DAMES & MOORE

SEPTEMBER 1984

TABLE OF CONTENTS

SECTION I

EXECUTIVE SUMMARY

PASNY Robert Moses Parkway

OBJECTIVE

The purpose of this two phase program is to conduct engineering investigations and evaluations at inactive hazardous waste disposal sites in New York State in order to calculate a Hazard Ranking System (HRS) score for each site and estimate the cost of any recommended remedial action. During the initial portion of this investigation (Phase I) all available data and records combined with information collected from a site inspection were reviewed and evaluated to determine the adequacy of existing information for calculating an HRS score. On the basis of this evaluation, a Phase II Work Plan was prepared for collecting additional HRS data (if necessary), evaluating remedial alternatives and preparing a cost estimate for recommended remedial action. The results of the Phase I study for this site are summarized below and detailed in the body of the report.

SITE BACKGROUND

The PASNY Robert Moses Parkway site is located in Niagara Falls, Niagara County, New York. The NYS site code is 932057. The site, previously owned by PASNY, was acquired by NYSDOT and is controlled by the Niagara Frontier Parks Commission. Allegedly, during the construction of the Parkway (about 1963) 300 drums of unknown waste materials from Hooker Chemical were buried in trenches between the breakwall and the Parkway. No visible evidence of the drums was noted during site inspections in 1978 and 1983. Concern centers on the possible migration of the suspected wastes off-site into the Niagara River. There are no known health or environmental problems.

ASSESSMENT

Insufficient data was available to complete a final HRS scoring. The preliminary HRS scoring was:

S_M	= 2.67	S_A	= 0.00
S_{GW}	= 0.00	S_{FE}	= 0.00
S_{SW}	= 4.62	S_{DC}	= 0.00

Site scores are low due to the unknown waste characteristics. While the target factor is low for the groundwater route it is high for the surface water route due to the proximity of the Niagara River and a Canadian water intake. Resistivity tests are recommended for the detection of the buried drums.

RECOMMENDATIONS

The following recommendations are made for the completion of Phase II:

- geophysical survey for detection of buried metal drums
- groundwater sampling at suspected area, 3 wells per area
- surface water monitoring system with two stations
- sample analyses for metals and a GC/MS scan
- air monitoring survey with an HNU meter
- additional file search/interviews for waste characterization

The estimated manhours required to complete Phase II are 544, while the estimated cost is $36,289.

SECTION II

SITE DESCRIPTION

PASNY Robert Moses Parkway

The PASNY Robert Moses Parkway site is located in Niagara Falls, Niagara County, New York. The site is under investigation as a hazardous waste site because of a suspected deposit of hazardous waste between the breakwall and parkway during the road construction. The exact location of the alleged deposit of wastes is not known.

SITE LOCATION MAP
PASNY ROBERT MOSES PARKWAY

FIGURE 1

HRS COVER SHEET

Facility name: PASNY Robert Moses Parkway

Location: Niagara Falls, NY

EPA Region: II

Person(s) in charge of the facility: Commissioner

PASNY

Niagara Falls, NY

Name of Reviewer: John Kubarewicz/Eileen Gilligan Date: August 27, 1983

General description of the facility:

(For example: landfill, surface impoundment, pile, container; types of hazardous substances; location of the facility; contamination route of major concern; types of information needed for rating; agency action, etc.)

It is suspected that up to 300 drums containing unknown Hooker Chemical wastes were buried between the breakwall and parkway during construction. There are no known health or environmental problems.

Scores: $S_M = 2.67$ ($S_{gw} = 0.00$ $S_{sw} = 4.62$ $S_a = 0.00$)

$S_{FE} = 0.00$

$S_{DC} = 0.00$

$\sqrt{S_{gw}^2 + S_{sw}^2 + S_a^2} \,/\, 1.73 = S_M =$		2.67

DOCUMENTATION RECORDS
FOR
HAZARD RANKING SYSTEM

INSTRUCTIONS: The purpose of these records is to provide a convenient way to prepare an auditable record of the data and documentation used to apply the Hazard Ranking System to a given facility. As briefly as possible summarize the information you used to assign the score for each factor (e.g., "Waste quantity = 4,230 drums plus 800 cubic yards of sludges"). The source of information should be provided for each entry and should be a bibliographic-type reference that will make the document used for a given data point easier to find. Include the location of the document and consider appending a copy of the relevant page(s) for ease in review.

FACILITY NAME: PASNY Robert Moses Parkway

LOCATION: City of Niagara Falls

1 OBSERVED RELEASE

Contaminants detected (5 maximum):

Not applicable. No groundwater samples collected for chemical analyses.

Rationale for attributing the contaminants to the facility:

Not applicable.

* * *

2 ROUTE CHARACTERISTICS

Depth to Aquifer of Concern

Name/description of aquifers(s) of concern:

Shallow aquifer.
(Basic geological knowledge)

Depth(s) from the ground surface to the highest seasonal level of the saturated zone [water table(s)] of the aquifer of concern:

Approximately 10 ft.
(Geological estimate based on hydraulic connection with adjacent Niagara River water.)

Depth from the ground surface to the lowest point of waste disposal/ storage:

Approximately 30 ft.
(Based on geological estimate of site geomorphology prior to dumping.)

Net Precipitation

Mean annual or seasonal precipitation (list months for seasonal):

32 inches.
(USDOC Climate Atlas of US, 1979)

Mean annual lake or seasonal evaporation (list months for seasonal):

24 inches.
(USDOC Climate Atlas of US, 1979)

Net precipitation (subtract the above figures):

8 inches.

Permeability of Unsaturated Zone

Soil type in unsaturated zone:

Not applicable, no soil on site.
(Interpretation of site geomorphology)

Permeability associated with soil type:

Within waste fill, N $+0^{-0}$ cm/sec.
(Lambe, T.W. and Whitman, K.V. (1969), Soil Mechanics, John Wiley & Sons, Inc., New York)

Physical State

Physical state of substances at time of disposal (or at present time for generated gases):

Solid and liquid.
(NCDOH, 1983)

* * *

3 CONTAINMENT

Containment

Method(s) of waste or leachate containment evaluated:

Unlined landfill and leaking barrels.

Method with highest score:

Unlined landfill
Leaking barrels - 3

4 WASTE CHARACTERISTICS

Toxicity and Persistence

Compound(s) evaluated:

Unknown - 0

Compound with highest score:

Not applicable.

Hazardous Waste Quantity

Total quantity of hazardous substances at the facility, excluding those with a containment score of 0 (Give a reasonable estimate even if quantity is above maximum):

300 drums - 3

Basis of estimating and/or computing waste quantity:

(NCDOH, 1983)

* * *

5 TARGETS

Ground Water Use

Use(s) of aquifer(s) of concern within a 3-mile radius of the facility:

Olin industrial cooling water wells.

Distance to Nearest Well

Location of nearest well drawing from aquifer of concern or occupied building not served by a public water supply:

Olin Corp. cooling water wells.

Distance to above well or building:

Approx. 1/2 mile.

Population Served by Ground Water Wells Within a 3-Mile Radius

Identified water-supply well(s) drawing from aquifer(s) of concern within a 3-mile radius and populations served by each:

Not applicable. No water-supply wells drawing from aquifer of concern.

Computation of land area irrigated by supply well(s) drawing from aquifer(s) of concern within a 3-mile radius, and conversion to population (1.5 people per acre):

Not applicable.

Total population served by ground water within a 3-mile radius:

Not applicable.

SURFACE WATER ROUTE

1 OBSERVED RELEASE

Contaminants detected in surface water at the facility or downhill from it (5 maximum):

Not applicable. No surface water samples collected for chemical analysis.

Rationale for attributing the contaminants to the facility:

Not applicable.

* * *

2 ROUTE CHARACTERISTICS (USGS Topographic Map: Niagara Falls, NY-ONT Quadrangle)

Facility Slope and Intervening Terrain

Average slope of facility in percent:

9.0%

Name/description of nearest downslope surface water:

Niagara River.

Average slope of terrain between facility and above-cited surface water body in percent:

0.1%

Is the facility located either totally or partially in surface water?

Yes.
(filled in area of river bank)

Is the facility completely surrounded by areas of higher elevation?

No.
(USGS Topographic Map: Niagara Falls, NY-ONT Quadrangle)

1-Year 24-Hour Rainfall in Inches

(US DOC Tech. Paper No. 40)

Distance to Nearest Downslope Surface Water

100 ft.
(USGS Topographic Map: Niagara Falls, NY-ONT Quadrangle)

Physical State of Waste

Solid and liquid.
(NCDOH, 1983)

* * *

3 CONTAINMENT

Containment

Method(s) of waste or leachate containment evaluated:

Unlined landfills with leaking drums.

Method with highest score:

Unlined landfill
or - 3
Leaking drums

4 WASTE CHARACTERISTICS

Toxicity and Persistence

Compound(s) evaluated

Unknown - 0

Compound with highest score:

Not applicable.

Hazardous Waste Quantity

Total quantity of hazardous substances at the facility, excluding those with a containment score of 0 (Give a reasonable estimate even if quantity is above maximum):

300 drums.

Basis of estimating and/or computing waste quantity:

NCDOH (1983)

* * *

5 TARGETS

Surface Water Use

Use(s) of surface water within 3 miles downstream of the hazardous substance:

Recreation
Commercial
(ES/D&M site visit)

Is there tidal influence?

No.
(USGS Topographic Map: Niagara Falls, NY-ONT Quadrangle)

Distance to a Sensitive Environment

Distance to 5-acre (minimum) coastal wetland, if 2 miles or less:

Not applicable. None within 2 miles.
(USGS Topographic Map: Niagara Falls, NY-ONT Quadrangle)

Distance to 5-acre (minimum) fresh-water wetland, if 1 mile or less:

More than 3.0 miles.
(NYS Wetlands Map)

Distance to critical habitat of an endangered species or national wildlife refuge, if 1 mile or less:

More than 3.0 miles.
(NYSDEC Region 9 Dept. of Fish & Wildlife conversation)

Population Served by Surface Water

Location(s) of water-supply intake(s) within 3 miles (free-flowing bodies) or 1 mile (static water bodies) downstream of the hazardous substance and population served by each intake:

1.5 miles downstream
Canadian water intake
10,000 estimated (based on city size)
(USGS Topographic Map: Niagara Falls, NY-ONT Quadrangle)

Computation of land area irrigated by above-cited intake(s) and conversion to population (1.5 people per acre):

Not applicable.

Total population served:

10,000
(based on Niagara Falls population estimate)

Name/description of nearest of above water bodies:

Niagara River.
(USGS Topographic Map: Niagara Falls, NY-ONT Quadrangle)

Distance to above-cited intakes, measured in stream miles.

1.5 miles
(USGS Topographic Map: Niagara Falls, NY-ONT Quadrangle)

1 OBSERVED RELEASE

Contaminants detected:

Not applicable. Air quality not monitored for contamination.

Date and location of detection of contaminants

Not applicable.

Methods used to detect the contaminants:

Not applicable.

Rationale for attributing the contaminants to the site:

Not applicable.

* * *

2 WASTE CHARACTERISTICS ES

Reactivity and Incompatibility

Most reactive compound:

Not applicable.

Most incompatible pair of compounds:

Not applicable.

Toxicity

Most toxic compound:

Not applicable.

Hazardous Waste Quantity

Total quantity of hazardous waste:

Not applicable.

Basis of estimating and/or computing waste quantity:

Not applicable.

* * *

3 TARGETS

Population Within 4-Mile Radius

Circle radius used, give population, and indicate how determined:

0 to 4 mi (0 to 1 mi) 0 to 1/2 mi 0 to 1/4 mi

3000 people.
(USGS Topographic Map: Niagara Falls, NY-ONT Quadrangle)

Distance to a Sensitive Environment

Distance to 5-acre (minimum) coastal wetland, if 2 miles or less:

Not applicable. None within 2 miles.
(USGS Topographic Map: Niagara Falls, NY-ONT Quadrangle)

Distance to 5-acre (minimum) fresh-water wetland, if 1 mile or less:

Not applicable. None within 1 mile.
(NYS Wetlands Maps)

Distance to critical habitat of an endangered species, if 1 mile or less:

Not applicable. None within 1 mile.
(NYSDEC Region 9 Fish & Wildlife Dept. conversation, 1983)

Land Use

Distance to commercial/industrial area, if 1 mile or less:

0.1 mi.
(ES/D&M site visit, 1983)

Distance to national or state park, forest, or wildlife reserve, if 2 miles or less:

Not applicable. None within 2 miles.
(ES/D&M site visit, 1983)

Distance to residential area, if 2 miles or less:

0.3 miles.
(ES/D&M site visit, 1983)

Distance to agricultural land in production within past 5 years, if 1 mile or less:

Not applicable. None within 1 mile.
(ES/D&M site visit, 1983)

Distance to prime agricultural land in production within past 5 years, if 2 miles or less:

Not applicable. None within 2 miles.
(ES/D&M site visit, 1983)

Is a historic or landmark site (National Register or Historic Places and National Natural Landmarks) within the view of the site?

Yes, mist for Niagara Falls at top of falls is visible from site.
(ES/D&M site visit, 1983)

SECTION IV

SITE HISTORY

PASNY Robert Moses Parkway

The PASNY Robert Moses Parkway site has been identified as a potential hazardous waste site because of an alleged deposit of hazardous material in trenches between the breakwall and parkway during construction of the road. The NYSDEC has estimated that 200 to 300 drums of waste were deposited. There is no visible evidence of the drums or adverse affects on the environment caused by this landfill.

SECTION V

SUMMARY OF AVAILABLE DATA

PASNY Robert Moses Parkway

REGIONAL GEOLOGY AND HYDROLOGY

The site is located in the Erie-Ontario lowlands physiographic province. The bedrock of this region is predominantly limestone, dolostone, and shale. Most of the rocks are deep aquifers with regional flow to the south.

In the recent past, most of New York State, including the site, has been repeatedly covered by a series of continental ice sheets. The activity of the glacier widened preexisting valleys, and deposited widespread accumulations of till. The melting of ice, ending approximately 12,000 years ago, produced large volumes of meltwater; this water subsequently shaped channels and deposited thick accumulations of stratified, granular sediments.

As glacial ice retreated from the region, meltwater formed lakes in front of the ice margin. This region is covered by lake sediments, the most recent being from Lake Iroquois (a larger predecessor to Lake Ontario) and from Lake Tonawanda (an elongate lake which occupied an east-west valley and drained north into Lake Iroquois). The sediments consist of blanket sands and beach ridges which are occasionally underlain by lacustrine silts and clays (indicating quiet or deeper water deposition).

Granular deposits in this region frequently act as shallow aquifers, whereas lacustrine clays, as well as tills, often inhibit groundwater movement. However, fine-grained, water-lain sediments, such as silts and clays, frequently contain horizontal laminations and sand seams. These internal features facilitate lateral groundwater movement through otherwise low permeability materials.

SITE GEOLOGY

No subsurface investigations have been performed at the site. This summary is based on our interpretation of USGS topographic maps, NYS Museum and Science Service Bedrock Geology Map and Quaternary Geology Map, and the investigations on nearby disposal sites.

The parkway is built on "made land"; thickness of fill may be in excess of 10 feet. Underlying the fill is probably a lacustrine, layered, silt and clay deposit. This unit is underlain by a silty and sandy till which rest on top of Lockport Dolomite bedrock. The total thickness of the natural soils under the parkway is probable approximately 15 feet. The bedrock suface may be located about 25 feet below the parkway.

SITE HYDROLOGY

No wells or borings have been made on the site. This summary is based on our estimates of site geology.

A shallow aquifer probably exists within the fill material and natural site soils. Flow of ground water through this aquifer is probably south, into the Niagara River.

The dolomite bedrock forms a deep aquifer; the direction of flow is determined.

SAMPLING AND ANALYSIS

There was no known sampling of the site.

SECTION VI

ASSESSMENT OF ADEQUACY OF DATA

PASNY Robert Moses Parkway

HRS Data Requirement	Comments on Data
Observed Release	
Ground Water	No available data, field data collection recommended.
Surface Water	No available data, field data collection recommended.
Air	No available data, field data collection recommended.
Route Characteristics	
Ground Water	Data available, adequate for HRS evaluation.
Surface Water	Data available, adequate for HRs evaluation.
Air	Data available, adequate for HRS evaluation.
Containment	Information available, adequate for HRS evaluation.
Waste Characteristics	No available information, additional research recommended.
Targets	Information available, adequate for HRS evaluation.
Observed Incident	Information available revealed no report of incident. No further investigation recommended.
Accessibility	Adequate information available.

SECTION VII

PHASE II WORK PLAN

PASNY Robert Moses Parkway

OBJECTIVES

The objectives of the Phase II activities are:

- To collect additional field data necessary to identify the HRS scoring.

- To perform a conceptual evaluation of remedial alternatives and estimate budgetary costs for the most likely alternative.

- To prepare a site investigation report.

The additional field data required to complete the HRS are defined as follows:

Geophysical Survey - A magnetometry survey will be performed along the length of the site to detect any buried metals and to assist in the placement of wells.

Ground Water - If areas of suspected metal disposal are identified by the geophysical survey, sampling wells will be installed to further characterize the nature and extent of potential contamination. Each suspect area will be investigated with one upgradient well north of the parkway and two downgradient wells along the Niagara River shoreline. For costing estimates we have assumed that three borings each extending to a depth of 30 feet will be required. The wells will sample the overburden aquifer and will consist of PVC. All installations will include

a quartz sand filter pack and at least one 2-ft bentonite seal. The water from these wells and from existing wells will be analyzed for metals (ICPES) and organics (GC/MS scan).

Surface Water - Two samples of surface water and sediment will be taken from Gill Creek and analyzed for metals and a GC/MS scan. If the geophysical survey identifies suspect areas, approximately five surface water samples will be taken from the Niagara River along the shoreline of the suspect area.

Air - An air monitoring survey with an HNU meter will be performed to test the air quality above and around the site.

TASK DESCRIPTION

The proposed Phase II tasks are described in Table VII-1. Survey and sampling locations are shown in Figure 2.

COST ESTIMATE

The estimated manhours required for the Phase II project are presented in Table VII-2 and the estimated project costs by tasks are presented in Table VII-3. If the geophysical survey determines that new sampling wells are needed and/or that suface water sampling of the Nigara River is required, additional funds will be requested. The total cost of the project is $36,289. The lump sum cost for the geophysical survey, surface water and sediment sampling and project reporting is $22,422. The estimated cost for installation and sampling of each group of wells is $13,867.

HEALTH AND SAFETY PLAN

The Health and Safety Plan will be submitted as a separate document.

TABLE VII-1
PHASE II WORK PLAN - TASK DESCRIPTION
PASNY ROBERT MOSES PARKWAY

Tasks	Description of Task
TASK	
II-A Update Work Plan	Review the information in the Phase I report conduct a site visit, check locations and condition of existing wells, examine aerial photography and revise the Phase II work plan.
II-B Conduct Geophysical studies	Conduct electromagnetic survey for detection of buried metals.
II-C Conduct Boring/Install Monitoring Wells	Install (assume 3 each to depth of 30 feet) ground water sampling wells in identified areas of suspected metal buried.
II-D Construct Test Pits/ Auger Holes	No construction of test pits/auger holes necessary.
II-E Perform Sampling and Analysis	
Soil samples from borings	Soil samples collected at 5 ft intervals during drilling or at changes in subsurface lithology. Perform one grain size analysis and permeability per well.
Soil samples from surface soils	No further sampling necessary.
Soil samples from test pits and auger holes	No further sampling necessary.
Sediment samples from surface water	Analyze samples for metals (ICPES) and organics (GC/MS scan).
Ground-water samples	Analyze samples for metals (ICPES) and organics (GC/MS scan).
Surface water samples	Analyze samples for metals (ICPES) and organics (GC/MS scan).

TABLE VII-1 (Continued)

PASNY ROBERT MOSES PARKWAY

Tasks	Description of Task
TASK	
Air samples	Using the HNU, determine the presence of organics.
Waste samples	No further sampling necessry.
II-F Calculate Final HRS	Based on the field data collected complete the HRS form.
II-G Conduct Site Assessment	Prepare final report containing Phase I report, additional field data, final HRS and HRS documentation records, and site assessments. The site assessment will consist of a conceptual evaluation of alternatives and a preliminary cost estimate of the most probable alternative.
II-H Project Management	Project coordination, administration and reporting.

BUREAU OF HAZARDOUS
WASTE MANAGEMENT PROGRAMS

Councilwoman Joan E. Gipp
1486 Ridge Road
Lewiston, New York 14902

Re: New York State Power Authority's New Road Construction in the Town of Lewiston, Niagara County, New York

Dear Ms. Gipp:

The Department of Environmental Conservation Agency collected soil samples from the road construction site on November 7, 1980, to determine if the road construction site was used as a dumping site for hazardous waste in the past. Sample points were marked with (X) on the attached map. Please be advised that no major excavation was done for the road construction at the time of the sample collection other than for the construction of the storm sewer catch basins. Generally for the road construction, fresh clay was deposited in some areas and it was covered with large size gravel.

Inspection of the ditch showed virgin clay deposits all along excavated trench. In addition, a thin layer of broken rock was observed beneath the surface, possibly due to the Power Authority's past construction activity for the power dam and the water conduits to the reservoir.

The analysis of the composite soil sample showed less than 1 ppb TOX (Total Hologeneted Organics) at the detection limit of 1 ppb set for the analytical instrument.

If you have any questions please call to this department at 716/842-5041.

Very truly yours,

John L. Beecher
Associate Chemical Engineer

NAME OF LANDFILL

PASNY ROBERT MOSES PARKWAY (DEC # 932057)

During the construction of the Robert Moses Parkway, 200 to 300 drums of unknown material from Hooker were allegedly placed in trenchs between the breakwall and the Parkway. Large quantities of fill material from the Niagara Power Project excavations were deposited along the river front, extending the shoreline, as much as, several hundred feet into the river, roughly from the Cayuga Creek outlet to a point 3,000 feet above the Falls. The parkway was subsequently built atop this filled area.

The exact location of the drums is unknown. It is not known if wastes were deposited in other areas of the fill.

The area was inspected by Mr. J. Tygert of the DEC in November, 1978. At this time, no visible evidence of drums or dumping was found. In addition, no signs of dumping were visible to the staff of the Niagara County Health Department at the time of this investigation.

No conclusions have been drawn on this site, as available information is insufficient.

Subject: PASNY Disposal Site at Niagara Power Project and Rubbish from Niagara Trash Racks

Dear Mr. Knowles:

For many years, the Niagara Power Project staff disposed of the rubbish from the trashracks and of grass-clippings in a landfill, actually a pit, at the Project. Suddenly, about a year ago, the disposal site was considered by DEC as a possibly hazardous site and the rubbish from the trashrack as "hazardous waste."

Because of the new EPA hazardous waste regulations, this designation of our trashrack rubbish will be very expensive and unwieldy to us. The plant personnel would very much like to return to disposing of it in the pit and have asked me to request of DEC a review of these designations. I myself cannot see that this trash satisfies any of the criteria for hazardous waste and would greatly appreciate reconsideration of this matter by the DEC.

If there is any information I can send you to facilitate a review, please let me know. My telephone number is 212-397-6337.

Very truly yours,

Deborah Wallace
