*RE: Monthly Monitoring Reports  
Yonkers Downtown Waterfront Development  
Parcels E (V00190-3) and F (B00045-3)*

Dear Mr. Gibbons,

ADVANCED ENVIRONMENTAL REDEVELOPMENT is the approved environmental consultant associated with the documentation and oversight of site clean-up currently underway at the above referenced sites. The clean-up is currently being performed under the actions described in AER's NYSDEC approved Work Plan dated January 2002.

As we agreed upon, monthly progress reports were to be submitted only when significant actions have been encountered. To date, three monthly reports have been prepared documenting the removal of two underground storage tanks, the disposal of limited petroleum containing soil and negative air monitoring results.

Copies of these reports are attached for your review and file. If you have any questions concerning this information, please call.

Sincerely,

ADVANCED ENVIRONMENTAL REDEVELOPMENT

Christopher J. Kopley, LEP, PG  
Principal

## Monthly Progress Report (May)

To: Mr. Mike Marcante/Mr. J. Flakowicz  
From: Chris Kopley  
Date: June 4, 2002

---

**Re: Monthly Progress Report Summary and Air Monitoring  
Parcels E and F  
Yonkers, New York**

Enclosed is the third monthly summary progress report concerning remedial activities conducted in accordance with our approved work plan dated January 2002 (voluntary clean-up agreement B0045-3). On-site monitoring began in January 2002 when site construction activities initiated. On January 9, 2002 AER observed the removal of two 3,000-gallon underground storage tanks from Parcel E of the Yonkers Waterfront Development Site. On March 5, 2002 AER observed the removal of approximately 21.22 tons of petroleum affected soil associated with the two underground storage tanks. Monthly progress reports for January and March are attached. This May progress report summarizes those remedial actions conducted at the site to date and specifically those site actions conducted during the months of April and May 2002.

### Air Monitoring

On January 15, 2002 AER, LLC initiated the NYSDEC approved Community Air Monitoring program for parcels E and F of the Yonkers Waterfront Development Site. The air monitoring program establishes and implements a perimeter air-monitoring program when ground intrusive site activities are performed and when affected soils are exposed.

AER has been monitoring ambient air at the site since January 15 when soil excavations for pile obstructions began. Currently buildings are being erected on both parcels E and F. Excavation activities for the months of April and May included excavating for water and electric services as well as grading for concrete slabs. A PID meter (Thermoenvironmental Instruments model 580EZ) is used to monitor ambient air volatile organic vapors down

gradient and upgradient of each excavation area. The meter is calibrated daily according to the manufacturer's instructions. Fifteen minute average readings have not exceeded 0.0 units (not detected).

Dust monitoring (PM-10) has been performed using a Casella DustPro Monitor. Dust levels are monitored down gradient and upgradient of each excavation area as stated in the work plan. The monitor is calibrated daily according to the manufacturer's instructions. Fifteen minute averages have not exceeded  $0.1 \text{ mg/m}^3$  no visible dust has been observed leaving the site.

Air monitoring and daily field logs are attached.

#### Future Activities

AER expects to visit the study sites twice per month until construction is completed. This reduced schedule is based upon the limited soil excavation remaining and the lack of meter readings above none detected. AER will submit additional monthly reports if significant data is collected.

AER is proceeding with the completion of the final report and NYS Professional Engineer Certification. These tasks will be completed after final site grading and plastic orange fencing installation.

## Monthly Progress Report (March)

To: Mr. Mike Marcante/Mr. J. Flakowicz  
From: Chris Kopley  
Date: March 13, 2002

---

**Re: Stockpiled Soil Removal and Air Monitoring  
Parcels E and F  
Yonkers, New York**

Enclosed is the second monthly progress report concerning remedial activities conducted in accordance with our approved work plan dated January 2002 (voluntary clean-up agreement B0045-3). This report discusses those remedial actions conducted at the site during the month of February and March 2002.

### Soil Removal

On January 9, 2002, AER observed the removal of two 3,000-gallon underground storage tanks located at the Yonkers Waterfront, Parcel E site. The removal of these tanks was described in our previous monthly progress report.

The tanks were located within a masonry vault that included concrete block walls and a concrete floor. The space between the tanks was backfilled; the backfill exhibited a petroleum odor. Backfill soils encountered consisted of brown, fine to course sand and gravel with some concrete and brick. The affected soil was removed from the vault and stockpiled on and covered with PVC sheeting. This soil was stockpiled approximately 15 feet east of the tank grave in a location chosen by Turner, the site contractor.

On March 5, 2002, AER observed the removal and off-site disposal of approximately 21.22 tons of affected soil. Sentrale, the site excavation contractor, loaded the affected soil into a single tri-axle dump truck supplied by Soil Safe, Inc., of New Jersey and transported to Soil Safe Inc., in Salem, New Jersey for disposal. Soil Safe is a licensed petroleum containing soil recycling facility. A tonnage report is attached.

### Air Monitoring

On January 15, 2002 AER, LLC initiated the NYSDEC approved Community Air Monitoring program for parcels E and F of the Yonkers Waterfront Development Site. The air monitoring program establishes and implements a perimeter air-monitoring program when ground intrusive site activities are performed and when affected soils are exposed.

AER has been monitoring ambient air at the site since January 15 when soil excavations for pile obstructions began. A PID meter (Thermoenvironmental Instruments model 580EZ) is used to monitor ambient air volatile organic vapors down gradient and upgradient of each excavation area. The meter is calibrated daily according to the manufacturer's instructions. Fifteen minute average readings have not exceeded 0.0 units (not detected).

Dust monitoring (PM-10) has been performed using a Casella DustPro Monitor. Dust levels are monitored down gradient and upgradient of each excavation area. The monitor is calibrated daily according to the manufacturer's instructions. Fifteen minute averages have not exceeded 0.1 mg/m<sup>3</sup> no visible dust has been observed leaving the site.

Air monitoring and daily field logs are attached.

**Re: Underground Storage Tank Removals and Air Monitoring  
Parcels E and F  
Yonkers, New York**

Enclosed is the first monthly progress report concerning remedial activities conducted in accordance with our approved work plan dated January 2002 (voluntary clean-up agreement B0045-3). This report discusses those remedial actions conducted at the site during the month of January 2002.

**Tank Removal**

On January 9, 2002, AER observed the removal of two 3,000-gallon underground storage tanks located at the Yonkers Waterfront, Parcel E, site. According to the site contractor, a 3,000-gallon underground storage tank was encountered during pile driving activities. The tank was located in the northeast corner of Parcel E approximately 75 feet west of the site trailer. The tank was reported to be empty and dry. Upon excavation of the first tank, AER discovered that a second 3,000-gallon underground storage tank was present adjacent to the first tank.

The newly discovered tank contained fuel oil and water. Approximately 2,000-gallons of a fuel and water mixture were pumped and cleaned from the tank by Northeast Environmental Inc./A.L. Eastmond & Sons of Mamaroneck and the Bronx, New York. A waste receipt is attached.

The tanks were removed by JRP Demolition of Fairfield Connecticut. The tanks were excavated with a Bobcat 325 tracked excavator equipped with a  $\frac{1}{4}$  yard bucket. The tanks were crushed and then loaded into a dump truck and a flatbed trailer and disposed of at H. Bixon & Sons in New Haven, Connecticut.

The tanks were located within a masonry vault that included concrete block walls and a concrete floor. The space between the tanks were backfilled with sand that exhibited a petroleum odor. This affected soil was removed from the vault and stockpiled on and covered with PVC sheeting. This soil was stockpiled on an area approximately 15 feet east of the tank grave chosen by the site contractor. Soils observed adjacent to the vault consisted of brown sand and silt with some gravel; no unusual odors were noted. Soils adjacent to the vault did not appear stained. The affected soil will be disposed of off-site after additional site excavation activities have been completed.

No confirmation soil samples were collected due to the containment of the tanks and affected soil within the vault. Based on AER's investigation, further site testing or studies for these tanks are not warranted.

#### Air Monitoring

On January 15, 2002 AER, LLC initiated the Community Air Monitoring program for parcels E and F of the Yonkers Waterfront Development Site. The air monitoring program establishes and implements a perimeter air-monitoring program when ground intrusive site activities are performed and when affected soils are exposed.

AER has been monitoring ambient air at the site since January 15 when soil excavations for pile obstructions began. A PID meter (Thermoenvironmental Instruments model 580EZ) has been used to monitor ambient air volatile organic vapors down gradient and upgradient of each excavation area. The meter is calibrated daily according to the manufacturer's instructions. Fifteen minute average readings have not exceeded 0.0 units (not detected).

Dust monitoring has not yet been authorized by the City of Yonkers personnel. AER has not observed any unusual dust conditions due primarily to the recent wet weather conditions.

Air monitoring and daily field logs are attached.
