SECTION 1
INTRODUCTION

In accordance with the December 1993 "Addendum to the Remedial Design/Remedial Action Work Plan," this annual report for 2006 documents the activities associated with the groundwater remedial action at the Former Carborundum Facility in Wheatfield, New York (Figure 1 and Figure 2).

In mid-1993, the Atlantic Richfield Company designed, built, and commenced operation of a Soil Remediation/Groundwater Treatment System. The system incorporated a soil vapor extraction system (SVES), as well as treatment of groundwater extracted by the groundwater remediation system (GRS) for discharge to the State Pollutant Discharge Elimination System (SPDES) outfall. The SVES operated until September 2001. All SVES operations were discontinued in 2002 with approval of the New York State Department of Environmental Conservation (NYSDEC). The GRS continued operation after the SVES operations were discontinued.

In 2006, the GRS continued to treat extracted groundwater and discharge the treated water to the SPDES outfall. The GRS was operated with goals to provide onsite migration control, and to prevent offsite migration of groundwater containing volatile organic compounds (VOCs).

Provided herein is a discussion of the remedial activities at the site from January 1 through December 31, 2006. These activities include GRS operations, waste handling activities, permit issues, sampling and analysis, further decommissioning of the above-ground groundwater conveyance piping, and health and safety.

SECTION 2
GROUNDWATER REMEDIATION SYSTEM

During 2006, operation of the GRS remained focused on groundwater migration control onsite, and the prevention of off-site migration of groundwater containing dissolved VOCs at concentrations above action levels. The GRS continued to extract, treat, and discharge the treated water to the SPDES outfall. The following sections summarize GRS operation, maintenance, performance in 2006, and planned future activities.

2.1 OPERATIONS AND MAINTENANCE

In 2006, O&M Enterprises, Inc. (OME) completed operation and maintenance (O&M) activities on GRS extraction wells P-2, P-3, P-4, PW-1, and PW-3 and the GRS treatment system. The goals of the O&M program for the GRS were to maintain pumping at a rate necessary to achieve migration control, and to maintain the system within operational and permitted levels. O&M activities included system inspections, routine maintenance, monitoring, sampling, system and equipment repairs, adjustment of pumping controls, and lawn care/snow removal from parking areas and driveways. Table 1 provides the recovery well specifications used during the year. Non-routine O&M activities conducted for the GRS during the annual period included:

- Installed and painted a removable portion of containment area wall for fork truck access.
- Installed new bag filter units.
- Replaced thermostat on the treatment plant heater.
- Repaired holes in well sheds for P-2 and P-3 and removed unused pipe supports.
- Repaired well shed roof at P-2.
- Modified recovery well PW-1 from a subgrade vault to an above-grade completion contained within a well shed.
- Painted well sheds.
- Removed, decontaminated, and disposed of above-ground water conveyance, heat tracing, and supports.
- Removed and ground bolts in treatment plant floor to eliminate trip hazard.
- Rebuilt pump P810-B.
- Installed new pressure differential gauge feed lines on bag filter housings.

- Removed and grouted well points associated with former soil vapor extraction system. Decontaminated and disposed of removed materials.
- Repaired the air compressor used for low-flow groundwater sampling.
- Placed protective barrier around the junction boxes for the recovery well power and controls.
- Completed system upgrades involving bringing the new low profile air stripper on line and associated programming of controls.
- Replaced level controller on tray air stripper.
- Sampled drums of waste (filter bags and PPE) for disposal profiling.
- Completed disposal of a drum of filter bags and PPE waste from the site.
- Removed and properly disposed of piping, piping supports, piping associated materials, SVE/SVI points, and old bag filter housings.
- Replaced pump controller and flow meter at PW-1.
- Adjusted level control for P-2, P-3, and P-4.
- Participated in a NYSDEC SPDES inspection.
- Participated in a Hazardous Waste Inspection conducted by NYSDEC.

2.2 SYSTEM PERFORMANCE IN 2006

Table 2 summarizes GRS performance and system uptime. The combined average system up time, based on operational hours relative to total hours, was approximately 99%. Individual well up times ranged from 98% at PW-1 to 99% at P-2, P-3, P-4, and PW-3. The treatment system was shut down intermittently during November and December 2006 to accommodate equipment modifications.

As per previous reports and consistent with the current goals for the system, GRS performance in 2006 was gauged by the degree of migration control, capture zone development, degree of groundwater extraction, mass recovery, and treatment to meet SPDES discharge requirements. The performance of the GRS in 2006, and recommendations to improve future performance, are discussed below.

2.2.1 Migration Control

The intent of the GRS is to provide onsite migration control and limit further impacts of dissolved VOCs to off-site areas. Migration control efforts were focused on the Top of Rock (TOR) and Zone 1 in 2006. Extraction wells PW-1, PW-3, P-2, P-3, and P-4 were utilized to achieve the objective of onsite migration control. Each of the wells extracts groundwater from the TOR and Zone 1 at locations within or downgradient of source areas (PW-1, PW-3, P-2), and at the downgradient property boundary (P-3, P-4). The high percentage of "up

time" for the extraction wells within the source areas (PW-1, PW-3) facilitated migration control, with continuous source control throughout the period. The potential impacts to offsite areas were limited by a high degree of "up time" at wells P-2, P-3, and P-4 located downgradient of the source areas, and at the property boundary respectively.

2.2.2 Capture Zone Development

A review of the potentiometric surface plots for the TOR and Zone 1 in 2006 (Appendix A) indicates that the GRS has maintained the capture zone in the immediate vicinity of the extraction wells.

2.2.3 Groundwater Extraction and Mass Recovery

Table 2 summarizes the extraction performance of the GRS. Approximately 14 million gallons of groundwater were extracted by the GRS in 2006, yielding approximately 213 pounds of extracted VOCs. The average GRS pumping rate for 2006 was approximately 27 gpm. These data indicate that the GRS continued to make progress in the reduction of available mass in the source area groundwater during 2006.

The groundwater analytical database (Appendix B) contains VOC data for selected monitoring wells dating back to 1984. See Section 5 for a discussion of groundwater quality.

2.2.4 Treatment and SPDES Discharge

During 2006, one noncompliant result was identified at a level above the SPDES permit requirements. In November, the daily maximum for methylene chloride was above the 10 ug/L permit level. The exceedence is discussed further in Section 4.3.

2.3 SYSTEM UPGRADES

With approval from the NYSDEC, a new tray stripper and air blower were installed to replace the tower strippers. The new tray stripper was placed on-line in December 2006. New pre-treatment bag filter units were installed in November 2006.

2.4 RECOMMENDATIONS AND PLANNED FUTURE GRS ACTIVITIES

In addition to continued operation, maintenance, and monitoring of the focused extraction effort, the following activities will be addressed in 2007:

- Evaluate installation of a new onsite computer and programming software to replace outdated equipment and software.
- Evaluate the efficiency of the current granular activated carbon (GAC) systems for water and air treatment to determine if smaller systems may be used in place of the current systems.
- Continue to evaluate the GRS to reduce energy usage and replace aging equipment. System processes will continue to be reviewed, economized,

upgraded and/or retrofitted as necessary to accommodate the groundwater recovery rate and treatment requirements.

- Downgradient chemical concentrations will continue to be evaluated to gauge the effectiveness of migration control.

SECTION 3
WASTE HANDLING PROGRAM

The waste handling program for the GRS and former SVES consisted of tracking the generation and the proper disposition of soils, personal protective equipment, demolition debris, and O&M materials. The program is intended to provide compliance with applicable local, state, and federal regulations related to waste handling. During 2006, wastes generated during site operation and maintenance included personal protective equipment (PPE), GRS materials, and SVES components.

3.1 PERSONAL PROTECTIVE EQUIPMENT

During 2006, PPE waste was generated during routine O&M activities. The PPE wastes had been in contact with hazardous materials and are disposed of with the spent water filters. Waste PPE during the 2007 period will continue to be handled with waste O&M materials.

3.2 GROUNDWATER TREATMENT SYSTEM OPERATIONS AND MAINTENANCE MATERIALS

O&M of the treatment system may generate used filter bags, PPE, sediment from filtering, and spent carbon adsorption material. During operations, a 55-gallon drum is used until full to contain used filter bags and PPE. When the drum is nearly full, the material is tested for disposal purposes. One drum of used filter bags and PPE was disposed of as a hazardous waste on January 23, 2006. The drum was taken to CWM Chemical Services, LLC in Model City, New York and disposed in a hazardous waste landfill. A copy of the waste manifest is included in Appendix C.

During 2006, less than one 55-gallon drum of used filter bags and O&M wastes (i.e. PPE, spent filter bags, etc.) was generated.

3.3 SOIL VAPOR EXTRACTION SYSTEM REMOVAL

Operation of the SVES system for soil remediation was discontinued in December of 2002. Beginning in 2003 and continuing through 2005, various components of the SVE system were dismantled and disposed. In 2006, accessible SVES extraction and injection points outside the treatment building were decommissioned in accordance with a NYSDEC-approved work plan.

SECTION 4
PERMIT ISSUES

Discharge from the GRS occurs under a SPDES permit for water discharge to Cayuga Creek, and an air discharge registration for air emissions from the air stripper. Key activities associated with the permit and the air registration are summarized below.

4.1 SPDES PERMIT FOR GRS

The SPDES Permit for the GRS presently consists of Outfall 001A, located at the discharge of the GRS in the treatment building. It was renewed in November 2006, and is due to expire March 31, 2012. A copy of the renewed SPDES Permit is provided in Appendix C.

In January, February, and March of 2006, samples collected for compliance with the SPDES permit were analyzed by Severn Trent Laboratories. Beginning in April of 2006, samples were analyzed by Waste Stream Technology, Inc. (WST).

One non-compliance event was reported in 2006, based on results of the discharge monitoring. In accordance with the SPDES permit, the non-compliance event was reported to the NYSDEC and investigated by the permit holder. Investigation results were reported to NYSDEC in the discharge monitoring report (see Appendix C).

Methylene chloride was found at a level greater than the discharge limit of 10 ppb. A level of 16 ppb was reported for methylene chloride in the initial analysis of the November 8, 2006 sample. Investigation and re-analysis revealed that the probable cause of the non-compliance was unusually high methylene chloride in the lab environment. This is substantiated by the high levels of methylene chloride reported for this sample, as well as for samples from other sites. Methylene chloride was detected in the method blank associated with these samples.

The permit holder also participated in the 2006 Quality Assurance Study (DMR-QA Study 26). In the study, an "unsatisfactory" result was obtained for Non Potable Water Phenols. The DMR-QA study requires that the permit holder investigate any discrepancies or not acceptable data reported. The investigation of the "unsatisfactory" result determined that the root cause was the analyst's failure to include the correct dilution factor in the final result calculation. The implemented corrective action for the calculation error is that the final result calculations for all parameters, especially phenol, will continue to be reviewed and checked with greater accuracy by the analyst. These results will be checked again by the QA/QC reviewer before they are posted as final. The results of the laboratory's investigation and the DMR-QA Study results reports are attached.

4.2 AIR REGISTRATION

In 2006, the facility continued to operate under a registration status in New York State. The registration does not expire.

SECTION 5
GROUNDWATER MONITORING, SAMPLING, AND ANALYSIS

Monitoring for the remediation program included both routine monitoring of groundwater conditions and discharges, as well as task-specific sampling and analysis events. The sampling and analyses that were conducted during the 2006 reporting period are summarized below.

5.1 GROUNDWATER MONITORING

Monitoring of groundwater conditions includes both groundwater level measurements and groundwater quality sampling and analysis. On a quarterly basis, groundwater samples were collected and submitted for laboratory analysis. Samples were collected in January, April, July, and October on the schedule defined in Table 3. The sampling schedule used in 2006 was approved by the NYSDEC in October 2005.

In 2006, groundwater levels were measured in all of the wells in the monitoring network on a quarterly basis, as approved by the NYSDEC in October 2005.

Groundwater samples were divided into three different groups based on historical analytical results from individual wells. The sampling groups were identified as least impacted (low), medium impacted (medium), and most impacted (high). To the extent practicable, the wells in the low group were sampled first, followed by wells in the medium group, and lastly wells in the high group. Within each group, wells were sampled, to the extent feasible, from lowest historical impacts to greatest historical impacts. Each sample submission group was marked on the chain-of-custody (COC) prior to delivery to the analytical laboratory. Quality assurance/quality control (QA/QC) samples included field duplicates, matrix spike/matrix spike duplicates (MS/MSD), and equipment blanks. To the extent practicable, QA/QC sample sets were collected at a rate of one per sample group. The equipment blank was collected using laboratory-supplied deionized water run through decontaminated sampling equipment.

Using standard protocols, each well was purged with a decontaminated purge pump, dedicated high density polyethylene (HDPE) bailer, or the sampling port on the recovery well. During purging, field parameters (pH, specific conductivity, temperature, and turbidity) were measured and recorded. Purging continued until field parameters had stabilized and between three and five well volumes of water had been purged. After purging was complete, groundwater samples were collected from the monitoring and recovery wells. Field parameters were also collected immediately after sample collection. Field parameters for natural attenuation parameters were collected after sampling, during the April quarterly sampling event. The samples were placed in pre-cleaned, labeled 40-ml glass vials provided by the analytical laboratory. The sample vials did not contain preservative, in accordance with New York State guidance. Two sample vials were collected for each analysis and well. The containers were visually inspected to confirm that they did not contain air bubbles.

January 2006

The January 2006 quarterly groundwater sampling event included the sampling of 22 monitoring wells and five recovery wells. The event was completed between January 23 and January 30, 2006. Groundwater samples were submitted to Severn Trent Laboratories for analysis. No low-flow samples were planned during this quarterly sampling event. Field data collected during the sampling event are provided on Table 4.

April 2006

The April 2006 quarterly sampling event included the sampling of 23 monitoring wells and five recovery wells, and low-flow sampling for natural attenuation parameters at 15 of the 23 monitoring wells that were sampled. The groundwater sampling event was completed between April 12 and April 21, 2006. In April, Waste Stream Technologies, Inc. (WST) performed laboratory analysis on all of the samples collected. Attenuation parameter field data collected in April are provided on Table 5. Laboratory results are provided on Table 6.

Low-flow sampling methods were employed to collect 15 groundwater samples. A pneumatically operated bladder pump was placed approximately one to two feet above the well bottom. Groundwater was pumped through an in-line flow cell until groundwater quality readings for the indicator parameters (pH, temperature, conductivity, redox, and dissolved oxygen) stabilized. Purge volumes varied between one and five gallons. Once the parameters stabilized, the groundwater sample was collected.

July 2006

Fifty-seven monitoring wells and five recovery wells were sampled during the July event. WST provided the laboratory analysis (EPA Method 8260) for VOCs. The event was completed between July 11 and July 21, 2006. No low-flow samples were planned during this quarterly sampling event. Field data collected during the sampling event are provided on Table 7.

October 2006

Twenty-three monitoring wells and five recovery wells were sampled during the October sampling event. WST provided the laboratory analysis (EPA Method 8260) for VOCs. The groundwater sampling event was completed between October 9 and October 12, 2006. Field parameters collected during this sampling event are provided on Table 8. No low-flow samples were planned during this quarterly sampling event.

Groundwater Quality

As mentioned in Section 2.2.1, recovery wells have been focused to recover groundwater from the Top of Rock and Zone 1. The highest concentrations of TCE, total 1,2-DCE, and VC have been identified in these upper zones. In general, the concentration of dissolved VOCs observed in groundwater samples from all zones in 2006 is consistent with historical levels. The concentrations for each 2006 sampling event are provided on maps presented in Appendix A. Time series plots showing historical and current analytical data, as well as analytical tables for current and historical results, are provided in Appendix B.

Top of Rock and Zone 1

In the Top of Rock and Zone 1 during 2006, dissolved VOCs generally ranged from below the analytical detection limits to 1,000 ppb. Wells in which concentrations of one or more VOCs exceeded 1,000 ppb are listed below:

- Since 2001, PW-1 has had fluctuating concentrations of dissolved VOCs that appear to have a flat trend. In 2004, TCE and total 1,2-DCE were identified over 1,000 ppb. In 2005, TCE occurred over 1,000 ppb in April and October, and total 1,2-DCE concentrations decreased from 2004 levels to less than 1,000 ppb. In 2006, TCE concentrations were less than 1,000 ppb and 1,2-DCE were between 100 and 200 ppb during each of the four sampling events. The change observed between pre-2001 and post-2001 concentrations in this well is attributable to a change (in 2001) in the screened interval of the well.

- Dissolved VOC concentrations in well B-8M have remained consistent since the well was first sampled in 1984. Well B-8M is near a former source area, east of PW-3. TCE has been typically observed at over 10,000 ppb. Total 1,2-DCE concentrations ranged as high as10,000 ppb in 2004, but dropped to 3,300 ppb in July 2005, and less than 1,000 ppb in October 2005. In 2006, total 1,2-DCE concentrations ranged up to 3,482 ppb in July.

- B-11M is sampled annually in July. In 2006, the TCE concentration in B-11M (1,090 ppb) was stable compared to the TCE concentrations in 2003 through 2005. Total 1,2-DCE concentrations ranged from 160 ppb to 313 ppb between 2002 and 2006.

- B-13M concentrations have been stable since the pumping wells were retrofitted in 2001. In 2005, the maximum total 1,2-DCE concentration was 1,100 ppb, and TCE concentrations were 300 ppb or lower. In 2006, TCE concentrations were 202 ppb or lower. The maximum total 1,2-DCE concentration was 858 ppb, and less than 400 ppb in the other three samples.

- B-14M is sampled annually in July. The TCE concentration in B-14M was higher in 2006 (1,500 ppb) compared to previous samples which were 500 ppb

or less. Total 1,2-DCE concentrations ranged from 160 ppb to 313 ppb between 2002 and 2006.

- B-17M concentrations have been stable since the pumping wells were retrofitted in 2001. In 2005, total 1,2-DCE concentrations ranged from 9,700 ppb to greater than 15,000 ppb. In 2006, total 1,2-DCE concentrations ranged from 4,300 ppb to 9,630 ppb. In 2005 and 2006, TCE concentrations were consistently above 7,000 ppb. Vinyl chloride concentrations were generally stable in 2006 (January, 470 ppb; April, 1,210 ppb; July, 1,320 ppb; and October, 798 ppb) compared to 2005 (January, 1,300ppb; April, 1,200 ppb; July, 1,500 ppb; and October, 1,000 ppb).
- P-2 concentrations have remained relatively stable since the well screen interval was changed in 2001. TCE concentrations ranged from 5,200 to 9,200 ppb in 2005 and between 2,700 ppb and 8,500 ppb in 2006. Total 1,2-DCE was detected in the 500 to 900 ppb range in 2005, and decreased to between 300 and 800 ppb in 2006.
- P-4 concentrations increased after a change in the screened interval of the well in 2001. TCE concentrations ranged from 869 to 1,500 ppb in 2006, similar to 2004 and 2005. Total 1,2-DCE concentrations were in the 500 to 1,200 ppb range, also similar to 2004 and 2005.
- TCE was detected in PW-3 at concentrations ranging from 946 to 4,620 ppb, a wider range than observed in 2004 and 2005.

Zones 2, 3, and 4

VOC concentrations in these deeper groundwater zones were typically orders of magnitude lower than those in the Top of Rock zone and Zone 1. Concentrations in the majority of the wells ranged from less than detection limits to 5 ppb. No wells contained concentrations exceeding 100 ppb. Results for these zones are displayed graphically in Appendix A.

5.2 NIAGARA QUARRY SEEP AND POND SAMPLING

In conjunction with the groundwater monitoring, groundwater seeps on the quarry wall and ponded water were sampled at the Niagara Quarry on April 13 and October 10, 2006. STL provided the laboratory analysis (EPA Method 8260). Laboratory analytical reports are on file at Parsons and available upon request.

No VOCs were detected in any of the water samples from the quarry pond. The quarry seep was dry during each of the sampling events. These results are consistent with historic results. In previous communications with the land owner, the NYSDEC has indicated that there appears to be no health risk associated with the quarry seeps. Monitoring of VOC concentrations in the quarry during the spring and fall will continue through the 2007 period.

5.3 FUTURE SAMPLING AND ANALYSIS ACTIVITIES

Scheduled activities for the 2007 annual period include the following:

- Quarterly water level monitoring of all monitoring wells and recovery wells;
- Quarterly sampling and chemical analysis of selected monitoring wells and the recovery wells as identified in Table 3. The April 2007 event will include both natural attenuation field and laboratory parameters;
- Annual sampling and chemical analysis for all monitoring and recovery wells as identified in Table 3; and
- Semi-annual sampling of Niagara Quarry wall seeps (when present) and ponded water.

SECTION 6
HEALTH, SAFETY, SECURITY, AND ENVIRONMENT

Health, Safety, Security, and Environment (HSSE) activities during the period included continued worker and community monitoring. The site HSSE program was undertaken in accordance with OSHA 1910.120, and was restricted to Level D protection requirements during non-intrusive activities.

6.1 SITE HEALTH, SAFETY, SECURITY, AND ENVIRONMENT PLAN

All contractors assigned to the remediation efforts operated under the provisions of the Site HSSE Plan. This plan was revised and updated in 2006. The new HSSE plan is part of the OM&M manual developed for use with the new tray stripper. The plan has been accepted by health and safety representatives from Atlantic Richfield Company, O&M Enterprises, and Parsons. All new personnel assigned to the site are given a health and safety orientation that includes a review of the Site HSSE Plan.

6.2 PERFORMANCE REPORT

During the 2006 Annual Period, no major accidents or incidents occurred at the site. A summary of the reportable accidents, injuries, incidents and releases during the 2006 Annual period is given below:

- Total Site Manhours Worked - 2006 Annual Period: 1,976 (approximate)
- Total Hours without accident, incident, or release: 7,381
- Reportable Accidents or Injuries: None
- Reportable OSHA Incidents: None
- Reportable Releases: None

Notes:

1. For the period of 01/01/06 to 12/31/06
2. Flow rates are estimated throughout the period due to meter malfunctions.
4. Average Concentration (total) equals the sum of the detected compounds, cis-1,2-DCE, trans-1,2-DCE, Tetrachloroethene, and Trichloroethene.

Quarry		S		S

Notes: 1. S indicates that groundwater sampling and analysis will be performed. LF indicates low flow sampling.
NA Indicates that natural attenuation sampling and analysis will be performed.
2. July was selected as the annual sampling event.
3. The well sampling may change as the groundwater remediation program alters the plume configuration.
4. Water Levels are to be collected from every well, on a quarterly basis.

07/14/2006	6G14010-08	8260B	ND	ND	ND	ND	ND	2	41	ND	3	ND	4	50

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

ND - Not detected, indicates parameter was analyzed for, but not detected at or above the reporting limit.
To address the NYSDEC concerns regarding the presentation and plotting of nondetected values, the data for 2001 to 2004 has been reevaluated and interpreted as follows:

1) Nondetected concentrations have been represented as ND for reporting purposes.
2) Total VOCs have been recalculated and represented as the sum of the detected parameters shown on this table.
3) The method change to 8260 was approved by the NYSDEC and changed in January 2005.

NAME: FORMER CARBORUNDUM COMPLEX
LOCATION: (T) WHEATFIELD
COUNTY: NIAGARA
SPDES NO: NY 000 1988
DEC ID NO. 9-2940-00059-00003

Dear SPDES Permittee:

Enclosed please find a validated NOTICE/RENEWAL APPLICATION/PERMIT form renewing your State Pollutant Discharge Elimination System (SPDES) permit for the referenced facility. This validated form, together with the previously issued permit (see issuance date of this permit in Part 3 of the NOTICE/RENEWAL APPLICATION/PERMIT form), and any subsequent permit modifications constitute authorization to discharge wastewater in accordance with all terms, conditions and limitations specified therein.

The instructions and other information that you received with the NOTICE/RENEWAL APPLICATION/PERMIT package fully described procedures for renewal and modification of your SPDES permit under the Environmental Benefit Permit Strategy (EBPS). As a reminder, SPDES permits are renewed at a central location in Albany in order to make the process more efficient. All other concerns with your permit such as applications for permit modifications, permit transfers to a new owner, name changes, and other questions should be directed to the Regional Permit Administrator at the following address:

Steve Doleski
NYSDEC REGION 9
270 Michigan Avenue
Buffalo, NY 14203-2999
(716) 851-7165

If you have already filed an application for modification of your permit, it will be processed separately through our regional office. If you have questions concerning this permit renewal, please contact Lynn Kaplan at (518) 402-9165.

Sincerely,

William R. Adriance

Chief Permit Administrator

Facility and SPDES Permit Information

Name: FORMER CARBORUNDUM COMPLEX - COR
Ind. Code: 9511 County: NIAGARA
DEC No.: 9-2940-00059/00003
SPDES No.: NY 000 1988
Expiration Date: 04/01/2007
Application Due By: 10/03/2006

Are these name(s) & address(es) correct? if not, please write corrections above.

The State Pollutant Discharge Elimination System Permit for the facility referenced above expires on the date indicated. You are required by law to file a complete renewal application **at least 180 days prior to expiration of your current permit. Note the "Application Due By" date above.**

CAUTION: This short application form and attached questionnaire are the only forms acceptable for permit renewal. Sign Part 2 below and mail only this form and the completed questionnaire using the enclosed envelope. *Effective April 1, 1994 the Department no longer assesses SPDES application fees.*

If there are changes to your discharge, or to operations affecting the discharge, then in addition to this renewal application, you must also submit a separate permit modification application to the Regional Permit Administrator for the DEC region in which the facility is located, as required by your current permit. See the reverse side of this page for instructions on filing a modification request.

PART 2 - RENEWAL APPLICATION

CERTIFICATION: I hereby affirm that under penalty of perjury that the information provided on this form and all attachments submitted herewith is true to the best of my knowledge and belief. False statements made herein are punishable as a Class A misdemeanor pursuant to section 210.45 of the Penal Law.

This permit together with the previous valid permit for this facility issued 4/1/02 and subsequent modifications constitute authorization to discharge wastewater in accordance with all terms, conditions and limitations specified in the previously issued valid permit, modifications thereof or issued as part of this permit, including any special or general conditions attached hereto. Nothing in this permit shall be deemed to waive the Department's authority to initiate a modification of this permit on the grounds specified in 6NYCRR §621.14, 6NYCRR §754.4 or 6NYCRR §757.1 existing at the time this permit is issued or which arise thereafter.

SPDES RENEWAL APPLICATION
QUESTIONNAIRE

THIS PAGE MUST BE COMPLETED AND RETURNED WITH YOUR COMPLETED APPLICATION

Please TYPE or PRINT neatly using adequate pressure to make ALL copies legible. Keep a copy for your records.

1. Has the SPDES permit for your facility been modified in the past 5 years ☐ YES ☒ NO

2. Dischargers who use, manufacture, store, handle or discharge toxic or hazardous pollutants are subject to Industrial Best Management Practices (BMP) plan requirements for toxic or hazardous substances. A BMP plan prevents or minimizes the potential for release of pollutants to receiving waters from such ancillary industrial activities, including material storage areas; plant site runoff; in-plant transfer; process and material storage areas; loading and unloading operations, and sludge and waste disposal areas.

   Does your facility conduct ancillary activities as described above, which are not covered by BMP requirements in your current permit? ☐ YES ☒ NO

Please indicate which of the following best describes the situation at your facility:

☐ None of the concerns on the "Self Evaluation List" seem to apply to my facility at this time and I will not be applying for a modification of the SPDES permit in the foreseeable future.

☐ Yes, some of the items on the "Self Evaluation List" have led me to believe that the permit for this facility needs to be modified. I already have a complete modification application pending with the Department.

☐ Yes, some of the items on the "Self Evaluation List" have led me to believe that the SPDES permit for this facility may need to be Modified. I have requested the appropriate forms by phone OR I have completed and attached the "Request For SPDES Application Forms" (included in this renewal package) to allow me to submit a permittee-initiated Modification application. See The "Request For SPDES Application Forms" page for a toll free 800 number.

☒ The items on the "Self Evaluation List" have left me unable to conclude whether my permit needs to be modified at this time. I am reporting the following general concerns about my permit:

1. With NYSDEC approval one of the recovery wells (PW-2) was taken off-line in 2003, resulting in a reduction of flow to the treatment system, and therefore, a reduction in flow at the SPDES outfall (01A). Average throughput is 28.0 GPM for the first six months of 2006.

2. Two of four pre-treatment water filters have been removed to accommodate the installation of a tray air stripper. The two remaining water filters are planned for replacement.

3. The new tray stripper and blower, installed (with NYSDEC approval on 10/14/05) to replace the existing tower strippers, is scheduled to be brought on-line in the near future. When in operation, the maximum allowable throughput is 100GPM. The DEC has stated that they will modify the permit to reflect this change in flow, and re-evaluate any changes to the nickel and silver action levels.

ACTION LEVEL REQUIREMENTS (TYPE I)

The parameters listed below have been reported present in the discharge but at levels that currently do not require water quality or technology based limits. Action levels have been established which, if exceeded, will result in reconsideration or water quality or technology based limits.

Routine action level monitoring results, if not provided for on the Discharge Monitoring Report (DMR) form, shall be appended to the DMR for the period during which the sampling was conducted. If submission of DMR's is not required by this permit, the results shall be maintained in accordance with instructions on the RECORDING, REPORTING AND MONITORING page of this permit.

If any of the action levels is exceeded, the permittee shall undertake a short-term, high-intensity monitoring program for this parameter. Samples identical to those required for routine monitoring purposes shall be taken on each of at least three operating days and analyzed. Results shall be expressed in terms of both concentration and mass, and shall be submitted no later than the end of the third month following the month when the action level was first exceeded. Results may be appended to the DMR or transmitted under separate cover to the addresses listed on the RECORDING, REPORTING AND MONITORING page of this permit. If levels higher than the actions levels are confirmed the permit may be reopened by the Department for consideration of revised action levels or effluent limits.

The permittee is not authorized to discharge any of listed parameters at levels which may cause or contribute to a violation of water quality standards.

Outfall Number & Effluent Parameter	Action Level	Units	Minimum Monitoring Requirements: Measurement Frequency	Sample Type
Outfall 01 A:				
Nickel, Total	0.07	lb/d	Quarterly	24 hr. Comp.
Silver, Total	0.07	lb/d	Quarterly	24 hr. Comp.

Modification Date(s): 04/01/1998, 09/04/2001

SPECIAL CONDITION

Analyses for the metals listed below shall be performed utilizing the specified methods:

Cadmium, Total - EPA Method 213.2
Chromium, Total - EPA Methods 218.2 or 218.3
Lead, Total - EPA Method 239.2

91-20-2a (2/89)

SPDES No.: NY 000 1988

Part 1, Page 5 of 6

Modification Date(s): 09/04/2001

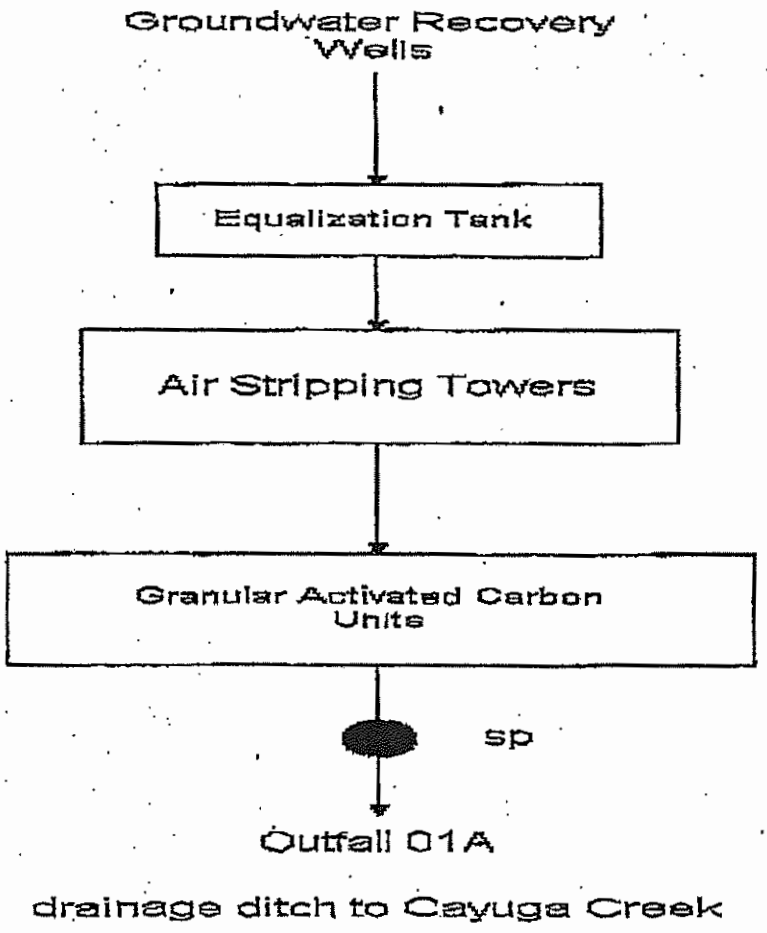
DEFINITIONS OF DAILY AVERAGE AND DAILY MAXIMUM

The daily average discharge is the total discharge by weight or in other appropriate units as specified herein, during a calendar month divided by the number of days in the month that the production or commercial facility was operating. Where less than daily sampling is required by this permit, the daily average discharge shall be determined by the summation of all the measured daily discharges in appropriate units as specified herein divided by the number of days during the calendar month when measurements were made.

The daily maximum discharge means the total discharge by weight or in other appropriate units as specified herein, during any calendar day.

MONITORING LOCATIONS

The permittee shall take samples and measurements, to comply with the monitoring requirements specified in this permit, at the location(s) indicated below:



91-20-2f (1/89)

SPDES No.: NY 000 1988

Part 1, Page 6 of 6

RECORDING, REPORTING AND ADDITIONAL MONITORING REQUIREMENTS

a) The permittee shall also refer to the General Conditions (Part II) of this permit for additional information concerning monitoring and reporting requirements and conditions.

b) The monitoring information required by this permit shall be summarized, signed and retained for a period of three years from the date of the sampling for subsequent inspection by the Department or its designated agent. Also;

[X] (If box is checked) monitoring information required by this permit shall be summarized and reported by submitting completed and signed Discharge Monitoring Report (DMR) forms for each one month reporting period to the locations specified below. Blank forms are available at the Department's Albany office listed below. The first reporting period begins on the effective date of this permit and the reports will be due no later than the 28th day of the month following the end of each reporting period.

Send the **original** (top sheet) of each DMR page to:

Department of Environmental Conservation
Division of Water
Bureau of Water Compliance Programs
625 Broadway
Albany, New York 12233-3506

Phone: (518)402-8177

Send the **second copy** (third sheet) of each DMR page to:

Niagara County Health Department
5467 Upper Mountain Road
Lockport, New York 14094

Phone : 716 - 439 - 7440

Send the **first copy** (second sheet) of each DMR page to:

Department of Environmental Conservation
Regional Water Engineer
Region 9
270 Michigan Avenue
Buffalo, New York 14203 - 2999

c) A monthly "Wastewater Facility Operation Report..." (form 92-15-7) shall be submitted (if box is checked) to the [ ] Regional Water Engineer and/or [ ] County Health Department or Environmental Control Agency listed above.

d) **Noncompliance** with the provisions of this permit shall be reported to the Department as prescribed in the attached General Conditions (Part II)

e) Monitoring must be conducted according to test procedures approved under 40 CFR Part 136, unless other test procedures have been specified in this permit.

f) If the permittee monitors any pollutant more frequently than required by the permit, using test procedures approved under 40 CFR Part 136 or as specified in this permit, the results of this monitoring shall be included in the calculations and recording of the data on the Discharge Monitoring Reports.

g) Calculation for all limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified in this permit.

h) Unless otherwise specified, all information recorded on the Discharge Monitoring Report shall be based upon measurements and sampling carried out during the most recently completed reporting period.

i) Any laboratory test or sample analysis required by this permit for which the State Commissioner of Health issues certificates of approval pursuant to section five hundred two of the Public Health Law shall be conducted by a laboratory which has been issued a certificate of approval. Inquiries regarding laboratory certification should be sent to the Environmental Laboratory Accreditation Program, New York State Health Department Center for Laboratories and Research, Division of Environmental Sciences , The Nelson A. Rockefeller Empire State Plaza, Albany, New York 12201.

NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION
STATE POLLUTANT DISCHARGE ELIMINATION SYSTEM (SPDES)
DISCHARGE PERMIT

GENERAL CONDITIONS
(PART II)

1. GENERAL PROVISIONS

a. This permit, or a true copy, shall be kept readily available for reference at the wastewater treatment facility.

b. A determination has been made on the basis of a submitted application, plans, or other available information, that compliance with the specified permit provisions will reasonably protect classified water use and assure compliance with applicable water quality standards. Satisfaction of permit provisions notwithstanding, if operation pursuant to the permit causes or contributes to a condition in contravention of State water quality standards, or if the Department determines, on the basis of notice provided by the permittee and any related investigation, inspection or sampling, that a modification of the permit is necessary to prevent impairment of the best use of the waters or to assure maintenance of water quality standards or compliance with other provisions of ECL Article 17, or the Act, the Department may require such a modification and may require abatement action to be taken by the permittee and may also prohibit the noticed act until the permit has been modified.

c. All discharges authorized by this permit shall be consistent with the terms and conditions of this permit. Facility expansion or other modifications, production increases, product changes, product process modifications, and wastewater collection, treatment and disposal system changes which will result in new or increased discharges of pollutants into the waters of the state must be reported by submission of a new SPDES application, in which case the permit may be modified accordingly. The discharge of any pollutant, not identified and authorized, or the discharge of any pollutant more frequently than, or at a level in excess of, that identified and authorized by this permit shall constitute a violation of the terms and conditions of this permit. Facility modifications, process modifications, or production decreases which result in decreased discharges of pollutants must be reported by submission of written notice to the permit-issuing authority, in which case the permit-issuing authority may require the permittee to submit a new SPDES application.

d. The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit, shall not be affected thereby.

e. If the discharge(s) permitted herein originate within the jurisdiction of an interstate water pollution control agency, then the permitted discharge(s) must also comply with any applicable effluent standards or water quality standards promulgated by that interstate agency.

f. The permittee must comply with all terms and conditions of this permit. Any permit noncompliance constitutes a violation of the Environmental Conservation Law and the Clean Water Act and is grounds for: enforcement action; for permit suspension, revocation and modification; and for denial of a permit renewal application.

g. Where the permittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the Department, the permittee shall promptly submit such facts or information.

h. It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

i. The permittee shall comply with effluent standards or prohibitions established under section 307(a) of the Clean Water Act for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if the permit has not yet been modified to incorporate the requirement.

j. The Clean Water Act provides that any person who violates a permit condition implementing sections 301, 302, 306, 307, 308, 318, or 405 of the Clean Water Act is subject to a civil penalty not to exceed $25,000 per day of such violations. Any person who willfully or negligently violates permit conditions implementing sections 301, 302, 306, 307, or 308 of the Clean Water Act is subject to a fine of not less than $5,000 nor more than $50,000 per day of violation, or by imprisonment for not more than three years, or both.

k. The filing of a request by the permittee for a permit modification, revocation, transfer, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

l. The permittee shall furnish to the Department, within a reasonable time, any information which Department may request to determine whether cause exists for modifying, suspending, or revoking ... permit, or to determine compliance with this permit. The permittee shall also furnish to the Department, upon request, copies of records required to be kept by this permit.

m. Nothing in this permit relieves the permittee from a requirement to obtain other permits required by law, including, but not limited to:

(1) an air contamination source permit/certification under 6NYCRR Part 201;

(2) a waste transporter permit under 6NYCRR Part 364; or

(3) a radioactive waste discharge permit under 6NYCRR Part 380.

2. SPECIAL REPORTING REQUIREMENTS FOR EXISTING MANUFACTURING, COMMERCIAL, MINING, AND SILVICULTURAL DISCHARGERS

All existing manufacturing, commercial, mining and silvicultural dischargers must notify the Department as soon as they know or have reason to believe:

a. That any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, of any toxic pollutant which is not specifically controlled in the permit, pursuant to General Provision 1 © herein. For the purposes of this section, recurrent accidental or unintentional spills or releases shall be considered to be a discharge on a frequent basis.

b. That any activity has occurred or will occur which would result in any discharge, on a non-routine or infrequent basis, of a toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":

(1) 500 micrograms/liter;

(2) 1.0 milligram/liter for antimony;

(3) five times the maximum concentration value reported for that pollutant in the permit application in accordance with 40 CFR §122.21(g)(7); or

(4) the level established by the Department in accordance with 40 CFR §122.44(f).

c. That they have begun or expect to begin to use, or manufacture as an intermediate or final product or by-product, any toxic pollutant which was not reported in the permit application under 40 CFR §122.21(g)(9) and which is being or may be discharged to waters of the state.

3. EXCLUSIONS

a. The issuance of this permit by the Department and the receipt thereof by the Applicant does not supersede, revoke or rescind an order or modification thereof on consent or determination by the Commissioner issued heretofore by the Department or any of the terms, conditions or requirements contained in such order or modification thereof unless specifically intended by said order.

b. The issuance of this permit does not convey any property rights in either real or personal property, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations; nor does it obviate the necessity of obtaining the assent of any other jurisdiction as required by law for the discharge authorized.

c. This permit does not authorize or approve the construction of any onshore or offshore physical structures or facilities or the undertaking of any work in any navigable waters.

d. Oil and hazardous substance liability: The imposition of responsibilities upon, or the institution of any legal action against the permittee under Section 311 of the Clean Water Act shall be in conformance with regulations promulgated pursuant to Section 311 governing the applicability of Section 311 of the Clean Water Act to discharges from facilities with NPDES permits.

4. MODIFICATION, SUSPENSION, REVOCATION

a. If the permittee fails or refuses to comply with any requirement in this permit, such noncompliance shall constitute a violation of the permit for which the Commissioner may modify, suspend, or revoke the permit after notice and opportunity for hearing and take direct enforcement action pursuant to law. When, at any time during or prior to a period for compliance, the permittee announces or otherwise lets it be known, or the Commissioner on reasonable cause determines, that the permittee will not make the requisite efforts to achieve compliance with an interim or final requirement, the Commissioner may modify, suspend or revoke the permit and take direct enforcement action pursuant to law, without waiting for expiration of the period for compliance with such requirements.

b. After notice and opportunity for a hearing, the Department may modify, suspend or revoke this permit, whole or in part during its term for cause including, but not limited to, the following:

(1) violation of any provision of this permit; or

(2) obtaining this permit by misrepresentation or failure to disclose fully all relevant facts at any time; or materially false or inaccurate statements or information in the application or the permit; or

(3) a change in any physical circumstances, requirements or criteria applicable to discharges, including, but not limited to:

(i) standards for construction or operation of the discharging facility;

(ii) the characteristics of the waters into which such discharge is made;

(iii) the water quality criteria applicable to such is made;

(iv) the classification of such waters; or

(v) effluent limitations or other requirements applicable pursuant to the Act or State Law.

(4) a determination that the permitted activity endangers human health or the environment and can only be regulated to acceptable levels by permit modification, a suspension, or revocation.

(5) violation of any order of the Commissioner or provision of ECL or regulation promulgated thereunder, which is related to the permitted activity.

(6) Newly discovered material information or material change in environmental conditions, relevant technology or applicable law or regulations since the issuance of this permit.

c. If any applicable toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under section 307(a) of the Clean Water Act for a toxic pollutant and that a standard or prohibition is more stringent than any limitation on the pollutant the permit, the Department shall institute proceedings to modify the permit in order to achieve conformance with the toxic effluent standard or prohibition and in conformance with ECL 17-0809.

5. REPORTING NONCOMPLIANCE

a. Anticipated noncompliance. The permittee shall give advance notice to the Department of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements.

b. Twenty-four hour reporting. The permittee shall report any noncompliance which may endanger health or the environment. Any information shall be provided orally within 24 hours from the time the permittee becomes aware of the circumstances. A written noncompliance report shall also be provided within five (5) days of the time the permittee becomes aware of the circumstances. The written noncompliance report shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent the noncompliance and its reoccurrence.

(1) The following shall be included as information which must be reported within 24 hours under paragraph (b) above:

(i) any unanticipated bypass which violates any effluent limitation in the permit;

(ii) any upset which violates any effluent limitation in the permit;

(iii) violation of a maximum daily discharge limitation for any of the pollutants listed by the Department in the permit to be reported within 24 hours.

(iv) any unusual situation, caused by a deviation from normal operation or experience (e.g. upsets, bypasses, inoperative treatment process units, spills or illegal chemical discharges or releases to the collection system) which create a potentially hazardous condition.

(v) any dry weather overflow(s).

(2) The Department may waive the written report on a case-by-case basis if the oral report has been received within 24 hours.

(3) Reports required by this section shall be filed with the Department's regional office having jurisdiction over the permitted facility. During weekends, oral noncompliance reports, required by this paragraph, may be made at (518) 457-7362.

c. Other noncompliance. The permittee shall report all instances of noncompliance not otherwise required to be reported under this section or other sections of this permit, with each submitted copy of its Discharge Monitoring Reports until such noncompliance ceases. Such noncompliance reports shall contain the information listed in paragraph (b) of this section.

d. Duty to mitigate. The permittee shall take all reasonable steps to minimize or prevent any discharge in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

6. INSPECTION AND ENTRY

The permittee shall allow the Commissioner of the Department, the EPA Regional Administrator, the County Health Department, or their authorized representatives, upon the presentation of credentials and other documents as may be required by law, to:

a. enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;

b. have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit, including records maintained for purposes of operation and maintenance;

c. inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit;

d. sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the Clean Water Act or Environmental Conservation Law, any substances or parameters at any location; and

e. enter upon the property of any contributor of wastewater to the system under authority of the permittee's Sewer Use Ordinance (municipalities) or Regulations.

7. TRANSFER OF PERMIT

a. A permit is transferable only with prior written approval of the Department.

b. To transfer a permit to a new owner or operator, written application must be made to the Department. Application for Permit Transfer forms can be obtained from, and must be submitted to, the appropriate regional office of the Department's Division of Regulatory Affairs.

c. In order for operation of the facility to continue without interruption, application must be made at least 30 days in advance of the transfer.

d. If, when the ownership or operation is transferred, the volume or composition of the facility discharge will be altered, a new application for permit may be required.

8. PERMIT RENEWAL

a. Any permittee who wishes to continue to discharge after the expiration date of a permit shall apply for renewal of its permit no later than 180 days prior to the permit's expiration date (unless permission for a later date has been granted by the Department) by submitting any forms, fees, or supplemental information which may be required by the Department. Upon request, the Department shall provide the permittee with specific information concerning the forms, fees, and supplemental information required.

b. When a permittee has made timely and sufficient application for the renewal of a permit or a new permit with reference to any activity of a continuing nature, the existing permit does not expire until the application has been finally determined by the Department, and, in case the application is denied or the terms of the new permit limited, until the last day for seeking review of the Department order or a later date fixed by order of the reviewing court, provided that this subdivision shall not affect any valid Department action then in effect summarily suspending such permit.

c. A municipality applying for a permit (renewal) shall submit evidence that it is enforcing an up-to-date enacted Sewer Use Ordinance which was approved by the Department.

d. A municipality applying for a permit (renewal) shall have an approved method of residuals disposal compliance with Part 6-NYCRR 360 and 364.

e. A municipality receiving industrial waste shall submit evidence that it is operating (or implementing) its industrial pretreatment program in accordance with Part 6 NYCRR 651.53(f).

9. SPECIAL PROVISIONS - NEW OR MODIFIED DISPOSAL SYSTEMS OR SERVICE AREAS

a. Prior to construction of any new or modified waste disposal system or modification of a facility or service area generating wastewater which could alter the design volume of, or the method or effect of treatment or disposing of the sewage, industrial waste or other wastes, from an existing waste disposal system, the Permittee shall submit to the Department or its designated field office for review, an approvable engineering report, plans, and specifications which have been prepared by a person or firm licensed to practice Professional Engineering in the State of New York.

b. The construction of the above new or modified disposal system shall not start until the Permittee receives written approval of the system from the Department or its designated field office.

c. The construction of the above new or modified disposal system shall be under the general supervision of a person or firm licensed to practice Professional Engineering in New York State. Upon completion of construction, that person or firm shall certify to the Department or its designated field office that the system has been fully completed in accordance with the approved engineering report, plans and specifications, permit and letter of approval; and the permittee shall receive written acceptance of such certificate from the Department or designated field agency prior to commencing discharge.

d. The Department and its designated field offices review wastewater disposal system reports, plans, and specifications for treatment process capability only, and approval by either office does not constitute approval of the system's structural integrity.

10. MONITORING, RECORDING, AND REPORTING

10.1 GENERAL

a. The permittee shall comply with all recording, reporting, monitoring and sampling requirements specified in this permit and such other additional terms, provisions, requirements or conditions that the Department may deem to be reasonably necessary to achieve the purposes of the Environmental Conservation Law, Article 17, the Act, or rules and regulations adopted pursuant thereto.

b. Samples and measurements taken to meet the monitoring requirements specified in this permit shall be representative of the quantity and character of the monitored discharges. Composite samples shall be composed of a minimum of 8 grab samples, collected over the specified collection period, either at a constant sample volume for a constant flow interval or at a flow-proportioned sample volume for a constant time interval, unless otherwise specified in Part I of this permit. For GC/MS Volatile Organic Analysis (VOA), aliquots must be combined in the laboratory immediately before analysis. At least 4 (rather than 8) aliquots or grab samples should be collected over the specified collection period. Grab sample means a single sample, taken over a period not exceeding 15 minutes.

c. Accessible sampling locations must be provided and maintained. New sampling locations shall be provided if existing locations are deemed unsuitable by the Department or its designated field agency.

d. Actual measured values of all positive analytical results obtained above the Practical Quantitation Limit (PQL)[1] for all monitored parameters shall be recorded and reported, as required by this permit; except, where parameters are limited in this permit to values below the PQL, actual measured values for all positive analytical results above the Method Detection Limit (MDL)[2] shall be reported.

---

1 Practical Quantitation Limit (PQL) is the lowest level that can be measured within specified limits of precision and accuracy during routine laboratory operations on most effluent matrices.

2 Method Detection Limit (MDL) is the level at which the analytical procedure referenced is capable of determining with a 99% probability that the substance is present. This value is determined in distilled water with no interfering substances present. The precision at this level is +/- 100%.

e. The permittee shall periodically calibrate and perform manufacturer's recommended maintenance procedures on all monitoring and analytical instrumentation to insure accuracy of measurements. Verification of maintenance shall be logged into the daily record book(s) of the facility. The permittee shall notify the Department's regional office immediately if any required instrumentation becomes inoperable. In addition, the permittee shall verify the accuracy of their measuring equipment to the Department's Regional Office annually.

f. The Clean Water Act provides that any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this permit, shall upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than 2 years per violation or by both. If a conviction of such person is for a violation committed after a first conviction of such person under this paragraph, punishment shall be a fine of not more than $20,000 per day of violation, or by imprisonment of not more than 4 years, or by both.

10.2 SIGNATORIES AND CERTIFICATION

a. All reports required by this permit shall be signed as follows:

(1) for a corporation: by a responsible corporate officer. For the purposes of this section, a responsible corporate officer means:

(i) a president, secretary, treasurer, or a vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making function for the corporation, or

(ii) the manager of one or more manufacturing, production, or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding $25 million (in second quarter 1980 dollars),if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

(2) for a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

(3) for a municipality, state, federal, or other public agency: by either a principal or executive officer or ranking elected official. For purposes of this section, a principal executive officer of a federal agency includes: (i) the chief executive officer of the agency, or (ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency; or

(4) a duly authorized representative of the person described in items (1), (2), or (3). A person is a duly authorized representative only if:

(i) the authorization is made in writing by a person described in paragraph (a)(1), (2), or (3) of this section;

(ii) the authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity such as the position of plant manager, operator of a well or well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position); and

(iii) the written authorization is submitted to the Department.

b. Changes to authorization: If an authorization under subparagraph (a)(4) of this section is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of subparagraph (a)(4) of this section must be submitted to the Department prior to or together with any reports, information, or applications to be signed by an authorized representative.

c. Certification: Any person signing a report shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision, in accordance with a system, designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the permit or persons

who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment for knowing violations."

d. The Clean Water Act provides that any person who knowingly makes any material false statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained under this permit, including monitoring reports or reports of compliance or noncompliance shall, upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than 2 years, or by both. If a conviction of such person is for a violation committed after a first conviction of such person under this paragraph, punishment shall be a fine of not more than $20,000 per day of violation, or by imprisonment of not more than 4 years, or by both.

10.3 RECORDING OF MONITORING ACTIVITIES AND RESULTS

a. The permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least 3 years from the date of the sample, measurement, report or application. This period may be extended by request of the Department at any time.

b. Records of monitoring information shall include:

(1) the date, exact place, and time of sampling or measurements;

(2) the individual(s) who performed the sampling or measurements;

(3) the date(s) analyses were performed;

(4) the individual(s) who performed the analyses;

(5) the analytical techniques or methods used; and

(6) the results of such analyses.

10.4 TEST AND ANALYTICAL PROCEDURES

a. Monitoring and analysis must be conducted using test procedures promulgated, pursuant to 40 CFR Part 136, except:

(1) should the Department require the use of a particular test procedure, such test procedure will be specified in Part I of this permit.

(2) should the permittee desire to use a test method not approved herein, prior Department approval is required, pursuant to paragraph (b) of this section.

b. Application for approval of test procedures shall be made to the Department's Regional Permit Administrator (see Part 1, page 1 for address), and shall contain:

(1) the name and address of the applicant or the responsible person making the discharge, the DEC permit number and applicable SPDES identification number of the existing or pending permit, name of the permit issuing agency, name and telephone number of applicant's contact person;

(2) the names of the pollutants or parameters for which an alternate testing procedure is being requested, and the monitoring location(s) at which each testing procedure will be utilized;

(3) justification for using test procedures, other than those approved in paragraph (a) of this section; and

(4) a detailed description of the alternate procedure, together with:

(i) references to published studies, if any, of the applicability of the alternate test procedure to the effluent in question;

(ii) information on known interferences, if any; and

(5) a comparability study, using both approved and the proposed methods. The study shall consist of 8 replicates of 3 samples from a well mixed waste stream for each Outfall if less than 5 outfalls are involved, or from 5 outfalls if 5 or more outfalls are involved. Four (4) replicates from each of the samples must be analyzed using a method approved in paragraph (a) of this section, and four of the replicates of each sample must be analyzed using the proposed method. This results in 24 analyses per Outfall up to a maximum of 120 analyses per permit. A statistical analysis of the data must be submitted that shall include, as a minimum:

(i) calculated statistical mean and standard deviation;

(ii) a test for outliers at the mean ±3 standard deviations level. Where an outlier is detected, an additional sample must be collected and 8 replicates of the sample must be analyzed as specified above;

(iii) a plot distribution with frequency counts and histogram;

(iv) a test for equality among with-in sample standard deviation;

(v) a check for equality of pooled with-in sample variance with an F-Test;

(vi) a t-Test to determine equality of method means; and

copies of all data generated in the study.

Additional information can be obtained by contacting the Bureau of Watershed Assessment & Research (NYSDEC, 50 Wolf Road, Albany, New York 12233 - 3502).

11. DISPOSAL SYSTEM OPERATION AND QUALITY CONTROL

11.1 GENERAL

a. The disposal system shall not receive or be committed to receive wastes beyond its design capacity as to volume and character of wastes treated, nor shall the system be materially altered as to: type, degree, or capacity of treatment provided; disposal of treated effluent; or treatment and disposal of separated scum, liquids, solids or combination thereof resulting from the treatment process without written approval of the Department of Environmental Conservation or its designated field office.

b. The permittee shall, at all times, properly operate and maintain all facilities and systems of treatment and control (or related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance also includes as a minimum, the following: 1) A preventive/corrective maintenance program. 2) A site specific action orientated operation and maintenance manual for routine use, training new operators, adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of backup or auxiliary facilities or similar systems which are installed by a permittee only when the operation is necessary to achieve compliance with the conditions of the permit.

c. When required under Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York (6NYCRR 650), sufficient personnel meeting qualifications for operators of sewage treatment works as required therein and additional maintenance personnel shall be employed to satisfactorily operate and maintain the treatment works.

d. The permittee shall not discharge floating solids or visible foam.

11.2 BYPASS

a. Definitions:

(1) "Bypass" means the intentional or unintentional diversion of waste stream(s) around any portion of a treatment facility for the purpose or having the effect of reducing the degree of treatment intended for the bypassed portion of the treatment facility.

(2) "Severe property damage" means substantial damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which would not reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

b. Bypass not exceeding limitations:

The permittee may allow any bypass to occur which does not cause effluent limitations to be violated, but only if it also is for essential maintenance, repair or replacement to assure efficient and proper operation. These bypasses are not subject to the provisions of paragraph © and (d) of this section, provided that written notice is submitted prior to bypass (if anticipated) or as soon as possible after bypass (if unanticipated), and no public health hazard is created by the bypass.

c. Notice:

(1) Anticipated bypass - If the permittee knows in advance of the need for a bypass, it shall submit prior written notice, at least forty five (45) days before the date of the bypass.

(2) Unanticipated bypass - The permittee shall submit notice of an unanticipated bypass as required in Section 5, paragraph b. of this Part (24 hour notice).

d. Prohibition of bypass:

(1) Bypass is prohibited, and the Department may take enforcement action against a permittee for bypass, unless:

(i) bypass was unavoidable to prevent loss of life, personal injury, public health hazard, or severe property damage;

(ii) there were no feasible alternatives to the bypass , such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal period of equipment downtime. This condition is not satisfied if adequate backup equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance or if designed and installed backup equipment which could have prevented or mitigated the impact of the bypass is not operating during the bypass; and

(iii) the permittee submitted notices as required under paragraph © of this section and, excepting emergency conditions, the proposed bypass was accepted by the Department.

11.3 UPSET

a. Definition:

"Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

b. Effect of an upset:

An upset constitutes an affirmative defense to an action brought for noncompliance with such permit effluent limitations if the requirements of paragraph © of this section are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.

c. Conditions necessary for a demonstration of upset:

A permittee who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed, contemporaneous operation logs, or other relevant evidence that:

(1) an upset occurred and that the permittee can identify the cause(s) of the upset;

(2) the permitted facility was at the time being properly operated; and

(3) the permittee submitted notice of the upset as required in Section 6, paragraph b of this part (24 hour notice).

(4) the permittee complied with any remedial measures required under Section 5, paragraph d of this part.

d. Burden of proof:

In any enforcement proceeding the permittee seeking to establish the occurrence of an upset has the burden of proof.

11.4 SPECIAL CONDITION - DISPOSAL SYSTEMS WITH SEPTIC TANKS

If a septic tank is installed as part of the disposal system, it shall be inspected by the permittee or his agent for scum and sludge accumulation at intervals not to exceed one year's duration, and such accumulation will be removed before the depth of either exceeds one-fourth (1/4) of the liquid depth so that no settleable solids or scum will leave in the septic tank effluent. Such accumulation shall be disposed of in an approved manner.

11.5 SLUDGE DISPOSAL

The storage or disposal of collected screenings, sludges, other solids, or precipitates separated from the permitted discharges and/or intake or supply water by the permittee shall be done in such a manner as to prevent creation of nuisance conditions or entry of such materials into classified waters or their tributaries, and in a manner approved by the Department. Any live fish, shellfish, or other animals collected or trapped as a result of intake water screening or treatment should be returned to their water body habitat. The permittee shall maintain records of disposal on all effluent screenings, sludges and other solids associated with the discharge(s) herein described. The following data shall be compiled and reported to the Department or its designated field office upon request:

a. the sources of the materials to be disposed of;

b. the approximate volumes, weights, water content and (if other than sewage sludge) chemical composition;

c. the method by which they were removed and transported, including the name and permit number of the waste transporter; and

d. their final disposal locations.

12. CONDITIONS APPLICABLE TO A PUBLICLY OWNED TREATMENT WORKS (POTW)

12.1 GENERAL

a. All POTWs must provide adequate notice to the Department of the following:

(1) any new introduction of pollutants into the POTW from an indirect discharger which would be subject to sections 301 or 306 of the Clean Water Act if it were directly discharging those pollutants; and

(2) any substantial change in the volume or character of pollutants being introduced into that POTW by a source introducing pollutants into the POTW at the time of issuance of the permit.

(3) For purposes of this paragraph, adequate notice shall include information on:

(i) the quality and quantity of effluent introduced into the POTW; and

(ii) any anticipated impact of the change on the quantity or quality of effluent to be discharged from the POTW.

b. Dry weather overflows are prohibited. The occurance of any dry weather overflow constitutes a bypass exceeding limitations as defined in Section 11.2 of this Part and shall be promptly abated and reported to the Department in accord with Section 6 of this Part. The permittee shall inspect all overflow facilities at least twice per year (once each spring and fall) during periods of dry weather flow to ensure they are functioning properly. Records of all inspections shall be maintained for inspection by the Department or its designated representative

c. The permittee shall identify all inflow to the tributary system and remove excessive infiltration/inflow to an extent which is economically feasible.

d. The permittee shall enact, maintain and enforce an up-to-date and effective Sewer Use Ordinance which has been approved by the Department.

e. New connections to a publicly owned sewer system or a privatized municipal sewer system are prohibited when the permittee is notified by the Department:

(1) that the discharge(s) regulated by this permit create(s) or is likely to create a public health or potential public health hazard, a contravention of water quality standards or the impairment of the best use of waters, as determined by the Commissioner; or

(2) that the discharge(s) regulated by this permit exceeded the permit limit for a specific parameter, including flow, in four of any six consecutive month periods or exceeded a permit limit by 1.4 (1.2 for toxics) times the permit limit in two of any six consecutive month periods; or

(3) that the permittee has failed or is likely to fail to carry out, meet or comply with any requirement of this permit, compliance schedule, order of the Department, judicial order, or consent decree.

f. The provisions provided for in e. above shall remain in effect until the Permittee can demonstrate to the Department's satisfaction and approval that adequate available capacity exists in the plant and that the facility is in full compliance with all of the effluent limitations required by this permit.

12.2 NATIONAL PRETREATMENT STANDARDS: PROHIBITED DISCHARGES

a. General prohibitions:

Pollutants introduced into POTW's by a non-domestic source shall not pass through the POTW or interfere with the operation or performance of the works or disposal of sludge. These general prohibitions and the specific prohibitions in paragraph (b) of this section apply to all non-domestic sources introducing pollutants into a POTW whether or not the source is subject to other National Pretreatment Standards or any national, State, or local Pretreatment Requirements.

b. Specific prohibition:

In addition, the following pollutants shall not be introduced into a POTW:

(1) pollutants which create a fire or explosion hazard in the POTW;

(2) pollutants which will cause corrosive structural damage to the POTW, but in no case discharge with pH lower than 5.0 unless the works is specifically designed to accommodate such discharges;

(3) solid or viscous pollutants in amounts which will cause obstruction to the flow in the POTW resulting in interference;

(4) any pollutant, including oxygen demanding pollutants (BOD, etc.) released in a Discharge at a flow rate and/or pollutant concentration which will cause Interference with the POTW.

(5) heat in amounts which will inhibit biological activity in the POTW resulting in interference, but in no case heat in such quantities that the temperature at the POTW Treatment Plant exceeds 40° C (104° F) unless the Approval Authority, upon request of the POTW, approves alternate temperature limits.

c. When Specific Limits Must be Developed by a POTW:

(1) POTW's developing POTW Pretreatment Programs pursuant to §403.8 shall develop and enforce specific limits to implement the prohibitions listed in §403.5(a) and (b).

(2) All other POTW's shall, in cases where pollutants contributed by User(s) result in Interference r Pass-Through, and such violation is likely to recur, develop and enforce specific effluent limi for Industrial User(s), and all other users, as appropriate, which, together with appropriate changes in the POTW Treatment Plant's Facilities or operation, are necessary to ensure renewed

and continued compliance with the POTW's SPDES permit or sludge use or disposal practices.

(3) Specific effluent limits shall not be developed and enforced without individual notice to persons or groups who have requested such notice and an opportunity to respond.

d. Local Limits:

Where specific prohibitions or limits on pollutants or pollutant parameters are developed by a POTW in accordance with paragraph © above, such limits shall be deemed Pretreatment Standards for the purposes of §307(d) of the Act.

e. EPA and State Enforcement Actions:

If, within 30 days after notice of an Interference or Pass Through violation has been sent by EPA or DEC to the POTW, and to persons or groups who have requested such notice, the POTW fails to commence appropriate enforcement action to correct the violation, EPA and DEC may take appropriate enforcement action.

Subject: **SPDES Permit #NY 000 1988**
Elm Holdings Inc., Sanborn, NY

Enclosed is the Discharge Monitoring Report for November 1, 2006 through November 30, 2006 for the subject SPDES outfall. There was one exceedence for the month. Methylene chloride was found at a level greater than the discharge limit of 10 ppb. A level of 16 ppb was reported for methylene chloride in the initial analysis of the November 8, 2006 sample. Investigation and re-analysis revealed that the probable cause of the non-compliance was unusually high methylene chloride in the lab environment. This is substantiated by the high levels of methylene chloride reported for this sample as well as for samples from other sites. Methylene chloride was detected in the method blank associated with these samples.

A letter from the analytical laboratory describing the non-compliance, and the short and long-term corrective actions, is attached. Also attached is the non-compliance event report submitted November 22, 2006, and the reported volatile organic compound results for the November 8, 2006 and November 15, 2006 samples. Note that methylene chloride was not detected in the sample collected on November 15, 2006.

Please contact the writer if there are any questions.

Sincerely,

William B. Barber
Project Manager

Appendix B

SECTION 1

New York State Department of Environmental Conservation
Division of Water

Report of Noncompliance Event

To: DEC Water Contact: Robert Locey DEC Region: 9

Report Type: X 5 Day ___ Permit Violation ___ Order Violation ___ Anticipated Noncompliance ___ Bypass/Overflow ___ Other

SECTION 2

SPDES #: NY- 0001988 Facility: Former Carborundum Complex – Cory Rd, Wheatfield

Date of noncompliance: 11/17/06 Location (Outfall, Treatment Unit, or Pump Station): Outfall 01A

Description of noncompliance(s) and cause(s):

Methylene chloride was found at a level greater than the discharge limit of 10ppb. A level of 16ppb was reported for methylene chloride in the initial analysis. The probable cause of the noncompliance event is unusually high methylene chloride in the lab environment. The lab reported Other samples, not related to this site, also exhibited uncharacteristic levels of methylene chloride. Methylene chloride was detected in the method blank associated with these samples.

Has event ceased? (Yes) (No) If so, when? 11/17/06 Was event due to plant upset? (Yes) (No) SPDES limits violated?* (Yes) (No)

Start date, time of event: 11 / 15 / 06, 1 : 59 (AM) (PM) End date, time of event: 11 / 17 / 06, 11 : 10 (AM) (PM)

Date, time oral notification made to DEC? 11 / 17 / 06, 12 : 03 (AM) (PM) DEC Official contacted: Rob Locey through Marty

Immediate corrective actions:

After review of the data and historical data review it was determined that it is not typical to see methylene chloride at a level above the discharge limit. Other aliquots of the composite made at the laboratory were analyzed two more times with similar results to the initial analysis, above the discharge limit. Immediately after the reanalyses the permit holder was informed of the problem by telephone.

Preventive (long term) corrective actions:

All sample volume was consumed during compositing. A remake and reanalyze was not possible after methylene chloride sample contamination was suspected. In the future, the lab will retain some of the uncomposited volume in order to remake the composite and reanalyze the sample.

SECTION 3

*The few historical occurrences of methylene chloride in relation to this permit have been attributed to laboratory contamination.

Complete this section if event was a bypass:

Bypass amount: ______ Was prior DEC authorization received for this event? (Yes) (No)

DEC Official contacted: ______ Date of DEC approval: / /

Describe event (in Description of noncompliance and cause(s) area in Section 2). Detail the start and end dates and times in Section 2 also.

SECTION 4

Facility Representative: George Hermance Title: Project Coordinator Date: 11 / 17 / 06

DEC - 6 2006

Dear Mr. Hermance

In response to the non-compliance of Methylene Chloride in the November 8th, 2006 Outfall sample from the BP Sanborn site (WST sample ID 6K08031-01), the following paragraphs will describe the non-compliance, the probable cause and the short and long term corrective actions.

Description of noncompliance:
Methylene chloride was found at a level greater than the discharge limit of 10ppb. A level of 16ppb was reported for methylene chloride in the initial analysis performed on November 15, 2006. This sample was composited in the volatile laboratory on November 15th, 2006 and there were indications that the background methylene chloride may have been unusually high in the lab. Other samples composited that day also exhibited uncharacteristic levels of methylene chloride and these samples were "B" flagged indicating a positive hit for methylene chloride in the method blank associated with these samples.

Immediate Corrective Actions:
After review of the data and historical data review it was determined that it is not typical to see methylene chloride at a level above the discharge limit. Because of this, other aliquots of the composite made at the laboratory were analyzed two more times with similar results to the initial analysis, all above the discharge limit. Immediately after the reanalyses the client was informed of the problem by telephone.

Preventative (long term) Corrective actions:
Because it is suspected that the sample may have been contaminated during compositing, in the future we will change the scheme that we composite under. This sample was composited by taking all 8 VOA vials supplied and compositing the total volumes together and taking a 5 ml aliquot from that composite to analyze. The problem with this

is that if there is contamination during the compositing step, there are no uncontaminated volumes to go back to. In the future we will composite only an aliquot of the 8 VOA's volumes supplied in order to retain some of the uncomposited volume. This way we can remake the composite and reanalyze. We feel that if we could have recomposited the sample and reanalyzed the new composite, we would have gotten compliant results.

Also included with this letter is a copy of the raw data for the original analysis, the first re-analysis and their associated method blank. If you have any further questions or need additional information, please call at 716-876-5290 and ask to speak to Sid.

Sincerely,

Sidney C. Tyrrell
Assistant Laboratory Director

cc: Daniel Vollmer, WST
