1.0 SITE OVERVIEW

1.1 Site Location & Description

The site is located at 600 Mill Street in the Town of Lockport County of Niagara, New York and is identified as Block 1 and Lot 56.11 on the Town of Lockport Tax Map. The site is an approximately 5-acre area bounded by Mill Street to the north, Somerset Railroad Corp corridor to the southeast, Twin Lakes Chemical Inc. beyond the rail corridor to the east, Plank Road and the City of Lockport Waste Water Treatment facility to the west (see Figure 1-1). The site is monitored under the New York State Inactive Hazardous Waste Disposal Site Remedial Program administered by New York State Department of Environmental Conservation (NYSDEC).

1.2 Nature and Extent of Contamination Prior to Remediation

Based on the historic use of the Site, the NYSDEC designated the Site as a Class 4 Inactive Hazardous Waste Disposal Site (Site #932039), which indicates that the Site was properly closed, but requires continued management. Following the expiration of the Post-Closure RCRA Permit #9-2909-00049/0003 in September 2013, the NYSDEC requested that Vanchlor Company, Inc. (the current property holder) enter into an Order of Consent executed July 10, 2014 (Order). The Order replaced the permit as the legal basis for continued fulfillment of operation, maintenance and monitoring requirements previously contained in the permit and to be consistent with the provisions of the existing deed restrictions on the property recorded with the Niagara County Clerk on October 5, 1999.

1.3 Site Remedial Program

Landfilling activities at the Site reportedly began in 1957 and continued until 1982 (from NYSDEC Module III, Part 373 Permit, July 2008). The landfilling activities reportedly consisted primarily of waste by-products from the manufacture of silicon tetrachloride. The landfilled wastes were deposited in 55-gallon drums and placed in trenches with crushed limestone (to enhance the neutralization of the acidic wastes).

In 1988, the landfill was closed in accordance with a NYSDEC approved Closure Plan that included the installation of a final cover system. The cover system consisted of two feet of compacted clay overlain by a drainage layer of sand and loam soil and planted with a vegetative cover.

The following construction activities were performed to complete the approved cover system:

- Site grading and proof rolling;
- Installation of a pan-lysimeter;
- Lime application;
- Installation of an interceptor trench in perimeter ditch;
- Construction of a two-foot clay cover including lining of ditch with clay;

- Addition of loam and sand drainage layers; and
- Addition of topsoil layer and seeding.

1.4 Purpose of Periodic Review Report

This Periodic Review Report (PRR) presents information on the maintenance, monitoring and compliance activities for the Class 4 Inactive Hazardous Waste Disposal Site (Site No. 932039) for the period from February 13, 2019 to February 13, 2020.

Required environmental elements under the Order of Consent are the development and implementation of the Site Management Plan (SMP) [Ref.1] incorporating required engineering and institutional controls.

Institutional Controls have been put in place to control potential exposure to remaining contamination during use of the site in the future and for the protection of public health and the environment. The ICs place restrictions on site use, and mandate maintenance and reporting measures for the ICs. Methods necessary to ensure compliance with the ICs are specified in the SMP for the Site and required by the Deed Restrictions for contamination that remains at the site. The SMP has been approved by the NYSDEC, and compliance with the approved plan is required by the grantor of the Deed Restriction and the grantor's successors and assigns. The SMP may only be revised with the approval of the NYSDEC.

The SMP provides a detailed description of the procedures required to manage remaining contamination at the site including: (1) implementation/management of the Engineering and Institutional Controls; and (2) performance of periodic monitoring and inspections, certification of results, and submittal of Periodic Review Reports.

The required elements of the Periodic Review Report are described in the SMP and include the periodic submittal of information, recommendations, and certifications to NYSDEC.

2.0 REMEDIAL SYSTEMS COMPLIANCE

There are no remedial treatment systems currently operating at the Inactive Hazardous Waste facility identified as Site No. 932039. Existing engineering controls for the Site consist of a clay lined drainage ditch leading to an interceptor trench for storm water management and a site wide cover system comprised of two feet of compacted clay overlain by a drainage layer of sand and loam soil with a vegetated cover.

The approved SMP requires the implementation of a long-term monitoring plan that incorporates annual groundwater and surface water analysis along with annual inspections of the site to assess the performance and effectiveness of the remedy. In particular, the annual inspections are to focus on the condition and integrity of the cover system, drainage ditch, and groundwater monitoring system. The results of the required monitoring activities and annual inspection are presented in Section 5 "Monitoring Plan Compliance Report".

3.0 ENGINEERING CONTROL COMPLIANCE

3.1 Introduction

3.1.1 General

Since hazardous waste remains within the Site, Engineering Controls (ECs) are required to protect human health and the environment. The Engineering Control Plan is a component of the SMP and describes the procedures for the implementation and management of all Ecs at the site.

3.2 Description of Engineering Controls

Exposure to remaining contamination in soil/fill at the site is prevented by a soil cover system placed over the site. This cover system is comprised of a minimum of 24 inches of compacted clay with a permeability of 1×10^{-7} cm/sec overlain by a minimum of six inches of drainage layer consisting of sand and loam topped with vegetative growth. The Excavation Work Plan (Appendix C in the SMP) outlines the procedures required to be implemented in the event the cover system is breached, penetrated or temporarily removed and any underlying remaining contamination is disturbed. Procedures for the inspection and maintenance of the cover system are provided in the Monitoring Plan included in SMP for the Site.

Procedures for maintaining the soil cover system are documented in the Operation and Maintenance Plan section of the SMP for the Site. The Monitoring Plan also addresses severe condition inspections in the event that a severe condition, which may affect the cover system at the site, occurs.

3.1.1 Status of ECs

During the reporting period covered by this PRR, all ECs were in place and effective in meeting their objectives. The soil cover system is a permanent control, and the quality and integrity of this system was observed as part of the annual groundwater monitoring event in conjunction with the PRR. There are no corrective measures required to address deficiencies in the ECs at this time based on the results of the monitoring and annual inspection performed.

No intrusive work was performed on the Site during the period covered by this PRR.

4.0 INSTITUTIONAL CONTROL COMPLIANCE

4.1 Introduction

4.1.1 General

Since hazardous waste remains within the Site, Institutional Controls (ICs) are required to protect human health and the environment. The Institutional Control Plan is a component of the SMP and describes the procedures for the implementation and management of all ICs at the site. The goals of the ICs are to: (1) prevent future exposure to remaining contamination by controlling disturbances of the subsurface contamination; and, (2) limit the use and development of the site to industrial uses only (the most restrictive use as defined in DER 10. Adherence to these Institutional Controls on the Site will be implemented under this Site Management Plan.

4.2 Description of Institutional Controls

The Institutional Controls are:

- Compliance with the Deed Restrictions and this SMP by the Granter and the Grantor's successors and assigns;
- Performance of environmental or public health monitoring as defined in this SMP, if applicable;
- Implementation and documentation of the soil/fill management procedures provided in the Excavation Work Plan (EWP), when required;
- Reporting of information pertinent to Site Management of the Controlled Property must be performed at the frequency and in a manner defined in this SMP;

The site has a series of Institutional Controls in the form of site restrictions. Site restrictions that apply to the Controlled Property are:

- The property may only be used for restricted industrial use provided that the long-term Institutional Controls included in this SMP are employed;
- The property may not be used for a higher level of use, such as restricted commercial use without additional remediation and amendment of the Deed Restriction, as approved by the NYSDEC;
- All future activities on the property that will disturb remaining contaminated material must be conducted in accordance with this SMP;
- The use of the groundwater underlying the property is prohibited;
- Vegetable gardens and farming on the property are prohibited;
- The site owner or remedial party will submit to NYSDEC a written statement that certifies under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP. NYSDEC retains the right to access such Controlled Property at any time in order to evaluate the continued maintenance of any and all controls. This certification shall be submitted annually, or an alternate period of time that NYSDEC may allow and will be made by the site owner or an expert that the NYSDEC finds acceptable.

The deed restriction summarizing the site use restrictions and requirements for the site was executed by the Department on March 6, 2013 and filed with the Erie County Clerk on July 15, 2013.

4.2.1 Status of ICs

During the reporting period covered by this PRR, all ICs were in place and effective in meeting their objectives. There are no corrective measures required to address deficiencies in the ICs at this time based on the results of the monitoring and annual inspection performed.

5.0 MONITORING PLAN COMPLIANCE REPORT

5.1 Introduction

5.1.1 General

The Monitoring Plan describes the measures for evaluating the conditions at the Site and conformance with the Deed Restrictions to reduce or mitigate impacts from residual contamination at the site and affected site media identified below. This Monitoring Plan may only be revised with the approval of NYSDEC.

5.1.2 Schedule

In September 2014 Vanchlor petitioned the Department for a reduction in the frequency of groundwater and surface water sampling from a semi-annual to an annual basis. This request was approved on October 3, 2014. Therefore, under the Site Management Plan groundwater sampling commencing in 2015 is performed annually on the landfill monitoring well network established under the former Part 373 permit for the Site. Annual groundwater monitoring events and inspections of the groundwater monitoring system will be conducted to assess the performance and effectiveness of the remedy and the overall reduction in contamination on-site. The Monitoring program is summarized in Table 5-1 and results of the monitoring performed are discussed further in Section 5.3 below.

Table 5-1: Monitoring/Inspection Schedule

Monitoring Program	Frequency*	Matrix Description	Analyses
Annual Groundwater & Surface Water Monitoring	Annual (during 3 rd quarter)	Sample groundwater from wells D-55, VDM-9R, VDM-10, VDM-11, VDM-12, and VDM-14R. Sample surface water from Eighteen Mile Creek (just downstream of Site)	Volatile Organic Compounds (VOCs), Method 8260 Metals, Method 6010 Chloride, 9251 pH, Method 9040
Annual Site & Groundwater System Inspection	Annual (during 3 rd quarter)	Inspect cover system integrity, vegetation condition, ditch lining, security fence and signage, monitoring well condition	Check for iron staining in drainage ditch and visible seeps in the cliff face

*The frequency of events will be conducted as specified until otherwise approved by NYSDEC and NYSDOH

5.2 Monitoring Program Results

5.2.1 Groundwater and Surface Water Monitoring

Groundwater samples were collected on August 06, 2019 by Vanchlor in accordance with the Groundwater Monitoring Plan (Appendix E of the SMP). Samples were collected from four (4) on-Site well locations and one (1) off-Site location (refer to Figure 5-1 for monitoring well

locations). Well VDM-12 was dry and groundwater samples could not be collected. Surface Water Samples were collected from Eighteen Mile Creek at a location downstream from the Site, but upstream of the City of Lockport Wastewater treatment plant SPDES discharge point. Refer to Figure 5-2 for the approximate location of the Eighteen Mile Creek surface water sample location.

Groundwater and surface water samples were analyzed in accordance with the specified analytical methods described more fully in the SMP for Chloroform, 1,2-Dichloroethane, Trans-1,2-Dichloroethene, Methylene Chloride, 1,1,2,2-Tetrachloroethane, Tetrachloroethene, Trichloroethene, Vinyl Chloride, Toluene, Chromium, Copper, Iron, Zinc, Chloride, and pH. The analytical results from the August 6, 2019 sampling event are summarized and compared to NYSDEC groundwater and surface water standards respectively (NYSDEC 1998) in Table 5-2.

Several detections were noted in groundwater above NYSDEC Class GA Groundwater Standards during the annual sampling event conducted during the period covered by the PRR. Detections of VOCs above groundwater standards include 1,2 Dichloroethane in VDM-10, and Chloroform, 1,2-Dichloroethane, Trans-1,2-Dichloroethene, 1,1,2,2-Tetrachloroethane, 1,1,2-Trichloroethane, Tetrachloroethene, Trichloroethene, and Vinyl Chloride in VDM-14R (the VDM-14R sample results were qualified due to dilution). No exceedances of VOCs in monitored wells VDM-9R, VDM-11, and D-55 were detected.

Copper was detected in wells VDM-9R in concentrations above the Class GA groundwater standard of 200 ug/L. Iron was found in all wells above NYSDEC groundwater standards during the August 2019 sampling event. Chloride was detected in VDM-9R, -10, -11, and -14R above NYSDEC groundwater standards during the August 2019 sampling event. Chromium was detected in VDM-14R above NYSDEC groundwater standards during the August 2019 sampling event.

A copy of the laboratory analytical report for all groundwater and surface water analyses performed is attached in Appendix A. A copy of the updated graphical historical trend analyses for each parameter at each monitoring location are also provided in Appendix A. Each trend graph has been updated to include the best fit 1-year moving average trend line.

5.3 Site Inspection Results

An annual inspection was performed in August 2019 in accordance with the SMP Monitoring Program requirements. Due to an oversight caused by the implementation of the revised (May 2019) monitoring well data sheets, the "Landfill/Groundwater Monitoring System Inspection" form was not completed by the field staff during the monitoring event.

However, both Golder and NYSDEC representatives were present for all or portions of the groundwater monitoring event and all areas of the Site were inspected to assess the condition of cover system

and groundwater monitoring system integrity to determine if evidence of erosion or related deterioration of the site soils. No erosion or deterioration in any areas was noted during the August monitoring event. One issue was identified on upgradient well D-55, the hinge on the cap of the well protective casing (a 5.5-inch outer diameter steel pipe) is broken and the well cannot be properly secured to prevent access to the well casing. Vanchlor plans on replacing the current protective casing cap with a lockable Royer-type cap in the spring of 2020. No other corrective actions were noted to address or otherwise correct the problem(s) identified during the inspection during the reporting period of this PRR.

Due to unexpected issues with the survey data collected in 2019, all well locations were re-surveyed in March 2020 using survey-grade equipment and accuracies. The updated TOR elevations presented on Figure 5.3 are representative of these survey results and accurately reflect the correct top of riser elevations.

5.4 Conclusions and Recommendations

At the time of the annual groundwater monitoring event, the Site was fully compliant with Engineering and Institutional controls fully described in the SMP. The majority of monitoring results were below NYSDEC standards and/or exhibited neutral or decreasing concentrations in both Site groundwater and surface water. Historically VOCs analyzed for and detected in VDM-14R have exceeded NYS groundwater standards and continue to do so based on the 2019 sampling results. The concentration trends for individual constituents have fluctuated (both increasing and decreasing) since monitoring began in 1985, however downgradient concentrations of VOCs in wells VDM-9 (former), VDM-9R and VDM -10 as well as surface water collected in Eighteen Mile Creek consistently demonstrate that the localized contamination in the vicinity of VDM-14R is not impacting potential off-site receptors. Therefore, no changes to the monitoring and inspection program are recommended or proposed at this time.

6.0 OVERALL CONCLUSIONS AND RECOMMENDATIONS

Based on the monitoring and inspection results described in Section 5 and conducted during the time-frame covered by this PRR, compliance with all relevant components of the SMP EC/ICs were achieved.

The groundwater and surface water sampling completed to date has assessed the long-term trends of contaminant concentrations to evaluate the performance of the remedy. Groundwater and surface water sample results over the last thirty-two (32) years, and the overall condition of the site and integrity of the soil cover system provide evidence that the remedy is achieving its intended goals of minimizing, to the extent feasible, exposure of remaining contamination to the environment through groundwater and surface water runoff and associated sediment erosion.

The next annual SMP monitoring event is scheduled for the third quarter of 2020. An inspection of the landfill cover system, including drainage, vegetative cover, indications of erosion or other deterioration of the soil cover, security fencing and the condition of monitoring wells will be performed in conjunction with this sampling and monitoring event.

Footnotes:

Trend Definitions:

Increasing - significant increasing trend identified on the plot for that parameter.

Decreasing - significant decreasing trend identified on the plot for that parameter.

Neutral - no significant increasing or decreasing trend identified on the plot for that parameter.

= Value exceeds NYSDEC Glass GA Groundwater /NYSDEC Class A, A-S, AA, AA-S Surface Water Standard

D(X) = Sample diluted, where X = dilution factor

† = Trend line has been skewed due to reporting limit adjustment from diluted analysis

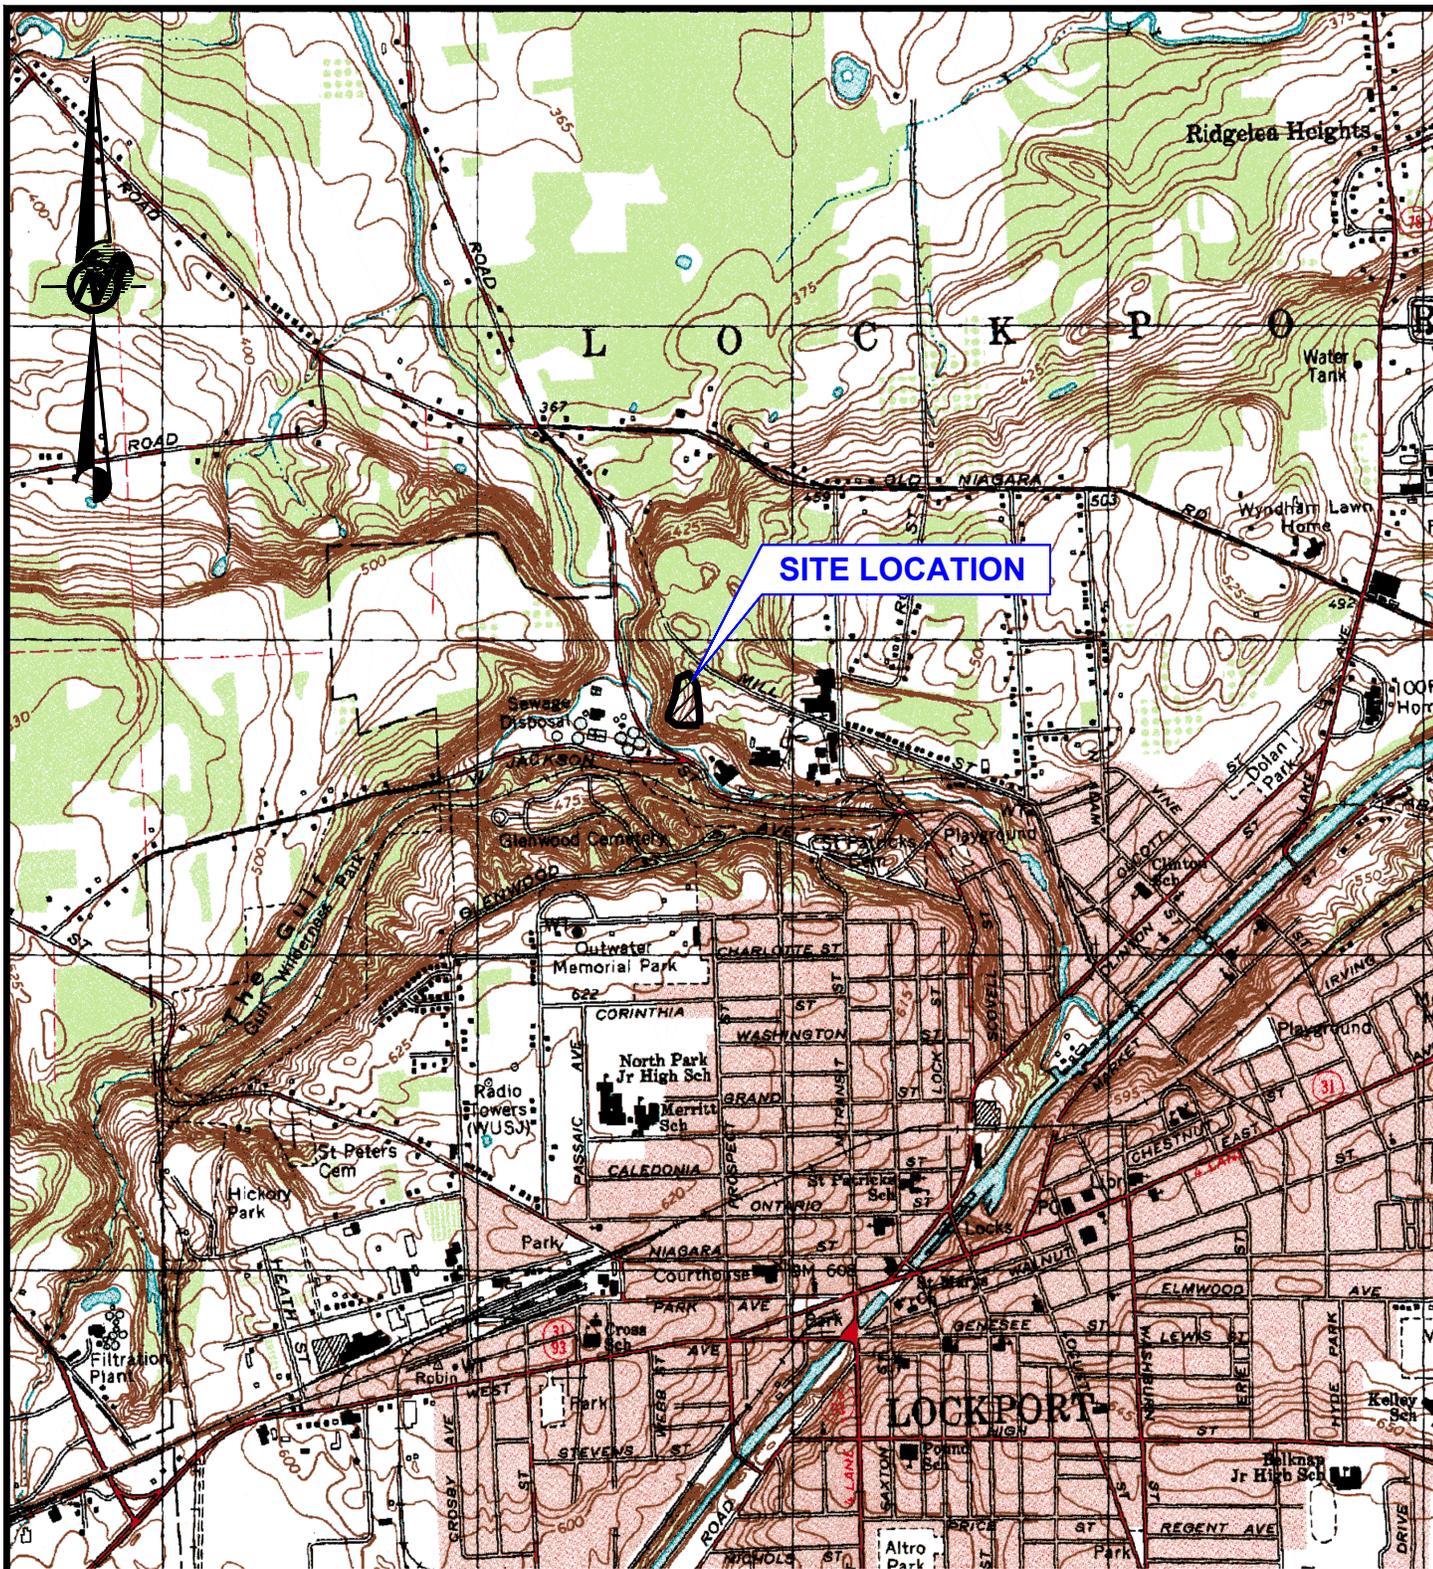

J = Estimated value (below quantitation limit)

¹ = Latest 3-5 years (or more) have been non-detect for parameter.

² = Non-detect for parameter this sampling event.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name: ANNUAL GROUNDWATER MONITORING
Project Number: Not Specified

Lab Number: L1934997
Report Date: 01/27/20

Case Narrative (continued)

Report Revision

January 27, 2020: The Volatile Organics analyte list has been amended on L1934997-01 through -08 to include 1,2-Dichloroethane and remove 1,1-Dichloroethane.

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Please note that this report format does not contain typical QC parameters that were performed with these samples. As such, any QC outliers or non-conformances can only be reviewed by accessing your Alpha Customer Center account at www.alphalab.com and building a Data Usability table (format 11) in our Data Merger tool.

Sample Receipt

L1934997-06: The sample identified as "VDM-9R" on the chain of custody was identified as "VDM-9" on the container label. At the client's request, the sample is reported as "VDM-9R".

Volatile Organics

L1934997-03 and -07: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

Total Metals

L1934997-01: The sample has elevated detection limits due to the dilution required by the high concentrations of target and non-target elements.

L1934997-03, -06 and -07: The sample has elevated detection limits due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Melissa Sturgis

Project Number: Not Specified

Lab Number: L1934997
Report Date: 01/27/20

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report - No QC w/'J' Qual

Project Name: ANNUAL GROUNDWATER MONITORING**Lab Number:** L1934997**Project Number:** Not Specified**Report Date:** 01/27/20

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Report Format: DU Report - No QC w/'J' Qual

Project Name: ANNUAL GROUNDWATER MONITORING
Project Number: Not Specified

Lab Number: L1934997
Report Date: 01/27/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE,**

EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B

EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

APPENDIX B

MONITORING WELL DATA FORMS (AUGUST 2019)

P1934997

Well Purging / Sampling Data

WELL VDM-14R:

WELL PURGING DATA:

START TIME: 0955

DATE: 8/5/19

FINISH TIME: 1005

A: MP ELEVATION: 445.25 FEET

B: DEPTH TO WATER:

10.16 FEET Serial_No:01272016:26

C: DEPTH OF WELL INSTALLED: 433.75

D: STATIC WATER COLUMN: F-B =

1.49 FEET well volumes

E: WELL VOLUME: $D * 0.1636 =$

0.244 GALLONS $\times 3 = 0.73$

F: DEPTH OF WELL AS MEASURED:

11.65 FEET

orange/brown

2 1/2 gal purged

WELL SAMPLING DATA:

DATE: 8/6/19

START TIME: 091000

FINISH TIME: _____

A: MP ELEVATION: 445.25 FEET

B: DEPTH TO WATER:

10.12 FEET

C: DEPTH OF WELL INSTALLED: 433.75

D: STATIC WATER CLOUMN: F-B =

1.53 FEET

E: WELL VOLUME: $D * 0.1636 =$

0.250 GALLONS

F: DEPTH OF WELL AS MEASURED:

11.65 FEET

G: pH OF SAMPLE:

5.46 pH 15.8°C

H: pH METER CALIBRATED?: YES [✓]

NO []

I: SAMPLES OBTAINED:

1- TOTAL METALS, 1 TOTAL CHLORIDES, 2 VOAs

J: WEATHER CONDITIONS: Overcast 78°F

K: SAMPLER(S): Zack Robinson & Eric Swartzmeyer

L: COMMENTS: Duplicate Taken Clear

P1934997

Well Purging / Sampling Data

WELL VDM-9R:

WELL PURGING DATA:

START TIME: 1015

DATE: 8/5/19

FINISH TIME: 1020

A: MP ELEVATION: 448.95 FEET
B: DEPTH TO WATER:
C: DEPTH OF WELL INSTALLED: 411.60
D: STATIC WATER COLUMN: F-B =
E: WELL VOLUME: D * 0.1636 =
F: DEPTH OF WELL AS MEASURED:

33.85 FEET

Serial_No:01272016:26

5.34 FEET

well volumes

0.874 GALLONS

$\times 3 = 2.62$

39.19 FEET

$\approx 3/4$ galbn \rightarrow Dry

Orange/brown

WELL SAMPLING DATA:

DATE: 8/6/19

START TIME: 0940

FINISH TIME: _____

A: MP ELEVATION: 448.95 FEET
B: DEPTH TO WATER:
C: DEPTH OF WELL INSTALLED: 411.60
D: STATIC WATER COLUMN: F-B =
E: WELL VOLUME: D * 0.1636 =
F: DEPTH OF WELL AS MEASURED:

36.78 FEET

2.41 FEET

0.394 GALLONS

39.19 FEET

5.82 pH 14.2°C

G: pH OF SAMPLE:
H: pH METER CALIBRATED?: YES

NO []

I: SAMPLES OBTAINED:

1- TOTAL METALS, 1 TOTAL CHLORIDES, 2 VOAs

J: WEATHER CONDITIONS: Partly cloudy 78°F

K: SAMPLER(S): Zack Robison & Eric Swartzmeyer

L: COMMENTS: Limited volume for Metals Orange color

P1934997

Well Purging / Sampling Data

WELL VDM-10:

WELL PURGING DATA:

START TIME: 1030

DATE: 8/5/19
FINISH TIME: 1105

A: MP ELEVATION: 444.89 FEET

B: DEPTH TO WATER:

32.86 FEET Serial_No:01272016:26

C: DEPTH OF WELL INSTALLED: 398.70

D: STATIC WATER COLUMN: F-B =

13.86 FEET well volumes

E: WELL VOLUME: $D * 0.1636 =$

2.273 GALLONS $\times 3 = 6.82$

F: DEPTH OF WELL AS MEASURED:

46.75 FEET

Clear \rightarrow Final Bailed Turbid
whole time

WELL SAMPLING DATA:

DATE: 8/6/19

START TIME: 0925

FINISH TIME: _____

A: MP ELEVATION: 444.89 FEET

B: DEPTH TO WATER:

43.94 FEET

C: DEPTH OF WELL INSTALLED: 398.70

D: STATIC WATER COLUMN: F-B =

2.81 FEET

E: WELL VOLUME: $D * 0.1636 =$

0.460 GALLONS

F: DEPTH OF WELL AS MEASURED:

46.75 FEET

G: pH OF SAMPLE:

6.39 pH 13.1°C

H: pH METER CALIBRATED?: YES

NO

I: SAMPLES OBTAINED:

1- TOTAL METALS, 1 TOTAL CHLORIDES, 2 VOAs

J: WEATHER CONDITIONS: Partly Cloudy 78°F

K: SAMPLER(S): Zack Robison & Eric Swartzmeyer

L: COMMENTS: clear
