Metals Analysis

QC Data Summaries

Includes the following where applicable:

- Instrument Runlogs
- Initial and Continuing Calibration Blanks
- Initial and Continuing Calibration Checks
- High and Low Check Standards
- Interfering Element Check Standards
- Method Blank Summaries
- Matrix Spike and Duplicate Summaries
- Blank Spike and Lab Control Sample Summaries
- Serial Dilution Summaries

APPENDIX I

DUSRS FOR ALL ENDPOINT SAMPLES

From: Karen Storne
Re: Geneva Market Basket DUSR
File: 1740/30852.007.002
Date: December 2, 2004

cc: D Meixell
S Spiegel

A usability review of analytical data was performed for the analyses that were performed for the Market Basket Property Site located in Geneva, New York. The samples were analyzed using United States Environmental Protection Agency (USEPA) methods and modified method guidance and deliverables guidance provided in New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP). The following table summarizes the analysis performed for this investigation.

Table 1-1. *Analytical methods and references*

Parameter	Method	Reference
VOCs	USEPA Method 5030A/5030B/8260B	1, 2
SVOCs	USEPA Method 6520C/3550B/8270C	1, 2
Metals	USEPA Method 3005B/6010B	1, 2
Mercury	USEPA Method 7470A/7471A	1, 2
Percent Total Solids	2540-G	3

Note:
1. United States Environmental Protection Agency (USEPA). 1996. *Test Methods for Evaluating Solid Weste Physicel/Chemical Methods (SW-846),* 3rd Edition. Washington, D.C., 1986 as updated through December 1996.
2. New York State Department of Environmental Conservation (NYSDEC). 1995. *Analytical Services Protocol (ASP) Methods, October 1995 Revisions* (modified). Albany, NY.
3. American Water Works Association (AWWA), American Public Health Association (APHA) and Water Environment Federation (WEF). 1992. *Standard Methods for the Examination of Water and Wastewater,* 18th Edition. Washington, D.C.

The samples collected for this investigation are summarized in Table 1-2, presented in Attachment A.

O'Brien & Gere Laboratories, Inc. of Syracuse, New York performed the analyses and provided the laboratory data packages, which contained NYSDEC ASP summary forms for quality control analysis and supportive raw data.

The data usability review included evaluating the following parameters (where applicable):

- Chain-of-custody records
- Sample collection
- Holding times
- Sample preservation
- Percent solids
- Blank analysis
- Calibrations
- Surrogate recovery
- Gas chromatography/mass spectrometry (GC/MS) tuning criteria
- Matrix spike/matrix spike duplicate (MS/MSD) analyses
- Laboratory control sample (LCS)/matrix spike blank (MSB) analysis
- Internal standards performance
- Contract required detection limit (CRDL) analysis
- Inductively Coupled Plasma (ICP) interference check sample analysis
- ICP serial dilution analysis
- Field duplicate analysis
- Target analyte identification, quantitation and reported detection limits.
- Documentation completeness.

The laboratories performed the analyses using USEPA methods and modified New York State Department of Environmental Conservation (NYSDEC) methods. Data affected by excursions from the QA/QC criteria previously listed were qualified based on the approach provided in the following documents as well as professional judgment:

- United States Environmental Protection Agency (USEPA). 1992. *USEPA Region II Evaluation of Metals Data for the CLP Program, SOP HW-2* Revision 11, (modified for SW-846 methods). New York, NY.

- United States Environmental Protection Agency (USEPA). 1995. *USEPA Region II Validating Semivolatile Organic Compounds by SW-846 Method 8270B, SOP HW-22.* New York, NY.

- United States Environmental Protection Agency (USEPA). 1999b. *USEPA Region II Standard Operating Procedure For the Validation of Organic Data Acquired Using SW-846 Method 8260B, SOP HW-24.* New York, NY.

Evaluation of organic and inorganic data for the holding time parameter was performed utilizing the validation holding times from date of collection.

Evaluation of organic data for the calibration parameter was performed utilizing the validation criteria.

Laboratory established control limits were used to assess MS/MSD, LCS/MSB, and laboratory duplicate data.

Qualification of organic data for MS/MSD analyses was performed only when both MS and MSD percent recoveries were outside of laboratory control limits.

For organic analyses, qualification of data associated with MS/MSD or field duplicate excursions was limited to the unspiked sample or the field duplicate pair, respectively.

Field duplicate data were evaluated against relative percent difference (RPD) criteria of less than 100 percent for soils and 50 percent for aqueous samples when results were greater than five times the reporting limit. When sample results for field duplicate pairs were less than five times the reporting limit, the data were evaluated using control limits of plus or minus two times the reporting limit for soils and aqueous samples.

In accordance with the USEPA guidance, results for samples submitted for organic analyses impacted by cooler temperatures of greater than 10°C, would have been qualified as approximate. Inorganic results would not have been qualified for elevated cooler temperatures. Cooler temperature excursions were not found in this sampling event.

In accordance with the USEPA guidance, results for samples submitted for organic and inorganic analyses impacted by percent solids of 50 percent or less, would have been qualified as approximate. Percent solids excursions were not found in this sampling event.

In the case that excursions were detected in quality control samples, samples associated with the quality control sample matrix were qualified for the excursion.

The following sections of this memorandum presents the results of the comparison of the analytical data to the QA/QC criteria specified in USEPA and modified NYSDEC ASP Methods, and the qualifiers assigned to the data when the QA/QC criteria were not met. Excursions that resulted in the qualification of samples and additional observations are described in the following sections.

CHAIN OF CUSTODY RECORDS

The chain-of-custody record associated with samples collected 7/21/04 and 7/22/04 was incomplete; the date, time and individual involved in relinquishing samples were not documented on the record. The samples were received by the laboratory on 7/23/04. However, the field collection individual did sign an after-hours laboratory custody record, indicating that the samples were relinquished to the laboratory security guard on 7/22/04 at 17:50. The Project Manager was informed of the incomplete custody record issue.

SAMPLE COLLECTION

Equipment blanks were not required for this investigation since dedicated equipment was used to collect the soil and ground water samples.

A trip blank was not included in the sample cooler used to ship the soil samples collected for this investigation. A trip blank was included in the sample cooler used for the aqueous samples and target analytes were not detected in that trip blank.

A field duplicate was not included with the soil samples collected for this investigation. A field duplicate was included in the ground water samples collected for this investigation. The ground water field duplicate met validation criteria.

VOLATILE ORGANIC COMPOUND AND METHANOL DATA EVALUATION SUMMARY

Excursions from quality control criteria and additional observations are summarized below.

I. Holding times, sample preservation and percent solids

The validation holding time criterion of 14 days from collection for preserved aqueous samples and 10 days from collection for soil samples for volatile organic analyses was met. Percent solids were greater than 50; therefore, qualification of sample results was not required.

II. Blank analysis

Trip blanks and method blanks were analyzed to evaluate the potential of introduced concentrations of target analytes. A trip blank was not included in the sample cooler used for the soil samples collected for this investigation. Therefore, contamination of samples during sample shipment could not be evaluated for the soil samples. A trip blank was included in the sample cooler used for the aqueous samples and target analytes were not detected in that trip blank. Several target analytes were detected in the method blanks above the method detection limit (MDL) concentration but below the practical quantitation limit (PQL). As a result of the method blank contamination, the results for impacted target analytes in the associated samples were qualified; detected results less than the PQLs were raised to the PQL concentration and qualified as non-detected (U) and results greater than the PQL were reported at the sample concentration level as non-detected (U).

III. Calibrations

Initial calibration data were evaluated using the USEPA Region II validation criteria. Target analyte results in the initial calibration analyses of 6/24/04 and 7/7/04 exceeded the validation criterion of 15 percent relative standard deviation. Therefore, detected target analytes in the associated samples were qualified as approximate (J).

Calibration verification data were evaluated using the USEPA Region II validation criteria. Target analyte results in the calibration verification analyses of 7/22/04, 7/23/04, 7/26/04, and 7/27/04 exceeded the validation criterion of 20 percent deviation. Therefore, detected and non-detected target analytes in the associated samples were qualified as approximate (UJ, J).

IV. GC/MS instrument check

GC/MS instrument checks met the validation criteria; therefore, qualification of sample results was not required.

V. Surrogate recoveries

The surrogate recoveries for sample SB-2 (3'-4') and the dilution analysis of that sample were outside of the laboratory control limits. Therefore, the results for target analytes in sample SB-2 (3'-4') were qualified as approximate (UJ, J). Qualification of remaining sample results was not required.

VI. MS/MSD analysis

The laboratory used spikes containing the complete target analyte list to generate the MS/MSD data. The MS/MSD results met validation criteria with the following exception; the recovery for 1,2,3-trichlorobenzene was less tban the lower laboratory control limit in the MS/MSD sample SB-16 (2'-4'). Tberefore the non-detected result for 1,2,3-trichlorobenzene in tbe unspiked sample SB-16 (2'-4') was qualified as approximate (UJ).

VII. LCS analysis

The laboratory used spikes containing the complete target analyte list to generate the LCS data. The LCS results met validation criteria; therefore, qualification of sample results was not required.

VIII. Internal standards performance

The recovery for internal standards in samples SB-4 (5'-7'), SB-11 (1'-3'), SB-3 (1'-3'), and SB-2 (15'-16') were outside of the validation criteria. Therefore, the results for target analytes associated with the internal standards were qualified as approximate (UJ, J).

IX. Field duplicates

A field duplicate pair was collected for sample DUP-1 [MW-7] for ground water samples. Target analytes met field duplicate validation criteria for the ground water sample; therefore, qualification of sample results was not required. A field duplicate was not included in the soil samples collected for this investigation. Therefore, field collection precision could not be evaluated for soil sample collection.

X. Target analyte quantitation, identification and reported detection limits

Samples MW-10, SB-2 (3'-4'), SB-2 (15'-16'), and SB-13 (2'-4') were analyzed at dilutions due to the detection of high concentrations of target analytes. The target analytes with concentrations that exceeded the upper calibration range were reported from the higher dilution analysis and the remaining results were reported from the less diluted analysis for the final sample result.

The level of dilution chosen by the laboratory targeted the highest concentrations of the target analytes found in sample SB-2 (3'-4'). Bromobenzene, 2-chlorotoluene and 4-chlorotoluene results were originally detected at concentrations that were greater than the upper calibration limits in the undiluted analyses. As a result of the level of dilution performed, the results for these analytes were reported as non-detected in the dilution analysis. As a result, the concentrations for these analytes were reported from the undiluted analyses, and were qualified as approximate (J).

The qualifier "J" was applied by the laboratory when the analyte concentration was greater than the MDL but less than the PQL. This qualifier has been retained during the validation process to indicate that the result is considered to be approximate.

XI. Overall assessment

- As a result of method blank contamination, the results for impacted target analytes in the associated samples were qualified as non-detected (U).
- As a result of calibration excursions, results for target analytes were qualified as approximate (UJ, J).
- Results for target analytes in sample SB-2 (3'-4') were qualified as approximate (UJ, J) due to surrogate recovery excursions.
- The non-detected result for 1,2,3-trichlorobenzene in the unspiked MS/MSD sample SB-16 (2'-4') was qualified as approximate (UJ) due to MS/MSD recovery excursions.
- The results for target analytes in samples SB-4 (5'-7'), SB-11 (1'-3'), SB-3 (1'-3'), and SB-2 (15'-16') were qualified as approximate (UJ, J) due to internal standard recovery excursions.
- The concentrations of bromobenzene, 2-chlorotoluene and 4-chlorotoluene in the undiluted analyses in sample SB-2 (3'-4') were reported as approximate (J) due an analysis excursion.
- The analyte concentrations reported by the lahoratory that were greater than the MDL but less than the laboratory PQL, were qualified as approximate (J).

SEMIVOLATILE ORGANIC COMPOUND DATA EVALUATION SUMMARY

Excursions from quality control criteria and additional observations are summarized below.

I. Holding times, sample preservation and percent solids

The validation holding time criteria of 7 days from collection to extraction for aqueous samples and 14 days from collection to extraction for soil samples and 40 days from extraction to analysis for semivolatile organic analyses were met. Percent solids were greater than 50; therefore, qualification of sample results was not required.

II. Blank analysis

Method blanks were analyzed to evaluate the potential of introduced concentrations of target analytes. Bis (2-ethylhexyl) phthalate was detected in the method blank PB080504W1 above the MDL concentration but below the PQL. As a result of the method blank contamination, the results for bis (2-ethylhexyl) phthalate in the associated samples were qualified; detected results less than the PQLs were raised to the PQL concentration and qualified as non-detected (U).

III. Calibrations

Initial calibration data were evaluated using the USEPA Region II validation criteria. Target analyte results in the initial calibration analyses met the validation criterion of 15 percent relative standard deviation and response factors of greater than or equal to 0.05. Therefore, qualification of sample results was not required.

Calibration verification data were evaluated using the USEPA Region II validation criteria. Target analyte results in the calibration verification analyses of 8/8/04, 8/9/04, 8/10/04, 8/13/04, and 8/23/04 exceeded the validation criterion of 20 percent deviation. Therefore, detected and non-detected target analytes in the associated samples were qualified as approximate (UJ, J).

IV. GC/MS instrument check

GC/MS instrument checks met the validation criteria; therefore, qualification of sample results was not required.

V. Surrogate recoveries

The surrogate recoveries for phenolics in sample MW-10 were greater than the upper laboratory control limits. Therefore, the detected results for phenolic target analytes in sample MW-10 were qualified as approximate (J). Qualification of remaining sample results was not required.

VI. MS/MSD analysis

The laboratory used spikes containing the complete target analyte list to generate the MS/MSD data. Tbe MS/MSD results met validation criteria; therefore, qualification of sample results was not required.

VII. LCS analysis

The laboratory used spikes containing the complete target analyte list to generate the LCS data. The recoveries for 2,4-dimethylphenol, phenanthrene, and anthracene were less than the lower laboratory control limits in the LCS L072304S2. Therefore, the results for these target analytes in associated samples were qualified as approximate (UJ, J). Qualification of remaining sample results was not required.

VIII. Internal standards performance

Internal standards were within the validation criteria; therefore, qualification of sample results was not required.

IX. Field duplicates

A field duplicate pair was collected for sample DUP-1 [MW-7] for ground water samples. Target analytes met field duplicate validation criteria for the ground water sample; therefore, qualification of sample results was not required. A field duplicate was not included in the soil samples collected for this investigation. Therefore, field collection precision could not be evaluated for soil sample collection.

X. Target analyte quantitation, identification and reported detection limits

Samples MW-10, SB-2 (3'-4') and SB-2 (15'-16') were analyzed at dilutions due to the detection of high concentrations of target analytes. The target analytes with concentrations that exceeded the upper calibration range were reported from the higher dilution analysis and the remaining results were reported from the less diluted analysis for the final sample result.

The qualifier "J" was applied by the laboratory when the analyte concentration was greater than the MDL but less than the PQL. This qualifier has been retained during the validation process to indicate that the result is considered to be approximate.

XI. Overall assessment

- Due to method blank contamination, the results for bis (2-ethylhexyl) phthalate in the associated samples were qualified as non-detected (U).
- Detected and non-detected target analytes in samples were qualified as approximate (UJ, J) due to calibration verification excursions.
- Detected results for phenolic target analytes in sample MW-10 were qualified as approximate (J) due to surrogate recovery excursions.
- Results for 2,4-dimethylphenol, phenanthrene, and anthracene were qualified as approximate (UJ, J) due to LCS recovery excursions.
- The analyte concentrations reported by the laboratory that were greater than the MDL but less than the laboratory PQL, were qualified as approximate (J).

METAL (INCLUDING MERCURY) DATA EVALUATION SUMMARY

Excursions from quality control criteria and additional observations are summarized below.

I. Holding times, sample preservation and percent solids

The validation holding time criterion of 180 days from collection for metal analyses and 28 days from collection for mercury samples were met. Percent solids were greater than 50; therefore, qualification of sample results was not required.

II. Blank analysis

Method blanks and calibration blanks were analyzed to evaluate the potential of introduced concentrations of target analytes. Target analytes were not detected in the blanks above the PQL concentration; therefore, qualification of sample results was not required.

III. Calibrations

Initial and calibration verification data met the validation criteria; therefore, qualification of sample results was not required.

IV. MS/MSD analysis

The MS/MSD results met validation criteria; therefore, qualification of sample results was not required.

V. LCS/MSB analysis

The LCS/MSB results met validation criteria; therefore, qualification of sample results was not required.

VI. CRDL analysis

CRDL analyses met the validation criteria; therefore, qualification of sample results was not required.

VII. ICP interference check sample analysis

ICP interference check samples analyses met the validation criteria; therefore, qualification of sample results was not required

VIII. ICP serial dilution analysis

The results for zinc in the serial dilution analysis for ground water samples and the results for chromium in the serial dilution analyses for soil samples were outside of the validation criterion of 10 percent difference. Therefore, results in the associated samples were qualified as approximate (J) when sample results were greater than ten times the instrument detection limit (IDL) concentration or greater than the PQL when ten times the IDL was less than the PQL.

IX. Field duplicate analysis

A field duplicate pair was collected for sample DUP-1 [MW-7] for ground water samples. Target analytes met field duplicate validation criteria for the ground water sample; therefore, qualification of sample results was not required. A field duplicate was not included in the soil samples collected for this investigation. Therefore, field collection precision could not be evaluated for soil sample collection.

X. Target analyte quantitation and reported detection limits

Sample SB-11 (1'-3') was analyzed at a dilution due to the detection of high concentrations of iron. The iron result that exceeded the upper calibration range was reported from the higher dilution analysis and the remaining results were reported from the less diluted analysis for the final sample result with the following exception. Since the elevated iron concentration impacted other elements due to interelement correction factors, the diluted results for the other impacted elements were reported.

In the associated laboratory quality control data, the qualifier "J" was applied by the laboratory when the analyte concentration was greater than the IDL but less than the PQL.

XI. Overall data assessment

- Results for zinc in ground water samples and chromium in soil samples were qualified as approximate (J) due to serial dilution excursions.
- The analyte concentrations reported by the laboratory that were greater than the IDL but less than the laboratory PQL, were qualified as approximate (J).

DATA USABILITY

Overall data usability with respect to completeness is 100 percent for the VOC, SVOC, and metal data. Based on the review performed, the data were determined to be usable for qualitative and quantitative purposes.

ATTACHMENT A

Cross Reference List of Validated Sample Results

Table 1-2 Cross Reference List

Sample Matrix	Collection Date	Client Identification	Laboratory Identification	Laboratory	Analysis Requested
Soil	7/19/2004	SB-1 (1'-3')	E3440	OBG Labs	Metals, VOCs, SVOCs, Percent solids

RE: **D**ata **U**sability **S**ummary **R**eport for the Market Basket Analytical Data
SGS Accutest SDG No. MC47774

Dear Mr. Meixell:

Review has been completed for the data package generated by SGS Accutest that pertains to samples collected 09/12/16 at the Market Basket site. Seven aqueous samples and a field duplicate were processed for the earlier TCL volatile and semivolatile analytes and TCL Aroclor PCBs by the USEPA SW846 methods 8260C, 8270D, and 8082A. Data pertaining to the leachate analyses reported in the data package did not require validation.

The data package submitted contains full deliverables for validation, and this usability report is generated from review of the summary form information, with full review of sample raw data, and limited review of associated QC raw data. The reported summary forms have been reviewed for application of validation qualifiers, using guidance from the USEPA Region 2 validation SOPs, the USEPA National Functional Guidelines for Data Review, the specific laboratory methodologies, and professional judgment, as affects the usability of the data. The following items were reviewed:

* Laboratory Narrative Discussion
* Custody Documentation
* Holding Times
* Surrogate and Internal Standard Recoveries
* Matrix Spike Recoveries/Duplicate Correlations
* Field Duplicate
* Preparation and Calibration/Blanks
* Laboratory Control Samples
* Calibration/Low Level Standards
* Sample Result Verification

The data review includes evaluation of the specific items noted in The NYS DER-10 Appendix B section 2.0 (c). The items listed above that show deficiencies are discussed within the text of this narrative. The laboratory QC forms illustrating the excursions can be found within the laboratory data package.

In summary, sample results are usable either as reported or with minor qualification..

Data completeness, representativeness, accuracy, precision, sensitivity, and the analytical method comparability are acceptable.

Included with this narrative are listings of sample identifications covered in this report and the laboratory EDD edited to reflect the validation qualifications recommended in this report.

The following text discusses quality issues of concern.

Chain-of-Custodies

The custody form should have stated the location at which the matrix spikes were collected.

The volatile fractions of the samples were not collected according to method 5035, and were not preserved by the laboratory within 48 hours. There may be a low bias to the sample volatile reported results.

Field Duplicate Evaluations

The field duplicate evaluation was performed on North and shows acceptable correlations.

Volatile Analyses by EPA8260C

Due to sample matrix, SMALL PILE exhibited a low recovery for one internal standard and one elevated recovery for one surrogate standard. Therefore, results for 1,1,2,2-tetrachloroethane and methylene chloride in that sample have been qualified as estimated, with low and high biases, respectively.

All of the detections of toluene and carbon disulfide, and the acetone results flagged with the laboratory "B" flag, are considered external contamination due to detection of those compounds in associated blanks. Those sample detections have been edited to reflect non-detection. The remaining acetone detections and the methylene chloride detections in the samples should be used with caution, as they are also suspect as laboratory contamination.

Matrix spikes of North show recoveries and correlations within laboratory acceptance ranges. Calibration standards show responses within validation action guidelines.

Tentatively Identified Compounds (TICs) are overly characterized; not all match the reported identification.

Semivolatiles by EPA 8270D

Due to presence in the associated method blank, the detections of di-n-butylphthalate in the samples are considered external contamination and have been edited to reflect non-detection.

Matrix spikes of North show recoveries and correlations within laboratory acceptance ranges.

Holding times were met. Surrogate and internal standard responses are compliant. Calibration standards show responses within validation action guidelines.

Small Pile was processed at fiftyfold dilution due to matrix interferences. Reporting limits are proportionally elevated, and detected concentrations are below the adjusted reporting limits and therefore estimated values. Review of the raw data indicates a lessor dilution may have successfully been performed.

Tentatively Identified Compounds (TICs) are overly characterized; not all match the reported identification.

TCL Aroclor PCBs by EPA Method 8082A

Holding times were met. Blanks show no contamination. Surrogate recoveries are acceptable. Calibration standards show acceptable responses.

Matrix spikes of North show recoveries and correlations within laboratory acceptance ranges.

Please do not hesitate to contact me if you have comments or questions regarding this report.

Very truly yours,

Judy Harry

VALIDATION DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
J-	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased low.
J+	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased high.
UJ	The analyte was analyzed for, but was not detected. The associated reported quantitation limit is approximate and may be inaccurate or imprecise.
NJ	The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control limits. The analyte may or may not be present.
EMPC	The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample.

Re: Market Basket ERP Site (B00018-8)

File: 1740/30852

Dear Greg:

Attached is a summary table of the analytical results from the surface soil samples that were collected on the southern block of the Market basket site in Geneva, New York. This table also includes the respective soil cleanup objectives (SCOs) for the detected constituents. As documented by the analytical results, each of the four samples exceeded several SCOs. However, two soil samples that were collected at a depth of approximately two feet in the trench that was located in this same area had only one minor exceedance of acetone in one sample (58 µg/Kg, with an SCO of 50 µg/Kg for unrestricted use).

Based on these results, the City is proposing to remove soil in this area to a depth of approximately two feet, to be followed by the collection of five soil samples for confirmation. This action will be a continuation of the previously approved Remedial Action Work Plan (RAWP), and the excavation and sampling procedures will be conducted in accordance with the RAWP, including the screening of the excavation visually and with a photoionization detector (PID).

Please confirm that the Department concurs with this continued remedial activity.

Very truly yours,

O'BRIEN & GERE ENGINEERS, INC.

Paul R. Malcuria

754 Lake Rd.
Phelps, New York 14532

Phone 716-733-7815

October 23, 2002

Mr. Gordon Eddington
Department of Public Works
City of Geneva
Castle St. Geneva, New York 14456

Dear Gordie:,

Here is the invoice for the state approved topsoil hauled by Riccelli Enterprises on October 22. 2002 from Gates Rd. in Geneva to the Market Basket site in Geneva, Glenwood Cemetery in Geneva and the Chamber of Commerce Lake Front site in Geneva.

As you know I gave the City an excellent price on the topsoil and I paid all cost for the loader to load the trucks. The trucking fee will be billed by Riccelli Enterprises.

Truck #	Gates Rd. Site	Glenwood Cemetery	Chamber of Commerce
71	6	1	1
86	13		
95	4		
79	11	1	1
76	10	2	1
97	13		
61	10	1	2
Total loads	67	5	5

Total 77 loads @ 20 yds. per load= 1540 yds. @ $8.00 per yd. = Total $12,320.00

As I stated above I gave the city an excellent price. The normal price for state approved topsoil would be $15.00 per yd. for material only.

It was a pleasure doing business with the city as always.

Paul Malcuria

Pace Analytical e-Report

Report prepared for:
CITY OF GENEVA
47 CASTLE ST
GENEVA, NY 14456
CONTACT: GORDON EDDINGTON

Project ID: MARKET BASKET
Sampling Date(s): December 03, 2013
Lab Report ID: 13120067
Client Service Contact: Peggy Siegfried (518) 346-4592 ext. 3838

Analysis Included:
VOCs by GCMS
SVOCs by GCMS
PCB Analysis
Pesticide Analysis (Solid)
Mercury Analysis
Metals by ICP (Custom)
Herbicides - Subcontracted
Hexavalent Chromium
Cyanide (Solid)

Test results meet all National Environmental Laboratory Accreditation Conference (NELAC) requirements unless noted in the case narrative. The results contained within this document relate only to the samples included in this report. Pace Analytical is responsible only for the certified testing and is not directly responsible for the integrity of the sample before laboratory receipt. This report shall not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

CASE NARRATIVE

December 13, 2013

CASE NARRATIVE

This data package (SDG ID: 13120067) consists of 2 soil samples received on 12/04/2013. The samples are from Project Name: MARKET BASKET.

This sample delivery group consists of the following samples:

Lab Sample ID	Client ID	Collection Date
AQ41891	COMPOSITE 1	12/03/2013 17:15
AQ41892	COMPOSITE 2	12/03/2013 17:30

Sample Delivery and Receipt Conditions

(1.) All samples were delivered to the laboratory via FEDEX delivery service on 12/04/2013.

(2.) All samples were received at the laboratory intact and within holding times.

(3.) All samples were received at the laboratory properly preserved with any exceptions listed below:

Volatile Organics Analysis

Analysis for Volatile Organics was performed by method SW-846 8260C. The following technical and administrative items were noted for the analysis:

(1.) All solid samples for Volatile Organic Analysis were not collected by Pace Analytical and were collected in bulk containers and not in accordance with Method 5035/5035A. All results below 200 ppb should be considered as potentially biased low.

(2.) The percent recovery of Bromomethane was below established qualtiy control limits in the associated continuing calibration verification (LAB ID: AQ41891, AQ41892). Analytical results for this analyte may be biased low.

(3.) The percent recovery of 1,4-Dioxane was above established qualtiy control limits in the associated continuing calibration verification (LAB ID: AQ41891, AQ41892). This analyte was not detected in the samples; therefore data is not impacted by the possible high bias.

(4.) The percent recovery of Bromomethane was below established qualtiy control limits in the associated laboratory control sample (LAB ID: AQ41891, AQ41892). Analytical results for this analyte may be biased low.

(5.) The percent recovery of 1,4-Dioxane was above established qualtiy control limits in the associated laboratory control sample (LAB ID: AQ41891, AQ41892). This analyte was not detected in the samples; therefore data is not impacted by the possible high bias.

Semivolatile Organics Analysis

Analysis for Semivolatile Organics was performed by method SW-846 8270D. Samples were extracted by Accelerated Solvent Extraction (EPA Method 3545A). The following technical and administrative items were noted for the analysis:

(1.) The percent recovery of Hexachlorocyclopentadiene was below established qualtiy control limits in the associated continuing calibration verification (LAB ID: AQ41891, AQ41892). Analytical resutls for this analyte may be biased low.

(2.) The percent recoveries of 4-Chloro-3-methylphenol, 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol were above established qualtiy control limits in the associated continuing calibration verification (LAB ID: AQ41891, AQ41892). These analytes were not detected in the samples; therefore data is not impacted by the possible high bias.

1

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by method SW-846 8082A. Samples were extracted by Accelerated Solvent Extraction (EPA Method 3545A). The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Pesticide Analysis

Analysis for pesticides was performed by method SW-846 8081B. Samples were extracted by Accelerated Solvent Extraction (EPA Method 3545A). The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Mercury Analysis

Analysis for mercury was performed by method SW-846 7471B. The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Metals Analysis by ICP

Analysis for metals was performed by method SW-846 6010C. The following technical and administrative items were noted for the analysis:

(1.) The relative percent difference between the sample and the duplicate sample was outside quality acceptance limits for sample (LAB ID: AQ41892D). Please see associated duplicate form for details.

(2.) The percent recovery of Manganese was below established quality control limits in the matrix spike sample.

Cyanide Analysis

Analysis for cyanide was performed by method SW-846 9014. Preparation was performed by method SW-846 9010C. The following technical and administrative items were noted for the analysis:

(1.) All quality assurance parameters were met for the analysis.

Subcontract Analysis

Please see the Phoenix Environmental Laboratory report for quality assurance details relating to the Herbicides and Trivalent Chromium, and Hexavalent Chromium analysis.

Respectfully submitted,

Peggy Siegfried
Project Manager

QUALIFIERS

Qualifier Definitions

Organic Laboratory Qualifiers

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate recovery not evaluated against control limits due to sample dilution.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

* - Value not within control limits.

Inorganic Laboratory Qualifiers

B - Denotes analyte observed in associated method blank or digestion blank. Analyte concentration should be considered as estimated.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

* - Value not within control limits.

[1]The pH preservation check of Oil and Grease (Method 1664) is performed as soon as possible after sample receipt and may not be included in this report
[2]The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.
[3]Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.
[4]Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made
[5]All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.

Reporting Parameters and Lists

SW-846 6010C - Metals by ICP (Custom) - (mg/kg)
- Arsenic
- Barium
- Beryllium
- Cadmium
- Chromium
- Copper
- Lead
- Manganese
- Nickel
- Selenium
- Silver
- Zinc

SW-846 7471B - Mercury Analysis - (mg/kg)
- Mercury

SW-846 8081B - Pesticide Analysis (Solid) - (ug/g)
- Aldrin
- alpha Chlordane
- alpha-BHC
- beta-BHC
- Chlordane
- delta-BHC
- Dieldrin
- Endosulfan I
- Endosulfan II
- Endosulfan sulfate
- Endrin
- Endrin aldehyde
- Endrin ketone
- gamma Chlordane
- gamma-BHC
- Heptachlor
- Heptachlor epoxide

SW-846 8081B - Pesticide Analysis (Solid) - (ug/g)
- Hexachlorobenzene
- Methoxychlor
- p,p'-DDD
- p,p'-DDE
- p,p'-DDT
- Toxaphene

SW-846 8082A - PCB Analysis - (ug/g)
- Aroclor 1016
- Aroclor 1221
- Aroclor 1232
- Aroclor 1242
- Aroclor 1248
- Aroclor 1254
- Aroclor 1260
- Total PCB Amount > RL

[1]Qualifier column where '*' denotes value outside the control limits or 'D' denotes value was diluted out.

ND: Denotes analyte not detected at a concentration greater than the PQL.
PQL (Practical Quantitation Limit): Denotes lowest analyte concentration reportable for the sample.
*3&4-Methylphenol is reported as a co-elution of 3-Methylphenol and 4-Methylphenol. 3-Methylphenol was not a calibration component in the initial calibration curve.

Mercury	7439-97-6	ND	ND			20

[1]Qualifier column where "*" denotes value outside the control limits. Note: RPD criteria does not apply if either the sample and duplicate sample are not detected.

ND: Denotes analyte not detected at a concentration greater than the PQL.
PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

Terphenyl-d14	1718-51-0	66.9	18.0-137		MS09-178-7
Nitrobenzene-d5	4165-60-0	64.4	23.0-120		MS09-178-7
Phenol-d6	13127-88-3	66.2	24.0-113		MS09-178-7

[1]Qualifier column where '*' denotes value outside the control limits or 'D' denotes value was diluted out.

ND: Denotes analyte not detected at a concentration greater than the PQL.
PQL (Practical Quantitation Limit): Denotes lowest analyte concentration reportable for the sample.
*3&4-Methylphenol is reported as a co-elution of 3-Methylphenol and 4-Methylphenol. 3-Methylphenol was not a calibration component in the initial calibration curve.

RE: Project: MARKET BASKET FILL DIRT
Pace Project No.: 702177

Dear Kathy McCormack:
Enclosed are the analytical results for sample(s) received by the laboratory on September 24, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This project was reissued on 10/19/16 to change the reporting format as per client request.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Wayne Bryce
wayne.bryce@pacelabs.com
Project Manager

ANALYTICAL RESULTS

Project: MARKET BASKET FILL DIRT
Pace Project No.: 702177

Sample: MONTEMORANO TOPSOIL #610557 **Lab ID: 702177003** Collected: 09/22/16 10:00 Received: 09/24/16 10:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report Limit	DF	Prepared	Analyzed	CAS No.	Qual

QUALIFIERS

Project: MARKET BASKET FILL DIRT
Pace Project No.: 702177

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-PA Pace Analytical Services - Greensburg

BATCH QUALIFIERS

Batch: 235237

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1j	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
2j	This analyte failed the 30 percent low level calibration standard check. Results may be biased high.
CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
CL	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased low.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

Custody Seal on Cooler/Box Present: ☒ yes ☐ no Seals Intact: ☒ yes ☐ no

Thermometer Used 7 Type of Ice: (Wet) Blue None

Cooler Temperature Observed Temp 4.9 °C Correction Factor: -0.4 °C Final Temp: 4.5 °C

Temp should be above freezing to 6°C

Date and Initials of person examining contents: MM 9/29/16

Comments:	Yes	No	N/A	
Chain of Custody Present:	X			1.
Chain of Custody Filled Out:	X			2.
Chain of Custody Relinquished:	X			3.
Sampler Name & Signature on COC:	X			4.
Sample Labels match COC: -Includes date/time/ID/Analysis Matrix: SL	X			5.
Samples Arrived within Hold Time:	X			6.
Short Hold Time Analysis (<72hr remaining):		X		7.
Rush Turn Around Time Requested:	X			8.
Sufficient Volume:	X			9.
Correct Containers Used: -Pace Containers Used:	X			10.
Containers Intact:	X			11.
Filtered volume received for Dissolved tests			X	12.
All containers needing preservation have been checked.			X	13.
All containers needing preservation are found to be in compliance with EPA recommendation. exceptions: VOA, coliform, TOC, O&G, Phenolics			X	Initial when completed MM Date/time of preservation; Lot # of added preservative
Headspace in VOA Vials (>6mm):			X	14.
Trip Blank Present:			X	15.
Trip Blank Custody Seals Present			X	
Rad Aqueous Samples Screened > 0.5 mrem/hr			X	Initial when completed: Date:

This chain of custody is considered complete as is since this information is available in the owner laboratory.

APPENDIX L

DER-10 APPENDIX 5 ALLOWABLE CONSTITUENT LEVELS FOR IMPORTED FILL OR SOIL SUBDIVISION 5.4(e)

Appendix 5
Allowable Constituent Levels for Imported Fill or Soil
Subdivision 5.4(e)

Source: This table is derived from soil cleanup objective (SCO) tables in 6 NYCRR 375. Table 375-6.8(a) is the source for unrestricted use and Table 375-6.8(b) is the source for restricted use.

Note: For constituents not included in this table, refer to the contaminant for supplemental soil cleanup objectives (SSCOs) in the Commissioner Policy on *Soil Cleanup Guidance*. If an SSCO is not provided for a constituent, contact the DER PM to determine a site-specific level.

Constituent	Unrestricted Use	Residential Use	Restricted Residential Use	Commercial or Industrial Use	If Ecological Resources are Present
Metals					
Arsenic	13	16	16	16	13

All concentrations are in parts per million (ppm)
NS = Not Specified

Footnotes:
[1] The SCO for Hexavalent or Trivalent Chromium is considered to be met if the analysis for the total species of this contaminant is below the specific SCO for Hexavalent Chromium.
[2] The SCO is the sum of endosulfan I, endosulfan II and endosulfan sulfate.
[3] For constituents where the calculated SCO was lower than the contract required quantitation limit (CRQL), the CRQL is used as the Track 1 SCO value.
[4] This SCO is derived from data on mixed isomers of BHC.
