#### I. Executive Summary

#### A. Site Summary

New York State Electric & Gas Corporation (NYSEG) entered into an Order on Consent with the New York State Department of Environmental Conservation (NYSDEC) to remediate (among other Sites) a 2.1-acre Site located on State Road in City of Lockport, Niagara County, New York (Site). This Order on Consent required NYSEG to investigate and remediate contaminated media at the Site.

After completion of the remedial work described in the Record of Decision, some contamination was left in the subsurface at this Site, which is hereafter referred to as "remaining contamination." A Site Management Plan (SMP) (URS Corporation, January 2010) was prepared to manage remaining contamination at the Site in perpetuity or until extinguishment of the deed restrictions in accordance with ECL Article 71, Title 36.

The Site is comprised of two separate parcels, both owned by NYSEG. Deed restrictions were filed with the Niagara County Clerk's office on July 12, 2010 and identified by Instrument Numbers 2010-11100 and 2010-11101.

Remedial action work on the Site began in May 2008 and was completed the same month. The Site was remediated in accordance with the NYSDEC-approved Remedial Design dated November 15, 2007.

The following is a summary of the Remedial Actions for the Site:

- 1. Construction and maintenance of a soil cover system consisting of placement of crushed stone or topsoil over portions of the Site to prevent human exposure to remaining contaminated soil/fill remaining at the Site;
- 2. Execution and recording of a deed restriction to restrict land use and prevent future exposure to any contamination remaining at the Site; and
- Development and implementation of a Site Management Plan for long term management of remaining contamination as required by the deed restriction, which includes plans for:
   (1) Institutional and Engineering Controls; (2) monitoring; (3) operation and maintenance; and (4) reporting.

#### **B. Effectiveness of the Remedial Program**

This reporting period covers the period beginning January 17, 2017 and ending January 17, 2022. Progress toward meeting the Site remedial objectives during this reporting period included periodic inspection of the cover system and maintenance of the SMP and all its supporting documents.

Site improvements during this reporting period included construction of a gas regulator station performed by NYSEG from December 2017 through April 2018, in accordance with the

1

NYSDEC-approved Excavation Work Plan (EWP), as required in the SMP. A copy of the Environmental Monitoring and Waste Characterization Sampling Report (Labella 2018) is provided as **Appendix D**.

The remedial program has been effective in achieving the remedial objectives for the Site.

#### C. Compliance

During this reporting period there were no areas of non-compliance regarding the elements of the SMP.

#### **D.** Recommendations

Because the engineering control components of the SMP are simple (i.e. a cover system) and the property is owned and controlled by NYSEG, Neu-Velle recommends continuing the frequency of PRR submittals every five (5) years.

#### II. Site Overview

#### A. Site Description

The Site is located in the City of Lockport, County of Niagara, New York and is identified as Block 4 and Lot 5 on the City of Lockport Tax Map number 109.17. The Site is an approximately 2.1-acre area bounded by privately-owned property to the north, High Street to the south, State Road to the east, and the New York State Barge Canal to the west (see Figure 1A). The boundaries of the Site are more fully described in Appendix A – Metes and Bounds.

#### **B.** Chronology

The Site remedial investigation was completed in September 2006. DEC issued the ROD in March 2007. Remedial actions were conducted during the month of May 2008. The SMP was finalized in January 2010 and Deed Restrictions were recorded in July 2010.

#### Components of the selected remedy are:

- 1. Appropriate cover was placed on the level, upper portion of the Site. The one-foot thick cover consisted of crushed stone or similar material, underlain by a demarcation layer to identify the original surface soil. The area within the existing fence, which is to remain to protect NYSEG infrastructure, is already covered with crushed stone.
- 2. Development of a Site management plan (SMP) to: (a) address residual contaminated soils that may be excavated from the Site during future redevelopment. The plan requires soil characterization and, where applicable, disposal/reuse in accordance with NYSDEC

regulations; (b) evaluate the potential for vapor intrusion for any buildings developed on the Site, including provision for mitigation of any impacts identified; (c) identify any use restrictions; and (d) provide for the operation and maintenance of the components of the remedy.

3. Imposition of an institutional control in the form of an environmental easement that (a) requires compliance with the approved Site management plan; (b) limits the use and development of the property to commercial or industrial uses only; (c) requires the property owner to complete and submit to the NYSDEC periodic certification. The property owner will provide a periodic certification, prepared and submitted by a professional engineer or such other expert acceptable to the NYSDEC, until the NYSDEC notifies the property owner in writing that this certification is no longer needed. This submittal will contain certification that the institutional controls are still in place, allow the NYSDEC access to the Site, and that nothing has occurred that would impair the ability of the control to protect public health or the environment, or constitute a violation or failure to comply with the Site management plan. Any evidence of foot or vehicle traffic will be reported, as will any indication of erosion. If evidence of foot or vehicular traffic is reported, or if changes of land use significantly increase the potential for public access to this Site, then the NYSDEC and NYSDOH will assess whether there is a need for a fence to limit access. Any fence determined necessary would be erected and maintained in compliance with all applicable City codes and/or zoning requirements that apply to such fences.

No changes to the selected remedy have been made since remedy selection.

#### III. Evaluation of Remedy Performance, Effectiveness, and Protectiveness

The remediation goals for this Site are to eliminate or reduce to the extent practicable:

- 1. Exposures of persons at or around the Site to PAHs in surface and subsurface soil; and
- 2. Environmental exposures of flora or fauna to PAHs in surface and subsurface soil.

The cover system has been effective in achieving those goals by preventing exposure of persons, flora, and fauna to "remaining contamination" in surface and/or subsurface soils.

#### IV. IC/EC Plan Compliance Report

#### A. IC/EC Requirements and Compliance

1. SMP

- a. Address residual contaminated soil that may be excavated from the Site during future development this control is evaluated by NYSEG's ownership of the Site; no development can occur on the Site without NYSEG's knowledge and approval. This control is fully in place, is effective, and no corrective measures are required.
- b. Evaluate the potential for vapor intrusion for any buildings developed on the Site this control is evaluated by NYSEG's ownership of the Site; no buildings may be constructed on the Site without NYSEG's knowledge and approval.
- c. Identify any use restrictions this control is evaluated through the deed restrictions which identify that the property may only be used for commercial or industrial purposes. This control is fully in place, is effective, and no corrective measures are required.
- d. Provide for the operation and maintenance of the components of the remedy this control is evaluated through this and future PRR's which require certification that the components of the remedy remain in place and are effective in meeting the Site remedial goals. This control is fully in place, is effective, and no corrective measures are required.
- 2. Environmental Easement
  - a. Require compliance with the approved SMP this control is evaluated through this and future PRR's which require certification that the components of the remedy remain in place and are effective in meeting the Site remedial goals. This control is fully in place, is effective, and no corrective measures are required.
  - b. Limit the use and development of the property to commercial or industrial uses only this control is evaluated through the deed restrictions which have been filed for the Site and through NYSEG's ownership and control over Site use. This control is fully in place, is effective, and no corrective measures are required.
  - c. Require the property owner to complete and submit to the NYSDEC periodic certification this control is evaluated through this and future PRR's which require certification that the components of the remedy remain in place and are effective in meeting the Site remedial goals. This control is fully in place, is effective, and no corrective measures are required.

#### **B. IC/EC Certification**

This certification is provided in Box 7 of the attached PRR Certification Form provided as **Appendix B**.

#### V. Compliance Report

Monitoring must be conducted to verify that the cover system remains intact and that there is no evidence of foot or vehicular traffic on parts of the Site not intended for such activities. This monitoring occurs informally each time the Site is visited by NYSEG employees, and occurs formally in preparation of this and future PRR's. The Site-wide inspection form, along with Site photographs is included as **Appendix C**.

There is no Operation & Maintenance Plan required for this Site.

#### VI. Conclusions and Recommendations

#### A. Compliance with SMP

All requirements of the SMP were met during this reporting period.

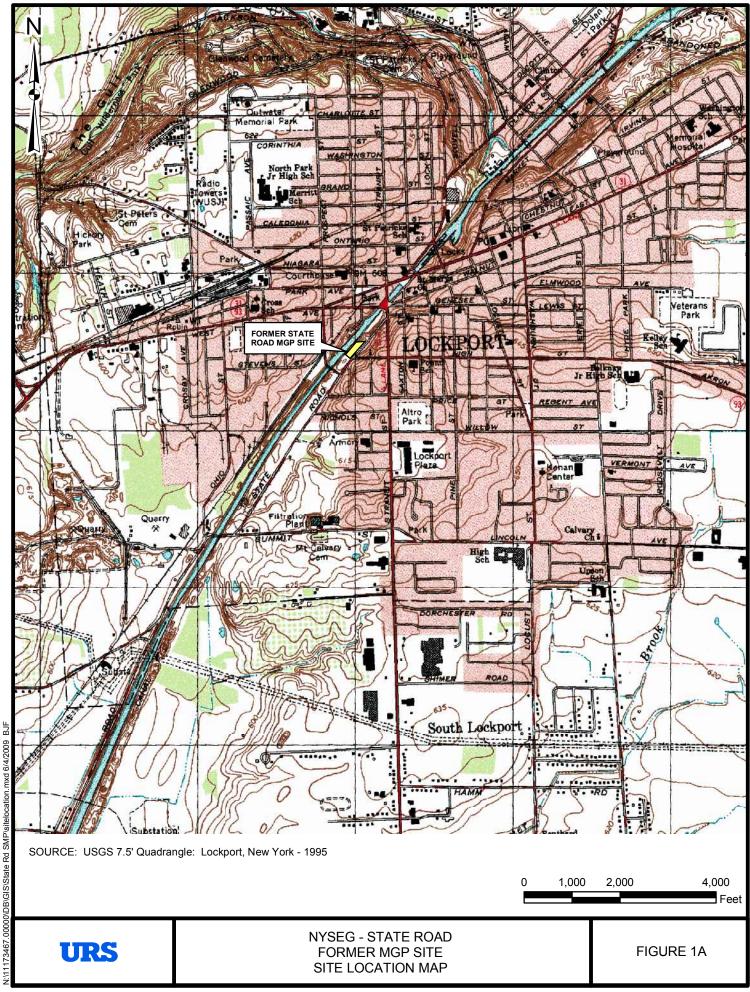

#### **B.** Performance and Effectiveness of the Remedy

The remedial objectives for the Site are being met through the effective performance of all remedial components.

#### C. Future PRR submittals

It is recommended that future PRR's continue to be submitted every five (5) years. Thus, the next PRR would be submitted in February 2027.

FIGURE 1 - Site Location

## **APPENDIX A**

Metes and Bounds Description

#### **SCHEDULE A**

ALL THAT TRACT OR PARCEL OF LAND, situate in the City of Lockport, County of Niagara and State of New York, being part of Lot 58, Township 14, and Range 7 of the Holland Land Survey (so-called), bounded and described as follows:

COMMENCING at a point in the centerline of State Road, distant 140.5 feet southwesterly from the north line of Lot 58 as measured along said centerline; thence S 88° 09' 15" W, parallel with the north line of Lot 58 a distance of 46.43 feet to the northwesterly line of State Road and the point of beginning; thence S 42° 51' 15" W, along the northwesterly line of State Road a distance of 666.60 feet; thence S 88° 09' 15" W, parallel with the north line of Lot 58, a distance of 174.22 feet to the Erie Canal Blue Line; thence along said Erie Canal Blue Line the following 3 courses and distances:

N 43° 08' 18" E, a distance of 164.71 feet;
 N 41° 10' 20" E, a distance of 428.86 feet;
 N 41° 16' 31" E, a distance of 60.26 feet;

thence N 88° 09' 15" E, a distance of 192.63 feet to the point of beginning containing 1.96 acres be the same more or less.

SUBJECT TO a permanent easement appropriated by the People of the State of New York, Map No. 5, Parcel No. 6 recorded in the Niagara County Clerk's Office in Liber 3205 of Deeds at page 77, bounded and described as follows:

COMMENCING at a point in the centerline of State Road, distant 140.5 feet southwesterly from the north line of Lot 58 as measured along said centerline; thence S 88° 09' 15" W, parallel with the north line of Lot 58 a distance of 46.43 feet to the northwesterly line of State Road; thence S 42° 51' 15" W, along the northwesterly line of State Road a distance of 401.13 feet to the point of beginning; thence S 42° 51' 15" W, along said northwesterly line of State Road a map distance of 210 feet more or less and a measured distance of 212.22 feet; thence N 89° 30' 16" W, a map distance of 165 feet more or less and a measured distance of 166.69 feet to the Erie Canal Blue Line; thence, along said Blue Line the following 2 courses and distances:

1) N 43° 08' 18" E, a map distance of 99 feet more or less and a measured distance of 101.24 feet; 2) N 41° 10' 20" E, a map distance of 210 feet more or less and a measured distance of 210.79 feet;

thence S 43° 16' 44" E, a map distance of 107 feet more or less and a measured distance of 107.38 feet; thence S 89° 30' 16" E, a map distance of 29 feet more or less and 29.40 feet measured to the point of beginning containing 0.73 acres be the same more or less.

## **APPENDIX D**

2018 Environmental Monitoring and Waste Characterization Sampling Report, Labella Associates

September 11, 2018

Jeremy Wolf Manager Programs/Projects (MGP) Electrical Capital Delivery AVANGRID 1300 Scottsville Road Rochester, New York 14624

#### Re: Environmental Monitoring and Waste Characterization Sampling Report NYSEG Gas Regulator Station Construction Lockport State Road Former MGP Site; NYSDEC Site No. 932109 Lockport, New York

Dear Mr. Wolf:

This Environmental Monitoring Services Report is being provided to document environmental monitoring, sampling and oversight activities conducted by LaBella Associates (herein LaBella) during the recent gas regulator station construction project conducted at the Avangrid-New York State Electric and Gas (NYSEG) Lockport State Road Former Manufactured Gas Plant (MGP) Site (herein the Site). Work performed by LaBella during regulator station construction activities was conducted per LaBella's *Gas Regulator Station Construction Excavation Work Plan* (EWP), dated November 2, 2017. Environmental monitoring was initiated on December 18, 2017 and completed on April 30, 2018 for station construction activities conducted inside the fenced regulator station located north of the intersection of State Road and Stevens Street in Lockport, New York (see Figure 1).

#### **Background and Objective**

Due to documented remaining contamination associated with historical MGP-related operations conducted at the Site, it is subject to management per the New York State Department of Environmental Conservation (NYSDEC) approved Site Management Plan (SMP), dated January 2010. The SMP was a required component of the Amended and Restated Multi Site Consent Order (ARMSCO) between NYSEG and the NYSDEC (NYSDEC Site Number 932109) and was prepared to manage remaining contamination at the Site. The SMP and EWP address the means for implementing the Institutional Controls (ICs) and Engineering Controls (ECs) that are required for the Site.

Per the SMP, Site construction activities associated with the regulator station upgrades, including soil excavation, soil staging/stockpiling and off Site soil disposal require environmental monitoring. LaBella's primary objectives for the project included conducting environmental monitoring and sampling tasks as outlined in the EWP.

#### Scope of Work

Based on the information provided by NYSEG and the regulator station construction activities observed, LaBella's scope of work generally consisted of the following:

Task 1 - Environmental Monitoring:

300 State Street, Suite 201 | Rochester, NY 14614 | p 585-295-6618 | f 585-454-3066

- A LaBella Qualified Environmental Professional (QEP) observed excavation activities at the Site associated with the gas regulator station construction project in order to identify potential evidence of MGP waste that may have been exposed. It is noted that based on the information provided in the SMP for the Site, the vicinity of the former MGP facilities was northeast of the excavation areas.
- LaBella conducted Community Air Monitoring Plan (CAMP) activities consistent with the existing CAMP included in the SMP. CAMP monitoring was conducted during soil excavation and stockpiling, soil loading for off Site disposal, and backfilling activities. Additional information pertaining to specific CAMP monitoring activities is provided in the Task 1 section provided below.

#### Task 2 - Waste Characterization Soil Sampling and Analysis:

- A LaBella QEP reviewed the SMP and site-specific EWP prior to performing the environmental monitoring and soil sampling activities during the gas regulator construction project.
- A LaBella QEP collected one representative composite soil sample from the excavated and stockpiled soil for waste disposal purposes and relinquished to an appropriately certified laboratory for chemical testing. Details of the sampling are provided in the Task 2 section provided below.

#### Task 3 - Imported Backfill Material Sampling and Analysis:

• A LaBella QEP collected one representative sample from each of the two (2) virgin stone products imported to the Site for use as backfill material in the excavations. Each sample was relinquished to an appropriately certified laboratory for chemical testing per NYSDEC's DER-10 Technical Guidance for Site Investigation and Remediation. The resulting laboratory data was validated by Data Validation Services and Data Usability Summary Reports (DUSRs) were generated for each sample set. Details of the sampling, including laboratory results and DUSRs are provided in the Task 3 section provided below.

#### Task 4: Soil Disposal Oversight and Monitoring:

• A LaBella QEP was on Site during all soil loading and disposal activities. The Labella representative performed CAMP monitoring during soil loading into dump trucks and signed the non-hazardous waste manifests on behalf of NYSEG (waste generator) for each load transported off-site. Details of the sampling are provided in the Task 4 section provided below.

#### Task 1: Environmental Monitoring

A LaBella QEP was on Site at all times during ground intrusive activities (i.e. trench excavation) to observe and screen excavated soils and to conduct CAMP monitoring during construction work conducted within the fenced limits of the gas regulator station.

The LaBella QEP performed continuous monitoring of excavated soils for evidence of impairment including visible impairment, olfactory indication of impairment, evidence of Non-Aqueous Phase Liquids (NAPLs) and detectable VOCs using a photoionization detector (PID). No evidence of impairment was observed during excavation.

Fill soils excavated at the site generally consisted of silt, sand, gravel, cobbles, and slab rock, with lesser amounts brick, wood, concrete, asphalt, and metal (wire). It is noted that per the SMP and EWP, all excavated soil was properly stockpiled on bermed plastic sheeting and covered daily with plastic sheeting.

CAMP monitoring was conducted per the site-specific SMP and EWP and included the following:

 Continuous upwind and downwind particulate (airborne dust) and volatile organic compound (VOC) monitoring; particulates were monitored upwind and downwind of the work area using TSI Dusttrak PM-10 Particulate/Aerosol Air Monitoring Units for particulate monitoring and Rae Systems Minirae 3000 PIDs for VOC monitoring. Background levels were monitored and established throughout each work day. Due to proper work practices and moist subsurface soils, downwind CAMP station readings did not exceed established action levels as set forth in the SMP and EWP during the duration of the project. CAMP stations were moved each time the wind changed direction. It is noted that each instrument was calibrated daily to ensure accurate readings were observed and recorded.

Soil removal and disposal activities completed within the Site proper boundary, and installation of fence posts along the northern property boundary were initiated on December 18, 2017 and completed on April 30, 2018. Ground intrusive activity was intermittent during this time period. Per the approved SMP and EWP, environmental monitoring was conducted during all ground intrusive activities performed within the limits of the Site boundary, as defined in the SMP. Work conducted outside the Site proper boundary during or after this time period did not require environmental monitoring. CAMP data is included as Attachment A of this report.

#### Task 2: Waste Characterization Soil Sampling and Analysis

Following the excavation and stockpiling of the majority of the total volume of soil removed during construction, one (1) composite soil sample, Trench Spoils-1, was collected from the excavated soil stockpile for waste characterization purposes. The sample consisted of five (5) grab samples collected from throughout the pile that were mixed in a stainless steel sampling bowl and placed immediately in appropriate jars for laboratory analysis. See Figure 2 for grab sample locations. The sample was immediately preserved on ice and relinquished to Alpha Analytical, an ELAP-certified laboratory. Per the disposal requirements of Waste Management, the sample was analyzed for the following parameters:

- TCL VOCs (by USEPA Method 8260)
- TCL SVOCs (by USEPA Method 8270)
- TCL PCBs (by USEPA Method 8082)
- TAL Metals + Hg (by USEPA Methods 6010/6020/7470/7474/1311)
- TCL Pesticides/Herbicides (by USEPA Methods 8081/8151/1311)
- TCLP for 40 TC Target Criteria Contaminants
- Ignitability
- Reactivity
- Corrosivity

Sample results are summarized in Table 2 and indicate that the excavated trench spoil soils were non-hazardous. Based on the results, the soils were approved for disposal at Waste Management's Mill Seat landfill in Bergen, New York. Laboratory analytical results are included as Attachment B of this report.

Task 3: Imported Backfill Material Sampling and Analysis

Excavated soils were not reused on Site; however, two (2) virgin stone products were imported to the Site to be used as backfill material within the excavated gas pipe trenches. Virgin stone products typically meet the NYSDEC DER-10 exemption from chemical testing. However, both stone products imported to the Site did not meet the exemption due to the sieve analysis criteria.

Prior to importing either material to the Site, LaBella visited the Lafarge North America quarry located in Lockport, New York to sample the two (2) materials as required by NYSDEC DER-10. One (1) material was dry screenings used for pipe bedding and the other was Crusher Run #2 used to fill the remainder of the excavated trenches to grade. Both materials are virgin limestone products. On December 15, 2017 a sample was collected at the quarry of each material type per NYSDEC DER-10 sample collection methods and sent to Alpha Analytical for chemical testing of the DER-10 import criteria. Sample results indicate that no constituents were detected above applicable DER-10 import criteria in either sample for commercial or industrial Site use.

Summary Table 1, included as an attachment to this report, presents the laboratory results for the two stone product samples. A total of approximately 400 tons of combined stone products (dry screenings and crusher run #2 material) were imported to the Site for use as clean backfill material within the utility trenches. Backfilling was completed on April 30, 2018. It is noted that the Lafarge North America quarry is a NYS Department of Transportation (DOT) approved source. Laboratory results are included in Attachment B of this report.

The laboratory analytical data for each sample was sent to Data Validation Services for third party review and validation. A Data Usability Summary Report (DUSR) was generated for the two samples collected. Per the DUSR, results of the samples were determined usable as reported or with minor qualification or edit, with the exception of the 1,4-dioxane results which were rejected due to very low instrument responses. A copy of the DUSR is included in Attachment C of this report.

#### Task 4: Soil Disposal Oversight and Monitoring

LaBella assisted NYSEG with waste profiling the soil excavated from within the fenced portion of the Site for disposal at an appropriately licensed waste disposal facility. The soil was approved for disposal as non-hazardous soil & debris at Waste Management's Mill Seat Landfill, located at 303 Brew Road, Bergen, New York.

A LaBella QEP mobilized to the Site on February 26, 2018 to oversee and monitor the loading of trucks and waste transportation activities. CAMP monitoring was conducted continuously during soil loading activities. No exceedances of CAMP action levels were observed during loading activities (see Attachment A). A total of 271.87 tons of soil was loaded into twelve (12) triaxle dump trucks, transported by Silvarole Trucking, and disposed of as non-hazardous waste at the Mill Seat Landfill, located at 303 Brew Road, Bergen, New York. All trucks were tarped prior to leaving the Site and maintained the appropriate 6 NYCRR Part 364 waste hauling permits. The LaBella representative signed the non-hazardous waste manifests on behalf of NYSEG for each load transported off-site. A copy of the waste disposal documentation is included as Attachment D of this report.

#### Conclusions

Environmental monitoring including CAMP monitoring, soil screening, sampling, and waste disposal oversight were conducted during the recent gas regulator station construction project conducted at the NYSEG Lockport State Road Former MGP Site. No exceedances of CAMP action levels, observation of contaminants of concern (i.e. coal tar) or evidence of impairment were observed during implementation of the construction project activities. Waste characterization sampling of the

excavated soil resulted in the classification of the waste soil as regulated non-hazardous waste. A total of 271.87 tons of waste soil was transported from the Site and disposed of at the Mill Seat Landfill. The excavation areas were backfilled to existing grade with virgin stone products that were chemically tested and proven clean prior to import to the Site, per applicable regulations.

If you have any questions, or require further clarification, please do not hesitate to contact me at (585) 295-6606.

Respectfully Submitted,

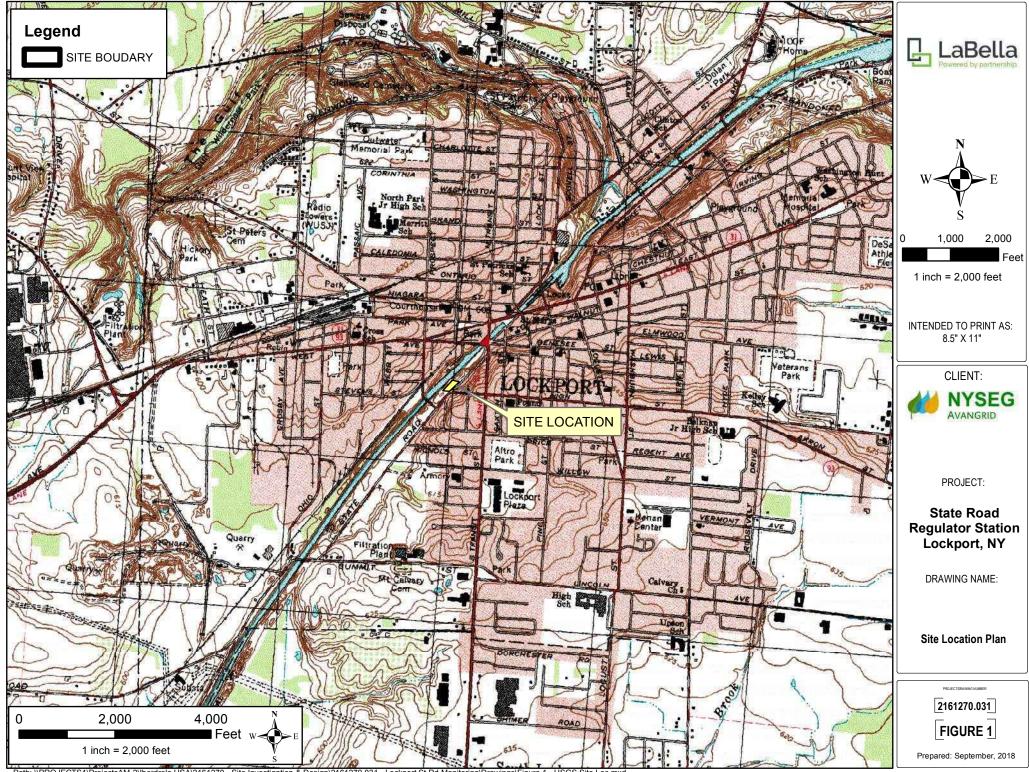

Eni Doto

Notes:

I - The lower value for the two columns has been reported due to obvious interference.

J - Sample result is above the MDL but below the RL, therefore the concentration is estimated

P - The RPD between the results for the two columns exceeds the method-specified criteria.

U - Not detected at the reported detection limit for the sample.

EPA-TCLP Criteria: EPA Toxicity Characteristic (TCLP) Regulatory Levels Criteria per 40CFR Part 261 as of September 10, 2015.

 Report Date:
 02/09/18

#### **Case Narrative**

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

#### **Case Narrative (continued)**

#### **Report Revision**

February 09, 2018: 1,4-Dioxane has been added to the Volatile Organics compound list.

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### **Total Metals**

L1746394-01 and -02: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG1074097-3 MS recoveries, performed on L1746394-01, are outside the acceptance criteria for aluminum (270%), silver (127%), thallium (72%) and zinc (47%). A post digestion spike was performed and yielded unacceptable recoveries for silver (19%) and thallium (77%); all other compounds were within acceptance criteria. This has been attributed to sample matrix.

The WG1074097-3 MS recoveries for calcium (0%), iron (1110%), magnesium (633%) and manganese (197%), performed on L1746394-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1074097-4 Laboratory Duplicate RPDs for lead (29%) and magnesium (28%), performed on L1746394-01, are outside the acceptance criteria. The elevated RPDs have been attributed to the non-homogeneous nature of the native sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## **Report Date:** 02/09/18

## GLOSSARY

## Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	<ul> <li>Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.</li> </ul>
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	<ul> <li>Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.</li> </ul>
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum. Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after

adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH. Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Waterpreserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'. Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

### Data Qualifiers

- A Spectra identified as "Aldol Condensation Product".
- **B** The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

# Project Name: NYSEG LOCKPORT STATE RD FMR

Project Number: 2161270.031

Lab Number:	L1746394
Report Date:	02/09/18

### Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte was detected above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C -Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- **D** Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.
- H The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I The lower value for the two columns has been reported due to obvious interference.
- M Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- **P** The RPD between the results for the two columns exceeds the method-specified criteria.
- Q The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- **R** Analytical results are from sample re-analysis.
- **RE** Analytical results are from sample re-extraction.
- **S** Analytical results are from modified screening analysis.
- J Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## **Case Narrative**

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

 Lab Number:
 L1804333

 Report Date:
 02/09/18

## **Case Narrative (continued)**

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analyses performed were specified by the client.

Cyanide, Total

The WG1087619-2 LCS recovery (74%), associated with L1804333-01 and -02, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1087619-4 MS recovery (30%), performed on L1804333-01, is outside the acceptance criteria; however, the associated LCS recovery is within criteria. No further action was taken.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

## Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	<ul> <li>Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.</li> </ul>
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	<ul> <li>Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.</li> </ul>
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum. Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after

adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH. Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Waterpreserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'. Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

### Data Qualifiers

- A Spectra identified as "Aldol Condensation Product".
- **B** The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

# Project Name: NYSEG LOCKPORT STATE RD FMR

Project Number: 2161270.031

Lab Number:	L1804333
Report Date:	02/09/18

### Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte was detected above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C -Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- **D** Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.
- H The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I The lower value for the two columns has been reported due to obvious interference.
- M Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- **P** The RPD between the results for the two columns exceeds the method-specified criteria.
- Q The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- **R** Analytical results are from sample re-analysis.
- **RE** Analytical results are from sample re-extraction.
- **S** Analytical results are from modified screening analysis.
- J Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## **Case Narrative**

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

 Lab Number:
 L1746621

 Report Date:
 12/21/17

## **Case Narrative (continued)**

**Report Submission** 

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Total Metals

L1746621-01: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

#### GLOSSARY

#### Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	<ul> <li>Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.</li> </ul>
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	<ul> <li>Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.</li> </ul>
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

#### Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

#### Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum. Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after

adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH. Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Waterpreserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'. Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

#### Data Qualifiers

- A Spectra identified as "Aldol Condensation Product".
- **B** The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

### Project Name: NYSEG LOCKPORT STATE RD. FMR

Project Number: 2161270.031

Lab Number:	L1746621
Report Date:	12/21/17

#### Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte was detected above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C -Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- **D** Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.
- H The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I The lower value for the two columns has been reported due to obvious interference.
- M Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- **P** The RPD between the results for the two columns exceeds the method-specified criteria.
- Q The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- **R** Analytical results are from sample re-analysis.
- **RE** Analytical results are from sample re-extraction.
- **S** Analytical results are from modified screening analysis.
- J Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

#### LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Rric Detweiler LoBella Associates 300 State Street, Suite 201 Rochester, NY 14614

RB: Validation of the Lockport State Road Site Analytical Laboratory Data Alpha SDG Nos. 1.1746394 and L1804333 Data Unability Summary Report (DUSR)

Dear Mr. Detweiler:

Review has been completed for the data packages generated by Alpha Analytical that pertain to samples collected 12/15/17 and 02/02/18 (for total cyanide only) at the Lockport State Road size. Two soil samples were processed for TCL and NYSDEC 6 NYCRR Part 375 CP-51 volatiles, CP-51 semivolatiles, CP-51 penticides, Aroclor ECEs, TAL metals, and total cyanide. Analytical methodologies utilized are USEPA SW846.

The data packages submitted by the laboratory contain full deliverables for validation, and this usability report is generated from review of the QC summary form information, with full review of sample raw data and limited review of associated QC raw data. The reported QC summary forms and sample raw data have been reviewed for application of validation qualifiers, with guidance from the USEPA assignal and regional validation documents, and in consideration for the specific requirements of the analytical methodology.

The following items were reviewed:

- Data Completicacia
- Case Negative
- \* Castody Documentation
- \* Holding Times
- Surrogaie and Internal Standard Recoveries
- \* Method/ Preparation Blanks
- Mairix Spike Recoveries/Duplicate Correlations (metals and total cyanide only)
- Laboratory Control Sample (LCS)
- Instrumental Luges
- Initial and Continuing Calabration Storgiards
- ICP Serial Delution Evaluation
- Method Compliance
- Sample Result Verification

Those items listed above which show deficiencies are **discussed within** the text of this narrative. All of the other items were determined to be acceptable for the DU**SR level review**, as discussed in NYS DIR-10 Appendix B Section 2.0 (c). Documentation of the outlying **pinemeters** cited in this report can be found in the laboratory data package.

In summary, results for the samples are usable either as reported or with minor qualification or edit, with the exception that 1,4 dioxane results in all samples are rejected due to inherent processing issues.

Project matrix spikes were processed only for metals and total cyanide. Accuracy and precision of the organic analytes has not been determined for these matrices. Data completeness, reproducibility, representativeness, sensitivity, and comparability

Validation qualifier definitions and the client sample identification summaries are attached to this text. Also included in this report are Alpha Anaytical EQuIS EDDs with recommended qualifiers edits applied in red

#### Chain-of-Custody

Although not requested on the custody form, silvex was processed on the samples collected in **December**. Although requested on the custody form, silvex was not processed on the samples collected in **Pebruary**.

The final relinquish entries were not present on the custody form related to the total cyanide sample fractions.

#### TCL and CP-51 Velotile Analyses by EPA #260C

The results for 1,4-dioxane in the samples are rejected due to very low instrument responses. (RRFs<0.01). Other calibration standards showed acceptable responses.

Holding times were stel. Surrogate and internal standard responses are compliant. Instrument taxes must figurate the optimization requirements. LCS recoveries are compliant. Blanks show no contamination.

#### (P-5) Sensivolutile Analyses by EPA8270D

Surrogate and internal standard responses are compliant. Instrument times meet fragmentation requirements. LCS recoveries are within validation guidelines.

Holding times were met. Calibration shardards show responses within validation action levels. Blanks show no contamination

#### Pesticide, Silves, and Arocior PCBs by EPA 8081B, 8151A, and 8082A

Surrogate and internal standard responses are compliant. Calibration standards show responses, within validation action limits.

Holding times were met, and blanks show no contamination. LCS recoveries are compliant.

### TAL Metals/CN Analyses by EPA 6010C, 7471B and 9012

The detection of arcsenic in Dry Screening\_1 is considered external contamination and edited to reflect non-detection due to presence in the associated method blank. The matrix spike and deplicate evaluation was performed for all elements except mercury on Dry Screenings\_1 abov recoveries and correlations within validation guidelines, with the exceptions of the recoveries for aluminum, thallium, and zinc (47% to 270%), results for which are qualified as estimated in the parent sample.

Due to a low recovery (74%) of the LCS, the results for total cyanide in the samples are qualified as optimated, with a low bias.

The total cyanide matrix spike of Dry Screenings\_1 shows an outging recovery of 30%, and the result for that compound in the parent sample has been qualified as estimated in value.

The ICP sectial dilution evaluation of Dry Screenings\_1 show acceptable correlations, with the exception of those for aluminum and magnetium (22%D and 28%D). The results for those two elements in the parent sample have been qualified as estimated.

Instrument performance is compliant.

Plouse do not hesitate to contact me if questions or comments area during your review of this report.

Very train yours, Jady Hildry

Attechenonie:

Validation Qualifier Definitions Sample Identifications Qualified Laboratory EQuIS HDDs

## VALIDATION DATA QUALIFIER DEFINITIONS

- U The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
- J The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
- J- The analyte was positively identified, the associated numerical value is an estimated quantity that may be biased low.
- J+ The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased high.
- UJ The analyte was analyzed for, but was not detected. The associated reported quantitation limit is approximate and may be inaccurate or imprecise.
- NJ The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
  - R The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control limits. The analyte may or may not be present.
- EMPC The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible. Concentration of the analyte in the sample.
