MDLs are calculated using the method in Appendix B, Part 136, Revision 1.11 of the Federal Register, Volume 49, No. 209, October 1984.

MDL=(S Dev) x (t-value)

The MDL is a statistical measurement which defines the theoretical minimum concentration of a substance which can be measured and reported with 99% confidence that the analyte concentration is greater than zero.

This solution was assayed gravimetrically, using a balance calibrated against weight sets, ID #NJ86563, traceable to NIST.

The concentration of the final solution was verified by ICP against NIST SRM# 3101a

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to confirm the elemental concentrations shown above. Balances, used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

This solution was assayed titrimetrically, using bromate which was standardized against NIST SRM #83d (arsenic trioxide).

The concentration of the final solution was verified by ICP against NIST SRM# 3102a

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to contain the elemental concentrations shown above. Balances used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

This solution was assayed titrimetrically, using EDTA which was standardized against NIST SRM #928 (lead nitrate).

The concentration of the final solution was verified by ICP against NIST SRM# 3104a

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to contain the elemental concentrations shown above. Balances used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

This solution was assayed titrimetrically, using EDTA which was standardized against NIST SRM #928 (lead nitrate.)

The concentration of the final solution was verified by ICP against NIST SRM# 3114

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to contain the elemental concentrations shown above. Balances, used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids. ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to contain the elemental concentrations shown above. Balances, used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

This solution was assayed gravimetrically, using a balance calibrated against weight sets, ID #NJ86563, traceable to NIST.

The concentration of the final solution was verified by ICP against NIST SRM# 3165

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to contain the elemental concentrations shown above. Balances used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

The total maximum uncertainty on the certified value(s) is ±2%. See reverse side of certificate for details.

This solution was assayed titrimetrically, using EDTA which was standardized against NIST SRM #928 (lead nitrate.)

The concentration of the final solution was verified by ICP against NIST SRM# 3135a

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to contain the elemental concentrations shown above. Balances, used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

CAT. NO. CLP-INF-1

Certificate of Analysis

CLP Interference Check Standard 1

Lot # 626224

	Source	Purity	Matrix	Standard Concentration
High Purity Metals, Salts or Oxides		99.98+%	HNO_3, 5%	µg/mL ± 0.5%
				Aluminum 5000
				Calcium 5000
				Iron 2000
				Magnesium 5000

This spectrometric standard solution has been prepared from high-purity reference materials. Sub-boiling distilled high-purity acid has been used to place the materials in solution and to stabilize the standard. The matrix is as noted above in 18 megaohm deionized water. The reference materials have been assayed by inductively coupled plasma optical emission spectrometry (ICP-OES).

The standard has been prepared gravimetrically by weighing the reference material to 5 significant figures. Volumetric glassware has been calibrated gravimetrically to 5 significant figures. The standard concentration has been verified by ICP-OES against an independent source which is traceable to National Institute of Standards and Technology, Standard Reference Material No. 3100 series.

This standard is valid for one year from the shipping date provided the solution is kept tightly capped and stored under normal laboratory conditions.

Theodore C. Rains, Ph.D.
President

HIGH-PURITY STANDARDS

CAT. NO. ANALCS-R

Certificate of Analysis

CLP Analyte Standard-Revised

Lot # 625441

Source	Source Purity	Matrix	Standard Concentration
High Purity Metals, Salts or Oxides	99.99+%	HNO_3, 2% + Tr HF	µg/mL ± 0.5% See element list on reverse

This spectrometric standard solution has been prepared from high-purity reference materials. Sub-boiling distilled high-purity acid has been used to place the materials in solution and to stabilize the standard. The matrix is as noted above in 18 megaohm deionized water. The reference materials have been assayed by inductively coupled plasma optical emission spectrometry (ICP-OES).

The standard has been prepared gravimetrically by weighing the reference material to 5 significant figures. Volumetric glassware has been calibrated gravimetrically to 5 significant figures. The standard concentration has been verified by ICP-OES against an independent source which is traceable to National Institute of Standards and Technology, Standard Reference Material No. 3100 series.

This standard is valid for one year from the shipping date provided the solution is kept tightly capped and stored under normal laboratory conditions.

The standard concentration has been verified by ICP-OES against an independent source, which is directly traceable to National Institute of Standards and Technology, Standard Reference Material No. 3152a.

This standard is valid for eighteen months from the shipping date provided the solution is kept tightly capped and stored under normal laboratory conditions.

ENVIRONMENTAL EXPRESS

CAT. NO. HP100028-1

Certificate of Analysis

Lead

Lot # 0728504

Source	Source Purity	Matrix	Density g/mL @ 21.1°C	Standard Concentration
Lead Metal	99.999+%	HNO_3 2%	1.011	1000 ± 3 µg/mL

This spectrometric standard solution has been prepared from high-purity reference materials. Sub-boiling distilled high-purity acid has been used to place the materials in solution and to stabilize the standard. The matrix is as noted above in 18 megaohm deionized water. The reference materials have been assayed by inductively coupled plasma optical emission spectrometry (ICP-OES).

A 1000µg/mL Lead solution was prepared from the source material and scanned by ICP-OES and ICP-MS for trace impurities. The reported values from the 1000µg/mL solution are for reference only. **M** = Major element.

Certificate of Analysis

Multi-Element Spiking Solution 1 for Water and Soil Samples-Modified

Lot # 0731305

Source	Source Purity	Matrix	Standard Concentration
High Purity Metals, Salts or Oxides	99.994%	HNO_3, 2% + Tr HF	µg/mL ± 0.5% See element list on reverse

This spectrometric standard solution has been prepared from high-purity reference materials. Sub-boiling distilled high-purity acid has been used to place the materials in solution and to stabilize the standard. The matrix is as noted above in 18 megaohm deionized water. The reference materials have been assayed by inductively coupled plasma optical emission spectrometry (ICP-OES).

The standard has been prepared gravimetrically by weighing the reference material to 5 significant figures. Volumetric glassware has been calibrated gravimetrically to 5 significant figures. The standard concentration has been verified by ICP-OES against an independent source which is directly traceable to National Institute of Standards and Technology, Standard Reference Material No. 3100 series.

This standard is valid for one year from the shipping date provided the solution is kept tightly capped and stored under normal laboratory conditions.

HIGH-PURITY STANDARDS

CAT. NO. ANALCS-R

Certificate of Analysis

CLP Analyte Standard-Revised

Lot # 0728327

Source	Source Purity	Matrix	Standard Concentration
High Purity Metals, Salts or Oxides	99.99+%	HNO_3, 2% + Tr HF	µg/mL ± 0.5% See element list on reverse

This spectrometric standard solution has been prepared from high-purity reference materials. Sub-boiling distilled high-purity acid has been used to place the materials in solution and to stabilize the standard. The matrix is as noted above in 18 megaohm deionized water. The reference materials have been assayed by inductively coupled plasma optical emission spectrometry (ICP-OES).

The standard has been prepared gravimetrically by weighing the reference material to 5 significant figures. Volumetric glassware has been calibrated gravimetrically to 5 significant figures. The standard concentration has been verified by ICP-OES against an independent source which is directly traceable to National Institute of Standards and Technology, Standard Reference Material No. 3100 series.

This standard is valid for one year from the shipping date provided the solution is kept tightly capped and stored under normal laboratory conditions.

Exp Date: JUL 18 2009

MDLs are calculated using the method in Appendix B, Part 136, Revision 1.11 of the Federal Register, Volume 49, No. 209, October 1984

MDL=(S.Dev) x (t-value)

The MDL is a statistical measurement which defines the theoretical minimum concentration of a substance which can be measured and reported with 99% confidence that the analyte concentration is greater than zero.

MDLs are calculated using the method in Appendix B, Part 136, Revision 1.11 of the Federal Register, Volume 49, No. 209, October 1984

MDL=(S.Dev) x (t-value)

The MDL is a statistical measurement which defines the theoretical minimum concentration of a substance which can be measured and reported with 99% confidence that the analyte concentration is greater than zero.

Life Science Laboratories, Inc.
5000 Brittonfield Parkway, Suite 200
East Syracuse, NY 13057 (315) 437-0200

ANALYTICAL QC SUMMARY REPORT

Method: SW7471A
Work Order: 0808076
Project: City of Geneva- Market Basket Site

CLIENT: O'Brien & Gere Engineers, Inc.

Sample ID: 0808076-009B	SampType: PDS	TestCode: HG7471S	Units: mg/Kg-dry	Prep Date: 8/27/2008	RunNo: 14821
Client ID: Trench-Bot-2	Batch ID: 8011	Method: SW7471A	(SW7471A)	Analysis Date: 8/27/2008	SeqNo: 383273
Instrument:	ColumnID:				

Analyte	QC Sample Result	PQL	SPK Added	Parent Sample Result	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Mercury	0.486	0.13	0.442	0.0531	98	85	115				

Qualifiers:
B Analyte detected in the associated Method Blank
ND Not Detected at the Practical Quantitation Limit (PQL)
U Not Detected at the MDC or RL
E Value exceeds the instrument calibration range
R RPD exceeds accepted precision limit
J Analyte detected below the PQL
S Spike Recovery outside accepted recovery limits

CERTIFICATE OF ANALYSIS

AccuTrace™ Reference Standard

Item Number: TCLP-02-1

Element: TCLP Standard #2 - Mercury
Matrix: 5% HNO3

Lot Number: B8025003
Expiration Date: Feb / 2010

7281-S
Received - 3/12/08
Opened -
Expires - 2/28/10

Actual Lot Analysis

TCLP Standard #2 - Mercury	20 µg/mL

The total maximum uncertainty on the certified value(s) is ±2%. See reverse side of certificate for details.

The concentration of the final solution was verified by ICP against NIST SRM# 3133

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to contain the elemental concentrations shown above. Balances, used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

Temperature (°C): 21.0
Homogeneity: No heterogeneity was observed in the preparation of this standard.

Certified by:

We use purified acids, 18 megohm double deionized water, calibrated Class A glassware and the highest purity raw materials available, (typically 99.999%). We meticulously clean our bottles by acid leaching and then triple rinsing with ASTM Type I water prior to use. Our standards are made gravimetrically using balances that are calibrated with weights traceable to NIST. **(NIST Test #: 732/245790).** We certify that all our standards are (+/-) 0.5% of the stated value unless otherwise stated, assuming that the bottle is kept tightly capped and stored under normal laboratory conditions.

RE: Analytical Result Order No.: 0810083

Dear Dave Miexell:

Life Science Laboratories, Inc. received 6 sample(s) on 10/10/2008 for the analyses presented in the following report.

Very truly yours,
Life Science Laboratories, Inc.

Monika Santucci
Project Manager

NARRATIVE

INTRODUCTION/ANALYTICAL RESULTS

This report summarizes the laboratory results for samples from O'Brien & Gere Engineers, Inc. for the City of Geneva – Market Basket project. Immediately following the narratives are the Work Order Sample Summary and Dates Report.

CONDITION UPON RECEIPT/CHAIN OF CUSTODY

The coolers were received intact. When the coolers were received by the laboratory, the sample custodian(s) opened and inspected the shipments for damage, custody inconsistencies and proper preservation. The chain of custody forms documenting receipt are presented in the chain of custody section. Each sample was assigned a unique laboratory number and a custody file created. The samples were placed in a secured walk-in cooler and signed in and out by the chemists performing the tests. The sign out record, or lab chronicle, is presented in the chain of custody section.

Discrepancies noted upon receipt are listed on the sample receipt checklist located in the chain of custody section of the report. The temperature of the iced cooler was 9.0°C.

METHODOLOGY

The following methods were used to perform the analyses:

PARAMETER	METHOD	REFERENCE
Volatile Organics	SW8260B	1
Semivolatile Organics	SW8270C	1
ICP Metals	SW6010B	1
Mercury	SW7471A	1
Percent Moisture	SM 2540G	2

1) New York State Department of Environmental Conservation Analytical Services Protocol, June 2000.

2) Standard Methods for the Examination of Water and Wastewater, 18th Edition, 1992

QUALITY CONTROL

QA/QC results are summarized in the Laboratory Report Package and are also included in the raw data.

RAW DATA

The raw data is organized in the New York State Department of Environmental Conservation Analytical Services Protocol Category B order of data requirements.

GC/MS Volatile Organics Case Narrative

Client: OBG-MS
Project/Order: City of Geneva – Market Basket Site
Work Order #: 0810083
Methodology: 8260B

Analyzed/Reviewed by (Initials/Date): GS 10/27/08
Supervisor/Reviewed by (Initials/Date): TA 10-27-08
QA/QC Review (Initials/Date): JLK 10/31/08

File Name: G:\Narratives\MSVoa\0810083msvnar.doc

GC/MS Volatile Organics
The GC/MS Volatile instruments are equipped with a Restek Rtx-VMS, 40 m x 0.18 mm ID capillary column (MS01 & MS03), Restek Rtx-502.2, 105 m x 0.53 mm ID capillary column (MS02), and Restek Rtx-VMS, 60 m x 0.25mm ID capillary column (MS04), and a Vocarb 3000 adsorbent trap.

Holding Times and Sample Preservation
All samples were prepared and analyzed within the method and/or QAPP specified holding time requirements. Samples were unpreserved.

Laboratory Control Sample
All spike recoveries met method and/or project specific QC criteria.

MS/MSD/MSB
The following compound(s) did not meet matrix spike/matrix spike duplicate percent recovery and/or RPD criteria:

Sample Description	Sample #	Compound	% REC	RPD	Corrective Action
MBSS-1	0810083-001AMS/MSD	Methyl acetate	X	X	1

1 The associated LCS and MSB met acceptance limits.

Surrogate Standards
Surrogate recoveries exceeded the upper control limit for toluene-d8 and/or 4-bromofluorobenzene in all soil samples. Matrix effects are suspected. Recoveries may have been biased due to low response of the associated internal standard(s). Associated target analytes results may also be biased high. All samples were reanalyzed at the same sample weight and both results are reported.

Internal Standards
Internal standard recoveries exceeded the lower control limit for chlorobenzene-d5 and/or 1,4-dichlorobenzene-d4 in all soil samples. Matrix effects are suspected. Samples were reanalyzed at the same sample weight and both results were reported.

Calibrations
All initial calibrations and calibration verifications met method and/or project specific QC criteria.

GC/MS Volatile Organics Case Narrative - Page 2

Client: OBG-MS
Project/Order: City of Geneva – Market Basket Site
Work Order #: 0810083
Methodology: 8260B

Preparation Blanks
All preparation blanks met method and/or project specific QC criteria.

GC/MS Semi-Volatile Organics Case Narrative

Client ID: OBG-MS
Project/Order: City of Geneva-Market Basket Site
Work Order #: 0810083
Methodology: 8270C

Analyzed/Reviewed by (Initials/Date): MA 11/7/08
Supervisor/Reviewed by (Initials/Date): 11-7-08
QA/QC Review (Initials/Date): 11/7/08
File Name: G:\Narratives\MSSemi\0810083svnar.doc

GC/MS Semi-Volatile Organics
The GC/MS Semi-volatile instruments used a J & W DB-5MS, 30 m x 0.25 mm ID capillary column.

Holding Times and Sample Preservation
All samples were prepared and analyzed within the method and/or QAPP specified holding time requirements. Due to suspected contamination during initial sample preparation, samples MBSS-1 MSD [0810083-001BMSD] and MBSS-2 [0810083-002B] were re-extracted within method holding time, but outside ASP holding time. Limited sample prevented re-extraction of the parent sample and matrix spike for MBSS-1 [0810083-001B].

Laboratory Control Sample
The following compound(s) did not meet laboratory control sample recovery criteria:

LCS No.	Compound	Corrective Action
LCS-8270	4-Chloroaniline	1

1 The recovery for this compound in the associated MSB was within acceptance limits. No corrective action was taken.

MS/MSD/MSB
The following compound(s) did not meet matrix spike/matrix spike duplicate percent recovery and/or RPD criteria:

Sample Description	Sample #	Compound	% REC	RPD	Corrective Action
MBSS-2	0810083-002B	several	X	X	1

1 Concentrations of several analytes in the sample were much greater than the concentration of the analyte spiked, which may bias recoveries. The sample extract was diluted, which also may bias recoveries. The recovery for all compounds in the associated MSB was within acceptance limits. No corrective action was taken.

GC/MS Semi-Volatile Organics Case Narrative - Page 2

Client ID: OBG-MS
Project/Order: City of Geneva-Market Basket Site
Work Order#: 0810083
Methodology: 8270C

Surrogate Standards
The following sample(s) did not meet surrogate recovery criteria:

Sample Description	Sample #	Surrogate	Corrective Action
MBSS-4	0810083-004B	Terphenyl-d14	1
MBSS-FD	0810083-005B	Terphenyl-d14	1

1 The recovery met acceptance criteria when reanalyzed at a higher dilution. Matrix interference is suspected. Both sets of data are reported. No further corrective action was taken.

Internal Standards
The internal standard area for the following sample(s) did not meet abundance criteria:

Sample Description	Sample #	Internal Standard	Corrective Action
MBSS-2	0810083-002B	Perylene-d12	1
MBSS-3	0810083-003B	Perylene-d12	1
MBSS-4	0810083-004B	Chrysene-d12	1
		Perylene-d12	1
MBSS-FD	0810083-005B	Chrysene-d12	1
		Perylene-d12	1

1 The recovery met acceptance criteria when reanalyzed at a higher dilution. Matrix interference is suspected. Both sets of data are reported. No further corrective action was taken.

Calibrations
All initial calibrations and calibration verifications met method and/or project specific QC criteria.

Preparation Blanks
All preparation blanks met method and/or project specific QC criteria.

Trace Metals Case Narrative

Client ID: OBG-MS
Project/Order: City of Geneva – Market Basket Site
Work Order: 0810083
Methodology: ICP metals – SW6010B

Analyzed/Reviewed by (Date/Initials): 10-29-08 MT
Supervisor/Reviewed by (Date/Initials): 10-29-08 MT
QA/QC Review (Date/Initials): 10/30/08 SL

Trace Metals

Holding Times
All samples were prepared and analyzed within the method and/or QAPP specified holding time requirements.

Laboratory Control Sample
All spike recoveries met method and/or project specific QC criteria.

MS/MSD AND MS/MSD RPD
The following analytes did not meet matrix spike/matrix spike duplicate percent recovery criteria:

Sample Description	Sample #	Analyte	% REC	RPD	Corrective Action
MBSS-1	0810083-001B	Fe, Zn	X		1

1. The concentration of the analyte in the sample was much greater than the concentration of the spike added. A post-digestion spike was performed as required. No further corrective action was taken.

ICP Serial Dilution
All percent differences met method and/or project specific QC criteria.

Calibrations
All calibrations and calibration verifications met method and/or project specific QC criteria.

Preparation Blanks
All preparation blanks met method and/or project specific QC criteria.

Trace Metals Case Narrative

Client ID: OBG-MS
Project/Order: City of Geneva – Market Basket Site
Work Order: 0810083
Methodology: Mercury – SW7471A

Analyzed/Reviewed by (Date/Initials): 10-29-08 MT
Supervisor/Reviewed by (Date/Initials): 10-29-08 MT
QA/QC Review (Date/Initials): 10/30/08 SL

Trace Metals
There were no excursions to note. All QC results were within established control limits.

NARRATIVE

INTRODUCTION/ANALYTICAL RESULTS

This report summarizes the laboratory results for samples from O'Brien & Gere Engineers, Inc. for the City of Geneva project. Immediately following the narratives are the Work Order Sample Summary and Dates Report.

CONDITION UPON RECEIPT/CHAIN OF CUSTODY

The coolers were received intact. When the coolers were received by the laboratory, the sample custodian(s) opened and inspected the shipments for damage, custody inconsistencies and proper preservation. The chain of custody forms documenting receipt are presented in the chain of custody section. Each sample was assigned a unique laboratory number and a custody file created. The samples were placed in a secured walk-in cooler and signed in and out by the chemists performing the tests. The sign out record, or lab chronicle, is presented in the chain of custody section.

Discrepancies noted upon receipt are listed on the sample receipt checklist located in the chain of custody section of the report. The temperature of the iced cooler was 9.0°C.

METHODOLOGY

The following methods were used to perform the analyses:

PARAMETER	METHOD	REFERENCE
Volatile Organics	SW8260B	1
Semivolatile Organics	SW8270C	1
ICP Metals	SW6010B	1
Mercury	SW7471A	1
Percent Moisture	SM 2540G	2

1) New York State Department of Environmental Conservation Analytical Services Protocol, June 2000.

2) Standard Methods for the Examination of Water and Wastewater, 18th Edition, 1992

QUALITY CONTROL

QA/QC results are summarized in the Laboratory Report Package and are also included in the raw data.

RAW DATA

The raw data is organized in the New York State Department of Environmental Conservation Analytical Services Protocol Category B order of data requirements.

Total # of pages in report: _____

GC/MS Volatile Organics Case Narrative

Client: OBG-MS
Project/Order: City of Geneva – Market Basket Site
Work Order #: 0810083
Methodology: 8260B

Analyzed/Reviewed by (Initials/Date): 10/27/08
Supervisor/Reviewed by (Initials/Date): 10-27-08
QA/QC Review (Initials/Date): 10/31/08

File Name: G:\Narratives\MSVoa\0810083msvnar.doc

GC/MS Volatile Organics
The GC/MS Volatile instruments are equipped with a Restek Rtx-VMS, 40 m x 0.18 mm ID capillary column (MS01 & MS03), Restek Rtx-502.2, 105 m x 0.53 mm ID capillary column (MS02), and Restek Rtx-VMS, 60 m x 0.25mm ID capillary column (MS04), and a Vocarb 3000 adsorbent trap.

Holding Times and Sample Preservation
All samples were prepared and analyzed within the method and/or QAPP specified holding time requirements. Samples were unpreserved.

Laboratory Control Sample
All spike recoveries met method and/or project specific QC criteria.

MS/MSD/MSB
The following compound(s) did not meet matrix spike/matrix spike duplicate percent recovery and/or RPD criteria:

Sample Description	Sample #	Compound	% REC	RPD	Corrective Action
MBSS-1	0810083-001AMS/MSD	Methyl acetate	X	X	1

1 The associated LCS and MSB met acceptance limits.

Surrogate Standards
Surrogate recoveries exceeded the upper control limit for toluene-d8 and/or 4-bromofluorobenzene in all soil samples. Matrix effects are suspected. Recoveries may have been biased due to low response of the associated internal standard(s). Associated target analytes results may also be biased high. All samples were reanalyzed at the same sample weight and both results are reported.

Internal Standards
Internal standard recoveries exceeded the lower control limit for chlorobenzene-d5 and/or 1,4-dichlorobenzene-d4 in all soil samples. Matrix effects are suspected. Samples were reanalyzed at the same sample weight and both results were reported.

Calibrations
All initial calibrations and calibration verifications met method and/or project specific QC criteria.

GC/MS Volatile Organics Case Narrative - Page 2

Client: OBG-MS
Project/Order: City of Geneva – Market Basket Site
Work Order #: 0810083
Methodology: 8260B

Preparation Blanks
All preparation blanks met method and/or project specific QC criteria.

GC/MS Semi-Volatile Organics Case Narrative

Client ID: OBG-MS
Project/Order: City of Geneva-Market Basket Site
Work Order #: 0810083
Methodology: 8270C

Analyzed/Reviewed by (Initials/Date): 11/6/08
Supervisor/Reviewed by (Initials/Date): 11-6-08
QA/QC Review (Initials/Date): 11/5/08

File Name: G:\Narratives\MSSemi\0810083svnar.doc

GC/MS Semi-Volatile Organics
The GC/MS Semi-volatile instruments used a J & W DB-5MS, 30 m x 0.25 mm ID capillary column.

Holding Times and Sample Preservation
All samples were prepared and analyzed within the method and/or QAPP specified holding time requirements. Due to suspected contamination during initial sample preparation, samples MBSS-1 MSD [0810083-001BMSD] and MBSS-2 [0810083-002B] were re-extracted within method holding time, but outside ASP holding time. Limited sample prevented re-extraction of the parent sample and matrix spike for MBSS-1 [0810083-001B].

Laboratory Control Sample
The following compound(s) did not meet laboratory control sample recovery criteria:

LCS No.	Compound	Corrective Action
LCS-8270	4-Chloroaniline	1

1 The recovery for this compound in the associated MSB was within acceptance limits. No corrective action was taken.

MS/MSD/MSB
The following compound(s) did not meet matrix spike/matrix spike duplicate percent recovery and/or RPD criteria:

Sample Description	Sample #	Compound	% REC	RPD	Corrective Action
MBSS-2	0810083-002B	several	X	X	1

1 Concentrations of several analytes in the sample were much greater than the concentration of the analyte spiked, which may bias recoveries. The sample extract was diluted, which also may bias recoveries. The recovery for all compounds in the associated MSB was within acceptance limits. No corrective action was taken.

GC/MS Semi-Volatile Organics Case Narrative - Page 2

Client ID: OBG-MS
Project/Order: City of Geneva-Market Basket Site
Work Order#: 0810083
Methodology: 8270C

Surrogate Standards
The following sample(s) did not meet surrogate recovery criteria:

Sample Description	Sample #	Surrogate	Corrective Action
MBSS-4	0810083-004B	Terphenyl-d14	1
MBSS-FD	0810083-005B	Terphenyl-d14	1

1 The recovery met acceptance criteria when reanalyzed at a higher dilution. Matrix interference is suspected. Both sets of data are reported. No further corrective action was taken.

Internal Standards
The internal standard area for the following sample(s) did not meet abundance criteria:

Sample Description	Sample #	Internal Standard	Corrective Action
MBSS-2	0810083-002B	Perylene-d12	1
MBSS-3	0810083-003B	Perylene-d12	1
MBSS-4	0810083-004B	Chrysene-d12	1
		Perylene-d12	1
MBSS-FD	0810083-005B	Chrysene-d12	1
		Perylene-d12	1

1 The recovery met acceptance criteria when reanalyzed at a higher dilution. Matrix interference is suspected. Both sets of data are reported. No further corrective action was taken.

Calibrations
All initial calibrations and calibration verifications met method and/or project specific QC criteria.

Preparation Blanks
All preparation blanks met method and/or project specific QC criteria.

Trace Metals Case Narrative

Client ID: OBG-MS
Project/Order: City of Geneva – Market Basket Site
Work Order: 0810083
Methodology: ICP metals – SW6010B

Analyzed/Reviewed by (Date/Initials): 10-28-08 mt

Supervisor/Reviewed by (Date/Initials): 10-28-08 mt

QA/QC Review (Date/Initials): 10/30/08 tbh

Trace Metals

Holding Times
All samples were prepared and analyzed within the method and/or QAPP specified holding time requirements.

Laboratory Control Sample
All spike recoveries met method and/or project specific QC criteria.

MS/MSD AND MS/MSD RPD
The following analytes did not meet matrix spike/matrix spike duplicate percent recovery criteria:

Sample Description	Sample #	Analyte	% REC	RPD	Corrective Action
MBSS-1	0810083-001B	Fe, Zn	X		1

1 The concentration of the analyte in the sample was much greater than the concentration of the spike added. A post-digestion spike was performed as required. No further corrective action was taken.

ICP Serial Dilution
All percent differences met method and/or project specific QC criteria.

Calibrations
All calibrations and calibration verifications met method and/or project specific QC criteria.

Preparation Blanks
All preparation blanks met method and/or project specific QC criteria.

Trace Metals Case Narrative

Client ID: OBG-MS
Project/Order: City of Geneva – Market Basket Site
Work Order: 0810083
Methodology: Mercury – SW7471A

Analyzed/Reviewed by (Date/Initials): 10-28-08 mt

Supervisor/Reviewed by (Date/Initials): 10-28-08 mt

QA/QC Review (Date/Initials): 10/30/08 tbh

Trace Metals
There were no excursions to note. All QC results were within established control limits.

Subject: Re: Geneva

Yes, please select an MS/MSD.

>>> "Monika Santucci" <santuccim@lsl-inc.com> 10/10/2008 2:48 PM >>>
Hi Dave,

I just want to confirm that you want the lab to select an MS/MSD for the Geneva project. Also, we consider MS/MSD billable samples so I want to make sure that you are aware of that. I do recommend an MS/MSD from a data validation stand point.

Thanks

Monika Santucci

MDLs are calculated using the method in Appendix B, Part 136, Revision 1.11 of the Federal Register, Volume 49, No. 209, October 1984.

MDL=(S.Dev) x (t-value)

The GC/MS instrument **minimum** threshold quantitation level is set to 0.5 ug/Kg.

The MDL is a statistical measurement which defines the theoretical minimum concentration of a substance which can be measured and reported with 99% confidence that the analyte concentration is greater than zero.

MDL Verifications: * not verified, surrogate no longer utilized.

Qualifiers:
* Value exceeds Maximum Contaminant Level
E Value exceeds the instrument calibration range
J Analyte detected below the PQL
P Prim./Conf. column %D or RPD exceeds limit
B Analyte detected in the associated Method Blank
H Holding times for preparation or analysis exceeded
ND Not Detected at the Practical Quantitation Limit (PQL)
S Spike Recovery outside accepted recovery limits

Copy of Calculations

GC/MS SOIL SAMPLE CALCULATIONS

1. Relative Response Factors for GC/MS Volatiles and Semivolatiles

$$RRF = \frac{A_x}{A_{is}} \times \frac{C_{is}}{C_x}$$

Where: A_x = Area of the characteristic ion for the compound to be measured
A_{is} = Area of the characteristic ion for the specific internal standard
C_{is} = Concentration of the internal standard (µg/Kg)
C_x = Concentration of the compound to be measured (µg/Kg)

2. Relative Standard Deviation

$$\%\ RSD = \frac{SD}{\overline{X}} \times 100$$

Where: RSD = Relative Standard Deviation
SD = Standard Deviation of initial relative response factors (per compound)
$\overline{X}$ = Mean of initial relative response factors (per compound)

3. %Deviation for Continuing Calibration (for quantitation from RF only)

$$\%\ Deviation_{(400.0)} = \frac{RRF_c - \overline{RRF_i}}{\overline{RRF_i}} \times 100$$

$$\%\ Deviation_{(software)} = \frac{\overline{RRF_i} - RRF_c}{\overline{RRFi}} \times 100$$

Where: RRF_c = Relative response factor from continuing calibration standard
$\overline{RRF_i}$ = Mean relative response factor from most recent initial calibration meeting technical acceptance criteria

4. %Drift for Continuing Calibration (for quantitation from RF or Curve)

$$\%\ Drift_{(400.0)} = \frac{C_c - C_t}{C_t} \times 100$$

$$\%\ Drift_{(software)} = \frac{C_c - C_c}{C_t} \times 100$$

Where: C_t = Calibration check std concentration (theoretical)
C_c = Measured concentration

GC/MS SOIL SAMPLE CALCULATIONS

5. RRT Deviation

$$\Delta\ RRT = RRT_x - RRT_c,\ RRT = \frac{RT_x}{RT_i}$$

Where: RRT_x = Relative RT of target compound in sample
RRT_c = RRT of target in continuing calibration standard
RT_x = RT of target compound
RT_i = RT of internal standard

6. Final Concentration for GC/MS Volatiles
Low Soil

$$Concentration\ (\mu g/kg) = \frac{A_x)(I_{is})V_o}{(A_{is})(RRF)(W_s)(D)}$$

Where: V_o = Volume of water purged (5 to 25 mL)
A_x = Area of the characteristic ion for the compound to be measured
A_{is} = Area of the characteristic ion for the specified internal standard
I_{is} = Concentration of internal standard added in nanograms/ml
W_s = Weight of sample purged (1-5g)
D = % solids/100
RRF = Response factor for compound to be measured (average or single point) *

* For compounds calculated using a regression equation for initial calibration, the terms of the equation replace the RRF.

Medium Soil

$$Concentration\ (\mu g/kg) = \frac{(A_x)(I_{is})(V_T)(V_A)Df}{(A_{is})(RRF)(W_s)(V_A)(D)}$$

Where: RRF, A_x, A_{is}, I_{is} = Same as above
W_s = Weight of sample extracted (5g)
V_T = Total volume of methanol extract adjusted for sample moisture.

V_T = mL solvent + (%moisture x W_s/100)

V_A = Volume of methanol extract used for purging
V_o = Volume of water purged
Df = Dilution factor if original extract is diluted

7. Final Concentration for GC/MS Semivolatiles

$$Concentration\ (\mu g/kg) = \frac{(A_x)(I_{is})(V_T)(Df)(2.0)}{(A_{is})(RRF)(V_i)(Ws)(D)}$$

Where: RRF, A_x, A_{is}, I_{is} D, Df= Same as above
W_S = Weight of sample extracted (g)
V_T = Volume of concentrated extract (µL)

GC/MS SOIL SAMPLE CALCULATIONS

V_T = Volume of extract injected (µL)

The factor of 2.0 is used to account for the amount of extract that is not recovered from the GPC. If the GPC is not used, this factor is not used.

8. Matrix Spike Recovery for Volatiles and Semivolatiles

$$Recovery\ (\%) = \frac{(SSR) - (SR)}{(SA)} \times 100$$

Where: SSR = Spike sample result
SR = Sample result
SA = Spike added

9. % RPD of Matrix Spike and Matrix Spike Duplicate

$$\%RPD = 100 \times \frac{|S - D|}{((S + D)/2)}$$

Where: S = First Sample Value (Original)
D = Second Sample Value (Duplicate)

10. The Recovery of Reference Sample (LCS) and Surrogate

$$Recovery\ (\%) = \frac{SR}{SA} \times 100$$

Where: SR = Sample results
SA = Sample spike added

11. The calculation of Library Search compounds (TICs) is similar to target compounds except a RRF of 1.0 is assumed.

MDLs are calculated using the method in Appendix B, Part 136, Revision 1.11 of the Federal Register, Volume 49, No. 209, October 1984

MDL=(S.Dev) x (t-value)

The MDL is a statistical measurement which defines the theoretical minimum concentration of a substance which can be measured and reported with 99% confidence that the analyte concentration is greater than zero.

The GC/MS instrument **minimum** threshold quantitation level is set to 0.5 (or 1.0 ug/mL) ug/mL of extract (dependant on the initial calibration low standard concentration).

MDL verified (MS5/MS6): 2-24-08 (*not verified)

4-8-08

Laboratory Worksheets

Copy of Calculations

GC/MS SOIL SAMPLE CALCULATIONS

1. Relative Response Factors for GC/MS Volatiles and Semivolatiles

$$RRF = \frac{A_x}{A_{is}} \times \frac{C_{is}}{C_x}$$

Where: A_x = Area of the characteristic ion for the compound to be measured
A_{is} = Area of the characteristic ion for the specific internal standard
C_{is} = Concentration of the internal standard (µg/Kg)
C_x = Concentration of the compound to be measured (µg/Kg)

2. Relative Standard Deviation

$$\%\ RSD = \frac{SD}{\overline{X}} \times 100$$

Where: RSD = Relative Standard Deviation
SD = Standard Deviation of initial relative response factors (per compound)
$\overline{X}$ = Mean of initial relative response factors (per compound)

3. %Deviation for Continuing Calibration (for quantitation from RF only)

$$\%\ Deviation_{(ROBOT)} = \frac{RRF_c - \overline{RRF_i}}{\overline{RRF_i}} \times 100$$

$$\%\ Deviation_{(software)} = \frac{\overline{RRF_i} - RRF_c}{\overline{RRF_i}} \times 100$$

Where: RRF_c = Relative response factor from continuing calibration standard
$\overline{RRF_i}$ = Mean relative response factor from most recent initial calibration meeting technical acceptance criteria

4. %Drift for Continuing Calibration (for quantitation from RF or Curve)

$$\%\ Drift_{(ROBOT)} = \frac{C_c - C_t}{C_t} \times 100$$

$$\%\ Drift_{(software)} = \frac{C_t - C_c}{C_t} \times 100$$

Where: C_t = Calibration check std concentration (theoretical)
C_c = Measured concentration

GC/MS SOIL SAMPLE CALCULATIONS

5. RRT Deviation

$$\Delta\ RRT = RRT_x - RRT_c,\ RRT = \frac{RT_c}{RT_i}$$

Where: RRT_x = Relative RT of target compound in sample
RRT_c = RRT of target in continuing calibration standard
RT_c = RT of target compound
RT_i = RT of internal standard

6. Final Concentration for GC/MS Volatiles
Low Soil

$$\text{Concentration } (\mu g/kg) = \frac{A_x)(I_{is})V_o}{(A_{is})(RRF)(W_s)(D)}$$

Where: V_o = Volume of water purged (5 to 25 mL)
A_x = Area of the characteristic ion for the compound to be measured
A_{is} = Area of the characteristic ion for the specified internal standard
I_{is} = Concentration of internal standard added in nanograms/ml
W_s = Weight of sample purged (1-5g)
D = % solids/100
RRF = Response factor for compound to be measured (average or single point) *

* For compounds calculated using a regression equation for initial calibration, the terms of the equation replace the RRF.

Medium Soil

$$\text{Concentration } (\mu g/kg) = \frac{(A_x)(I_{is})(V_t)(V_o)Df}{(A_{is})(RRF)(W_s)(V_A)(D)}$$

Where: RRF, A_x, A_{is}, I_{is} = Same as above
W_s = Weight of sample extracted (5g)
V_t = Total volume of methanol extract adjusted for sample moisture:

V_T = mL solvent + (%moisture x W_s/100)

V_A = Volume of methanol extract used for purging
V_o = Volume of water purged
Df = Dilution factor if original extract is diluted

7. Final Concentration for GC/MS Semivolatiles

$$\text{Concentration } (\mu g/kg) = \frac{(A_x)(I_{is})(V_T)(Df)(2.0)}{(A_{is})(RRF)(V_i)(Ws)(D)}$$

Where: RRF, A_x, A_{is}, I_{is}, D, Df= Same as above
W_S = Weight of sample extracted (g)
V_T = Volume of concentrated extract (µL)

GC/MS SOIL SAMPLE CALCULATIONS

V_i = Volume of extract injected (µL)

The factor of 2.0 is used to account for the amount of extract that is not recovered from the GPC. If the GPC is not used, this factor is not used.

8. Matrix Spike Recovery for Volatiles and Semivolatiles

$$\text{Recovery } (\%) = \frac{(SSR) - (SR)}{(SA)} \times 100$$

Where: SSR = Spike sample result
SR = Sample result
SA = Spike added

9. % RPD of Matrix Spike and Matrix Spike Duplicate

$$\%RPD = 100 \times \frac{|S - D|}{((S + D)/2)}$$

Where: S = First Sample Value (Original)
D = Second Sample Value (Duplicate)

10. The Recovery of Reference Sample (LCS) and Surrogate

$$\text{Recovery } (\%) = \frac{SR}{SA} \times 100$$

Where: SR = Sample results
SA = Sample spike added

11. The calculation of Library Search compounds (TICs) is similar to target compounds except a RRF of 1.0 is assumed.

MDLs are calculated using the method in Appendix B, Part 136, Revision 1.11 of the Federal Register, Volume 49, No. 209, October 1984.

MDL=(S.Dev) x (t-value)

The MDL is a statistical measurement which defines the theoretical minimum concentration of a substance which can be measured and reported with 99% confidence that the analyte concentration is greater than zero.

This solution was assayed gravimetrically, using a balance calibrated against weight sets, ID #NJ86563, traceable to NIST.

The concentration of the final solution was verified by ICP against NIST SRM# 3101a

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to contain the elemental concentrations shown above. Balances, used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

This solution was assayed titrimetrically, using EDTA which was standardized against NIST SRM #928 (lead nitrate).

The concentration of the final solution was verified by ICP against NIST SRM# 3104a

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to contain the elemental concentrations shown above. Balances used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

This solution was assayed titrimetrically, using EDTA which was standardized against NIST SRM #928 (lead nitrate).

The concentration of the final solution was verified by ICP against NIST SRM# 3126a

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to contain the elemental concentrations shown above. Balances, used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

This solution was assayed gravimetrically, using a balance calibrated against weight sets, ID #NJ86563, traceable to NIST.

The concentration of the final solution was verified by ICP against NIST SRM# 3149

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to contain the elemental concentrations shown above. Balances used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.9999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.

This solution was assayed gravimetrically, using a balance calibrated against weight sets, ID #NJ86563, traceable to NIST.

The concentration of the final solution was verified by ICP against NIST SRM# 3165

RESULTS: This solution standard was certified for accuracy of major elemental constituency via methodology traceable to primary or well characterized secondary standards. All trace level elements and impurities were determined via plasma emission spectroscopy on the concentrate.

This standard was prepared gravimetrically to contain the elemental concentrations shown above. Balances, used in the preparation, are calibrated regularly using NIST-traceable weights. All glassware used in preparation is Class A.

We use the highest purity raw materials available, including high purity acids, ASTM type I 18 megohm deionized water, and typically 99.999%+ starting materials to minimize impurity levels in the final solution. All bottles are acid leached and then triple rinsed with deionized water prior to use.

Use good laboratory procedure when diluting this product. Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware.

We certify the accuracy of this standard to be ± 0.5% of the stated value until the expiration date listed above, provided it is kept tightly capped and stored under normal laboratory conditions.
