-8-20150825 (160-13546-6), SB-76-0-8-20150825 (160-13546-7), SB-81-0-6-20150825 (160-13546-8), SB-78-0-14-20150825 (160-13546-9) and SB-DUP1-20150825 (160-13546-10) were analyzed for Isotopic Uranium (Alpha Spectrometry) in accordance with DOE. The samples were leached on 08/26/2015, prepared on 09/02/2015 and analyzed on 09/13/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	No time on CoC or sample container.
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	False	No time on CoC or sample container.
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Method Summary

Client: CDM Smith, Inc.
Project/Site: BLCP Sampling - Radioactivity

TestAmerica Job ID: 160-13546-1

Method	Method Description	Protocol	Laboratory
6020A	Metals (ICP/MS)	SW846	TAL SL
901.1	Radium-226 & Other Gamma Emitters (GS)	EPA	TAL SL
9310	Gross Alpha / Beta (GFPC)	SW846	TAL SL
A-01-R	Isotopic Uranium (Alpha Spectrometry)	DOE	TAL SL

Protocol References:

Narrative

CASE NARRATIVE

Client: CDM Smith, Inc.

Project: BLCP Sampling - Radioactivity

Report Number: 160-13585-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica St. Louis attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results for Chemistry analyses are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header. All soil/sediment sample results for radiochemistry analyses are based upon sample as dried and disaggregated with the exception of tritium, carbon-14, and iodine-129 by gamma spectroscopy unless requested as wet weight by the client.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/28/2015; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 19.0° C.

ISM_DD_SI_BM_SS prep batch 208635
These samples had rocks and organic material. The samples arrived wet and were oven dried and puck-milled prior to sieving through 2 mm mesh and slab sub-sampling. SB-85-0-10-20150826 (160-13585-1), SB-85-0-10-20150826 (160-13585-1[MS]), SB-85-0-10-20150826 (160-13585-1[MSD]), SB-89-0-12-20150826 (160-13585-2), SB-92-0-10-20150826 (160-13585-3), SB-91-0-10-20150826 (160-13585-4), DUP-2 (160-13585-5), SB-97-0-10-20150826 (160-13585-6), SB-93-0-10-20150826 (160-13585-7), SB-90-0-10-20150826 (160-13585-8), SB-98-0-10-20150826 (160-13585-9), SB-84-0-10-20150825 (160-13585-10), SB-88-0-8-20150825 (160-13585-11), SB-88-0-8-20150825 (160-13585-11[MS]), SB-88-0-8-20150825 (160-13585-11[MSD]), SB-83-0-12-20150825 (160-13585-12), SB-87-0-12-20150826 (160-13585-13), SB-95-0-10-20150827 (160-13585-14), SB-94-0-10-20150827 (160-13585-15), SB-96-0-10-20150827 (160-13585-16) and SB-86-0-8.5-20150827 (160-13585-17)

METALS (ICP/MS)

Job ID: 160-13585-1 (Continued)

Laboratory: TestAmerica St. Louis (Continued)

Samples SB-85-0-10-20150826 (160-13585-1), SB-89-0-12-20150826 (160-13585-2), SB-92-0-10-20150826 (160-13585-3), SB-91-0-10-20150826 (160-13585-4), DUP-2 (160-13585-5), SB-97-0-10-20150826 (160-13585-6), SB-93-0-10-20150826 (160-13585-7), SB-90-0-10-20150826 (160-13585-8), SB-98-0-10-20150826 (160-13585-9), SB-84-0-10-20150825 (160-13585-10), SB-88-0-8-20150825 (160-13585-11), SB-83-0-12-20150825 (160-13585-12), SB-95-0-10-20150827 (160-13585-14), SB-94-0-10-20150827 (160-13585-15), SB-96-0-10-20150827 (160-13585-16) and SB-86-0-8.5-20150827 (160-13585-17) were analyzed for Metals (ICP/MS) in accordance with EPA SW-846 Method 6020A. The samples were dried on 08/31/2015, prepared on 09/03/2015 and 09/10/2015 and analyzed on 09/15/2015 and 09/18/2015.

Preparation batch 160-208635 and 160-209332 and analytical batch 160-211963:
The following samples were diluted due to the nature of the sample matrix. The samples were high in salts, which caused internal standard and QC failures when the samples were run at a lesser dilution: SB-85-0-10-20150826 (160-13585-1), SB-85-0-10-20150826 (160-13585-1[MS]), SB-85-0-10-20150826 (160-13585-1[MSD]), SB-89-0-12-20150826 (160-13585-2), SB-92-0-10-20150826 (160-13585-3), SB-91-0-10-20150826 (160-13585-4), DUP-2 (160-13585-5), SB-97-0-10-20150826 (160-13585-6), SB-93-0-10-20150826 (160-13585-7), SB-90-0-10-20150826 (160-13585-8), SB-98-0-10-20150826 (160-13585-9), SB-84-0-10-20150825 (160-13585-10), SB-88-0-8-20150825 (160-13585-11), SB-88-0-8-20150825 (160-13585-11[MS]), SB-88-0-8-20150825 (160-13585-11[MSD]), SB-83-0-12-20150825 (160-13585-12), SB-94-0-10-20150827 (160-13585-15), SB-96-0-10-20150827 (160-13585-16), SB-86-0-8.5-20150827 (160-13585-17) and (160-13585-A-1-D SD). Elevated reporting limits (RLs) are provided.

Preparation batch 160-208635 and 160-210266 and analytical batch 160-211074:
The following samples were diluted due to the nature of the sample matrix. The samples were high in salts, which cause internal standard and QC failures when the samples are run at a lesser dilution: SB-95-0-10-20150827 (160-13585-14), (160-13585-A-14-E MS), (160-13585-A-14-F MSD) and (160-13585-A-14-D SD). Elevated reporting limits (RLs) are provided.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

RADIUM-226 BY GAMMA SPEC (21 DAY INGROWTH)

Samples SB-85-0-10-20150826 (160-13585-1), SB-89-0-12-20150826 (160-13585-2), SB-92-0-10-20150826 (160-13585-3), SB-91-0-10-20150826 (160-13585-4), DUP-2 (160-13585-5), SB-97-0-10-20150826 (160-13585-6), SB-93-0-10-20150826 (160-13585-7), SB-90-0-10-20150826 (160-13585-8), SB-98-0-10-20150826 (160-13585-9), SB-84-0-10-20150825 (160-13585-10), SB-88-0-8-20150825 (160-13585-11), SB-83-0-12-20150825 (160-13585-12), SB-95-0-10-20150827 (160-13585-14), SB-94-0-10-20150827 (160-13585-15), SB-96-0-10-20150827 (160-13585-16) and SB-86-0-8.5-20150827 (160-13585-17) were analyzed for Radium-226 by gamma spec (21 day ingrowth) in accordance with EPA 901.1. The samples were dried on 08/31/2015, prepared on 09/03/2015 and analyzed on 09/24/2015.

Prep batch: 160-209360
Lead-214 analyzed by gamma spectroscopy was detected above the MDC in the method blank. Variations in Compton backgrounds and statistical analyses allow for small area counts in the ROIs of this nuclide. Other Uranium decay chain products are not present in the blank to support Lead-214 identification. The data is reported. SB-85-0-10-20150826 (160-13585-1), SB-89-0-12-20150826 (160-13585-2), SB-92-0-10-20150826 (160-13585-3), SB-91-0-10-20150826 (160-13585-4), DUP-2 (160-13585-5), SB-97-0-10-20150826 (160-13585-6), SB-93-0-10-20150826 (160-13585-7), SB-90-0-10-20150826 (160-13585-8), SB-98-0-10-20150826 (160-13585-9), SB-84-0-10-20150825 (160-13585-10), SB-88-0-8-20150825 (160-13585-11), SB-83-0-12-20150825 (160-13585-12), SB-95-0-10-20150827 (160-13585-14), SB-94-0-10-20150827 (160-13585-15), SB-96-0-10-20150827 (160-13585-16), SB-86-0-8.5-20150827 (160-13585-17), (LCS 160-209360/2-A), (MB 160-209360/1-A) and (160-13585-A-1-H DU)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GROSS ALPHA AND GROSS BETA RADIOACTIVITY

Samples SB-85-0-10-20150826 (160-13585-1), SB-89-0-12-20150826 (160-13585-2), SB-92-0-10-20150826 (160-13585-3), SB-91-0-10-20150826 (160-13585-4), DUP-2 (160-13585-5), SB-97-0-10-20150826 (160-13585-6), SB-93-0-10-20150826 (160-13585-7), SB-90-0-10-20150826 (160-13585-8), SB-98-0-10-20150826 (160-13585-9), SB-84-0-10-20150825 (160-13585-10), SB-88-0-8-20150825 (160-13585-11), SB-83-0-12-20150825 (160-13585-12), SB-95-0-10-20150827 (160-13585-14), SB-94-0-10-20150827 (160-13585-15), SB-96-0-10-20150827 (160-13585-16) and SB-86-0-8.5-20150827 (160-13585-17) were analyzed for Gross Alpha and Gross Beta Radioactivity in accordance with SW-846 Method 9310. The samples were dried on 08/31/2015,

Job ID: 160-13585-1 (Continued)

Laboratory: TestAmerica St. Louis (Continued)

prepared on 09/09/2015 and analyzed on 09/09/2015 and 09/10/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

ISOTOPIC URANIUM (ALPHA SPECTROMETRY)

Samples SB-85-0-10-20150826 (160-13585-1), SB-89-0-12-20150826 (160-13585-2), SB-92-0-10-20150826 (160-13585-3), SB-91-0-10-20150826 (160-13585-4), DUP-2 (160-13585-5), SB-97-0-10-20150826 (160-13585-6), SB-93-0-10-20150826 (160-13585-7), SB-90-0-10-20150826 (160-13585-8), SB-98-0-10-20150826 (160-13585-9), SB-84-0-10-20150825 (160-13585-10), SB-88-0-8-20150825 (160-13585-11), SB-83-0-12-20150825 (160-13585-12), SB-95-0-10-20150827 (160-13585-14), SB-94-0-10-20150827 (160-13585-15), SB-96-0-10-20150827 (160-13585-16) and SB-86-0-8.5-20150827 (160-13585-17) were analyzed for Isotopic Uranium (Alpha Spectrometry) in accordance with DOE. The samples were dried on 08/31/2015, prepared on 09/14/2015 and analyzed on 09/20/2015 and 09/21/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Special Instructions/ Conditions of Receipt: NYSDEC EDD

Possible Hazard Identification
☒ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal
☐ Return To Client ☒ Disposal By Lab ☐ Archive For _____ Months (A fee may be assessed if samples are retained longer than 1 month)

Turn Around Time Required
☐ 24 Hours ☐ 48 Hours ☐ 7 Days ☐ 14 Days ☐ 21 Days ☒ Other Standard

QC Requirements (Specify)

1. Relinquished By	Date: 8/27/15	Time: 10:50	1. Received By	Date: 8/27/15	Time: 10:50
2. Relinquished By	Date: 8/27/15	Time: 11:25	2. Received By (FEDEX)	Date: 08/27/15	Time: 1125
3. Relinquished By	Date:	Time:	3. Received By	Date: 8/28/15	Time: 0720

Comments

9/28/2015

DISTRIBUTION: WHITE - Returned to Client with Report; CANARY - Stays with the Sample; PINK - Field Copy

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Method Summary

Client: CDM Smith, Inc.
Project/Site: BLCP Sampling - Radioactivity

TestAmerica Job ID: 160-13585-1

Method	Method Description	Protocol	Laboratory
6020A	Metals (ICP/MS)	SW846	TAL SL
901.1	Radium-226 & Other Gamma Emitters (GS)	EPA	TAL SL
9310	Gross Alpha / Beta (GFPC)	SW846	TAL SL
A-01-R	Isotopic Uranium (Alpha Spectrometry)	DOE	TAL SL

The results presented on this Certificate of Analysis only reflect those parameters that were requested by the client on the chain of custody or other documentation received with the sample(s). The analytical results relate only to the items tested. Analytical results are based on dry-weights for solid samples, unless otherwise specified.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
X	Surrogate is outside control limits
F2	MS/MSD RPD exceeds control limits
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 480-88934-1

Laboratory: TestAmerica Buffalo

Narrative

Job Narrative
480-88934-1

Receipt
The samples were received on 10/12/2015 7:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.0º C.

GC/MS Semi VOA
Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows two of these surrogates to be outside acceptance criteria without performing re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: S8-74-0-4-101215 (480-88934-1), S8-74-4-8-101215 (480-88934-2), SB-75-4-8-101215 (480-88934-8), SB-75-12-16-10125 (480-88934-10), (480-88934-B-1-A MS) and (480-88934-B-1-B MSD). These results have been reported and qualified.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-268989 was outside the method criteria for the following analyte: Pentachlorophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8270D: The laboratory control sample (LCS) for batch preparation batch 480-268660 and analytical batch 480-268989 recovered outside control limits for the following analyte: Benzaldehyde. This analyte was biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-268989 recovered above the upper control limit for Benzaldehyde. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: S8-74-0-4-101215 (480-88934-1), S8-74-4-8-101215 (480-88934-2), S8-74-8-12-101215 (480-88934-3), SB-DUP-1-101215 (480-88934-4), SB-74-12-16-101215 (480-88934-5), SB-74-16-20-101215 (480-88934-6), SB-75-0-4-101215 (480-88934-7), SB-75-4-8-101215 (480-88934-8), SB-75-8-12-101215 (480-88934-9), SB-75-12-16-10125 (480-88934-10), SB-75-16-20-101215 (480-88934-11), (480-88934-B-1-A MS) and (480-88934-B-1-B MSD).

Method(s) 8270D: The following samples were diluted due to appearance and viscosity: SB-75-0-4-101215 (480-88934-7) and SB-75-12-16-10125 (480-88934-10). Elevated reporting limits (RL) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The following samples were diluted due to the presence of Calcium which interferes with Total Copper: S8-74-0-4-101215 (480-88934-1), S8-74-4-8-101215 (480-88934-2), SB-75-4-8-101215 (480-88934-8) and SB-75-8-12-101215 (480-88934-9). Elevated reporting limits (RLs) are provided.

Method(s) 6010C: The following samples were diluted for Total Silver due to the nature of the sample matrix: S8-74-0-4-101215 (480-88934-1) and S8-74-4-8-101215 (480-88934-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) 9012B: The laboratory control sample (LCS) for batch preparation batch 480-269890 and analytical batch 480-269953 recovered outside control limits for the following analytes: Cyanide, Total. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. SB-75-12-16-10125 (480-88934-10), SB-75-16-20-101215 (480-88934-11) and (480-88934-B-10-B DU)

Method(s) 9012B: The laboratory control sample (LCS) for batch preparation batch 480-269642 and analytical batch 480-270178 recovered inside control limits provided by the manufacturer for the following analytes: Cyanide, Total. Therefore the data has been reported.

Certification Summary

Client: New York State D.E.C.
Project/Site: Buffalo Lakeside #915193A

TestAmerica Job ID: 480-88934-1

Laboratory: TestAmerica Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
New York	NELAP	2	10026	03-31-16

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Laboratory: TestAmerica Edison

The certifications listed below are applicable to this report.

Authority	Program	EPA Region	Certification ID	Expiration Date
New York	NELAP	2	11452	03-31-16

Method Summary

Client: New York State D.E.C.
Project/Site: Buffalo Lakeside #915193A

TestAmerica Job ID: 480-88934-1

Method	Method Description	Protocol	Laboratory
8270D	Semivolatile Organic Compounds (GC/MS)	SW846	TAL BUF
6010C	Metals (ICP)	SW846	TAL BUF
9012B	Cyanide, Total andor Amenable	SW846	TAL BUF
9016	Cyanide, Free	SW846	TAL EDI
Moisture	Percent Moisture	EPA	TAL BUF

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	CDM SMITH
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Orlette Johnson

Definitions/Glossary

Client: New York State D.E.C.
Project/Site: Buffalo Lakeside #915193A

TestAmerica Job ID: 480-89011-1

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits

General Chemistry

Qualifier	Qualifier Description
HF	Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 480-89011-1

Laboratory: TestAmerica Buffalo

Narrative

Job Narrative
480-89011-1

Receipt
The samples were received on 10/13/2015 4:50 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.0º C.

Receipt Exceptions
The following sample was received however was not listed on the COC: SS-DUP-101315 (480-89011-7). Information listed on the sample container labels was used for sample login.

Metals
Method(s) 6010C: The Serial Dilution (480-89011-B-4-A SD ^) in batch 480-268757, exhibited results outside the quality control limits for Total Barium, Calcium, Chromium, Manganese, and Zinc. However, the Post Digestion Spike was compliant therefore no corrective action was necessary

Method(s) 6010C: The following samples was diluted due to the presence of Total Iron which interferes with Total Silver, Cadmium, Chromium, Copper, Manganese, Lead, Antimony, Selenium, Nickel, and Vanadium SS-72-101315 (480-89011-1), SS-76-101315 (480-89011-5), SS-77-101315 (480-89011-6) and SS-DUP-101315 (480-89011-7). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) 9045C, 9045D: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: SS-72-101315 (480-89011-1), SS-73-101315 (480-89011-2), SS-74-101315 (480-89011-3), SS-75-101315 (480-89011-4), SS-76-101315 (480-89011-5), SS-77-101315 (480-89011-6) and SS-DUP-101315 (480-89011-7).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	No: Received extra samples not listed on COC.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	CDM SMITH
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Orlette Johnson

Project/Site: Buffalo Lakeside #915193A PIN

TestAmerica Job ID: 480-89012-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.
F1	MS and/or MSD Recovery is outside acceptance limits.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
T	Result is a tentatively identified compound (TIC) and an estimated value.
N	Presumptive evidence of material.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F2	MS/MSD RPD exceeds control limits
F1	MS and/or MSD Recovery is outside acceptance limits.

General Chemistry

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative
480-89012-1

Receipt
The samples were received on 10/13/2015 4:50 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.0º C.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-269161 recovered above the upper control limit for Benzaldehyde. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: SB-76-0-4-101315 (480-89012-1), SB-76-4-8-101315 (480-89012-2), SB-76-8-12-101315 (480-89012-3), SB-76-12-16-101315 (480-89012-4) and SB-76-16-20-101315 (480-89012-5).

Method(s) 8270D: The following samples were diluted due to appearance and viscosity: SB-76-0-4-101315 (480-89012-1). Elevated reporting limits (RL) are provided.

Method(s) 8270D: The laboratory control sample (LCS) for batch preparation batch 480-268902 and analytical batch 480-269161 recovered outside control limits for the following analytes: Benzaldehyde. This analyte was biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The following samples was diluted due to the presence of Total Iron which interferes with Total Silver, Cadmium, Chromium, Copper, Manganese, Lead, Antimony, Selenium, Nickel, and Vanadium SB-76-0-4-101315 (480-89012-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) 9012B: The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 480-270110 and analytical batch 480-270211 recovered within the control limits provided from the manufacturer for the following analytes: Cyanide, Total. The data has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method(s) 3550C: The following samples:SB-76-16-20-101315 (480-89012-5[MS]) were decanted prior to preparation .

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Certification Summary

Client: New York State D.E.C.
Project/Site: Buffalo Lakeside #915193A PIN

TestAmerica Job ID: 480-89012-1

Laboratory: TestAmerica Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
New York	NELAP	2	10026	03-31-16

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Laboratory: TestAmerica Edison

The certifications listed below are applicable to this report.

Authority	Program	EPA Region	Certification ID	Expiration Date
New York	NELAP	2	11452	03-31-16

Method Summary

Client: New York State D.E.C.
Project/Site: Buffalo Lakeside #915193A PIN

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	CDM SMITH
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

List Creation: 10/15/15 10:50 AM

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	411398
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.8°C IR #5
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Orlette Johnson

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*	RPD of the LCS and LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.
X	Surrogate is outside control limits
H	Sample was prepped or analyzed beyond the specified holding time
B	Compound was found in the blank and sample.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.
H	Sample was prepped or analyzed beyond the specified holding time

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 480-89110-1

Laboratory: TestAmerica Buffalo

Narrative

Job Narrative
480-89110-1

Receipt
The samples were received on 10/14/2015 4:36 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.7º C.

GC/MS Semi VOA
Method(s) 8270D: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 480-269019 recovered outside control limits for the following analytes: Multiple Analytes.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-270713 was outside the method criteria for the following analyte: Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8270D: The initial calibration curve analyzed in analytical batch 268224 was outside method criteria for the following analyte: Benzaldehyde. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered an estimated concentration.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: TP-02-101415 (480-89110-1). These results have been reported and qualified.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-272094 was outside the method criteria for the following analytes: Benzaldehyde and 2,2-oxybis(1-chloropropane). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-272094 recovered above the upper control limit for Benzo[g,h,i]perylene. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following sample is impacted: TP-03-101415 (480-89110-3).

Method(s) 8270D: The following sample was re-extracted outside of preparation holding time due to low surrogate recoveries in the initial extraction: TP-03-101415 (480-89110-3). Both sets of data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The low level continuing calibration verification (CCVL 480-269140/16) for analytical batch 480-269140 contained Total Aluminum above the upper quality control limit. All reported samples associated with this CCVL were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples (LCS 480-268970/2-A) and (MB 480-268970/1-A) was not performed..

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method(s) 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 480-269019.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	CDM SMITH
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Orlette Johnson
Senior Project Manager

TestAmerica Job ID: 480-89238-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F2	MS/MSD RPD exceeds control limits
F1	MS and/or MSD Recovery is outside acceptance limits.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Metals

Qualifier	Qualifier Description
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 480-89238-1

Laboratory: TestAmerica Buffalo

Narrative

Job Narrative
480-89238-1

Receipt
The samples were received on 10/15/2015 5:17 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 3.0º C and 3.8º C.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-270126 recovered above the upper control limit for Benzo[g,h,i]perylene. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: TP-05-101515 (480-89238-1), TP-05-F-101515 (480-89238-2), TP-06-101515 (480-89238-3), TP-06-F-101515 (480-89238-4), TP-DUP-01-101515 (480-89238-5), TP-14-101515 (480-89238-6), TP-14-101515 (480-89238-6[MS]), TP-14-101515 (480-89238-6[MSD]), TP-14-F-101515 (480-89238-7) and FB-101515 (480-89238-8).

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-270126 was outside the method criteria for the following analytes: 4-Chloroaniline and Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes are considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in analytical batch 269785 recovered outside the method criteria for the analyte Benzaldehyde. The large number of analytes included in the continuing calibration verification (CCV) gives a high probability that one or more analytes will be outside acceptance criteria. As indicated in the reference method, analysis may proceed as long as no more than 20% of the analytes of interest are outside the method-defined %D criteria. (CCVIS 480-269785/3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The low level continuing calibration verification (CCVL 480-229736/16) for analytical batch 480-229736 contained Total Aluminum above the upper quality control limit. All reported samples associated with this CCVL were either below the laboratory's standard reporting limit for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples TP-05-101515 (480-89238-1), TP-05-F-101515 (480-89238-2), TP-06-F-101515 (480-89238-4), TP-DUP-01-101515 (480-89238-5), (LCS 480-269259/2-A) and (MB 480-269259/1-A) was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) 9012B: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 480-271297 and analytical batch 480-271418 was outside control limits. Sample matrix interference is suspected. TP-14-101515 (480-89238-6[MS]) and TP-14-101515 (480-89238-6[MSD])

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	CDM SMITH
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Orlette Johnson

Definitions/Glossary

Client: New York State D.E.C.
Project/Site: Buffalo Lakeside #915193A

TestAmerica Job ID: 480-89318-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative
480-89318-1

Receipt
The samples were received on 10/16/2015 3:30 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.1° C.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-270403 recovered above the upper control limit for Benzo[g,h,i]perylene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: CB-12-101615 (480-89318-1), CB-12-F-101615 (480-89318-2), CB-DUP-01-101615 (480-89318-3), CB-26-101615 (480-89318-4), CB-26-F-101615 (480-89318-5), CB-27-101615 (480-89318-6), CB-27-F-101615 (480-89318-7) and CB-28-101615 (480-89318-8).

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-270403 was outside the method criteria for the following analytes: Benzaldehyde and N-Nitrosodi-n-propylamine. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8270D: Surrogate recovery for the following sample was outside control limits: CB-12-101615 (480-89318-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-270512 recovered above the upper control limit for Benzo(g,h,i)perylene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: CB-28-F-101615 (480-89318-9) and FB-101615 (480-89318-10).

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-270512 was outside the method criteria for the following analyte(s): N-Nitrosodi-n-propylamine and Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	CDM
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Orlette Johnson

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
X	Surrogate is outside control limits

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Buffalo

Narrative

Job Narrative
480-89389-1

Receipt
The samples were received on 10/19/2015 5:05 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.4° C.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-272360 was outside the method criteria for the following analytes: 2,4-Dinitrophenol, Benzaldehyde, Diethyl phthalate and Pentachlorophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-272542 was outside the method criteria for the following analytes: 2,4-Dinitrophenol, 4-Chloroaniline, Benzaldehyde, Diethyl phthalate and Pentachlorophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8270D: The initial calibration curve analyzed in analytical batch 271208 was outside method criteria for the analyte Benzaldehyde. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered an estimated concentration.

Method(s) 8270D: The continuing calibration verification (CCVIS) associated with analytical batch 271942 was outside the method criteria for the analytes Benzaldehyde, Hexachlorocyclopentadiene and Diethyl phthalate. The large number of analytes included in the continuing calibration verification (CCV) gives a high probability that one or more analytes will be outside acceptance criteria. As indicated in the reference method, analysis may proceed as long as no more than 20% of the analytes of interest are outside the method-defined %D criteria. (CCVIS 480-271942/3).

Method(s) 8270D: The laboratory control sample (LCS) for preparation batch 270014 recovered outside control limits for the following analytes: 2,4-Dinitrophenol and 4,6-Dinitro-2-methylphenol. These analytes have been identified as a poor performing analytes when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

Method(s) 8270D: The following sample was diluted due to the nature of the sample matrix: TP-11-101915 (480-89389-1). Elevated reporting limits (RLs) are provided.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: TP-11-101915 (480-89389-1). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	CDM SMITH
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
X	Surrogate is outside control limits
F2	MS/MSD RPD exceeds control limits
F1	MS and/or MSD Recovery is outside acceptance limits.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
B	Compound was found in the blank and sample.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 480-89476-1

Laboratory: TestAmerica Buffalo

Narrative

Job Narrative
480-89476-1

Receipt
The samples were received on 10/20/2015 5:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 4.7º C and 5.2º C.

GC/MS Semi VOA
Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows two of these surrogates to be outside acceptance criteria without performing re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: MW-404-102015 (480-89476-3), MW-404-F-102015 (480-89476-4) and TP-09-102015 (480-89476-9). These results have been reported and qualified.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-271039 was outside the method criteria for the following analyte: Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-271039 recovered above the upper control limit for Benzo[g,h,i]perylene. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: MW-405-102015 (480-89476-1), MW-405-F-102015 (480-89476-2), MW-404-102015 (480-89476-3), MW-404-F-102015 (480-89476-4), TP-08-102015 (480-89476-5), TP-08-F-102015 (480-89476-6), TP-08-F-102015 (480-89476-6[MS]), TP-08-F-102015 (480-89476-6[MSD]), TP-10-102015 (480-89476-7), TP-10-F-102015 (480-89476-8), TP-09-102015 (480-89476-9), TP-09-F-102015 (480-89476-10) and FB-102015 (480-89476-11).

Method(s) 8270D: The following samples were diluted due to color and viscosity: MW-405-102015 (480-89476-1), MW-405-F-102015 (480-89476-2), TP-10-102015 (480-89476-7), TP-10-F-102015 (480-89476-8) and TP-09-102015 (480-89476-9). Elevated reporting limits (RL) are provided.

Method(s) 8270D: The continuing calibration verification (CCVIS) analyzed in analytical batch 270415 was outside the method criteria for the analytes Benzaldehyde and Benzo(g,h,i)perylene. The large number of analytes included in the continuing calibration verification (CCV) gives a high probability that one or more analytes will be outside acceptance criteria. As indicated in the reference method, analysis may proceed as long as no more than 20% of the analytes of interest are outside the method-defined %D criteria. (CCVIS 480-270415/4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The low level continuing calibration verification (CCVL 480-270316/23) for analytical batch 480-270316 contained Total Copper above the upper quality control limit. All reported samples associated with this CCVL were either below the laboratory's standard reporting limit for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples (LCS 480-270046/2-A) and (MB 480-270046/1-A) was not performed.

Method(s) 6010C: The low level continuing calibration verification (CCVL 480-270316/29) for analytical batch 480-270316 contained Total Copper above the upper quality control limit. All reported samples associated with this CCVL were either below the laboratory's standard reporting limit for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples MW-405-102015 (480-89476-1), MW-405-F-102015 (480-89476-2), MW-404-102015 (480-89476-3), (LCS 480-270046/2-A) and (MB 480-270046/1-A) was not performed.

Method(s) 6010C: The low level continuing calibration verification (CCVL 480-270316/41) for analytical batch 480-270316 contained Total Copper above the upper quality control limit. All reported samples associated with this CCVL were either below the laboratory's standard reporting limit for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples MW-405-102015 (480-89476-1), MW-405-F-102015 (480-89476-2), MW-404-102015 (480-89476-3), MW-404-F-102015 (480-89476-4), TP-08-102015 (480-89476-5), TP-08-F-102015 (480-89476-6), TP-08-F-102015 (480-89476-6[MS]), TP-08-F-102015 (480-89476-6[MSD]), TP-10-102015 (480-89476-7), TP-10-F-102015 (480-89476-8), (480-89476-C-6-A PDS) and (480-89476-C-6-A SD ^) was not performed.

Job ID: 480-89476-1 (Continued)

Laboratory: TestAmerica Buffalo (Continued)

Method(s) 6010C: The low level continuing calibration verification (CCVL 480-270316/53) for analytical batch 480-270316 contained Total Copper above the upper quality control limit. All reported samples associated with this CCVL were either below the laboratory's standard reporting limit for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples MW-404-F-102015 (480-89476-4), TP-08-102015 (480-89476-5), TP-08-F-102015 (480-89476-6), TP-08-F-102015 (480-89476-6[MS]), TP-08-F-102015 (480-89476-6[MSD]), TP-10-102015 (480-89476-7), TP-10-F-102015 (480-89476-8), TP-09-102015 (480-89476-9), TP-09-F-102015 (480-89476-10), FB-102015 (480-89476-11), (480-89476-C-6-A PDS) and (480-89476-C-6-A SD ^) was not performed.

Method(s) 6010C: The low level continuing calibration verification (CCVL 480-270316/59) for analytical batch 480-270316 contained Total Copper above the upper quality control limit. All reported samples associated with this CCVL were either below the laboratory's standard reporting limit for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples TP-09-102015 (480-89476-9), TP-09-F-102015 (480-89476-10) and FB-102015 (480-89476-11) was not performed.

Method(s) 6010C: The low level continuing calibration verification (CCVL 480-270316/41) for analytical batch 480-270316 contained Total Potassium above the upper quality control limit. All reported samples associated with this CCVL were either below the laboratory's standard reporting limit for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples MW-404-102015 (480-89476-3), MW-404-F-102015 (480-89476-4), TP-08-102015 (480-89476-5), TP-08-F-102015 (480-89476-6), TP-08-F-102015 (480-89476-6[MS]), TP-08-F-102015 (480-89476-6[MSD]), (480-89476-C-6-A PDS) and (480-89476-C-6-A SD ^) was not performed.

Method(s) 6010C: The low level continuing calibration verification (CCVL 480-270316/53) for analytical batch 480-270316 contained Total Potassium above the upper quality control limit. All reported samples associated with this CCVL were either below the laboratory's standard reporting limit for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples MW-404-F-102015 (480-89476-4), TP-08-102015 (480-89476-5), TP-08-F-102015 (480-89476-6), TP-08-F-102015 (480-89476-6[MS]), TP-08-F-102015 (480-89476-6[MSD]), (480-89476-C-6-A PDS) and (480-89476-C-6-A SD ^) was not performed.

Method(s) 6010C: The low level continuing calibration verification (CCVL 480-270459/33) for analytical batch 480-270459 contained Total Potassium above the upper quality control limit. All reported samples associated with this CCVL were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples MW-405-102015 (480-89476-1), MW-405-F-102015 (480-89476-2), TP-10-102015 (480-89476-7), TP-10-F-102015 (480-89476-8), TP-09-102015 (480-89476-9) and TP-09-F-102015 (480-89476-10) was not performed.

Method(s) 6010C: The continuing calibration blank (CCB 480-270316/52) for analytical batch 480-270316 Total Potassium above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples MW-404-F-102015 (480-89476-4), TP-08-102015 (480-89476-5), TP-08-F-102015 (480-89476-6), TP-08-F-102015 (480-89476-6[MS]), TP-08-F-102015 (480-89476-6[MSD]), (480-89476-C-6-A PDS) and (480-89476-C-6-A SD ^) was not performed.

Method(s) 6010C: The recovery of Post Spike, (480-89476-C-6-A PDS), in batch 480-270046 exhibited results outside the quality control limits for Total Calcium. However, the Serial Dilution of this sample was compliant. Therefore, no corrective action was necessary.

Method(s) 6010C: The following samples were diluted due to the presence of Silicon which interferes with Total Arsenic and Lead: MW-405-102015 (480-89476-1) and MW-405-F-102015 (480-89476-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	CDM SMITH
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Orlette Johnson

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
X	Surrogate is outside control limits
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Buffalo

Narrative

Job Narrative
480-89590-1

Receipt
The samples were received on 10/21/2015 5:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 3.0º C, 3.2º C and 3.4º C.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-270925 was outside the method criteria for the following analytes: Benzaldehyde, Bis(2-chloroethoxy)methane, Hexachlorocyclopentadiene, Isophorone and N-Nitrosodi-n-propylamine. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes are considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-271160 was outside the method criteria for the following analyte: Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-272432 was outside the method criteria for the following analytes: Benzaldehyde and 2,2-oxybis(1-chloropropane) . A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-272432 recovered above the upper control limit for Benzo[g,h,i]perylene. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following sample is impacted: FB-102115 (480-89590-20).

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-272542 was outside the method criteria for the following analytes: 2,4-Dinitrophenol, 4-Chloroaniline, Benzaldehyde, Diethyl phthalate and Pentachlorophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: CB-14-102115 (480-89590-3). These results have been reported and qualified.

Method(s) 8270D: The initial calibration curve analyzed in analytical batch 271208 was outside method criteria for the analyte Benzaldehyde. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered an estimated concentration.

Method(s) 8270D: The initial calibration curve analyzed in analytical batch 270697 was outside method criteria for the analytes Benzaldehyde and Isophorone. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered an estimated concentration.

Method(s) 8270D: The minimum response factor (RF) criteria for the initial calibration (ICAL) analyzed in analytical batch 270697 was outside criteria for the analytes N-Nitrosodi-n-propylamine, Isophorone and Bis(2-chloroethoxy)methane. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The low level continuing calibration verification (CCVL 480-270877/86) for analytical batch 480-270877 contained Total Iron above the upper quality control limit. All reported samples associated with this CCVL were either below the laboratory's standard reporting limit for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples CB-29-102115 (480-89590-1), CB 29-F-102115 (480-89590-2), CB-14-102115 (480-89590-3), (LCS

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Orlette Johnson

Definitions/Glossary

Client: New York State D.E.C.
Project/Site: Buffalo Lakeside #915193A

TestAmerica Job ID: 480-89590-2

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 480-89590-2

Laboratory: TestAmerica Buffalo

Narrative

Job Narrative
480-89590-2

Receipt
The samples were received on 10/21/2015 5:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 3.0º C, 3.2º C and 3.4º C.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-272432 was outside the method criteria for the following analytes: Benzaldehyde and 2,2-oxybis(1-chloropropane) . A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-272432 recovered above the upper control limit for Benzo[g,h,i]perylene. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: CB-05-102115 (480-89590-21), CB-05-F-102115 (480-89590-22), CB-06-102115 (480-89590-23), CB-06-F-102115 (480-89590-24), CB-20-102115 (480-89590-25), CB-20-F-102115 (480-89590-26), CB-21-F-102115 (480-89590-28) and CB-18-F-102115 (480-89590-30).

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-272542 was outside the method criteria for the following analytes: 2,4-Dinitrophenol, 4-Chloroaniline, Benzaldehyde, Diethyl phthalate and Pentachlorophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-272605 was outside the method criteria for the following analytes: bis (2-chloroisopropyl) ether and Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-272605 recovered above the upper control limit for Benzo[g,h,i]perylene. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: CB-18-102115 (480-89590-29), CB-22-102115 (480-89590-31) and CB-22-F-102115 (480-89590-32).

Method(s) 8270D: The initial calibration curve analyzed in analytical batch 271208 was outside method criteria for the analyte Benzaldehyde. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered an estimated concentration.

Method(s) 8270D: The following sample was diluted due to the nature of the sample matrix: CB-18-102115 (480-89590-29). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The low level continuing calibration verification (CCVL 480-270585/16) for analytical batch 480-270585 contained Total Zinc above the upper quality control limit. All reported samples associated with this CCVL were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of sample (MB 480-270362/1-A) was not performed.

Method(s) 6010C: The low level continuing calibration verification (CCVL 480-270585/44) for analytical batch 480-270585 contained Total Zinc above the upper quality control limit. All reported samples associated with this CCVL were either below the laboratory's standard reporting limit for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples CB-21-F-102115 (480-89590-28), CB-18-102115 (480-89590-29), CB-18-F-102115 (480-89590-30) and CB-22-102115 (480-89590-31) was not performed.

Job ID: 480-89590-2 (Continued)

Laboratory: TestAmerica Buffalo (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Orlette Johnson

Definitions/Glossary

Client: New York State D.E.C.
Project/Site: Buffalo Lakeside #915193A

TestAmerica Job ID: 480-89685-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative
480-89685-1

Receipt
The samples were received on 10/22/2015 5:30 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 3.4º C, 3.9º C and 4.1º C.

Receipt Exceptions
Matrix QC was logged based upon order of the COC, as times do not match up.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-272753 was outside the method criteria for the following analytes: Bis(2-chloroethoxy)methane and N-Nitrosodi-n-propylamine. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes are considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-273052 recovered above the upper control limit for 2,4-Dinitrophenol. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data has been reported. The following samples are impacted: CB-DUP-03-102215 (480-89685-16), CB-03-102215 (480-89685-17), CB-03-F-102215 (480-89685-18), CB-04-102215 (480-89685-19) and CB-04-F-102215 (480-89685-20).

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-273052 was outside the method criteria for the following analytes: Bis(2-chloroethoxy)methane, Isophorone, N-Nitrosodi-n-propylamine and Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes are considered estimated.

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-272964 was outside the method criteria for the following analytes: 2,2-oxybis[1-chloropropane] and Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes are considered estimated.

Method(s) 8270D: The initial calibration curve analyzed in analytical batch 272186 was outside method criteria for the analytes Benzaldehyde, Isophorone, 4-Chloroaniline and 2,4-Dinitrophenol. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analytes is considered an estimated concentration.

Method(s) 8270D: The minimum response factor (RF) criteria for the initial calibration (ICAL) analyzed in analytical batch 272186 was outside criteria for the analytes N-Nitrosodi-n-propylamine and Bis(2-chloroethoxy)methane. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analytes is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	CDM SMITH
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Definitions/Glossary

Client: New York State D.E.C.
Project/Site: Buffalo Lakeside #915193A

TestAmerica Job ID: 480-89685-2

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Buffalo

Narrative

Job Narrative
480-89685-2

Receipt
The samples were received on 10/22/2015 5:30 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 3.4º C, 3.9º C and 4.1º C.

Receipt Exceptions
Matrix QC was logged based upon order of the COC, as times do not match up.

GC/MS Semi VOA
Method(s) 8270D: The continuing calibration verification (CCV) associated with batch 480-272430 recovered above the upper control limit for Benzo(g,h,i)perylene. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: BASIN-1-102215 (480-89685-21), BASIN-1-F-102215 (480-89685-22), BASIN-2-102215 (480-89685-23), BASIN-2-F-102215 (480-89685-24), BASIN-3-102215 (480-89685-25), BASIN-3-F-102215 (480-89685-26) and BASIN-DUP-04-102215 (480-89685-27).

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-272430 was outside the method criteria for the following analytes: 2,2-oxybis[1-chloropropane], 4-Chloroaniline and Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes are considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	CDM SMITH
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

Data Usability Summary Reports

SUMMARY OF THE ANALYTICAL DATA VALIDATION
Buffalo Lakeside

Soil TCLP Inorganic Analyses & Hexavalent Chromium
Samples Collected: January 21, 2013
Samples Received: January 22, 2013
Sample Delivery Group: M0080

Laboratory Reference Numbers	Client Sample Number
M0080-01	SS- 1
M0080-02	SS- 2
M0080-03	SS- 3
M0080-04	SS- 4
M0080-05	SS- 5
M0080-06	SS- 6
M0080-07	SS- 7
M0080-08	SS- 8
M0080-09	FD-01
M0080-09 MS	FD-01 MS (Hexavalent Chromium)
M0080-09 MD	FD-01 MD (Hexavalent Chromium)

Soil samples were validated for TCLP Inorganic analyses and hexavalent chromium by the US EPA Region II data validation SOP (HW-2, Revision 13). Data were reviewed for usability according to the following criteria:

* - Data Completeness
* - Holding Times
* - Calibration Verification
  - CRDL Standards
* - Laboratory Control Sample
  - Serial Dilutions
  - Calibration Blanks
  - Field Blanks
  - Preparation Blanks
  - Matrix Spike
  - Duplicate Analyses
* - ICP Interference Check Sample
* - Detection Limit Results
* - Linear Range
* - Sample Results

* - Indicates that all criteria were met for this parameter.

Data Validation Summary

Hexavalent chromium was not recovered from the matrix spike duplicate (0%). The hexavalent chromium data were flagged with the “J” qualifier and technically rejected.

No other problems were detected with the analyses.

Holding Times

All samples were analyzed within the required holding times.

CRDL Standards

CRDL standards were not analyzed.

Initial and Continuing Calibrations

No problems were detected with any of the calibrations associated with this sample delivery group.

Preparation Blank

No compounds were detected in the one preparation blank associated with the digestions of these samples at concentrations above the CRDL. Several analytes were found in the preparation blank at concentrations between the CRDL and instrument detection limit. These very low concentrations are not required to be noted in the data validation summary table.

Calibration Blanks

Several analytes were found in the continuing calibration blanks at concentrations between the CRDL and instrument detection limit. These very low concentrations are not required to be noted in the data validation summary table and do not affect the end use of the data.

Field Blank

A field blank was not analyzed with this sample delivery group.

ICP Interference Check Sample

All ICP check samples recoveries were within the 80% - 120% limits.

Matrix Spike Recovery

Sample M0080-09 / FD-01 was analyzed as the matrix spike and matrix spike duplicate for hexavalent chromium.

The recovery in the matrix spike was 23%, but the recovery in the matrix spike duplicate was 0%.

The data for the hexavalent chromium analyses were technically rejected and flagged with the “J” qualifier due to the lack of matrix spike recovery

A matrix spike was not analyzed for the ICP analytes.

Duplicate Analysis

The matrix duplicate was not analyzed.

Laboratory Control Sample

All laboratory control samples were within the required limits.

Serial Dilutions

A serial dilution was not analyzed.

Instrument Detection Limit

No problems were found with the instrument detection limits.

ICP Linear Ranges

No problems were detected with the linear ranges.

Sample Results

Note: The laboratory used the “B” qualifier to denote sample concentrations between the instrument detection limit and CRDL. This was changed to the “J” qualifier in the interpreted qualifiers column of the EDD.

No other problems were detected with any of these samples.

Matrix spikes were performed on samples: FD-01_01/21/2013 (M0080-09AMS), FD-01_01/21/2013 (M0080-09AMSD) and FD-01_01/21/2013 (M0080-09AMSI).
Percent recoveries were within the QC limits with the following exceptions:
FD-01_01/21/2013 (M0080-09AMS) recovery is below criteria for Chromium, Hexavalent at 23% with criteria of (75-125).
FD-01_01/21/2013 (M0080-09AMSD) recovery is below criteria for Chromium, Hexavalent at 0% with criteria of (75-125).

Soil samples were validated for inorganic analyses by the US EPA Region II data validation SOP (HW-2, Revision 13). Data were reviewed for usability according to the following criteria:

* * - Data Completeness
* * - Holding Times
* * - Calibration Verification
  - CRDL Standards
* * - Laboratory Control Sample
  - Serial Dilutions
* * - Calibration Blanks
  - Field Blanks
  - Preparation Blanks
  - Matrix Spike
  - Duplicate Analyses
* * - ICP Interference Check Sample
* * - Detection Limit Results
* * - Linear Range
* * - Sample Results

* - Indicates that all criteria were met for this parameter.

Data Validation Summary

The problems with the matrix spike, matrix duplicate and serial dilution should be noted.

These are described in detail below

No other problems were detected with the analyses.

Holding Times

All samples were analyzed within the required holding times.

CRDL Standards

CRDL standards were not analyzed.

Initial and Continuing Calibrations

No problems were detected with any of the calibrations associated with this sample delivery group.

Preparation Blank

No compounds were detected in the one preparation blank associated with the digestions of these samples at concentrations above the CRDL. Several analytes were found in the preparation blank at concentrations between the CRDL and instrument detection limit. These very low concentrations are not required to be noted in the data validation summary table.

Calibration Blanks

Several analytes were found in the continuing calibration blanks at concentrations between the CRDL and instrument detection limit. These very low concentrations are not required to be noted in the data validation summary table and do not affect the end use of the data.

Field Blank

A field blank was not analyzed with this sample delivery group.

ICP Interference Check Sample

All ICP check samples recoveries were within the 80% - 120% limits.

Matrix Spike Recovery

Percent recoveries were within the QC limits with the following exceptions: DUP 1 (L1966-20AMS), Spike sample recovery is below criteria for Antimony at 39% with criteria of (75-125).

The data for antimony were flagged with the “J” qualifier and are estimated values.

Duplicate Analysis

Duplicate analyses were performed on sample: DUP 1 (L1966-20ADUP).

Relative percent differences were within the 20% QC limit with the exceptions of

Aluminum (34%), Barium (43%), Beryllium (59%), Cadmium (44%), Calcium (57%), Cobalt (59%), Lead (54%), Magnesium (46%), Manganese (37%), Nickel (51%), Potassium (28%), Selenium (44%), Sodium (49%),Thallium (66%), Vanadium (29%) and Zinc (47%).

The data for these compounds were flagged with the “J” qualifier and are estimated values.

Laboratory Control Sample

All laboratory control samples were within the required limits.

Serial Dilutions

Serial Dilution analyses were performed on sample DUP 1 (L1966-20ASD).

Percent differences were within the QC limits with the exception of the following: DUP 1 (L1966-20ASD).

The serial dilution analysis was not within control limit for Cobalt (16%), Nickel (10%) and Zinc (13%).

The data for these compounds were flagged with the J qualifier and are estimated values.

Instrument Detection Limit

No problems were found with the instrument detection limits.

ICP Linear Ranges

No problems were detected with the linear ranges.

Sample Results

Note: The laboratory used the “B” qualifier to denote sample concentrations between the instrument detection limit and CRDL. This was changed to the “J” qualifier in the interpreted qualifiers column of the EDD.

No other problems were detected with any of these samples.

  - Preparation Blanks
  - Matrix Spike
  - Duplicate Analyses
* * - ICP Interference Check Sample
* * - Detection Limit Results
* * - Linear Range
* * - Sample Results

* - Indicates that all criteria were met for this parameter.

Data Validation Summary

The problems with the matrix spike, matrix duplicate and serial dilution should be noted.

These are described in detail below

No other problems were detected with the analyses.

Holding Times

All samples were analyzed within the required holding times.

CRDL Standards

CRDL standards were not analyzed.

Initial and Continuing Calibrations

No problems were detected with any of the calibrations associated with this sample delivery group.

Preparation Blank

No compounds were detected in the one preparation blank associated with the digestions of these samples at concentrations above the CRDL. Several analytes were found in the preparation blank at concentrations between the CRDL and instrument detection limit. These very low concentrations are not required to be noted in the data validation summary table.

Calibration Blanks

Lead was detected in the 10/02/12 17:09 continuing calibration blank at a concentration of 11 ug/l.

All of the lead concentrations in the samples were too high to be affected by the low level blank contamination.

Several analytes were found in the other continuing calibration blanks at concentrations between the CRDL and instrument detection limit. These very low concentrations are not required to be noted in the data validation summary table and do not affect the end use of the data.

Field Blank

A field blank was not analyzed with this sample delivery group.

ICP Interference Check Sample

All ICP check samples recoveries were within the 80% - 120% limits.

Matrix Spike Recovery

Sample SB-16 0-4 (L1967-20AMS) was used for the matrix spike.

All percent recoveries were within the 75% - 125% QC limits with the exceptions of antimony (38%), nickel (73%), selenium (0%) and thallium (22%).

The data for selenium were flagged with the “R” qualifier and technically rejected when it was not detected in a sample.

The selenium data were flagged with the “J” qualifier when they were detected in a sample.

The data for the remaining compounds were flagged with the “J” qualifier and are estimated values.

Duplicate Analysis

The duplicate analyses was performed on sample SB-16 0-4 (L1967-20ADUP).

Relative percent differences were within the 20% QC limit with the exceptions of antimony (31%) and copper (89%).

The data for these compounds were flagged with the “J” qualifier and are estimated values.

Laboratory Control Sample

All laboratory control samples were within the required limits.

Serial Dilutions

The Serial Dilution analysis were performed on sample SB-16 0-4 (L1967-20ADUP).

All percent differences were less than 10% QC limits with the exceptions of arsenic (29%), cadmium (31%), cobalt (19%), lead (16%), magnesium (14%), nickel (13%) and vanadium (18%).

The data for these compounds were flagged with the J qualifier and are estimated values.

Instrument Detection Limit

No problems were found with the instrument detection limits.

ICP Linear Ranges

No problems were detected with the linear ranges.

Sample Results

Note: The laboratory used the “B” qualifier to denote sample concentrations between the instrument detection limit and CRDL. This was changed to the “J” qualifier in the interpreted qualifiers column of the EDD.

No other problems were detected with any of these samples.

Soil samples were validated for inorganic analyses by the US EPA Region II data validation SOP (HW-2, Revision 13). Data were reviewed for usability according to the following criteria:

* * - Data Completeness
* * - Holding Times
* * - Calibration Verification
  - CRDL Standards
* * - Laboratory Control Sample
  - Serial Dilutions
  - Calibration Blanks
  - Field Blanks
  - Preparation Blanks
  - Matrix Spike
  - Duplicate Analyses
* * - ICP Interference Check Sample
* * - Detection Limit Results
* * - Linear Range
* * - Sample Results

* - Indicates that all criteria were met for this parameter.

Data Validation Summary

The problems with the matrix spike, matrix duplicate and serial dilution should be noted.

These are described in detail below

No other problems were detected with the analyses.

Holding Times

All samples were analyzed within the required holding times.

CRDL Standards

CRDL standards were not analyzed.

Initial and Continuing Calibrations

No problems were detected with any of the calibrations associated with this sample delivery group.

Preparation Blank

No compounds were detected in the one preparation blank associated with the digestions of these samples at concentrations above the CRDL. Several analytes were found in the preparation blank at concentrations between the CRDL and instrument detection limit. These very low concentrations are not required to be noted in the data validation summary table.

Calibration Blanks

Several analytes were found in the continuing calibration blanks at concentrations between the CRDL and instrument detection limit. These very low concentrations are not required to be noted in the data validation summary table and do not affect the end use of the data.

Field Blank

A field blank was not analyzed with this sample delivery group.

ICP Interference Check Sample

All ICP check samples recoveries were within the 80% - 120% limits.

Matrix Spike Recovery

Sample SB-25 4-8 (L1968-20AMS) was used for the matrix spike.

All percent recoveries were within the 75% - 125% QC limits with the exceptions of antimony (46%), arsenic (56%), nickel (705%), selenium (0%), thallium (0%) and zinc (37%).

The data for selenium and thallium were flagged with the “R” qualifier and technically rejected when they were not detected in a sample.

The selenium and thallium data were flagged with the “J” qualifier when they were detected in a sample.

The data for the remaining compounds were flagged with the “J” qualifier and are estimated values.

Duplicate Analysis

The duplicate analyses was performed on sample SB-25 4-8 (L1968-20ADUP).

Relative percent differences were within the 20% QC limit with the exceptions of aluminum (22%), barium (33%), chromium (22%), lead (22%), nickel (59%), potassium (91%), sodium (142%), vanadium (50%) and zinc (24%).

The data for these compounds were flagged with the “J” qualifier and are estimated values.

Laboratory Control Sample

All laboratory control samples were within the required limits.

Serial Dilutions

The serial dilution analysis was performed on sample SB-25 4-8 (L1968-20ASD).

All percent differences were less than 10% QC limits with the exceptions of arsenic (29%), beryllium (12%), cadmium (64%), cobalt (17%), lead (19%), magnesium (16%), nickel (17%), potassium (10%), sodium (76%), vanadium (36%) and zinc (23%).

The data for these compounds were flagged with the J qualifier and are estimated values.

Instrument Detection Limit

No problems were found with the instrument detection limits.

ICP Linear Ranges

No problems were detected with the linear ranges.

Sample Results

Note: The laboratory used the “B” qualifier to denote sample concentrations between the instrument detection limit and CRDL. This was changed to the “J” qualifier in the interpreted qualifiers column of the EDD.

No other problems were detected with any of these samples.

RE: Validation of the Buffalo Lakeside Commerce Park Site Analytical Data Packages
Data Usability Summary Report (DUSR)

Spectrum Analytical Inc. SDG Nos. N1176, N1181, N1194, N1205, N1208, N1220, and N1221

Dear Ms. Picunas:

Review has been completed for the data packages generated by Spectrum Analytical Laboratories that pertain to samples collected between 07/07/14 and 07/15/14 at the Buffalo Lakeside Commerce Park site. Sixty-seven soil samples, eight soil field duplicates, eleven aqueous samples, and two aqueous field duplicates were processed for site-specific semivolatile PAHs and metals, total cyanide, and hexavalent chromium. The analytical methodologies utilized are USEPA SW846 methods 8270D, 6010C, 9012, and 7196.

The data packages submitted by the laboratory contain full deliverables for validation, but this usability report is generated from review of the QC summary form information, with full review of sample raw data and limited review of associated QC raw data. The reported QC summary forms and sample raw data have been reviewed for application of validation qualifiers, with guidance from the USEPA national and regional validation documents, and in consideration for the specific requirements of the analytical methodology. The following items were reviewed:

The following items were reviewed:

* Data Completeness
* Case Narrative
* Custody Documentation
* Holding Times
* Surrogate and Internal Standard Recoveries
* Method, Field, and Trip Blanks
* Matrix Spike Recoveries/Duplicate Correlations
* Field Duplicate Correlations
* Laboratory Control Sample (LCS)
* Instrumental Tunes
* Initial and Continuing Calibration Standards
* Method Compliance
* Sample Result Verification

Those items listed above which show deficiencies are discussed within the text of this narrative. All of the other items were determined to be acceptable for the DUSR level review, as discussed in NYS DER-10 Appendix B section 2.0 (c). Documentation of the outlying parameters cited in this report can be found in the laboratory data package.

In summary, results for target analyte are usable either as reported or with minor qualification/ edit, with the following exceptions:

- the results for the three semivolatile phenolic analytes in one sample are not usable
- the results for selenium and thallium are not usable in one sample due to an apparent matrix effect

It is also noted that there is evidence of non-homogeneity in the soil samples, as indicated by poor field duplicate correlations in some instances.

Data completeness exceeds 95%, and accuracy, representativeness, comparability, and sensitivity are acceptable.

Copies of the client sample identifications are attached to this text. Also included in this report are client results EDDs with recommended qualifiers/edits applied in red.

Chain-of-Custody/Sample Receipt

Due to elevated temperature at sample receipt (after extended time in transit over a weekend), the results for the semivolatiles, total cyanide, and hexavalent chromium in six samples and two field duplicates reported in SDG N1205 have been qualified as estimated, and may have a low bias.

The second page of the custodies for samples reported in N1181 does not show the matrix entries.

Blind Field Duplicate

The blind field duplicate evaluations of SB-06-10-070714, SB-11-10-070814, SS-04-070914, SS-10-070914, SS-24-071014, SS-37-071114, SS-44-071114, SS-47-071414, GW-TP-08-071114, and GW-TP-09-071414 show acceptable correlations, with the following exceptions, results for which are qualified as estimated in the indicated parent sample and its field duplicate:

- naphthalene, aluminum, barium, cadmium, calcium, chromium, lead, magnesium, zinc, and total cyanide in SB-06-10-070714
- all semivolatile detections, arsenic, cadmium, chromium, cobalt, copper, iron, lead, manganese, nickel, sodium, thallium, vanadium, and zinc in SB-11-10-070814
- antimony, beryllium, calcium, copper, nickel, sodium, and thallium in SS-04-070914
- chromium, iron, sodium, and vanadium in SS-10-070914
- selenium and thallium in SS-24-070914
- aluminum, barium, beryllium, calcium, magnesium, sodium, zinc, and total cyanide in SS-37-071114
- nickel and total cyanide in SS-47-071414
- total cyanide in GW-TP-09-071414

The total cyanide result for SS-37-071114 varies widely from that of its duplicate, at 6.9 mg/kg and non-detect at a reporting limit of 0.5 mg/kg. SS-44-071114 shows similar variance, at 4.3 mg/kg and <0.5 mg/kg. Similar variances were observed in total cyanide laboratory duplicates (detailed later in this text).

The field duplicate of SB-11-10-070814 shows poor correlation to the parent sample for the semivolatiles (most are five to eight fold different in concentrations) and the metals (five are at least 90%RPD; some are more highly concentrated in the parent sample, and some are more highly concentrated in the duplicate).

The variance for naphthalene in SB-06-10-070714 was significant, with values of 150 ppb and 3800 ppb. The solids content of this sample that was determined at the subcontract laboratory (for the hexavalent chromium analysis) differed significantly from that determined at Pace Analytical. The result for hexavalent chromium is qualified as estimated as a result.

The solids content of SB-06-10-070714, SS-24-070914, and SS-37-071114 that were determined at the subcontract laboratory (for the hexavalent chromium analysis) differ significantly from those determined at Pace Analytical. The results for hexavalent chromium in those samples are therefore qualified as estimated.

Data Package Completeness

Raw data for the subcontracted soil hexavalent chromium analyses were submitted on request.

Semivolatile Analyses by EPA8270D

All of the surrogate recoveries for GW-TP-06-071514 were below required limits, including one acid surrogate value below 10%. Therefore the results for 2-methylphenol, 4-methylphenol, and pentachlorophenol in that sample are rejected and not usable. All other results, including the detected result for phenol, in that sample are qualified as estimated, with a low bias. The sample could not be re-extracted due to lack of available sample volume.

4-Methylphenol detections in the samples can be 3-methylphenol, as these two compounds are not distinguishable from one another in the analysis.

The following detections are edited as tentative in identification and estimated in value due to poor mass spectral quality:

- anthracene in SB-06-10-070714
- benzo(k)fluoranthene and benzo(g,h,i)perylene in SB-16-10-070814

The detections of 2-methylphenol in GW-TP-10-071414 and naphthalene in GW-TP-11-071414 are edited to reflect non-detection due to very poor mass spectral quality.

The standard reference spectra are incorrect on some of the sample files. Reported results are unaffected.

Results for analytes initially reported with the laboratory "E" flag are derived from the dilution analyses of the samples, thus reflecting responses within the established linear range of the instrument.

Internal standard responses are compliant. Instrument tunes meet fragmentation requirements.

Blanks show no contamination affecting sample results.

Matrix spike evaluations performed on SB-10-10-070814, SS-11-071014, SS-23-071014, SS-51-071414, and GW-TP-05-071514 show recoveries and duplicate correlations that are within the project required limits, indicating acceptable accuracy and precision.

The results for pentachlorophenol in GW-TP-05-071514, GW-TP-06-071514, GW-TP-07-071514, GW-TP-12-071514, and GW-FB-071514 are qualified as estimated due to low response (43%D) in the associated continuing calibration standard.

Metals Analyses by EPA 6010C

Results for selenium and thallium are rejected and not usable in SB-10-10-070814 due to failure of those elements to recover in the matrix spike of the sample.

The following additional matrix spike/duplicate evaluations show recoveries or correlations that are outside the recommended limits, indicating a matrix effect on analyte recovery from the samples. The results for the listed elements are qualified as estimated in the indicated parent sample:

Parent Sample	Element	%Recovery	%RPD
SB-10-10-070814	Aluminum		41
	Antimony	50	
	Barium		36
	Beryllium		>±2XCRDL
	Cadmium		55
	Chromium	322	
	Iron		40
	Nickel	73	46
SB-12-10-070814	Antimony	39	
	Chromium	73	
	Copper	161	
	Cadmium	68	
	Potassium		65
	Zinc	157	
SS-11-071014	Antimony	43	
	Cadmium	64	37
	Chromium	6	
	Thallium	64	>±2XCRDL
SS-23-071014	Antimony	45	
	Chromium		38
	Nickel	166	49
	Selenium	64	
SS-41-071114	Antimony	37	
	Arsenic	141	
	Chromium	62	66
	Nickel	58	
	Selenium	74	
	Thallium	69	

Parent Sample	Element	%Recovery	%RPD
SS-51-071414	Antimony	41	
	Beryllium		55
	Chromium	463	
	Magnesium		53
	Silver		51
	Sodium		>±2XCRDL

The matrix spikes of GW-TP-05-071514 show recoveries and correlations within validation guidelines.

The following ICP serial dilution correlations fall above the validation action limit, and results for the listed elements are qualified as estimated in the indicated parent sample:

Parent Sample	Element	%Difference
SB-10-10-070814	Arsenic	92
	Barium	18
	Beryllium	23
	Cadmium	26
	Chromium	18
	Cobalt	31
	Lead	27
	Magnesium	27
	Nickel	26
	Vanadium	74
	Zinc	36
SB-12-10-070814	Cadmium	29
	Cobalt	23
	Vanadium	17
	Zinc	19
SS-11-071014	Arsenic	16
	Cadmium	31
	Zinc	16
SS-23-071014	Cadmium	25
	Cobalt	18
	Vanadium	18
	Zinc	18
SS-41-071114	Arsenic	23
	Cadmium	29
	Cobalt	18
	Vanadium	23
	Zinc	19
SS-51-071114	Cadmium	40
	Cobalt	16

The ICP serial dilution of GW-TP-05-071514 shows acceptable correlations.

Although the results are not provided on summary forms in the data packages, the low level concentration ICP standards required of the protocol were processed and reported in the raw data.

Instrument performance is compliant.

Hexavalent Chromium and Total Cyanide Analyses by EPA 7196 and EPA 9012

The total cyanide matrix spikes of SB-06-10-070714, SB-10-10-070814, SS-FD-02-070914, SS-11-071014, SS-23-071014, and SS-40-071114 show outlying total cyanide recoveries and/or duplicate correlations. As with the field duplicates, the laboratory duplicates differed from the parent with one of the pair showing detection well above the reporting limits, and one showing non-detection. In that some of the post-digest spikes recoveries were also outside limits, a matrix effect as well as a nonhomogeneous matrix are suspected. All of the total cyanide results in the soil samples are qualified as estimated in value, with an unknown direction of bias.

Due to analyses performed outside the allowable holding time, the result for hexavalent chromium in the field blank FB-01-071114 is rejected, and the results for hexavalent chromium in GW-TP-08-071114 and GW-TP-DUP1-071114 are qualified as estimated.

The total cyanide matrix spike recoveries and duplicate correlations of SS-51-071414 and GW-TP-0-071514, and the hexavalent chromium matrix spike recovery and duplicate correlation of GW-TP-05071514, are within recommended ranges.

The insoluble hexavalent chromium matrix spikes of SS-51-071414 and SS-11-071014 show recoveries and correlations within the guidance limits. The insoluble hexavalent chromium matrix spikes of SB-10-10-070814 and SS-23-071014 show low recoveries (56% and 57%). The soluble hexavalent chromium matrix spikes recovered only at or below 10% for all four of those parent samples. However, those samples were in a reducing state, meaning that hexavalent chromium would have been converted to trivalent chromium in the natural matrix; a point proven by the failed and low recovery spikes. It must be noted that the laboratory entries on the report forms for many of the samples that are actually in a reducing state (shown by the pH/Redox measurements) incorrectly state that they are in an oxidizing state. Those forms should be regenerated and submitted by the laboratory.

The blanks show no contamination. Instrument performance was acceptable.

Please do not hesitate to contact me if questions or comments arise during your review of this report.

Very truly yours,

Judy Harry

VALIDATION DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
J-	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased low.
J+	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased high.
UJ	The analyte was analyzed for, but was not detected. The associated reported quantitation limit is approximate and may be inaccurate or imprecise.
NJ	The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control limits. The analyte may or may not be present.
EMPC	The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample.

RE: Validation of the Buffalo Lakeside Commerce Park Site Analytical Data Packages
Data Usability Summary Report (DUSR)
Spectrum Analytical Inc. SDG Nos. N1532, B1537, and N1547

Dear Ms. Picunas:

Review has been completed for the data packages generated by Spectrum Analytical Laboratories that pertain to samples collected between 08/25/14 and08/28/14 at the Buffalo Lakeside Commerce Park site. Twelve aqueous samples and one aqueous field duplicates were processed for site-specific semivolatile PAHs and metals, total cyanide, and hexavalent chromium. The analytical methodologies utilized are USEPA SW846 methods 8270D, 6010C, 9012, and 7196.

The data packages submitted by the laboratory contain full deliverables for validation, but this usability report is generated from review of the QC summary form information, with full review of sample raw data and limited review of associated QC raw data. The reported QC summary forms and sample raw data have been reviewed for application of validation qualifiers, with guidance from the USEPA national and regional validation documents, and in consideration for the specific requirements of the analytical methodology. The following items were reviewed:

The following items were reviewed:

* Data Completeness
* Case Narrative
* Custody Documentation
* Holding Times
* Surrogate and Internal Standard Recoveries
* Method, Field, and Trip Blanks
* Matrix Spike Recoveries/Duplicate Correlations
* Field Duplicate Correlations
* Laboratory Control Sample (LCS)
* Instrumental Tunes
* Initial and Continuing Calibration Standards
* Method Compliance
* Sample Result Verification

Those items listed above which show deficiencies are discussed within the text of this narrative. All of the other items were determined to be acceptable for the DUSR level review, as discussed in NYS DER-10 Appendix B section 2.0 (c). Documentation of the outlying parameters cited in this report can be found in the laboratory data package.

In summary, results for target analyte are usable either as reported or with minor qualification/edit.

Data completeness exceeds 95%, and accuracy, representativeness, reproducibility, sensitivity, and comparability are acceptable.

Copies of the client sample identifications are attached to this text. Also included in this report are client results EDDs with recommended qualifiers/edits applied in red.

Chain-of-Custody/Sample Receipt

The laboratory receive date for samples reported in SDG N1547 should have been 08/2/8/14, not 08/27/14.

The custody forms do not have fields for relinquish date/time, only receipt date/time.

Blind Field Duplicate

The blind field duplicate evaluation of WG-TP-08-082514 shows acceptable correlations for all analytes.

Data Package Completeness

Raw data for the hexavalent chromium analyses in N1537 were submitted on request.

Semivolatile Analyses by EPA8270D

The 4-methylphenol detections in the samples can be 3-methylphenol, as these two compounds are not distinguishable from one another in the analysis.

Surrogate and internal standard responses are compliant. Instrument tunes meet fragmentation requirements. Blanks show no contamination.

The matrix spike evaluation was performed on WG-TP-02-082514, and show recoveries and duplicate correlations that are within the project required limits, indicating acceptable accuracy and precision.

Metals Analyses by EPA 6010C

The matrix spikes of GW-TP-02-082514 show recoveries and correlations within validation guidelines.

The ICP serial dilution of GW-TP-02-082514 shows acceptable correlations.

Although the results are not provided on summary forms in the data packages, the low level concentration ICP standards required of the protocol were processed and reported in the raw data.

Instrument performance is compliant.

Hexavalent Chromium and Total Cyanide Analyses by EPA 7196 and EPA 9012

WG-TP-02-082514, WG-TP-DUP1-082514, and WG-TP-07-082614 produced hexavalent chromium detected results falling between 37 ug/L and 41 ug/L. However, the total chromium results for those samples are non-detection at concentrations below 1 ug/L. The total chromium results are much less susceptible to matrix interferences, and those for hexavalent chromium in those samples are likely false positives. The results for hexavalent chromium in WG-TP-02-082514, WG-TP-DUP1-082514, and WG-TP-07-082614 are edited to reflect non-detection at elevated reporting limits corresponding to the originally reported concentrations.

The total cyanide matrix spike recoveries and duplicate correlations of WG-TP-02-082514 are acceptable. The hexavalent chromium matrix spike recovery of that parent sample is low, at 50%. The result for that analyte in WG-TP-02-082514 is qualified as estimated in value, with a possible low bias.

WG-TP-06-082814 was processed at fivefold dilution due to matrix interference, resulting in a proportionally elevated reporting limit.

The blanks show no contamination. Instrument performance was acceptable.

The raw data for hexavalent chromium were not present in the data package for SDG N1537, but were provided upon request.

Please do not hesitate to contact me if questions or comments arise during your review of this report.

Very truly yours,

Judy Harry

VALIDATION DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
J-	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased low.
J+	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased high.
UJ	The analyte was analyzed for, but was not detected. The associated reported quantitation limit is approximate and may be inaccurate or imprecise.
NJ	The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control limits. The analyte may or may not be present.
EMPC	The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample.

RE: Validation of the Buffalo Lakeside Commerce Park Site Analytical Data Packages
Data Usability Summary Report (DUSR)
Spectrum Analytical Inc. SDG Nos. N1727, B1741, and N1761

Dear Ms. Picunas:

Review has been completed for the data packages generated by Spectrum Analytical Laboratories that pertain to samples collected between 09/17/14 and 09/19/14 at the Buffalo Lakeside Commerce Park site. The total and dissolved fractions (unfiltered and filtered) of twelve aqueous samples and two field duplicates were processed for TAL metals (excluding mercury), total cyanide, amenable cyanide, and Physical Available Cyanide (PAC). Six sediment samples and a field duplicate were also processed for those same parameters. The analytical methodologies utilized are USEPA SW846 methods 6010C, and 9012, and method 335.4. The weak acid dissociable cyanide analyses reported the data packages did not undergo validation review.

The data packages submitted by the laboratory contain full deliverables for validation, but this usability report is generated from review of the QC summary form information, with full review of sample raw data and limited review of associated QC raw data. The reported QC summary forms and sample raw data have been reviewed for application of validation qualifiers, with guidance from the USEPA national and regional validation documents, and in consideration for the specific requirements of the analytical methodology. The following items were reviewed:

The following items were reviewed:

* Data Completeness
* Case Narrative
* Custody Documentation
* Holding Times
* Surrogate and Internal Standard Recoveries
* Method, Field, and Trip Blanks
* Matrix Spike Recoveries/Duplicate Correlations
* Field Duplicate Correlations
* Laboratory Control Sample (LCS)
* Instrumental Tunes
* Initial and Continuing Calibration Standards
* Method Compliance
* Sample Result Verification

Those items listed above which show deficiencies are discussed within the text of this narrative. All of the other items were determined to be acceptable for the DUSR level review, as discussed in NYS DER-10 Appendix B section 2.0 (c). Documentation of the outlying parameters cited in this report can be found in the laboratory data package.

In summary, results for the target metals analytes are usable either as reported or with minor qualification/edit.

The cyanide data show several items of concern, discussed later in this report. Of greatest concern are the amenable cyanide data, some of which show higher responses for cyanide following the chlorination process than before.

Other concerns relate to inconsistencies observed between filtered and unfiltered concentrations of cyanides in some of the samples, and in field duplicate correlations of the cyanides in the aqueous samples. It is not apparent whether these variances are due to sample matrix (including interferences or non-homogeneity), analytical method or processing anomalies, or human error. Because there are also numerous outlying matrix spike recoveries for the various cyanide methods, it does appear that the matrix or method anomalies are more likely than human error. In a couple of instances, the samples showing variances from the expected values were reanalyzed with consistent results.

For metals analytes, data completeness exceeds 95%, and accuracy, representativeness, reproducibility, sensitivity, and comparability are acceptable. For the cyanides, although no data are rejected, results should be used with caution.

Copies of the client sample identifications are attached to this text. Also included in this report are client results EDDs with recommended qualifiers/edits applied in red.

Chain-of-Custody

The custody form requests TAL metals; however, mercury is not processed/reported.

The field custody forms associated with the samples reported in SDG N1761 do not include the entry for the relinquish time.

The time of collection of the field duplicates should not have been entered on the custody forms.

Blind Field Duplicate

The blind field duplicate evaluations of BASIN-U-2-20140917, BASIN-F-2-20140917, and BASIN-3-SED-20140918 shows acceptable correlations, with the following exceptions, results for which are qualified in the indicated parent sample and its associated duplicate:

- iron (132%RPD), manganese (154%RPD), magnesium (55%RPD), zinc (>±2XCRDL) , and total cyanide (>±2XCRDL) in BASIN-U-2-20140917
- total cyanide and amenable cyanide (>±2XCRDL) in BASIN-F-2-20140917

Both of the total and amenable cyanide values in BASIN-F-2-20140917 vary by about an order of magnitude from the field duplicate, with the field duplicate showing the higher concentrations. That filtered field duplicate also shows higher concentrations than the unfiltered fraction for those two analytes. Those results should be used with caution.

Metals Analyses by EPA 6010C

Due to very low solids content, results for BASIN-2-SED-20140918 (13%) and BASIN-3-SED-2014-0918 (28%) are qualified as estimated.

The matrix spikes of BASIN-F-1-20140917, BASIN-U-2-20140917, BASIN-2-SED-20140918, CB-2-SED-20140919, CB-2-F-20140919, OUTFALL-F-20140919, and OUTFALL-U-20140919 show recoveries and correlations within validation guidelines, with the following exceptions, results for which are qualified as estimated in the indicate parent sample:

- aluminum (27%RPD) in BASIN-F-1-20140917
- potassium (127%RPD and 126%RPD) in BASIN-2-SED-20140918
- aluminum (408% and 444%), potassium (134% and 130%), and sodium (127% and 126%) in CB-2-SED-20140919

The ICP serial dilution evaluations of BASIN-F-1-20140917, BASIN-U-2-20140917, BASIN-2-SED-20140918, CB-2-SED-20140919, CB-2-F-20140919, OUTFALL-F-20140919, and OUTFALL-U-20140919 show acceptable correlations.

Instrument performance is compliant.

Total and filtered fractions correlate well.

Total, PAC, and Amenable Cyanide Analyses by EPA 9012

Due to very low solids content, results for BASIN-2-SED-20140918 (13%) and BASIN-3-SED-2014-0918 (28%) are qualified as estimated.

As discussed in the laboratory narrative, the analyses for amenable cyanide in BASIN-F-1-20140917, BASIN-U-1-20140917, BASIN-U-DUP-20140917, TP-11-U-20140918, BASIN-DUP-SED-20140918, BASIN-1-SED-20140918, BASIN-2-SED-20140918, BASIN-3-SED-20140918, CB-1-U-20141919, CB-2-F-20141919, CB-2-U-20141919, CB-3-U-20141919, CB-4-F-20141919, and CB-4-U-20141919 produced a negative result (following the subtraction of the response following chlorination from the total cyanide concentrations), possibly due to breakdown or interferences from the chlorination process. Due to this matrix effect, the amenable cyanide results in those samples are qualified as estimated in value, but may be of borderline usability.

Several of the samples show significantly higher concentrations (by up to an order of magnitude) in the filtered (dissolved) fraction than the unfiltered fraction. The reason for these variances is not evident in the data packages. The following results have been qualified as estimated in both fractions of the indicated samples:

Sample ID	Total Cyanide	Amenable Cyanide	PAC
TP-6-20140918			X
TP-8-20140918		X	
TP-10-20140918	X	X	X
BASIN-DUP-20140917	X	X	
OUTFALL-20140919	X	X	
CB-2-20140919	X		
CB-3-20140919	X	X	
CB-4-20140919	X		

The following matrix spike/duplicate evaluations were performed:

- Total cyanide on BASIN-F-2-20140917, BASIN-F-DUP-20140917, BASIN-U-2-20140917, BASIN-2-SED-20140918, TP-8-F-20140918, TP-11-F-20140918, TP-10-U-20140918, TP11-U-20140918, CB-1-U-20140919, CB-3-U-20140919, OUTFALL-U-20140919, and CB-2-SED-20140919
- PAC in BASIN-U-2-20140917, BASIN-F-2-20140917, TP-08-U-20140918, BASIN-2-SED-20140918, CB-4-F-20140919, CB-4-U-20140919, and CB-2-SED-20140919

The following significant matrix spike recovery/duplicate correlation outliers were noted, with results qualified as estimated in the indicated parent sample:

- Total cyanide in BASIN-F-2-20140917 (44%, 78%RPD), BASIN-U-2-20140917 (4% and 18%), TP-11-U-20140918 (52% and 16%), CB-1-U-20140919 (38% and 132%; 92%RPD), and CB-2-SED-20140919 (51% and 97%; 49%RPD)
- PAC (30% and 78%) in TP-08-U-20140918, CB-4-F-20140919 (0% and 57%) and CB-2-SED-20140919 (55% and 57%)

The blanks show no contamination affecting sample reported results. Instrument performance was acceptable.

Raw data run logs should better clarify the differences between the total cyanide and amenable cyanide analyses of the samples. The scratch-overs on the raw data should have been dated and initialed.

Please do not hesitate to contact me if questions or comments arise during your review of this report.

Very truly yours,

Judy Harry

VALIDATION DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
J-	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased low.
J+	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased high.
UJ	The analyte was analyzed for, but was not detected. The associated reported quantitation limit is approximate and may be inaccurate or imprecise.
NJ	The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control limits. The analyte may or may not be present.
EMPC	The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample.

RE: Validation of the Buffalo Lakeside Commerce Park Site Analytical Data Packages
Data Usability Summary Report (DUSR)
TAL SDG Nos. 480-71154, 480-71163, 480-71165, 480-71249, 480-71360, 480-71459, 480-71528, 480-72717, and 480-72809
Alloway SDG Nos. M14-25759 and M14-26982

Dear Ms. Picunas:

Review has been completed for the data packages generated by Test America Laboratories (TAL) and Alloway that pertain to samples collected between 11/10/14 and 12/10/14 at the Buffalo Lakeside Commerce Park site. The total and dissolved fractions (unfiltered and filtered) of thirty one aqueous samples, sixty two soil samples, one soil field duplicate, and two aqueous field duplicates were processed for TCL semivolatiles, TAL metals, total cyanide and available cyanide. The soil samples, both fractions of twenty four of the aqueous samples, the soil field duplicate, and one aqueous field duplicate were also processed for Free cyanide. The Free cyanide analyses of the aqueous samples were processed by ASTM method D7237 by Alloway. Other analytical methodologies utilized are USEPA SW846 methods 6010C, 7470, 7471, 9012, 9013, and 9016.

The data packages submitted by the laboratory contain full deliverables for validation, but this usability report is generated from review of the QC summary form information, with full review of sample raw data and limited review of associated QC raw data. The reported QC summary forms and sample raw data have been reviewed for application of validation qualifiers, with guidance from the USEPA national and regional validation documents, and in consideration for the specific requirements of the analytical methodology. The following items were reviewed:

The following items were reviewed:

* Data Completeness
* Case Narrative
* Custody Documentation
* Holding Times
* Surrogate and Internal Standard Recoveries
* Method and Preparation Blanks
* Matrix Spike Recoveries/Duplicate Correlations
* Blind Field Duplicate Correlations
* Laboratory Control Sample (LCS)
* Instrumental Tunes

* Initial and Continuing Calibration Standards
* ICP Serial Dilution Evaluation
* Method Compliance
* Sample Result Verification

Those items listed above which show deficiencies are discussed within the text of this narrative. All of the other items were determined to be acceptable for the DUSR level review, as discussed in NYS DER-10 Appendix B section 2.0 (c). Documentation of the outlying parameters cited in this report can be found in the laboratory data package.

In summary, results for the most of the target metals analytes are usable either as reported or with minor qualification/edit. However, the following concerns are noted:

- Phenolic analytes in SB-04-1114-8-12 are not usable due to an apparent matrix effect
- Free cyanide in GW-TP8-1214-F, and available cyanide in SO-06-1114-12-16, SO-09-1114-16-20, and SED-CB-22-1214, are not usable due to apparent matrix effects
- The soil field duplicate evaluation, performed on SO-10-1114-0-4, shows poor correlations, indicating a non-homogenous matrix
- Many of the Tentatively Identified Compound (TIC) characterizations are not accurate

Data completeness exceeds 95%, and accuracy, representativeness, reproducibility, sensitivity, and comparability are acceptable. The frequency of aqueous field duplicates was acceptable for all analytes except Free cyanide. Two additional soil field duplicates should have been evaluated, and an additional soil matrix spike pair evaluation should have been performed for the semivolatile analytes. There is an over- abundance of matrix spike/duplicate evaluations for the metals and cyanide analytes.

Copies of the client sample identifications are attached to this text. Also included in this report are client results EDDs with recommended qualifiers/edits applied in red.

Chain-of-Custody/Sample Receipt

TestAmerica Laboratory reported samples SW-CB04-1114-U, SW-CB04-1114-F, SW-CB05-1114-U, and SW-CB05-1114-F with the prefix of "SO- " instead of "SW-".

The custody form for the available cyanide analyses on the soil samples reported in SDG 480-71459 does not include the year or time on the receipt date.

Edits to the custody forms should have been dated and initialed.

The preservatives were not noted on the field custody forms.

Blind Field Duplicate

The blind field duplicate evaluations of GW-TP6-1214-U, SW-CB03-1114-U show acceptable correlations, with the exception of that for Available Cyanide (50%RPD) in GW-TP6-1214-U, results for which are qualified in the indicated parent sample and its associated duplicate.

The field duplicate evaluation of SO-10-1114-0-4 shows poor correlations, with most elements showing outlying correlations, up to twentyfold variance, some higher in the parent, others in the

duplicate. The affected analytes are: arsenic (>2XRL), beryllium (67%RPD), cadmium (>2XRL), calcium (55%RPD), chromium (103%RPD), copper (128%RPD), iron (112%RPD), lead (179%RPD), magnesium (82%RPD), manganese (125%RPD), nickel (51%RPD), potassium (113%RPD), silver (>2XRL), zinc (180%RPD), and mercury (>2XRL).

TCL Semivolatile Analyses by EPA8270D

SB-04-1114-8-12 exhibited recoveries below 10% for the acid (phenolic) surrogate standards. Therefore, the results for the phenolic compounds in that sample are rejected, and not usable. This is typically a matrix effect, although reextraction to confirm that assumption was not performed.

The following detections are edited to reflect non-detection due to very poor mass spectral quality:

- benzo(a)anthracene in SB-03-1114-0-4 and SB-03-1114-4-8, SS-03-1114-4-8, and SE-CB13-1114-4-8
- nitrobenzene in SW-CB02-1114-U, SW-CB04-1114-F, and SW-CB05-1114-F
- di-n-butylphthalate, nitrobenzene, and n-nitroso-di-n-propylamine in SW-CB02-1114-F
- 4,6-dinitro-3-methylphenol and n-nitroso-di-n-propylamine in SW-CB01-1114-U
- 2,6-dinitrotoluene in SW-CB12-1114-F
- n-nitroso-di-n-propylamine in SW-CB03-1114-F and SW-CB05-1114-U
- nitrobenzene and n-nitroso-di-n-propylamine in SW-CB03-1114-U
- 4-nitroaniline and n-nitroso-di-n-propylamine in SW-BD01-1114-U
- di-n-octylphthalate in SO-10-1114-4-8

The following detections are qualified as tentatively identified compounds and estimated in value due to poor mass spectral quality:

- n-nitroso-di-n-propylamine in SW-CB01-1114-F
- fluorene and benzo(a)anthracene in SO-08-1114-4-8
- fluorene, benzo(a)anthracene, and acenaphthene in SO-08-1114-8-12
- acenaphthene in SO-09-1114-4-8
- fluorene and acenaphthene in SO-09-1114-8-12
- di-n-butylphthalate in SW-CB07-1114-F

The 4-methylphenol detections in the samples can be 3-methylphenol, or a mix of the two, as these two compounds are not distinguishable from one another in the analysis.

Calibration standards show responses within validation action levels, with the following exceptions, results for which are qualified as estimated in the indicated associated samples:

- benzaldehyde (30%D to 39%D) in samples SW-CB02-1114-U, SW-CB02-1114-F, SW-CB03-1114-F, SW-CB03-1114-U, SW-BD01-1114-U, SO-CB04-1114-U, SO-CB04-1114-F, SO-CB05-1114-U, SO-CB05-1114-F, SW-CB06-1114-F, and SW-CB06-1114-U, and all samples reported in SDG 480-71249
- bis (2-chloroisopropyl) ether (31%D and 43%D) in SED-CB21-1214, SED-CB22-1214, SED-CB23-1214, SED-CB24-1214, and in all samples reported in SDG 480-72717
- bis (2-chloroisopropyl) ether, 3-nitroanaline, and 3,3-dichlorobenzidine (21%D to 37%D) in samples GW-TP7-1214-U, GW-TP7-1214-F, GW-TP12-1214-U, and GW-TP12-1214-F

Due to presence in the associated blanks, the following detections are considered external contamination and have been edited to reflect non-detection:

- benzaldehyde, 2-methylphenol, and benzo(a)anthracene in samples reported in SDG 480-71163
- benzaldehyde, 2-methylphenol, and bis(2-ethylhexyl)phthalate in samples reported in SDG 480-71165
- benzaldehyde and bis(2-ethylhexyl)phthalate in samples reported in SDG 480-71249
- benzaldehyde, phenol, and bis(2-ethylhexyl)phthalate in samples reported in SDG 480-71360
- benzaldehyde and bis(2-ethylhexyl)phthalate in samples reported in SDG 480-71528
- bis(2-ethylhexyl)phthalate in samples reported in SDG 480-72717 and J72809

Due to very low solids content (12%), results for SE-CB12-1114 are qualified as estimated.

Surrogate and internal standard responses are compliant. Instrument tunes meet fragmentation requirements.

The matrix spike evaluations were performed on SB-03-1114-4-8, SW-CB02-1114-U, SB-07-1114-4-8, and GW-TP-09-1114-U, and show recoveries and duplicate correlations for twelve analytes that are within the guidance ranges, with the exception of those for phenol (222% and 281%) in GW-TP-09-1114-U. The result for that compound is qualified as estimated in that parent sample. The analytical protocol requires that all analytes be evaluated.

Total and filtered fractions correlate well, with the exception of that for 4-methylphenol in GW-TP3-1214-U, results for which are qualified as estimated in both fractions of the sample.

The aqueous methodology used by the laboratory produces non-target analyte responses in the samples and associated method blanks and QC, indicating that they are a product of laboratory processing. They are of significant concentration and, as they were reported in place of actual sample TICs, and the elution of those (relatively high concentration) TIC analysis artifacts mask actual sample non-target components. Therefore, the information of sample TIC constituency is not available. Additionally, the laboratory failed to recognize the spectrum for the extraction solvent (methylene chloride), and reported that response as an extremely high concentration TIC. Three of the data packages were revised to report the TICs in the method blanks, and to add the appropriate "B" flags to the associated sample detections. Upon validation, the affected TICs have been removed as reportable data, as they are not sample components.

The review of the TIC spectra was not properly performed. This resulted in identifications that are not accurate, particularly with those identified by the calibration quantitation software. If specific characterizations of the TICs is important for this project, the laboratory should re-review and re-report the TIC identifications according to the protocol. The TICs identified by the quantitation software have been qualified during validation as tentative in identification and estimated in value. Some, but not all, of the applicable identifications have been edited to be "Unknown".

Some of the samples were processed only at dilution, resulting in proportionally elevated reporting limits.

Metals Analyses by EPA 6010C

Due to very low solids content (12%), results for SE-CB12-1114 are qualified as estimated.

The matrix spikes of SB-03-1114-0-4 were evaluated for all elements except mercury, and produced outlying recoveries in the matrix spike for all elements for which the evaluation is applicable. Most recoveries in the matrix spike duplicate are also out of the acceptance range. Results for all elements in that sample except calcium, copper, iron, lead, manganese, mercury, and zinc have been qualified as estimated in value.

Matrix spikes/duplicates were also performed for the TAL metals on SO-07-1114-4-8, SW-CB06-1114-F, SW-CB02-1114, SO-10-1114-4-8, SW-CB13-1114-F, SO-10-1114-4-8, SS-04-1114, GW-TP09-1114-U, GW-TP11-1214, and SED-CB21-1214, and for mercury on SB-05-1114-0-4 and SB-02-1114-8-12, and show recoveries and correlations within validation guidelines, with the following exceptions, results for which are qualified as estimated in the indicate parent sample:

Parent Sample	Element	Outlying % Recoveries
SO-07-1114-4-8	antimony	53,44
	barium	130,171
	copper	54,60
	magnesium	51,-71
SO-10-1114-4-8	antimony	63,69
	magnesium	47,228
	nickel	74,71
SS-04-1114	aluminum	175,213
	copper	140,154
SED-CB21-1214	aluminum	333,377
	antimony	74,68
	barium	126,135
	potassium	164,170

The ICP serial dilution evaluations of SB-03-1114-0-4, SW-CB06-1114-F, SW-CB02-1114-U, SW-CB13-1114-F, SS-04-1114, GW-TP09-1114-U, GW-TP11-1214-U, and SED-CB21-1214 show acceptable correlations. The following serial dilution evaluations show outlying correlations, and the results for the listed elements have been qualified as estimated in the indicated parent sample:

Parent Sample	Element	%Difference
SO-07-1114-4-8	Beryllium	23
	Copper	25
SO-10-1114-4-8	Zinc	16

Instrument performance is compliant.

Total and filtered fractions correlate well, with the following exceptions, results for which are qualified as estimated in both fractions of the indicated samples:

- zinc in SW-CB10-1114
- copper in GW-TP8-1214
- aluminum in SW-CB20-1114
- aluminum, cobalt, iron, manganese, nickel, sodium, vanadium, and zinc in GW-TP09-1114

Some of the samples were processed a dilution for numerous elements due to interferences from iron.

Total, Free, and Available Cyanide Analyses by EPA 9012, 9013, 9016, and ASTM 7237-1

Due to presence at similar levels in the associated preparation blank, the detected results for Free cyanide in the samples reported in SDG 480-71459 are considered contamination and edited to reflect non-detection.

The following matrix spike (MS)/MSD)/duplicate evaluations were performed:

- Total cyanide on SB-01-1114-16-20, SB-03-1114-0-4, SB-01-1114-12-16 (duplicate only), SW-CB01-1114-U, SO-07-1114-12-16, SO-07-1114-4-8, SO-09-1114-16-20, SO-10-1114-4-8, SW-CB02-1114-U, SW-CB05-1114-F, SW-CB-14-1114-U, SW-CB-14-1114-F (8%), SS-07-1114 (Duplicate only), SS-04-1114 (MS only), SS-09-1114 (MS only), SW-CB16-1114-U (Duplicate only), SW-CB15-1114-U (MS only), GW-TP09-1114-F (MS only), GW-TP09-1114-U, GW-TP1-1214-U (Duplicate only), GW-TP11-1214-F, GW-TP3-1214-F, and SED-CB-22-1214
- Free cyanide on GW-TP09-1114-U, SW-CB05-1114-U, SW-CB19-1114-U, GW-TP12-1114-F, GW-TP11-1114-F, GW-TP8-1114-U, SB-01-1114-0-4, SO-07-1114-4-8, SS-01-1114, SED-CB15-1114
- Available cyanide on SB-01-1114-0-4 SB-03-1114-0-4, SO-06-1114-8-12, SO-07-1114-4-8, SS-01-1114, SE-CB12-1114, SO-09-1114-16-20, and SW-CB01-1114-U

Available cyanide on GW-TP09-1114-U, SS-01-1114, SB-01-1114-0-4, SE-CB12-1114, SB-03-1114-0-4, and SED-CB21-1214

Available cyanide failed to recover in the matrix spikes of SO-07-1114-4-8, SED-CB-22-1214, SO-09-1114-16-20, and SO-06-1114-12-16. Therefore, the result for that analyte in the parent samples SO-06-1114-12-16, SO-09-1114-16-20, and SED-CB-22-1214, which show no detection, are rejected and not usable. The result for that analyte in parent sample SO-07-1114-4-8, which shows a low detected value, is qualified as estimated. A significant low bias is expected to that result.

The following additional matrix spike recovery/duplicate correlation outliers were noted, with results qualified as estimated in the indicated parent sample:

- Total cyanide in SB-01-1114-16-20 (-34%), SW-CB-14-1114-U (8%), SB-03-1114-0-4 (23%D), SS-04-1114 (13%), SO-10-1114-4-8 (16%), SS-09-1114 (73%), SW-CB-15-1114-U (82%), GW-TP09-1114-F (112%), GW-TP11-1214-F (247%), and SED-CB-22-1214 (MS only) (16%)
- Available cyanide in SB-01-1114-0-4 (35% and 39%), SS-01-1114 (23% and 24%), SE-CB12-1114 (26% and 26%) and SB-03-1114-0-4 (21% and 20%)
- Free cyanide in SS-01-1114 (64% and 71%), SED-CB15-1114 (70% and 75%)

The summary Forms 3 for these evaluations are not complete.

The Free cyanide analysis of GW-TP8-1214-F was performed at least three times, at varying dilutions, and with inconsistent results. The reported value of 0.212 mg/L was significantly above that of the unfiltered fraction of the sample (0.009 mg/L); the unfiltered value was supported by the matrix spikes run on that sample. Based on what may be matrix interferences, the result for that filtered fraction of the sample has been rejected, and is not usable.

Other total and filtered fractions correlate well, with the following exceptions, results for which are qualified as estimated in both fractions of the indicated samples:

- Available cyanide in SW-CB-14-1114, GW-TP8-1214, GW-TP1-1214, GW-TP6-1214, GW-TP09-1114
- Total cyanide in GW-TP11-1214 and W-PP12-1214
- Free cyanide on GW-TP10-/1214

Due to very low solids content (12%), results for SE-CB12-1114 are qualified as estimated.

Please do not hesitate to contact me if questions or comments arise during your review of this report.

Very truly yours,

Judy Harry

VALIDATION DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
J-	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased low.
J+	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased high.
UJ	The analyte was analyzed for, but was not detected. The associated reported quantitation limit is approximate and may be inaccurate or imprecise.
NJ	The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control limits. The analyte may or may not be present.
EMPC	The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample.

RE: Validation of the Buffalo Lakeside Commerce Park Site Analytical Data Packages
Data Usability Summary Report (DUSR)
Spectrum SDG Nos. P0972, P0987, P0990, and P0991
Alloway SDG No. M15-16950

Dear Ms. Picunas:

Review has been completed for the data packages generated by Spectrum Analytical, Inc. and Alloway that pertain to samples collected between 05/26/15 and 05/29/15 at the Buffalo Lakeside Commerce Park site. The total and dissolved fractions (unfiltered and filtered) thirteen aqueous samples, ninety soil samples, four soil field duplicates, and three aqueous field duplicates were processed for site-specific semivolatiles, TAL metals, and total cyanide. The soil samples and duplicates were also processed for reactive cyanide and the aqueous samples and one of the field duplicates were also processed for free cyanide. Four additional soil samples were processed for total and reactive cyanide and two additional soil samples and three field duplicates were processed for reactive cyanide. The free cyanide analyses of the aqueous samples were processed by ASTM method D7237 by Alloway. Other analytical methodologies utilized are USEPA SW846 methods 8270-C, 6010C, 7470, 7471, and 9012.

The data packages submitted by the laboratory contain full deliverables for validation, but this usability report is generated from review of the QC summary form information, with full review of sample raw data and limited review of associated QC raw data. The reported QC summary forms and sample raw data have been reviewed for application of validation qualifiers, with guidance from the USEPA national and regional validation documents, and in consideration for the specific requirements of the analytical methodology. The following items were reviewed:

The following items were reviewed:

* Data Completeness
* Case Narrative
* Custody Documentation
* Holding Times
* Surrogate and Internal Standard Recoveries
* Method and Preparation Blanks
* Matrix Spike Recoveries/Duplicate Correlations
* Blind Field Duplicate Correlations
* Laboratory Control Sample (LCS)

* Instrumental Tunes
* Initial and Continuing Calibration Standards
* ICP Serial Dilution Evaluation
* Method Compliance
* Sample Result Verification

Those items listed above which show deficiencies are discussed within the text of this narrative. All of the other items were determined to be acceptable for the DUSR level review, as discussed in NYS DER-10 Appendix B section 2.0 (c). Documentation of the outlying parameters cited in this report can be found in the laboratory data package.

In summary, results for the most of the target metals analytes are usable either as reported or with minor qualification/edit. However, the following concerns are noted:

- phenolic analytes in four samples are not usable due to an apparent matrix effect
- significant variances were noted in some of the field and laboratory duplicate evaluations, particularly for the metal analytes

Data completeness exceeds 95%, and accuracy, representativeness, reproducibility, sensitivity, and comparability are acceptable. Precision outliers (noted below) have been qualified as estimated.

Copies of the client sample identifications are attached to this text. Also included in this report are client results EDDs with recommended qualifiers/edits applied in red.

Chain-of-Custody/Sample Receipt

The date of collection is not present on page 2 of the custodies for samples reported in SDG P0991. The date was obtained from the sample labels.

No relinquish entries were present on the custody forms for samples reported in SDG P0990

No relinquish or receipt entries or cooler temperatures are present on pages 2 through 4 of the custodies for samples reported in SDG P0991. The temperatures are entered on the login form.

The lack of custody transfer, dates, and times should have been noted in the case narratives.

Login forms indicate that sample tags differ from custody entries, but no specifics are given.

Blind Field Duplicate

The blind field duplicate evaluations of semivolatiles, metals, and total cyanide in CB-12-052815, CB-27-F-052915, CB-28-052915, SB-58-16-20-052715, SB-62-8-12-052715, SB-71-0-4-052915, and SB-71-4-8-052915 show correlations within the validation guidelines of >±2XRL/ 50%RPD, with the following exceptions, results for which are qualified in the indicated parent sample and its associated duplicate:

- aluminum, barium, beryllium, cadmium, magnesium, nickel, and sodium in SB-62-8-12-052715
- detected semivolatile analytes, cadmium, calcium, iron, and lead in SB-71-0-4-052915
- beryllium, calcium, magnesium, and nickel in SB-71-4-8-052915

The semivolatile concentrations of detected analytes in SB-71-0-4-052915 are two to fivefold higher in the parent sample than in the field duplicate.

The reactive cyanide field duplicate correlations on SB-67-0-4-052815, SB-68-8-12-052815, SB-69-8-12-052815, SB-71-0-4-052915, and SB-71-4-8-052915, and the free cyanide correlations for CB-27-F-052915, show acceptable correlations, as all report no detection.

Semivolatile Analyses by EPA8270D

Results for analytes initially reported with an "E" flag are derived from the dilution analyses of the samples.

CB-12-F-052815, CB-29-051915, CB-18-052815, and CB-18-F-052815 exhibit recoveries below 10% for the one or more of the acid (phenolic) surrogate standards. Therefore, the non-detected results for the phenolic compounds in those samples are rejected, and not usable. Detected values of phenolics in the samples are qualified as estimated, with a possible very low bias. This is typically a matrix effect, although reextraction to confirm that assumption was not performed.

The base/neutral compounds in CB-29-052915 are qualified as estimated due to low surrogate standard recoveries.

The following detections are edited to reflect non-detection due to very poor mass spectral quality:

- benzo(a)anthracene in SB-59 0-4-052715, SB-61A-4-8-052715, SB-62-8-12-052715
- fluoroanthene in SB-59A-8-12-052715
- acenaphthylene in SB-62-8-12-052715

The 4-methylphenol detections in the samples can be 3-methylphenol, or a mix of the two, as these two compounds are not distinguishable from one another in the analysis.

Calibration standards show responses within validation action levels.

Holding times were met. Internal standard responses are compliant. Instrument tunes meet fragmentation requirements.

The matrix spike evaluations were performed on SB-57-0-4-052715, SB-62-12-16-052715, SB-67-8-12-052815, CB-26-052915, and CB-29-F-052915, and show recoveries and duplicate correlations within validation action limits.

Total and filtered fractions correlate well, with the exception that low level detections below the RL are found in the filtered fractions of CB-18-052815 and SB-23-052815, but not in the unfiltered fractions.

Metals Analyses by EPA 6010C

Matrix spikes/duplicates were performed for metals on SB-56-12-16-052615, SB-57-0-4-052715, SB-62-12-16-052715, SB-65-4-8-052815, SB-67-8-12-052815, SB-73-8-12-052815, CB-26-052915, and CB-29F-052915, and for mercury on SB-67-12-16-052815, and show recoveries and correlations within validation guidelines, with the following exceptions, results for which are qualified as estimated in the indicated parent sample:

Parent Sample	Element	Outlying % Recoveries
SB-56-12-16-052615	antimony	62
SB-57-0-4-052715	antimony	53
	cadmium	73
	chromium	13
	selenium	47
SB-62-12-16-052715	antimony	58
	mercury	136
SB-65-4-8-052815	arsenic	71
	antimony	63
	cadmium	62
SB-67-8-12-052815	antimony	73

In addition, SB-73-8-12-052815 shows acceptable recoveries (and all except one serial dilution correlation, as noted below), but the laboratory duplicate correlations are very poor. The duplicate shows concentration for almost all of the detected analytes as about three times those of the parent sample. The reason for that variance is not evident in the raw data, and as the sample does not show significant matrix effects on recovery and serial dilution either a nonhomogenous matrix or human error is suspected. Since only one bottle was provided for the metals analysis, one would have expected a nonhomogenous matrix to show in the matrix spike aliquot as well. The detected results for that sample have been qualified as estimated in value, with a possible low bias.

Matrix spike recovery evaluations were not performed for aluminum, calcium, magnesium, manganese, potassium, and iron.

The ICP serial dilution evaluations of SB-56-12-16-052615, SB-62-12-16-052715, and CB-26-052915 show acceptable correlations. The following serial dilution evaluations show outlying correlations, and the results for the listed elements have been qualified as estimated in the indicated parent sample:

Parent Sample	Element	%Difference
SB-57-0-4-052715	aluminum	29
	beryllium	30
	cadmium	61
	calcium	31
	chromium	28
	copper	23
	cobalt	19
	magnesium	26
	manganese	15
	sodium	27
	thallium	87
	vanadium	33

Parent Sample	Element	%Difference
SB-65-4-8-052815	cadmium	55
	cobalt	25
SB-67-8-12-052815	sodium	18
SB-73-8-12-052815	sodium	25
CB-29-F-052915	potassium	45

Total and filtered fractions correlate well.

Total, Free, and Reactive Cyanide Analyses by EPA 9012, Chapter 7.3, and ASTM 7237-1

Please see the following excerpt from the laboratory case narrative regarding the limitations of the reactive cyanide analysis:

> "These samples do not exhibit the characteristics of reactivity as defined in 40 CFR 261.23, sections (1), (2) and (4); however, Spectrum Analytical, Inc. does not test for detonation, explosive reaction or potential, or forbidden explosives as defined in 40 CFR 261.23, sections (3), (6), (7) and (8).
> Reactive sulfide and cyanide are tested at a pH of 2 and not tested at all conditions between pH 2 and12.5 as stated in 40 CFR 261.23, section (5); thus reactive cyanide and sulfide results as reported in this document can not be used to support the nonreactive properties of these samples.
> The responsibility falls on the generator to use knowledge of the waste to determine if the waste meets or does not meet the descriptive, prose definition of reactivity."

Three of the four LCSs for free cyanide recovered above the upper limit (111% to 116%). Therefore, the detected result for that analyte in CB-21-052815 is qualified as estimated, with a possible high bias.

The following matrix spike (MS)/MSD)/duplicate evaluations were performed:

- Total cyanide MS/MSD on SB-55-8-12-05215, SB-57-0-4-052715, SB-61-0-4-052715, SB-62-12-16-052715, SB-68-4-8-052815, SB-67-8-12-052815, SB-63-16-20-052815, SB-71-16-20-052915, and CB-26-052915
- Free cyanide MS/MSD on CB-26-052915, CB-21-052815, and CB-DUP-01-052815
- Reactive cyanide laboratory duplicates of SB-52-4-8-052615, SB-57-0-4-052715, SB-62-12-16-052715, SB-65-4-8-052815, SB-67-8-12-052815, and SB-73-8-12-052915

Recoveries and correlations are acceptable, with the exception of those for total cyanide in SB-57-0-4-052715 (134% and 28%; 61%RPD). The result for total cyanide in that parent sample is qualified as estimated.

Total and filtered fractions correlate well, with the following exceptions, results for which are qualified as estimated in both fractions of the indicated samples: total cyanide in CB-20-052815, CB-23-052815, and CB-26-052815

The laboratory case narrative for reactive cyanide SDG P0987 is not included in the data package. The narrative in that package is the one for P0972.

Please do not hesitate to contact me if questions or comments arise during your review of this report.

Very truly yours,

Judy Harry

VALIDATION DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
J-	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased low.
J+	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased high.
UJ	The analyte was analyzed for, but was not detected. The associated reported quantitation limit is approximate and may be inaccurate or imprecise.
NJ	The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control limits. The analyte may or may not be present.
EMPC	The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample.

DATA VALIDATION SUMMARY REPORT
BUFFALO LAKESIDE COMMERCE PARK, BUFFALO, NEW YORK

Client: CDM Smith, Inc. Latham, New York
SDG: J13546
Laboratory: Test America, St. Louis, Missouri
Site: Buffalo Lakeside Commerce Park, Buffalo, New York
Date: November 17, 2015

Section A: Introduction

The samples and analytical methods included in this sample delivery group (SDG) are documented in Table 1 Sample Summary Table and Table 2 Method Summary (below). All data qualifications were reviewed and approved by the qualified data validation chemist at Environmental Data Services, Inc.

Compliance with the project QC criteria is documented in this data validation report. The checklist and tables summarize the data review process and summarize the data that are qualified due to non-conformance with the guidance document. Any major or minor concerns affecting data usability are summarized below.

Table 1: Sample Summary Table - Soil

EDS ID	Client Sample ID	Laboratory Sample ID	Matrix	QC Sample
1*	SB-80-0-3.6-20150824	160-13546-1	Soil	
2	SB-75-0-3.5-20150824	160-13546-2	Soil	
3	SB-77-0-9-20150824	160-13546-3	Soil	
4	SB-74-0-14-20150824	160-13546-4	Soil

10	SB-DUP1-20150825	160-13546-10	Soil	Field Duplicate

* - Analyzed for ICP/MS Metals Uranium and Thorium only

A full data validation was performed on the analytical data for ten soil samples collected on August 24-25, 2015 by CDM Smith at the Buffalo Lakeside Commerce Park site in Buffalo, New York. The samples were analyzed under the Environmental Protection Agency (USEPA) Test Methods as follows.

Specific method references are as follows in Table 2:

Table 2: Method Summary

Analysis	Method References
Metals (ICP/MS)	EPA Method 6020A
Radium-226 & Gamma Emitters (GS)	EPA Method 901.1
Gross Alpha/Beta	EPA Method 9310
Isotopic Uranium (Alpha Spectroscopy)	USDOE Method A-01-R

The data have been validated according to the protocols and quality control (QC) requirements of the analytical methods and the USACE Data Validation Guidelines as follows:

- USACE Kansas City and St. Louis District Radionuclide Data Quality Evaluation Guidance for Alpha and Gamma Spectroscopy, Revision 1, June 2004;
- and the reviewer's professional judgment.

Section B: Completeness Checklist

Do samples and analyses on the COC check against the lab login? Yes __×__ No ____
Were samples correctly preserved? Yes __×__ No ____
Did cooler arrive at the lab at appropriate temperature and in good condition? Yes __×__ No ____
Was the frequency of the laboratory QC correct? Yes __×__ No ____
Was the frequency of the field QC correct? Yes __×__ No ____
All forms and raw data complete? Yes __×__ No ____
Was the case narrative present and complete? Yes __×__ No ____

The following items/criteria were reviewed for this report to assess data usability:

Section C: Radiological Data Validation

- Holding times and preservation
- Calibration
- Method blank
- Field blank
- Sample Specific Chemical Recovery
- Laboratory Control Sample
- Matrix Spike
- Laboratory Replicate
- Field Replicate
- Quantitation
- Chemical Separation Specificity
- Target Radionuclide List Identification
- Matrix Density Variability

Part 1: Checklist for ICP/MS Metals (Uranium & Thorium), Radium-226, Gamma Emitters (GS), Gross Alpha/Beta, & Isotopic Uranium (Alpha Spectroscopy)

Holding Time: Were there any holding time violations? Yes ____ No __×__

- All samples were analyzed within the recommended holding time of 6 months.

Calibration: Does the calibration meet the QC criteria? Yes ____ No ____ NA__×__

- Calibration data were not included.

Method Blank: Did any targets in the samples exceed the QC criteria based on the method blank contamination? Yes__×__ No ____

- The method blanks were free of contamination.

Field Blank: Were there any targets in the Field Rinse Blank associated with potential blank contamination? Yes ____No ____ NA__×__

- Field blanks were not collected.

Sample-Specific Chemical Recovery: Did any sample-specific chemical recovery exceed the QC criteria? Yes ____ No ____ NA__×__

- Not applicable.

Laboratory Control Sample: Was the Laboratory Control Sample (LCS) and LCS Duplicate (as applicable) within the QC criteria for accuracy and precision? Yes __×__ No ____

- The LCS samples exhibited acceptable %R values.

Matrix Spike: Was the Matrix Spike/Matrix Spike Duplicate within the QC criteria for accuracy and precision? Yes __×__ No ____ NA _____

- Matrix spike/matrix spike duplicate samples exhibited acceptable %R and RPD values.

Laboratory Replicate: Did the laboratory replicate samples exceed the QC criteria for precision? Yes ____ No __×___

- The laboratory replicate samples exhibited acceptable RER values.

Field Duplicate: Did the field duplicate samples exceed the QC criteria for precision? Yes ____ No __×__

- Field duplicate results are summarized below.

Compound	SB-78-0-14-20150825 mg/kg	SB-DUP1-20150825 mg/kg	RPD	Qualifier
Uranium	2.3	2.2	4%	None
Thorium	2.9	3.0	3%	

Compound	SB-78-0-14-20150825 pCi/g	SB-DUP1-20150825 pCi/g	RPD	Qualifier
Actinium-228	0.327U ± 0.176	0.549 ± 0.196	NC	None
Bismuth-214	0.786 ± 0.205	0.671 ± 0.205	16%	
Lead-210	5.43 ± 1.86	5.36 ± 1.62	1%	
Lead-212	0.458 ± 0.139	0.445 ± 0.154	3%	

Compound	SB-78-0-14-20150825 pCi/g	SB-DUP1-20150825 pCi/g	RPD	Qualifier
Lead-214	0.714 ± 0.208	0.914 ± 0.209	25%	None
Potassium-40	4.28 ± 1.41	4.51 ± 1.48	5%	
Radium-226	0.786 ± 0.205	0.671 ± 0.205	16%	
Radium-228	0.327U ± 0.176	0.549 ± 0.196	NC	
Thallium-208	0.191 ± 0.0663	0.0858U ± 0.0854	NC	
Thorium-232	0.327U ± 0.176	0.549 ± 0.196	NC	
Gross Alpha	18.6 ± 6.37	27.4 ± 8.89	38%	
Uranium-233/234	0.727 ± 0.104	0.675 ± 0.0972	7%	
Uranium-235/236	0.0212 ± 0.0161	0.0718 ± 0.0299	109%	None <5X MDC
Uranium-238	0.644 ± 0.0958	0.594 ± 0.0894	8%	None

Quantitation: Are the radionuclide quantitation and detection limits with the QC criteria?
Yes ____ No __× (refer to attached pages)__

- Negative results have been negated and qualified as nondetected (U) by the laboratory.
- Results less than the MDC and less than the uncertainty have been qualified as nondetected (U) by the laboratory.
- The ICP/MS Metals samples contained high levels of salts, which caused interferences. The laboratory analyzed these samples at a 10X dilution. The reporting limits were elevated accordingly. No action was required.

Chemical Separation Specificity: Was the chemical separation specificity within the QC criteria?
Yes _×___ No ____

- All criteria were met.

Target Radionuclide List Identification: Does the target radionuclide list identification meet the QC criteria? Yes _×___ No ____

- All criteria were met.

Matrix Density: Does the matrix density variability meet the QC criteria?
Yes ____ No ____ NA__×__

- Not included.

Section D: Overall Usability Issues

An evaluation of the project chain of custody forms, laboratory receiving reports and associated analytical data indicates that the sampling, handling, shipping and analytical procedures have been adequately completed. The analytical results for SDG J13546 should be considered accurate and useable.

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Signed: Nancy Weaver Dated: 11/19/15

Nancy Weaver
Senior Chemist

Data Qualifiers

U	=	Not detected at the detection limit listed.
UJ	=	The associated minimum detectable activity (MDA) is estimated.
J	=	The associated numerical value is an estimated quantity.
R	=	The data are unacceptable (radionuclide may or may not be present or quantitation is in serious doubt). Resampling and reanalysis is necessary for verification.

DATA VALIDATION SUMMARY REPORT
BUFFALO LAKESIDE COMMERCE PARK, BUFFALO, NEW YORK

Client: CDM Smith, Inc. Latham, New York
SDG: J13585
Laboratory: Test America, St. Louis, Missouri
Site: Buffalo Lakeside Commerce Park, Buffalo, New York
Date: November 17, 2015

Section A: Introduction

The samples and analytical methods included in this sample delivery group (SDG) are documented in Table 1 Sample Summary Table and Table 2 Method Summary (below). All data qualifications were reviewed and approved by the qualified data validation chemist at Environmental Data Services, Inc.

Compliance with the project QC criteria is documented in this data validation report. The checklist and tables summarize the data review process and summarize the data that are qualified due to non-conformance with the guidance document. Any major or minor concerns affecting data usability are summarized below.

Table 1: Sample Summary Table - Soil

EDS ID	Client Sample ID	Laboratory Sample ID	Matrix	QC Sample
1	SB-85-0-10-20150826	160-13585-1	Soil	
1MS*	SB-85-0-10-20150826MS	160-13585-1MS	Soil	Matrix Spike

* - Analyzed for ICP/MS Metals (Uranium and Thorium) and Isotopic Uranium only
† - Analyzed for ICP/MS Metals Uranium and Thorium only

*Note: EDS Sample ID #13 (Client ID: SB-87-0-12-20150826) was cancelled. EDS Sample ID #14 was inadvertently combined with EDS Sample ID #13. The sample was compromised and cancelled. EDS Sample ID #13 was the field duplicate parent sample as well.

A full data validation was performed on the analytical data for sixteen soil samples collected on August 25-27, 2015 by CDM Smith at the Buffalo Lakeside Commerce Park site in Buffalo, New York. The samples were analyzed under the Environmental Protection Agency (USEPA) Test Methods as follows.

Specific method references are as follows in Table 2:

Table 2: Method Summary	
Analysis	Method References
Metals (ICP/MS)	EPA Method 6020A
Radium-226 & Gamma Emitters	EPA Method 901.1
Gross Alpha/Beta	EPA Method 9310
Isotopic Uranium (Alpha Spectroscopy)	USDOE Method A-01-R

The data have been validated according to the protocols and quality control (QC) requirements of the analytical methods and the USACE Data Validation Guidelines as follows:

- USACE Kansas City and St. Louis District Radionuclide Data Quality Evaluation Guidance for Alpha and Gamma Spectroscopy, Revision 1, June 2004;
- and the reviewer's professional judgment.

Section B: Completeness Checklist

Do samples and analyses on the COC check against the lab login? Yes __×__ No ____
Were samples correctly preserved? Yes __×__ No ____
Did cooler arrive at the lab at appropriate temperature and in good condition? Yes __×__ No ____
Was the frequency of the laboratory QC correct? Yes __×__ No ____
Was the frequency of the field QC correct? Yes __×__ No ____
All forms and raw data complete? Yes __×__ No ____
Was the case narrative present and complete? Yes __×__ No ____

The following items/criteria were reviewed for this report to assess data usability:

Section C: Radiological Data Validation

- Holding times and preservation
- Calibration
- Method blank
- Field blank
- Sample Specific Chemical Recovery
- Laboratory Control Sample
- Matrix Spike
- Laboratory Replicate
- Field Replicate
- Quantitation
- Chemical Separation Specificity
- Target Radionuclide List Identification
- Matrix Density Variability

Part 1: Checklist for ICP/MS Metals (Uranium & Thorium), Radium-226, Gamma Emitters (GS), Gross Alpha/Beta, & Isotopic Uranium (Alpha Spectroscopy)

Holding Time: Were there any holding time violations? Yes ____ No __×__

- All samples were analyzed within the recommended holding time of 6 months.

Calibration: Does the calibration meet the QC criteria? Yes ____ No ____ NA__×__

- Calibration data were not included.

Method Blank: Did any targets in the samples exceed the QC criteria based on the method blank contamination? Yes __×__ No ____

Table 3: Method Blanks

Blank ID	EDS Sample ID	Compound	Concentration pCi/g	Qualifier
MB 160-209360/1-A	9	Lead-214	0.1895	J - All Results

Field Blank: Were there any targets in the Field Rinse Blank associated with potential blank contamination? Yes ____No ____ NA__×__

- Field blanks were not collected.

Sample-Specific Chemical Recovery: Did any sample-specific chemical recovery exceed the QC criteria? Yes ____ No __×__

- All percent recoveries were within QC limits.

Laboratory Control Sample: Was the Laboratory Control Sample (LCS) and LCS Duplicate (as applicable) within the QC criteria for accuracy and precision? Yes __×__ No ____

- The LCS samples exhibited acceptable %R values.

Matrix Spike: Matrix Spike: Was the Matrix Spike/Matrix Spike Duplicate within the QC criteria for accuracy and precision? Yes __×__ No ____

- Matrix spike/matrix spike duplicate samples exhibited acceptable %R and RPD values.

Laboratory Replicate: Laboratory Replicate: Did the laboratory replicate samples exceed the QC criteria for precision? Yes ____ No __×___

- The laboratory replicate samples exhibited acceptable RER values.

Field Duplicate: Did the field duplicate samples exceed the QC criteria for precision? Yes ____ No ____ NA__×__

- One of the field duplicate samples was cancelled.

Quantitation: Quantitation: Are the radionuclide quantitation and detection limits with the QC criteria?
Yes ____ No __× (refer to attached pages)__

- Negative results have been negated and qualified as nondetected (U) by the laboratory.
- Results less than the MDC and less than the uncertainty have been qualified as nondetected (U) by the laboratory.
- The ICP/MS Metals samples contained high levels of salts, which caused interferences. The laboratory analyzed these samples at a 10X and/or 20X dilution. The reporting limits were elevated accordingly. No action was required.

Chemical Separation Specificity: Chemical Separation Specificity: Was the chemical separation specificity within the QC criteria?
Yes _×___ No ____

- All criteria were met.

Target Radionuclide List Identification: Target Radionuclide List Identification: Does the target radionuclide list identification meet the QC criteria? Yes _×___ No ____

- All criteria were met.

Matrix Density: Matrix Density: Does the matrix density variability meet the QC criteria? Yes ____ No ____ NA__×__

- Not included.

Section D: Overall Usability Issues

An evaluation of the project chain of custody forms, laboratory receiving reports and associated analytical data indicates that the sampling, handling, shipping and analytical procedures have been adequately completed. The analytical results for SDG J13585 should be considered accurate and useable.

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Signed: Nancy Weaver Dated: 11/19/15

Nancy Weaver
Senior Chemist

Data Qualifiers

U	=	Not detected at the detection limit listed.
UJ	=	The associated minimum detectable activity (MDA) is estimated.
J	=	The associated numerical value is an estimated quantity.
R	=	The data are unacceptable (radionuclide may or may not be present or quantitation is in serious doubt). Resampling and reanalysis is necessary for verification.

RE: Validation of the Buffalo Lakeside Commerce Park Site Analytical Data Packages
Data Usability Summary Report (DUSR)
TAL SDG Nos. 480-88934-1, 480-89011-1, 480-89012-1, 480-89110-1, 480-89238-1, 480-89318-1, 480-89389-1, 480-89476-1, 480-89590-1, 480-89590-2, 480-89685-1, and 480-89685-2
Alloway SDG Nos. M15-25187, M15-25283, M15-25362, M15-25435, and M15-25599

Dear Ms. Picunas:

Review has been completed for the data packages generated by TestAmerica, Inc. and Alloway that pertain to samples collected between 10/12/15 and 10/22/15 at the Buffalo Lakeside Commerce Park site. The total and dissolved fractions (unfiltered and filtered) of forty five aqueous samples, fifteen soil field duplicates, six aqueous field duplicates, and a soil field duplicate were processed for TCL semivolatiles and TAL metals. The soil samples, the total and dissolved fractions of thirteen aqueous samples, and field duplicates were also processed for total cyanide. The soil samples, the soil field duplicate, the total and dissolved fractions of fifteen of the aqueous samples, and two of the aqueous field duplicates were also processed for free cyanide. Six soil samples and a field duplicate were processed for TAL metals. The free cyanide analyses of the aqueous samples were processed by ASTM method D7237 by Alloway. Other analytical methodologies utilized are USEPA SW846 methods 8270C, 6010C, 7471, and 9012.

The data packages submitted by the laboratory contain full deliverables for validation, but this usability report is generated from review of the QC summary form information, with full review of sample raw data and limited review of associated QC raw data. The reported QC summary forms and sample raw data have been reviewed for application of validation qualifiers, with guidance from the USEPA national and regional validation documents, and in consideration for the specific requirements of the analytical methodology. The following items were reviewed:

The following items were reviewed:

* Data Completeness
* Case Narrative
* Custody Documentation
* Holding Times
* Surrogate and Internal Standard Recoveries
* Method and Preparation Blanks

* Matrix Spike Recoveries/Duplicate Correlations
* Blind Field Duplicate Correlations
* Laboratory Control Sample (LCS)
* Instrumental Tunes
* Initial and Continuing Calibration Standards
* ICP Serial Dilution Evaluation
* Method Compliance
* Sample Result Verification

Those items listed above which show deficiencies are discussed within the text of this narrative. All of the other items were determined to be acceptable for the DUSR level review, as discussed in NYS DER-10 Appendix B section 2.0 (c). Documentation of the outlying parameters cited in this report can be found in the laboratory data package.

In summary, results for the most of the target metals analytes are usable either as reported or with minor qualification/edit. However, the following concerns are noted:

- phenolic analytes in one sample are not usable due to an apparent matrix effect
- significant variances were noted in some of the field and laboratory duplicate evaluations, particularly for the metal analytes
- Tentatively Identified Compound (TIC) results reflect laboratory contamination, as discussed below

Data completeness exceeds 95%, and accuracy, representativeness, reproducibility, sensitivity, and comparability are acceptable. Precision outliers (noted below) have been qualified as estimated.

Copies of the client sample identifications are attached to this text. Also included in this report are client results EDDs with recommended qualifiers/edits applied in red.

Chain-of-Custody/Sample Receipt

SS-DUP-101315 was received by the laboratory, but had not been entered onto the custody.

Some of the samples identifications were reported as "S8" rather than "SB".

The third page of the custodies for samples reported in SDG 480-89685 did not include the marks to designate the requested analyses.

No relinquish date and time were entered onto the custody form for samples reported in SG 480-89238-1.

Strikeovers should have been dated and initialed.

Blind Field Duplicates

The blind field duplicate evaluations of semivolatiles, metals, and total cyanide in SB-74-8-12-101215, of semivolatiles, metals, total cyanide, and free cyanide in TP-05-101515, TP-11-F-101915, of semivolatiles and metals in CB-23-F-102115, CB-02-F-102215, and BASIN-3-F-102215, and of metals in SS-77-101315 show correlations within the validation guidelines , with the following exceptions, results for which are qualified in the indicated parent sample and its associated duplicate:

- Significant variances were observed for the metals in SB-74-8-12-101215, with the duplicate showing concentrations about twice those of the parent sample for most analytes, but with calcium detected at 134,000 ppm in the parent sample and 26,000 ppm in the duplicate. Results for all elements except magnesium, potassium, selenium, nickel, cadmium, arsenic, and antimony are qualified as estimated
- Magnesium and nickel in SS-77-101315
- Total cyanide and free cyanide in TP-05-101515
- Aluminum, barium, iron, magnesium, and zinc in CB-12-F-101615

Semivolatile Analyses by EPA8270D

CB-12-101615 exhibits recoveries below 10% for the one of the acid (phenolic) surrogate standards. Therefore, the non-detected results for the phenolic compounds in that sample are rejected, and not usable. Detected values of phenolics in the sample are qualified as estimated, with a possible very low bias. This is typically a matrix effect, although reextraction to confirm that assumption was not performed.

Due to low surrogate recoveries, the results for TP-03-101415 have been qualified as estimated, with a low bias. The reextraction was successful, but was performed past the required holding time.

The following detections are edited to reflect non-detection due to very poor mass spectral quality:

- 2,4-dinitrotoluene in TP-02-101415
- 2,4,5-trichlorophenol in TP-06-101515
- n-nitrosodipropylamine and 2,4-dinitrotoluene in TP-15-101915
- 4-nitrophenol in TP-09-F-102015

The following target analyte detections are considered external contamination and edited to reflect non-detection due to presence in the associated field and/or method blanks:

- diethylphthalate, dimethylphthalate, isophorone, phenol, acetophenone, and benzaldehyde in samples reported in SDGs 480-88934, 48-89012-1, and 480-89110-1
- benzaldehyde and butyl benzyl phthalate in samples reported in SDG 480-89238-1
- 2-methylphenol and benzaldehyde in samples reported in 480-89318-1
- benzaldehyde in samples reported in 480-89389-1
- benzaldehyde and butyl benzyl phthalate in samples reported in SDGs 480-89476-1, 480-89590-1, and 480-80590-2
- benzaldehyde and phenol in samples reported in 480-89685-1 and 480-89685-2
- butyl benzyl phthalate in samples reported in 480-89685-2

The blanks, particularly the aqueous method blanks, show numerous Tentatively Identified Compounds (TICs). During validation the detections of those compounds in the project samples have been removed from consideration as sample components.

Calibration standards show responses within validation action levels, with the following exceptions, results for which are qualified in the indicated, associated samples:

- benzaldehyde (38%D to 64%D) in CB-11-F-102115, FB-102115, CB-05-102115, CB-05-F-102115, CB-06-102115, CB-06-F-102115, CB-20-102115, CB-20-F-102115, CB-21-F-102115,

CB-18-F-102115, CB-18-102115, CB-22-102115, CB22-F-102115, CB-07-102215, CB-07-F-102215, CB-09-102215, CB-09-F-102215, CB-30-102215, CB-30-F-102215, CB-16-102215, CB-16-F-102215, MW-UNK-102215, MW-UNK-F-102215, FB-102215, CB-01-102215, CB-02-102215, CB-02-F-102215, CB-DUP-03-102215, CB-03-102215, CB-03-F-102215, CB-04-102215, CB-04-F-102215, and CB-01-F-102215, and in all samples reported in SDG 480-89110-1, 480-89238-1, 480-89476-1, and 480-89685-2

- benzaldehyde and n-nitroso-di-n-propylamine (23%D to 54%D) in samples CB-12-101615, CB-12-F-101615, CB-DUP-01-101615, CB-26-101615, CB-26-F-101615, CB-27-101615, CB-27-F-101615, CB-28-101516, CB-28-F-101615, FB-101615, CB-10-102115, CB-10-F-102115, CB-19-102115, CB-19-F-102115, CB-25-102115, CB-25-F-102115, and CB-24-102115
- benzaldehyde and pentachlorophenol (22%D to 47%D) in samples TP-11-F-101915, TP-DUP-02-101915, TP-13-101915, TP-13-F-101915, TP-15-101915, TP-15-F-101915, TP-11-101915 FB-101915, CB-29-102115, CB-29-F-102115, CB-14-102115, CB-14-F-102115, CB-11-102115, CB-24-F-102115, CB-23-102115, CB-23-F-102115, CB-DUP-02-102115, CB-08-102115, CB-21-102115, and CB-08-F-102115

Holding times were met. Internal standard responses are compliant. Instrument tunes meet fragmentation requirements.

The matrix spike evaluations performed on SB-76-16-20-101315, TP-08-F-102015, TP-14-101515, CB-21-102115, CB-11-F-102115, CB-01-F-102215, and BASIN-1-F-102215 show recoveries and duplicate correlations within validation action limits for the twelve analytes that were evaluated by the laboratory. That evaluation should have been performed on all target analytes. The LCSs also do not report the full evaluation required of the protocol.

The following matrix spikes show the indicated outliers, and the results for those compounds have been qualified as estimated in value.

Parent Sample	Analyte	Outlying % Recoveries
S8-74-0-4-101215	4-nitrophenol	29,33
	pentachlorophenol	10,12

Total and filtered fractions correlate well, with the exception that low level detections of phthalates and phenolics (below the RL) are found in the filtered fractions of some of the samples, but not in their unfiltered fractions.

The laboratory utilizes a low sample volume aqueous method modification that results in background responses reported as field sample TIC detections. This is evidenced by the prevalence of non-target responses in the associated method blanks. The laboratory should have flagged sample TICs that were also present in the associated method blanks as "B"s. This is of particular importance because for most samples those contaminants compromise the majority and strongest of the TIC concentrations. Although requested, the laboratory has not provided revised TIC results, and the ability to remove those contaminants from field samples results is hindered. The effort to perform the extensive review is well beyond the scope of validation, and therefore the TIC results remain unvalidated at the time this report is issued. The proper reporting can be performed by the laboratory at a later date if so desired. The source of the low level aqueous processing contamination should be resolved as the responses interfere with the detection of, and priority reporting of, sample TICs.

Volatile TCL compounds and extraction artifacts were included in the reported semivolatile TICs. They are also processed in associated blanks.

Some of the samples were processed at dilution due to extract viscosity or "matrix". This resulted in proportionally elevated reporting limits.

Metals Analyses by EPA 6010C

The following zinc detections are considered external contamination and edited to reflect non-detection due to presence in the associated field blanks:

- all samples reported in SDG 480-89318 except CB-DUP-01-101615 and CB-12-101615
- all samples reported in SDGs 480-89590-1 and 480-89590-2 except CB-22-F-102115 and CB-14-102115
- all samples reported in SDGs 480-89238, 480-89685-1 and 480-89685-2

The detections of copper in the samples reported in SDG 480-89389 are considered external contamination and edited to reflect non-detection due to presence in the associated field blank.

Matrix spikes/duplicates were performed for metals on SS-75-101315, SB-76-16-20-101315, TP-14-101515, TP-08-F-102015, CB-29-102115, CB-21-102115, CB-01-F-102215, and BASIN-1-F-102215 and show recoveries and correlations within validation guidelines, with the following exceptions, results for which are qualified as estimated in the indicated parent sample:

Parent Sample	Element	Outlying % Recoveries	Outlying %RPD
SB-76-16-20-101315	antimony	74,58	26
	barium	-97,-25	35
	iron	157,595	61
	magnesium	221,444	49
	potassium	164,236	29
	aluminum		49
	calcium		88
SS-75-101315	aluminum	597,470	
	antimony	46,68	45
	barium	384,134	66
	copper	182	43
	lead	394	96
	selenium	63	40
	zinc	694	112
	potassium	225	62
	iron		84
	magnesium		100
	manganese		62

The ICP serial dilution evaluations of SS-75-101315, TP-14-101515, TP-08-F-102015, CB-29-102115, CB-11-F-102115, CB-21-102115, CB-01-F-102215, and BASIN-1-F-102215 show acceptable

correlations. The following serial dilution evaluations show outlying correlations, and the results for the listed elements have been qualified as estimated in the indicated parent sample:

Total and filtered fractions correlate well, with the following exceptions, results for which are qualified as estimated in both fractions of the samples:

- Nickel in TP-10-102015
- Zinc in CB-22-F-102115
- Iron in CB-30-102215

Results of certain elements in some of the samples are reported at elevated reporting limits due to interferences from iron or silica.

Total a nd Free Cyanide Analyses by EPA 9012 and ASTM 7237-1

The following matrix spike (MS)/MSD)/duplicate evaluations were performed:

- Total cyanide and Free Cyanide on SB-76-16-20-101315
- Total cyanide in SB-75-12-16-101215, TP-03-F-101415, TP-05-F-101515, TP-14-101515, FB-101915, FB-102215, TP-09-F-102015, TP-08-F-102015
- Free cyanide MS/MSD on TP-14-101515, TP-15-101915, TP-10-102015, and TP-08-F-102015

Recoveries and correlations are acceptable, with the exception of those for total cyanide in SB-75-12-16-101215 (18%), TP-14-101515 (65% and 80%), TP-09-F-102015 (82%), and TP-03-F-101415 (115%). The results for total cyanide in those parent samples are qualified as estimated.

The detected total cyanide results in samples reported in SDG 480-89012-1 and 480-88934-1 are qualified as estimated, with a high bias, due to elevated recoveries (126% to 152%) in the associated LCSs.

Total and filtered fractions correlate well, with the following exceptions, results for which are qualified as estimated in both fractions of the indicated samples:

- free cyanide in TP-03-101415, TP-05-101415, and MW-405-102015
- total cyanide in TP-08-102015 and MW-404-102015

Please do not hesitate to contact me if questions or comments arise during your review of this report.

Very truly yours,

Judy Harry

VALIDATION DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
J-	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased low.
J+	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased high.
UJ	The analyte was analyzed for, but was not detected. The associated reported quantitation limit is approximate and may be inaccurate or imprecise.
NJ	The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control limits. The analyte may or may not be present.
EMPC	The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample.

Key:

Green highlighted cell with bold white font = Exceedance of NYSDEC Subpart 375-6.8(b) Restricted Commerical Use Soil Clean up Objectives.

[b] The SCOs for commercial use were capped at a maximum value of 500 ppm. See TSD section 9.3.

[d] The SCOs for metals were capped at a maximum value of 10,000 ppm. See TSD section 9.3.

[f] For constituents where the calculated SCO was lower than the rural soil background concentration as determined by the Department and Department of Health rural soil survey, the rural soil background concentration is used as the Track 2 SCO value for this use of the site.

[h] The SCO for this specific compound (or family of compounds) is considered to be met if the analysis for the total species of this contaminant is below the specific SCO.

B = Analyte detected in the associated Method Blank
bgs = below ground surface
D = The compound concentration was obtained from a secondary dilution analysis (Organics).
E = Analyte compound concentration exceeded the Calibration
J = Analyte detected below quantitation limits

M = Indicates that the duplicate injection precision was not met.

N = The analyte passed identification criteria and is considered to be positively identified (Organics), or the matrix spike recovery falls outside of the control limit (Inorganics).

ND = Not detected or not reportable
NG = No standard or guidance value
U = Not detected.

Key:

Green highlighted cell with bold white font = Exceedance of NYSDEC Subpart 375-6.8(b) Restricted Commerical Use Soil Clean up

[b] The SCOs for commercial use were capped at a maximum value of 500 ppm. See TSD section 9.3.

[d] The SCOs for metals were capped at a maximum value of 10,000 ppm. See TSD section 9.3.

[f] For constituents where the calculated SCO was lower than the rural soil background concentration as determined by the Department and Department of Health rural soil survey, the rural soil background concentration is used as the Track 2 SCO value for this use of the site.

[h] The SCO for this specific compound (or family of compounds) is considered to be met if the analysis for the total species of this contaminant is below the specific SCO.

B = Analyte detected in the associated Method Blank

bgs = below ground surface

D = The compound concentration was obtained from a secondary dilution analysis (Organics).

E = Analyte compound concentration exceeded the Calibration Rage (Organics), or the concentration is estimated due to the presence of interferences, as determined by the serial dilution analysis (Inorganics).

J = Analyte detected below quantitation limits

M = Indicates that the duplicate injection precision was not met.

N = The analyte passed identification criteria and is considered to be positively identified (Organics), or the matrix spike recovery falls outside of the control limit (Inorganics).

ND = Not detected or not reportable

NG = No standard or guidance value

U = Not detected.

Key:

Green highlighted cell with bold white font = Exceedance of NYSDEC Subpart 375-6.8(b) Restricted Commerical Use Soil Clean up Objectives.

[b] The SCOs for commercial use were capped at a maximum value of 500 ppm. See TSD section 9.3.

[d] The SCOs for metals were capped at a maximum value of 10,000 ppm. See TSD section 9.3.

[f] For constituents where the calculated SCO was lower than the rural soil background concentration as determined by the Department and Department of Health rural soil survey, the rural soil background concentration is used as the Track 2 SCO value for this use of the site.

[h] The SCO for this specific compound (or family of compounds) is considered to be met if the analysis for the total species of this contaminant is below the specific SCO.

B = Analyte detected in the associated Method Blank
bgs = below ground surface

D = The compound concentration was obtained from a secondary dilution analysis (Organics).

E = Analyte compound concentration exceeded the Calibration Rage (Organics), or the concentration is estimated due to the presence of interferences, as determined by the serial dilution analysis (Inorganics).
J = Analyte detected below quantitation limits

M = Indicates that the duplicate injection precision was not met.

N = The analyte passed identification criteria and is considered to be

ND = Not detected or not reportable
NG = No standard or guidance value
U = Not detected.

U = Not detected.

J = Estimated

Note:

1. Sample DUP-2 is a field duplicate of SB-87-0-12-20150826. The parent sample was inadvertenly combined with another sample at the laboratory and therefore was not analyzed.

2. The above parameters do not currently have cleanup guidance values.

Key:

Green highlighted cell with bold white font = Exceedance of NYSDEC Subpart 375-6.8(b) Restricted Commerical Use Soil Clean up Objectives.

[b] The SCOs for commercial use were capped at a maximum value of 500 ppm. See TSD section 9.3.

[d] The SCOs for metals were capped at a maximum value of 10,000 ppm. See TSD section 9.3.

[f] For constituents where the calculated SCO was lower than the rural soil background concentration as determined by the Department and Department of Health rural soil survey, the rural soil background concentration is used as the Track 2 SCO value for this use of the site.

[h] The SCO for this specific compound (or family of compounds) is considered to be met if the analysis for the total species of this contaminant is below the specific SCO.

B = Analyte detected in the associated Method Blank
bgs = below ground surface
J = Analyte detected below quantitation limits
ND = Not detected or not reportable
NG = No standard or guidance value
T (organics) = result is a tentatively identified compound and an
T (inorganics) = indicates that quality control parameter exceeded laboratory limits.

Key:

Green highlighted cell with bold white font = Exceedance of NYSDEC Subpart 375-6.8(b) Restricted Commerical Use Soil Clean up Objectives.

(1) Semi-Volatile Organic Compounds were reported in the Analyitcal Reports in ug/Kg, or parts per billions (ppb). They were divided by 1,000 then reported in this table to match the standards measured in ppm.

[b] The SCOs for commercial use were capped at a maximum value of 500 ppm. See TSD section 9.3.

[d] The SCOs for metals were capped at a maximum value of 10,000 ppm. See TSD section 9.3.

[f] For constituents where the calculated SCO was lower than the rural soil background concentration as determined by the Department and Department of Health rural soil survey, the rural soil background concentration is used as the Track 2 SCO value for this use of the site.

[h] The SCO for this specific compound (or family of compounds) is considered to be met if the analysis for the total species of this contaminant is below the specific SCO.

B = Analyte detected in the associated Method Blank (Organics), or the analyses reported using CLP ILM-type metals dorms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit (Inorganics).

bgs = below ground surface

D = The compound concentration was obtained from a secondary dilution analysis (Organics).

E = Analyte compound concentration exceeded the Calibration Rage (Organics), or the concentration is estimated due to the presence of interferences, as determined by the serial dilution analysis (Inorganics).

J = Analyte detected below quantitation limits

M = Indicates that the duplicate injection precision was not met.

N = The analyte passed identification criteria and is considered to be positively identified (Organics), or the matrix spike recovery falls outside of the control limit (Inorganics).

ND = Not detected or not reportable

NG = No standard or guidance value

U = Not detected.

Key:

Blue highlighted cell and bold white font = Exceedance of NYSDEC TOGS 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA groundwater.

(1) Standard of 1 µg/L refers to the sum of all phenolic compounds.
(2) Standard for the sum of Iron and Manganese is 500 µg/L.
B = Analyte detected in the associated Method Blank (Organics), or the
J = Analyte detected below quantitation limits
ND = Not detected
NG = No standard or guidance value
U = Not detected or not reportable

Key:

groundwater.

(1) Standard of 1 µg/L refers to the sum of all phenolic compounds.

(2) Standard for the sum of Iron and Manganese is 500 µg/L.

B = Analyte detected in the associated Method Blank (Organics), or the analyses reported using CLP ILM-type metals dorms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit (Inorganics).

J = Analyte detected below quantitation limits

ND = Not detected

NG = No standard or guidance value

U = Not detected or not reportable

Note: Samples were filtered for metals analysis.

Key:

for Class GA groundwater.

--- - Not analyzed

U - Analyte not detected at or above the method detection limit

D - Data reported from a dilution

J - Estimated

Note:

1. Results are as reported by laboratory, however filtered sample results for total cyanide and cyanide species were higher than the unfiltered samples in several cases which is considered to be an anomaly.

Key:

Blue highlighted cell and bold white font = Exceedance of NYSDEC TOGS 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA groundwater.

(1) Standard of 1 µg/L refers to the sum of all phenolic compounds.

(2) Standard for the sum of Iron and Manganese is 500 µg/L.

B = Analyte detected in the associated Method Blank (Organics), or the analyses reported using CLP ILM-type metals dorms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit (Inorganics).

J = Analyte detected below quantitation limits

ND = Not detected

NG = No standard or guidance value

U = Not detected or not reportable

Key:

Blue highlighted cell and bold white font = Exceedance of NYSDEC TOGS 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA groundwater.

(1) Standard of 1 µg/L refers to the sum of all phenolic compounds.

(2) Standard for the sum of Iron and Manganese is 500 µg/L.

B = Analyte detected in the associated Method Blank (Organics), or the analyses reported using CLP ILM-type metals dorms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit (Inorganics).

J = Analyte detected below quantitation limits

ND = Not detected

NG = No standard or guidance value

U = Not detected or not reportable

Key:

Blue highlighted cell and bold white font = Exceedance of NYSDEC TOGS 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA groundwater.

U - Analyte not detected at or above the method detection limit

AmC - Unidentified organic chemicals may oxidize or form breakdown products during chlorination which results in a negative value

CN1 - Unable to determine the cyanide amendable to chlorination dur to matrix interference

R06 - Method reporting limit raised to correlate to batch QC reporting limits

J - Detected above the method detection limit, but below the reporting limit; value is estimated

B- Analyte detected in method blank

NS - Not Sampled

ND - Not detected

--- - Not Measured

Note:

1. Results are as reported by laboratory, however filtered sample results for total cyanide and cyanide species were higher than the unfiltered samples in some cases and are considered to be an anomaly.

Key:

Blue highlighted cell and bold white font = Exceedance of NYSDEC TOGS 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA groundwater.

U - Analyte not detected at or above the method detection limit

AmC - Unidentified organic chemicals may oxidize or form breakdown products during chlorination which results in a negative value

CN1 - Unable to determine the cyanide amendable to chlorination dur to matrix interference

R06 - Method reporting limit raised to correlate to batch QC reporting limits

J - Detected above the method detection limit, but below the reporting limit; value is estimated

B- Analyte detected in method blank

NS - Not Sampled

ND - Not detected

--- - Not Measured

Note:

1. Results are as reported by laboratory, however filtered sample results for total cyanide and cyanide species were higher than the unfiltered samples in some cases and are considered to be an anomaly.

Key:

U - Analyte not detected at or above the method detection limit

AmC - Unidentified organic chemicals may oxidize or form breakdown products during chlorination which results in a negative value

CN1 - Unable to determine the cyanide amendable to chlorination dur to matrix interference

R06 - Method reporting limit raised to correlate to batch QC reporting limits

J - Detected above the method detection limit, but below the reporting limit; value is estimated

B- Analyte detected in method blank

NS - Not Sampled

ND - Not detected

--- - Not Measured

Note:

1. Results are as reported by laboratory, however filtered sample results for total cyanide and cyanide species were higher than the unfiltered samples in some cases and are considered to be an anomaly.

Notes:

a Values from NYSDEC Division of Fish, Wildlife and Marine Resources *Screening and Assessment of Contaminated Sediment,* January 2013

[b] The SCO shown is for trivalent chromium. The SCO for this specific compound (or family of compounds) is considered to be met if the analysis for the total species of this contaminant is below the specific SCO

[c] The Class A and Class B sediment guidance values for total PAHs are 4 and 3 ppm, respectively

[d] The SCOs for metals were capped at a maximum value of 10,000 ppm. See TSD section 9.3.

[f] For constituents where the calculated SCO was lower than the rural soil background concentration as determined by the Department and Department of Health rural soil survey, the rural soil background concentration is used as the Track 2 SCO value for this use of the site.

[h] The SCO for this specific compound (or family of compounds) is considered to be met if the analysis for the total species of this contaminant is below the specific SCO.

Key:

GS1 - Sample dilution required for high concentration of target analytes to be within the instrument calibration range

D - Data reported from a dilution

J - Detected above the method detection limit, but below the reporting limit; value is estimated

U - Analyte not detected at or above the method detection limit

NL - Not listed

ND - Not detected

Z-2a - Data did not match the total analysis so was reanalyzed outside of hold time to confirm; result from reanalysis reported

NS - Not Sampled

B - Detected in associated lab blank

NOTES:

1. CROSS-SECTIONS SHOWN ON FIGURES 3-1B THROUGH 3-1F PRESENT THE OBSERVED STRATIGRAPHY OF THE SOIL BORINGS INSTALLED AS SHOWN ON THIS PLAN. A LEGEND DENOTING SOIL TYPES IS PROVIDED AT THE BOTTOM OF EACH FIGURE.
2. THE ANALYTICAL CONCENTRATIONS SHOW IN FIGURES 3-1B THROUGH 3-1F DISPLAY ONLY CADMIUM, CHROMIUM, NICKEL, AND LEAD CONCENTRATIONS THAT EXCEED THEIR INDIVIDUAL PART 375 UNRESTRICTED USE SOIL CLEANUP OBJECTIVES (SCO). THERE ARE OTHER METALS WHOSE ANALYTICAL RESULTS ALSO EXCEED THE PART 375 UNRESTRICTED USE SCOs NOT SHOWN IN FIGURES 3-1B THROUGH 3-1F. PLEASE REFER TO TABLE 3-1 FOR A FULL SUMMARY OF ANALYTICAL RESULTS AND EXCEEDANCES.
