### State Superfund Site Classification Notice

The Inactive Hazardous Waste Disposal Site Program (the State Superfund Program) is the State's program for identifying, investigating, and cleaning up sites where the disposal of hazardous waste may present a threat to public health and/or the environment. The New York State Department of Environmental Conservation (DEC) maintains a list of these sites in the Registry of Inactive Hazardous Waste Disposal Sites (Registry). The site identified above, and located on a map on the reverse side of this page, has been added to the Registry as a Class 2 site that presents a significant threat to public health and/or the environment for the following reason:

- The former 370 acre Camp O'Ryan Military Reserve Training site contains a 24.1 acre rifle range area that is contaminated with lead, copper, and antimony from spent munitions. These metals are present in the surface and subsurface soils, and the site is not fenced nor posted to restrict access. Lead was determined to be at hazardous waste levels in the target hillside berm. An adjoining swale contains lead contaminated sediment that poses a potential exposure risk. While the Army National Guard is proposing to address these areas with metals contamination at this site, other areas of this site require additional investigation and potential remediation.

DEC will keep you informed throughout the investigation and cleanup of the site.

**If you own property adjacent to this site and are renting or leasing your property to someone else, please share this information with them. If you no longer wish to be on the contact list for this site or otherwise need to correct our records, please contact DEC's Project Manager listed below.**
