

New York State Department of Environmental Conservation
Division of Environmental Remediation

NOTICE OF AVAILABILITY

**RECORD OF DECISION
PROVAN FORD SITE
ENVIRONMENTAL RESTORATION SITE (#B00127-3)
CITY OF NEWBURGH, ORANGE COUNTY**

The New York State Department of Environmental Conservation (NYSDEC) announces that the printed Record of Decision (ROD) for the Provan Ford Environmental Restoration Site # B00127-3, City of Newburgh, Orange County, is available. The ROD presents the selected remedy for the Provan Ford Site and the rationale for the chosen remedy.

NYSDEC held a public meeting on March 7, 2005, presenting the Proposed Remedial Action Plan for the Provan Ford Site and receiving public comments on the proposal. The comments received at this meeting and during the public comment period (February 11, 2005 through March 28, 2005) were considered along with the administrative record for the site in preparing the final ROD. The ROD also contains a Responsiveness Summary addressing the public comments received.

The chosen remedial action plan described in the ROD includes:

- A remedial design program to provide the details necessary to implement the remedial program.
- A pre-design investigation to determine the extent of off-site groundwater and vapor contamination.
- Demolition of the former Provan Ford operations building and wash rack.
- Excavation of subsurface soils impacted with volatile organic compounds (VOCs) or light non-aqueous phase liquid (LNAPL).
- LNAPL recovery from open excavation areas.
- Off-site treatment/disposal of excavated soil and LNAPL to an appropriate, NYSDEC approved disposal facility.
- Removal, cleaning and off-site disposal of the 8,000 gallon underground storage tank (UST) present under the wash rack area.
- Backfill excavated areas with clean fill.
- Treatment of on-site groundwater using *in situ* chemical oxidation.

- Covering all vegetated areas with clean soil and all non-vegetated areas with either concrete or a paving system.
- Development of a site management plan to address residual contamination and any use restrictions.
- Annual certification of the institutional and engineering controls.
- Imposition of an environmental easement.
- Operation of the remedial components until achievement of remedial objectives or technical impracticability.
- Institution of a long term monitoring program.

The Provan Ford Site ROD with responsiveness summary is available on the internet at:
