RCRA-Hazardous Solid Waste Approval from CWM

CONFIRMATION LETTER

September 14, 2001

JEFF SHIRLEY SEVENSON ENVIRONMENTAL SVCS 2749 LOCKPORT RD NIAGARA FALLS, NY 14305-2229

Re: Confirmation Number

4562020

Attention:

JEFF SHIRLEY

We are pleased to confirm CWM's approval of your waste material as described below. The attached profile for the waste materials was prepared by CWM based upon information provided by you. It is important that no changes be made to the profile without CWM's consent. If the profile meets with your approval, please call 1- 800-843-3604 to schedule shipment of your waste materials.

CWM Profile Number:

CS5057 MDC

Approved Mgmt. Facility:

CWM MODEL CITY FACILITY or another CWM or CWM approved facility

Waste Name:

EXCAVATED SOIL-LEAD AND PCBS

Disposal Method:

Stabilization and Subtitle C Landfill.

Disposal & Transportation

per ton (using standard recipe)
Includes taxes, 22 ton min end dumps

Demurrage:

- \$75.00 per hour after two free hours

Profile Expiration Date:

8/23/02

Special Conditions:

- Waste profile sheet numbers must appear on manifests.
- No demurrage will be paid by CWM Chemical Services, Inc., for delays at Model City for on-site acceptance procedures when generator/customer arranges their own transportation.
- Customers who require Certificates of Disposal should place the phrase "Certificate of Disposal Required" in Section 15 of the manifest.
- Alternative Soil Land Disposal Notification and Certification Form must be properly executed and accompany first shipment of this waste.

Re: Confirmation Number

4562020 , CWMI Profile Number CS5057 MDC

- For all loads for stabilization, the first load of the month will be held for testing prior to landfill.
- Shipment of PCB material must meet the manifest requirements outlined by the USEPA in 40 CFR 761.207.
- Copy of analysis must be submitted to Model City prior to shipment.
- A signed copy of the profile must be on file at Model City prior to scheduling.

Applicable state and local taxes are not included in these disposal prices. All wastes are priced as profiled, invoiced as actually received. Invoices shall be paid no later than thirty (30) days from the date of receipt. All terms are governed by the Agreement previously executed between our companies. The prices quoted above are subject to change by CWM upon thirty (30) days' prior written notice to you unless otherwise specifically provided or per the terms of our Agreement. If we have not previously concluded a Service Agreement with your company, one is enclosed for your convenience. Please sign and return it to us as soon as possible. Also, if 'Signature on File' does not appear on the signature line of the Waste Profile Sheet, please sign and return it before scheduling your material.

If you have any questions or would like to make changes to the profile, please contact your representative. Thank you for this opportunity to be of service.

Title

1990 Chemical Waste Management , Inc. - 08/99- Form CWM-2005-C

Signature _

SOLVENT

If the waste identified on the first page of this form is described by any of the following USEPA hazardous waste codes: F001, F002, F003, F004, F005, and all solvent constituents will not be monitored by the treater, then each constituent MUST be identified below by checking the appropriate box, and this page must accompany the shipment, along with the previous page of this form. If the waste code F039 describes this waste, then the corresponding list of constituents must be attached. If D001-D043 require treatment to 268.48 standards, then the underlying hazardous constituent(s) must also be attached.

	SOLVENT WASTE TREATMEN	NT STANDARDS	
F001 through F005 spent solvent constituents and their associated USEPA hazardous waste code(s).	Treatment Standard	F001 through F005 spent sol- vent constituents and their associated USEPA hazardous	Treatment Standard
_waste_code(s).	Wastewaters Nonwastewaters	Waste code(s).	Wastewaters Nonwastewaters

All spent solvent treatment standards are measured through a total waste analysis (TCA), unless otherwise noted. Wastewater units are mg/l, nonwastewater are mg/kg.

For contaminated soils using the alternative soil treatment standards, the treatment standards for F001-F005 spent solvents must be a 90% reduction of constituents or less than 10 x the standards listed.

SUBCATEGORY REFERENCE

D001:
A. Ignitable characteristic wastes, except for the 40 CFR 261.21(a)(1) High TOC subcategory.
B. High TOC Ignitable characteristic liquids subcategory based on 40 CFR 261.21(a)(1) - Greater than or equal to 10% total organic carbon.

CONFIRMATION LETTER

September

14, 2001

JEFF SHIRLEY SEVENSON ENVIRONMENTAL SVCS 2749 LOCKPORT RD NIAGARA FALLS, NY 14305-2229

Re: Confirmation Number

4562014

Attention:

JEFF SHIRLEY

We are pleased to confirm CWM's approval of your waste material as described below. The attached profile for the waste materials was prepared by CWM based upon information provided by you. It is important that no changes be made to the profile without CWM's consent. If the profile meets with your approval, please call 1- 800-843-3604 to schedule shipment of your waste materials.

CWM Profile Number:

CS5056 MDC

Approved Mgmt. Facility:

CWM MODEL CITY FACILITY or another CWM or CWM approved facility

Waste Name:

EXCAVATED SOIL WITH LEAD

Disposal Method:

Stabilization and Subtitle C Landfill.

Disposal & Transportation:

per ton (using standard receipe)

Includes taxes, 22 ton min

Demurrage:

- \$75.00 per hour after two free hours

Profile Expiration Date:

8/23/02

Special Conditions:

- Waste profile sheet numbers must appear on manifests.
- No demurrage will be paid by CWM Chemical Services, Inc., for delays at Model City for on-site acceptance procedures when generator/customer arranges their own transportation.
- Customers who require Certificates of Disposal should place the phrase "Certificate of Disposal Required" in Section 15 of the manifest.
- Contaminated Soil Land Disposal Notification and Certification Form must be properly executed and accompany first shipment of this waste.

Re: Confirmation Number

4562014 , CWMI Profile Number CS5056 MDC

- For all loads for stabilization, the first load of the month will be held for testing prior to landfill.
- Copy of analytical packages must be submitted to MDC prior to shipment.
- A signed copy of the profile must be on file at Model City prior to scheduling.

Applicable state and local taxes are not included in these disposal prices. All wastes are priced as profiled, invoiced as actually received. Invoices shall be paid no later than thirty (30) days from the date of receipt. All terms are governed by the Agreement previously executed between our companies. The prices quoted above are subject to change by CWM upon thirty (30) days' prior written notice to you unless otherwise specifically provided or per the terms of our Agreement. If we have not previously concluded a Service Agreement with your company, one is enclosed for your convenience. Please sign and return it to us as soon as possible. Also, if 'Signature on File' does not appear on the signature line of the Waste Profile Sheet, please sign and return it before scheduling your material.

If you have any questions or would like to make changes to the profile, please contact your representative. Thank you for this opportunity to be of service.

CERTIFICATE OF DISPOSAL

CWM CHEMICAL SERVICES, L.L.C. has received waste material from BOOTH OIL SITE ADMNSTRV GRP on 08/27/03 as described on Hazardous Waste Manifest number NYB9792738 Sequence number 01.

Profile Number: CS5056
CWM Tracking ID: 8157643801
CWM Unit #: 1*0

Disposal Date: 09/05/03

I certify, on behalf of the above listed treatment facility, that to the best of my knowledge, the above-described waste was managed in compliance with all applicable laws, regulations, permits and licenses on the date listed above.

RICHARD STURGES DIVISION MANAGER Certificate # 253148

09/09/03

For questions please call our Customer Service Dept. at (800) 843-3604

In case of emergency or spill immediately call the National Response Center (800) 424-8802 and the NYS Department of Environmental Conservation (518) 457-7362

CERTIFICATE OF DISPOSAL

CWM CHEMICAL SERVICES, L.L.C. has received waste material from BOOTH OIL SITE ADMNSTRV GRP on 09/11/03 as described on Hazardous Waste Manifest number NYB9792621 Sequence number 01.

Profile Number: CS5056

CWM Tracking ID: 8157693801

CWM Unit #: 1*0

Disposal Date: 09/11/03

I certify, on behalf of the above listed treatment facility, that to the best of my knowledge, the above-described waste was managed in compliance with all applicable laws, regulations, permits and licenses on the date listed above.

PCB Remediation Waste Approval from CWM

CONFIRMATION LETTER

September

14,2001

JEFF SHIRLEY SEVENSON ENVIRONMENTAL SVCS 2749 LOCKPORT RD NIAGARA FALLS, NY 14305-2229

Re: Confirmation Number

4562021

Attention:

JEFF SHIRLEY

We are pleased to confirm CWM's approval of your waste material as described below. The attached profile for the waste materials was prepared by CWM based upon information provided by you. It is important that no changes be made to the profile without CWM's consent. If the profile meets with your approval, please call 1-800-843-3604 to schedule shipment of your waste materials.

CWM Profile Number:

CS5058 **MDC**

Approved Mgmt. Facility:

CWM MODEL CITY FACILITY or another CWM or CWM approved facility

Waste Name:

EXCAVATED SOIL W/PCBS

Disposal Method:

TSCA Landfill.

Disposal & Transportation

er ton (22 ton min per load end dumps)

Taxes included

per ton (17 ton min per load rolloffs)

Taxes included

Demurrage:

- \$75.00 per hour after two free hours

Misc Costs

- \$400.00 initial rolloff spot fee
- \$15.00 per day or \$400.00 per month rolloff rental
- Liners included
- Fuel surcharge included in disposal pricing
- Dispoal mim based on one ton per cubic yard

Profile Expiration Date:

8/23/03

Special Conditions:

- Waste must not contain any free liquid, solidified B002 liquids or liquids with PCB

source > 500 ppm.

- Waste profile sheet numbers must appear on

manifests.

Re: Confirmation Number

4562021 , CWMI Profile Number CS5058 MDC

- No demurrage will be paid by CWM Chemical Serv.,Inc. for delays at Model City for on-site acceptance procedures when generator/customer arranges their own transportation.
- Customers who require Certificates of Disposal should place the phrase "Certificate of Disposal Required" in Section 15 of the manifest.
- Special Land Disposal Notification and Certification Form must be properly executed and accompany first shipment of this waste.
- Shipment of PCB material must meet the manifest requirements outlined by the USEPA in 40 CFR 761.207.
- Sorbents present in bulk shipments must be non biodegradable and must not have been used as a solidification agent to remove free standing liquid in the load.
- A signed copy of the profile must be on file at Model City prior to scheduling.

Applicable state and local taxes are not included in these disposal prices. All wastes are priced as profiled, invoiced as actually received. Invoices shall be paid no later than thirty (30) days from the date of receipt. All terms are governed by the Agreement previously executed between our companies. The prices quoted above are subject to change by CWM upon thirty (30) days' prior written notice to you unless otherwise specifically provided or per the terms of our Agreement. If we have interpreviously concluded a Service Agreement with your company, one is enclosed for your convenience. Please sign and return it to us as soon as possible. Also, if 'Signature on File' does not appear on the signature line of the Waste Profile Sheet, please sign and return it before scheduling your material.

If you have any questions or would like to make changes to the profile, please contact your representative. Thank you for this opportunity to be of service.

SOLVENT

If the waste identified on the first page of this form is described by any of the following USEPA hazardous waste codes: F001, F002, F003, F004, F005, and all solvent constituents will not be monitored by the treater, then each constituent MUST be identified below by checking the appropriate box, and this page must accompany the shipment, along with the previous page of this form. If the waste code F039 describes this waste, then the corresponding list of constituents must be attached. If D001-D043 require treatment to 268.48 standards, then the underlying hazardous constituent(s) must also be attached.

	SOLVENT WASTE TREATMEN	VT STANDARDS	
F001 through F005 spent solvent constituents and their associated USEPA hazardous	Treatment Standard	F001 through F005 spent sol- vent constituents and their associated USEPA hazardous	Treatment Standard
waste code(s).	Wastewaters Nonwastewaters	waste code(s)	Wastewaters Nonwastewaters

All spent solvent treatment standards are measured through a total waste analysis (TCA), unless otherwise noted. Wastewater units are mg/l, nonwastewater are mg/kg.

2 For contaminated soils using the alternative soil treatment standards, the treatment standards for F001-F005 spent solvents must be a 90% reduction of constituents or less than 10 x the standards listed.

SUBCATEGORY REFERENCE

D001:
A. Ignitable characteristic wastes, except for the 40 CFR 261.21(a)(1) High TOC subcategory.
B. High TOC Ignitable characteristic liquids subcategory based on 40 CFR 261.21(a)(1) - Greater than or equal to 10% total organic carbon.

CONFIRMATION LETTER

November

12, 2003

Ken Paisley SEVENSON INDUSTRIAL SVCS INC 2749 LOCKFORT RD NIAGARA FALLS, NY 14305-2229

Re: Confirmation Number 4582258

Attention

Ken Paislev

We are pleased to confirm CWM's approval of your waste material as described below. The attached profile for the waste materials was prepared by CWM based upon information provided by you. It is important that no changes be made to the profile without CWM's consent. If the profile meets with your approval, please call 1-716-754-8231 to schedule shipment of your waste materials.

CWM Profile Number;

C85246

MDC

Approved Mgmt. Facility: CWM MODEL CITY FACILITY

or another CWM or CWM approved facility δ^{\prime} .

Waste Name:

SOIL WITH GLASS

Disposal Method:

Bulk at Model City for Incineration at Port Arthur

Disposal Price:

per 55-gallon drum per 5-gallon pail

Transportation Price:

per drum, via ltl minimum per load

Demurrage:

- \$75.00 demurrage per hour after the first free hour of loading time

Profile Expiration Data: 11/05/04

Special Conditions:

- Waste profile sheet number must appear on manifest and drums.
- No demurrage will be paid by CWM Chemical Services, Inc. for delays at Model City for on-site acceptance procedures when generator/customer arranges their own transportation.
- Customers who require Certificates of Disposal

November

12, 2003

Re: Confirmation Number 4582258, CWMI Profile Number C85246 MDC

should place the phrase "Certificate of Disposal Required" in section 15 of the manifest.

- Special Land Disposal Notification and notification Form must be properly executed and accompany each shipment of this waste.
- Drummed waste must be properly marked with the profile number and bear only the appropriate labeling under RCRA and/or TSCA provisions.
- Shipment of PCB material must meet the manifest requirements outlined by the USEPA in 40 CFR 761.207.
- CWM has determined based on information provided that this waste stream does require Subpart CC controls. This determination is based on regulations contained in 40 CFR 264.1080-1090 and 265.1080-1090. If you do not agree with the above determination, please contact the Model City facility prior to your planned shipment.
- CWM Chemical Servies, L.L.C. (CWM) has all the necessary permits and licenses and is authorized for the management of the waste that has been characterized and identified by this profile. CWM has the capacity and will provide or assure that the ultimate disposal method specified on the hazardous waste manifest for this particular waste is followed.

Applicable state and local taxes are not included in these disposal prices. All wastes are priced as profiled, invoiced as actually received. Invoices shall be paid no later than thirty (30) days from the date of receipt. All terms are governed by the Agreement previously executed between our companies. The prices quoted above are subject to change by CWM upon thirty (30) days' prior written notice to you unless otherwise specifically provided or per the terms of our Agreement. If we have not previously concluded a Service Agreement with your company, one is enclosed for your convenience. Please sign and return it to us as soon as possible. Also, if 'signature on File' does not appear on the signature line of the Waste Profile Sheet, please sign and return it before scheduling your material.

If you have any questions or would like to make changes to the profile, please contact your representative. Thank you for this opportunity to be of service.

CERTIFICATE OF DISPOSAL

CWM CHEMICAL SERVICES, L.L.C. has received waste material from BOOTH OIL SITE ADMNSTRV GRP on 08/26/03 as described on Hazardous Waste Manifest number NYB9757422 Sequence number 01. CWM CHEMICAL SERVICES, L.L.C. hereby certifies that the above described material was landfilled in accordance with the 40 CFR part 761 as it pertains to the land disposal of polychlorinated biphenyl contaminated materials.

Profile Number: CS5058 CWM Tracking ID: 8157642001

CWM Unit #: 1*0 Disposal Date: 08/26/03

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representations (18 U.S.C 1001 and 15 U.S.C. 2615) I certify that the information contained in or accompanying this document is true accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true accurate and complete.

CERTIFICATE OF DISPOSAL

CWM CHEMICAL SERVICES, L.L.C. has received waste material from BOOTH OIL SITE ADMNSTRV GRP on 09/03/03 as described on Hazardous Waste Manifest number NYB9756477 Sequence number 01. CWM CHEMICAL SERVICES, L.L.C. hereby certifies that the above described material was landfilled in accordance with the 40 CFR part 761 as it pertains to the land disposal of polychlorinated biphenyl contaminated materials.

Profile Number: CS5058 CWM Tracking ID: 8157662801

CWM Unit #: 1*0 Disposal Date: 09/03/03

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representations (18 U.S.C 1001 and 15 U.S.C. 2615) I certify that the information contained in or accompanying this document is true accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true accurate and complete.

CERTIFICATE OF DISPOSAL

CWM CHEMICAL SERVICES, L.L.C. has received waste material from BOOTH OIL SITE ADMNSTRV GRP on 09/15/03 as described on Hazardous Waste Manifest number NYB9756459 Sequence number 01. CWM CHEMICAL SERVICES, L.L.C. hereby certifies that the above described material was landfilled in accordance with the 40 CFR part 761 as it pertains to the land disposal of polychlorinated biphenyl contaminated materials.

Profile Number: CS5058 CWM Tracking ID: 8157706901

CWM Unit #: 1*0

Disposal Date: 09/15/03

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representations (18 U.S.C 1001 and 15 U.S.C. 2615) I certify that the information contained in or accompanying this document is true accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true accurate and complete.

CERTIFICATE OF DISPOSAL

CWM CHEMICAL SERVICES, L.L.C. has received waste material from BOOTH OIL SITE ADMNSTRV GRP on 10/21/03 as described on Hazardous Waste Manifest number NYB9757377 Sequence number 01. CWM CHEMICAL SERVICES, L.L.C. hereby certifies that the above described material was landfilled in accordance with the 40 CFR part 761 as it pertains to the land disposal of polychlorinated biphenyl contaminated materials.

Profile Number: CS5058 CWM Tracking ID: 8157868601

CWM Unit #: 1*0
Disposal Date: 10/21/03

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representations (18 U.S.C 1001 and 15 U.S.C. 2615) I certify that the information contained in or accompanying this document is true accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true accurate and complete.

CERTIFICATE OF DISPOSAL

CWM CHEMICAL SERVICES, L.L.C., EPA ID: NYD049836679, has received waste material from BOOTH OIL SITE ADMNSTRV GRP on 10/27/03 as described on Hazardous Waste Manifest number NYB9757323 Sequence number 01. CWM CHEMICAL SERVICES, L.L.C. hereby certifies that the above described material was landfilled in accordance with the 40 CFR part 761 as it pertains to the land disposal of polychlorinated biphenyl contaminated materials.

Profile Number: CS5058 CWM Tracking ID: 8157897701

CWM Unit #: 1*0
Disposal Date: 10/27/03

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representations (18 U.S.C 1001 and 15 U.S.C. 2615) I certify that the information contained in or accompanying this document is true accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true accurate and complete.

Pre-Final Inspection Meeting Minutes

Memorandum

To:

Participants

From:

Leo M. Brausch

Date:

December 12, 2003

Re:

Notes from Pre-Final Inspection, December 10, 2003 @ 1100 a.m. Booth Oil Site Remediation Project, North Tonawanda, New York

This memorandum provides a summary of discussions at the Pre-Final Inspection for remedial construction at the Booth Oil Site (the "Site"), held on-site on Wednesday, December 10, 2003 at 11:00 a.m. The purpose of this site inspection is to confirm that the work is substantially complete and to identify any remaining items to be completed or corrected to arrive at completion of the work (i.e., "punchlist" items).

Leo Brausch chaired the meeting as the Project Coordinator for the Booth Oil Site Administrative Group (BOSAG). Representatives from Sevenson Environmental Services, Inc. (Sevenson); Blasland, Bouck & Lee, Inc. (BBL); the New York State Department of Environmental Conservation (NYSDEC); New York State Department of Health (NYSDOH); CSX Transportation, Inc. (CSXT); AT&T; and the City of North Tonawanda (City) were present. A list of participants is provided as Attachment A. The participants conducted a walk-around inspection of the Site during which the completed work was observed and punchlist items were identified and discussed.

Project Status

At the time of the Pre-Final Inspection, all impacted soil excavation and disposal have been completed, and NYSDEC and NYSDOH agree that the final limits of removal have accomplished the remedial action objectives for the Site. Excavations have been backfilled, and topsoil placement, grading, and hydroseeding have been completed for approximately 90 percent of the Site. Although not included as part of the Pre-Final Inspection, Sevenson reported that all sediment removal from the Little River has been completed.

Sevenson also reported that it had completed two of the minor tasks identified at the November 18, 2003 Construction Progress Meeting:

• Decontaminate the surface of the concrete pad in the southeast corner of Site and collect confirmatory samples to show surface polychlorinated biphenyl concentrations at or below 1 part per million; and

Notes from Booth Oil Site Pre-Final Inspection

Memo Date: December 12, 2003

Page 2

• Remove filter fabric from the storm water inlets on Robinson Street and remove any accumulations of sediments from these inlets.

Sevenson is now finishing its demobilization from the Site.

Based on the finings of the Pre-Final Inspection, remedial construction was determined to be substantially complete.

Punchlist Items

Attachment B provides the identified punchlist items, which include a few tasks that CSXT will complete in addition to the work to be completed by Sevenson. As indicated in this punchlist, placing additional topsoil, grading, and reseeding areas of localized depressions that hold ponded water will need to be delayed until the spring of 2004. Current weather and very wet (or frozen) ground conditions preclude completion this task at this time. In addition, an interim (i.e., in advance of the Final) inspection of the Site in the spring of 2004 will be conducted to determine if other areas of the Site require topsoil, grading, or reseeding to repair soil erosion ort otherwise ensure a complete vegetative ground cover.

Site Drainage Issue

Over the period of November 27 through 30, 2003, the Site received an estimated 1.20 inches of rainfall. Runoff apparently was concentrated in the newly constructed railroad ditch along the southeast side of the new crossover track. The ditch overflowed and caused water to accumulate to the rear of the property at 124 North Marion Street. The basic problem is that the railroad ditches have no outlets and, by removing and not reinstalling Track 7B, the railroad ditch along the southeast side of the new crossover track collects runoff from much of the Site, exacerbating the pre-construction drainage problem at 124 North Marion Street.

The punchlist includes an item to address the drainage issue in the short-term. The planned corrective measure is to build a small berm, using either clean fill or sandbags, around the northeast end of the ditch and across the rear of the 124 North Marion Street property. The concept is to redirect any overtopping of the ditch to on-site areas rather than off-site properties.

During the December 11, 2003 Pre-Final Inspection, BOSAG, BBL, CSXT, NYSDEC, and City representatives reviewed possible longer-term solutions to the Site drainage issue. The consensus approach is to correct the problem as follows:

• Rework the railroad ditch along the southeastern side of the crossover track to ensure a uniform slope from the northeast to the southwest. This reworking may involve placing fill/topsoil in the upper reaches of the ditch, especially at its head near the rear of the 124 North Marion Street property.

Notes from Booth Oil Site Pre-Final Inspection

Memo Date: December 12, 2003

Page 3

• Installing an appropriately sized culvert pipe in the ditch at the location of the AT&T fiber optic cable crossing, maintaining the minimum cover requirements atop this buried cable.

• Installing an appropriately sized subsurface culvert pipe connecting the southwestern end of the ditch to the storm sewer in Robinson Street. This pipe installation will include a concrete headwall and trash screen at the southwest end of the ditch and a near manhole at the storm sewer connection in Robinson Street.

On behalf of BOSAG, BBL will prepare the design for this installation and coordinate these efforts, including any permitting requirements, with the City. BOSAG will make arrangements for the required construction work in the spring of 2004. As part of this effort, CSXT will install connector pipes beneath the rails to allow the drainage ditch on the northwestern side of the crossover track to drain to the southeastern ditch. Issues of cost allocation between BOSAG and CSXT will be resolved between the parties.

In addition, BBL will coordinate with the City to provide, as a contingency, pumping of accumulated water from the ditch if, after heavy rainfall or snowmelt, it appears the ditch could overtop sufficiently to cause runoff to off-site properties.

Remedial Action Completion Report

Sevenson/BBL will prepare and BOSAG will submit to NYSDEC a Remedial Action Completion Report to document the remedial action activities completed for the Site. As described in Section 9.2 of the approved Final Design, this report will provide the following information:

- Narrative description of remedial action activities;
- As-built record drawings that document the final excavation limits, location of verification soil samples, final topography and drainage patterns, and other pertinent information associated with the remedy for the Site;
- Quantities of waste generated, including manifests, bills of lading, and certificates of disposal (where applicable) for off-site waste shipment;
- Field changes implemented during remedial construction and approved by NYSDEC;
- Analytical data, including waste, soil, water, and air monitoring results; and
- Copies of recorded restrictive covenants for the Site.

Page 4

1 age 1

The final Remedial Action Completion Report will include a certification statement and will be stamped and signed by a Professional Engineer licensed in the state of New York.

In addition, BBL/Sevenson will prepare and BOSAG will submit to NYSED a Post-Remedial Operation and Maintenance (O&M) Plan that identifies activities needed to monitor and maintain the effectiveness of the implanted remedy. The O&M Plan will include a soils management plan to address requirements for any future redevelopment activities conducted at the Site. Pursuant to Paragraph II.D of the Order on Consent, the Remedial Action Completion Report and O&M Plan will be submitted within 45 days of completion of remedial construction.

December 24, 2003

Michael J. Hinton, P.E. New York State Department of Environmental Conservation Region 9 270 Michigan Avenue Buffalo, NY 14203-2999

Re: Drainage Issues, Booth Oil Site, North Tonawanda, New York

NYSDEC Site No. 9-32-100

Dear Mr. Hinton:

Pursuant to our discussions at the Pre-Final Inspection on December 11, 2003 and our subsequent telephone conversation, this letter confirms the steps being taken by the Booth Oil Site Administrative Group (BOSAG) to address drainage issues at the Booth Oil site in North Tonawanda, New York (the "Site").

Background

Over the period of November 27 through 30, 2003, the Site received an estimated 1.20 inches of rainfall. Runoff apparently was concentrated in the newly constructed railroad ditch along the southeast side of the new crossover track. Because the installed railroad ditches currently have no outlets, the ditch overflowed and caused water to accumulate to the rear of the property at 124 North Marion Street.

Corrective Measures

As a short-term corrective measure, Sevenson Environmental Services, Inc., on behalf of BOSAG, has built a small berm around the northeast end of the ditch and across the rear of the 124 North Marion Street property. This berm is intended to redirect any overtopping of the ditch to on-site areas rather than off-site properties. Until longer-term corrective measures are completed, we will observe the effectiveness of this short-term measure. If necessary, BOSAG will arrange for expansion of the berm and/or the

pumping of accumulated water from the ditch if, after heavy rainfall or snowmelt, it appears the ditch could overtop sufficiently to cause runoff to off-site properties.

Based on the Pre-Final Inspection discussions, the proposed long-term solution to the Site drainage issue is as follows:

- Rework the railroad ditch along the southeastern side of the crossover track to ensure a uniform slope from the northeast to the southwest. This reworking may involve placing fill/topsoil in the upper reaches of the ditch, especially at its head near the rear of the 124 North Marion Street property.
- Installing an appropriately sized culvert pipe in the ditch at the location of the AT&T fiber optic cable crossing, maintaining the minimum cover requirements atop this buried cable.
- Installing an appropriately sized subsurface culvert pipe connecting the southwestern end of the ditch to the storm sewer in Robinson Street. This pipe installation will include a concrete headwall and trash screen at the southwest end of the ditch and a near manhole at the storm sewer connection in Robinson Street.

BOSAG will arrange for the design for this installation and coordinate thesee fforts, including any permitting requirements, with the City of North Tonawanda. BOSAG will make arrangements for the required construction work in the spring of 2004. As part of this effort, CSX Transportation, Inc. will install connector pipes beneath the rails to allow the drainage ditch on the northwestern side of the crossover track to drain to the southeastern ditch.

We trust this submittal satisfies your requirements at this time. If you have questions regarding this submittal or other project matters, please do not hesitate to contact me.

Respectfully submitted,

Leo M. Brausch Project Coordinator

December 29, 2003

Leo M. Brausch, P.E. Consulting Environmental Engineer 131 Wedgewood Drive Gibsonia, PA 15044-9795

Dear Mr. Brausch:

Booth Oil Site #932100 North Tonawanda, Niagara County Notice of Substantial Completion

On December 10, 2003 a Pre-Final Inspection of the Booth Oil remediation project was conducted. The inspection of the project has found that the construction of the remediation phase of the Booth Oil site has been substantially completed. Final project approval will be issued after a Final Inspection, anticipated for the Spring of 2004; completion of punch list items identified during the Pre-Final inspection; and review and approval of the Final Engineering Report prepared and certified by a New York State Registered Professional Engineer. The Final Engineering report must include a summary of the project activities, As-Built Drawings, and a proposed Operation Monitoring and Maintenance Plan (OM&M).

In accordance with the Order on Consent, Index #B9-0214-96-03, for the Booth Oil site, the Final Engineering Report, As-Built Drawings and OM&M plan must be submitted within 45 days of completion of construction activities. With the temporary construction of a berm to control site runoff and a commitment for a final remedy in the spring of 2004, the date of substantial completion is set as December 24, 2003. The Final Engineering Report, As-Built Drawings and OM&M are expected to be submitted by February 9, 2004.

Sincerely,

Michael J. Hinton, P.E.

Field Change Form 015

Appendix EE

Approximate Locations of the New Groundwater Monitoring Wells

Appendix FF Well Installation Procedures

1.0 General

To provide for the post-remedial monitoring program requested by the New York State Department of Environmental Conservation (NYSDEC), BOSAG will install four groundwater monitoring wells at the locations shown in Appendix EE. This appendix describes the procedures to be employed in this monitoring. All well construction will be in accordance with 6 New York Code of Rules and Regulations (NYCRR) Part 360, subparagraphs, 2.11(a)(8)(i), (ii) and (iii).

2.0 Drilling and Well Installation

The four monitoring well locations (Appendix EE) will be laid out in the field and cleared of underground utility conflicts. The well locations will then be drilled using a rotary drill rig and hollow-stem augers that will be advanced approximately 2 feet into the clay layer at a nominal depth of 7 feet below the ground surface (bgs). Prior to mobilization, the drill rig will be thoroughly cleaned by a steam or pressure washer to remove all oil, grease, and mud.

The well will be constructed using a minimum 4.25-diameter hollow stem auger, or other engineer-approved method from surface to the specified depth for each well. As the augers are advanced, the holes will be logged by a qualified geologist or geotechnical engineer by conducting continuing split-spoon sampling as described in the American Society for Materials and Testing (ASTM) Method D1586-84. Drill cuttings will be collected and placed in 55-gallon drums staged at the four drilling locations. The disposition of staged drill cuttings is discussed in Section 6.

The wells will be constructed of 2-inch-diameter Schedule 40 polyvinyl chloride (PVC) risers and 5-foot factory slotted well screens. Only entire premanufactured whole lengths of well tubing will be used. Sand pack across the screened interval will be 1Q or equivalent quartz silica. A typical well detail is provided on Figure 1. As shown on Figure 1, the well screen will be set across the interface between the clay layer and overlying materials. The annular space between the well screen and the borehole wall will be filled with a uniform sand pack using quartz silica sand to serve as a filter medium that extends 6 inches above the top of the well screen.

A hydrated bentonite seal of a minimum 1 foot vertical thickness will be placed in the annular space above the sand pack to hydraulically isolate the sand pack and well screen from surface water. The noncoated hydrated bentonite pellets will be placed directly into the annular space. Cement bentonite grout will be placed from the top of the hydrated bentonite seal to the ground surface.

Each well will be finished at the surface with a protective casing that will consist of a 5-foot minimum length of 6-inch black iron or galvanized pipe extending about 1.5 to 3 feet above the ground surface and set in concrete or cement grout. A 0.5-inch drain hole will be drilled in the casing near ground level. A protective steel cap, secured to the protective casing by a padlock, will be installed

3.0 Well Surveying

Following installation, each well location will be surveyed to determine horizontal location (± 1 foot) and vertical location (ground surface ± 0.1 foot and top of casing ± 0.01 foot). The survey will establish the measuring point for each well (typically the top of casing) for future reference in measuring groundwater levels. The surveyed well locations will be used to update the map provided in Appendix EE.

4.0 Well Development

Following the curing of the grout used in well installation for a minimum of 24 hours, the installed well will be developed to remove drilling fluids and fine-grained formation material. It is envisioned that development will be accomplished by surging and purging. Using an appropriately sized surge block, 2-foot sections of the well screen will be surged. Periodically, the surge block will be withdrawn from the well and accumulated sediment-laden water will be removed from the well by bailing or pumping. A well is considered developed when the pH, conductivity, and temperature of the groundwater stabilize and the measured turbidity is <50 nephlometric turbidity units (NTUs). Because these are shallow wells in fine-grained materials; however, it may not be possible to achieve the 50 NTU turbidity goal. Well development may be terminated after removing a minimum of 10 well volumes irrespective of the turbidity level. All liquids generated in well development will be collected in 55-gallon drums staged at the four drilling locations. The disposition of well development liquids is discussed in Section 6.

5.0 Decontamination

Before drilling each boring, all downhole equipment will be steam cleaned and rinsed with potable water to minimize cross-contamination. Special attention will be given to the threaded section of the casings, and to the drill rods. Each piece of polyvinyl chloride (PVC) pipe, screen, and the bottom plug will be steam-cleaned before lowering into the borehole. All drilling equipment will again be steam-cleaned at the completion of the project to ensure that no contamination is transported from the site.

6.0 Management of Investigation-Derived Waste

Investigation-derived waste (IDW) includes excess drill cuttings, liquids from well development, liquids and solids from decontamination, spent personal protection equipment (PPE), and other disposable materials (e.g., polyethylene sheeting). Solid and liquid IDW will be segregated to the extent practicable and staged in individual 55-gallon drums. Prior to driller demobilization, these IDW drums will be moved to the concrete slab in the southeastern portion of the site. The drum contents will then be sampled and analyzed, as needed, to determine offsite disposal requirements. The IDW will be shipped for offsite disposal based on the results of characterization testing.
