

**New York State - Department of Environmental Conservation
Division of Environmental Remediation
Periodic Review Evaluation Report**

Period covered by -- 2008-09

Site Code: 932113	Site Name: Delphi Harrison Thermal Systems	Class: 03
Program Lead: State Superfund Program	Site Management Funding Source: Responsible Party (RP)	
Start Date: 03/31/2005 ACT		
IC/EC Certification:	Recieved Date:	Accept Date:
DEC Inspection Date: 04/15/2008 --- Last Date of DEC Inspection		
Report Used for Evaluation: Longterm Monitoring, Inspection		
ROD Compliance? Yes		
Long Term Monitoring (effectiveness of remedy): Yes Frequency:		
Treatment System (Monitoring performance of remedy): No Frequency: Number of Wells: 6		
Problem Status:		
Comments/Changes/Attachments: Natural attenuation of TCE and PCE continues to occur. This is evident by the presence of breakdown products DCE and VC. Most organic concentrations are below DEC GA Stds. The last round of groundwater sampling was done on 11/4/08. Of the six wells sampled, only MW-12 had compounds of concern twice the concentrations of the previous sampling round. Based upon the Contingency Plan, when the above scenario occurs, resampling is to be done within two months. The RP has scheduled the resampling of MW-12 for early February 2009. Off-site migration of contaminated groundwater is not occurring. This evaluation is for the Superfund monitoring wells only.		
ROD/Consent Order Modifications? No		
Site reclassification recommended:		
Contaminant of concern	OU	Media/Receptor
TCE (F001AND D040 WASTE)	01	
Evaluation: The Remedy is performing properly and is effective.		
Remedies	OU	Site of Treatment
Monitored Natural Attenuation	01	XX
		Date in Place
		Remedy Effective
		Ongoing
