Re: Phase I Environmental Site Assessment
Former Oil Storage Facility
5335 River Road
Tonawanda, New York

Dear Amy:

GZA GeoEnvironmental (GZA) is pleased to provide the attached Phase I Environmental Site Assessment Report. This assessment was completed in general accordance with the guidelines described in ASTM Standard Practice E1527-2005 for Phase I Site Assessments.

This report is based on our review of available historical and environmental records, visual observations of the surface of the subject and adjoining properties and personal interviews with available persons having knowledge of the property. Recognized environmental conditions have been identified. See Section 11.00 of the report, our Findings and Conclusions, which is considered an Executive Summary, and should be reviewed in conjunction with the entire report.

We hope this satisfies your present needs. If you need any additional information, please call Michele Wittman at 716-685-2300.

Sincerely,

GZA GEOENVIRONMENTAL, INC.

1.00 INTRODUCTION

1.10 PROJECT AUTHORIZATION

This report presents the results of a Phase I Environmental Site Assessment (ESA) conducted by GZA GeoEnvironmental (GZA) for the Niagara County Department of Economic Development (Client) at the Former Oil Storage Facility, 5335 River Road, Tonawanda, New York (Site). The Site visit portion of this environmental assessment of the property was conducted on June 8, 2007. Authorization to proceed on this project was granted with issuance of purchase order #NIACO-0000042930 dated April 27, 2007.

1.20 PROJECT OBJECTIVES

The objectives of this Phase I Environmental Site Assessment are:

- To render an opinion as to whether surficial or historical evidence indicates the presence of recognized environmental conditions which could result in the presence of hazardous substances or petroleum products in the environment, as defined in ASTM Standard Practice E1527-05 for Phase I Environmental Site Assessments.
- To permit the Client to satisfy one of the requirements to qualify for certain Landowner Liability Protections under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

As defined by ASTM Method E1527-05, the term recognized environmental condition means "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, past release, or material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property."

1.30 SCOPE OF SERVICES

GZA's assessment of the Site was completed in general accordance with ASTM Method E1527-05 and GZA's proposal for services. We understand that this assessment is funded with a United States Environmental Protection Agency (EPA) Brownfields Showcase Community Grant. GZA's scope of services consisted of the following activities:

- Review of federal and state regulatory agency databases identified by ASTM for the Site listing and other property listed within a selected radius around the Site;
- Contact with local environmental regulatory agencies to inquire about environmental conditions at the Site and in its vicinity;

- Review of the Site history through available ASTM Standard Historical Sources;
- A site reconnaissance to make surficial observations for evidence of recognized environmental conditions;
- Visual observations from public property of properties within ¼ mile of the Site;
- Observations of adjoining properties to view for the potential use of hazardous materials;
- An interview with the property owner or Key Site Manager (identified by Client) as well as certain other available occupants and/or major tenants regarding the current and past site usage and facility operations (and past owners and occupants if identified);
- Review of the information provided as part of "User responsibilities" described in ASTM 1527-05; and
- Preparation of this report which presents GZA's field observations, results, and opinions.

This report is subject to modification if subsequent information is developed by GZA or any other party, and it is subject to the limitations presented in Section 13.00 and Appendix A.

2.00 BACKGROUND SITE INFORMATION

The following information was obtained during GZA's site reconnaissance and from an interview with a Key Site Manager knowledgeable about the Site. Photographs depicting Site conditions at the time of GZA's assessment are presented in Appendix B. Additional information on Site use and area observations and activity at the Site is contained in Sections 6.00 and 7.00.

2.10 SITE LOCATION

The Site is addressed as 5335 River Road in Tonawanda, New York. A locus plan is attached as Figure 1.

2.20 SITE DESCRIPTION

The Site consists of one parcel identified as SBL number 52.06-3-10 by the Town of Tonawanda Assessor's Office. The Site is approximately 25.2 acres and occupied by a two story vacant building located on the northern portion of the Site. The central and southern portions of the Site are vacant, wooded land. Mr. Ken Swanekamp, Erie County Department

of Environmental Planning, indicated the Site was abandoned due to over \$1,000,000 in back taxes.

2.30 CURRENT SITE USE

At the time of GZA's site visit, the Site building was vacant. The Site limits were provided by the Client and are indicated on Figure 2. A more detailed description of Site use and our reconnaissance observations is contained in Section 6.

2.40 ADJOINING PROPERTIES USE

The properties that adjoin the Site are

- North: River Road/Niagara River
- South: Vacant wooded land/Enbridge Energy Tonawanda Station (crude oil pipeline pumping station)
- East: Co. Steel Recycling (vacant), beyond which is R&L Carriers/Vacant land/crude oil pipe line
- West: Vacant wooded land and River View Commerce Park (under construction)

2.50 AREA USE

The general property usage in the vicinity of the Site is

- North Niagara River
- South Commercial/light industrial (Tonawanda Sewer Plant)
- East Light industrial/commercial/residential
- West Vacant land/commercial/industrial

2.60 SITE UTILITIES

The Site is currently vacant. The following utilities are reportedly available in the area.

<u>Gas:</u>	National Fuel
<u>Electricity:</u>	National Grid
<u>Potable Water:</u>	Town of Tonawanda
<u>Sanitary Sewer:</u>	Town of Tonawanda
<u>Storm Sewer:</u>	State of New York
<u>Solid Waste Disposal:</u>	Solid waste is currently not generated at the Site.

3.00 ENVIRONMENTAL SETTING

The following subsection provides information regarding the general regional physiographic, regional hydrology and soil/rock conditions in the area of the Site.

3.10 REGIONAL PHYSIOGRAPHY

Based on a review of the U.S. Geologic Survey Map for the Tonawanda West quadrangle dated 1980, the Site ranges in approximate elevation from 600 feet above mean sea level in the southern portion to approximately 580 feet above mean sea level in the northern area. The Site area topographic gradient appeared to slope gradually downward to the north. Local topography in the area slopes downward to the north. The Niagara River adjoins the Site to the north. A tributary of Two Mile Creek was shown on the northern and southern portions of the site, flowing in a northeasterly direction. Two Mile Creek is located approximately 1,000 feet to 2,000 feet northeast of the Site. Two Mile Creek flows northerly to the Niagara River.

3.20 REGIONAL HYDROLOGY

Based on review of the USGS topographic map, Tonawanda quadrangle and knowledge of the Site area, the estimated depth to groundwater is likely less than 20 feet below ground surface. Regional and site groundwater flow is assumed to be north to northeasterly, towards the Niagara River. However, localized flow direction in the area of the Site may vary as a result of underground utilities, septic systems, or heterogeneous subsurface conditions. Subsequent references to upgradient and downgradient properties are based on the estimated north to northeasterly groundwater flow direction. Based on the Environmental Data Resources (EDR) Geocheck report, the Site is not located within the 100 year or 500 year floodplain. State or national wetlands do not appear to be identified at the Site.

3.30 SOIL AND ROCK CONDITIONS

Based on the EDR Geocheck report, the bedrock at the Site is anticipated to be of Paleozoic era. According to the Soil Conservation Service STATSGO data supplied by EDR, the soils in the Site area were identified as Cayuga silt loam, which has slow infiltration rates and are moderately well drained. Udorthents were also reported present at the Site which have very slow infiltration rates and are moderately well drained.

GZA also reviewed the Soil Survey of Erie County, New York by the United States Department of Agriculture Soil Conservation Service, issued December 1986, which identified Urban Land on the northwestern portion of the Site. This unit is a miscellaneous area in which 80% or more of the soil surface is covered by asphalt, concrete, buildings, or other impervious structures. It was not practical to examine and identify the soils underlying these impervious Urban land areas.

Castile gravelly loam was present on the central portion of the Site. This unit is deep and moderately well drained. Cayuga silt loam was identified on the southern portion of the Site. This unit is described as deep and well to moderately well drained. Permeability and internal drainage are slow.

4.00 HISTORICAL USE INFORMATION

The site history was developed from ASTM Standard Historical Sources and available files at the Town of Tonawanda Assessor's office, Building Department, and interviews with the Key Site contacts, Mr. Ken Swannekamp, Erie County Department of Environmental Planning, and Mr. Bob Morris, Town of Tonawanda. A list of sources interviewed is included in Section 9.00. ASTM indicates that "all obvious uses of the property shall be identified from the present, back to the property's first developed use, or back to 1940, whichever is earlier. ASTM further indicates that "data failure is not uncommon" when trying to establish the historical use of a property. A historical summary report is provided in Section 4.10 below. Specific detail obtained from ASTM historical sources is contained in subsequent sections.

4.10 SITE AND AREA HISTORY SUMMARY

The Site has been vacant since the early 1990s. The Site was owned and operated by oil storage and distribution facilities since 1937, including Coastal Oil, Erie Petroleum, and River Road Oil. Over eleven large storage oil ASTs have been present on the Site at least from 1948 until the early 1990s.

In general, the surrounding area has been used for residential, commercial, and light industrial purposes.

4.20 CITY DIRECTORIES REVIEW

EDR provided a historic city directory extract for the Site address of 5335 River Road for the years 1974 to 2000. A copy of the city directory abstract is included in Appendix C. The information obtained from this review is provided below.

- 1974 – Address not listed in research source
- 1980 – Budget Gas Inc., Oilatomic Corp.
- 1990 – Erie Petroleum Transfer, Kinetic Labs Inc.
- 1995 – Kinetic Labs Inc.
- 2000 – Address not listed in research source

In addition, GZA reviewed historic Tonawanda city directories for the Site address of 5335 River Road for the years 1924 to 2004 at the Buffalo and Erie Public Library. Tonawanda directories were not available prior to 1924. The information obtained from this review is provided below.

- 1924-1978 – No listings
- 1983 – Vacant
- 1989 – Erie Petroleum Transfers Inc; Reaction Laboratories, Inc.
- 1994 – Kinetic Laboratories, Inc.
- 1999-2004 – No listings

4.30 HISTORIC TOPOGRAPHIC MAP REVIEW

EDR provided historical topographic maps for the Site for the years 1899, 1901, 1948, 1949, 1950 and 1965. Copies of the topographic maps are included in Appendix C.

Year	Site	Nearby Properties
1899, 1901	The Site appeared to be vacant land. A small tributary traversed the Site.	The area surrounding the Site appeared to be vacant land with sparse residential development and a residential community to the northeast. The Niagara River was located to the north.
1948, 1949, 1950	The northern portion of the Site was occupied by seven circular structures, labeled as “gasoline”. One building was shown in similar location to the existing building. The southern portion of the Site was vacant land.	The surrounding areas were generally vacant land. Residential development was apparent to the northeast. A sewage disposal facility was shown to the southeast. Additional gasoline storage facilities were shown to the southwest.
1965	The northern portion of the Site was occupied by eleven circular structures and one building. The remaining areas of the Site were vacant.	Generally appeared similar to the previous map. A pipeline adjoined the Site to the east.

4.40 AERIAL PHOTOGRAPH REVIEW

GZA reviewed copies of historical aerial infrared orthophotographs provided by EDR dated 1959, 1966, 1978, and 1983; the New York State Department of State, Division of Coastal Resources, GIS Division: <http://www.nysgis.state.ny.us/gateway/index.html> dated 1995, 2002 and 2005; and http://www.erie.gov/depts/community/highways_aerial.phtml dated 1927 and 1951. Copies of the photographs are included in Appendix C.

Year	Site	Nearby Properties
1927	The Site appeared to be vacant land, used for agricultural purposes. Portions of the Site were wooded.	The surrounding areas appeared to be vacant agricultural land with limited wooded areas.
1951, 1959, 1966, 1978	A Site building and truck racks were apparent in the northern portion of the Site. Additionally, ten circular structures, which appeared to be large ASTs, were present in the northern portion of the Site. The remaining areas appeared to be vacant land with a dirt roadway.	Generally appeared to be vacant, undeveloped land.
1983	Generally appeared similar to the previous photograph. However, eleven ASTs were present.	A commercial type building was present to the east. The remaining areas appeared similar to the previous photograph.
1995, 2002, 2005	A Site building and truck racks were present in the northern portion of the Site. One large AST was apparent. The remaining ASTs were removed. The earthen berms appeared to be filled with water. The remaining portions of the Site appeared to be vacant, wooded land.	The surrounding areas appeared to be vacant land, or commercial facilities, similar to conditions observed during the Site reconnaissance.

4.50 HISTORIC ATLAS REVIEW

EDR conducted a search of their complete Sanborn library for fire insurance maps in the Site area. The Site area was not included in the mapped area. A copy of EDR's no coverage letter is included in Appendix C.

4.60 TITLE SEARCH AND ENVIRONMENTAL LIEN SEARCH REPORT

Completion of a title search was not included in the scope of this assessment. No title information was provided by the Client.

GZA retained Land Records Researching Ltd. of Buffalo, New York to complete an environmental lien search on the Site. Mr. Mark McGowan of Land Records Researching Ltd. indicated that no environmental liens or activity use limitation (AULs) were found for the parcels.

Additionally, GZA reviewed information on the Erie County Department of Real Property Tax Services website <http://www.erie.gov/depts/finance/webprop/index.asp> which identified the following property owner information:

- Riverview (5/6) Dr Hold (1/6) – 10/27/1999
- Riverview (5/6) Norry (1/6) – 4/1/1999
- Petro Chem Storage Term – 7/15/1986
- Norry, Neil Irving & Others – 2/14/1983
- Geiger, Harold J. & Etal – 8/6/1980
- Geiger, Patrick – 1/6/1978
- Geiger, Harold – 1/6/1978
- American Oil Co – 6/30/1954
- Elmer J Goetz Oil – 6/17/1937
- JCDL Corp – 12/26/1921

No additional previous owners were identified.

4.70 BUILDING DEPARTMENT RECORDS

GZA visited the Town of Tonawanda Building Department for information pertaining to the Site address of 5335 River Road. The desk clerk indicated that building department records are not available prior to 1965 because they were destroyed. The following information was available in the department's index, which is listed by address and year.

- 9/10/1965 – “1-10,000 gallon methanol oil” for American Oil Company
- 2/18/1976 – “replace 2,000-gallon fuel oil tank” for Amoco
- 9/26/1978 – “aboveground tank” for Geiger Enterprises
- 12/3/1991 – “remove 11 tanks” for Riverview Industrial Center

The Town of Tonawanda Building Department also keeps a file pertaining to active/inactive above and underground storage tanks. The desk clerk indicated the file has been accurately kept since the mid-1980s. No records were on file pertaining to the Site address of 5335 River Road. The desk clerk indicated the Site has been vacant for several years and was formerly a petroleum storage facility.

4.80 PROPERTY TAX FILES

GZA visited the Town of Tonawanda, Assessors Office for information pertaining to the Site. The desk clerk was unaware of any environmental concerns associated with the Site. The following information was available.

Tax ID Number: 52.06-3-10
Lot Size: 25.29 acres
Gross Floor Area: 10,460 square feet
Year Built: 1954
Usage: Commercial
Current Owner: Riverview Industrial Center – 10/27/1999;
Dr. Holdings LLC – 10/27/1999
Past Owners: Ronnen, Deborah – not dated.
Improvements: None listed.
Pertinent Information: GZA reviewed historic tax files for the Site address. The following pertinent information was available.

- Old tax card – The improvements section of the card referred to the installation of three tanks – “1 ½ mil. Each”, three tanks – 470 capacity each, 10,000-gallon methanol tank, replace 2,000-gallon gas fuel oil tank, 10/2/1978 - aboveground tank, 12/3/1991 – remove/demolish 11 tanks (aboveground), and 12/5/1994 – demolish nine aboveground tanks
- Newspaper article titled “Oil storage facility faces state charges” dated 12/14/83. The article pertained to charges against N.N.R.S. Inc. at 5335 River Road filed by the state Department of Transportation (DOT) and the State Department of Environmental Conservation. The charges were filed because the facility was thought to be operating without a permit to operate a major oil facility and operating an air contamination source without a permit. The Site was noted to be leased by SIPCO Oil Ltd. of Toronto. 800,000-gallons of petroleum were noted to be received at the Site on November 28, 1983. The Site was noted to have 12 storage tanks, one of which was in use. New York State Department of Environmental Conservation (NYSDEC) issued an order to cease operations until the proper permits were filed. The DOT charged that the facility was operating as a major petroleum bulk storage without a license, a violation that was noted to be punishable by a fine of \$25,000 for each day.
- Letter to Walter Marcus, Hansen Appraisal, from Harold Schectman, Industrial Realty and Funding, Inc. dated 2/13/1990 – indicated that the Site was empty and for sale for \$500,000. The terminal was noted to “not meet State and Federal requirements for the storage of gasoline and, therefore, cannot be used as such”. An unpaid tax document was attached to the letter which indicated that \$40,639.05 in back taxes was due from Petro Chemical Storage for 1990. A real estate advertisement was attached to the letter. The ad included a site map with eleven tanks ranging in capacity from 300,000 to 5,000,000 gallons. The Site building was noted to be heated by fuel oil.
- Letter to Harold Schectman, Industrial Realty and Funding, Inc., from Frederick Goebel, Coastal Oil New York, Inc. dated 2/15/1993 – Letter indicated that Coastal Oil was terminating their option to lease/purchase the facilities at 5335 River Road due to the likely “large capital investment required by Coastal and the likelihood that in the

foreseeable future the property will go through a condemnation process in favor of the Horizons Waterfront Commission”.

- Building Permit dated 12/05/1994 for the demolition of nine above ground tanks

5.00 PREVIOUS SITE INVESTIGATIONS

Previous reports were not provided to GZA for review.

6.00 SITE RECONNAISSANCE

The purpose of GZA's site reconnaissance was to make surficial observations for evidence of recognized environmental conditions which could result in the presence of hazardous materials in the environment. GZA Engineering Technician, Thomas Bohlen, visited the Site on June 8, 2007. Mr. Ken Swannekamp, Erie County Department of Environmental Planning, and Mr. Bob Morris, Town of Tonawanda, accompanied GZA during the visit to the Site. Observations were documented and pertinent features or areas of environmental concern were photographed and are referenced in the text. Selected photographs are included in Appendix B, and Figure 2 depicts pertinent Site features. A summary of each area assessed is presented below.

6.10 EXTERIOR OBSERVATIONS

The periphery of the Site was visually assessed for recognized environmental conditions. The central and southern portions of the Site were heavily vegetated during our Site reconnaissance; therefore, portions of the property could not be readily observed.

6.10.1 Underground Storage Tanks (USTs)

Two gasoline pumps were located west of the Site building. The pumps were observed to be in poor condition. A potential vent pipe was observed between the pumps.

GZA observed a possible vent pipe and fill port south of the earthen berm areas. The source or purpose of the piping is not known.

Assessor records indicate that the Site building was formerly heated by fuel oil. The Site is a former major oil storage facility and additional USTs may be present at the Site. Mr. Swannekamp and Mr. Morris were unaware of the presence of USTs at the Site.

6.10.2 Aboveground Storage Tanks (ASTs)

One 5,000,000-gallon AST was observed on the north portion of the Site. GZA was able to observe the interior of the AST from unattached transfer piping located at the bottom of the AST and an open manhole located at the top of the AST. The AST was observed to be empty. Mr. Swanekamp indicated the AST has been out of service since at least the early 1990s. The AST was located within an earthen secondary containment berm. A subsurface manhole was located near the AST. No significant areas of staining or discoloration were observed to be associated with the AST. No additional exterior ASTs were observed on the Site.

6.10.3 Hazardous Substances or Petroleum Products Use

Three large pumping stations (i.e. truck racks) formerly associated historic Site use were observed north of the Site building. The truck racks were formerly used to load refined petroleum products from the historic ASTs to trucks for off-Site distribution. Piping from the truck racks appeared to run underground.

6.10.4 Staining

No surficial staining (other than typical parking lot staining) was observed.

6.10.5 Electrical Transformers/Equipment

Nine pole mounted transformers were observed on the north portion of the Site. The transformers are reportedly owned and maintained by the power company. No staining was observed on the transformers or poles.

An electrical panel station was located in the vicinity of the transformers. The electrical equipment appeared old and rusted. GZA did not observe staining near the equipment.

6.10.6 Drywells and Sumps

No surficial evidence of exterior drywells or sumps were observed during GZA's site reconnaissance.

6.10.7 Pits, Ponds, and Lagoons

No surficial evidence of pits or lagoons were observed during GZA's site reconnaissance. Several shallow ponds were observed on the northern portion of the Site. The ponds appeared to be the result of the secondary containment earthen berms associated with the former ASTs, which have been filled with water (i.e. rainwater).

Wetland type vegetation (i.e. reeds and pussy willows) was observed to be associated with the ponds.

6.10.8 Wells

No surficial evidence of wells were observed during GZA's site reconnaissance, and Mr. Morris indicated the Site is connected to the municipal water supply.

6.10.9 Solid Waste

Solid waste is currently not generated at the Site. An old fuel truck and an empty 55-gallon drum were observed southwest of the Site building. Several fill piles consisting of soil, stone, concrete, and brick were observed on the north portion of the Site. Mr. Swannekamp and Mr. Morris were unaware of the origin of the fill piles.

Several piles of construction/demolition debris, consisting of shingles, wood, brick, cinder blocks, and concrete were observed on the north portion of the Site.

Three unlabeled 55-gallon drums were observed to be floating on the water in an earthen berm pond located southeast of the 5,000,000-gallon AST.

6.10.10 Process Wastewater

No surficial evidence of on-site process wastewater disposal was observed.

6.10.11 Septic System

No septic systems were observed. Mr. Morris indicated the Site is connected to the municipal sewer system.

6.10.12 Stressed Vegetation

No stressed vegetation was observed on the Site.

6.10.13 Soil/Water Sampling

No subsurface exploration or chemical analysis has been included as part of GZA's scope of services. Information regarding subsurface conditions can be obtained by traditional subsurface exploration techniques and the collection and chemical analysis of soil and water samples.

6.10.14 Oil/Water Separators

No evidence of oil/water separators was observed.

6.10.15 Surface Water Runoff

Surface water is expected to infiltrate into the ground or runoff to the north toward the Niagara River. The Niagara River was observed to be flowing to the northeast. A tributary of Two-Mile Creek was observed on the northern portion of the Site and was flowing to the east.

A catch basin was observed northeast of the three truck racks. Mr. Swannekamp and Mr. Morris were unaware of the discharge point of the catch basin.

6.10.16 Other Observations

Trench drains were observed along the perimeter of the three truck racks. Mr. Swannekamp and Mr. Morris were unaware of the discharge point of the trench drains. Based on information within the EDR Database (See Section 8.00), an oil/water separator may be associated with the trench drains. GZA did not observe the oil/water separator during our Site reconnaissance.

Disconnected transfer piping was observed on the northern portion of the Site.

A storm water discharge valve was observed near the eastern property limit, southeast of the earthen berms. Based on available information, it is unclear if this structure is located within property limits. The concrete pit associated with the valve was observed to be filled with water. A slight sheen was observed on the water in the pit. Fish were observed swimming in the pit.

Three PVC pipes were observed protruding from the ground on the northern portion of the Site. The pipes were encased with 8-inch cylindrical steel protective casing. A sheen was observed in water between the protective casing and the PVC pipes in the northern most pipe. The purpose of the pipes is not known. These structures may have been monitoring wells.

An empty and rusted 55-gallon drum was observed on the southern portion of the Site. No staining or discoloration was observed to be associated with the drum.

6.20 INTERIOR OBSERVATIONS

The interior of on-Site structures, including occupied areas and storage areas, was visually assessed for evidence of recognized environmental conditions. GZA did not observed areas on the second story of the Site building due to the poor condition of the stairs and floor. The conditions observed are presented below.

6.20.1 Construction

The Site building consists of concrete block walls and sits on a slab-on-grade foundation. The office areas had drywalled and paneled walls and tiled floors.

6.20.2 Heating and Cooling

According to documents obtained from the Town of Tonawanda Assessor's office, the building was formerly heated by a fuel oil furnace.

An approximate 2,000-gallon AST was observed in the southern portion of the Site building. No staining or discoloration was observed on the concrete floor near the AST. The former contents of the AST are not known. Additionally, six 2-inch diameter steel pipes were observed in the vicinity of the AST. Mr. Swannekamp and Mr. Morris were unaware of the purpose of the pipes.

6.20.3 Current Site Use

The Site building has been vacant since the early 1990s.

6.20.4 Chemical Use and Storage Areas

The Site building is currently vacant. Chemicals are not currently used at the Site.

6.20.5 Hazardous Wastes Generated and Waste Storage Areas

Several (approximately 10-20) 55-gallon drums were observed within the Site building. The majority of the drums appeared empty and were unlabeled. Some of the drums appeared to contain unknown contents. One of the drums was labeled "Distilled Oleic Acid". An open top tub of oil (appeared to be waste oil) and oil filters were observed sorted on top of one of the 55-gallon drums located in the central portion of the building, near the loading dock door. A second tub was on the ground, next to the 55-gallon drum, which also contained oil.

A full 5-gallon container of kerosene was observed in the northern portion of the Site building.

An apparent waste storage area was located in the southwest portion of the Site building. Thirty-six unlabeled 55-gallon drums were located in this area. Black staining and a Speedy-Dry type absorbent were observed to be associated with the drums. The concrete slab the drums were located on appeared to be in good condition with no significant chipping or cracking.

6.20.6 Stains or Corrosion

Areas of black staining and discoloration were observed on the concrete floor and walls. However, the concrete floor was in good condition, with no significant areas of chipping or cracking observed.

6.20.7 Floor Drains or Sumps

A 12-inch diameter floor drain was observed in the southern portion of the Site building. A sewer clean-out was observed in the drain. A slight sheen was observed on the water in the drain. Mr. Swanekamp and Mr. Morris were unaware of the discharge point of the drain.

6.20.8 Transformers

No transformers were observed in the interior of the Site building.

6.20.9 Other Interior Observations

Six subsurface access points were observed in the southern portion of the Site building. GZA was unable to open the access points. They were oriented in a straight line. Mr. Swanekamp and Mr. Morris were unaware of the purpose of the access points.

A repair pit filled with water was observed in the northern portion of the Site building. A sheen was observed on the water. Two empty 55-gallon drums were observed floating in the water.

6.30 NON-SCOPE CONSIDERATIONS:

Radon: Radon is a naturally occurring gas produced by the breakdown of uranium in soil, rock and water. The amount of radon in the air is measured in picocuries of radon per liter of air, or pCi/L. The Environmental Protection Agency (EPA) recommends remedial action be taken, if the level of indoor radon is greater than 4 pCi/L, known as the action level. The New York State Department of Health, Short Term Basement Radon Measurements dated February 2007,

reported that 370 homes were tested in Tonawanda. The average radon reading was 1.03 pCi/L. This is below the above the action level.

Asbestos: As a part of this assessment, GZA made observations for readily accessible suspect friable asbestos-containing materials (ACM). A pile of roofing debris and shingles was observed within the Site building. The roofing shingles may contain asbestos. Additionally, due to the age of the Site building (1954), it is possible that ACM are present in the Site building in areas that were not readily accessible.

Lead-Based Paints: Lead is a toxic metal known to be harmful to human health if inhaled or ingested. Lead-based paint is the most significant source of lead exposure in the U.S. today. Most buildings built before 1980 may contain some lead-based paint. Lead-based paint is considered to be a hazard if it is in poor condition, peeling, chipping, cracking or flaking. Due to the age of the building (1954), it is possible that painted surfaces contain detectable quantities of lead. The painted surfaces within the Site building were observed to be in fair to poor condition.

7.00 VICINITY RECONNAISSANCE

As part of GZA's site assessment, a reconnaissance of the properties adjoining the Site, as well as the vicinity within a ¼ mile radius of the Site, was conducted from public properties. The result of GZA's vicinity reconnaissance is presented below.

7.10 HAZARDOUS MATERIAL USE AT ADJOINING PROPERTIES

Adjoining properties are identified in Section 2.30. Hazardous materials and/or petroleum products are expected to be used at Co. Steel Recycling (vacant), which adjoins the Site to the northeast. This facility is in an assumed cross to downgradient direction from the Site. Several piles of construction/demolition debris, several piles of metal rods and wire, a dumpster, and a large pile of tires were observed on this property. GZA interviewed the secretary of R&L Carriers, which adjoins the vacant Co. Steel Recycling facility to the northeast, for information pertaining to the Site and Co. Steel Recycling. The secretary indicated the Site and Co. Steel Recycling have been vacant for at least three years. She also indicated that everyone at R&L Carriers is relatively new and would unlikely have any further knowledge.

Enbridge Energy – Tonawanda Station adjoins the Site to the southeast in an assumed cross to downgradient direction from the Site. GZA interviewed Mr. Marc Curry, Area Supervisor, for information pertaining to the Site and Enbridge Energy. Mr. Curry indicated the Site has been vacant for a long time and was abandoned due to tax debt. Mr. Curry was unaware of any past development on the central or southern portions of the Site. Mr. Curry indicated the Enbridge Energy facility is a pumping station. A subsurface pipeline which transports crude oil is located

northeast of the Site. Portions of the pipeline right-of-way appear to adjoin the southern portion of the Site.

7.20 HAZARDOUS MATERIAL USE AT VICINITY PROPERTIES

The area within ¼ mile of the study Site is primarily residential, commercial, and light industrial. Hazardous materials and/or petroleum products are generally not expected to be used at the facilities located within ¼ mile of the Site, within an estimated upgradient direction, based on a north to northeasterly groundwater flow direction. The Tonawanda Sewer Plant is located approximately ¼ mile southwest of the Site, in an estimated cross gradient direction from the Site.

8.00 REGULATORY DATABASE REVIEW

The following section is based on public information obtained from various federal, state, and local agencies that maintain environmental regulatory databases. These databases provide information about the regulatory status of a property and incidents involving use, storage, spillage, or transportation of oil or hazardous materials. Information was gathered by GZA personnel and by a professional data search service, EDR. Federal, state, and local regulatory information is presented in Appendix D. A discussion of the reviewed information is presented in the following sections.

8.10 FEDERAL AGENCY DATABASES

Source: Environmental Data Resources, Inc.

Site: The Site address of 5335 River Road was listed on the following federal databases reviewed.

- The Service Station at 5335 River Road was listed on the RCRA database as a small quantity generator of hazardous waste. No violations were found. The Site was also listed on the FINDS database for RCRA-Info.
- Coastal Oil New York Inc. at 5335 River Road was listed on the FINDS database for New York – Facility Information System (FIS).
- Erie Petroleum Transfers at 5335 River Road was listed on the FINDS database for FIS.

Nearby Properties: The following facilities were identified adjoining the Site or in an estimated upgradient direction, based on a north to northeasterly groundwater flow direction.

- Co Steel Recycling at 5445 River Road, which formerly adjoined the Site to the northeast, was listed on the FINDS database for FIS. Since this listing is for registration purposes and the facility is in an assumed down to crossgradient direction from the Site, it is not expected to have significantly impacted the environment at the Site.
- Riverview Commerce Park at 5201 River Road, which is under construction and adjoins the Site to the southwest, was listed on the FINDS database for FIS. Since the listing is for regulatory purposes, it is not expected to have significantly impacted the environment at the Site.
- US Transco at 4400 River Road was identified on the database to be approximately 175 feet southwest of the Site. However, this location is actually located approximately 1.25 miles southwest and was listed on the RCRA database as a small quantity generator of hazardous waste. No violations were found. This facility was also listed on the FINDS database for RCRA Info. Due to the distance from the Site and that no violations have been found, this listing is not expected to have significantly impacted the environment at the Site.
- Rattlesnake Creek Remedial Action FUSRAP at 4999 River Road was identified on the database to be approximately 190 feet southwest of the Site. This facility is actually located approximately ¼ mile southwest and was listed on the RCRA database as a large quantity generator of hazardous waste. No violations were found. Since this listing is a registration and no violations have been found, it is not expected to have significantly impacted the environment at the Site. Although, the FUSRAP remediation is a federal action.
- Seaway Industrial Waste Disposal at 4825 River Road, which is approximately ½ mile southwest of the Site, was listed on the CERCLIS database. The facility is not a federal facility and is not listed on the NPL. It is listed as an "other cleanup activity; State-Lead Cleanup". This facility was also listed on the FINDS database for FIS, NEI, and CERCLIS.
- NYS Thruway Authority at 5 Grand Island Bridges was identified on the database approximately 1,680 feet southwest of the Site. Grand Island Bridge is located approximately 1 mile southwest. The listing was for a RCRA database as a small quantity generator of hazardous waste. No violations were found. This facility was listed on the FINDS database for RCRA Info. NY Manifest data indicates that 14,400 pounds of unknown waste, 291,860 pounds of lead, 165 gallons of non-listed ignitable wastes, were removed from the facility. Because these listings are registrations and no violations have been found, they are not expected to have significantly impacted the environment at the Site.

- Allied Chemical Specialty Chemical Division at 821 River Road, which was identified approximately 1,700 feet southwest of the Site, was listed on the RCRA database as a small quantity generator of hazardous waste. One violation was identified pertaining to an oversight. This facility was listed on the FINDS database for RCRA Info. The facility was also listed on CORRACTS database and on the CERC-NFRAP. Due to the distance of this facility from the Site, it is not expected to have significantly impacted the environment at the Site.
- In addition to the above listings, five RCRA small quantity generators of hazardous waste, one CERCLIS facility, two CERC-NFRAP facilities, one CORRACTS facility, and six HMIRS facilities were also identified on the federal databases within the radii reviewed. However, due to the distance and/or direction from the Site, these facilities are not expected to have significantly impacted the environment at the Site.

8.20 STATE AGENCY DATABASE REVIEW

Source: Environmental Data Resources, Inc

Site: The Site address of 5335 River Road was listed on the following state databases reviewed.

- Coastal Oil New York, Inc. at 5335 River Road was listed on the MOSF database (facility ID 9-1540) as an inactive facility. The Site was listed on the UST database for a 10,000-gallon “empty” UST, two 3,000-gallon unleaded gasoline USTs, and five “0-gallon” USTs. The USTs were listed as closed/removed. The Site was listed on the AST database for seventeen (17) ASTs totaling 7,590,000-gallons. Contents included unleaded gasoline, 1, 2, 4 fuel oil, and diesel fuel. The ASTs were listed as “Temporarily Out of Service”.
- Erie Petroleum Transfers at 5335 River Road was listed on the NY Spills database (spill no. 8907712) on 11/3/89 for a #2 Fuel Oil release in the containment dike of Tank 10. The facility was noted as “apparently abandoned”. A cleanup was completed by the owner and disposal receipts were received. The spill was closed in December 1990.
- Erie Petroleum Transfers at 5335 River Road was listed on the NY Spills database (spill no. 8710042) for a release on 3/1/88. The material was washed into an oil/water separator and contaminated soil was placed in a BFI dumpster. The cleanup was satisfactory to the regulatory agency and the listing was closed in May 1988.
- Erie Petroleum Transfers at 5335 River Road was listed on the NY Spills database (spill no. 8710053) for a fuel oil spill at the truck rack on 2/29/88. The spill went to the

oil/water separator and material was absorbed by Speedy-Dry. The cleanup was satisfactory to the regulatory agency and the listing was closed in March 1988.

- River Road Oil Company at 5335 River Road was listed on the NY Manifest database; however, no manifest records were available.
- NNRS Inc. at 5335 River Road was listed on the NY Spills database (spill no. 8603632) for a kerosene release due to a stuck valve during transfer on 9/30/86. The listing was closed by the regulatory agency in September 1986.
- Erie Petroleum Transfer Inc. at 5335 River Road was listed on the NY Spills database (spill no. 8708193) for a fuel oil release during a valve leak pressure test on 12/21/07. The spill was limited to the separator and loading rack. The release was cleaned up with absorbents. No further action was required by the regulatory agency and the listing was closed in December 2004.
- Spill number 0485248 was listed on 12/1/04 when a strong chemical odor was found and sample results shown contamination while doing a study along the creek. NYSDEC reviewed Corps of Engineers documentation and no further work was required by spills. The listing was closed on 12/15/04

Nearby Properties:

The following facilities were identified adjoining the Site or in an estimated upgradient direction, based on a north to northeasterly groundwater flow direction.

- E&R General Construction at the I-190 Exit 17, was listed on the NY Spills database (spill no. 9701816) for a dump truck traffic accident. Contaminated soil was removed and the listing was closed in January 1998. Since the listing has been closed by the regulatory agency and it is quite a distance from the Site, it is not expected to have significantly impacted the environment at the Site.
- Co-Steel Recycling at 5445 River Road, which formerly adjoined the Site to the northeast, was listed on the NY Spills database (spill no. 0175030) for housekeeping issues. The facility cut open a scrap tank, which caused a fire due to remaining product. Approximately 20-gallons of lube oil were released on the ground. The release was cleaned to the satisfaction of the regulatory agency and the listing was closed in August 2001. Since the listing has been closed by the regulatory agency it is not expected to have significantly impacted the environment at the Site.
- Ward Trucking Facility at 4885 River Road, which is approximately ½ mile southwest of the Site, was listed on the NY Spills database (spill no. 9901991) for an organic peroxide release. The material and impacted soils were contained in drums and removed from the

Site to the satisfaction of the regulatory agency. The listing was closed in July 1999. Since the listing has been closed by the regulatory agency it is not expected to have impacted the environment at the Site.

- Calore Express Trucking at 4885 River Road, which is approximately ½ mile southwest of the Site, was listed on the LTANKS database (spill no. 9413479) for a UST removal. Contaminated soils were biotreated and analytical results of the excavation indicated there were no exceedences of regulatory guidelines. The listing was closed in May 1996. Since the listing has been closed it is not expected to have significantly impacted the environment at the Site.
- 4825 River Road, identified as Niagara Landfill, a NY Manifest Site; Northside Transfer Station, a State Landfill Site; and Seaway/Niagara Landfill, Inc, a State Hazardous Waste Site (SHWS). This facility is located approximately ½ mile southwest of the Site. The landfill listing was identified as “inactive”. The Seaway Niagara Landfill has accepted wastes from municipalities and industries. The landfill has been upgraded to meet Part 360 regulations. A cut off wall and leachate collection systems was added. The facility stopped receiving waste in 1993 and is currently in a 30 year post closure monitoring and maintenance program. Leachate is sampled monthly and surface water and groundwater area sampled quarterly. Assessment of health problems indicated the potential for exposure by direct contact is low. Since the facility is currently in a monitoring program, it is not expected to have significantly impacted the environment at the Site.
- 4545 River Road, identified as Ashland Petroleum, located approximately ¾ mile southwest of the Site, was listed on several state databases, including the hazardous waste disposal sites, inactive hazardous waste site, state landfill site, and LUST listings. One open LUST was identified for the facility, resulting from a jet fuel leak from a frozen gauge. The fuel was confined to the secondary containment. Soil will need to be excavated. This work is on-going. The facility was identified on the inactive hazardous waste and hazardous waste disposal site for storage of hazardous waste in a concrete tank. Groundwater monitoring wells were installed around the tank; the wells did not detect a release to groundwater. Public access is restricted and exposure to contaminated soil and sludge is unlikely due to security fencing. The facility classification was identified as “does not present a significant threat to the public health or the environment – action may be deferred”. Based on the distance from the Site and the regulatory action at the facility, this facility is not expected to have significantly impacted the environment at the Site.
- In addition to the above listings, one HSWDS facilities, one State Hazardous Waste facility, one State Landfill, ten LTANKS facilities, two UST facilities, one CBS UST facility, two AST facilities, one CBS UST facility, two MOSF AST facility, six Manifest facilities, one NY Spills facility, one VCP facility, two CBS facilities, and two MOSF

facility were also identified on the state databases within the radii reviewed. However, due to the distance and/or direction from the Site, these facilities are not expected to have significantly impacted the environment at the Site.

Source: New York State Department of Environmental Conservation (NYSDEC)

Summary: Submitted a Freedom of Information Legislation (FOIL) request to NYSDEC dated May 15, 2007. NYSDEC responded that a tiny file on Erie Petroleum Transfers was available in the water unit. GZA contacted Ms. Mary Barren for further Site information, requesting the available information regarding former occupants including Coastal Oil NY, Inc., Erie Petroleum Transfers, NNRS Inc., and River Road Oil. GZA also provided NYSDEC with identified spill numbers 8907712, 8708193, 8710042, 8710053, and 8603632. Ms. Barren indicated available information on the requested spills has been forwarded to the appropriate units of the agency for processing and files may be available for review.

8.30 HEALTH DEPARTMENT RECORDS AND LOCAL REGULATORY AGENCIES

Source: New York State Department of Health (NYSDOH)

Summary: Submitted a Freedom of Information Legislation (FOIL) request to the New York State Department of Health (NYSDOH) dated May 15, 2007. NYSDOH indicated the Site has State Pollution Discharge Elimination System (SPDES) permits 9146400176 under the name Coastal Oil New York, Inc. and 9146300134 under the name Erie Petroleum Transfers. NYSDOH indicated the department does not maintain records for SPDES facilities.

NYSDOH indicated Inactive Hazardous Waste Site 915074 was noted to be in the vicinity of the Site, but no address could be found to determine if this facility was located on the Site.

Source: Erie County Department of Health (ECDH)

Summary: Submitted a Freedom of Information Legislation (FOIL) request to the Erie County Department of Health (ECDH) dated May 15, 2007. ECDH indicated no files were available that met the criteria of our FOIL request.

Source: Town of Tonawanda Assessor's Office

Findings: The desk clerk did not have any additional records other than those summarized in Section 4.40.

Source: Town of Tonawanda Building Department

Findings: The desk clerk did not have any additional records other than those summarized in Section 4.40.

9.00 INTERVIEWS

GZA interviewed the following people as part of this assessment:

- Mr. Ken Swannekamp, Erie County Department of Environmental Planning
- Mr. Bob Morris, Town of Tonawanda
- Secretary, R&L Carriers
- Mr. Marc Curry, Enbridge Energy Area Supervisor
- Desk Clerk, Town of Tonawanda Building Department
- Desk Clerk, Town of Tonawanda Assessor's Office
- Ms. Mary Barren, New York State Department of Environmental Conservation

The information provided by each is discussed and referenced in the text or provided below.

10.00 USER RESPONSIBILITIES

GZA requested the following information from the User regarding title information, environmental liens, Activity and Use Limitations, and specialized knowledge or commonly known information regarding the Site and reason for significantly lower purchase price (if applicable).

- A review of land title records and lien records for environmental liens or Activity and Use Limitations. ASTM states that this information shall be reported to the Environmental Professional.
- Communicate any "specialized knowledge or experience of the user" regarding recognized environmental conditions at the property to the Environmental Professional.
- Communicate any "actual knowledge" of the user of any environmental lien or AULs.
- "Consider the relationship of the purchase price to the fair market value."
- Communicate any "commonly known or reasonably ascertainable" regarding recognized environmental conditions at the property to the Environmental Professional.

Section 12.3 of ASTM 1527-05 (The Evaluation and Report Preparation) indicates "the report shall state whether the user reported to the environmental professional any information pursuant to the user's responsibility described in Section 6.00."

A copy of the user response, provided by Mr. Swannekamp is included in Appendix. E. Mr. Swannekamp was not aware of any environmental liens, AULs or environmental investigations completed on the Site. Additionally, Mr. Swannekamp indicated that no sale of the Site is being considered. Mr. Swannekamp indicated the Site was formerly used as a petroleum tank farm with approximately twelve tanks. He indicated this former usage, former motor service conducted at the Site, and subsequent abandonment of the property as indicators of likely contamination at the Site.

11.00 FINDINGS AND CONCLUSIONS

A Phase I Environmental Site Assessment following the general guidance of the ASTM Phase I Standard Practice 1527-05 has been conducted at the Former Oil Storage Facility located at 5335 River Road, Tonawanda, New York (Site). The study included a site reconnaissance, a review of Site history, a review of selected local, state and federal regulatory records, and interviews with persons and agencies familiar with environmental conditions at the Site. No subsurface explorations or chemical testing of soil or groundwater was conducted and no assessment for the presence of lead hazards, mold, radon or asbestos was completed.

11.10 FINDINGS

The findings below are based on the work conducted as part of this assessment:

- The Site consists of one parcel identified as SBL number 52.06-3-10 by the Town of Tonawanda Assessor's Office. The Site is approximately 25.2 acres, occupied by a two story vacant building located on the northern portion of the Site. The central and southern portions of the Site are vacant wooded land. Mr. Ken Swannekamp, Erie County Department of Environmental Planning, indicated the Site was abandoned due to over \$1,000,000 in back taxes.
- Based on review of the USGS topographic map, Tonawanda quadrangle and knowledge of the Site area, the estimated depth to groundwater is likely less than 20 feet below ground surface. Regional and site groundwater flow is assumed to be north to northeasterly, towards the Niagara River. Based on the Environmental Data Resources (EDR) Geotcheck report, the Site is not located within the 100 year or 500 year floodplain. State or national wetlands do not appear to be identified at the Site.
- The Site has been vacant since the early 1990s. The Site was owned and operated by oil storage and distribution facilities since about 1937, including Coastal Oil, Erie Petroleum, and River Road Oil. Over eleven large storage oil ASTs have been present on the Site at least from 1948 until the early 1990s.

- GZA retained Land Records Researching Ltd. of Buffalo, New York to complete an environmental lien search on the Site. Mr. Mark McGowan of Land Records Researching Ltd. indicated that no environmental liens or activity use limitation (AULs) were found for the parcels.
- The Site is a former Major Oil Storage Facility. A historic Site map indicated eleven ASTs ranging in capacity from 300,000 to 5,000,000 gallons were present at the Site.
- Two gasoline pumps were located southwest of the Site building. The pumps were observed to be in poor condition. A potential vent pipe was observed between the pumps.
- GZA observed a possible vent pipe and fill port south of the earthen berm areas. The source or purpose of the piping is not known.
- Assessor records indicate that the Site building was formerly heated by fuel oil. The Site is a former major oil storage facility and additional USTs may be present at the Site. Mr. Swannekamp and Mr. Morris were unaware of the presence of USTs at the Site.
- One 5,000,000-gallon AST was observed on the northwestern portion of the Site. GZA was able to observe the interior of the AST from unattached transfer piping located at the bottom of the AST and an open manhole located at the top of the AST. The AST was observed to be empty. The AST was located within an earthen secondary containment berm. A subsurface manhole was located near the AST. No significant areas of staining or discoloration were observed to be associated with the AST.
- Three large pumping stations (i.e. truck racks) formerly associated with historic on-Site activities were observed north of the Site building. The truck racks were formerly used to load refined petroleum products from the historic ASTs to trucks for off-Site distribution. Piping from the truck racks appeared to run underground.
- Nine pole mounted transformers were observed on the northwestern portion of the Site. The transformers are reportedly owned and maintained by the power company. No staining was observed on the transformers or poles.
- An electrical panel station was located in the vicinity of the transformers. The electrical equipment appeared old and rusted. GZA did not observe staining near the equipment.
- Several areas of shallow standing water were observed on the northern portion of the Site. The ponds are the result of the secondary containment earthen berms associated with the former ASTs becoming filled with water. Wetland type vegetation (i.e. reeds and pussy willows) was observed to be associated with the areas of standing water.

- Solid waste is currently not generated at the Site. An old fuel truck and an empty 55-gallon drum were observed southwest of the Site building. Several fill piles consisting of soil, stone, concrete, and brick were observed on the northwestern portion of the Site. Mr. Swannekamp and Mr. Morris were unaware of the origin of the fill piles.
- Several piles of construction/demolition debris, consisting of shingles, wood, brick, cinder blocks, and concrete were observed on the northwestern portion of the Site.
- Three unlabeled 55-gallon drums were observed to be floating in water contained within an earthen berm area located southeast of the 5,000,000-gallon AST.
- Trench drains were observed along the perimeter of the three truck racks. Mr. Swannekamp and Mr. Morris were unaware of the discharge point of the trench drains. Based on information within the EDR Database, an oil/water separator may be associated with the trench drains. GZA did not observe the oil/water separator during our Site reconnaissance.
- A storm water discharge valve was observed southeast of the earthen berms. The concrete pit associated with the valve was observed to be filled with water. A slight sheen was observed on the water in the pit. Fish were observed swimming in the pit.
- Three PVC pipes were observed protruding from the ground on the northern portion of the Site. The pipes were encased with 8-inch cylindrical steel protective casing. A sheen was observed in water between the protective casing and the PVC pipes in the northern most pipe. The purpose of the pipes is not known. These structures may have been monitoring wells.
- According to documents obtained from the Town of Tonawanda Assessor's office, the building was formerly heated by a fuel oil furnace. An approximate 2,000-gallon AST was observed in the southern portion of the Site building. No staining or discoloration was observed on the concrete floor near the AST. The former contents of the AST are not known. Additionally, six 2-inch diameter steel pipes were observed in the vicinity of the AST.
- Several (approximately 10-20) 55-gallon drums were observed within the Site building. The majority of the drums were empty and unlabeled. Some of the drums appeared to contain contents. One of the drums was labeled "Distilled Oleic Acid". An open top tub of oil (appeared to be waste oil) and oil filters was observed on top of one of the 55-gallon drums located in the central portion of the building near a loading dock door. A second tub was on the ground, next to the 55-gallon drum,, which also contained oil.

- An apparent waste storage area was located in the southwest portion of the Site building. Thirty-six unlabeled 55-gallon drums were located in this area. Black staining and a Speedy-Dry type absorbent were observed to be associated with the drums. The concrete slab the drums were located on appeared to be in good condition with no significant chipping or cracking.
- Areas of black staining and discoloration were observed on the concrete floor and walls. However, the concrete floor was in good condition, with no significant areas of chipping or cracking observed.
- A 12-inch diameter floor drain was observed in the southern portion of the Site building. A sewer clean-out was observed in the drain. A slight sheen was observed on the water in the drain. Mr. Swanekamp and Mr. Morris were unaware of the discharge point of the drain.
- Six subsurface access points were observed in the southern portion of the Site building. GZA was unable to open the access points. They were oriented in a straight line. Mr. Swanekamp and Mr. Morris were unaware of the purpose of the access points.
- A repair pit filled with water was observed in the northern portion of the Site building. A sheen was observed on the water. Two empty 55-gallon drums were observed floating in the water.
- As a part of this assessment, GZA made observations for readily accessible suspect friable asbestos-containing materials (ACM). No suspect ACM were observed. However, due to the age of the Site building (1954), it is possible that ACMs are present in the Site building in areas that were not readily accessible.
- Due to the age of the building (1954), it is possible that painted surfaces contain detectable quantities of lead. The painted surfaces within the Site building were observed to be in fair to poor condition.
- Enbridge Energy – Tonawanda Station adjoins the Site to the southeast in an assumed cross to downgradient direction from the Site. GZA interviewed Mr. Marc Curry, Area Supervisor, for information pertaining to the Site and Enbridge Energy. Mr. Curry was unaware of any past development on the central or southern portions of the Site. Mr. Curry indicated the Enbridge Energy facility is a pumping station. A subsurface pipeline which transports crude oil is located northeast of the Site. Portions of the pipeline right-of-way appear to adjoin the southern portion of the Site to the northeast.

- The Site address of 5335 River Road was listed on several federal and state databases.
 - RCRA database as a small quantity generator of hazardous waste. No violations were found. The Site was also listed on the FINDS database for RCRA-Info.
 - Coastal Oil New York Inc. at 5335 River Road was listed on the FINDS database for FIS.
 - Erie Petroleum Transfers at 5335 River Road was listed on the FINDS database for FIS.
 - Coastal Oil New York, Inc. at 5335 River Road was listed on the MOSF database (facility ID 9-1540) as an inactive facility. The Site was listed on the UST database for a 10,000-gallon "empty" UST, two 3,000-gallon unleaded gasoline USTs, and five "0-gallon" USTs. The USTs were listed as closed/removed. The Site was listed on the AST database for seventeen (17) ASTs totaling 7,590,000-gallons. Contents included unleaded gasoline, 1, 2, 4 fuel oil, and diesel fuel. The ASTs were listed as "Temporarily Out of Service".
 - Erie Petroleum Transfers at 5335 River Road was listed on the NY Spills database (spill no. 8907712) for a #2 Fuel Oil release in the containment dike of Tank 10. The facility was noted as "apparently abandoned". The spill was closed in December 1990.
 - Erie Petroleum Transfers at 5335 River Road was listed on the NY Spills database (spill no. 8710042) for a release. The material was washed into a oil/water separator and contaminated soil was placed in a BFI dumpster. The cleanup was satisfactory to the regulatory agency and the listing was closed in May 1988.
 - Erie Petroleum Transfers at 5335 River Road was listed on the NY Spills database (spill no. 8710053) for a fuel oil spill at the truck rack. The material was absorbed by Speedy-Dry. The cleanup was satisfactory to the regulatory agency and the listing was closed in March 1988.
 - River Road Oil Company at 5335 River Road was listed on the NY Manifest database; however, no manifest records were available.
 - NNRS Inc. at 5335 River Road was listed on the NY Spills database (spill no. 8603632) for a kerosene release due to a stuck valve. The listing was closed by the regulatory agency in September 1986.
 - Erie Petroleum Transfer Inc. at 5335 River Road was listed on the NY Spills database (spill no. 8708193) for a toluene release during a valve leak pressure test. The spill was limited to the separator and loading rack. The release was cleaned up with absorbents. No further action was required by the regulatory agency and the listing was closed in December 2004.
- Several nearby facilities were listed on the State and Federal databases reviewed. However, due to their distance/direction from the Site, or the current regulatory status

(i.e. closed, inactive), these listings are not expected to have significantly impacted the environment at the Site.

- A copy of the user response, provided by Mr. Swannekamp is included in Appendix. E. Mr. Swannekamp was not aware of any environmental liens, AULs or environmental investigations completed on the Site. Additionally, Mr. Swannekamp indicated that no sale of the Site is being considered. Mr. Swannekamp indicated the Site was formerly used as a petroleum tank farm with approximately twelve tanks. He indicated this former usage, former motor service conducted at the Site, and subsequent abandonment of the property as indicators of likely contamination at the Site.

11.20 CONCLUSIONS AND OPINIONS

Based on the presented findings above, it is GZA's opinion that "we have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 at the Former Oil Storage Facility located at 5335 River Road in Tonawanda, New York. Any exceptions to, or deletions from, this practice are described in Section 1.00 of this report. This assessment has revealed the following evidence of Recognized Environmental Conditions in connection with the property.

- The Site was historically occupied by Major Oil Storage Facilities from at least the 1940s through the early 1990s, including Coastal Oil, Erie Petroleum, and River Road Oil, that used petroleum products and/or hazardous materials during routine operations. Approximately 11 ASTs ranging in size from 300,000-gallons to 5,000,000-gallons of various petroleum products were stored on the Site. Additionally, underground transfer piping was evident at the Site. The historic storage, transport and disposal at these facilities are unknown. The potential exists for historic spills or releases to have impacted the Site soil and/or groundwater.
- Two gasoline pumps were located southwest of the Site building. The pumps were observed to be in poor condition. A potential vent pipe was observed between the pumps. Additionally, GZA observed a possible vent pipe and fill port south of the earthen berm areas. The source or purpose of the piping is not known. The facility was also noted to be heated with fuel oil. The potential exists for USTs to be present at the Site.
- Three large pumping stations (i.e. truck racks) formerly associated with the large ASTs were observed north of the Site building. The truck racks were formerly used to load refined petroleum products from the ASTs to trucks for off-Site distribution. Piping from the truck racks appeared to run underground. Additionally, trench drains were located near the truck racks. Database information indicated an oil/water separator was located near the racks. The potential exists for spillage or leakage from the truck racks, underground piping, trench drains and oil/water separator to have impacted the Site soil and/or groundwater.

- Several fill piles consisting of soil, stone, concrete, and brick were observed on the northwestern portion of the Site. Several piles of construction/demolition debris, consisting of shingles, wood, brick, cinder blocks, and concrete were observed on the northwestern portion of the Site. The potential exists for the fill to contain hazardous materials and or petroleum products which could impact the Site soil and/or groundwater.
- Several (approximately 10-20) 55-gallon drums were observed within the Site building. The majority of the drums were empty and unlabeled. Some of the drums appeared to contain contents. One of the drums was labeled "Distilled Oleic Acid". An open top tub of oil (appeared to be waste oil) and oil filters were observed sorted on top of one of the 55-gallon drums located in the central portion of the building and loading dock door. A second tub was on the ground next to the 55-gallon drum, which also contained oil. An apparent waste storage area was located in the southwest portion of the Site building. Thirty-six unlabeled 55-gallon drums were located in this area. Black staining and a Speedy-Dry type absorbent were observed to be associated with the drums. Additionally, three unlabeled 55-gallon drums were observed to be floating within an earthen bermed area located southeast of the 5,000,000-gallon AST. The contents of the drums, if any, are not known. The potential exists for the spills or leakage from the drums to have impacted the Site soil and/or groundwater.
- A 12-inch diameter floor drain was observed in the southern portion of the Site building. A sewer clean-out was observed in the drain. A slight sheen was observed on the water in the drain. Additionally, six subsurface access points were observed in the southern portion of the Site building. GZA was unable to open the access points. They were oriented in a straight line. The purpose and discharge locations of the drains and access points is not known. A repair pit filled with water was observed in the northern portion of the Site building. A sheen was observed on the water within this pit. Two empty 55-gallon drums were observed floating in the water. Potential releases to these points may have impacted the Site soil and/or groundwater.
- The Site was identified on several federal and state databases, confirming the historic use as a MOSF. Although the spills were listed as closed, the listings confirm that historic releases have occurred. The potential exists that the Site soil and/or groundwater may have been impacted from historic use as a MOSF.

It is GZA's opinion that a subsurface investigation consisting of a geophysical survey in an attempt to identify locations of possible existing USTs and underground piping associated with former transfer operations, and subsurface soil and groundwater sampling and analyses would be necessary to confirm the presence of hazardous materials in the environment associated with the identified Recognized Environmental Conditions. Additionally, an asbestos survey, lead based

paint survey, and mold survey would be necessary to assess for the presence of these materials within the on-Site structure.

GZA also recommends that a file review be conducted at the New York State Department of Environmental Conservation pertaining to the identified spills and listings at the Site.

12.00 LIMITATIONS

GZA's site assessment was performed in accordance with generally accepted practices of other consultants undertaking similar studies at the same time and in the same geographical area, and GZA observed the degree of care and skill generally exercised by other consultants under similar circumstances and conditions. GZA's findings and conclusions must be considered not as scientific certainties, but rather as our professional opinion concerning the significance of the limited data gathered during the course of the environmental site assessment. No other warranty, express or implied, is made. Specifically, GZA does not and cannot represent that the Site contains no hazardous material, oil or other latent condition beyond that observed by GZA during its site assessment. This report is also subject to the specific limitations contained in Appendix A.

It should be noted that when an assessment is completed without subsurface explorations and chemical screening of soil and groundwater beneath the site, no data can be generated regarding latent subsurface conditions which may be the result of on-site or off-site sources.

This study and report have been prepared on behalf of and for the exclusive use of the Niagara County Department of Economic Development, United States Environmental Protection Agency (EPA), and the Town of Tonawanda, solely for use in an environmental assessment of the Site. This report and findings contained herein shall not, in whole or in part, be disseminated or conveyed to any other party, nor relied on by any other party in whole or in part, without the prior written consent of GZA. Client acknowledges and agrees that reliance upon the report and the findings in the report by any other party, or for any other purpose, shall be at that party's sole risk and without any liability to GZA.

13.00 ENVIRONMENTAL PROFESSIONAL STATEMENT

GZA declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 12." We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312." The signature of the Environmental Professional is contained on the cover page of this report and presented below.

A handwritten signature in cursive script, reading 'Michele M. Wittman'.

APPENDIX A
LIMITATIONS

PHASE I ENVIRONMENTAL SITE ASSESSMENT LIMITATIONS

1. The observations described in this report were made under the conditions stated herein. The conclusions presented in the report were based solely upon the services described, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by Client.
2. The findings, conclusions and recommendations in this report are based on information concerning the facility available to GZA and observations made during a Phase I ESA related to the property. Conditions in many of the elements of the Phase I ESA are subject to change, so the status at any given time could differ from the status at the time of our services.
3. In preparing this report, GZA has relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to GZA at the time of the Site assessment. Although there may have been some degree of overlap in the information provided by these various sources, GZA did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this Site assessment.
4. Observations were made of the Site and of structures on the Site as indicated within the report.
5. Unless otherwise specified in the report, GZA did not perform testing or analyses to determine the presence or concentration of asbestos or polychlorinated biphenyls (PCBs) at the Site or in the environment at the Site.
6. No specific attempt was made to check on the compliance of present or past owners or operators of the Site with federal, state, or local laws and regulations, environmental or otherwise.
7. Except as noted within the text of the report, no quantitative laboratory testing was performed as part of the Site assessment.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☒ Library of Congress
- ☒ University Publications of America
- ☒ EDR Private Collection

Total Maps: 0

Limited Permission To Make Copies

Oil storage facility faces state charges

A Jan. 16 court date has been scheduled for a Buffalo company facing charges over its operation of an oil storage facility in the Town of Tonawanda.

N.N.R.S. Inc., owner of the site at 5335 River Road, is the target of charges filed by the state Department of Transportation and the state Department of Environmental Conservation, which contend the firm is operating without required permits.

"You could have a major spill in the Niagara River and that would be very serious," according to DEC senior engineer Henry Sandonato.

The site is leased to SIFCO Oil Ltd. of Toronto, according to Peter J. Burke, regional attorney for DEC.

Mr. Sandonato said N.N.R.S. assured them permits had been applied for and received. Mr. Burke said:

"Mr. Burke said 600,000 gallons of fuel oil was received Nov. 23 at the site which has 12 storage tanks. Only one tank, he said,

The company was ordered to stop and resist, and they have not brought any other product in since Nov. 23," Mr. Burke said.

They were warned numerous times since mid-September not to start without permits," said Mr. Burke.

Robert Saulter of the firm's parent company, Industrial Refining Co. of Buffalo, said the firm had applied for all necessary permits it knew of but did not know of one new permit requirement.

The firm, formerly the River Road Oil Co., had not operated for several years, he said.

"There's no fee for any of these permits. There's no reason in the world we wouldn't have complied if we had known," he said.

"If we aren't now (in compliance), we will be shortly, in a matter of days," Mr. Saulter said.

The charges were filed against an N.N.R.S. employee, Harry Moehlau, who was arraigned Monday before Town Justice James Tippet and released on his own recognizance pending the January Town Court date, said Mr. Burke.

Mr. Burke said the DEC charges are: operating a major petroleum facility without a letter of certification from DEC, a violation; operating an air contamination source without a permit, a misdemeanor punishable by a fine of up to \$10,000 and/or a year in jail; and operating a wastewater discharge treatment system without a permit, a misdemeanor punishable by a fine of up to \$25,000 and/or a year in jail.

Hydrocarbon vapors are emitted from such tanks, Mr. Sandonato said in explaining the air permit requirement.

The DOT is charging operation of a major petroleum facility without a license, a violation of the state's Navigation Law, which Mr. Burke said is punishable by a maximum fine of \$25,000 for each day of the violation.

Mr. Walter Marcus
Hansen Appraisal
414 Franklin Street
Buffalo, New York

Dear Walter,

The terminal located at 5335 River Road, Tonawanda, New York, description of which is attached, is empty and we are presently advertising it for sale for \$500,000.00.

As you know, the terminal does not meet State and Federal requirements for the storage of gasoline and, therefore, cannot be used as such.

Very truly yours,

INDUSTRIAL REALTY AND FUNDING, INC.

Mr. Harold Schectman
INDUSTRIAL REALTY & FUNDING, INC.
P.O. Box 1011
Buffalo, NY 14240

Dear Mr. Schectman,

Pursuant to our telephone conversation of February 12, 1993, please be advised that we are terminating our option to lease/purchase the facilities at 5335 River Road, Tonawanda, New York effective February 28, 1993.

As we discussed, the principal reasons behind this termination are the large capital investment required by Coastal and the likelihood that in the foreseeable future the property will go through a condemnation process in favor of the Horizons Waterfront Commission. As you requested I have attached a copy of the Horizons Waterfront Commission - Waterfront Region Master Plan for your appraisal.

Sincerely,

COASTAL OIL NEW YORK, INC.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

DEC Remarks:	Start DEC Remark - 9901991 Prior to Sept. 2004 data translation this spill Lead DEC Field was "MJS" 05/21/99. JDC TELECON TO PAUL WOITAS. HE STATED CLEANUP HAD BEEN COMPLETED BY BRIGHTON FIRE. SPILL HAD OCCURRED AT 2100 HRS, CAUSED BY TOW MOTOR OPERATOR WHEN HE PUNCTURED THE PEROXIDE CONTAINER. AN ATTEMPT TO CLEANUP THE MATERIAL IN THE TRUCK BED CAUSED FOR TWO EMPLOYEES TO BE AFFECTED BY THE VAPORS. AT 0200 THE OPERATIONS MANAGER WAS CONTACTED BY THE NIGHT SHIFT SUPERVISOR THAT A SPILL HAD OCCURRED. NO ATTEMPT BY WARD TRUCKING WAS MADE TO NOTIFY DEC. NOTIFICATION WAS MADE THROUGH THE HOSPITAL VIA CHEMTREC AND BRIGHTON FIRE. BRIGHTON FIRE CONTAINED THE MATERIAL. WARD WILL MANAGE DISPOSAL THROUGH EPS. 06/02/99. JDC TELECON TO PAUL WOITAS. DRUM STILL ON SITE. EPS HAS NOT COLLECTED FOR DISPOSAL. ADVISED TO SENT RECEIPTS. 07/22/99. MJS TOOK OVER FILE. JDC NO LONGER WITH DEC. MJS CALLED WARD TRUCKING AND SPOKE WITH TOM. TERMINAL MANAGER. HE STATED THAT DRUM HAD BEEN DISPOSED BY EPS INC. HE HAD SENT A LETTER DATED 7/6 WITH COPY OF HAZ. WASTE MANIFEST. APPARENTLY LOST. HE WILL FAX INFORMATION TO ME AGAIN FOR FILE CLOSURE. MJS FOUND LETTER, INCIDENT REPORT, MANIFEST IN JDC'S IN BOX. DRUMS DISPOSED AT CYCLE CHEM INC. ONE DRUM LIQUID, ONE DRUM SOLIDS. NO FURTHER ACTION REQUIRED. MJS CLOSE FILE. END DEC Remark - 9901991

Other Pertinent Environmental Activity Identified at Site

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities.

RCRAinfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAinfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Remarks: Start DECRemark - 9802587 Prior to Sept. 2004 data translation this split Lead
DEC Field was "NJSP" 06/28/99: MJS SITE INSPECTION: MET WITH RAMON KHU. TWO OIL-WATER SEPARATORS AND SKIM TANKS REMOVED. CONTAMINATION FOUND AND STOCKPILED. ALSO MOTOR OIL, GEAR OIL AND ANTI-FREEZE TANKS REMOVED AT ADJACENT LOCATION AND SOME CONTAMINATION FOUND. REVIEWED SAMPLING REQUIREMENTS. 06/10/99: MJS TELECON WITH MR KHU. SAMPLE RESULTS ARE IN. HE WILL FAX SUMMARY OF RESULTS. HE ASKED IF SOIL PILES INDICATING NO CONTAMINATION CAN BE SPREAD ON SITE. MJS EXPLAINED THAT FURTHER SAMPLING MAY BE REQUIRED TO DEEM SOIL NON-CONTAMINATED. 06/11/99: MJS RECEIVED FAX OF SAMPLE RESULTS SUMMARY. EXCAVATIONS OK TO BACKFILL. MINOR VIOLATION FOR NAPHTHALENE AT WASTEOIL EXCAVATION (NORTH WALL). NO VIOLATIONS AT OTHER EXCAVATION. 06/78: MJS TELECON WITH MR KHU AND EXPLAINED INACTIVE STATUS. MJS SUGGESTED ADDITIONAL

CONSOLIDATED FREIGHTWAYS (Continued)

1000383763

EXCAVATION AT NORTH WALL AND RESAMPLING IN ORDER TO OBTAIN CLOSED STATUS MR KHU AGREED AND WILL DISCUSS WITH CLIENT. 06/78: MJS TELECON FROM MR KHU. THEY WILL PERFORM ADDITIONAL EXCAVATION AND RESAMPLE. 07/21/98: MJS TELECON WITH MR KHU AND EXPLAINED THAT ALL SOILS MUST BE DISPOSED. NO SCREENING PERFORMED. 11/20/98: MJS REVIEW FILE. NEED REPORT. MJS TELECON TO MR KHU AT BLYMYER ENGINEERS. HE STATED THAT REPORT NOT YET COMPLETE BECAUSE OF DIFFICULTY OBTAINING SAMPLE RESULTS FROM A CONTRACTOR. HE WILL SEND REPORT BEFORE FIRST OF THE YEAR. 02/09/99: MJS REVIEW FILE. NEVER RECEIVED REPORT. MJS TELECON TO MR KHU AT BLYMYER ENGINEERS AND LEFT MESSAGE FOR HIM TO CALL. 04/02/99: MJS REVIEW FILE. NO CALL BACK OR REPORT. MJS TELECON TO MR KHU AND LEFT MESSAGE FOR HIM TO CALL. 04/16/99: MJS TELECON TO MR KHU. HE STATED HE IS STILL HAVING TROUBLE OBTAINING SAMPLE RESULTS FOR RESAMPLE FROM SUBCONTRACTOR. OKAR. IF HE CANNOT OBTAIN RESULTS SOON, HE WILL FORWARD REPORT WITHOUT THEM AND ADDRESS ISSUE LATER. MJS TELECON TO OKAR EQUIPMENT AND LEFT MESSAGE FOR CHUCK NORRIS TO CALL REGARDING RE-SAMPLE RESULTS. 05/17/99: RECEIVED REPORT FROM MR KHU. BLYMYER ENGINEERS. DATED 5/7/99. 505.99 TONS SOIL DISPOSED AT BFI LANDFILL IN NIAGARA FALLS. DISCREPANCY WITH SAMPLE RESULTS. RESULTS FORWARDED BY MR KHU IN 6/96 INDICATE NAPHTHALENE AT 0.55% TO 360 PPB. THUS, FURTHER EXCAVATION AND RESAMPLE WAS REQUIRED TO OBTAIN CLOSED STATUS. REPORT INDICATES THIS COMPOUND AT THIS LOCATION TO 1.3 PPB. MJS TELECON TO MR KHU. HE STATED THAT THE RESULTS HE FAXED TO ME IN 6/96 WERE PRELIMINARY AND WHEN HE RECEIVED THE ACTUAL LABORATORY REPORT THIS COMPOUND SHOWED DIFFERENT RESULTS. IN LIGHT OF THIS INFORMATION, THE ADDITIONAL EXCAVATION AND RESAMPLE WAS NEVER REALLY NEEDED TO OBTAIN A CLOSED STATUS. HE ALSO STATED THAT TO DATE HE HAS BEEN UNABLE TO OBTAIN THE RESAMPLE RESULTS FROM OKAR EQUIPMENT. MJS EXPLAINED THAT SINCE THE ORIGINAL RESULTS MEET STANDARDS, MJS WILL ISSUE A LETTER STATING FILE WILL BE CLOSED (NOT INACTIVE). IF HE RECEIVES THE RESAMPLE RESULTS, HE WILL FORWARD TO ME. MJS SENT CLOSURE LETTER. END DECRemark - 9802587

 DEC Remarks: 05/28/98: MJS SITE INSPECTION, MET WITH RAMON KHU. TWO OIL-WATER SEPARATORS AND SKIM TANKS REMOVED. CONTAMINATION FOUND AND STOCKPILED. ALSO MOTOR OIL. GEAR OIL AND ANTI-FREEZE TANKS REMOVED AT ADJACENT LOCATION AND SOME CONTAMINATION FOUND. REVIEWED SAMPLING REQUIREMENTS. 06/10/98: MJS TELECON WITH MR KHU. SAMPLE RESULTS ARE IN. HE WILL FAX SUMMARY OF RESULTS. HE ASKED IF SOIL PILES INDICATING NO CONTAMINATION CAN BE SPREAD ON SITE. MJS EXPLAINED THAT FURTHER SAMPLING MAY BE REQUIRED TO DETERMINE NON-CONTAMINATED. 06/11/98: MJS RECEIVED FAX OF SAMPLE RESULTS SUMMARY. EXCAVATIONS OK TO BACKFILL. MINOR VIOLATION FOR NAPHTHALENE AT WASTE OIL EXCAVATION (NORTH WALL). NO VIOLATIONS AT OTHER EXCAVATION. 06/18/98: MJS TELECON WITH MR KHU AND EXPLAINED INACTIVE STATUS. MJS SUGGESTED ADDITIONAL EXCAVATION AT NORTH WALL AND RESAMPLING IN ORDER TO OBTAIN CLOSED STATUS. MR KHU AGREED AND WILL DISCUSS WITH CLIENT. 06/19/98: MJS TELECON FROM MR KHU. THEY WILL PERFORM ADDITIONAL EXCAVATION AND RESAMPLE. 07/21/98: MJS TELECON WITH MR KHU AND EXPLAINED THAT ALL SOILS MUST BE DISPOSED. NO SCREENING PERFORMED. 11/20/98: MJS REVIEW FILE. NEED REPORT. MJS TELECON TO MR KHU AT BLYMYER ENGINEERS. HE STATED THAT REPORT NOT YET COMPLETE BECAUSE OF DIFFICULTY OBTAINING SAMPLE RESULTS FROM A CONTRACTOR. HE WILL SEND REPORT BEFORE FIRST OF THE YEAR. 02/09/99: MJS REVIEW FILE. NEVER RECEIVED REPORT. MJS TELECON TO MR KHU AT BLYMYER ENGINEERS AND LEFT MESSAGE FOR HIM TO CALL. 04/02/99: MJS REVIEW FILE. NO CALL BACK OR REPORT. MJS TELECON TO MR KHU AND LEFT MESSAGE FOR HIM TO CALL. 04/16/99: MJS TELECON TO MR KHU. HE STATED HE IS STILL HAVING TROUBLE OBTAINING SAMPLE RESULTS FOR RESAMPLE FROM SUBCONTRACTOR. OKAR. IF HE CANNOT OBTAIN RESULTS SOON, HE WILL FORWARD REPORT WITHOUT THEM AND ADDRESS ISSUE LATER. MJS TELECON TO OKAR EQUIPMENT AND LEFT MESSAGE FOR CHUCK NORRIS TO CALL REGARDING RE-SAMPLE RESULTS. 05/17/99: RECEIVED REPORT FROM MR KHU. BLYMYER ENGINEERS. DATED 5/7/99. 505.99 TONSSOIL DISPOSED AT BFL LANDFILL IN NIAGARA FALLS. DISCREPANCY WITH SAMPLE RESULTS. RESULTS FORWARDED BY MR KHU IN 8/98 INDICATE NAPHTHALENE AT 0W SNW-11 TO 360 PPB. THUS, FURTHER EXCAVATION AND RESAMPLE WAS REQUIRED TO OBTAIN CLOSED STATUS. REPORT INDICATES THIS COMPOUND AT THIS LOCATION TO 6.3 PPB. MJS TELECON TO MR KHU. HE STATED THAT THE RESULTS HE FAXED TO ME IN 6/98 WERE PRELIMINARY AND WHEN HE RECEIVED THE ACTUAL LABORATORY REPORT THIS COMPOUND SHOWED DIFFERENT RESULTS. IN LIGHT OF THIS INFORMATION, THE ADDITIONAL EXCAVATION AND RESAMPLE WAS NEVER REALLY NEEDED TO OBTAIN A CLOSED STATUS. HE ALSO STATED THAT TO DATE HE HAS BEEN UNABLE TO OBTAIN THE RESAMPLE RESULTS FROM OKAR EQUIPMENT. MJS EXPLAINED THAT SINCE THE ORIGINAL RESULTS MEET STANDARDS, MJS WILL ISSUE A LETTER STATING FILE WILL BE CLOSED (NOT INACTIVE). IF HE RECEIVES THE RESAMPLE RESULTS, HE WILL FORWARD TO ME. MJS SENT CLOSURE LETTER.

EXECUTIVE SUMMARY

MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 10/26/2006 has revealed that there are 8 NY MANIFEST sites within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page

SPILLS: Data collected on spills reported to NYSDEC, is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 813.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 01/17/2007 has revealed that there are 6 NY Spills sites within approximately 0.375 miles of the target property.

HIST SPILLS: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there

TC1929688.2s EXECUTIVE SUMMARY 11

EXECUTIVE SUMMARY

are 6 NY Hist Spills sites within approximately 0.375 miles of the target property.

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the VCP list, as provided by EDR, and dated 03/05/2007 has revealed that there is 1 VCP site within approximately 0.75 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
ASHLAND	4825 RIVER ROAD	1/2 - 1 SW	I50	209

CBS: These facilities store regulated hazardous substances in aboveground tanks with capacities of 165 gallons or greater, and/or in underground tanks of any size.

A review of the CBS list, as provided by EDR, and dated 03/06/2007 has revealed that there are 2 CBS sites within approximately 0.5 miles of the target property.

VCP:		
Program Type:	BCP	
Site Code:	367223	
Assessment:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.	
Env Problems:	Information submitted with the BCP application regarding the environmental conditions at the site are currently under review and will be revised as additional information becomes available.	
Site Desc:	This new BCP application pertains to Tank 75 located at 4625 River Road, in the Town of Tonawanda, Erie County. This site is approximately 1.25 acres in size. The site is defined as the former in-ground product storage tank owned by Ashland Inc. but located within the United Refining facility. The tank, constructed in the early 1940's, is an in-ground pit (200 ft. x 300 ft.) lined with gunite. Primary use was to store No. 6 fuel oil. Also contained refinery sludges and off-spec asphalt and run-down. Active tank operation discontinued in 1980. The current and future land use for this site is industrial. Known contaminants at this site are Petroleum and sludge; refinery wastes K049, K050 and K052. These contaminants are impacting the sediment. The BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility in conjunction with the Department of Health.

DEC Remarks:	Start DEC Remark - 0475288 Prior to Sept. 2004 data translation this spill Lead DEC Field was "SAC" 8/1/04 SAC TELECON DEAN MESSING - ERIE CO. EMERGENCY SERVICES NOTIFYING HIM OF THE RELEASE. DIK NOTIFIED OF SPILL. COPY OF REPORT GIVEN TO DAN DAVID. 8/1/04 SAC INSPECT SITE. MET W/LARREN DOSSER, RICK BRANT, AND JIM HARE - UNITED REFINING. THEY HAVE COLLECTED TWO VACUUM TRUCKS FULL OF OIL/WATER MIXTURE. THEY ARE IN THE PROCESS OF REPAIRING THE LINE. COLLECTED OIL WILL BE USED IN ON-SITE HEATER FOR THE ASPHALT TANKS. WATER WILL BE PLACED IN OIL/WATER SEPARATOR. THERE IS A SUMP IN THE CONTAINMENT WHICH DISCHARGES TO THE OIL/WATER SEPARATOR. SMALL AMOUNT OF SOIL AFFECTED FROM PRODUCT THAT SPRAYED ONTO STONE OUTSIDE CONTAINMENT. CLAY SOIL UNDERLIES PIPING BANK. ENVIRONMENTAL REMEDIATION PERSONNEL FROM WARREN ARE COMING TO SITE TO ASSESS THE INCIDENT. 8/1/04 SAC TELECON RICK BRANT, MR. BRANT SAID BASED ON CALCULATIONS FROM THE DATA SUPPLIED BY SUN OIL, THEY ESTIMATE ABOUT 100 GALLONS OF FUEL WAS LOST. OF THE 100 GALLONS THEY ESTIMATED ABOUT 99 GALLONS HAS BEEN RECOVERED. THE ENVIRONMENTAL REMEDIATION PERSONNEL ARE PUTTING TOGETHER A WORKPLAN AND IT WILL BE SUBMITTED SOON. 10/27/04 SAC called Tim Ruth - United Refining. Left message for call back. 11/4/04 SAC spoke to AES. AES inspect site. Stone outside containment area was cleaned up. Containment area inspected during heavy rain and no sheen observed. 11/4/04 SAC telecon Tim Ruth. Discussed site requirements. United will take grab samples of clay in containment area for volatile and semivolatile STARS analysis. Mr. Ruth will have Todd France write a letter proposing sampling of area. 4/25/05 Received letter for sampling area of the spill. 5/18/05 Drafted comment letter accepting sampling plan. 5/18/05 SAC telecon Todd France - United Refining. They will be sampling the site on 5/18. 7/8/05 RECEIVED SAMPLING RESULTS. RESULTS BELOW TQM 4048 GUIDANCE BUT SOME PARAMETERS ARE ABOVE STARS GUIDANCE VALUES. NO FURTHER WORK REQUIRED. END

DEC Remarks:	07/15/93: SAC/GEORGE WHITE/SITE - SMALL AMOUNT OF SPILLAGE SHEEN PRESENT. DARKENED SOIL. EP 5 PUMPING TANK. WILL DIG CONTAMINATED SOIL AND REPAIR TANK. 08/19/93: SAC DRAFTED LETTER REQUIRING DOUBLE BOTTOM FOR TANK AND ASKING HOW CONTAMINATED SOIL WILL BE HANDLED. 08/21/93: SAC DRAFTED LETTER REQUIRING DETAILS OF VAPOR EXTRACTION SYSTEM. POST BIO-TREATMENT SAMPLING. 3 GRABS FOR ISOBUTYLENE. 07/21/94: SAC INSPECT SITE INSPECTION. MET GEORGE WHITE-UNITED REFINING. VENT PIPING BEING INSTALLED. NO BIOREMEDIATION HAS BEGUN FOR THE AFFECTED AREAS. 09/01/94: SAC TELECON B. RICHNAFSKY-UNITED REFINING. VACUUM EXTRACTION PUMP MOTOR BURNED OUT. TREATMENT OF SOIL WILL BE STARTING NEXT FEW WEEKS. 10/29/94: RECEIVED VACUUM BOX TEST RESULTS FOR THE TANK BOTTOM. HYDROTEST RESULTS AND TREATMENT AND VAPOR EXTRACTION SCHEDULE FOR SPILL. 11/18/95: SAC INSPECT. TREATED AREA UNDER WATER IN DIKE. RECEIVED COMPOSITE RESULTS OF TREATED AREA. 4ppm. LETTER SENT REQUESTING STATUS REPORT INCLUDING ANY ADDITIONAL SAMPLE RESULTS. WHAT IS PROPOSED FOR 1996. 12/12/95: RECEIVED SCHEDULE FOR '95. SYSTEM RAN FROM MAY TO OCTOBER. TREATMENT CONTINUED. SAMPLING TAKING PLACE 12/95. 3/8/96: SAC RNL MEETING WITH UNITED REFINING. SYSTEM CONTINUES TO OPERATE. WILL SAMPLE IN SPRING ONCE WEATHER PERMITS AND WILL CONSIST OF 3 GRAB SAMPLE IN DIKE AND BELOW TANK. TANK IS EMPTY AT PRESENT. 8/21/96 SENT LETTER REQUESTING RESULTS FOR 3 GRAB SAMPLES BY 9/30/96. 10/29/96: RECEIVED THE RESULTS FROM THE THREE GRAB SAMPLES FOR THE BIO-TREATMENT. RESULTS WERE BELOW 10 ppm. SAC TELECON BERT RICHNAFSKY ASKING FOR THREE SAMPLES BELOW THE TANK FOR THE VAPOR EXTRACTION. BERT WILL SAMPLE FROM THE HOLES IN THE RINGWALL USED FOR THE PIPING. LETTER TO BE SENT. 7/22/97: SAC TELECON BERT RICHNAFSKY, UNITED REFINING. 1 SAMPLE HAS BEEN TAKEN FROM BELOW THE TANK AND THE RESULTS INDICATE LEVELS OF ABOUT 3ppm. WILL TAKE 2 ADDITIONAL SAMPLES NEXT WEEK. 8/18/97: RECEIVED ANALYTICAL RESULT FOR ONE SAMPLE. BELOW DETECTION LIMITS OF 3 ug/L. 8/27/97: SAC TELECON BERT RICHNAFSKY, UNITED REFINING. RICHNAFSKY WILL BE SAMPLING 8/28/97 UNDER TANK. 12/28/97: RECEIVED 2 ADDITIONAL ANALYTICAL RESULTS FOR SAMPLES TAKEN BELOW THE TANK ON 8/28/97. RESULTS BELOW DETECTION LIMITS OF 3 ug/L. ANALYZED USING TCLP METHOD. FILE PUT INTO CLOSURE BIN FOR RNL APPROVAL. NOTICED PRODUCT ON GROUND OUTSIDE OF TANK.

DEC Remarks: 01/24/99: 0320 HOURS - MJS CONTACTED BY DUTY OFFICER HENRY S) TO RESPOND.
0615 HOURS - MJS SITE INSPECTION. MET WITH GEORGE WHITE, UNITED REFINING. HE DISCOVERED SPILL DURING CHECK AT APPROX 0130 HOURS. MAIN OIL-WATER SEPARATOR SYSTEM BY RIVER OVERFLOWED DUE TO EXTREMELY HEAVY FLOW FROM RECENT THAWING. TEMPERATURE ON SAT 1/23 REACHED 60 DEGREES. READINGS ON FLOW CHART OFF THE SCALE FOR LATER HOURS OF 1/23. OILS FROM SEPARATOR OVERFLOWED TO CONCRETE PADS AROUND AREA AND SIGNIFICANT CONTAMINATION TO SOIL AREAS AROUND SEPARATOR. OIL TRAVELED UNDER SNOWICE TOWARDS RIVER EDGE. AT TIME OF DISCOVERY OIL

CONTAMINATION STOPPED APPROX 15 FEET FROM RIVER. SHALLOW TRENCH INSTALLED AT LEADING EDGE AND FILLED WITH SORBENT BOOM MJS MET WITH CARL CROSSEN, CONTRACTOR EP 5. THEY ARE PERFORMING CLEANUP. MJS MET WITH TOM PARTISH, USCG. HE IS SATISFIED WITH RESPONSE SO FAR 0520 HOURS - MJS MET WITH CARL CROSSEN. FOCUS OF CLEANUP ACTIVITIES AT THIS TIME IS TO VACUUM ANY RECOVERABLE OILS AROUND SEPARATOR SYSTEM AND PREVENTION OF MIGRATION TO NIAGARA RIVER. THEY PLAN LATER) TO SHOVEL SNOWICE IN IMMEDIATE AREA INTO SEPARATOR AND START EXCAVATING/SCRAPING IMPACTED SOILS AND STOCKPILING. TEMPERATURE EXPECTED TO DROP INTO 30 s AND HIGH 20 s BY TONIGHT AND SNOW ANTICIPATED. SNOW COVER WILL HINDER CLEANUP. 0610 HOURS - MJS MET WITH ALL PARTIES AND LEFT SITE. WILL BE BACK LATER IN A.M. 0745 HOURS - MJS TELECON AT HOME FROM CARL CROSSEN. HEADVISED THAT OIL REACHED RIVER EDGE AND CAUGHT UP IN RIP-RAP. THEY ARE CONTINUING TO USE VACUUM TRUCK TO COLLECT FREE PRODUCT. 1215 HOURS - MJS SITE INSPECTION. MET WITH GEORGE WHITE AND CARL CROSSEN. OIL CAUGHT UP IN RIP-RAP AT RIVER EDGE. THEY WILL BE MOVING RIP-RAP AND ATTEMPTING TO COLLECT OIL. THEY HAVE EXTENDED TRENCH BY RIVER AND PUMPING WATER BACK TO SEPARATOR. THEY WOULD LIKE TO BEGIN SCRAPING SOILS BUT DIFFICULT DUE TO SOFTNESS AND WETNESS OF SOIL. USCG SATISFIED WITH WORK THUSFAR. EP 5 HAS DEPLOYED ADDITIONAL BOOM IN RIVER. 0125/99: 0913 HOURS - MJS SITE INSPECTION. MET WITH MR WHITE. EP 5 ON SITE WITH VACUUM TRUCK. SUMP PUMPS IN TRENCH TAKING WATER BACK TO SEPARATOR. THEY REMOVED APPROX 20 FEET OF RIP-RAP YESTERDAY AND COLLECTED OIL WITH SORBENTS AND VACUUM TRUCK. THEY ARE NOW CHANGING BOOMS IN RIVER BY AFFECTED RIP-RAP. CANNOT REMOVE SOILS TODAY DUE TO SNOW COVER FROM LAST NIGHT AND IS TOO WET/SOFT ANYWAYS. 0125/99: MJS UPDATED SAC ON SPILL AND PROGRESS. 0125/99: 1500 HOURS - MJS TELECON TO GEORGE WHITE. UNITED WILL BE RENTING A STEAM MACHINE TOMORROW TO CLEAN CONCRETE AREAS AND WILL MELT SNOW ON SOIL AREAS AND TRY TO WASH OILS TOWARDS COLLECTION TRENCH BY RIVER. 0126/99: MJS TELECON WITH MR WHITE. HE HAS BEEN UNABLE TO LOCATE A STEAM MACHINE. THEIR VACUUM TRUCK WILL BE REPAIRED BY THIS AFTERNOON. HE HAS EP 5 ON SITE VACUUMING A FEW PUDDLES. 1027/00: MJS LEFT DEPARTEMENT. SAC ASSUMED RESPONSIBILITY FOR FOLLOWUP. SAC MET GEORGE WHITE. CLEANUP WAS COMPLETED. THE OIL/WATER MIXTURE WAS VACUUMED UP AND PLACED IN THE OIL/WATER SEPARATOR. THE CONTAMINATED SOIL WAS DISPOSED AT GREEN TREE LANDFILL IN PENNSYLVANIA. MR. WHITE WILL SEND IN THE DISPOSAL RECEIPT. 12/13/00: SAC TELECON BERT RICHNAFSKY. HE SENT DISPOSAL RECEIPTS TO DEC YESTERDAY. 12/13/00: SAC RECEIVED DISPOSAL RECEIPTS.
SNOW MELT BACKUP IN SEPARATOR - CAUSING KEROSENE AND GASOLINE MIX TO OVERFLOW ONTO GROUND AND INTO RIVER - AREA BOOMED AND CLEAN UP BEGUN - ALSO CALL ERIE COUNTY EMERGENCY SERVICES AT 716-498-3636

Recovered: 2500.00
Resource Affected: Soil
Oxygenate: False
DEC Remarks: Start DEC Remark - 9911829 Prior to Sept. 2004 data translation the spill lead OEC Field was "SAC 01/11/00: SAC SITE INSPECTION, MET GEORGE WHITE & LARREN DOSSIER OF UNITED REFINING. SPILL OCCURRED WHEN LOW SULFUR DIESEL FUEL LEAKED FROM THE AIR ELIMINATOR LINE DIRECTLY INTO PIPE THAT DRAINED INTO OILY WATER SEWER SYSTEM AND THEN INTO THE API SEPARATOR. PROBLEM WAS FIRST DISCOVERED WHEN PRODUCT WAS NOTED IN THE API SEPARATOR. EVENTUALLY IT WAS TRACED BACK TO THE AIR ELIMINATOR. NO PRODUCT REACHED THE GROUND SURFACE SO NO SOIL WAS AFFECTED. THE PRODUCT WAS BEING VACUUMED UP FROM THE SEWER INTO A VACUUM TRUCK. PRODUCT WILL BE USED TO HEAT ASPHALT TANKS, ANY WASTE THAT CANNOT BE USED FOR HEATING WILL BE RETURNED TO THE REFINERY IN WARREN AND RECYCLED. ESTIMATES INDICATE THAT ONLY 2000 GALLONS SPILLED. 01/12/00: SAC TELECON GEORGE WHITE, UNITED REFINING. HE SAID THAT 1500 GALLONS OF PRODUCT WAS COLLECTED USING THE VACUUM TRUCK WHICH WOULD BE THE APPROXIMATE AMOUNT SPILLED SINCE IT WAS ALL COLLECTED IN THE SEWER SYSTEM AND THE SEPARATOR. MR. WHITE WILL USE ALL THE PRODUCT TO HEAT THE FACILITY'S ASPHALT TANKS WHEN THE SEASON BEGINS THIS SPRING. HE USES APPROXIMATELY 800 GALLONS A DAY TO HEAT THESE TANKS. THE AIR ELIMINATOR IS DESIGNED TO VENT OFF AIR THAT MAY BE IN THE LINE WHEN PUMPING PRODUCT FROM A TANK TO THE LOADING RACK. IF AIR WAS ALLOWED TO REMAIN IN THE LINE IT COULD CAUSE PROBLEM IN THE METERING THE FLOW AND AMOUNT OF PRODUCT AT THE RACK. MR. WHITE HAS SHUT DOWN THE ENTIRE ELIMINATOR SYSTEM FOR ALL LINES UNTIL THE ONE LINE CAN BE FIXED. THE SYSTEM WAS DESIGNED TO BLEED OFF THE AIR BUT THE LINE TO BLEED OFF AIR DRAINS INTO A PIPE THAT LEADS INTO THE OILY WATER SEWER IN CASE ANY PRODUCT BLENDS OFF THROUGH THIS AIR LINE, NO FURTHER ACTION REQUIRED. END DEC Remark - 9911829
Start Caller Remark - 9911829 caller reported leak in air eliminator, leaked to city water sewer system. 4000 gallons recovered. END Caller Remark - 9911829

Other Pertinent Environmental Activity Identified at Site

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

FRP

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major revision to support facility operating permits required under Title V of the Clean Air Act.

ICIS (Integrated Compliance Information System) is the integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites,

including an inventory of sites, planned and actual site activities, and financial information.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description:
Foundry sand and slag from the Chevrolet foundry sand operation, and liquid boiler cleaning wastes from the Dow Chemical Company were allegedly disposed here. CFlamp also disposed steel slag from its operation at this site. In March 1981, water samples were collected from drainage ditches around the site. Extensive subsurface soil sampling was performed by USGS in August 1982 and in May 1983. There were 22 organic priority pollutants found, some as high as 199 ppm concentration. A Phase I investigation for this site was completed by the responsible party in 1987. A Consent Order (CO) for a Remedial Investigation / Feasibility Study (RIFS) was signed by the PRP group in April 1989. The RIFS has been completed and a Record of Decision (ROD) was signed February 1991. Based on the results of additional investigations and pump tests completed in 1992, the ROD was amended during October 1993. Due to common site history, former common ownership, similar waste and a similar Remedial Program, the site was combined with the adjacent River Road Site (#915031) for Remedial Action. The site remedy includes the stabilization of the river bank, installation of a clean earth cover, extraction and treatment of groundwater and recovery and disposal of non-aqueous phase liquid. A Consent Order for Remedial Design/Remedial Action (RDRA) was signed in September 1994. The PRP Group developed a comprehensive remedial design for this and the adjoining River Road Site (Site # 915031). The Remedial Design work was completed in February 1995 and the Remedial Action work began in May 1996 and was completed by August 1999. The Construction Certification Report and the Operation, Maintenance and Monitoring Plan were approved January, 2000. Long term Operation and Maintenance (O&M) of the site is now underway. Long term sampling of site monitoring wells indicates that site related contaminants in only one site monitoring well exceeded ground water standards. A Ground Water Upgrading study was performed to evaluate the impact of site related contaminants from the deep ground water zone on the Niagara River. The study did not detect any river impact from the site. Nine of the eleven deep ground water extraction wells were shut down and will be de-commissioned. The shallow ground water collection and treatment system will continue to operate. With completion of the remedial construction and long-term O&M now underway, on-site wastes have been contained, contaminated groundwater is collected and treated, and contaminated sediments have been removed. Environmental impacts have been mitigated and environmental threats removed.

Health Problems Assessment: The site is unfenced, but access is limited since the site is located along the Niagara River in an industrial area. Exposures via drinking water are not expected because the area is served by public water. The remedial action, which includes placement of a protective cap over the entire site, should

Database(s) 8105114330

eliminate potential exposures to contaminated soils. Deed restrictions to prevent future activities that would compromise the protective cap and waste are in place. There are currently plans to develop the site into a public park. The proposed development should not result in exposures to the public.

Other Pertinent Environmental Activity Identified at Site

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

FS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

FRP

AFS (Aerometric Information Retrieval System) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

DEC Remarks: Start DECRemark - 0275430 Prior to Sept. 2004 data translation this spill Load DEC Field was "SAC" 12/3/02 SAC TELECON DENNIS BARRY, VAL SPECK, & MIKE YOUNT - NOCO. BECAUSE OF YESTERDAY'S HEAVY SNOW, AMOUNT OF SPILL WAS UNKNOWN. DID NOT BELIEVE IT WAS REPORTABLE. AFTER SNOW MELTED SIZE OF SPILL WAS THOUGHT TO BE POSSIBLY GREATER. MR. BARRY BELIEVES AMOUNT SPILLED COULD BE ANYWHERE FROM 3 TO 30 GALLONS. SPILL OCCURRED WHEN VAPOR RECOVERY UNIT WHICH HAS RAW GASOLINE SPRAYED INTO IT AS PART OF COOLING PROCESS INSIDE CARBON UNIT. PUMP THAT SENDS PRODUCT INTO UNIT VIBRATES, THE VIBRATION CAUSED A SCREW TO HIT THE SHUT OFF VALVE FOR THE UNIT TO TURN OPEN AND CAUSED AN OVERFILL IN THE UNIT. THEY HAVE COLLECTED SNOW/WATER/GASOLINE MIXTURE. 12/4/02 AES, SAC MET W/ DENNIS BARRY, MIKE YOUNT, & VAL SPECK. TO DISCUSS SPILL. THEY AGAIN EXPLAINED THAT PROBLEM WAS CAUSED WHEN THE SCREW CREATED THE CONTACT TO KEEP THE PUMP ON AND THE GAS DIKE ALSO AFFECTED. THEY HAVE CALLED IN NATIONAL VACUUM TO CONTINUE TO CLEAN AREA. AREA WAS FROZEN AND SOME RESIDUAL ADSORBENT MATERIAL IS TO BE REMOVED. 1/20/03 SAC REVIEW FILE. CONTAMINATED MATERIAL FOR SPILL WILL BE COMBINED WITH CONTAMINATED SOIL FOR SPILL NUMBERS 0275063 AND 0275319. WILL FOLLOW UP ON DISPOSAL RECEIPTS AS PART OF SPILL NUMBER 0275063. NO FURTHER WORK REQUIRED FOR THIS SPILL. END DECRemark - 0275430

Waste Code: U044 - CHLOROFORM
Quantity: 00021
Units: G - Gallons (liquids only)* (8.3 pounds)
Number of Containers: 001
Container Type: DM - Metal drums, barrels
Handling Method: B Incineration, heat recovery, burning
Specific Gravity: 100
Year: 96
Facility Type: Both Generator and TSD
EPA ID: NYD013293519

12/01/89. MWWS, RALDER SENT ACCEPT/RECOM/SENT NO 1ST RESPONSE LETTER FOR RAR
BY 31/05/89 SENT TO PJB ASK HWRT TAKE OVER SITE. 04/03/93. SAC SPIKE
WIG/ROESCH NOCCO HAS PROPOSAL FROM GT/HE NEEDS TO SPEAK W/AMGT REGARDING
SITE AND THEN SUBMIT PLAN/SENT 1ST NO RESPONSE LETTER FOR RAR BY 5/10/85 SENT
TO PJB ASK HWRT TAKE OVER SITE. 05/08/95. RECEIVED/RAR/BIOSPARGING IS
TESTING TO SITE. 12/01/89. MWWS, RALDER SENT ACCEPT/RECOM/SENT NO 1ST
995 SYSTEM INSTALLATION. OPERATION IN 1996. COM/LETTER SENT ACCEPTING
SCHEDULE. 07/11/86. RECEIVED 85/95 SAMPLE RESULTS FOR THE
WELLS MW-12+18PPM/MW-C3+17 PPM MW-WT+18PPM ORTHOCHLOROTOLUENE.
11/24/89 SENT LETTER ASKING FOR PILOT STUDY REPORT BY 13/1/88. 11/7/86. 11/2/86
RECEIVED PILOT STUDY REPORT. 11/2/86. MWWS, RALDER SENT ACCEPT/RECOM/SENT NO 1ST
THE MONTH. 12/03/86. RECEIVED RESULTS FROM 121/95 SAMPLING OF THE MONITORING
WELLS. OCT LEVELS ARE: MW-12+17ppb. MW-WT+2900ppb. MW-C2+23000ppb. MW-C3+5ppb
22/09/86. SAC TELECON BRIAN CAREY/GT CONTRACTOR FOR NOCO. REPORT WILL BE SENT
NEXT WEEK. 31/10/86. SENT LETTER REQUESTING PILOT STUDY BY 4/30/86.
11/2/86. MWWS, RALDER SENT ACCEPT/RECOM/SENT NO 1ST RESPONSE LETTER FOR RAR
AEROBIC BIOGRADATION IS FAVORABLE. SENT LETTER REQUESTING DESIGN PLAN BY
7/11/86. 8/10/86. SENT NO RESPONSE LETTER REQUESTING DESIGN PLAN BY 10/01/86.
11/2/86. SENT NO RESPONSE LETTER REQUESTING DESIGN PLAN BY 31/5/87.
11/3/87. SAC MET W/BIAN CAREY/FLOOR DANIELS GT AT NOCO SITE. ANOTHER PILOT
STUDY REQUESTING DESIGN PLAN. 11/2/86. MWWS, RALDER SENT ACCEPT/RECOM/SENT NO 1ST
WILL BE ESTABLISHED BASED ON RESULTS OF STUDY. 12/1/87. RECEIVED RESULTS OF THE
PILOT TEST METHANE DISSIPATED AFTER 72 HR. PERIOD AND NO EXPLSIVE HAZARD
EXISTS. ORIGINAL DESIGN PLAN GO FORWARD. 24/1/87. SAC TELECON BRIAN CAREY/FLOOR
DANIELS GT/DESIGN PLAN HAS BEEN SUBMITTED TO P.E. AT FLUOR DANIELS FOR FINAL
APPROVAL. 11/2/86. MWWS, RALDER SENT ACCEPT/RECOM/SENT NO 1ST RESPONSE LETTER FOR RAR
THE POTENTIAL PROBLEM METHANE THAT WAS RESTRICTED IN 2ND PILOT STUDY
10/07/87. SAC MJLS/RNL MET W/GARY ROESCH RE OTHER SPILL BROUGHT UP OCT
PROJECT. MR ROESCH WILL SPEAK W/TOM ANTOFF/FLOOR DANIELS GT TO FIND OUT STATUS OF
PROPOSAL. 10/20/87. SAC TELECON TOM ANTOFF/FLOOR DANIELS GT/DESIGN PLAN
FOR PILOT STUDY. 11/2/86. MWWS, RALDER SENT ACCEPT/RECOM/SENT NO 1ST RESPONSE LETTER FOR RAR
IS CORRECTED MR ROESCH WILL PROBABLY FORWARD PLAN NEXT WEEK. 11/2/87. SAC MET
W/PIPER GRASSO. SPILL WILL BE MADE PART OF CONSENT ORDER. 12/1/87. RECEIVED
DESIGN REPORT FOR BIOSPARGE TREATMENT SYSTEM. 31/08/88. COM/LETTER ACCEPTING
SYSTEM DESIGN PLAN ALONG W/ FOLLOWING CONDITIONS: 1) SUBMIT COPY OF PILOT
STUDY REPORT. 2) SUBMIT ANALYSIS OF RESULTS. 3) CALCULATE METHANE RELEASE FROM
SYSTEM BLOWER. 3) MW ANALYSIS INDICATES LOW LEVEL METHANE. WILL REAR RNR
MW-13) AND 1986 SOL. GAS SURVEY FROM CONESTOGA ROVERS INDICATES CONTAMINATION
MAY BE FARTHER THAN FOR AREA THAT THE SYSTEM WILL TREAT. IT WAS AGREED TO
INSTALL THE SYSTEM AS DESIGNED AND RUN FOR A YEAR. IF NO CHANGES OCCUR OR
LEVELS GO UP. ADDITIONAL POINTS WILL BE MONITORED. 11/2/86. MWWS, RALDER SENT
RECEIVED PILOT STUDY REPORT BY 5/10/85. 10/09/86. SAC TELECON GARY ROESCH - NOCO
ENERGY CORP., REGARDING SYSTEM INSTALLATION, PER MR. ROESCH, SYSTEM
INSTALLATION HAS BEEN COMPLETED AND START UP HAPPENED YESTERDAY. MR. ROESCH
WILL CALL SAC BEGINNING OF NEXT WEEK TO SET UP MEETING TO LOOK AT SYSTEM.
11/2/86. MWWS, RALDER SENT ACCEPT/RECOM/SENT NO 1ST RESPONSE LETTER FOR RAR
11/24/88. SAC CALLED GARY ROESCH, NOCO BUT HE WAS UNAVAILABLE. LEFT MESSAGE FOR
A CALLBACK AND TO INSPECT THE INSTALLED SYSTEM. 11/24/88. RECEIVED SAMPLE
RESULTS FOR 4 WELLS MW-12, MW-13, MW-18. ONLY IN MW-13 WAS OCT DETECTED
THE LEVEL WAS 33 ppb. 12/29/88. RNL/ED. SAC MET W/GARY ROESCH - NOCO. TOM
ANTOFF/FLOOR DANIELS GT AND GARY ROESCH AND GARY ROESCH AND GARY ROESCH
AND THE SYSTEM STARTUP. THE SYSTEM HAS JUST RECENTLY BEEN STARTED UP
21/10/89. RECEIVED SYSTEM INSTALLATION - START UP REPORT FROM IT CORPORATION
FORMERLY FLUOR DANIELS GT. ADDITIONAL MONITORING WELL WAS INSTALLED FOR SYSTEM
MONITORING PURPOSES. FIGURE 1 FROM REPORT WAS NOT ATTACHED. SAC TELECON BRIAN
CAREY/FLOOR DANIELS GT. 11/2/86. MWWS, RALDER SENT ACCEPT/RECOM/SENT NO 1ST
RECEIVED PILOT STUDY REPORT BY 5/10/85. 10/09/86. SAC TELECON GARY ROESCH - NOCO
ENERGY CORP., REGARDING SYSTEM INSTALLATION, PER MR. ROESCH, SYSTEM
INSTALLATION HAS BEEN COMPLETED AND START UP HAPPENED YESTERDAY. MR. ROESCH
WILL CALL SAC BEGINNING OF NEXT WEEK TO SET UP MEETING TO LOOK AT SYSTEM.

GINA SENIA OF EMCON'S IS NOW PROJECT MANAGER FOR THE SITE. TWO WELLS WERE SAMPLED. MW-18 HAS AN OCT LEVEL OF 37,300 PPD AND MW-13 HAS AN OCT LEVEL OF 23 ppp. NO OTHER WELLS WERE SAMPLED. 11/29/95/RECEIVED PROJECT STATUS REPORT FOR JULY .99 TO SEPT. .99. MW-18 HAS AN OCT LEVEL OF 53,900 PPD AND MW-13 WAS NON-DETECT FOR OCT. 27/100/RECEIVED PROJECT STATUS REPORT FOR OCT-DEC .99. MW-18 HAS AN OCT LEVEL OF 16,800 PPD AND MW-13 WAS NON-DETECT FOR OCT. 41/300/RECEIVED PROJECT STATUS REPORT JANUARY-MARCH 2000. MW-18 HAS AN OCT LEVEL OF 31,300 PPD AND MW-13WAS NON-DETECT FOR OCT. 9/25/00/RECEIVED PROPOSAL FROM GINA SENIA. IT CORP. THEY ARE GOING TO INTRODUCE MICROORGANISMS PURCHASED FROM WASTETESTMTR TECH. INTO MW-18 SINCE THE MICROORGANISMS FOUND IN THE AREA ARE NOT SUITABLE FOR REMEDIATION. THE PROPOSAL REQUESTS THAT CORP. FOR MW-13 WHICH HAS THE CORRECT MICROORGANISMS AND CONCENTRATIONS HAVE BEEN LOW TO NON-DETECT. 11/16/00/SA TELECOM GINA SENIA. THEY HAVE BEEN PERFORMING THE WORK IN THE PROPOSAL AND ARE MONITORING THE WELLS. THEY WILL SEND IN THE QUARTERLY REPORT INDICATING THE PROGRESS OF THE WORK. 4/23/01/RECEIVED 1ST QUARTERLY REPORT FROM GINA SENIA. OCT LEVEL IN MW-18 IS 3,601. OCT LEVEL IN MW-13 IS 16 ppb. IT CORP. IS LOOKING AT LOW COST REMEDIAL ENHANCEMENT FOR MW-18. 7/13/01/RECEIVED ANALYTICAL RESULTS FROM ANNUAL MOSP SAMPLING OF SURROUNDING MONITORING WELLS. OCT LEVELS WERE NON-DETECT. HOWEVER MW-18 WAS NOT SAMPLED. 7/26/01/SA FOUNO OUT GINA SENIA NO LONGER WITH IT CORP. SHE NOW WORKS FOR BETH CARPENTER. IT CORP. IS CURRENTLY HIRING A NEW PROJECT MANAGER. LEFT MESSAGE FOR A CALL BACK. MR. REPP RETURNED CALL AND LEFT MESSAGE THAT BETH CARPENTER IS THE NEW PROJECT MANAGER. RECEIVED QUARTERLY REPORT FROM IT CORP.. OCT LEVEL IN MW-16 IS 41,400 ppp. OCT LEVEL IN MW-13 IS NON-DETECT. THEY ARE LOOKING AT ALTERNATIVE REMEDIAL METHODS FOR MW-18. 9/4/01/RECEIVED PROPOSAL FROM BETH CARPENTER. REQUESTED RESPONSE BY 10/15/01. 10/20/01/RECEIVED LETTER REGARDING WORK PLAN, REQUESTED RESPONSE BY 10/31/01. 10/20/01/RECEIVED RESPONSE LETTER. IT REQUESTED MEETING TO DISCUSS RESULTS. 10/31/01/SA MET WIDENISS BARRY. MIKE YOUNT. VAL SPECK - NOCO CRAIG REPP BETH CARPENTER - IT CORPORATION. IT CORP WILL INSTALL TWO ADDITIONAL SPARGE POINTSAROUND MW-16 BUT NOT NEARBY MW-18. THEY WILL ALSO INSTALL TWO ADDITIONAL SPARGE POINTS IN WELLS. OTHER WELLS THAT HAD LEVELS OF OCT IN THEM MW-67, MW-C3, MW-C2) APPEAR TO HAVE BEEN COMPROMISED. IT PROPOSES TO INSTALL ANOTHER MONITORING WELL IN THE AREA WHERE MW-67 AND MW-C3 WERE LOCATED. THEY WILL LOOK AT POSSIBLY INSTALLING A WELL NEAR MW-62 IF POSSIBLE. THEY WILL ALSO LOOK INTO THE FACT THAT THEY HAVE A LARGE AMOUNT OF MATERIAL ON HAND BUT NOT USING IT. 11/15/01/RECEIVED 2ND QUARTERLY THROUGH ANALYSIS. 10/16/01/RECEIVED THIRD QUARTER REPORT. OCT LEVEL IN MW-16 IS 24,800 PPD. IN MW-13 IS 50 ppb. BLOWER WAS NOT OPERATING FOR THE MAJORITY OF THE PERIOD. THE BLOWER HAS BEEN REPAIRED AND WAS PUT BACK INTO SERVICE ON 9/18 WHICH IS THE SAME DAY THAT THE WELLS WERE SAMPLED. ROADBOX 4 FOR POINTS 14 THROUGH 17 HAS BEEN REPAIRED. 11/15/01/RECEIVED 3RD QUARTER REPORT FOR POINTS 14 THROUGH 17 THAT WILL BE CHECKED TO ENSURE SOLID CONNECTIONS. 10/17/01/SA TELECOM BETH CARPENTER. BASED ON REPORTS AND LETTER THERE WAS CONFLICTING INFORMATION WHETHER THE SYSTEM WAS REPLACED OR REPAIRED. SA ASKED MS. CARPENTER WHETHER THE BLOWER WAS REPLACED OR REPAIRED. MS. CARPENTER SAID THE BLOWER WAS REPAIRED. 11/15/01/RECEIVED 4TH QUARTER REPORT. THE BLOWER WAS REPAIRED. MEETING MINUTES ALONG WITH REMEDIATION OPTION PROPOSAL, AND WORK SCHEDULE. MW-13 ALSO DAMAGED AND WILL BE REPLACED. 10/29/01/SA TELECOM BETH CARPENTER. AS DISCUSSED IN MEETING WORK SHOULD BEGIN IN MID DECEMBER AFTER THE ASPHALT SEASON HAS BEEN COMPLETED. NO APPROVAL LETTER FOR PLAN WAS EXPECTED SINCE THIS WAS A PREVIOUSLY APPROVED PLAN. ADDRESSING THE SITE METTING WITH THE CONTRACTOR 2 WEEKS TO COMPLETE. MR. REPP OR SHE WILL CONTACT SA WHEN THE WORK WILL BEGIN. 12/01/01/SA RECEIVED MESSAGE FROM BETH CARPENTER. WORK WILL BEGIN NEXT WEEK. THEY WILL START WITH THE INSTALLATION OF 2 WELLS AND THEN CONTINUE WITH THE IMPROVEMENTS TO THE BIOSPARGE SYSTEM. THE WORK SHOULD TAKE ABOUT A WEEK AND A HALF TO COMPLETE. THE SITE METTING WITH THE CONTRACTOR WILL BE HELD ON MONDAY MORNING BUT DUE TO A SCHEDULING ERROR IT DIDN'T START UNTIL AFTER 3 PM.

NATURE S WAY IS DOING THE DRILLING, THEY COMPLETED THE AUGERING DOWN TO 16 FT. AND HAVE PLACED THE SCREEN IN THE BORING. THEY WELFINSH SETTING AND INSTALLING THE WELL TOMORROW AND CONTINUE TO INSTALL THE SECOND WELL. MS. CARPENTER ALSO SAID SHE CHANGED THE SCOPE OF WORK SLIGHTLY SO THEY WILL INSTALL 2 ADDITIONAL MONITORING WELLS AND INSTALL 2 ADDITIONAL PUMP-OUT PIPES IN THE HEAD OF ONE LOCATION. CARPENTER SAID THAT THE WELL LOCATIONS ARE 121101 BFG, SAC INSPECT SITE, MET WIDENIS BARRY, MICK YOUNT, AND VAL SPEER- MOCO. BETH CARPENTER, FINISHED INSTALLING WELL STARTED YESTERDAY, COMPLETED INSTALLING 2 ADDITIONAL WELLS, AND STARTED THE INSTALLATION OF THE FINAL WELL. WELL INSTALL THE TWO SPARING WELLS TO THE TRENCH. THE TRENCH SCREENS WILL BE INSTALLED WHEN THEY ARE SCHEDULED TO TRENCH AND HOOK UP THE WELLS TO THE SYSTEM AND THEN CONTINUE TO TRENCH AND MAKE REPAIRS TO THE SYSTEM. 121201 SAC INSPECT SITE, MET WIDENIS CARPENTER, NATURE S WAY WAS IN THE PROCESS OF DRILLING 1 INCH WELL TO INSTALL A SPARGE POINT. 121301 SAC TELECON BETH CARPENTER, MS. CARPENTER SAID THEY HAVE BEEN IN THE EXCAVATION SINCE THE 12TH. SHE SAID THAT THE SAC SPOKE TO BFG, BFG INSPECTED AND FOUND THEY WERE INVOLVED WITH REPAIRING THE SYSTEM. 121801 SAC TELECON BETH CARPENTER, MS. CARPENTER SAID THAT THEY HAVE COMPLETED THIS PHASE OF THE WORK BUT ARE PROPOSING ADDITIONAL MEASURES AND REPAIRS NECESSARY TO COMPLETE THIS WORK. MS. CARPENTER ANTICIPATES THIS WORK WILL BE DONE IN JANUARY 02.

Other Persistent Environmental Activity Identified at Site

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with

GENERAL ELECTRIC - TONAWANDA (Continued)

1000212536

a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo Corrective Action Summary:

Event: RFI Workplan Approved
Event Date: 06/27/2002
Event: RFI Approved
Event Date: 01/15/2002
Event: Stabilization Measures Implemented. Primary measure is source removal and/or treatment (e.g., soil or waste excavation, in-situ soil treatment, off-site treatment).
Event Date: 06/24/2001
Event: RFI Approved
Event Date: 06/21/2001

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 12/09/2005
Date Data Arrived at EDR: 12/11/2006
Date Made Active in Reports: 01/11/2007
Number of Days to Update: 31

Source: Department of the Navy
Telephone: 843-820-1328
Last EDR Contact: 03/26/2007
Next Scheduled EDR Contact: 06/11/2007
Data Release Frequency: Varies

DOT OPS: Incident and Accident Data

Department of Transportation, Office of Pipeline Safety Incident and Accident data.

Date of Government Version: 02/14/2007
Date Data Arrived at EDR: 02/28/2007
Date Made Active in Reports: 04/10/2007
Number of Days to Update: 41

Source: Department of Transportation, Office of Pipeline Safety
Telephone: 202-366-4595
Last EDR Contact: 02/28/2007
Next Scheduled EDR Contact: 05/25/2007
Data Release Frequency: Varies

PADS: PCB Activity Database System

PCB Activity Database. PADS identifies generators, transporters, commercial stores and/or brokers and disposers of PCBs who are required to notify the EPA of such activities.

Date of Government Version: 10/17/2006
Date Data Arrived at EDR: 11/29/2006
Date Made Active in Reports: 01/11/2007
Number of Days to Update: 43

Source: EPA
Telephone: 202-566-0500
Last EDR Contact: 05/11/2007
Next Scheduled EDR Contact: 08/06/2007
Data Release Frequency: Annually

MLTS: Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 01/11/2007
Date Data Arrived at EDR: 01/26/2007
Date Made Active in Reports: 02/27/2007
Number of Days to Update: 32

Source: Nuclear Regulatory Commission
Telephone: 301-415-7189
Last EDR Contact: 04/02/2007
Next Scheduled EDR Contact: 07/02/2007
Data Release Frequency: Quarterly

MINES: Mines Master Index File

Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Date of Government Version: 02/06/2007
Date Data Arrived at EDR: 02/26/2007
Date Made Active in Reports: 05/14/2007
Number of Days to Update: 47

Source: Department of Labor, Mine Safety and Health Administration
Telephone: 303-231-8559
Last EDR Contact: 02/26/2007
Next Scheduled EDR Contact: 06/25/2007
Data Release Frequency: Semi-Annually

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and pointers to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerosol/Inertial Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFB (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 01/18/2007
Date Data Arrived at EDR: 01/23/2007
Date Made Active in Reports: 02/27/2007
Number of Days to Update: 35

Source: EPA
Telephone: (212) 637-3000
Last EDR Contact: 05/14/2007
Next Scheduled EDR Contact: 07/02/2007
Data Release Frequency: Quarterly

TC1929688.2s Page GR-7

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

RCRA Administrative Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administrative actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995
Date Data Arrived at EDR: 07/31/1995
Date Made Active in Reports: 05/07/1995
Number of Days to Update: 35

Source: EPA
Telephone: 202-564-4104
Last EDR Contact: 03/05/2007
Next Scheduled EDR Contact: 06/04/2007
Data Release Frequency: No Update Planned

BRS: Biennial Reporting System

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2005
Date Data Arrived at EDR: 03/06/2007
Date Made Active in Reports: 04/13/2007
Number of Days to Update: 38

Source: EPA/NTIS
Telephone: 800-424-9348
Last EDR Contact: 03/06/2007
Next Scheduled EDR Contact: 06/11/2007
Data Release Frequency: Biennially

STATE AND LOCAL RECORDS

SHWS: Inactive Hazardous Waste Disposal Sites in New York State

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites.

Date of Government Version: 03/05/2007
Date Data Arrived at EDR: 03/15/2007
Date Made Active in Reports: 04/19/2007
Number of Days to Update: 35

Source: Department of Environmental Conservation
Telephone: 518-402-9822
Last EDR Contact: 03/15/2007
Next Scheduled EDR Contact: 06/11/2007
Data Release Frequency: Annually

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites deleted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. The means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overlaps they will be added to the registry or not.

Date of Government Version: 01/01/2003
Date Data Arrived at EDR: 10/20/2006
Date Made Active in Reports: 11/30/2006

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SWFLF: Facility Register

Solid Waste Facilities/Landfill Sites. SWFLF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 01/30/2007

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used waste oil, rock, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oil waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASES

Depending on the geographic area covered by the report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a land facility.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County: ERIE, NY
Flood Plain Panel at Target Property: 360260001B
Additional Panels in search area: 3602420005B, 3602420006B, 3602500001B, 3602420008B, 3602420009B, 3602600002B

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property: TONAWANDA WEST
NWI Electronic Data Coverage: YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:
Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the data of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table

TC1929688.2s Page A-3

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Silurian
Series: Upper Silurian (Cayugan)
Code: S3 (recorded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Continuous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beltman Map, USGS Digital Data Series DDS - 11 (1994).

SSURGO SOIL MAP - 1929688.2s

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CAYUGA
Soil Surface Texture: silt loam
Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.
Soil Drainage Class: Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

Soil Layer Information							
Layer	Boundary		Classification		Permeability Rate (in/hr)	Soil Reaction (pH)	
	Upper	Lower	Soil Texture Class	AASHTO Group			
1	0 inches	10 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils	FINE-GRAINED SOILS. Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.80	Max: 7.30 Min: 5.50
2	10 inches	26 inches	silty clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils	FINE-GRAINED SOILS. Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.10 Min: 0.00	Max: 7.50 Min: 5.50
3	26 inches	60 inches	loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand	FINE-GRAINED SOILS. Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.10 Min: 0.00	Max: 8.40 Min: 6.60

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geological Survey
 EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000 and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geological Survey
 A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

 Telephone: 518-412-6961

HYDROGEOLOGIC INFORMATION

AQUIFLOW®

Information System
 Source: EDR proprietary database of groundwater flow information
 EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec. Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service
 The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information on privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
 Telephone: 800-677-2559
 SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of over 4 million government records from more than 600 federal, state and local environmental databases. The report is divided into three sections.

Section 1: Facility Summary Page 3

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports Page 4

All available detailed information from databases where sites are identified.

Section 3: Databases Searched and Update Information Page 8

Name, source, update dates, contact phone number and description of each of the databases searched for this report.

Thank you for your business.

SECTION 1: FACILITY SUMMARY

AREA	FACILITY 1 ERIE PETROLEUM TRANSFERS 5335 RIVER ROAD TONAWANDA, NY EDR ID: 4S104487808
WASTE MANAGEMENT	
Facility generates hazardous waste (RCRA)	NO
Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSD)	NO
Facility has received notices of Violations (RCRA/VOL)	NO
Facility has been subject to RCRA administrative actions (RAATS)	NO
Facility has been subject to corrective actions (CORRACTS)	NO
Facility handles PCBs (PAQS)	NO
Facility uses radioactive materials (MLTS)	NO
Facility manages regulated aboveground storage tanks (AST)	NO
Facility manages regulated underground storage tanks (UST)	NO
Facility has reported leaking underground storage tank incidents (LUST)	NO
Facility has reported emergency releases to the soil (ERNS)	NO
Facility has reported hazardous material incidents to DOT (HMRS)	NO
WASTE DISPOSAL	
Facility is a Superfund Site (NPL)	NO
Facility has a known or suspected abandoned, inactive or uncontrolled hazardous waste site (CERCLIS)	NO
Facility has a reported Superfund Lien on it (LIENS)	NO
Facility is listed as a state hazardous waste site (SHWS)	NO
Facility has disposed of solid waste on-site (BWL/FP)	NO
MULTIMEDIA	
Facility uses toxic chemicals and has notified EPA under EPCRA Title III, Section 313 (TRIS)	NO
Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS)	NO
Facility manufactures or imports toxic chemicals on the TSCA list (TSCA)	NO
Facility has inspections under FIFRA, TSCA or EPCRA (FTS)	NO
Facility is listed in EPA's order system (FINDS)	NO
Facility is listed in a county/local unique database (LOCAL)	YES - pt
POTENTIAL SUPERFUND LIABILITY	
Facility has a list of potentially responsible parties PRP	NO
TOTAL (YES)	1

SECTION 2: FACILITY DETAIL REPORTS

MULTIMEDIA

Facility is listed in a county/local unique database

Date of Next Scheduled Update: 10/15/2007

WASTE DISPOSAL

NPL: National Priority List

Source: EPA
Telephone: Not reported
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/20/2007
Date Made Active at EDR: 07/05/2007
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 05/03/2007
Elapsed ASTM Days: 63
Date of Last EDR Contact: 05/03/2007

Proposed NPL: Proposed National Priority List Sites

Source: EPA
Telephone: Not reported
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/20/2007
Date Made Active at EDR: 07/05/2007
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 05/03/2007
Elapsed ASTM Days: 63
Date of Last EDR Contact: 05/03/2007

SECTION 3: DATABASES SEARCHED AND UPDATE DATES

...Continued...

DELISTED NPL: National Priority List Deletions

Source: EPA
Telephone: Not reported
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425 (e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/20/2007
Date Made Active at EDR: 06/25/2007
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 05/03/2007
Elapsed ASTM Days: 53
Date of Last EDR Contact: 05/03/2007

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA
Telephone: 703-412-8810
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/27/2007
Date Made Active at EDR: 04/27/2007
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 03/21/2007
Elapsed ASTM Days: 37
Date of Last EDR Contact: 06/20/2007

CERCLIS-NFRA: CERCLIS No Further Remedial Action Planned

Source: EPA
Telephone: 703-412-8810
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment of a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates that decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 03/21/2007
Database Release Frequency: Quarterly
Date of Last EDR Contact: 06/15/2007
Date of Next Scheduled Update: 09/17/2007

ROD: Record of Decision

Source: EPA
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 03/27/2007
Database Release Frequency: Annually
Date of Last EDR Contact: 07/02/2007
Date of Next Scheduled Update: 10/01/2007

NPL LIENS: Federal Superfund Liens

Source: EPA
Telephone: 202-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Made Active at EDR: 03/30/1994
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 02/02/1994
Elapsed ASTM Days: 58
Date of Last EDR Contact: 05/21/2007

NY SHWS: Inactive Hazardous Waste Disposal Sites in New York State

Source: Department of Environmental Conservation
Telephone: 518-402-8622
Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites.

Date of Government Version: 03/05/2007
Database Release Frequency: Annually
Date of Last EDR Contact: 06/13/2007
Date of Next Scheduled Update: 09/19/2007

SECTION 3: DATABASES SEARCHED AND UPDATE DATES

FINDS: Facility Index System/Facility Registry System

Source: EPA
Telephone: Not reported
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aeronautics Information Retrieval System), Docket (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FLIRS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/12/2007
Database Release Frequency: Quarterly
Date of Last EDR Contact: 07/02/2007
Date of Next Scheduled Update: 10/01/2007

RMP: Risk Management Plans

Source: Environmental Protection Agency
Telephone: 202-564-8800
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes (a) Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases, prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g. the fire department) should an accident occur.

NY E DESIGNATION: E DESIGNATION SITE LISTING

Source: New York City Department of City Planning

Telephone: 718-566-6636

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDP.

Date of Last EDR Contact: 06/20/2007

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA

Telephone: 703-412-8810

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment of a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates the decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RMP: Risk Management Plans
Source: Environmental Protection Agency

Telephone: 202-564-8600

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases. Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g. the fire department) about an accident occur.

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory
Source: Department of Environmental Conservation

Telephone: 518-402-8664

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites deleted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been reauthorized and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

Kenmore, NY 14217

Operator during disposal: SEAWAY INDUSTRIAL PK. DEV. CO. INC.

Stated Operator(s) Address: 2321 KENMORE AVE.
KENMORE, NY 14217

Site Description:

The Seaway Niagara Landfill has accepted wastes from municipalities and industries throughout western New York. The landfill has been upgraded to meet Part 360 regulations. A cut off wall and a leachate collection system, which discharges to the Tonawanda STP, were added in 1988-89. 6,000 cubic yards of radioactive waste consisting of contaminated ore-tailings left over from the processing of radioactive ores from the Manhattan Engineer District (MED) Project was disposed of on-site. This radioactive waste was originally landfilled at what is now the Ashland Petroleum Co. Site (ID No. 915061). During the early 1970s it was excavated from that site and re-landfilled at the Seaway Niagara Landfill. Because of this disposal activity this property is listed by the US Department of Energy (DOE) under the FUSRAP (Formerly Utilized Site Remedial Action Program). The landfill stopped receiving waste in 1993. Closure of most of the site was completed in 1995. Those portions of the site with MED waste still need to receive a final cap. The US Army Corps of Engineers is currently evaluating various closure scenarios for the MED waste. The site is currently in a 30 year post-closure monitoring and maintenance program. Leachate is sampled monthly and surface water and groundwater are sampled quarterly. Maintenance activities also include managing leachate breakouts.

Material Disposed of at Site and Quantity:

Type of Waste	Quantity of Waste
RADIOACTIVE MATERIALS/WASTES	UNKNOWN
SOLVENTS	UNKNOWN

Assessment of Environmental Problems:

In the past, leachate leaving the site was impacting local surface waters. Remediation of such has been completed with a leachate collection system connected to a sanitary sewer and then to the local sewage treatment plant.

Assessment of Health Problems:

Access to the site is restricted. Past leachate and other problems have been mitigated by landfill improvements. The potential for exposure by direct contact is low. Exposures to contaminated groundwater are not likely since there are no groundwater users within the vicinity of this site and public water is supplied to the area.

GZA MODIFIED USER QUESTIONNAIRE

Site Name: 5335 River Road, Tonawanda, NY

Title and Signature of Person Completing Questionnaire
 Director of Business Assistance
 Kenneth J. Bueckner
 Date: 7/10/07

The following are a series of questions from ASTM 1527-05 that must be answered in order to qualify for Landowner Liability Protection under CERCLA. Please provide an answer to each question or attach pertinent information.

(1) Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

☒ No ☐ Yes (Describe or attach information)

Attachment No. _____

(2) Are you aware of any Activity and Use Limitations (AULs), such as engineering controls (e.g. engineered caps, foundations, liners, treatment methods, etc. in use to prevent contamination from migrating to surrounding areas), land use restrictions or institutional controls (e.g. administrative measures restricting groundwater use, construction, or property use) that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

☒ No ☐ Yes (Describe or attach information)

Attachment No. _____

(3) Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you

would have specialized knowledge of the chemicals and processes used by this type of business?

☒ No ☐ Yes (Describe or attach information) Attachment No. _____

(4) Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

☐ No ☐ Yes (Describe or attach information) Attachment No. _____

NO SALE IS BEING CONSIDERED.

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

☐ No ☐ Yes (Describe or attach information) Attachment No. _____

N/A

(5) Are you aware of commonly known or reasonable ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as User,

(a) Do you know the past uses of the property?

☐ No ☒ Yes (Describe or attach information) Attachment No. _____

Petroleum Tank Farm, APPROX 12 TANKS

(b) Do you know of specific chemicals that are present or once were present at the

Property? ☒ No ☐ Yes (Describe or attach information) Attachment No. _____

(c) Do you know of spills or other chemical releases that have taken place at the

Property? ☒ No ☐ Yes (Describe or attach information) Attachment No. _____

(d) Do you know of any environmental cleanups that have taken place at the property?

☒ No ☐ Yes (Describe or attach information) Attachment No. _____

(6) As the User of the ESA, based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?

☒ Yes (Describe or attach information) Attachment No. _____

(7) ASTM identifies certain documents as "Helpful Documents" for the understanding of environmental conditions at the Site. Are you aware of any of the following documents; and if so, can they be made available?

☒ No ☐ Yes (Describe or attach information) Attachment No. _____

☐ Prior Environmental Assessments	☐ Risk Assessments
☐ Compliance Reports	☐ Hazardous Waste Generation Notices
☐ Environmental Permits	☐ Notices from Environmental Agencies
☐ Tank Registrations	☐ Underground Injection System Registrations
☐ Material Safety Data Sheets (MSDS)	☐ Community Right to Know Plans
☐ Safety or Spill Protection Plans	☐ Hydrogeologic or Geotechnical Reports

(8) Do you know who the past owners of the property are and can you provide contact information?

☒ No ☐ Yes (Describe or attach information) Attachment No. _____

(9) Do you have a complete site plan of the property that shows property boundaries and can you make it available?

☒ No ☐ Yes (Describe or attach information) Attachment No. _____

ABANDONMENT OF PROPERTY

APPENDIX F

RESUME

Thomas Bohlen/ Engineering Technician

Education

State University of New York at
Buffalo 9/97-12/01

Buffalo State College - ongoing

Areas of Specialization

- Environmental Site Assessments
- Geotechnical Laboratory Testing
- Spill Prevention, Control and Countermeasures (SPCC) Plans

Experience:

Years with GZA: 7
Years with other firms: 1

Summary of Experience

Mr. Bohlen has been involved in a variety of environmental and geotechnical projects as an engineering technician. Mr. Bohlen's range of responsibilities has included environmental site assessments, Spill Prevention, Control and Countermeasure (SPCC) Plans, geotechnical laboratory testing, air emission inventories, groundwater sampling, and ultrasonic tank thickness measurements. He has conducted Environmental Site Assessments (Phase I and Phase II) on residential, commercial and industrial properties. Recent relevant work experience includes the following.

Relevant Project Experience

Multi-Site Commercial Drug Store Facilities, Western New York Area. Conducted work to complete Phase I Environmental Site Assessments at 25 drug store facilities. Work was completed on a fast-track with reports completed within three weeks. Historic environmental concerns, including former dry cleaner and gasoline station usage, was identified at eleven of 25 properties. GZA completed fast track Phase II investigations on the eleven properties that included subsurface investigation, soil and groundwater sample collection and analysis and report preparation. Phase II investigations were completed within required fast track time frame designated by Client. Reports were issued to client and lender to proceed with resale transaction.

Industrial/Office Building, Rochester, New York - Completed a Phase I environmental site assessment at a 78,000 square foot building formerly used for the manufacture and distribution of various vacuum pumps and components. Historical usage at the property identified usage of various solvents, oils, and paints, the presence of three former underground storage tanks, and a vapor degreaser that used trichloroethane. Recommended soil and groundwater sampling/analysis to determine potential impact from historic usage. Work included site reconnaissance, historical review, and report preparation.

Industrial/Office Building, Lancaster, New York - Conducted a Phase I environmental site assessment at a facility specializing in the manufacture of quick-connect couplers used in automobile radiators and transmissions. Identified potential wetland areas, the chemicals used in the assembly process, and the hazardous and solid waste generated at the facility. Work included site reconnaissance, historical review, and report preparation.

Retail Paint Store/Vacant Automotive Facilities, Buffalo, New York - Conducted a Phase I environmental site assessment at a retail paint store and three vacant buildings. Historical usage of the property included automotive repair and detailing shops, a laundry machinery company, and a potential dry cleaner. Identified several environmental concerns including historical usage, potential underground storage tanks, and floor drains in the former automotive facilities. Recommended soil and groundwater sampling/analysis to determine potential impact from historic usage. Work included site reconnaissance, historical review, and report preparation.

Michele M. Wittman

Senior Project Manager

Education

B.A., 1994, Geology, State
University of New York at
Buffalo

B.S., 1994, Social Sciences—
Environmental Studies, State
University of New York at
Buffalo

Professional Registrations

2002, Professional Geologist,
Washington, #29940

Areas of Specialization

- Remedial Investigations /
Feasibility Studies
- Environmental Site
Assessments
- Geologic Evaluations
- Hydrogeologic
Investigations
- Soil Testing

Summary of Experience

Ms. Wittman has 15 years of professional experience in conducting a variety of environmental projects for both private and public clients. Clients have included industry, governmental agencies, developers, legal firms, financial institutions, and engineering firms. Project work has included conducting and managing Phase I and Phase II Environmental Site Assessments throughout New York and surrounding states, regulatory compliance, hydrogeologic investigations, and remediation of soil and groundwater. Responsibilities as project manager include supervising field and technical activities, training staff, data analysis, report preparation, and client contact.

Ms. Wittman also worked one year (from 2000 to 2001) at an international financial institution as an Assistant Vice President and Environmental Risk Analysis Officer. During her tenure at this position, Ms. Wittman was responsible for evaluating potential environmental risk associated with a property and potential recourse to the bank. Ms. Wittman reviewed hundreds of Phase I and Phase II Environmental Site Assessments completed throughout the country for completeness and potential risks. Additionally, Ms. Wittman provided remedial costs estimates to evaluate the potential risk and future losses. Relevant work experience at GZA is summarized in the following project descriptions.

Relevant Project Experience

Voluntary Cleanup Program - Commercial Facility, Hamburg, New York. Completed a Phase I environmental site assessment at retail facility constructed in the early 1950s. Identified historical dry cleaner usage in one unit from mid 1950s to late 1990s. Conducted a Phase II environmental assessment in the rear of the facility, as well as inside the former dry cleaner unit. Identified tetrachloroethene in various soil sample located beneath the building floor slab and behind the building (i.e. back door). Concentrations behind the building were above regulatory standards. Additional investigation was completed to identify potential source under building and extent of contamination. No source was identified below the building slab, but confirmed to be outside the building. Collected shallow and deep water samples, which identified shallow groundwater contamination, but confirmed clay confining layer. Interim remedial measures (IRM) included soil removal, resulting in approximately 200 tons of soil that was disposed at a hazardous waste landfill. Confirmatory soil sampled identified the vertical and north-south extent of contamination in the alley. However, significant amounts of contamination remained on the sidewalls limited by building foundations. A soil vapor intrusion study was done. Vapor analysis identified the presence of compounds of concern at concentrations above draft guidance values under the floor slab and below draft guidance values above the floor slab (within the working area). To achieve site closure, GZA negotiated a remedial solution that included confirmation sampling of soils around the building structure to confirm the limited presence of chlorinated solvents, installation of a sub-slab depressurization/vent system and re-sampling of indoor air. This additional work did not identify the presence of compounds of concern above regulatory guidance limits.

York

Contract to Closure, Remedial Activities, Commercial Facility, Rochester, New York – Former gasoline stations were located at two adjoining properties from the early 1950s through 1990s. Soil and groundwater contamination was identified at both properties. The site owner signed a Stipulation Agreement with NYSDEC to remediate the Site, but had taken no action to remediate. Our client wanted to develop the Site for commercial use as a credit union/banking facility. GZA performed soil and groundwater sampling investigations, demolished Site buildings, prepared a NYSDEC approved work plan to remediate the soil and groundwater, removed soil impacted with free product, and performed in-situ chemical oxidation injections to remediate Site groundwater in order to achieve NYSDEC inactive status. GZA prepared the Closure Report to summarize Site activities, which is currently being reviewed by NYSDEC. In order to obtain an inactive status, GZA completed a Qualitative Risk Assessment at the Site, which determined there would be no risk to future construction workers or commercial employees.

Phase II and Brownfield, Former Steel Plant, Site, Pittsburgh, Pennsylvania. Conducted field investigation on an 85-acre former steel plant. Study included the installation of deep monitoring wells, performing 31 shallow soil probes, and analysis of soil and groundwater samples for volatile organic compounds (VOCs), metals, and PCBs. Results indicated several areas of existing contamination including possible PCB oil contamination.

Vacant Building, Lancaster, New York Conducted a Phase I environmental site assessment at vacant warehouse building. Identified potential fill port and vent pipe for suspect tank under building slab during site reconnaissance. Historical review identified potential second tank within parking area of property. Completed Phase II investigation including geophysical survey and soil probes. Identified potential geophysical anomaly in area of exterior UST. Supervised removal of one interior tank and one exterior tank and collected confirmatory soil samples for analysis. Completed report summarizing tank removal and submitted to state regulatory agency to receive inactive status on open spill. No additional work was required by regulatory authority and property transaction was completed.

Residential Facility, Not-for-Profit Organization, Amherst, New York Completed Phase I environmental site assessment at approximate 9 acre facility with five buildings, including residential quarters, maintenance building and garage. Identified two former fuel oil underground storage tanks, one former fuel oil aboveground tank located on a dirt floor in the basement, and one suspect underground tank near maintenance building. Completed Phase II investigation in area of former tanks and identified contamination near suspect tank at maintenance building. Provided remedial cost estimate to remove tank and contaminated soil. Client put remediation out to bid and contractor underbid our estimate. Client indicated that after removal of tank and impacted soil, our estimate was very close to the project ending cost.

Multi-Site Gas Station Facilities, Western New York Area. Managed and completed limited Phase I Environmental Site Assessments on 88 gas station facilities work included file review and historical review. Each site and condition were categorized. Estimated remedial cost and escrow amounts were determined.

Ernest R. Hanna, PE

Principal

Education

B.S., 1979, Biology/Geology,
University of Rochester

M.S., 1986, Civil and Environmental
Engineering, University of Wisconsin-
Madison

Professional Registrations

1989, PE, NY, #065440

Areas of Specialization

- Environmental Engineering
- Geotechnical Engineering
- Geosynthetics
- Trenchless Technology

Summary of Experience

Mr. Hanna has been responsible for data review, site investigation, engineering design, report preparation and construction monitoring/administration for numerous environmental and geotechnical projects that involve site development, building foundations, bridge abutments, dams, slopes and tunnels. He has incorporated the use of trenchless technology and geosynthetics whenever possible in his projects. As an Associate in Charge and Operations Manager of the Buffalo office, Mr. Hanna is responsible for contracting, scheduling, field supervision, design oversight, report preparation and review, and client contact. An example of selected local projects follows.

Project Experience

Environmental Restoration Project, Batavia Iron & Metal, City of Batavia, New York. The City of Batavia obtained authority to access 6.8 acres of vacant industrial property formerly owned by the Batavia Iron and Metal Co. (Site), which previously used to reclaim iron, metal and wire materials for sale to recycling and manufacturing firms. The Site has been vacant since 2000. Various waste debris (including concrete block, scrap metal, wood, tires, propane tanks, steel drums, rubbish, etc.) is present over a large portion of the Site. To date, GZA has prepared required work plans approved by NYSDEC and completed various field activities including test pits, surface soil and surface water sample collection, soil probes, monitoring well installation, and groundwater sampling. An Interim Remedial Measure (IRM) was also done at the Site to consolidate and secure PCB impacted soil for future off-Site disposal. Responsible for overall management and review of work being done by GZA under NYSDEC ERP Program.

Environmental Restoration Project, Broome County Brownfield Cleanup, 312 Maple Road, Endicott, New York. Retained by the Broome County Environmental Management Council to assist them in assessing this contaminated site, formerly operated as a chemical processing facility. Performed an initial Phase I and Phase II Environmental Site Assessment. Assisted Broome County in its application through the Voluntary Clean-up Program (VCP); however, the County has now received a ERP grant through the newly regulated Brownfield Clean-up Program. Project tasks include development and implementation of a NYSDEC approved work plans in accordance with DER-10. Field activities includes an IRM consisting of excavation and disposal of an estimated 400 tons of chlorinated solvent contaminated soil and completion of a vapor intrusion assessment of the facility and surrounding properties in accordance with NYSDEC and NYSDOH requirements. Responsible for overall management and review of work being done by GZA under NYSDEC ERP Program.

Voluntary Cleanup Program at 5 Buffalo Street, Hamburg, New York. Our Phase I environmental site assessment identified historical dry cleaner usage. The subsequent Phase II environmental assessment identified tetrachloroethene in various soil samples located beneath the building floor slab and behind the building. Initiated discussions with NYSDEC to enter the voluntary clean-up program (VCP) and prepared an application and work plan. Remedial activities were recommended, waste characterization sampling and analysis performed. Remedial actions completed in March

2004 included soil vapor assessment and remediation.

GZA Program Manager, NYSDEC Superfund Standby Contract. Responsible for overall management and review of work being done by GZA under its Superfund Standby Contract with NYSDEC. Work completed consists of preliminary site assessments (8 sites), and remedial investigations and feasibility studies (5 sites). These sites have been throughout New York State. The work involved the collection and chemical analysis of soil gas, surface and subsurface soils, surface water and groundwater, and sediment samples. Geophysical techniques were also used.

Trucking Terminal Remediation, Rochester, New York. Conducted a Remediation Assessment Study for a former trucking facility. Three 4,000-gallon USTs were removed from the facility in 1991. A Phase I and Phase II environmental site assessment (ESA) was completed that noted the potential for off-site migration of contamination. The scope of work includes soil probe sampling, monitoring well installation and soil and groundwater sampling. Directed the injection of 3,000 pounds of oxygen releasing compound (ORC) and provided closure documentation for the site under NYSDEC exposure assessment guidelines.

Supermarket Management, Inc., Brownfield - Voluntary Cleanup, Buffalo, New York - The proposed site is a one-city block area with a history of commercial and industrial uses. Business on-site included chemical manufacture, dyeing and cleaning, auto repair, dry cleaner, commercial, and residential. The property owner purchased the site in the 1970s. During Phase II investigations, several possible source areas were identified, the source removed and an exposure assessment completed. NYSDEC accepted the exposure assessment, and the spill has an "inactive status."

Hamburg Nike Base/Town Landfill - Retained by the Town of Hamburg to assess potential contamination at this 320-acre site that consists of a former Nike Base and landfill, and is currently used for recreation and town highway garage purposes. GZA assessed the hydrogeologic and geochemical conditions at the site in soil, sediment, surface water, groundwater, and air. Negotiated scope of work with NYSDEC, NYSDOH, Corps of Engineers, and Town representatives. Prepared and made press releases and participated in press conferences to discuss the results with the public. Also, assessed the existing on-Site closed Town Landfill following a site visit and comment letter received by the Town from NYSDEC. A remedial closure plan was prepared to address the concerns raised by State regulators.

McKenna Landfill Remedial Closure, Waste Management of North America, Albion, New York. Principal during remedial design for closure of this solid waste management facility under a NYSDEC, Department of Environmental Remediation consent order. Components included waste limit identification, wetland delineation, re-use of on-Site soils, adjacent Erie canal, slurry wall design and construction, leachate collection, and groundwater and surface water control.

Batavia Landfill Superfund Site, Batavia, New York. Provided technical review during remedial investigation and feasibility study at this former landfill site. Principal engineer during supplemental surface water and sediment sampling studies related to an expanded ecological assessment of the site. Also provided technical review during the ecological assessment.

RE: Phase I ESA Final Report

Please find enclosed for your files the final Phase I ESA report for 5335 River Road in the Town of Tonawanda. I kindly ask that Dan forward a copy of the report to the appropriate person in the Town of Tonawanda.

If you have any questions, please feel free to contact me at (716) 278-8754.

Thank you.

Enclosure
