Re: Final Remedial Action Report
Independent Leather Tannery Site (#B-00158-5) Off-Site Work
City of Gloversville, Fulton County
C.T. Male Project No. 06.6146

Dear Mike:

C.T. Male has been informed that the March 17, 2008 Draft Remedial Action Report prepared by our firm has been approved by NYSDEC and NYSDOH. In order to make the draft documents into final documents the cover sheet and signature pages may be replaced in lieu of issuing the entire document again in the absence of any other changes. Enclosed herewith are the two pages to replace, pre-bound for their insertion. Please let us know if you have any problems with this action. I can be reached at 786-7548.

Sincerely,
C.T. MALE ASSOCIATES, P.C.

Jeffrey A. Marx, P.E.
Project Engineer

1.0 INTRODUCTION

1.1 Background & Site Description

Independent Leather Tannery is the subject of a New York State Department of Environmental Conservation (NYSDEC) Environmental Restoration Program (ERP) whereby the City of Gloversville (the Property Owner) has investigated and remediated the former tannery. Off-site sampling relative to this project has indicated that soil remediation was warranted on 5 and 7 Hill Street properties, the adjoining properties south of the Independent Leather Tannery. The ERP allocates funds to a Municipality for remediation of eligible off-site properties at no cost to the property owner.

The site of the remedial work described in this report is generally defined as 5 and 7 Hill Street, which are separately owned properties yet contiguous to each other. The tax map ID for 5 Hill Street is 149.13, Block 2, Lot 10, and the tax map ID for 7 Hill Street is 149.13, Block 2, Lot 11. The north and east side of 5 Hill Street and the north side of 7 Hill Street borders the Independent Leather Tannery. Both properties are accessed from Hill Street. A Site Location Map prepared with a New York State Department of Transportation 7.5-minute series quadrangle depicts the site and surrounding areas, and is provided as Figure 1.

At the time of the remedial work, the 5 Hill Street property was owned by Kenneth Carden and the 7 Hill Street property was owned by Mark Vrooman, both of which may still own the properties. Authorization for Permission to Enter Private Property was sought and granted by Kenneth Carden on February 7, 2005, and Mark Vrooman on February 25, 2005. A Topographic Survey was prepared for the site on December 5, 2006 to depict the conditions of the site prior to implementing the remedial activities described in this report. A copy of the Topographic Survey (Dwg. No. 06-0762) is provided as Figure 2.

1.2 Summary of Work

Remediation of the site generally involved soil excavation, transportation to and disposal of excavated media to Fulton County Landfill, and placement of clean imported backfill to restore the site to original grade. Technical plans and specifications

for this scope of work were prepared and released for public bid in April/May 2007. MC Environmental Services, Inc. (MCES) of Queensbury, New York was the low bidder and was awarded the work upon receipt of NYSDEC's authorization to award. MCES was issued the Notice to Proceed on August 1, 2007 and achieved Final Completion on October 25, 2007.

1.3 Sampling Background

C.T. Male initially collected and analyzed soil samples from the 7 Hill Street property in June/July 2004. Samples from the 5 Hill Street property were not collected in 2004 due to access restrictions. The soil samples were collected from three locations at three depth intervals from each location (i.e., 0 to 2 inches below vegetation, and 10 to 12 and 18 to 20 inches below grade). The analytical results were transmitted to the NYSDEC in an October 7, 2004 letter. The results were also transmitted to the Mr. Carden and Mr. Vrooman, owners of the 5 Hill Street and 7 Hill Street properties, respectively in an October 27, 2004 letter from the Department.

Based on the findings of the June/July 2004 sampling, further soil sampling and analysis was warranted to delineate the arsenic and chromium concentrations in soil on the 5 and 7 Hill Street properties. In November 2004, a supplemental scope of work for collecting additional soil samples for total arsenic and chromium analysis was prepared by C.T. Male. In March 2005, as approved by the Department, twenty-eight additional sampling locations were explored. Five soil samples were collected and analyzed from each boring location. The sampling intervals were 0 to 2, 10 to 12, 18 to 20, 24 to 26, 34 to 36 and 46 to 48 inches below grade, whereby the first three intervals were initially analyzed and deeper intervals were held until a review of the initial analytical results were completed. The deeper interval samples were analyzed one interval at a time up to four feet below grade when the shallower intervals revealed concentrations of arsenic and/or chromium above NYSDEC TAGM 4046 recommended soil cleanup objective values of 7.5 mg /kg and 10 mg/kg, respectively.

The analytical results showed that arsenic and chromium were detected above the laboratory method detection limit within most samples. The concentrations of arsenic and chromium generally decreased with depth, and in most cases, reached concentrations below respective NYSDEC TAGM 4046 recommended soil cleanup objective values within four feet below grade, with a few exceptions.

Chromium appeared to be more prevalent in soil at both properties in comparison to arsenic. Chromium concentrations generally exceeded its NYSDEC TAGM 4046 recommended soil cleanup objective value from the surface to approximately two to three feet below grade where the concentrations decreased to less than 10 mg/kg. Chromium was detected at concentrations up to 1,410 mg/kg on the 7 Hill Street property, and up to 35,600 mg/kg on the 5 Hill Street property, thereby justifying the need for remediation.

Arsenic in soil, although not as widespread as chromium in soil, was detected in soil above its NYSDEC TAGM 4046 recommended soil cleanup objective value at isolated locations and intervals. Arsenic was detected at concentrations up to 88.5 mg/kg on the 5 Hill Street property and up to 59.9 on the 7 Hill Street property further justifying the remedial action. In most cases where the arsenic was detected at concentration above its regulatory value, the chromium concentration was also above its regulatory value.

As the chromium concentrations at sampling location OFF01 were on the order of 14,500 to 35,600 mg/kg these samples were subjected to TCLP analysis. The TCLP results were generally less than 1 ug/l, which was below chromium's hazardous waste regulatory value of 5 ug/l.

In January 2006, C.T. Male performed additional sampling and analysis at the 5 Hill Street and 7 Hill Street properties and along South Main Street to delineate the horizontal and vertical extent or arsenic and chromium impacts in soil where previous sampling did not achieve the target cleanup levels, and define the depth of soil removal for technical plans and specifications. This sampling reduced the necessity for collecting post-remediation verification samples.

2.0 SUMMARY OF REMEDY

2.1 General

Based on the results of the sampling performed at 5 and 7 Hill Street properties (as presented in Section 1.3), arsenic and chromium impacts above regulatory values were detected in soil. Therefore, the remedial action objective was to protect human health and the environment from arsenic and chromium impacted soil and achieve compliance with applicable Standards, Guidance and Criteria (SCGs). Considering the shallow nature and accessibility of arsenic and chromium impacted soil, excavation, disposal and replacement of impacted soils until applicable SCGs were achieved was selected as the remedial action. The depth of the excavation in the isolated areas where regulatory values were not achieved by previous sampling was increased beyond the deepest sampling interval and confirmatory soil sampling was implemented after soil removal, as explained further in this report.

Other available remedial alternatives including placement of a barrier to contact and in-situ treatment (i.e., chemical treatment or stabilization) were evaluated. A barrier to contact may have been protective of human health and the environment, but would require long-term property use restrictions and would not achieve compliance with applicable SCGs. Chemical treatment or stabilization may have been protective of human health and the environment, but would require soils to be excavated, treated and replaced, and due to the small volume of arsenic and chromium impacted soil would not have been a cost effective alternative. For these reasons, placement of a barrier to contact and in-situ treatment were not considered viable alternatives.

Remediation of the 5 and 7 Hill Street properties by soil excavation and disposal off-site was the remedial alternative accepted by NYSDEC. The following sections summarize the remediation areas, unforeseen conditions encountered during construction, changes to the approved design documents, contaminants removed, and waste disposed of.

2.2 Remediation Area

The remedial activities were implemented on one remediation area covering two properties separately owned by individuals, not the City of Gloversville. The

approximate size of the remediation area on 5 Hill Street was 3,058 square feet. The approximate size of the remediation area on 7 Hill Street was 9,246 square feet. These estimated areas do not include the footprint of the buildings on those properties, as soil was not removed from beneath the buildings.

The remedial work on both properties was completed concurrently under one set of technical plans and specifications. NYSDEC approved the plans and specifications on March 28, 2007. NYSDEC authorized the award of the contract to MC Environmental Services, Inc. on June 8, 2007. Deviations from the NYSDEC approved Project Manual are described in the following sections.

2.2.1 Unforeseen Conditions Encountered During Construction

During the soil excavation work between the loading dock on 5 Hill Street and the northwestern building on 7 Hill Street an unknown 4-inch diameter PVC perforated pipe (about 10 feet in length) was encountered approximately 2 feet below the ground surface. The pipe was not connected to other pipes or drainage structures, but was surrounded in #2 stone suggesting that is was drainage related. The #2 stone was removed as contaminated material as it was black stained/discolored. Samples of the soil beneath the stone (CS-1 and CS-3) and along side of the stone (CS-2) were collected and analytically tested to determine if further soil removal was warranted. Based on analytical results, an additional 1 foot of soil with elevated arsenic and chromium was excavated horizontally from beneath the pipe from 2 to 3 feet below grade. Post-remediation sampling analytical results are summarized in Section 4.2.

During the soil excavation work near the loading dock on 5 Hill Street, MCES accidentally damaged the above grade block foundation wall with construction equipment. Two or three concrete blocks were knocked out of the corner of the loading dock's foundation wall near the southeast corner of the loading dock. The damage was repaired by removing the loose blocks and installing new concrete/mortar to match the existing condition of the wall. MCES made this repair on October 2 and 5, 2007.

On or about September 6, 2007, National Grid elected to work on the power poles within the right of way on Hill Street for a few days. National Grid was parking and moving their vehicles within close proximity to one of the electronic dust monitoring

equipment which may have affected the readings because of the dust caused by traversing the adjacent parking lot.

The Manifest Document Number of the non-hazardous waste manifests was intended to be sequential throughout the course of the project starting at #1 and ending up on #85. Due to MCES's administrative and field staff errors there were Manifest Document Numbers missing and duplicated. MCES did not use Manifest Document Numbers #18, #40 and #72, and there were two separate manifests with Manifest Document Number #22.

It was speculated as part of remedial design that the building foundations were continuous under the entire building. During construction it was noted that the easternmost building on 7 Hill Street was built on pier foundations in lieu of continuous strip foundations. Therefore, flowable fill was used around and beneath those piers that were exposed beneath the bottom elevation of the pier by the soil excavation.

An area just north of the westernmost building on 7 Hill Street was inadvertently excavated deeper than the depth required by contract documents. There was an error made by MCES in reading the technical plans which resulted in an area approximately 10 feet by 20 feet to be excavated about one foot deeper than specified. These soils were disposed of at Fulton County Landfill.

The electronic dust monitoring equipment occasionally recorded short-term exceedances to the New York State Department of Health (NYSDOH) Community Air Monitoring Plan (CAMP) action levels for dust. In most cases, the high dust conditions were the result of truck traffic across clean imported soils placed on the site, and not the result of disturbing existing site soils potentially containing arsenic and chromium contaminants.

2.2.2 Changes to the Approved Design Documents

Deviations to the scope of work in the approved design documents were documented through issuing change orders to the contract. Four change orders were issued and approved, as described in the following paragraphs.

Change Order 001 was issued on October 8, 2007 and was approved by the City of Gloversville shortly thereafter. The signed change order was misfiled and therefore,

resigned on February 25, 2008. The change order was necessary when it was identified that the actual quantity of groundwater was less than estimated during design. MCES proposed a cost equivalent alternate method to treatment on-site by hauling the contaminated groundwater to Norlite Corporation in Cohoes, New York. Although the change order showed an interim net increase to the contract price, the final adjustment of contract quantities reflected an overall reduction in the contract price for those estimated fees to treat contaminated groundwater on-site.

Change Order 002 was issued on October 8, 2007 and was approved by the City of Gloversville shortly thereafter. The signed change order was misfiled and therefore, resigned on February 25, 2008. The change order was necessary to provide a clear demarcation chain link fence between the site and 5 and 7 Hill Street properties to prevent inadvertent disturbance of the Independent Leather site and its soil barrier to contact.

Change Order 003 was issued on November 19, 2007 and approved by the City of Gloversville on November 29, 2007. The change order was for the final adjustment of contract quantities for contract closeout.

Change Order 004 was issued on November 19, 2007 and approved by the City of Gloversville on November 29, 2007. The change order was necessary to containerize and properly dispose of arsenic and chromium contaminated soil generated from the installation of the chain-link fence posts. Placement of concrete in the fence post holes did not allow for the return of the soil to the subgrade, therefore the excess soil was manually transferred to 55 gallon steel drums. The drums were transported to Fulton County Landfill where the contents of the drums were emptied.

Other changes to the approved design documents included substitution or "or-equal" items that did not warrant preparation of a change order. This included the placement of gravel in lieu of topsoil along the drip edges of the building. Placement of gravel would mitigate the "washout" from storm runoff from the roofs of the building.

2.2.3 Contaminant Removal

Approximately 2,314.72 tons of arsenic and chromium contaminated soil were excavated from the 5 and 7 Hill Street properties. Petroleum related impacts were also encountered in localized areas of these two properties, and were excavated together

with the arsenic and chromium contaminated soil, but were not separately quantified. Arsenic and chromium contaminated soil was excavated generally from the areas shown on Figure 3. The contaminated soil was transported by MCES, a 6NYCRR Part 364 permitted waste hauler, to the Fulton County Landfill in Johnstown, New York. Disposal documentation including manifests and weight tickets is provided in Appendix A.

Groundwater was encountered during the soil excavation activities north of the building on 5 Hill Street. The groundwater infiltration was minimal and removed from the excavation via a vacuum tank truck. A total of 2,411 gallons of contaminated groundwater accumulated in the excavation while waiting for soil analytical results to confirm adequate soil removal. Once the analytical results documented adequate soil removal, the groundwater was removed and the excavation was backfilled. The contaminated groundwater was disposed of at Norlite Corporation in Cohoes, New York. Disposal documentation for the groundwater removed from the excavation is provided in Appendix B.

2.2.4 Waste Disposal Summary

Before commencement of remedial activities, MCES cleared the site of miscellaneous surface debris that would impede soil excavation. The debris generally consisted of steel, wood, vegetation, and concrete, which was removed from the site and disposed of by MCES.

Installation of the fence posts for the demarcating chain link fence required placement of concrete and the displacement of existing site soils that may have contained arsenic and chromium above background concentration. The soil removed for the fence posts installation (0.49 tons) was transferred into steel 55 gallon drums and disposed of at Fulton County Landfill. Disposal Documentation for the drums of soil delivered to and emptied at Fulton County Landfill is provided in Appendix C.

2.3 Petroleum Findings

Three (3) localized areas of petroleum impacted soil (Area #1, #2 and #3) were encountered during the implementation of soil removal and disposal at the 5 and 7 Hill Street Properties, as shown in Figure 4. Two (Area #1 and Area #2) of the three areas

were removed through removal of the known arsenic and chromium impacted soil. The third area (Area #3) of petroleum impacts was observed in an exploratory test pit (TP-OFF-2) performed in the northern portion of 7 Hill Street, in the grassy area where historical information documented the presence of bulk petroleum storage tanks. A continuous concrete wall was also encountered below grade during soil removal in this area which may have been part of a containment basin for the former tanks.

In order to further evaluate the purpose of the concrete wall and at the direction of NYSDEC, test pit TP-OFF-2 was advanced north of the easternmost existing building on 7 Hill Street on September 20, 2007 to approximately 11 feet below grade. The test pit did not encounter evidence of concrete that might indicate a floor slab related to the subgrade concrete wall, or possibly a containment structure for the former petroleum storage tanks. However, petroleum impacts, as evidenced by elevated PID readings, were encountered starting at approximately 8 feet below grade with readings of approximately 751 parts per million (ppm) at 8', 519 ppm at 10 to 10.5', and 1,047 ppm at 10.5' to 11' below grade. Gray staining and petroleum odor was noted within these intervals. Discrete soil samples from the 10 to 10.5' and 10.5 to 11' intervals were placed in glass containers and each were subjected to laboratory analysis for the NYSDEC STARS list of volatile and semi-volatile organic compounds by EPA Method 8260 and 8270, respectively. A summary of the analytical result detections are presented in Table 2.3-1 along with NYSDEC regulatory values for comparison.

Table 2.3-1
Summary Table of Analytical Detections in Soil (Off-site)

Compound	**TP-OFF – 2 (10-10.5')**	**TP-OFF – 2 (10.5 - 11')**	**NYSDEC TAGM 4046 Recommended Soil Cleanup Objective Value**
Volatile Organic Compounds by EPA Method 8260 (mg/kg or ppm)			
1,3,5-Trimethylbenzene	< 1.1	**5**	3.3
1,2,4-Trimethylbenzene	< 1.1	**17**	10
n-Butylbenzene	< 1.1	2.5	10
Semi-volatile Organic Compounds by EPA Method 8260 (mg/kg or ppm)			
Naphthalene	< 0.37	1.1	13
2-Methylnaphthalene	< 0.37	1.4	No Standard
Acenaphthene	< 0.37	0.3 J	50
Fluorene	< 0.37	0.3 J	50
Phenanthrene	0.12 J	1.4	50
Anthracene	0.11 J	0.61 J	50

Semi-volatile Organic Compounds by EPA Method 8260 (mg/kg or ppm) (continued)			
Fluoranthene	0.63	1.2	50
Pyrene	0.58	1.2	50
Benzo(a)anthracene	0.15 J	**0.43 J**	0.224
Chrysene	0.14 J	**0.44 J**	0.4
Benzo(b)fluoranthene	0.11 J	**0.29 J**	0.22
Benzo(k)fluoranthene	< 0.37	**0.28 J**	0.22
Benzo(a)pyrene	**0.1 J**	**0.34 J**	0.061
Indeno(1,2,3-cd) pyrene	< 0.37	0.22 J	3.2
Benzo(g,h,i)perylene	< 0.37	0.16 J	50

Notes:
Bold value denotes exceedance of NYSDEC Recommended Soil Cleanup Objective Value.
J denotes estimated value.
Data has been validated through NYSDEC DUSR process.

As shown in Table 2.3-1, two volatile organic compounds and a few semi-volatile organic compounds were detected at concentrations above NYSDEC regulatory values. The groundwater quality at the 5 and 7 Hill Street properties had been previously evaluated in February/March 2006 and again in March 2007 through sampling monitoring wells OFF03a, OFF24a, OFF29, OFF33, OFF34 and OFF35, in conjunction with sampling and analysis of groundwater at the adjacent Independent Leather Site. The compounds detected in groundwater above their NYSDEC Groundwater Quality Standard Values are summarized in the Table 2.3-2.

Table 2.3-2
Summary Table of Analytical Detections in Groundwater (Off-site)

Monitoring Well ID	**Volatile Organic Compounds Detected Above Groundwater Standards**		**Semi-volatile Organic Compounds Detected Above Groundwater Standards**	
	2006	**2007**	**2006**	**2007**
OFF03a (1)	None	None	None	None
OFF24a (1)	None	None	None	None
OFF29 (1)	Benzene at 10 ug/l	Benzene at 2.2 ug/l	None	None
OFF33	None	None	None	None
OFF34 (1)	Xylenes at 36 ug/l	None	None	None
OFF35 (1)	None	None	None	None

(1) Removed by soil removal activities.

On the basis of the soil and groundwater data presented above, NYSDEC did not require the removal of these soils, but opened Spill Number 0751176 to document the petroleum findings. In December 17, 2007 letters to the owners of 5 Hill Street and 7 Hill Street properties, NYSDEC explained the petroleum finding and closed the spill number requiring no further investigation or remediation. A copy of the NYSDEC letters sent to the owners of 5 and 7 Hill Street properties is provided as Exhibit 1.

3.0 POST-REMEDIATION SOIL SAMPLING

3.1 Purpose and Frequency

The limits of impacted soil removal were established in contract documents prior to remediation through pre-remediation sampling and analysis. A few of the pre-remediation locations exhibited arsenic and/or chromium concentrations above target cleanup levels at the bottom depth of the pre-remediation borings. These areas were the grassy area east of the loading dock on 5 Hill Street, and at sampling locations OFF32, OFF02a, and OFF003a. At these locations, post remediation samples were collected and analyzed for total arsenic and total chromium to determine if the soil remaining in-place meets NYSDEC remediation standards. The remediation standards for the soil removal were NYSDEC Part 375 Environmental Restoration Program, Table 375-6.8(a) Unrestricted Use Soil Cleanup Objectives; 13 mg/kg for arsenic and 30 mg/kg for trivalent chromium.

3.2 Analytical Results

The post-remediation confirmatory samples (CS) were analyzed by Adirondack Environmental Services, Inc., of Albany, New York, a New York State Department of Health (NYSDOH) ELAP certified analytical laboratory (ELAP #10709). The samples were collected by C.T Male within four localized areas (grass area adjacent to the loading dock, OFF32, OFF02a, and OFF03a) after the contract specified excavation depths were reached. The initial soil sample was collected from the first six inches of the excavation floor, and in some instances from the next underlying six inch interval. If the analytical results for the deepest soil sample collected were not below the applicable regulatory values, additional soil samples were collected from the next six inch interval and analyzed in this manner until the regulatory values were achieved. The CS collected, their sample ID, the arsenic and chromium analytical results, and the corresponding pre-remediation sampling locations are listed below in Table 3.2-1. The post remediation sampling locations are depicted on Figure 5.

Table 3.2-1
Post-Remediation Soil Sampling Results

Corresponding Pre-Remediation Sampling Location	Lab Sample ID	Depth Below Grade (Feet)	Arsenic (mg/kg)	Chromium (mg/kg)
Grass Area Adjacent to Loading Dock	CS-1	2.5	13.4 J	84 J
	CS-2	2	2.2 J	2.6 J
	CS-3	3	1.1	10.8
OFF32	CS-4	7 to 7.5	183	2,640
	CS-9	9 to 9.5	Non-detect at 0.56	Non-detect at 8.2
	CS-10	9.5 to 10	Non-detect at 0.54	Non-detect at 6.9
OFF02a	CS-7	7.5 to 8	105	1,330
	CS-8	8 to 8.5	63.6	862
	CS-11	9 to 9.5	755	2,030
	CS-12	9.5 to 10	53.7	476
	CS-13	10 to 10.5	46.6	91.8
	CS-14	10.5 to 11	25.4	33.5
OFF03a	CS-5	8 to 8.5	392 J	934
	CS-6	8.5 to 9	18.3	13.9

Notes:

"J" denotes a laboratory or datavalidator qualifier meaning estimated value.

As shown in Table 3.2-1, the remediation standards were achieved at most final sampling locations after completion of soil excavation except at two sampling locations, CS-14 and CS-6. At sample CS-14, the arsenic and chromium concentration remained slightly above the remediation standards, and at sample CS-6, the arsenic concentration remained slightly above the remediation standard. These samples were collected from the north side of the building on 5 Hill Street where the soil excavation (mainly centralized around CS-14, but also extended to CS-6), extended down to bedrock or till soils that could not be excavated further. The detections at these depths may be representative of the natural occurring levels of arsenic and chromium, and not

necessarily the result of tanning related impacts. The analytical results were discussed with NYSDEC, and further excavation of till or bedrock was not required.

3.2.2 Data Usability

The analytical results for the post-remediation sampling were subjected to data validation in accordance with NYSDEC Guidance for the development of Data Usability Summary Reports (DUSR). A DUSR dated November 12, 2007 was prepared by C.T. Male, which described data validation of fourteen (14) post-remediation samples (a.k.a. CS-1 through CS-14) and related quality control samples. Also part of this DUSR was two test pit soil samples collected for the purpose of evaluating petroleum related findings, as described in Section 2.3. The analytical results were usable, but with qualification as described in the DUSR. The November 12, 2007 DUSR is provided as Appendix D.

4.0 SITE RESTORATION ACTIVITIES

4.1 General

Upon completion of the impacted soil removal activities, the 5 and 7 Hill Street properties were backfilled with clean imported materials as documented through analytical testing, and the surfaces were restored to original condition. The fill materials placed included general fill, Item 2, topsoil, asphalt and flowable fill. The following sections describe the source, quantity and/or quality of fill materials used for this project.

4.2 Source, Quantity and/or Quality of Fill Materials

4.2.1 General Fill

General fill was sandy soil which was placed in open excavations to return the site to near surface grade in all areas of the site. The general fill was provided by E.J. Simek General Contractor, Inc. of Johnstown, New York from their North Perry Street source located in Johnstown, New York. According to E.J. Simek, the general fill was virgin material that had not been reclaimed from agricultural or industrial material. The total quantity of general fill placed was 2,270.86 tons.

A representative sample of the general fill was collected by MCES on August 6, 2007 and was analyzed by Phoenix Environmental Laboratories, Inc. (Phoenix) of Manchester, Connecticut, for the Target Compound List (TCL) volatile organic compounds, semi-volatile organic compounds, pesticides, PCBs, and metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium, silver and cyanide). The analytical results were non-detect (i.e., not detected above the limit of laboratory detection) except for trace levels of barium, chromium (trivalent), and lead. The concentrations of these metals were well below their SCGs established in New York State Department of Environmental Conservation (NYSDEC) Part 375 Environmental Restoration Programs Unrestricted Use Soil Cleanup Objectives Table 375-6.8(a), and therefore allowed to be utilized as fill. A copy of the analytical report with the general fill analytical results is provided as Exhibit 2.

It should be noted that the analytical report in Exhibit 2 also provides analytical results for Item 4, however, this fill material was not utilized as site fill. MCES initially provided these analytical results, but realized that specifications required Item 2 material instead. Additionally, pages 13 though 18 of the analytical report in Exhibit 2 are incomplete results for the topsoil material. The replacement analytical results are discussed in Section 3.2.2 and provided in Exhibit 3.

4.2.2 Topsoil and Hydroseed

Topsoil was organic-rich soil which was placed on top of general fill. The topsoil was used to make final grades in portions of the site not used for driveways. The topsoil was provided by E.J. Simek General Contractor, Inc. of Johnstown, New York from their North Perry Street source located in Johnstown, New York. According to E.J. Simek, the topsoil was virgin material that had not been reclaimed from agricultural or industrial material. The total area where topsoil was placed was approximately 9,915 square feet, which was subsequently hydroseeded.

A representative sample of the topsoil was collected by MCES on August 6, 2007 and was analyzed by Phoenix for the TCL volatile organic compounds, semi-volatile organic compounds, pesticides, PCBs, and metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium, silver and cyanide). The analytical results were non-detect (i.e., not detected above the limit of laboratory detection) except for trace levels of barium, chromium (trivalent), and lead. The concentrations of these metals were well below their SCGs established in New York State Department of Environmental Conservation (NYSDEC) Part 375 Environmental Restoration Programs Unrestricted Use Soil Cleanup Objectives Table 375-6.8(a), and therefore allowed to be utilized as fill. A copy of the analytical report for the topsoil analytical results is provided as Exhibit 3.

The analytical results indicated that the topsoil contained organic matter at 1.77%, which was below the specified range of 4% to 20% organic matter. Therefore, the topsoil supplier amended the topsoil with manure prior to delivery to increase the organic matter. The amended material was not re-sampled prior to being placed.

4.2.3 Item 2 Crusher Run

Item 2 Crusher Run was granular fill used beneath asphalt and for surfaces used as driveways (without asphalt pavement). The Item 2 was provided by Delaney Crushed

Stone Products, Inc. of Northville, New York from their source located at 410 State Hwy 30 in Northville, New York. The total quantity of Item 2 Crusher Run placed was 312.74 tons.

A representative sample of the Item 2 was collected by MCES on September 14, 2007 and was analyzed by Phoenix for the TCL volatile organic compounds, semi-volatile organic compounds, pesticides, PCBs, and metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium, silver and cyanide). The analytical results were non-detect (i.e., not detected above the limit of laboratory detection) except for trace levels of barium, chromium (trivalent), and lead. The concentrations of these metals were well below their SCGs established in New York State Department of Environmental Conservation (NYSDEC) Part 375 Environmental Restoration Programs Unrestricted Use Soil Cleanup Objectives Table 375-6.8(a), and therefore allowed to be utilized as fill. A copy of the analytical report for the Item 2 analytical results is provided as Exhibit 4.

4.2.4 Asphalt

Asphalt pavement was placed for the driveway at 5 Hill Street, along the west side of the building at 5 Hill Street, and for a ramp entering a garage door to a building at 7 Hill Street. The asphalt (Type 6 Top 403.178902 and Type 3 Binder 403.138902) was provided by Callanan Industries, Inc. of Albany, New York. The asphalt was placed in a total thickness of three inches and the quantity of asphalt used was 35.9 tons.

4.2.5 Flowable Fill

Soil removal, in some instances, extended below the depth of the bottom elevation of the building's foundations, and therefore required the placement of flowable fill to backfill the void up to and around the bottom of the existing foundations. This mitigated jeopardizing the structural condition of the foundation and reduced the potential from settlement in the load bearing zone of the foundations. Approximately 37 cubic yards of flowable fill was placed, as provided by Fulmont Ready Mix, Co., Inc, of Johnstown, New York.

Quality control testing (7 and 28 day breaks) performed by MCES's subcontractor revealed the compressive strength of the flowable fill was 20 psi, less than the required 50 psi, which was discovered after flowable fill and backfill had already been placed.

Cranesville Block Company, Inc. was contacted by MCES regarding the inadequate design strength of the flowable fill in which they indicated that the preparation of the test specimens, which was performed by MCES, was not an American Concrete Institute (ACI) certified technician and therefore questions the validity of the testing results. Based on further information provided, Cranesville did not have negative test results for this mix provided on other NYSDOT projects and it is therefore assumed that the material provided met the design strength of 50 to 200 psi that was requested. Based on this information and the absence of a feasible method to test its strength in-place, the flowable fill was deemed acceptable.

5.0 ACTUAL CONTRACT COST

5.1 Remediation

The original low and selected bid for the Off-Site Soil Removal and Disposal at 5 and 7 Hill Street Properties was received at $316,580.88. There were four change orders to the contract as summarized below:

- Change Order#1 = $4,070.30 (increase for alternate groundwater disposal)
- Change Order#2 = $7,000 (increase for installation of chain link fence between 5 and 7 and Hill Street and the Independent Leather site)
- Change Order#3 = $88,284.65 (decrease for final adjustment of contract quantities)
- Change Order#4 = $139.11 (increase for disposal of soil from the fence post installation)

The actual cost of the Off-Site Soil Removal and Disposal at 5 and 7 Hill Street Properties contract was $239,505.64.

6.0 CERTIFICATION

6.1 Site Excavation and Restoration

MCES was required to excavate to the prescribed soil limits specified in Contract Documents, and to restore the site to original grade upon completion of the remedial work. Ferguson & Foss Professional Land Surveyors of Johnstown, New York were involved in the project from the start to provide horizontal and vertical control throughout the project and collect the necessary survey data to certify at the end of the project that the targeted excavation depths were reached and the site was restored to the original grade. J. Christopher Foss (P.L.S. 50044) prepared a Certification Map, which is presented as Exhibit 5.

6.2 Groundwater Monitoring Plan

Annual groundwater sampling of monitoring wells related to the Independent Leather Tannery ERP is required indefinitely. Four out of the five monitoring wells related to the Independent Leather project installed on the 5 and 7 Hill Street properties were removed/abandoned as part of the soil remediation activities described herein. The remaining monitoring well is identified as OFF33, and will be sampled annually in accordance with the most current NYSDEC approved groundwater monitoring plan.

6.3 Professional Engineer Certification

I hereby certify that at the Independent Leather Tannery ERP Site the remedial actions completed were performed under my general supervision, and were completed substantially in accordance with the NYSDEC approved Independent Leather Remedial Action Project, Off-site Removal and Disposal at 5 and 7 Hill Street Properties, Plans and Specifications dated December 2006 with the exceptions noted herein.

APPENDIX D
November 12, 2007 DUSR

C.T. MALE ASSOCIATES, P.C.

SUBJECT: Data Usability Summary Report (DUSR)
Independent Leather Off-Site
AES SDG Nos.: CS-1, CS-9 and CS-13
C.T. Male Project No.: 06.6146

DATE: November 12, 2007

Between August 30, 2007 and September 20, 2007, C.T. Male Associates P.C. (C. T. Male) collected seventeen (17) soil samples from the off-site area of the Independent Leather Site. The samples were submitted to Adirondack Environmental Services, Inc. (AES) in Albany, NY for the following analyses:

Parameter	Sample Date	STARS VOC, SW-846 8260B	STARS SVOC, SW-846 8270C	As & Cr, SW-846 6010B
Sample Ids				
CS-1	8/30/2007	0	0	1
CS-2	8/30/2007	0	0	1
CS-3	8/30/2007	0	0	1
CS-4	8/30/2007	0	0	1

TP-OFF-2 (10.5-11)	9/20/2007	1	1	0
FD01	8/30/2007	0	0	1
Total Samples		**3**	**3**	**15**

STARS – Spill technology and remediation series
VOC – Volatile organic compounds
SVOC – Semi-volatile organic compounds
As – Arsenic
Cr – Chromium

C. T. Male evaluated the data reported by the laboratory to determine usability per Appendix 2B of the *Draft DER-10 Technical Guidance for Site Investigation and Remediation* (NYSDEC, December 2002), with guidance from the *USEPA CLP National Functional Guidelines for Organic and Inorganic Data Review* (October 1999 and 2004, respectively). The following criteria were reviewed:

- Completeness of data package as defined under the requirements for the NYSDEC ASP Category B or USEPA CLP deliverables;
- Holding time compliance for chemical analysis;

- Protocol required limits and specification compliance for quality control (QC) data (e.g., instrument tuning, calibration standards, blank results, spike results, duplicate results, etc);
- Contract compliance for analytical protocols;
- Omissions and transcription errors; and
- Data qualification.

Data Completeness

Documentation required by the project was included in the data package. There were no discrepancies found between the raw data and summary forms. The laboratory Case Narratives (Attachment A) identified deviations from laboratory analytical specifications. C.T. Male reviewed these QC results to determine if sample results should be qualified based on the criteria provided in Appendix 2B of the *Technical Guidance for Site Investigation and Remediation*. QC exceedences and data qualification recommendations are presented in the Data Evaluation Checklists (Attachment B). Qualified sample results are presented in the laboratory summary forms, which are located in Attachment C.

QC exceedences and data qualification recommendations are summarized below.

Sample Condition upon Receipt and Holding Times

AES received all the samples listed on the chain of custody (COC) records intact and in good condition. The temperature of samples exceeded laboratory specification limits of 2 to 6°C upon receipt. However, no action is warranted as the samples were packed in coolers with ice and received at the laboratory on the day of sample collection and therefore were not given the chance to cool to the specified limits.

Project samples were prepared and analyzed within EPA-established holding times. Samples CS-3, CS-6 and CS-8 were submitted to the laboratory and put on hold. The analysis of these samples was later requested on September 5 and 6, 2007 by C. T. Male.

STARS VOA by SW-846 8260B

All samples were analyzed within 12 hours of the performance check standard, BFB. Percent relative abundance of all ions met the criteria specified in Table 4 of the EPA SW-846 Method 8260B. Laboratory specifications were met during the initial and continuing calibrations associated with the project samples. In addition the average relative response factor (RRF) was greater than or equal to 0.05 for target analytes during the initial and continuing calibrations. The percent relative standard deviation (%RSD) between RRF was less than or equal to 30% during the initial calibration, and the percent difference (%D) between the initial calibration average RRF and continuing calibration RRF was less than or equal to 25% for target analytes.

Surrogate recovery and internal standard results met laboratory specifications for project samples.

The percent recovery (%R) results for laboratory control sample (LCS) analyses were within laboratory specifications for the target analytes.

A method blank was reported for each analytical batch. Target compounds were not detected during the analysis of the method blank associated with the project samples.

Criteria for accuracy and precision were met during the matrix spike (MS) and MS duplicate (MSD) analysis of samples CS-6 and TP-Off-2 (10-10.5) for target analytes.

STARS SVOA by SW-846 8270C

Project samples were analyzed within 12 hours of the performance check standard, DFTPP. Percent relative abundance of ions met the criteria specified in Table 3 of the EPA SW-846 Method 8270C. Laboratory specifications were met during the initial and continuing calibrations associated with the project samples. In addition the average RRF was greater than or equal to 0.05 for target analytes during the initial and continuing calibrations. The %RSD between RRF was less than or equal to 30% during the initial calibration, and the %D between the initial calibration average RRF and continuing calibration RRF was less than or equal to 25% for target analytes.

Surrogate recoveries and internal standard results met laboratory specifications for project samples.

The %R results for LCS analyses were within laboratory specifications for target analytes.

A method blank was reported for each analytical batch. Target analytes were not detected during the analyses of the associated blanks.

Criteria for accuracy and precision were met during the MS/MSD analysis of samples CS-6 and TP-Off-2 (10-10.5) for target analytes.

Arsenic and Chromium Analysis by SW-846 6010B

The inductively coupled plasma (ICP) instrument was calibrated according to the SW-846 Methods 6010B. All samples were bracketed by ICV/CCV standards with recoveries that were within 90-110% of the true value for arsenic and chromium.

Recovery of the ICP interference check samples fell within 80-120% of the true standard concentration for arsenic and chromium.

Laboratory specifications (80-120%R) were met during the analysis of the LCS for arsenic and chromium.

The recovery of the contract required detection limit (CRDL) standard fell within 75-125% of the true value for target metals.

A method blank was reported for each batch, and a calibration blank was analyzed at the beginning, after every 10 samples, and at the end of each batch. Arsenic was not detected during the analysis of blanks. Chromium was detected during the analyses of the blanks associated with the analyses of project samples CS-9, CS-10, CS-11 and CS-12. Action levels were developed by multiplying the highest concentration observed among the associated blank by a factor of 5. Results in the associated samples reported below the action level have been have been qualified as non-detect (U) and the detection limit has been elevated to the amount detected in the sample.

Chemical and matrix interference was not observed during the serial dilution analysis of samples CS-1, CS-5, CS-8, CS-9, CS-11 and CS-13. The percent difference between initial and serially diluted results was less than 10% for all samples with native concentrations of arsenic greater than 50 times the detection limit except chromium in sample CS-1 and arsenic in sample CS-5. The associated results have been qualified as estimated (J) due to chemical and matrix interference.

Criteria for accuracy and precision were met during the MS/MSD analysis of samples CS-1, CS-5, CS-8, CS-9, CS-11 and CS-13 for target analytes

A laboratory duplicate evaluation was performed on samples CS-1, CS-8, CS-9, CS-11 and CS-13. Criteria for precision was achieved for the detected results in the associated samples.

A field duplicate evaluation was performed on samples FD01 (blind field duplicate) and CS-1. Refer to Attachment B-1 for a duplicate evaluation. Arsenic and chromium have been qualified as estimated (J) in the associated samples, due to analytical imprecision.

Summary

Overall, data quality objectives for the Independent Leather off-site work were met, as there were no data deficiencies that would indicate the need for re-sampling. The analytical results are usable with the qualification of results as described in this DUSR. No analytical data has been rejected.

Megan Drosky
Environmental Scientist

Case Narrative

Client: C.T. Male Associates – Independent Leather

Case: CTM 0701

SDG: CS-1

Sample ID	Laboratory Sample ID	Date Received	VTSR	Matrix
CS-1	070830051-001	08/30/07	16:28	Soil
CS-2	070830051-002	08/30/07	16:28	Soil
CS-3	070830051-003	08/30/07	16:28	Soil
CS-4	070830051-004	08/30/07	16:28	Soil
FD01	070830051-005	08/30/07	16:28	Soil
CS-5	070904040-001	09/04/07	15:58	Soil
CS-6	070904040-002	09/04/07	15:58	Soil
CS-7	070904040-003	09/04/07	15:58	Soil
CS-8	070904040-004	09/04/07	15:58	Soil

Volatile Organics

1) Sample CS-6 only was analyzed. This sample was analyzed using EPA Method 8260 for STARS compounds following the criteria for NYSDEC ASP.

2) The samples received on 8/30/07 had a temperature of 8 °C. The samples received on 9/4/07 had a temperature of 9 °C.

3) Sample CS-6 had 1 gram of sample used for analysis instead of the usual 5 grams due to the sample matrix.

4) Sample CS-6 (AES sample number 070904040-002) was used for the soil matrix spike and matrix spike duplicate analysis. All recoveries were within acceptable limits.

5) The column used in Instrument C for analysis was an RTX-624, 20 meters long with an internal diameter of 0.18 mm. The trap used for this instrument is a VOCARB 4000 with Carbopack C&B / Carboxen 1000 & 1001.

Semi-Volatile Organics

1) Sample CS-6 only was analyzed. This sample was analyzed using EPA Method 8270 for STARS compounds following the criteria for NYSDEC ASP.

Adirondack Environmental Services, Inc.
Experience is the solution
314 North Pearl Street • Albany, New York 12207 • 800-848-4983 • (518) 434-4546 • Fax (518) 434-0891

2) Samples were not treated using Gel Permeation Chromatography (GPC) clean-up.

3) Sample CS-6 (AES sample number 070904040-002) was used for the matrix spike and matrix spike duplicate analysis. All recoveries were within acceptable limits.

Inorganics – Metals

1) The samples were analyzed for Arsenic and Chromium only.

2) Sample CS-2 (AES sample number 070830051-002) was originally on hold as per the client. This sample was taken off hold on 9/5/07. This sample was analyzed together with the other samples from 8/30/07.

3) Samples CS-6 and CS-8 (AES sample numbers 070904040-002 and 070904040-004) were originally on hold as per the client. These samples were taken off hold on 9/6/07. Sample CS-6 was analyzed together with the other samples from 9/4/07. Sample CS-8 was analyzed on 9/7/07.

4) The recovery for Aluminum, Calcium and Iron in the ICSA and the ICSAB check standards were outside the required limit. The required concentration for these analytes in the check standards is 500,000 ug/L and 200,000 ug/L, respectively. The linear range on this instrument for Aluminum, Calcium and Iron is 250,000 ug/L, 200,000 ug/L and 80,000 ug/L, respectively. At this level accurate recovery of Aluminum, Calcium and Iron in the check standards is not possible. No further action is required.

5) The digested spike recovery for the element Arsenic on sample CS-1 (AES sample number 070830051-001) was outside the required 75-125 % limits. A post digestion spike was performed and the recovery was within acceptable limits. The results for this element for the samples received on 8/30/07 are flagged with an "N" as specified by the protocol. This indicates possible matrix interference.

6) Sample CS-5 (AES sample number 070904040-001) was used for the matrix spike and duplicate sample. All recoveries were within acceptable limits.

7) Sample CS-8 (AES sample number 070904040-004) was used for the matrix spike and duplicate sample. All recoveries were within acceptable limits.

8) The element Chromium for sample CS-1 (AES sample number 070830051-001) did not meet the serial dilution criteria of 10 %. This element for the samples received on 8/30/07 is flagged with an "E" as required by the protocol. The "E" denotes an estimated value. This indicates a possible chemical or physical interference.

Adirondack Environmental Services, Inc.
Experience is the solution
314 North Pearl Street • Albany, New York 12207 • 800-848-4983 • (518) 434-4546 • Fax (518) 434-0891

9) The element Arsenic for sample CS-5 (AES sample number 070904040-001) did not meet the serial dilution criteria of 10 %. This element for the samples received on 9/4/07 (except CS-8) is flagged with an "E" as required by the protocol. The "E" denotes an estimated value. This indicates a possible chemical or physical interference.

"I certify that this data package is in compliance with the terms and conditions of the protocol, both technically and for completeness, to the best of my knowledge, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature."

Inorganics – Metals

1) The samples were analyzed for Arsenic and Chromium only.

2) The samples received on 9/10/07 had a temperature of 18 °C. The samples received on 9/14/07 had a temperature of 19 °C.

3) The recovery for Aluminum, Calcium and Iron in the ICSA and the ICSAB check standards were outside the required limit. The required concentration for these analytes in the check standards is 500,000 ug/L and 200,000 ug/L, respectively. The linear range on this instrument for Aluminum, Calcium and Iron is 250,000 ug/L, 200,000 ug/L and 80,000 ug/L, respectively. At this level accurate recovery of Aluminum, Calcium and Iron in the check standards is not possible. No further action is required.

4) Sample CS-9 (AES sample number 070910030-001) was used for the matrix spike and duplicate sample. All recoveries were within acceptable limits.

5) Sample CS-11 (AES sample number 070914043-001) was used for the matrix spike and duplicate sample. All recoveries were within acceptable limits.

"I certify that this data package is in compliance with the terms and conditions of the protocol, both technically and for completeness, to the best of my knowledge, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature."

Case Narrative

Client: C.T. Male Associates – Independent Leather

Case: CTM 0705

SDG: CS-13

Sample ID	Laboratory Sample ID	Date Received	VTSR	Matrix
CS-13	070918030-001	09/18/07	12:47	Soil
CS-14	070918030-002	09/18/07	12:47	Soil
TP-OFF-2 (10-10.5)	070920067-001	09/20/07	16:48	Soil
TP-OFF-2 (10.5-11)	070920067-002	09/20/07	16:48	Soil

Volatile Organics

1) Samples TP-OFF-2 (10-10.5) and TP-OFF-2 (10.5-11) only were analyzed per client instructions. These samples were analyzed using EPA Method 8260 for STARS compounds following the criteria for NYSDEC ASP.

2) The samples received on 9/18/07 had a temperature of 19 °C. The samples received on 9/20/07 had a temperature of 11 °C.

3) Samples TP-OFF-2 (10-10.5) and TP-OFF-2 (10.5-11) were analyzed using a medium level extraction. A 5 gram portion of sample was placed in 10 mL of Methanol. A 100 uL aliquot of this methanol was purged with 4.9 mL of water for analysis.

4) Sample TP-OFF-2 (10-10.5) (AES sample number 070920067-001) was used for the soil matrix spike and matrix spike duplicate analysis. All recoveries were within acceptable limits.

5) The surrogate recovery for Bromofluorobenzene for sample TP-OFF-2 (10-10.5) MS/MSD (AES sample number 070920067-001 MS/MSD) was outside specified limits. According to the protocol, the matrix spike, matrix spike duplicate and matrix spike blank are not re-analyzed for surrogate recoveries outside specified limits. No further action is necessary.

6) The column used in Instrument C for analysis was an RTX-624, 20 meters long with an internal diameter of 0.18 mm. The trap used for this instrument is a VOCARB 4000 with Carbopack C&B / Carboxen 1000 & 1001.

Adirondack Environmental Services, Inc.

314 North Pearl Street • Albany, New York 12207 • 800-848-4983 • (518) 434-4546 • Fax (518) 434-0891

Semi-Volatile Organics

1) Samples TP-OFF-2 (10-10.5) and TP-OFF-2 (10.5-11) only were analyzed per client instructions. These samples were analyzed using EPA Method 8270 for STARS compounds following the criteria for NYSDEC ASP.

2) Samples were not treated using Gel Permeation Chromatography (GPC) clean-up.

3) The %D for the compound Terphenyl-d14 in the continuing calibration analyzed on 10/10/07 was outside the criteria established by the method. The %D for this compound was 26.9 %. According to the protocol, four semi-volatile organic compounds may exceed the %D limit of 25.0 % as long as the %D is less than 40 % and the RRF is above 0.010. The %D was less than 40 % and the RRF was greater than 0.010 for this compound.

4) Sample TP-OFF-2 (10-10.5) (AES sample number 070920067-001) was used for the soil matrix spike and matrix spike duplicate analysis. All recoveries were within acceptable limits.

5) The internal standard recoveries for sample TP-OFF-2 (10-10.5) MS (AES sample number 070920067-001 MS) were outside specified limits. According to the protocol, the matrix spike, matrix spike duplicate and matrix spike blank are not re-analyzed for internal standard recoveries outside specified limits. No further action is necessary.

Inorganics – Metals

1) The samples were analyzed for Arsenic and Chromium only. Only samples CS-13 and CS-14 were analyzed for metals.

2) The recovery for Aluminum, Calcium and Iron in the ICSA and the ICSAB check standards were outside the required limit. The required concentration for these analytes in the check standards is 500,000 ug/L and 200,000 ug/L, respectively. The linear range on this instrument for Aluminum, Calcium and Iron is 250,000 ug/L, 200,000 ug/L and 80,000 ug/L, respectively. At this level accurate recovery of Aluminum, Calcium and Iron in the check standards is not possible. No further action is required.

3) The digested spike recovery for the element Arsenic on sample CS-13 (AES sample number 070918030-001) was outside the required 75-125 % limits. A post digestion spike was performed and the recovery was within acceptable limits. The results for this element for the samples received on 9/18/07 are flagged with an "N" as specified by the protocol. This indicates possible matrix interference.

314 North Pearl Street • Albany, New York 12207 • 800-848-4983 • (518) 434-4546 • Fax (518) 434-0891

4) The element Arsenic for sample CS-13 (AES sample number 070918030-001) did not meet the serial dilution criteria of 10 %. This element for the samples received on 9/18/07 is flagged with an "E" as required by the protocol. The "E" denotes an estimated value. This indicates a possible chemical or physical interference.

"I certify that this data package is in compliance with the terms and conditions of the protocol, both technically and for completeness, to the best of my knowledge, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature."

Review Questions	Yes	No	N/A	Samples (Analytes) Affected/Comments	Flag
				○ CCV: 09/05/07 @17:00 ○ CCV: 09/07/07 @12:57	
8. Were these results within lab or project specifications?	✓				
9. Were the results of the ICS Check Standard analysis within 80-120% of the true value (metals only)?	✓				
10. Was a CRDL Standard analyzed for metals?	✓				
11. Were recoveries within 75-125% of the true value during the CRDL analysis (CRA, CRI)?	✓				
12. Was a LCS analyzed with each batch?	✓			• VOA: VMSB • SVOA: SMSB01 • As & Cr: LCS-S (9/4, 9/5 and 9/7)	
13. Were LCS' recoveries within lab specifications?	✓				
14. Were LCS/LCSD RPD within lab specifications?		✓		LCS only	
15. Was a MS/MSD pair analyzed with each batch?	✓			• VOA: CS-6 • SVOA: CS-6 • As & Cr: CS-1, CS-5, CS-8	
16. Is the MS/MSD parent sample a project-specific sample?	✓				
17. Were MS/MSD recoveries within lab specifications? *Only QC results for project samples are evaluated.*		✓		CS-1, As & Cr: • As @128.7%R, post digestion spike @116.3%R (75-125). No action warranted as the post digestion spike was within specifications. CS-5, As & Cr: • As @168.4%R (75-125). No action warranted as the native concentration was 4x's the spike added. CS-8, As & Cr: • Cr @210.8%R (75-125). No action warranted as the native concentration was 4x's the spike added.	
18. Were MS/MSD RPD within lab specifications? *Only QC results for project samples are evaluated.*	✓				
19. Was a serial dilution conducted on each inorganic batch?	✓			CS-1, CS-5, CS-8	
20. Is the serial dilution parent sample a project-specific sample?	✓				

Data Evaluation Checklist (Continued)

Review Questions	Yes	No	N/A	Samples (Analytes) Affected/Comments	Flag
21. Is the percent difference between the serially diluted result and undiluted result less than 10% (for those analytes with native concentrations greater than 50x the DL)? *Only QC results for project samples are evaluated.*		✓		CS-1 – Cr @34.9%D CS-5 – As @11.3%D J+ associated samples.	J
22. Was a laboratory duplicate analyzed with each batch?		✓		• VOA: None • SVOA: None • As & Cr: CS-1, CS-8	
23. Is the laboratory duplicate sample a project-specific sample?	✓				
24. Does laboratory duplicate results meet lab specifications? *Only QC results for project samples are evaluated.*	✓				
25. Were surrogate recoveries within lab specifications during organic analysis?	✓				
26. Were internal standard results within lab specifications during the VOA and SVOA?	✓				
27. Were TIC reported and were reported results qualified as estimated concentrations?		✓			
28. Were field duplicate samples submitted to the laboratory for analysis?	✓			FD01 is the field duplicate of CS-1	
29. Was precision deemed acceptable as defined by DV Guidelines?		✓		Refer to Attachment B-1 for duplicate evaluation.	J
30. Were laboratory-generated Corrective Action Reports (i.e., QCER) issued? If yes, summarize contents or attach copy of the report.		✓			
31. Were lab comments included in report? If yes, summarize contents or attach a copy of the narrative.	✓			Refer to Case Narratives	

Comments:

The data review process was modeled after the EPA Region 2 Data Validation Guidelines for unusable data and Appendix 2B, Guidance for the Development of Data Usability Summary Reports, of *Draft DER-10 Technical Guidance for Site Investigation and Remediation* (NY DEC, December 2002).

Key:

J Positive sample result is considered estimated
R Unusable data
R+ Positive sample result is considered unusable
U Not present above the associated level; blank contamination exists
UJ Sample result is not detected and the detection limit is considered estimated
ND Sample result is not detected
N A "tentative identification" has been made of the presence of an analyte

Evaluation of Field Duplicate Results

ATTACHMENT B-1

Analyte	CS-1	FD01	CRDL	CRDLx5	*Criteria*	RPD	Absolute difference	Action
Arsenic	13.4	22.2	2.4	12	*RPD*	49	8.8	J, RPD >20%
Chromium	84	134	2.7	13.5	*RPD*	46	50	J, RPD >20%

Note: If the analyte was not detected, then the cell is left blank.
DL - Detection limit
RPD - Relative percent difference
*Results are reported on a dry weight basis (mg/Kg)
Precision is based on either the absolute difference between sample results or RPD. If the sample results are less than or equal to 5x's the CRDL, then precision is based on the absolute difference between duplicate results. If sample results >5x's CRDL, then precision is evaluated using RPD. J sample results whenever the absolute difference is greater than CRDL or RPD >20%. If the analyte is detected in one sample but not the other, then J/UJ sample results. Above table presents results for detected analytes only. Blank cells indicates that the analyte was not detected.

ENVIRONMENTAL RESTORATION PROGRAM
REMEDIAL ACTION REPORT
OFF-SITE SOIL REMOVAL AND DISPOSAL
5 AND 7 HILL STREET PROPERTIES
GLOVERSVILLE, NEW YORK

PHOTO LOG

NUMBER	DESCRIPTION
1.	Easternmost building (south end) at 7 Hill Street.
2.	Easternmost building (north end) at 7 Hill Street.
3.	North side of the building at 5 Hill Street.
4.	South side of the buildings at 7 Hill Street.
5.	South side of the building at 5 Hill Street.
6.	Decontamination pad installed north of the 5 and 7 Hill Street properties.
7.	Typical silt fence installation on 7 Hill Street along the creek.
8.	Unknown subgrade pipe and stone along the loading dock at 5 Hill Street.
9.	Soil removal from driveway at 5 Hill Street
10.	Soil removal north of building at 5 Hill Street, looking east.
11.	Soil removal north of building at 5 Hill Street, looking south.
12.	Soil removal west of the building at 5 Hill Street, looking north.
13.	Typical stone foundation to the western building at 7 Hill Street.
14.	Completed soil removal in driveway to 5 Hill Street prior to backfilling.
15.	Flowable fill placement along loading dock at 5 Hill Street.
16.	Soil removal and flowable fill placement at 7 Hill Street, looking south.
17.	Typical pier foundation of the easternmost building on 7 Hill Street.
18.	Driveway at 5 Hill Street partially backfilled.

Re: NYS Spill Number 0751176 5-7 Hill Street Properties
Gloversville, Fulton County

Dear Mr. Vrooman:

During the removal of arsenic and chromium contaminated soil at 5 and 7 Hill Streets, three distinct areas of petroleum contaminated soils were encountered. As discussed in C.T. Male's (CTM) correspondence dated December 3, 2007, two of these petroleum contaminated areas (Area #1 and Area #2) were entirely excavated while excavating metal contaminated soil. The petroleum contaminated area identified as Area #3 was not excavated. Based upon soil and groundwater sampling conducted in the area, the age of the petroleum contamination, and site specific conditions including commercial use of the property, no further Department action is necessary. The spill report concerning the identified petroleum contamination has been closed. A copy of the closed NYSDEC Spill Report Form and a copy of the CTM correspondence are enclosed for your reference.

A report detailing the arsenic and chromium contaminated soil removal has yet to be generated by CTM; a copy will be forwarded to you once complete. Please note that additional site work will be conducted on your properties, including the drilling of replacement monitoring well(s), the sampling of existing and new wells, and the final closure of these monitoring wells.

If you have questions or concerns regarding this information, please contact me. I can be reached at (518) 897-1242.

Sincerely,

Michael P. McLean, P.E.
Environmental Engineer 2

CALLER REMARKS:

Off-site ERP work from former Independent Leather Tannery has encountered historical petroleum contamination in three locations. Some compounds remain on 7 Hill Street property above TAGM 4046 but exhibit no apparent GW impacts. NFA taken. See Independent Leather ERP Off-site cleanup, specifically CT male December 3, 2007 correspondence for additional details.

Comments:

* Poor surrogate recovery was observed. The other surrogates associated with this sample were within QA/QC criteria. No further action was necessary.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Client ID: CITY OF GLOVERSVILLE
Sample ID#s: AJ39596

This laboratory is in compliance with the QA/QC procedure outlined in EPA 600/4-79-019, Handbook for Analytical Quality in Water and Waste Water, March 1979, and SW846 QA/QC requirements of procedures used.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody as received by the laboratory.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller

Comments:

* Poor surrogate recovery was observed. The other surrogates associated with this sample were within QA/QC criteria. No further action was necessary.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

** Analysis completed by CT certified lab #PH-0520.

This laboratory is in compliance with the QA/QC procedure outlined in EPA 600/4-79-019, Handbook for Analytical Quality in Water and Waste Water, March 1979, and SW846 QA/QC requirements of procedures used.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody as received by the laboratory.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller
