SJB Project No. BD-17-092

Village of Manchester
8 Clifton Street
PO Box 188
Manchester, New York 14504

Attention: Ms. Nancy Johnson, Mayor

Reference: Frederick Property Environmental Restoration Project
NYSDEC Site B00131-8
147 State Street
Manchester, New York

Dear Ms. Johnson:

As authorized by the Village of Manchester, SJB Services, Inc. (SJB) completed a subsurface investigation with analytical soil testing at the referenced property from August 30, 2017 to September 5, 2017. The work was completed in accordance with the 2017 Supplemental Work Plan; Frederick Property Environmental Restoration Project, 147 State Street, NYSDEC Site B00131-8; Manchester, New York, February 2017 (Revised May 2017); provided to SJB from the Village of Manchester.

TEST BORINGS

A Central Mine Equipment (CME) 550-X rotary drill rig was utilized at the site to advance 7 test borings. Soil sampling was performed in accordance with ASTM D-1586 "Standard Test Method for Penetration Test and Split Barrel Sampling of Soils". The locations of the borings were determined by others and are presented in the 2017 Supplemental Work Plan.

SUBSURFACE CONDITIONS

Test boring SB-4 was advanced to a depth of 10 feet below grade. Split spoon sampler refusal was encountered at borings SB-1, SB-2, SB-5, SB-6 and SB-7 at depths ranging from 5.9 feet grade to 9.9 feet below grade. At the request of the NYSDEC, the boring depth of SB-3 was extended beyond 10 feet due to the presence of petroleum impacts. This boring was completed at 12.1 feet with split spoon sampler refusal.

The recovered soils were classified by an Empire geologist who prepared subsurface test boring logs for each location. The logs are attached to this report.

The subsurface soils generally consisted of a sand fill overlying native sand deposits. The fill material was approximately 2 to 8 feet thick at locations SB-1 through SB-6. Deposits of native silty clays were encountered below the sand fills and above the native sand deposits at SB-5 and SB-6.

Free standing water was encountered at SB-3 approximately 10.5 feet below grade.

ENVIRONMENTAL SCREENING

The Empire geologist screened the recovered soils with a MiniRAE Lite photoionization detector (PID). The PID is capable of detecting volatile organic vapor concentrations at a practical threshold of 1.0 part per million (ppm). The geologist also inspected the soils for evidence of environmental degradation (i.e. discoloration, staining, odors, etc.). Elevated PID measurements and evidence of environmental degradation were observed on the soils recovered from borings SB-2 and SB-3, as summarized below.

| Boring Location | PID Reading (ppm) | Depth Interval (Feet) | Observations |
|-----------------|-------------------|-----------------------|--|
| SB-2 | Background | 8 - 10 | Very slight fuel-like odor, very slight staining |
| SB-3 | 60-70; peak 340 | 6 – 8 | Gasoline-like odor |
| | 70 – 120 | 8 - 10 | Gasoline-like odor |
| | 400 – 1,000 | 10 – 12 | Gasoline-like odor |
| | 500 – 1,000 | 12 – 12.1 | Gasoline-like odor |

Petroleum product collected on the surface of the observed groundwater in boring SB-3. The product thickness was estimated at 1/8 inch.

PID measurements are recorded on the subsurface logs.

SOIL SAMPLING

As specified in the Supplemental Work Plan, soil samples of the fill material were collected from one boring located in each of the following areas: former pump island excavation, hydraulic lift excavation, and dry well excavation. The fill was sampled from 0–2 inches below grade, 2–12 inches below grade, and 12–24 inches below grade, as specified in the Supplemental Work Plan. In addition, a “native soil/bottom of test boring sample” was collected from each soil boring.

For each sample collected for laboratory analysis, the recovered soils were placed into stainless steel bowls and homogenized before placing the soils into certified, pre-cleaned glass containers, labeled with the date, time, location of project, and stored in an iced cooler at approximately 4 degrees Celsius for transport to Alpha Analytical located in Westborough, Massachusetts. Alpha Analytical is a New York State Department of Health (NYSDOH) certified laboratory. Chain-of-custody documentation was maintained with the samples.

All sampling equipment and drilling rods were decontaminated between sampling intervals and locations to minimize the potential for cross contamination.

ANALYTICAL TESTING

As specified in the Supplemental Work Plan, the samples were analyzed for the following:

- Target Compound List Volatile Organic Compounds (Test Method 8260)
- Target Compound List Semi Volatile Organic Compounds (Test Method 8270)
- Pesticides/Polychlorinated Biphenyls (Test Method 8081/8082)
- Target Analyte List Metals (Test Method 6010/7471)

A blind field duplicate, SB-1A, was collected from SB-1 (12 to 24 inches) and MS/MSD samples were collected at SB-7 (2 to 12 inches) as required by the Supplemental Work Plan.

Sample SB-1B is the “native soil/bottom of the boring sample” for test boring SB-1. It was Empire’s understanding that the site was excavated to a depth of 9 feet. Therefore, Empire did not retain enough soil for analytical testing from a depth of 6 to 8 feet at SB-1. Split spoon refusal was encountered at 8 feet, when Empire attempted to advance the boring. Empire complete another boring approximate 4 feet south of SB-1 to collect the native sample.

The lab reports are attached.

CLOSING

This project and report have been completed for the Village of Manchester in accordance with generally accepted environmental practices. Empire appreciates the opportunity to provide these services. If you have any questions or we can provide further assistance, please contact our office at 716-649-8110.

Respectfully submitted,
EMPIRE GEOSERVICES, INC.

Project Name: FREDERICK PROPERTY
Project Number: BD-17-092

Lab Number: L1730972
Report Date: 09/11/17

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

Any reported concentrations that are below 200 ug/kg may be biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

L1730972-04: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

Total Metals

L1730972-01 through -05: The samples have elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the high concentrations of target and non-target elements.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

| | |
|----------|---|
| EDL | - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME). |
| EPA | - Environmental Protection Agency. |
| LCS | - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes. |
| LCSD | - Laboratory Control Sample Duplicate: Refer to LCS. |
| LFB | - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes. |
| MDL | - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. |
| MS | - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. |
| MSD | - Matrix Spike Sample Duplicate: Refer to MS. |
| NA | - Not Applicable. |
| NC | - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit. |
| NDPA/DPA | - N-Nitrosodiphenylamine/Diphenylamine. |
| NI | - Not Ignitable. |
| NP | - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil. |
| RL | - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable. |
| RPD | - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report. |
| SRM | - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples. |
| STLP | - Semi-dynamic Tank Leaching Procedure per EPA Method 1315. |
| TIC | - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations. |

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name: FREDERICK PROPERTY
Project Number: BD-17-092

Lab Number: L1730972
Report Date: 09/11/17

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: NPW and SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

EPA 9012B: NPW: Total Cyanide

EPA 9050A: NPW: Specific Conductance

SM3500: NPW: Ferrous Iron

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO₂, NO₃.

SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility

SM 2540D: TSS

EPA 3005A NPW

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.**

Non-Potable Water

SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH, EPA 350.1: Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **EPA 351.1, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D.**

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9221E.**

Mansfield Facility:

Drinking Water

EPA 200.7: Ba, Be, Cd, Cr, Cu, Ni, Na, Ca. **EPA 200.8:** Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Ni, Se, TL. **EPA 245.1 Hg.**

Non-Potable Water

EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.

EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn.

EPA 245.1 Hg.

Project Name: FREDERICK PROPERTY
Project Number: BD-17-092

Lab Number: L1731243
Report Date: 09/13/17

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Number: BD-17-092

Lab Number: L1731243
Report Date: 09/13/17

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

Any reported concentrations that are below 200 ug/kg may be biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Total Metals

L1731243-01 through -06: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG1039482-3/-4 MS/MSD recoveries for aluminum (812%/776%), calcium (10%/67%), iron (2630%/1140%), magnesium (73%/30%), and manganese (144%/132%), performed on L1731243-04, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1039482-3/-4 MS/MSD recoveries, performed on L1731243-04, are outside the acceptance criteria for antimony (60%/64%) and lead (62%/147%). A post digestion spike was performed and yielded an unacceptable recovery for lead (76%); all other compounds were within acceptance criteria. This has been attributed to sample matrix.

The WG1039482-3/-4 MS/MSD RPD, performed on L1731243-04, is above the acceptance criteria for lead (39%).

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

| | |
|----------|---|
| EDL | - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME). |
| EPA | - Environmental Protection Agency. |
| LCS | - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes. |
| LCSD | - Laboratory Control Sample Duplicate: Refer to LCS. |
| LFB | - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes. |
| MDL | - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. |
| MS | - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. |
| MSD | - Matrix Spike Sample Duplicate: Refer to MS. |
| NA | - Not Applicable. |
| NC | - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit. |
| NDPA/DPA | - N-Nitrosodiphenylamine/Diphenylamine. |
| NI | - Not Ignitable. |
| NP | - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil. |
| RL | - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable. |
| RPD | - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report. |
| SRM | - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples. |
| STLP | - Semi-dynamic Tank Leaching Procedure per EPA Method 1315. |
| TIC | - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations. |

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name: FREDERICK PROPERTY
Project Number: BD-17-092

Lab Number: L1731243
Report Date: 09/13/17

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: NPW and SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

EPA 9012B: NPW: Total Cyanide

EPA 9050A: NPW: Specific Conductance

SM3500: NPW: Ferrous Iron

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO₂, NO₃.

SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility

SM 2540D: TSS

EPA 3005A NPW

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

Project Name: FREDERICK PROPERTY
Project Number: BD-17-092

Lab Number: L1731245
Report Date: 09/13/17

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Lab Number: L1731245
Report Date: 09/13/17

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

Any reported concentrations that are below 200 ug/kg may be biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Total Metals

L1731245-01 through -06: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

| | |
|----------|---|
| EDL | - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME). |
| EPA | - Environmental Protection Agency. |
| LCS | - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes. |
| LCSD | - Laboratory Control Sample Duplicate: Refer to LCS. |
| LFB | - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes. |
| MDL | - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. |
| MS | - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. |
| MSD | - Matrix Spike Sample Duplicate: Refer to MS. |
| NA | - Not Applicable. |
| NC | - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit. |
| NDPA/DPA | - N-Nitrosodiphenylamine/Diphenylamine. |
| NI | - Not Ignitable. |
| NP | - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil. |
| RL | - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable. |
| RPD | - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report. |
| SRM | - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples. |
| STLP | - Semi-dynamic Tank Leaching Procedure per EPA Method 1315. |
| TIC | - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations. |

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name: FREDERICK PROPERTY
Project Number: BD-17-092

Lab Number: L1731245
Report Date: 09/13/17

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: NPW and SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

EPA 9012B: NPW: Total Cyanide

EPA 9050A: NPW: Specific Conductance

SM3500: NPW: Ferrous Iron

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO₂, NO₃.

SM5310C: DW: Dissolved Organic Carbon

RE: NYSDEC Site #B00131 (Frederick Property)
147 State Street, Manchester New York
Data Package for Supplementary Studies: June 2018

Dear Ms. Miles:

This letter, prepared by DAY Engineering, P.C. (DAY) on behalf of the Village of Manchester, summarizes the findings of supplementary studies completed at the above-referenced property (Site) between June 20, 2018 and July 2, 2018. These studies were completed in accordance with the provisions described in an Investigation Work Plan (IWP) dated April 2018, which was approved by the New York State Department of Environmental Conservation (NYSDEC) and New York State Department of Health (NYSDOH) as outlined in a letter from the NYSDEC dated May 21, 2018. A project locus map is presented as Figure 1.

Test Borings and Monitoring Well Installation

On June 20, 2018, ten test borings designated TB-201 through TB-206, TB-206A, TB-207, TB-208, and MW-A were advanced at the Site in the approximate locations identified on Figure 2. The subsurface conditions observed at each location are documented on the test boring logs provided as Attachment A. Soil samples were retained for testing from select test borings as outlined on Table 1, titled *Analytical Laboratory Testing Program*. The soil samples were transported by a DAY representative to ALS Environmental Laboratory (ALS) in Rochester, NY for testing.

A 2-inch diameter monitoring well, designated MW-A, was installed adjacent to test boring MW-A on June 20, 2018. [Note: The drilling equipment encountered an object at the base of test boring MW-A which caused the auger stem to deflect away from the boring hole. Therefore, the augers were retracted and monitoring well MW-A was subsequently installed approximately 2.5 feet to the northwest of test boring MW-A.] A monitoring well construction diagram for MW-A is provided as Attachment B.

During the advancement of the test borings and well installation described above, CAMP monitoring was completed as described in the IWP. CAMP response/action levels were not exceeded at the downwind Site boundary or western Site boundary (i.e., in proximity to potentially exposed individuals or structures) during the intrusive work completed on June 20, 2018.

Development and Sampling of Monitoring Well MW-A

On June 26, 2018, monitoring well MW-A was evaluated for the presence of free petroleum product and developed for subsequent sampling. The data collected on June 26, 2018 is summarized on the well development log provided in Attachment C. [Note: Free petroleum product was not encountered in MW-A on June 26, 2018 (i.e., prior to, or during, the well development process.)]

On July 2, 2018, monitoring well MW-A was re-evaluated for the presence of free petroleum product and subsequently purged (to dry conditions) and allowed to recharge prior to sampling. Free petroleum product was not encountered in MW-A on July 2, 2018. Therefore subsequent to recovery, a groundwater sample was collected from monitoring well MW-A and subsequently transported by a DAY representative to ALS for testing. Data collected during the sampling of MW-A is summarized on the Well Sampling Log included in Attachment C.

Location and Elevation Survey

The locations of the existing monitoring wells (i.e., MW-1 through MW-6, RW-1 through RW-3 and P102), the test borings installed on June 20 2018, and MW-A were measured using a Trimble model Geo XH™ GPS receiver and an elevation survey of each inner well casing of the existing monitoring wells and MW-A was also completed using a Topcon™ laser level.

Groundwater Flow

Static water levels were measured within accessible groundwater monitoring wells at the Site on July 2, 2018. A groundwater contour map, based on static water levels measured on July 2, 2018, is presented as Figure 3.

Analytical Laboratory Results

Each soil and groundwater sample submitted to ALS was tested for USEPA Target Compound List (TCL) and NYSDEC Commissioner's Policy (CP)-51 List volatile organic compounds (VOCs) plus tentatively identified Compounds (TICs) and for USEPA TCL and NYSDEC CP-51 List semi-volatile organic compounds (SVOCs) plus TICs. The results of the testing completed by ALS are summarized on the following tables:

Table 2 – Summary of detected TCL/CP-51 List VOCs plus TICs: Soil Samples;

Table 3 – Summary of detected TCL/CP-51 List SVOCs plus TICs: Soil Samples;

Table 4 – Summary of detected TCL/CP-51 List VOCs plus TICs: Groundwater Samples; and

Table 5 – Summary of detected TCL/CP-51 List SVOCs plus TICs: Groundwater Samples.

The data summary packages provided by ALS are presented as Attachment D.

DAY will contact the NYSDEC to discuss options to address the results of these supplemental studies and the next steps required pursuant to obtaining a Certificate of Completion (COC) for this Site. In the interim, please contact this office if you have questions.

Very truly yours,
Day Engineering, P.C.

Legend

-  Monitoring well installed June 20, 2018
-  Test boring advanced June 20, 2018
-  Soil boring advanced in August-September 2017
-  Existing bedrock monitoring well
-  Existing overburden monitoring well
-  Abandoned piezometer
-  Property Boundary

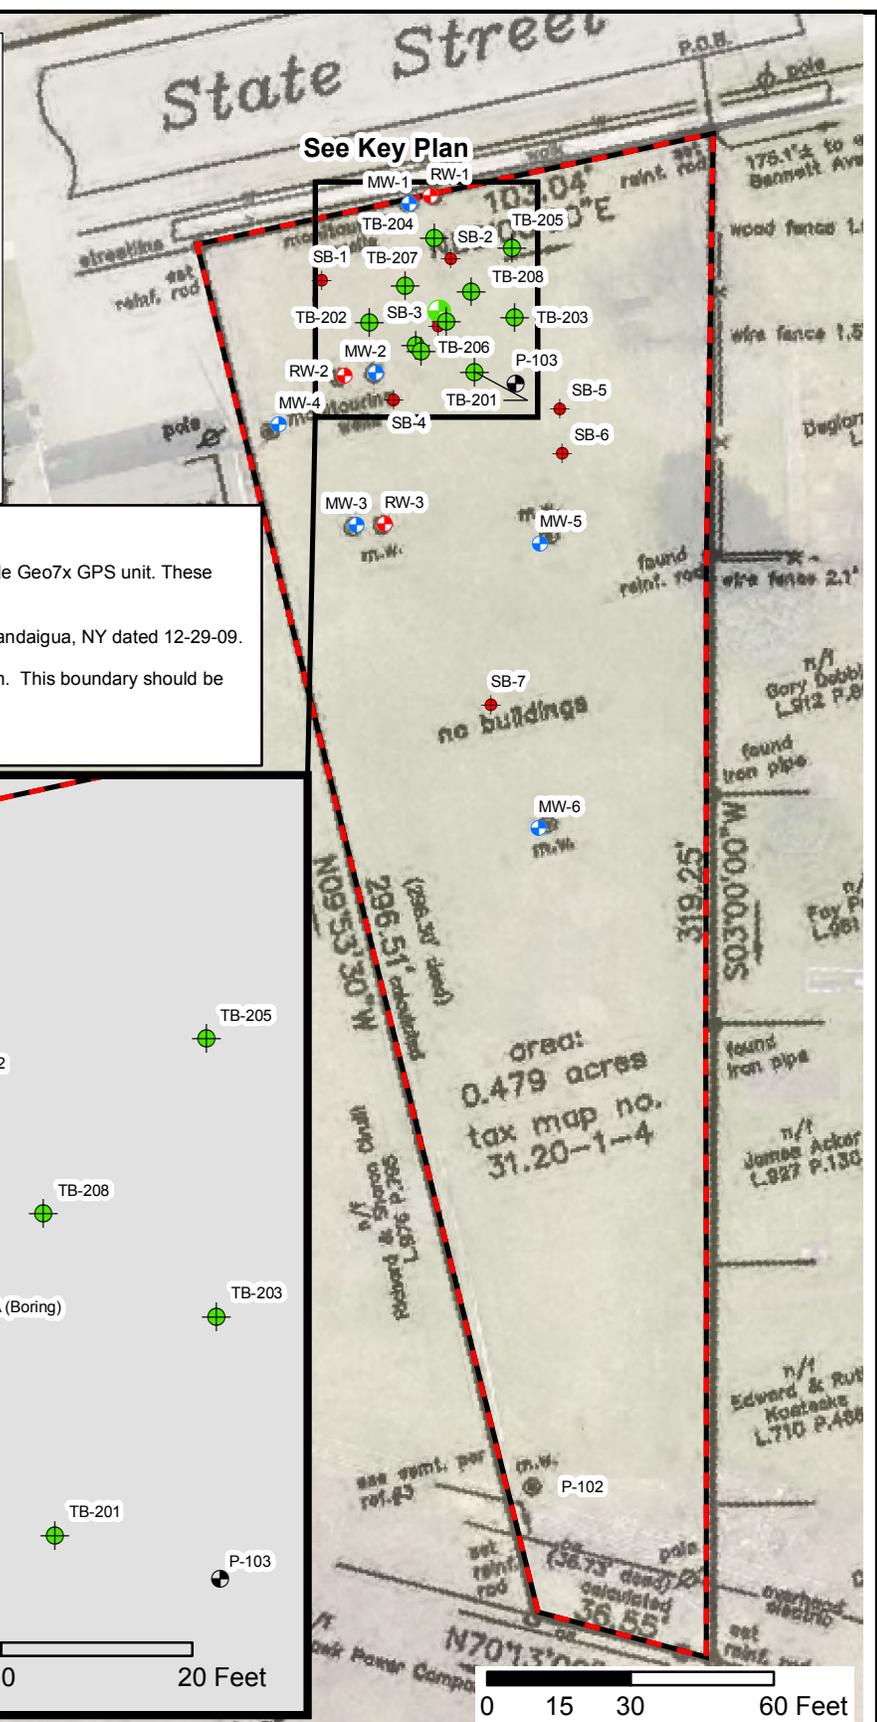

NOTES:

Overburden and Bedrock monitoring wells were located using a Trimble Geo7x GPS unit. These locations are to be considered approximate.

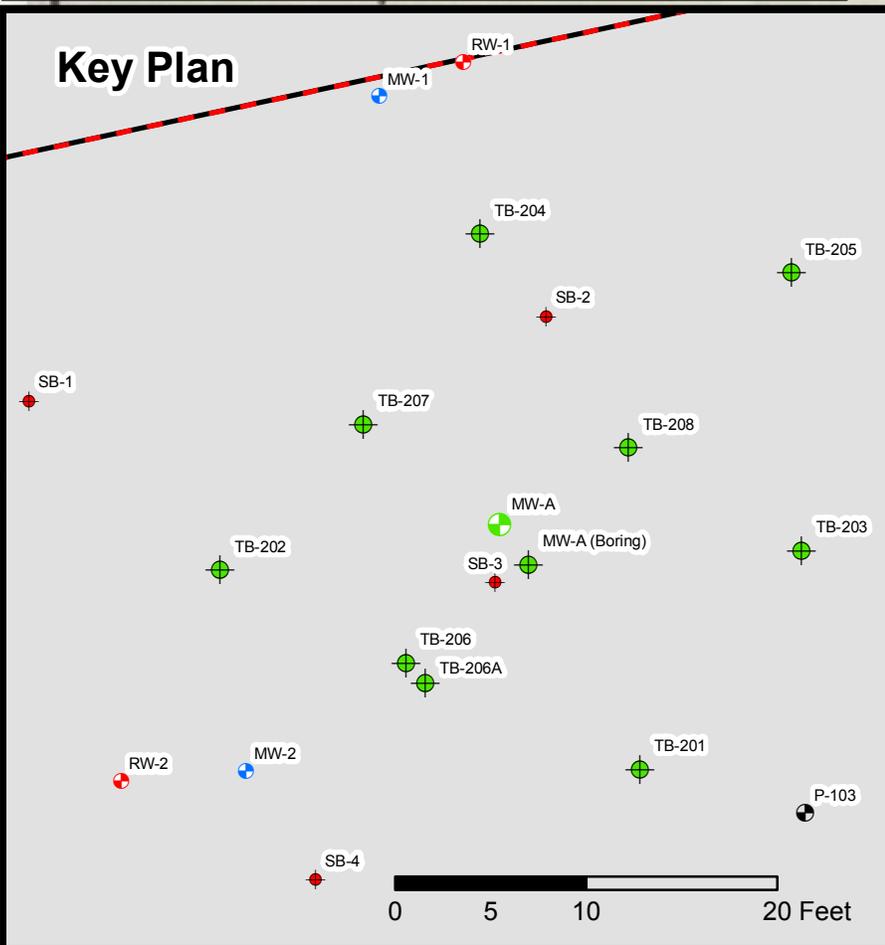

Site survey completed by Freeland-Perrinello Land Surveyors of Canandaigua, NY dated 12-29-09.

Property boundary provided by the Ontario County OnCor GIS system. This boundary should be considered approximate.

Aerial imagery provided by Pictometry, dated 2014.

NOTES

Results, SCOs and SCLs are presented in milligrams per kilogram (mg/kg) or parts per million (ppm).

(1) = Soil Cleanup Level (SCL) as referenced in NYSDEC Commissioner Policy 51 dated 10/21/2010.

(2) = Soil Cleanup Objective (SCO) for Protection of Groundwater as referenced in 6 NYCRR Part 375 dated 12/14/06.

(3) = Soil Cleanup Objective (SCO) for Restricted Commercial Use as referenced in 6 NYCRR Part 375 dated 12/14/06.

VOCs = Volatile Organic Compounds

TICs = Tentatively Identified Compounds

ND = Not Detected at a concentration greater than the detection limit reported by the analytical laboratory

NS = No Standard

J = Estimated Concentration

D = Concentration following sample dilution

*SCL and SCO for mixed xylenes, including the sum of m,p-xylenes and o-xylene

Highlighted value exceeds the SCL and/or Protection of Groundwater SCO

Highlighted value exceeds the Restricted Commercial Use SCO

Test Boring TB- 205

Ground Elevation: NA Datum: NA Page 1 of 1
 Date Started: 6/20/2018 Date Ended: 6/20/2018
 Borehole Depth: 7.9' Borehole Diameter: 2.25
 Completion Method: Well Installed Backfilled with Grout Backfilled with Cuttings
 Water Level (Date): NA

| Depth (ft) | Blows per 0.5 ft. | Sample Number | Sample Depth (ft) | % Recovery | N-Value or RQD% | Headspace PID (ppm) | PID Reading (ppm) | Sample Description | Notes |
|------------|-------------------|---------------|-------------------|------------|-----------------|---------------------|-------------------|---|-------|
| 1 | | | | | | | 0.0 | Grass and Topsoil | |
| | | | | | | | | Tan, fine Sand, little Silt, little Gravel, damp (FILL) | |
| 2 | - | S-1 | 0-4 | 73 | - | 0.0 | 0.0 | Tan, fine Sand, little fine to coarse Gravel (FILL) | |
| 3 | | | | | | | 0.0 | ...medium to coarse Sand, moist | |
| 4 | | | | | | | | | |
| 5 | | | | | | | 0.2 | | |
| 6 | - | S-2 | 4-7.7 | 58 | - | 0.0 | 0.0 | Brown, Clayey SAND and GRAVEL, moist | |
| 7 | | | | | | | 0.0 | ...wet | |
| | | | | | | | | Tan, CLAY, trace fine Sand | |
| 8 | - | S-3 | 7.7-7.9 | 100 | - | 0.0 | 0.0 | Fractured BEDROCK, wet | |
| 9 | | | | | | | | Equipment Refusal @ 7.9' | |
| 10 | | | | | | | | | |
| 11 | | | | | | | | | |
| 12 | | | | | | | | | |
| 13 | | | | | | | | | |
| 14 | | | | | | | | | |
| 15 | | | | | | | | | |
| 16 | | | | | | | | | |

- Notes: 1) Water levels were made at the times and under conditions stated. Fluctuations of groundwater levels may occur due to seasonal factors and other conditions.
 2) Stratification lines represent approximate boundaries. Transitions may be gradual.
 3) PID readings are referenced to an isobutylene standard. A MiniRae 3000 equipped with a 10.6 eV lamp was used to obtain the PID readings.
 4) NA = Not Available or Not Applicable
 5) Headspace PID readings may be influenced by moisture

Analytical Laboratory Reports and Chain-of Custody Documentation

July 03, 2018

Service Request No:R1805749

Mr. Charles Hampton
Day Environmental, Incorporated
1563 Lyell Avenue
Rochester, NY 14606

Laboratory Results for: Manche

Dear Mr.Hampton,

Enclosed are the results of the sample(s) submitted to our laboratory June 20, 2018
For your reference, these analyses have been assigned our service request number **R1805749**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Brady Kalkman
Project Manager

Client: Day Environmental, Incorporated
Project: Manche
Sample Matrix: Soil, Water

Service Request: R1805749
Date Received: 06/20/2018

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV, validation deliverables including all summary forms and associated raw data. Analytical procedures performed by the lab are validated in accordance with NELAC standards. Any parameters that are not included in the lab's NELAC accreditation are identified on a "Non-Certified Analytes" report in the Miscellaneous Forms Section of this report. Individual analytical results requiring further explanation are flagged with qualifiers and/or discussed below. The flags are explained in the Report Qualifiers and Definitions page in the Miscellaneous Forms section of this report.

Sample Receipt:

Six soil, water samples were received for analysis at ALS Environmental on 06/20/2018. Any discrepancies noted upon initial sample inspection are noted on the cooler receipt and preservation form included in this data package. The samples were received in good condition and consistent with the accompanying chain of custody form. Samples are refrigerated at 6°C upon receipt at the lab except for aqueous samples designated for metals analyses, which are stored at room temperature.

Semivolatiles by GC/MS:

Method 8270D, 06/22/2018: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.

Method 8270D, 06/22/2018: The Relative Percent Difference control limits were exceeded for one or more analytes in Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD). The associated recoveries of target compounds were in control, indicating the analysis was in control. No further corrective action was appropriate.

General Chemistry:

No significant anomalies were noted with this analysis.

Volatiles by GC/MS:

Method 8260C, 06/21/2018: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.

Method 8260C, 06/26/2018: The upper control criterion was exceeded for one or more analytes in the Laboratory Control Sample (LCS). There were no detections of the analyte(s) in the associated field samples. The error associated with elevated recovery equates to a high bias. The sample data is not significantly affected. No further corrective action was appropriate.

REPORT QUALIFIERS AND DEFINITIONS

| | |
|---|--|
| <p>U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.</p> <p>J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).</p> <p>B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.</p> <p>E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.</p> <p>E Organics- Concentration has exceeded the calibration range for that specific analysis.</p> <p>D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.</p> <p>* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.</p> <p>H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.</p> <p># Spike was diluted out.</p> | <p>+ Correlation coefficient for MSA is <0.995.</p> <p>N Inorganics- Matrix spike recovery was outside laboratory limits.</p> <p>N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.</p> <p>S Concentration has been determined using Method of Standard Additions (MSA).</p> <p>W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.</p> <p>P Concentration >40% difference between the two GC columns.</p> <p>C Confirmed by GC/MS</p> <p>Q DoD reports: indicates a pesticide/Aroclor is not confirmed ($\times 100\%$ Difference between two GC columns).</p> <p>X See Case Narrative for discussion.</p> <p>MRL Method Reporting Limit. Also known as:</p> <p>LOQ Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.</p> <p>MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).</p> <p>LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.</p> <p>ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.</p> |

| Florida ID # E87674 | North Carolina #676 | Rhode Island ID # 158 |
| | | Virginia #460167 |

¹ Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory or go to <https://www.alsglobal.com/locations/americas/north-america/usa/new-york/rochester-environmental>

Service Request No:R1806184

Mr. Charles Hampton
Day Environmental, Incorporated
1563 Lyell Avenue
Rochester, NY 14606

Laboratory Results for: 147 State Street, Manchester

Dear Mr.Hampton,

Enclosed are the results of the sample(s) submitted to our laboratory July 02, 2018
For your reference, these analyses have been assigned our service request number **R1806184**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Brady Kalkman
Project Manager

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV, validation deliverables including all summary forms and associated raw data. Analytical procedures performed by the lab are validated in accordance with NELAC standards. Any parameters that are not included in the lab's NELAC accreditation are identified on a "Non-Certified Analytes" report in the Miscellaneous Forms Section of this report. Individual analytical results requiring further explanation are flagged with qualifiers and/or discussed below. The flags are explained in the Report Qualifiers and Definitions page in the Miscellaneous Forms section of this report.

Sample Receipt:

One water sample was received for analysis at ALS Environmental on 07/02/2018. Any discrepancies noted upon initial sample inspection are noted on the cooler receipt and preservation form included in this data package. The sample was received in good condition and consistent with the accompanying chain of custody form. Samples are refrigerated at 6°C upon receipt at the lab except for aqueous samples designated for metals analyses, which are stored at room temperature.

Semivolatiles by GC/MS:

No significant anomalies were noted with this analysis.

Volatiles by GC/MS:

No significant anomalies were noted with this analysis.

A handwritten signature in black ink, appearing to read 'Brady Kullen', with a long horizontal flourish extending to the right.

REPORT QUALIFIERS AND DEFINITIONS

| | |
|--|---|
| <p>U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.</p> <p>J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).</p> <p>B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.</p> <p>E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.</p> <p>E Organics- Concentration has exceeded the calibration range for that specific analysis.</p> <p>D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.</p> <p>* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.</p> <p>H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.</p> <p># Spike was diluted out.</p> | <p>+ Correlation coefficient for MSA is <0.995.</p> <p>N Inorganics- Matrix spike recovery was outside laboratory limits.</p> <p>N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.</p> <p>S Concentration has been determined using Method of Standard Additions (MSA).</p> <p>W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.</p> <p>P Concentration >40% difference between the two GC columns.</p> <p>C Confirmed by GC/MS</p> <p>Q DoD reports: indicates a pesticide/Aroclor is not confirmed ($\times 100\%$ Difference between two GC columns).</p> <p>X See Case Narrative for discussion.</p> <p>MRL Method Reporting Limit. Also known as: LOQ Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.</p> <p>MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).</p> <p>LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.</p> <p>ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.</p> |

¹ Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory or go to <https://www.alsglobal.com/locations/americas/north-america/usa/new-york/rochester-environmental>

Acronyms

| | |
|------------|--|
| ASTM | American Society for Testing and Materials |
| A2LA | American Association for Laboratory Accreditation |
| CARB | California Air Resources Board |
| CAS Number | Chemical Abstract Service registry Number |
| CFC | Chlorofluorocarbon |
| CFU | Colony-Forming Unit |
| DEC | Department of Environmental Conservation |
| DEQ | Department of Environmental Quality |
| DHS | Department of Health Services |
| DOE | Department of Ecology |
| DOH | Department of Health |
| EPA | U. S. Environmental Protection Agency |
| ELAP | Environmental Laboratory Accreditation Program |
| GC | Gas Chromatography |
| GC/MS | Gas Chromatography/Mass Spectrometry |
| LUFT | Leaking Underground Fuel Tank |
| M | Modified |
| MCL | Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA. |
| MDL | Method Detection Limit |
| MPN | Most Probable Number |
| MRL | Method Reporting Limit |
| NA | Not Applicable |
| NC | Not Calculated |
| NCASI | National Council of the Paper Industry for Air and Stream Improvement |
| ND | Not Detected |
| NIOSH | National Institute for Occupational Safety and Health |
| PQL | Practical Quantitation Limit |
| RCRA | Resource Conservation and Recovery Act |
| SIM | Selected Ion Monitoring |
| TPH | Total Petroleum Hydrocarbons |
| tr | Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL. |

NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Division of Environmental Remediation, Region E
6274 East Avon-Lima Road, Avon, NY 14414-9516
P: (585) 226-5353 | F: (585) 226-8139

April 18, 2017

Village of Manchester
Mayor Nancy W. Johnsen
P. O. Box 188
Manchester, NY 14504

**Re: Frederick Property (#B00131)
147 State Street, Village of Manchester, NY
Supplemental Work Plan, February 2017**

Dear Mayor Johnsen:

The New York State Departments of Environmental Conservation and Health (Departments) have reviewed the Supplemental Work Plan (SWP) dated February 2017 and prepared by Clark Patterson Lee for the Frederick Property ("site") located in the Village of Manchester, Ontario County. In accordance with 6 NYCRR 375-1.6, the Departments have determined that the SWP does not substantially address the requirements of the Environmental Restoration Program. The SWP is hereby disapproved. Please address the following comments:

1. Please certify the work plan in accordance with DER-10 Section 1.5.
2. Please include the analytical lab reports associated with Tables 1, 2, and 3 and remove any samples from the tables that do not have corresponding lab data, if needed.
3. In Section 3, paragraph 3, after the last sentence add that samples will be collected in the worst case areas indicated by stains, odors, or visual impairments. In addition, one boring from each excavation (i.e. pump island excavation, hydraulic lift excavation, and dry well excavation) will be sampled from 0-2 inches, 2-12 inches, and 12-24 inches.
4. In Section 3, add Pesticides to the sampling parameters. Backfill will be sampled for full suite analysis (TCL VOCs and SVOCs, TAL Metals, PCBs, and Pesticides) with results compared to DER-10 Appendix 5.
5. Include in Section 4.4 that ASP Category B will be used for evaluation of the samples.
6. All data associated with the work plan will be included in the Final Engineering Report. A separate Supplemental Remedial Investigation Report is not needed unless further work is necessary. Please update Section 6 to reflect this.
7. Please include a Community Air Monitoring Plan (CAMP) in the Appendices, independent of the Health and Safety Plan (HASP).
8. Please update the schedule accordingly.

Per 6 NYCRR Part 375-1.6, please notify me in writing by **May 3, 2017** which of the following options you will choose to address these comments:

- Modify the SWP to address these comments and submit a revised SWP by **May 18, 2017**;
- Invoke dispute resolution; or,
- Terminate the Environmental Restoration Agreement.

The Departments seek to resolve outstanding differences in a mutually agreeable manner which addresses the requirements of the Environmental Restoration Agreement, Part 375, and associated plans. To that end, please contact me before **May 3, 2017** at (585) 226-5349 if you have any questions or to schedule a meeting or conference call to discuss these comments.

Sincerely,

Danielle Miles, EIT
Engineer Trainee

**Re: Frederick Property (#B00131)
147 State Street, Village of Manchester, NY**

Dear Mayor Johnsen:

The New York State Department of Environmental Conservation (NYSDEC) met with the Village of Manchester on January 24, 2018 to discuss the November 16, 2017 letter which detailed the need for additional work at the site. Below is a list of what is required from the Village of Manchester for this site:

1. In order for the NYSDEC to issue a release letter to the Village as part of the Environmental Restoration Program, a complete and revised Final Engineering Report (FER) must be submitted that addresses the following comments (which are also detailed in the January 9, 2017 FER disapproval letter):
 - a. Tabulate analytical data and compare the results to Part 375 unrestricted and restricted residential soil cleanup objectives for soil and Technical Operational Guidance Series (TOGS) standards for groundwater;
 - b. Include Interim Remedial Measure (IRM) sample results in the appendix (from the 2000/2001 IRM Work – these results were attached to the January 9, 2017 letter);
 - c. Include a site map that comprises a survey of the following:
 - i. approximate excavation limits from the 2006 remedial action work; and
 - ii. sample locations from 2017 field work, including details on the depth and material of the backfill (i.e. sand, crusher run, etc.);
 - d. Results from the supplemental work completed in 2017 (see comment #3); and
 - e. Results for any future additional work completed at the site.
2. Please notify NYSDEC how you choose to proceed with the supplemental investigation work required as stated in the November 16, 2017 letter. The Village's options are to either complete the work themselves or the NYSDEC will complete this work and determine how to proceed moving forward as discussed during the January 24, 2018 meeting.
3. A Report for Supplemental Work completed in August-September 2017 is needed, documenting the field work and sample results in accordance with DER-10 and the approved 2017 Supplemental Work Plan (SWP) completed by Clark Patterson Lee. In addition, it is the NYSDEC's understanding that the following tasks have not been completed as part of this supplemental work:
 - a. A Data Usability Summary Report (DUSR) as specified in Section 4.4 of the SWP;
 - b. Analytical data provided in table format and compared to Part 375 unrestricted and restricted residential soil cleanup objectives as described in comment #1a above and Section 6.0 of the SWP; and,

Department of
Environmental
Conservation

- c. A site survey as described in comment #1c above and as specified in Section 3.1 of the SWP.
4. The Village will need to determine if Clark Patterson Lee will sign off on the FER and who will sign off on any additional work (this person must be a Professional Engineer – refer to DER-10 Section 1.5(b)(4)).
5. If the Village has performed groundwater monitoring in the past in accordance with the Site Management Plan (SMP) and has those results, please provide these results to the NYSDEC (specifically, any groundwater data from the site during 2009-2017).
6. Please remove drums from the site in accordance with DER-10 Section 3.3(e) and 6 NYCRR Parts 360, 364, and 370. The Village will need to contact the local sewer municipality to dispose of wastewater and contact a landfill to dispose waste soils.

If you have any questions about the above, please contact me at (585) 226-5349 or danielle.miles@dec.ny.gov.

Sincerely,

Danielle Miles, EIT
Environmental Engineer

**Re: Frederick Property (#B00131)
147 State Street, Village of Manchester, NY
Final Engineering Report, November 2016**

Dear Mayor Johnsen:

The New York State Department of Environmental Conservation (NYSDEC) has reviewed the Final Engineering Report (FER) dated November 2016 and prepared by Clark Patterson Lee for the Frederick Property ("site") located in the Village of Manchester, Ontario County. In accordance with 6 NYCRR 375-1.6, NYSDEC has determined that the FER does not substantially address the requirements of the Environmental Restoration Program. The FER is hereby disapproved. Please address the following comments in a timely manner to reach an approvable FER:

1. Please tabulate analytical data with positive detections, compare the results to Part 375 unrestricted and restricted residential soil cleanups objectives for soil and Technical Operational Guidance Series (TOGS) standards for groundwater.
2. Include missing IRM sample results (attached) in the appropriate appendix within the report.
3. Include remaining geoprobe sample results (only 2 – lift and dry well – found in report Appendix L). If the missing data cannot be found, the areas need to be re-sampled in accordance with the Work Plan discussed in Comment 5 below.
4. Please complete a site map that includes a survey of excavation limits and depths, confirmatory/documentation sample locations, and cover restoration depths and materials to the best of your ability. This map shall represent the as-built drawing for the remediation work and be stamped by a professional engineer.
5. In addition to the above, please complete a Work Plan to sample excavation backfill per DER-10 requirements and obtain any additional information needed to complete the FER. Include sample results and DUSR in the FER.

Please submit a work plan with a schedule of events by **February 10, 2017**. If this date is unfeasible, please notify me in writing by **January 27, 2017**. NYSDEC seeks to resolve outstanding differences in a mutually agreeable manner which addresses the requirements for the Final Engineering Report as in Part 375. To that end, please contact me at (585) 226-5349 or danielle.miles@dec.ny.gov if you have any questions.

Sincerely,

Danielle Miles, EIT
Environmental Engineer

Investigation Work Plan, April 2018**

Dear Mayor Johnsen:

The New York State Departments of Environmental Conservation (NYSDEC) and Health (NYSDOH; collectively referred to as the Departments) have reviewed the *Investigation Work Plan* (IWP) dated April 2018 and prepared by Day Engineering, P.C. for the Frederick Property located in the Village of Manchester, Ontario County. In accordance with 6 NYCRR 375-1.6, the Departments have determined that the IWP, with the following modifications, substantially addresses the requirements of the Environmental Restoration Program:

1. According to the Record of Decision and Easement, the applicable Soil Cleanup Objectives (SCOs) for the site are restricted residential.
2. Appendix B: NYSDOH Generic Community Air Monitoring Plan (CAMP) notes that "special requirements will be necessary for work within 20 feet of potentially exposed individuals or structures." Therefore, in addition to the monitoring associated with the generic CAMP, please include the following provisions:
 - a. Continuous air monitoring in the direction of the residents regardless of wind direction;
 - b. Planned work should be implemented during hours when building occupancy is at a minimum;
 - c. Continuous monitoring must reflect any exposed individuals and/or locations of ventilation intakes, window/door openings or conduits;
 - d. Background readings should be taken prior to planned work commencement and if total particulate concentrations next to intake vents, windows, doors, etc. exceed 150 mcg/m³, work activities should be suspended until controls are implemented and successful in reducing total particulate concentrations.
3. Section 2.2, page 5: If grossly contaminated media is not identified in test borings TB-201 through TB-205, but is observed at MW-A, additional borings will be advanced between the test borings, TB-201 through TB-205, and MW-A (i.e. 5 to 10 feet away from SB-3) to further delineate the grossly contaminated material.
4. A meeting will be scheduled once field work is completed and analytical results are received to discuss the next actions and reporting.

With the understanding that the modified Work Plan is agreed to, the Investigation Work Plan is hereby approved. By **June 5, 2018** and before field work begins, please sign the IWP and attach a copy of this letter to the Final IWP. Please distribute the IWP as follows:

- Danielle Miles (NYSDEC – Avon, 1 bound hard copy); and,
- Steven Berninger (NYSDOH – Albany, electronic file).

Please notify the Departments at least 7 days in advance to the start of field activities. If you have questions or concerns, please contact me at 585-226-5349.

Sincerely,

Danielle Miles, EIT
Assistant Engineer

Supplemental Work**

Dear Mayor Johnsen:

The New York State Department of Environmental Conservation (NYSDEC) has received the document entitled "*Subsurface Investigation Report*" (the Report) prepared by Empire Geo Services, Inc dated October 3, 2017 for the Frederick Property site in the Village of Manchester, Ontario County.

The data provided in the Report and observed by the NYSDEC during field work on August 31, 2017 indicate that "grossly contaminated media" as defined in DER-10 1.3(b)(23) is currently present at the site. As such, further delineation to define the extent of the grossly contaminated media is needed to determine whether additional remediation and/or monitoring is needed at the site.

To address this issue, please submit an Investigation Work Plan (Work Plan) by **December 18, 2017**. The Work Plan should include details for sampling and analysis of soil and groundwater at the site in accordance with DER-10 and 6 NYCRR Part 375 regulations.

Please notify me in writing by **December 1, 2017** whether you choose to submit a Work Plan, invoke dispute resolution, or terminate the Environmental Restoration Agreement.

Thank you for your cooperation in this matter. Please contact me at (585) 226-5349 or danielle.miles@dec.ny.gov if you have any questions or to schedule a meeting or conference call to discuss.

Sincerely,

Danielle Miles, EIT
Environmental Engineer

Data Package for Supplementary Studies**

Dear Mayor Johnsen:

The New York State Departments of Environmental Conservation and Health (collectively referred to as the “Departments”) have received the document entitled “*Data Package for Supplementary Studies: June 2018*” (the Report) prepared by Day Engineering, P.C. dated July 26, 2018 for the Frederick Property site in the Village of Manchester, Ontario County.

The data provided in the Report indicates that grossly contaminated material was not encountered during the supplemental investigation completed between June 20, 2018 and July 2, 2018. However, soil and groundwater analytical results indicate exceedances of Standards, Criteria, and Guidance (SCGs). Based on these results, further remediation at the site is not needed at this time. Instead, a revised Site Management Plan will be submitted to include the additional data from the supplemental work. The additional data from the supplemental work will also be included in the revised Final Engineering Report (FER).

In addition, in a phone call on August 13, 2018, Day Environmental asked what remaining work is needed to receive a Certificate of Completion for the site. The following is a list of requirements and includes items from the letter sent to the Village of Manchester on February 1, 2018:

1. A complete and revised FER must be submitted.
2. A survey of approximate excavation limits based on observations from the recent 2017 and 2018 sample events, and information provided in the February 2017 FER and attachment.
3. A figure of sample locations from the 2017 and 2018 field work and details on backfill depth and material.
4. A data usability summary report (DUSR) for the 2017 and 2018 analytical results and data provided in table format, compared to Part 375 Restricted Residential Soil Cleanup Objectives.
5. The Village and Day Engineering, P.C. will need to determine who will sign off on the FER (this person must be a Professional Engineer – refer to DER-10 Section 1.5(b)(4)).
6. Investigation derived waste must be removed from the site in accordance with DER-10 Section 3.3(e) and 6 NYCRR Parts 360, 364, and 370.

Please submit a schedule with dates of when the above items will be completed by **September 20, 2018**.

Contact me at (585) 226-5349 or danielle.miles@dec.ny.gov before September 20, 2018 if you have any questions or to schedule a meeting or conference call to discuss.

Sincerely,

Frederick Property with BCP Sign, NYSDEC Site #B00131) – 147 State Street, Manchester, New York

Installation of Monitoring Well MW-A

Purge Water from MW-A (no free product observed)

Liquid Investigation Derived Waste (No Free Product Observed)

June 20, 2018 - 147 State Street (ERP B00131-8) Overcast - 70°F
No wind to light wind from S

- ↳ GAT onsite @ 06:50 -
 - ↳ find existing MW and mark out boring locations
 - ↳ Opened Drums - 1 drum ~ 1/4 full H₂O - 1 drum ~ 1/3 full soil/Jars/(bentonsite?) paper sack
- ↳ 07:20 - Jeff w/ Village stopped by site. Discussed SOW and ^{cost} asked if village could provide extension for MW's by road b/c the pro tops are ~ 0.5' below ground surface.
- ↳ 07:45 - HMZ onsite. Set up CAMP & Swing tie proposed locations
- ↳ 08:00 → Nothinghe (Steve +) onsite - set up on TB-203
- ↳ Drilling started 08:25
- ↳ Danielle Miles onsite @ 08:35
- ↳ Drill ^{macro core - no augers} TB-203 → TB-205 → TB-204 → TB-202 → TB-201 → MW-A
- ↳ Auger MW-A ~ 11:45 → Augers kick @ bottom (~ 10.5 bgs) and move to SW ~ 0.5', Steve recommends off-set and re-drill, thinks there is a boulder or something else on top of rock
- ↳ off-set ~ 2.5' NNW and auger to refusal (~~10.5'~~ 10.9" - bottom of well) - set well w/ 7' screen - 7 bags of sand
- ↳ 13:20 rig off of MW-A
- ↳ 13:45 → Danielle (MPS DEC) off-site
- ↳ 14:20 → Well complete → Advance inner TB's → 206, 206A, 207, 208
- ↳ 15:35 → Drilling complete
- ↳ 16:20 → Nothinghe off-site
- ↳ 16:35 → DAY off-site

CAMP (DAY)

| 16 | | | | | | | | | |

Notes: 1) Water levels were made at the times and under conditions stated. Fluctuations of groundwater levels may occur due to seasonal factors and other conditions.
 2) Stratification lines represent approximate boundaries. Transitions may be gradual.
 3) PID readings are referenced to an isobutylene standard. A MiniRae 3000 equipped with a 10.6 eV lamp was used to obtain the PID readings.
 4) NA = Not Available or Not Applicable
 5) Headspace PID readings may be influenced by moisture

| 10 | / | 3 | 8-12 | 33 | / | | 0.0 | | |
| 11 | | | | | | | | Brn/grey silty sand and gravel, wet | Sample 12 @ 10:30 |
| 12 | / | 4 | 12-12.2 | 100 | / | 3.1 | 0.5 | | |
| 13 | | | | | | | | 12' 2" Refusal | |
| 14 | | | | | | | | | |
| 15 | | | | | | | | | |
| 16 | | | | | | | | | |

Notes: 1) Water levels were made at the times and under conditions stated. Fluctuations of groundwater levels may occur due to seasonal factors and other conditions.

2) Stratification lines represent approximate boundaries. Transitions may be gradual.

3) PID readings are referenced to an isobutylene standard. A MiniRae 3000 equipped with a 10.6 eV lamp was used to obtain the PID readings.

4) NA = Not Available or Not Applicable

5) Headspace PID readings may be influenced by moisture

| 16 | | | | | | | | | |

- Notes: 1) Water levels were made at the times and under conditions stated. Fluctuations of groundwater levels may occur due to seasonal factors and other conditions.
 2) Stratification lines represent approximate boundaries. Transitions may be gradual.
 3) PID readings are referenced to an isobutylene standard. A MiniRae 3000 equipped with a 10.6 eV lamp was used to obtain the PID readings.
 4) NA = Not Available or Not Applicable
 5) Headspace PID readings may be influenced by moisture
